America's Master Book of Home Remedies

Natural Remedies Encyclopedia

VANCE FERRELL • HAROLD M. CHERNE, M.D.

FOURTH EDITION
COMPLETELY REVISED AND EXPANDED

OVER 11,000 INEXPENSIVE HOME REMEDIES
COVERS OVER 730 DISEASES AND DISORDERS!

PRESCRIPTIONS FROM NATURE'S STOREHOUSE

Heritage Edition

GUARDING THE HOME FOR YEARS TO COME

$85.00

PRACTICAL, LOW-COST THINGS YOU CAN DO AT HOME TO TAKE CARE OF YOURSELF AND YOUR LOVED ONES

THE BEST FOLK REMEDIES OF EARLIER GENERATIONS COMBINED WITH MODERN MEDICAL AND NUTRITIONAL FACTS

"If the United States is to be saved from **catastrophic health-care costs**, it is time to take a good look at the wisdom and cost-effectiveness of **alternative medicine**."

— John R. Lee, M.D.

BASIC PRINCIPLES: Caring for the Sick • Rebuilding Health Dietetic and Nutritional Principles • The Eight Laws of Health Vitamins, Minerals, Enzymes, Special Foods, and Other Nutrients 125 Most Important Herbs • Poultices - Essential Oils Complete Water Therapy Manual • Hydrotherapy Index

HOME CARE FOR NEARLY 730 DISEASES: Fevers • Skin Extremities • Head and Throat • Gastro-intestinal • Urinary Respiratory • Cardiovascular • Neuro-Mental • Skeletal-Muscular Endocrine • Lymphatics • Bites • Allergies • Infestations • Tumors Poisoning • Addictions • Cancer • Men's Problems

SPECIAL WOMEN'S SECTIONS: Women's Reproductive Problems • Pregnancy and Breast-feeding • Infancy and Childhood • Basic Women's Herbs • Pregnancy Herbs • First Nine Months • More

PLUS MORE: Terrorist and New Diseases. Disasters and Emergency Care • How to Quit Tobacco and Alcohol • Indexes

BASED ON RESEARCH, PERSONAL MEDICAL PRACTICE, plus the drugless, natural remedies of seven leading medical specialists of earlier times: R.T. Trall, M.D.; John Harvey Kellogg, M.D.; J. C. Jackson, M.D.; John H. Tilden, M.D.; Jethro Kloss; Hubert O. Swartout, M.D.; F.M. Rossiter, M.D.

The sections on hydrotherapy and other remedial treatments are based on the writings of the following medical authorities: George Knapp Abbott, M.D.; Fred B. Moor, M.D.; Ethel M. Manwell, B.S., RN., A.R.P.T.; J. Wayne McFarland, M.D.; Gertrude Muench, R.N., R.P.T.; Agatha Thrash, M.D.; Clarence W. Dail, M.D.; Kathryn Jensen-Nelson, R.N., M.A.; Mary C. Noble, B.S., R.N.; Stella C. Peterson, R.N., B.S.N.E.; Charles S. Thomas, Ph.D.; Richard A. Hansen, M.D.; Robert S. Mendelsohn, M.D.

The sections on herbal medicine are based on the writings of the following authorities: Samuel O.L. Potter, M.D.; Edward E. Shook, D.C.; Michael A. Weiner, Ph.D.; William Pelly, N.D.; John R. Christopher, N.D.; Melvyn R. Werbach, M.D.

FIND IT FAST – NUTRITION, HERBS, ETC.

REBUILDING HEALTH* — *121 principles of right living, to help you keep from getting sick

BASIC HEALING PRINCIPLES 17
Twenty-two underlying principles
BASIC METHODS OF HEALING 18
Sixteen healing agencies, based on the methods used by John H. Tilden, M.D.
SIX TILDEN FORMULAS 23
Common Cold 23
Asthma 24
Pernicious Anemia 24
Diabetes 24
Tonsillitis 25
Alcoholism 25
THE HEALING CRISIS 25
What the healing crisis is and how to work with it, in helping a person fully recover health.
THE KELLOGG FORMULAS 26
Introduction to ninety-seven Kellogg formulas found in this book
ADDITIONAL HEALING PRINCIPLES 26
THE USE OF DRUGS 28
Several guiding principles in the use of medicinal drugs
NUTRITIONAL EXPERTS SPEAK 29

MAINTAINING HEALTH* — *121 principles of good dietetic health

BASIC PRINCIPLES OF HEALTH 79
Seventeen dietetic principles
FRUITS 79
Five facts about fruits
VEGETABLES 80
Eight principles to keep in mind
GRAINS 80
Six aspects of grain utilization
NUTS AND SEEDS 80
Three basic principles
FATS 80
Two principles when using fats and oils
SWEETENING 80
Two more principles
OTHER NUTRIENTS 80
Five items which can help you
VITAMINS AND MINERALS 81
Eleven special facts about these substances
SUMMARY 81
Certain foods to keep in mind
THINGS TO AVOID 82
Twenty-two things to stay away from
ACID-ALKALINE FORMING FOODS 82
NON-DIETETIC FACTORS 83
Thirty principles that can help you

SPECIAL NUTRIENTS AND HEALING AGENCIES
A wealth of facts you can use

VITAMINS 84
Importance of Vitamins 85

B-COMPLEX VITAMINS
Vitamin B Complex 85
Vitamin B_1 (Thiamine) 86
Vitamin B_2 (Riboflavin) 86
Vitamin B_3 (Niacin, Niacinamide, Nicotinic Acid) 86
Vitamin B_5 (Pantothenic Acid, Calcium Pantothenate) 87
Vitamin B_6 (Pyridoxine) 87
Vitamin B_{12} (Cobalamin) 87
Vitamin B_{13} (Orotic Acid) 87
Vitamin B_{15} (Pangamic Acid, Calcium Pangamate) 87
Vitamin B_{17} (Nitrilosides, Amygdalin, Laetrile) 88
Biotin 88
Choline 88
Inositol 88
Folic Acid 89
PABA (Para-amino-benzoic Acid) 89

OIL SOLUBLE VITAMINS
Vitamin A 89
Vitamin D (Ergosterol, Calciferol, Viosterol) 90
Vitamin E (Tocopherols: Alpha, Beta, Gamma, Mixed) 91
Vitamin F (Essential Fatty Acids: Linoleic, Linolenic, and Archadonic Acids) 91
Vitamin K (Menadione) 92

C-COMPLEX VITAMINS
Vitamin C (Ascorbic Acid) 92
Vitamin P (Bioflavonoids) 93

OTHER VITAMINS
Vitamin T ("Sesame Seed Factor") 94
Vitamin U ("Anti-ulcer Factor") 94

MAJOR MINERALS 94
Calcium (Ca) 94
Phosphorus (P) 94
Magnesium (Mg) 95
Potassium (K) 95
Sodium (Na) 96
Chlorine (Cl) 96
Iron (Fe) 91
Sulfur (S) 97

TRACE MINERALS 97
Iodine (I) 97
Selenium (Se) 98
Zinc (Zn) 98

"For health-care reform to succeed at reducing costs . . disease prevention must be the ultimate focus of the primary health-care system, rather than disease treatment."

National Institutes of Health 1994 Report

"The solution to the health problems of the world today is to be found in natural remedies, not in poisoning the system with chemicals. Although they may appear to bring temporary relief, they add a debt of debilitating poison which will later result in serious problems."

John Harvey Kellogg, M.D.

The Natural Remedies Encyclopedia

NOTICE to the buyer and user:

This Encyclopedia contains hundreds of simple, natural healing methods which have NOT received official medical or governmental approval. Therefore, you use this book at your OWN RISK. Although you have a right to treat yourself, official medical opinion advises that you consult your physician and follow his directives. This book is designed to provide accurate and authoritative information; yet this information is not intended as a substitute for medical advice. The publisher and authors expressly disclaim responsibility for any unforeseen consequence arising from the use of the information contained herein.

The Natural Remedies Encyclopedia

Dedication

This book is DEDICATED:

***First,* to the suffering ones who need help, yet so often do not know where to find it.**

As you study and, perhaps, use some of the simple remedies in this volume, go frequently to the Great Physician in prayer and plead for wisdom, strength, and help. He alone can give you what is best for your case. These words are for you:

"Whatever your anxieties and trials, spread out your case before the Lord. Your spirit will be braced for endurance. The way will be opened for you to disentangle yourself from embarrassment and difficulty. The weaker and more helpless you know yourself to be, the stronger will you become in His strength. The heavier your burdens, the more blessed the rest in casting them upon the Burden Bearer."—*Desire of Ages, 329.*

"Keep your wants, your joys, your sorrows, your cares, and your fears before God. You cannot burden Him; you cannot weary Him. He who numbers the hairs of your head is not indifferent to the wants of His children. 'The Lord is very pitiful, and of tender mercy.' James 5:11. His heart of love is touched by our sorrows and even by our utterances of them. Take to Him everything that perplexes the mind. Nothing is too great for Him to bear, for He holds up worlds. He rules over all the affairs of the universe. Nothing that in any way concerns our peace is too small for Him to notice. There is no chapter in our experience too dark for Him to read; there is no perplexity too difficult for Him to unravel. No calamity can befall the least of His children, no anxiety harass the soul, no joy cheer, no sincere prayer escape the lips, of which our heavenly Father is unobservant, or in which He takes no immediate interest. 'He healeth the broken in heart, and bindeth up their wounds.' Psalm 147:3. The relations between God and each soul are as distinct and full as though there were not another soul upon the earth to share His watchcare, not another soul for whom He gave His beloved Son."
—*Steps to Christ, 100.*

***Second,* to the God and Father of us all. The kind Shepherd will lead—all the sheep willing to follow Him—to the heavenly pastures.**

We thank Thee for forgiveness as we confess our sins to Thee. We thank Thee for enabling strength, by the grace of Jesus Christ Thy Son, to obey Thy Ten Commandment Law.

The Natural Remedies Encyclopedia

How to Use This Book

LARGEST COVERAGE OF DISEASES—You have in your hands **thousands of easy-to-use solutions to over 730 diseases and physical problems**, far more than any comparable health book on the market. For the cost of what you would pay for one or two prescriptions at the drugstore, **it is now yours—helping your family for a lifetime.**

ARRANGED THE BEST WAY—Instead of being in alphabetical order like most books, the 25 Disease Sections *(212-757)* are arranged topically, just like major medical books written for physicians—because that is the way doctors who treat diseases all the time want them arranged. **Similar diseases and disorders are grouped together on nearby pages. In this way, you can easily compare symptoms, causes, treatments, and prevention.** You will find sections on breast-feeding difficulties, infant problems, skin rashes, and dozens more. In most books, *"Urinary Problems"* is right after *"Ulcer,"* just before *"Urticaria"* (a skin rash). A confusing way to arrange things. But **in this *Encyclopedia*, all the urinary diseases are next to the kidney and bladder disorders.** This outstanding feature is a great help when you are searching for the information you urgently need—*when you need it.*

TWO WAYS TO FIND WHAT YOU WANT—**If you have trouble in the chest, turn to the complete Disease Table of Contents in front of the book. There you will find all the chest problems listed together** under *"Respiratory."* **If you want to find a specific disease (*"Bronchitis,"* for example), you will find it fast in the complete Disease Index at the back of the book.** Black edge tabs quickly help you locate the Table of Contents, the Index, and the section you are looking for. In addition, we have added **thousands of cross-references** to **pages** all through the book. The *Find It Fast* pages in the front of the book also help you get quick results.

EASY TO READ, EASY TO USE—**This outstanding book is simply written, nothing complicated, and in a very readable print size.** Many natural remedies are given for each disease. Simple home remedies never go out of date. They are **always low-cost or free. They are not toxic and appeal to common sense.** Here you will find the best natural remedies of earlier generations combined with the latest nutritional facts. **These are simple home remedies you can immediately use to help your family.** This durable *Encyclopedia* comes to you in a washable, casebound edition. It will help your family for a lifetime. And it will bring you assurance every time you see it on the shelf, ready when you need it.

HERBS AND WATER TREATMENTS—This *Encyclopedia* includes two complete chapters on herbal remedies *(107-152)* and hydrotherapy treatments *(153-211)*: **The 126 most important herbs and how to use them** to treat dozens of diseases. **How to use over 100 water treatments in caring for the sick.** This information is of highest value. You will not find this much on these two subjects, as given in those two chapters, in any other full-size natural remedies book dealing with hundreds of diseases. **The skillful use of herbs and water therapy is invaluable** in the recovery from sickness.

HOW TO IMPROVE YOUR HEALTH—But there is more: You not only want to know how to deal with sickness, **you want to know how to rebuild health and maintain it in the future.** The first four chapters in this *Encyclopedia (17-106)* are filled with invaluable information: **Basic health principles** *(17-29)*, **The Eight Laws of Health** *(30-78)*, **Dietetic Principles** *(79-83)*, **Vitamins, Minerals** *(84-106)*, **and much more.**

SEVEN SPECIAL SECTIONS FOR WOMEN—*Nearly 100 pages of special help:* Diseases of reproductive organs *(639-664)*, Pregnancy and Breast-feeding *(665-684)*, Infant and Childhood Problems *(685-715)*, Women's Herbs *(716-721)*, Pregnancy Herbs *(722-726)*, How to Deliver a Baby, Pre-Birth Development *(736-741)*.

PLUS MUCH MORE—Terrorist and New Diseases *(742-749)*, Disasters and Emergency Care *(750-757)*, How to Quit Smoking and Drinking *(773-777)*, Hard Drug Warning Signals *(778-780)*, Herb and Seed Sources *(824-825)*, Healthful Cookbooks *(826)*.

Part Three - Special Home Care

BASIC PHYSIOLOGY

Body Systems 758 / 1 - The Skin 759 / 2 - The Skeletal System 759
3 - The Muscular System 760 / 4 - The Circulatory System 761
5 - The Digestive System 763 / 6 - The Respiratory System 766
7 - The Urinary System 766 / 8 - The Nervous System 767
9 - The Endocrine System 768 / 10 - The Reproductive System 769
11 - The Special Senses 771

HOW TO QUIT SMOKING AND DRINKING

How to Quit Tobacco 773 / How to Quit Alcohol 775

HARD DRUG WARNING SIGNALS

16 Warning Signals for Parents 778 / 34 Signs of Drug Use 779 / Why Young People Do It: The Help that is Needed 779 / Legal Penalties 780

Part Four - Improving One's Life

IS EVOLUTION SCIENTIFIC?

A flood of scientific evidence reveals a startling truth:
The Big Bang is a Fizzle 781 / DNA and Protein vs. Evolution 788

THE CAUSE OF PAIN AND SUFFERING

How it all began, why it is here, when it will end 794

A BETTER WAY OF LIFE

Basic Steps to Christ 799 / A Closer Walk with God 803
The Moral Standard 816 / The Pathway to Better Health 818

Part Five - Resources and Indexes

Herb and Seed Supply Sources 824 / Lifestyle Centers 826
Healthful Cookbooks 826 / DISEASE INDEX 828 / General Index 838

Part Two - The Disease Encyclopedia

OVER 11,000 NATURAL REMEDIES FOR OVER 730 DISORDERS !

On the next ten pages - The DISEASE TABLE OF CONTENTS

Similar diseases are located next to one another, in the DISEASE TABLE OF CONTENTS and inside the Encyclopedia

But if you know the name of the disease, you will quickly find it in the very large DISEASE INDEX on pp. 828-836

The Natural Remedies Encyclopedia

- A Valued Friend in Time of Need -

Complete Disease Table of Contents

If you know the name of the disease you are looking for - You can quickly find it by turning to the DISEASE INDEX - pages 828-836

 # = Items marked # provide information, but do not discuss diseases.

*— **Also see** = This indicates related topics which are listed elsewhere.*

- SECTION 1 -
GENERAL PROBLEMS

FATIGUE —
Debility (Weak, Debilitated Conditions) 213
Emotional Fatigue Syndrome 213
Chronic Fatigue 214
Epstein-Barr Virus (Chronic Fatigue Syndrome) 214
Candidiasis (Yeast Infection, Candida, Thrush, Chronic Fatigue Syndrome) 215
— Also see Vaginitis (660) and Infant Thrush (695).
Jet Lag 216
 # Tonic Effects, Obtaining 217
 # Tonic Herbs 217
 # Liniments 218

NAUSEA —
Nausea 218
Fainting (Syncope) 219
Heat Exhaustion 219
Heat Stroke (Sunstroke) 220
Motion Sickness (Car Sickness, Sea Sickness) 220
Altitude Sickness 221

COLDS —
Catarrh (Excess Mucus) 221
Common Cold 222
Coughs 224
Chills 224
 # Increase Heat Production 225

INFECTIONS —
— Also see Sore Throat (328), Fever (233), Childhood Problems (697-701).
Inflammation 225
Flu (Influenza, La Grippe) 226
Viral Infections 227
Staph Infections (Staphylococcal Infection) 228
 # Special Antibiotic Herbs (Antimicrobial Herbs) 228
 # Special Herbal Antiseptics 229
 # Water Therapies Which Fight Infectious Diseases 229
Fungal Infections 229
 # Special Antifungal Herbs 230
— Also see Four Powerful Antidotes (558).
Herpes Virus Infections 230
Iatrogenic Diseases 231
Nosocomial Infections 231
 # Convalescence 232
 # Post-Operative Recovery 233

FEVER —
Fever 233
Smallpox (Variola) 235
Cholera (Cholera Morbus) 236
Malaria 237
Typhoid Fever 237
Yellow Fever 238
Dengue (Breakbone Fever) 239
— Also see **Childhood Diseases** (702) Diphtheria (709), Rocky Mountain Spotted Fever (568), Typhus (567).

IMMUNE PROBLEMS —
Weakened Autoimmune System (Immune Disorders) 239
Lupus (Systemic Lupus Erythematosus) 240
Sjögren's Syndrome 241
— Also see **Autoimmune Diseases** (584), Ankylosing Spondylitis (523).

AGING —
Aging 241

- SECTION 2 -
SKIN

WOUNDS, BRUISING—
Skin Problems 244
Bruises (Contusions) 244
Easy Bruising (Ecchymosis) 245
Wounds, Cuts, and Scrapes 245
— Also see **Bleeding** (444).
Hematoma 246
Intertrigo 246
Swelling 246
Scarring 247
Adhesions 247
Skin Grafts 247

SORES, ULCERS, BURNS—
Blisters 248
Sores, Abscesses, Pus 248
Canker Sores (Aphthous Ulcers) 249
Cold Sores (Fever Blisters, Herpes Simplex Type I) 250
Boils (Furuncles, Carbuncles) 251
Bed Sores (Pressure Sores, Decubitus Ulcers) 251
Burns (Scalds) 252
Sunburn 253
Leg Ulcers (and other skin ulcers) 254

SKIN SPOTS—
Moles (and unknown spots) 254
Acne (Acne Vulgaris) 254
Blackheads 256
Age Spots (Liver Spots, Lentigo, Senile Lentigines) 257

CHAPPING, CRACKING, ITCHING—
Chapped Hands 257
Chapped Lips 258
Dry Skin, Chafing 258
Itching (itching skin) 259
Scabies (The Itch) 260
Jock Itch 261
Ringworm 261

GROWTHS—
Warts (Papillomas, Verrucae) 262
Wens (Sebaceous Cysts, Steatomas) 263
— Also see section on **Tumors** and Cancer (611-626).

OTHER MINOR SKIN PROBLEMS—
Oily Skin 264
Prickly Heat 264
Heat Rash 264
Rosacea (Acne Rosacea) 265
Enlarged Pores 265
Wrinkles 265
Night Sweats (Excess Sweating, Hyperhidrosis) 266
Body Odor (Bromhidrosis) 267
Skin Rash 267
Erythema Multiforme 267
Pityriasis Rosea 268
Discoid Lupus Erythematosus (DLE) 268
Needle Stick Injury 268
*# **Eruptive and Rash Skin Diseases** (Symptoms of 23 Diseases)* 269

MAJOR DERMAL PROBLEMS—
Major Skin Disorders 270
Eczema (Dermatitis, Atopic Dermatitis) 270
Seborrhea (Seborrheic Dermatitis) 272
Hives (Urticaria) 272
Drug-Induced Rashes 273
Impetigo (Impetigo Contagiosa, Echthyma) 274
Shingles (Herpes Zoster) 274
Psoriasis 275
Erysipelas 277
Keratosis (Sharkskin) 278
Leukoderma (Vitiligo) 278
Cellulitis 278
Lupus Vulgaris (TB of the Skin, Lupus Erythematosis) 279
Actinic Keratoses 279
— Also see **Skin Cancer** (617).
Scleroderma 279

- SECTION 3 -

EXTREMITIES

EXTREMITIES—
Numb Extremities 281
Cold Extremities 281
Frostbite (Chilblains) 281
Hyperthermia 282
Felon (Whitlow) 283
Erythromelalgia 283
Gangrene 283
Raynaud's Disease 284
Buerger's Disease (Thromboangiitis Obliterans) 285
Dupuytren's Contracture 286
Elephantiasis 286
— See **Claudication** (530).

NAILS—
Nail Problems (Fingernails and Toenails) 286
Ingrown Nails 287
Yellow Nail Syndrome 287

LEGS—
Leg Cramps 288
Leg Ulcers 288

FEET—
Foot Problems 288
Corns and Calluses (Callus, Bunions, Warts) 289
Foot Aches 290
Heel Pain 290
Burning Feet 291
Swelling Feet 291
Foot Odor 291
Cold Feet 292
Flatfeet (Pes Planus) 292
Athlete's Foot (Tinea Pedis) 292
—Also see **Bone Spur** (508) and **Knee problems** listed under Joints (511-525).

- SECTION 4 -

HEAD AND THROAT

HEAD —
Sinus Trouble (Sinusitis) 295
— See **Headache** (456), **Common Cold** (222), the sections on **Teeth** (333-339) and **Mouth** (339-343).

HAIR —
Baldness and Hair Loss (Alopecia) 297
Dandruff 298
Oily Hair 299
Dry Hair 299
Gray Hair 300
Ingrown Hair 300
 # Hair Tonics 300
 # Hair Conditioner 300
 # Hair Fixer 301

EYES —
WARNING - EYES ! 301
Eye Problems 301
Eyestrain 302

Computer Eyestrain 303
Mucus in Eye 303
Yellow Eyes (Icterus, Jaundice) 303
— Also see Jaundice (303, 359).
Puffy Eyes (Bags under the Eyes) 304
Itchy Eyes 304
Red Eyes (Bloodshot Eyes) 304
Black Eye 305
Corneal Abrasion 305
Nearsightedness (Myopia) 305
Farsightedness (Hyperopia) 305
Night Blindness 306
Color Blindness 306
Amblyopia (Inability to Focus Eyes) 306
Keratomalacia (Xerophthalmia) 307
Dry Tear Ducts (Dry Eyes, Keratoconjunctivitis Sicca) 307
Sty (Stye, Hordeolum) 307
Chalazion 308
Ulcerated Eye and Lid (Corneal Ulcer) 308
Xerophthalmia 309
Bitot's Spots 309
Entropion 309
Strabismus (Crossed Eyes, Squint) 309
Floaters 310
Scotoma 310
Dimness of Vision 310
Retinal Detachment 310
Toxic Amblyopia (Tobacco Amblyopia) 311
Diabetic Retinopathy 311
Cataracts 311
Photophobia (Light Sensitivity) 313
Inflamed Eyelids (Blepharitis) 313
Conjunctivitis (Pinkeye) 313
Retinitus Pigmentosa (Tunnel Vision) 315
Macular Degeneration 315
Glaucoma 316
Thinning Eyelashes 317
— Also see Sjögren's Syndrome (241).

NOSE —
Anosmia (Loss of Sense of Smell) 317
Nasal Catarrh (Rhinitis. Runny, Stuffy Nose) 317
Nosebleed (Epistaxis) 318
Nasal Cuts and Infections 319
Nasal Polyps 319
— Also see **Allergic Rhinitis** (578).

EARS —
Earache and Ear Infection, **Mastoiditis** (Otitis Externa and Media) 320
Earwax (Wax Blockage) 322
Swimmer's Ear 323
Insect in Ear 324
Tinnitus (Ringing in the Ears) 324
Ménière's Syndrome 325
Hearing Loss (Increasing Deafness) 326
Pressure Problems (Barotrauma) 327
Outer Ear Injury 327

THROAT —
Sore Throat 328
— Also see **Tonsilitis** (703) and **Adenoids** (704).
Pharyngitis 329
Laryngitis (Hoarseness, Aphonia) 329
Snoring 330

- SECTION 5 -
GASTRO-INTESTINAL

TEETH AND GUMS —
Bruxism (Teeth Grinding) 333
Calculus (Tartar, Stained Teeth) 333
Tooth Sensitivity 334
Toothache 334
Tooth Decay (Dental Caries) 335
Mercury Filling Syndrome (Poisonous Dental Fillings) 335
Avulsed Tooth 336
Dry Socket (Post-extraction Alveolitis) 336
Gum Boil 337
Gingivitis (Swollen Gums, Bleeding Gums, Gingival Hyperplasia) 337
Receding Gums 337
Pyorrhea (Periodontal Disease, Gum Disease) 338
Denture Problems 338

MOUTH —
Mouth and Gum Infections 339
Bleeding Gums 339
Halitosis (Bad Breath) 340
Cheilosis (Angular Stomatitis, Geographic Tongue) 341
Loss of Sense of Taste 341
Dry Mouth (Xerostoma) 341
Leukoplakia 342
Oral Thrush 342
Red, Cracking Lips (Chelitis, Perléche) 342
 # Lip Balm 343
— See **Cold Sores** (Fever Blisters) (250)
— See **Canker Sores** (Aphthous Ulcers) (249)
— Cleft Palate - see Birth Defects (687-689)
— Cleft Lip - see Birth Defects (687-689)

GAS AND VOMITING —
Hiccups (Hiccoughs, Singultus) 343
Belching (Eructation, Aerophagia) 344
Flatulence (Gas, Bloating) 344
— See **Colic in Infants** (691) and in **Children** (698)
Heartburn (Acidosis, Overacid Stomach, Gastroesophageal Reflux Disease) 346
Hiatal Hernia (Hiatus Hernia) 347
Vomiting (Emesis) 348
Indigestion (Poor Digestion, Dyspepsia) 348
Nervous Dyspepsia 350

STOMACH —
Enlarged Stomach 350
Achlorhydria (Insufficient Stomach Acid) 351
Excess Hydrochloric Acid 351
Gastroenteritis (Acute Gastritis, Stomach Flu, Inflammation of the Stomach) 352
Chronic Gastritis 353
Peptic Ulcer (Gastric Ulcer, Stomach Ulcer, Duodenal Ulcer) 354
 # Stomach-acid Self Test 355
 # Stomach Tonic 355

PANCREAS —
Pancreatitis 356

LIVER —
 # Nutrition of the Liver 357
Hepatitis 358
Jaundice 359

Infectious Jaundice (Weil's Disease, Leptospirosis, Spirochetal Jaundice) 360
Cirrhosis of the Liver 361
 # Liver Flush 361
— Also see Neonatal Jaundice (694).

GALLBLADDER —
Gallbladder Inflammation (Cholecystitis) 362
Gallstones (Cholelithiasis) 362
Billary Colic 363

INTESTINES, APPENDIX —
Intestinal Cramps (Food Cramps) 364
Malabsorption 364
Dumping Syndrome 365
Ileocecal Valve Syndrome 365
Appendicitis, Acute 365
Appendicitis, Chronic 366
— Also see Celiac Disease (382) and Lactose Intolerance (383).

BOWEL —
Constipation 367
Diarrhea 369
Chronic Diarrhea (Chronic Intestinal Catarrh) 370
Dysentery 370
Turista (Traveler's Diarrhea) 371
Sprue (Psilosis) 371
Irritable Bowel Syndrome (Mucous Colitis, Spastic Colitis, Intestinal Neurosis) 372
Colitis (Ulcerative Colitis) 373
Crohn's Disease (Regional Enteritis, Ulcerative Colitis, Inflammatory Bowel Disease) 374
Diverticulitis (Diverticulosis) 375
Colon Polyps 376
Leaky Gut Syndrome 376
 # Herbal Laxatives 377
 # Overcoming the Enema and Laxative Habit 377

ANUS —
Hemorrhoids (Piles) 378
Rectal Fissures (Rectal Abscesses) 379
Rectal Itching (Pruritis Ani, Anus Itch) 380
Anal Eczema 380

DIGESTIVE —
Anorexia Nervosa 380
Bulimia (Bulimia Nervosa, Binge Eating Disorder) 381
Celiac Disease (Celiac Sprue, Gluten Intolerance) 382
Lactose Intolerance 383
Gluten Intolerance 384
Wilson's Disease (Copper Disease) 385
Copper Deficiency 385

NUTRITIONAL —
Emaciation 386
Pica (craves dirt) 386
Malabsorption Syndrome 386
Beriberi (B_1 vitamin deficiency) 387
Pellagra (B vitamin deficiency) 388
Scurvy (Vitamin C deficiency) 388
Kwashiorkor (Protein starvation) 388
—Also see Pernicious Anemia (442) and Megaloblastic Anemia (443).

WEIGHT —
Overweight (Obesity) 388
Underweight (Thinness) 390
Poor Appetite 391
Cellulite (Lumpy Fat) 392

- SECTION 6 -
URINARY

URINE —
Urine Problems 394
Enuresis (Bed-wetting) 394
Urine Retention 394
Incontinence (Urinary Stress Incontinence) 395
Hematuria (Blood in Urine) 396
Scalding Urine 396

KIDNEY —
Kidney Problems 397
Kidney Stones (Nephrocalcinosis, Lithemia, Uric-acid Diathesis) 397
Renal Colic (Kidney Pain Attack) 399
Nephritis (Kidney Infection, Glomerulonephritis) 399
Nephrosis 400
Bright's Disease 401
Edema (Dropsy, Water Retention) 401

BLADDER —
Bladder Problems 402
Cystitis (Bladder and Urinary Tract Infection, Irritable Bladder) 402

- SECTION 7 -
RESPIRATORY

BREATHING —
Postnasal Drip 405
Croup 405
False Croup (Spasmodic Laryngitis) 406
Suffocation 406
— Also see Asthma (580) and Hyperventilation (493).

BRONCHIAL TUBES —
Acute Bronchitis 407
Chronic Bronchitis (Acute and Chronic) 407
Bronchiectasis 409

LUNGS —
Lung Congestion 409
Pneumonia (Lung Fever) 409
Bronchial Pneumonia (Bronchopneumonia) 410
Lobar Pneumonia 411
Tuberculosis (Consumption) 412
Emphysema 413
Legionnaire's Disease 414
Q Fever 415
Hypersensitivity Pneumonitis 415
Occupational Lung Disease 415
Black Lung (Coalworkers' Pneumoconiosis) 416
Silicosis, Asbestosis 416
Swimming Pool Syndrome 416

PLEURA —
Pleurisy 417

- SECTION 8 -
CARDIOVASCULAR

HEART —

Heart Attack - Emergency / / (Threatened Cardiac Failure) 419
Heart Problems (Cardiac Problems) 419
Pericarditis, Endocarditis 424
Cardiomyopathy (Keshan Disease, Muscular Dystrophy of the Heart) 424
Cardiac Arrhythmia 425
Angina Pectoris 425
Congestive Heart Failure 426
Heart Palpitations 426

CIRCULATORY—
Arteriosclerosis (Hardening of the Arteries) and **Atherosclerosis** (Plaque Development and Hardening) 427
Hypotension (Low Blood Pressure) 429
Hypertension (High Blood Pressure) 429
 # Facts about Blood Pressure 432
Stroke (Apoplexy) 432
Thrombosis 433
 # Lowering Triglycerides 434
High Cholesterol 435
Phlebitis and Thrombophlebitis (Milk Leg, Phlegmasia Alba dolens) 436
Varicose Veins (Varicosities) 438
— Also see **Raynaud's Disease** (284) and # Chelation Therapy (596).

BLOOD—
Poor Circulation and Chills 439
Chlorosis (Green Sickness, chloremia) 440
Anemia (Simple Anemia, Iron Anemia) 440
Pernicious Anemia 442
Megaloblastic Anemia (Folic Acid and B_{12} Anemia) 443
Thalassemia 443
Sickle-Cell Anemia 443
Bleeding (External) 444
Hemorrhage (Internal Bleeding) 444
 # Water Therapies which Control Bleeding 445
Hemophilia 445
Blood Poisoning (Septicemia) 446
 # Blood Purifier 446

- SECTION 9 -
NEURO-MENTAL

MISCELLANEOUS —
Insomnia (Sleeplessness) 448
Narcolepsy (Chronic Sleeping Disorder) 450
Sleep Apnea 450
Vertigo (Dizziness) 451
Neurasthenia (Nervous Exhaustion) 452
Chorea (St. Vitus' Dance, Sydenham's Chorea, Nervous Twitching) 453
Shook 454
Transient Ischemic Attacks 454
Wernicke-Korsakoff Syndrome 454
Nutritional Neuropathies 455
—Also see Nervous Tics (464, 699) and Stuttering (699).

STRESS, ANXIETY, PAIN —
Stress and Anxiety (Nervousness) 455
Headache (Nervous Headaches, Cluster Headaches) 456
Migraine 459
Neck Pain (Stiff neck) 461
 # Pain Control 462
Neuralgia (Neuropathy) 462
Bell's Palsy (Facial Palsy) 463
Tic Douloureux (Trigeminal Neuralgia) 464
Sciatica 465
Brachial Neuralgia (Thoracic Outlet Syndrome) 466
Neuritis 467
Multiple Neuritis 467
 # Strengthening the Nerves 468
Seasonal Affective Disorder (SAD) 469
Tennis Elbow 470
Carpal Tunnel Syndrome 470
— Also see **Claudication** (530), **Intestinal Cramps** (364), and **Muscular Cramps** (527).

CONVULSIONS —
Convulsions (Spasms, Seizures, Fits) 472
Epilepsy 473
 # Antispasmodic Tincture 474

PARALYSIS —
Lou Gehrig's Disease (Amyotrophic Lateral Sclerosis) 475
Locomotor Ataxia (Tabes Dorsalis) 475
Meningitis 476
Meningocele (Spina Bifida) 477
Menkes' Syndrome 478
Multiple Sclerosis 478
Muscular Dystrophy 479
Myasthenia Gravis 479
Parkinson's Disease (Shaking Palsy, Paralysis Agitans, Parkinsonism) 480
Polio (Poliomyelitis, Infantile Paralysis) 482
Post-Polio Syndrome 483
Creutzfeldt-Jacob Disease (Mad Cow Disease, Kuru) 483
—Also see Cerebral Palsy (688) and #Chelation Therapy (596).

MEMORY PROBLEMS —
 # Memory Improvement 483
Memory Problems (Forgetfulness) 484
Korsakoff's Syndrome (Recent Memory Loss, False Alzheimer's Disease) 485
Alzheimer's Disease 485
Senility (Senile Dementia, Cerebrovascular Disease) 487
Organic Brain Disorder (Chronic Brain Syndrome) 488
Attention Deficit Disorder (ADD) 488
Attention Deficit Hyperactivity Disorder (ADHD) 489

EMOTIONAL, MENTAL —
Hyperactivity (Hyperkinesis) 489
Dyslexia (a disturbance of the ability to read) 490
Nightmares 490
Phobias and Panic Attacks (Irrational Fears; Agoraphobia, Claustrophobia, etc.) 491
Anxiety Disorder 493
Post-Traumatic Stress Disorder 493
Hyperventilation 493
Depression 494
—See **Post-partum Depression** (684).
Manic Depression (Bipolar Disorder) 495
Mania 496
Hysteria 497

Melancholia 498
Münchausen Syndrome 498
Mental Illness 498
Insanities (Post-Febrile, Post-Operative, Puerperal Confusional) 499
Schizophrenia (Paranoic, Catatonic, Hebephrenic, Dementia Precox) 500
Autism 501
Demon Possession 502
—Also see Down's Syndrome (689).

- SECTION 10 -
SKELETAL-MUSCULAR

BONES —
Fracture (Broken Bone) 504
 # Strengthening the Bones 505
Broken Rib 508
Bone Spur (Heel Spur) 508
Osteoporosis (Brittle Bones) 509
Rickets (Osteomalacia in children) 510
Osteomalacia (Rickets in adults) 510
Paget's Disease of the Bone 511

JOINTS —
Knee Pain 511
Osgood-Schlatter's Syndrome 512
Chondromalacia (Patellofemeral Pain Syndrome) 512
 # Types of Arthritis 512
Arthritis 513
Osteoarthritis 517
Rheumatism 517
Rheumatoid Arthritis 517
Articular Rheumatism, Acute 518
Muscular Rheumatism, Acute 519
Chronic Rheumatism 519
Gout 520
Bursitis 522
Ankylosing Spondylitis (Rheumatoid Spondylitis, Marie-Strümpell Disease) 523
Temporomandibular Joint Syndrome (TMJ) 524
— Also see **Sciatica** (465, 537), **Neuritis** (467), **Neuralgia** (462), Lumbago (540), and # Chelation Therapy (596).
Ganglion (Ganglion Cyst) 525

TENDONS—
Shinsplints 525
Tendinitis and Tenosynovitis 526
— Also see Gout (520).

MUSCLES —
Restless Leg Syndrome 527
Muscle Cramps (Muscle Pain, Leg Cramps, Charley Horse) 527
Repetitive Strain Injury (RSI, Overuse Injury, Cumulative Trauma Disorder) 529
Claudication (Intermittent Claudication) 530
Side Stitches (Pain in the Side) 531
Fibromyalgia Syndrome (Chronic Muscle Pain Syndrome, Fibromyositis, Fibrositis, Tension Myalgia, Muscular Rheumatism) 531
Myelitis 533
Hernia (Rupture, Abdominal Hernia, Femoral Hernia) 533
Umbilical Hernia (Omphalocele, Navel Hernia) 534

SPRAINS —
Muscle Injuries (Sprains and Strains) 534
 # Athletic Workouts (Strengthen and Build Muscles) 536

SPINE —
 # Posture, Improving 536
Backache (Low Back Pain, Lumbago, Sciatica, Slipped Disc, Lumbar Disc Herniation, Spinal Disc Prolapse) 537
— Also see Sciatica (465).
Lumbago (Lower Back Pain) 540
Scoliosis (Curvature of the Spine, Posterior Lateral Scoliosis) 541

ABDOMINAL —
Peritonitis 541

What you eat greatly affects your health.

1 - BASIC HEALING PRINCIPLES

The basic principle upon which modern medicine is based is twofold: poisoning and cutting. While in training, every physician and nurse is taught that every drug is poisonous. Two primary types of poisons are used: chemical poisoning and radiation poisoning. The other method is cutting. If something is wrong with an organ, cut it out instead of letting it heal.

In great contrast are the natural healing principles which work with the body's own efforts to restore health. Here we find rest, generally brief liquid fasts, light meals, enemas, water applications, fresh air, sunshine, avoidance of harmful substances, and trust in divine power.

Here is a clarifying passage which is outstanding in its simplicity and breadth of understanding; it was written by a pioneer in natural remedies, Ellen White. Paragraph headings have been added to focus on the points made:

The solution is to teach the people: "The only hope of better things is in the education of the people in right principles. Let the physicians teach the people that restorative power is not in drugs, but in nature."

The true nature of "disease." It is a cleansing process: "Disease is an effort of nature to free the system from conditions that result from a violation of the laws of health."

What we should do when a person is sick: "In case of sickness, the cause should be ascertained. Unhealthful conditions should be changed, wrong habits corrected. Then nature is to be assisted in her effort to expel impurities and to reestablish right conditions in the system."

Here are the eight natural remedies: "Pure air, sunlight, abstemiousness, rest, exercise, proper diet, the use of water, trust in divine power,—these are the true remedies."

Everyone should be taught how to use these remedies: "Every person should have a knowledge of nature's remedial agencies and how to apply them. It is essential both to understand the principles involved in the treatment of the sick and to have a practical training that will enable one rightly to use this knowledge."

The use of natural remedies requires thought and work, but is well-worth it: "The use of natural remedies requires an amount of care and effort that many are not willing to give. Nature's process of healing and upbuilding is gradual, and to the impatient it seems slow . . But in the end it will be found that nature, untrammeled, does her work wisely and well. Those who persevere in obedience to her laws will reap the reward in health of body and health of mind."

Prevention is better than treatment: "Too little attention is generally given to the preservation of health. It is far better to prevent disease than to know how to treat it when contracted."

There are important laws of life which govern every part of our bodies, our diet, and our behavior: "It is the duty of every person, for his own sake, and for the sake of humanity, to inform himself in regard to the laws of life, and conscientiously to obey them."

We need to learn about these laws and how they govern the parts (anatomy) and function (physiology) of our bodies: "All need to become acquainted with that most wonderful of all organisms, the human body. They should understand the functions of the various organs and the dependence of one upon another for the healthy action of all. They should study the influence of the mind upon the body, and of the body upon the mind, and the laws by which they are governed."

Health is not the result of chance, but of obedience to law: "We cannot be too often reminded that health does not depend on chance. It is a result of obedience to law."

Athletes understand this principle better than many others: "This is recognized by the contestants in athletic

games and trials of strength. These men make the most careful preparation. They submit to thorough training and strict discipline. Every physical habit is carefully regulated. They know that neglect, excess, or carelessness, which weakens or cripples any organ or function of the body, would ensure defeat."

Failure to understand and practice these principles, and obey these laws of nature—can have effects which reach far into the future: "How much more important is such carefulness to ensure success in the conflict of life. It is not mimic battles in which we are engaged. We are waging a warfare upon which hang eternal results. We have unseen enemies to meet. Evil angels are striving for the dominion of every human being."

When we weaken our health, we weaken our mental and moral powers: "Whatever injures the health, not only lessens physical vigor, but tends to weaken the mental and moral powers. Indulgence in any unhealthful practice makes it more difficult for one to discriminate between right and wrong, and hence more difficult to resist evil. It increases the danger of failure and defeat."

Everyone can be a winner, if he will determine to control himself and practice right principles: " 'They which run in a race run all, but one receiveth the prize' *(1 Corinthians 9:24).* In the warfare in which we are engaged, all may win who will discipline themselves by obedience to right principles. The practice of these principles in the details of life is too often looked upon as unimportant—a matter too trivial to demand attention. But in view of the issues at stake, nothing with which we have to do is small. Every act casts its weight into the scale that determines life's victory or defeat. The Scripture bids us, 'So run, that ye may obtain.' "

If we would have success, we must obey the law of God: "The foundation of all enduring reform is the law of God. We are to present in clear, distinct lines the need of obeying this law. Its principles must be kept before the people. They [the moral law of Ten Commandments and the physical laws of nature] are as everlasting and inexorable as God Himself. One of the most deplorable effects of the original apostasy was the loss of man's power of self-control. Only as this power is regained, can there be real progress."

The mind must control the body, or the mind will lose control of itself: "The body is the only medium through which the mind and the soul are developed for the upbuilding of character. Hence it is that the adversary of souls directs his temptations to the enfeebling and degrading of the physical powers. His success here means the surrender to evil of the whole being. The tendencies of our physical nature, unless under the dominion of a higher power, will surely work ruin and death."

The power of the will must be exercised, to bring both body and mind under the control of God: "The body is to be brought into subjection. The higher powers of the being are to rule. The passions are to be controlled by the will, which is itself to be under the control of God. The kingly power of reason, sanctified by divine grace, is to bear sway in our lives."

We must urge upon men and women the vital importance of self-mastery in controlling the appetites and passions, and keeping the body in good health: "The requirements of God must be brought home to the conscience. Men and women must be awakened to the duty of self-mastery, the need of purity, freedom from every depraving appetite and defiling habit. They need to be impressed with the fact that all their powers of mind and body are the gift of God, and are to be preserved in the best possible condition for His service."

Only in the enabling strength of Christ can this be done: "Apart from divine power, no genuine reform can be effected. Human barriers against natural and cultivated tendencies are but as the sand-bank against the torrent. Not until the life of Christ becomes a vitalizing power in our lives can we resist the temptations that assail us from within and without."

Each of us can have strength to bring our appetites and passions under control: "Christ came to this world and lived the law of God, that man might have perfect mastery over the natural inclinations which corrupt the soul. The Physician of soul and body, He gives victory over warring lusts. He has provided every facility, that man may possess completeness of character."

A surrendered life makes obedience a delight, not a drudgery: "When one surrenders to Christ, the mind is brought under the control of the law; but it is the royal law which proclaims liberty to every captive. By becoming one with Christ, man is made free. Subjection to the will of Christ means restoration to perfect manhood."

Obedience to God is freedom to be happy: "Obedience to God is liberty from the thraldom of sin, deliverance from human passion and impulse. Man may stand conqueror of himself, conqueror of his own inclinations, conqueror of principalities and powers, and of 'the rulers of the darkness of this world,' and of 'spiritual wickedness in high places.' "

The above quotations were taken from *Ministry of Healing*, pages 127 to 131, by Ellen White. The book was first published in 1905; yet the health and healing principles in it are needed as much today as then. (Single copies of *Ministry of Healing* may be obtained from the publisher of this present book, for $5.00 a copy, postpaid in the U.S.)

2 - BASIC METHODS OF HEALING

Introduction: You will find, scattered throughout this present volume, the J.H. Kellogg, M.D., formulas for natural healing. Each one is identified as such in the indexes, so you can easily locate them. They deal primarily with water treatments. In addition, John Kellogg also used a variety of other natural remedies.

Another major figure in the natural healing movement was John H. Tilden, M.D. (1866-1940). He was a pioneer in natural remedies; and, along with Trall, Jackson, White, and Kellogg, he made immense strides in providing us today with a systematic regimen for natural healing.

Dr. Tilden had a medical practice in Denver, Colorado, where he operated a 200-bed natural healing hospital; and, on the premises, he conducted the Tilden Health School. For over 25 years, he published a monthly magazine which did not close down until a year before his death at the age of 90, in 1940.

From his writings, and from those of others who have used his methods, the following information has been gathered.

These principles, which are little understood by many in our time, should be taught to every grade school student. A special required two-semester class should be taught in every high school in the land!

The principles you will learn here, if followed, can help you and your loved ones for the rest of your lives. That is how important they are!

Here is a brief summary overview of the Tilden method of natural healing:

Importance of proper care and diet: Flowers, fruits, and vegetables which are grown in good soil will always be superior to those grown on depleted soils. Every experienced farmer knows that proper nourishment of livestock and crops is vital to good production. People who raise show dogs are very careful to give them balanced nutriments, supplemented by significant amounts of vitamins and minerals.

Yet basic scientific knowledge of human nutrition is almost completely ignored in the everyday feeding of children, as well as the diet of teenagers and adults.

Good health can be built, and disease prevented, by eating right and taking proper care of the body. The mind will be vigorous and achieve its greatest development when the body is well.

The body's self-healing mechanism: It is a remarkable fact that, with the help of God, the body can heal itself. It is normal for a person to be well, eat the right food in the proper amount, and have the energy to work hard. The body has built-in ways to process the food into the needed energy.

But when that individual becomes ill, the body also has built-in ways to produce healing. (We say "built-in"; yet this is not entirely correct. It is only the power of God which can make us well and keep us well. Indeed, it is God who not only made us but also the good natural food we so much need!)

The human system is subject to wear and tear; but, when disease strikes, the regular functions are temporarily set aside and the body goes to work to regenerate itself. Instead of using energy for food digestion and muscular activity, it switches over to cleansing, repair, and rebuilding.

When a person becomes sick, his organs have become weary and overloaded with toxins. The word, "Dis-ease," is what the word says: The body is no longer at ease. Disease is actually an effort of nature to cleanse the body of the toxins; let the body rest awhile, and rebuild the organs. Disease is meant to be a friend, not an enemy.

It is at this time that we must help the body cleanse the system of impurities and restore itself to health.

When the sick person rests in bed, while receiving only a *minimum* of the most nourishing and most digestible food, his body turns its attention to carrying on the healing process. Results can be amazing. What the sick need is pure air, wholesome food, gentle help by attendants, rest, and pure water.

The medical route: But, before explaining how that is done, let me answer a question you may have at this point: How is the method used by the medical association different? Rather than cleanse the system of impurities, it tends to do just the opposite: Chemicals, known to be poisonous, are placed into the body. Yet the body seems to get well! What has happened here?

The body has, as it were, shut down or reduced all extra functions so the healing can take place. You feel weak, you cannot handle much food, you want to lie in bed and rest your mind and body. The healing function is in progress and it needs help in order to succeed.

But, instead, a poisonous drug is introduced into the body. Immediately, the body is aroused. "Hey, I must stop the natural healing process—and fight that poison!"

Everything is now changed. The sickness may apparently end or you may get sicker some other way. Perhaps surgery will be the next step.

But true healing did not take place. Additional poisons are now in the body, which will only weaken it for years to come. They can be very tenacious and are frequently lodged in the body, to bring you grief at a later time.

Let us now return to the natural method of bringing about the healing process. If the condition is serious, we do well to begin with a liquid fast, followed by a juice diet, and then by light meals. We will discuss all of these in this chapter. If the situation is not too serious, we may begin with a light juice diet. Let us first consider that.

The Juice Diet: Wholesome food for the person who is impaired in health consists of fresh, raw fruit juices and fresh, raw vegetable juices. This is a juice diet.

Three or four times a day, a glass of fresh, raw juice is given. It may be fruit juice or it may be vegetable juice. Sometimes it may be a fruit-vegetable juice.

The best fruits are citrus or pineapple. The best vegetables are carrots, beets, and/or celery. These are "salad vegetables." The best fruit-vegetable combination juice is carrot and apple.

When a person is distressed (physically, mentally, or emotionally), this juice diet will bring him back to normal far better than the taking of drugs.

The ordinary staples (such as nuts, bread, cereals, etc.) are set aside for a period of a few days to a few weeks, depending on the nature and severity of the condition.

Sometimes, a longer cleansing program is needed and a *rotation diet* is maintained for a time: This may involve several days of liquid fasting, followed by 1-3 days of light meals.

It is obvious that all this must be done carefully. Pray for guidance and proceed carefully.

Such a program enables the body to cleanse itself of retained wastes instead of allowing those wastes to remain and cause the organs to deteriorate. When drugs are introduced, this only accelerates the deterioration process! Too much unnecessary food clogs the system; eating junk food, smoking cigarettes, and drinking liquor and colas only add to the eventual misery. Taking pills and drugs in order to reduce the stomach trouble, headaches, sleeplessness, and minor ailments which result—does not help the situation. Disaster is sure to result.

Before excessive medication and drastic surgery are

considered, it is generally better that a rest and juice diet cure be tried for several weeks.

A person who is ill needs blood cleansing and tissue cleansing. This is done by means of rest and fresh, raw fruit and vegetable juices. Sick people frequently have little or no appetite. This is normal! Work with nature instead of against it.

At such times, we should not use force-feeding by intravenous methods. Such desperate measures do the sick more harm than good. It is true that, at times, the physician must make use of intravenous nourishment—but this is primarily in cases of coma, insulin-shock, or accidental loss of blood. (A similar mistake is made when post-operative cases are fed the same foods that, in a measure, made them sick in the first place. Faulty food is a basic cause of the chronic diseases. Faulty food affects the digestive structures by irritation, inflammation, ulceration, and neoplastic changes, as well as the entire biochemistry of the body.)

We should, instead, let those who are sick rest and get well. Here is how this is done:

Every home should own a food liquefier and juice extractor. A food blender is good when you are in health; but an electric juicer (juicing machine) is needed both in times of health and illness. A glass of freshly made raw carrot, beet, or celery juice will help the well remain well and the sick get well. This is not fruit and vegetable pulp, but juice.

In some hospitals, fruit juices are given in addition to the regular menus of the day. This cannot work. An individual who suffers from an inflammatory disease process (such as hypertension, bronchial asthma, arthritis, nephritis, or endocarditis) can be helped in a really curative manner only when systematically treated by means of raw fruit and raw vegetable juices. They provide an ideal combination of staple food to meet the needs of the sick, so they can regain their health.

Lemon-water fasting: We have looked at the fruit and vegetable juice diet. But there is also the fast. A *"healing crisis"* often occurs at some point in an illness. (More on the healing crisis elsewhere in this book; look it up in the index at the back.) If the person is experiencing an infection, a healing crisis generally occurs near the beginning of the sickness while there is a fever, etc. In most cases, a fast should be given during this fever and/or during the healing crisis.

This fast generally consists of water with lemon juice or grapefruit juice, unsweetened, taken by the sick person as often as it can be enjoyed without forcing.

This is a water-lemon fast. It is not a strict water-only fast, which is not as beneficial. Remember that a water-only fast is generally not the best.

In some cases, it is well to have the fast continue for one to three or more days. This is especially needed during the healing crisis (which is usually about three' days duration, but sometimes as long as seven days).

At other times it is best to alternate between fasting and a juice diet, rotating between a day or two on a water and lemon juice fast, a day or two on juices, then back to the water and lemon juice fast.

Sometimes it is best to give only juices for several days. But, at times, it is best to alternate between a juice diet for a day or two, followed by light meals for a day or two.

As a general rule, it is best not to give light meals until after the primary symptoms (fever, etc.) are past, the crisis is over, and the person is ready to start recuperation.

Fasting provides physiological rest for the organism. It provides the body with its best chance for throwing off the retained impurities plaguing the body cells. Organs and structures throughout the system are able to regain, as much as is possible, their former strength. No chemical, cutting, or radiation can provide that healing; only the body's own resources can do it. —And the body will try to do it, if permitted! Work with the body, not against it.

Nature is a wonderful healer and physician. Soon after an individual is put on a fast, the system begins to oxidize (burn up) materials from the tissues of the body. These are used for basic life functions (basal metabolism) while the healing continues.

Obviously, fasting must be used thoughtfully and skillfully. It is not a stereotyped method, to be applied equally to all. One individual may be able to fast with complete comfort while another may become very distressed on one fast—and perhaps not on another. A person who is mildly ill will actually feel better on the fast. But one who is quite sick, or has some organs in poor shape, may feel worse during a first attempt at fasting.

A person who is normally very thin may not be able to fast as long as a person who has average or excess weight. If it is a chronic condition, requiring longer fasts, he may need a three-day fast, alternated with three days on light fruit meals or light meals (both are described below).

Fasting alternated with light fruit meals: A variation which works quite well is to alternate a fast with light fruit meals. The light feeding consists of fresh, raw fruits—mostly oranges, grapefruit, pineapple, and their juices—while the fasting consists of water and lemon juice only. The fast on lemon juice and water gives the whole organism the most effective opportunity to cleanse itself of its accumulated and retained wastes.

But this fasting cannot go on too many days, without the possibility of organic or functional damage. Fasting (living on water and lemon juice) is low-level starvation. So one must be careful and not overdo it.

Do not overdo it! Think, pray, and ask God to help you know what to do next. When in doubt, you may need to move from a fast to a juice diet for a meal or two. Perhaps a light meal is needed before returning to the fast. Thoughtful consideration is needed.

During the fasting process, the body consumes some of its stored chemicals (including calcium, iron, phosphorus, and various other tissue components). The one who is fasting is very weak, even while lying comfortably in a warm bed. He may get severe palpitations of the heart when he tries to sit up or walk to the bathroom. While on a fast, he needs an experienced helper, nurse, or physician. He needs to be observed very carefully. The fast must only be carried to the point where he can take it with psychological comfort.

When in doubt, put him back on additional nourishment. This may be a light fruit meal; it may be best to put him on the juice diet of fresh, raw fruit and vegetable juices.

Or he may need a light meal (described below).

If he is in the midst of a healing crisis (which frequently does not require more than 1-3 days before the fever breaks), it is best to keep him on the water-lemon juice fast, with possible rotation back and forth to fruit and vegetable juice. Remember, if he can remain on the water-lemon fast during the crisis, he will recover more quickly. Yet you must watch him and do what is best in the situation.

But if the crisis is extended longer than three days, you may need to give him a meal of juice or food, on a rotational cycle.

Extra warmth: While the person is fasting, he needs extra warmth. The extremities (the feet and hands) generally get cold during the fasting period. It is therefore necessary to apply one or two electric pads, or an electric blanket, day and night in order to keep him comfortably warm.

Although important, this is often not done, even in the hospitals.

The avenues of elimination: At this juncture, we should consider another aspect of physiology. The body is constantly producing wastes. It tries to throw them off through the *"organs of elimination,"* which are primarily these: the bowels, the kidneys, the lungs, the skin, and spitting.

If too much waste is produced (because of overeating, wrong eating, overwork, and a lack of rest, exercise, and fresh air), then the body becomes overburdened, and sickness and organic breakdown occur.

During natural healing, the system goes into high gear in its efforts to eliminate these poisons. It must be aided in its efforts.

We must *"open all the organs of elimination"*; that is, we must help the body throw off toxins through the four avenues by which it can do it:

The bowels - Daily enemas or colonics must be given.

The kidneys - The sick person must be given an abundance of fluids to drink. (This also helps the other avenues of elimination function better.)

The lungs - There must always be a current of fresh air in the bedroom of the sick person.

The skin - Daily baths must be given.

To the above four, we can add a fifth. This is spitting. Both the blood and lymphatic system carry waste away from the cells to the organs of elimination. The lymphatic system empties part of its load through the right thoracic duct and into the back of the mouth, so the phlegm can be spit out. Try to do this rather than swallowing it. At a time when your body is trying so hard to cleanse itself, do not endlessly recycle phlegm!

And we can add a sixth: cell and tissue cleansing. Like the other five, drinking plenty of water and juices helps here also.

Water is the best way to cleanse the system of impurities. Apply it internally, by drinking water, diluted fruit juices, and raw fruit and vegetable juices. Apply it externally in baths and water treatments.

Drinking fluids to cleanse: In order to cleanse the blood and lymph of impurities, one has to drink fluids. This consists of water-lemon fasts or fresh fruit or vegetable juices; never a water fast alone. Keep in mind that water alone does not cleanse as well when it is not accompanied by juice. The vitamins and minerals in the juices aid directly in the cleansing and rebuilding process.

Enemas and colonics to cleanse: During a fasting period, two daily enemas (or colonics) should be given. (Instructions on how to make a colonic apparatus are given in the back of the author's book, *The Water Therapy Manual*.) Each enema or colonic consists of plain water that is mixed with the juice of a lemon. Up to 3 pints should be given to the person as a matter of routine—while he is fasting.

At any other time in the healing process that he is not having proper bowel movements, he should also be given enemas or colonics. This is important. But never put soap suds in the water! You may wash the skin with soap, but do not put it in the body. Remember the basic rule: Never place poisons in the body.

Medical knowledge has it that a person does not need a bowel movement when he is not eating. Yet this is not true. During the healing process, toxic substances are being drawn from the tissues. They need to be eliminated from the body; and this cannot be fully done by the kidneys, lungs, and bathing.

(In the disease sections of this book, various herbal enemas will be mentioned. They can be used in place of the water-lemon juice enema formula. An enema, with added catnip tea, works well for children.)

Wastes accumulated in the colon must be washed out once, twice, or even three times a day. During a fast, enemas or colonics must be used for this purpose. If this is not done, wastes are absorbed into the bloodstream and carried throughout the body.

Baths to cleanse: If the person is in the healing crisis, give him a sponge bath once or twice a day while he is in bed. If he is able to do so, give him a couple showers or a tub bath each day. However, tub baths are often too taxing and may cause fainting or weakening of the one who is quite ill.

As a rule, water placed on the skin enables the skin to throw off more poisons than it would otherwise do. Yet water on the skin also has other uses:

- If a person is in a fever, you will need to cool his body with sponging or other methods.
- If he has an inflammatory condition, you will want to apply one or more water treatments.

Light exercises: When a sick person is in bed, he is obtaining the extra rest he so much needs. But a little movement is also required from time to time, to help his lymphatic elimination. The lymph only moves by muscular activity.

Encourage him to move lightly every so often. This may be simply a matter of shifting and flexing the arms and legs. If the person is on a lengthy program of overcoming a chronic disorder, he needs to be taught to regularly extend, flex, and rotate each muscle every so often. This includes the arms, hands, legs, feet, abdomen, shoulders, and neck. Although this may seem complicated, it is not. It is just a matter of some simple body movements. He

may do this while in bed or sitting on its edge.

Summary to this point: Let us summarize the typical regimen.

• *Water-lemon fast*—First comes the fast of water and lemon juice, with no sweetening. Continue this until the fever crisis (typically 1-3 days) is past. Give him *as much* water-lemon as he wants, *as often* as he wants it.

• *Rotational fast: juice*—If there is a need for a longer fast, you may find it best to alternate it with a juice diet of fresh fruit and vegetable juices; perhaps a glass of fresh juice once a day.

• *Rotational fast: light meal*—If the fast is unusually long, as in the case of very chronic diseases, you may alternate it with light meals; perhaps fasting for 3 days, followed by light meals for 3 days.

Always give 1-2 enemas or colonics every day when fasting.

• *Juice diet*—Then comes the juice diet. If the illness is not severe, you may omit the fast and only place him on the juice diet.

Three or four times a day, a glass of fresh, raw juice is given. It may be fruit juice or it may be vegetable juice. Or it may be a fruit-vegetable juice.

• *Light meals*—Next comes some solid food. Let us consider that now.

Light meals: Sometimes a light meal is given alternately with a juice diet (a day of one, followed by a day of the other, etc.).

But, when the crisis from a fever or other inflammatory illness is past, a light diet should be started. The person is now recuperating. Healing is still going on, but he definitely "is on the mend." Or perhaps he is recovering from severe arthritis, will continue receiving care for an extended period, and needs to eat light meals alternated with a juice diet.

Such foods should include some solid fruits that are raw rather than cooked, raw vegetables in the form of a salad, and steamed vegetables once a day. A protein food once a day may be included.

The kind of protein food will depend on the type of ailment, the age of the person, his weight, and other factors. For example, one who has hardening of the arteries should necessarily be fed a lighter protein diet than one who is suffering from a milder problem.

No meat should be given to the person who is cleansing or recovering! No junk food! No processed, white-flour food! No fried, greasy food! No caffeine, tobacco, alcohol, or hard drugs! And, if at all possible, no medicinal drugs! And, after he is well again, he does well not to return to such things.

It is true that eggs have blood-building properties *(cf. Counsels on Diet and Foods, 204, 365, by E.G. White)*. Yet eggs, if used at all, must be used judiciously. People with a tendency to malignancy or actual malignancies must not be given any eggs. Those with skin diseases cannot handle eggs. Eggs have a sulphur-containing protein, so they cannot be given to anyone with a degenerative disease.

Meat contains a variety of substances which weaken and infect the body.

Milk has its own dangers, including contamination. Every public health officer knows that meat and milk are two of the most dangerous foods.

Yet for those who feel they need milk, it is more easily handled by those convalescing from chronic diseases than by those who are very ill. However, the very chronic types of inflammatory diseases (such as arthritis, bronchitis, and sinusitis) react unfavorably to milk and milk products.

Starchy foods and sweet foods are handled much better by the chronically sick than are protein foods. The invalid needs first to have been prepared for a mixed (building-up) diet by having undergone an initial fast, followed by a juice diet. Then he will be able to properly digest starches and sugars to gradually gain body weight and energy.

What are the most easily digested starches? Two are baked potatoes and steamed brown rice. But they must be prepared without salt, butter, oil, or grease. The third is toasted bread, ideally zwieback. Zwieback ("twice-toasted" in German) is made by taking whole-grain bread and, after it has been baked, toasting the slices in the oven until it is firm throughout. (A toaster does not do this as well.) This helps dextrinize the starch and render it more digestible. The heat converts the starch into intermediate dextrines.

The light diet includes a mixture of starchy foods and raw fruits, along with the raw vegetable juices, raw fruit juices, some palatable salads, and those raw vegetables which can be palatably chewed and enjoyed. A certain amount of fat (in the form of unhydrogenated vegetable oil) can be added to the starchy foods to make them more palatable; but this must be added to the food on the plate as it is served, not to the cooking.

Thousands could be helped who would follow this healing procedure of water-lemon fasting, raw fruit and vegetable juice fasting, and the above light meals for a time.

Someone may ask, exactly how many days on this and on that? Each case may be different. Yet if you will pray for help, think, watch, and be ready to make a changeover to a different diet when the need arises, you can have success.

Pointers to keep in mind: Fasting removes cellular wastes from the skin and mucous membranes. A sufferer from the irritation and inflammation of hay fever or asthma can get great relief by a properly managed fast of 7-10 days, followed by a correct diet. (But it may require a month for the wheezing to stop and 4-6 months on this careful program for the problem to be overcome.) A deep-seated disorder, such as arthritis or inflammation of the joints, may require a longer period of fasting for relief.

Individuals with poor kidney elimination may be troubled by mild or severe symptoms of uremic poisoning during a stringent fast, because urinary wastes thrown off by the tissues are more poisonous than bowel wastes. They may irritate the kidneys or bladder. Adding colonic irrigation to the water-lemon juice intake helps to eliminate those toxins more rapidly.

It is remarkable what can be done in the hands of a person who is skilled in caring for people. Using these methods (and obtaining the full cooperation of the patient), here are some of the things which repeatedly have been accomplished:

• Placed on a natural healing program, a drug user can generally stop his medicines; and tobacco / alcohol users can be released from their addictions. After several days of fasting, the tobacco user loses his taste for the tobacco and the coffee drinker loses the craving for caffeine. The alcoholic can lose the craving more quickly and thoroughly by means of fasting than in any other way.

• Skin ailments of prolonged duration, such as psoriasis and other forms of eczema, have responded very well to fasting methods.

• Bronchial asthma in individuals who had been sick for over a decade were cured by a few fasting periods, alternated with a properly chosen diet.

• The chronic disease complex, called arthritis (even when many joints are immobilized and deformed), responds well to the fasting method.

• The younger the person, the quicker the healing occurs.

• There are some conditions which, through long years of abuse, are entrenched. They may require many months of care, sometimes a year. Yet any other approach would require many years of treatment with drugs, as the condition keeps getting worse.

• In some cases, diabetes mellitus requires some insulin during the fast, especially for juvenile diabetics. Short fasting periods are safer and more effective for such people. But, in most other cases, medicinal drugs are not needed on a fast.

• If a child has a cold, he should be placed on a short fast; he should not be given food "to feed the cold to death."

• Children would never have dangerous complications, such as mastoid infections or middle-ear diseases, if they were quickly placed on a short fast to stop the infection at its inception.

• Raw vegetable salads can be given, in extracted juice form, to a stomach-ulcer case. This works quite well.

• In the late stages, the fight to control cancer is difficult. The one with cancer has much to gain by body-cleansing treatments which include fasting. Early stages of the disease are marked by fatigue, weakness, and skin eruptions such as eczema and warts.

• In the late stages of cancer, the body actually shrinks. It loses weight, despite the Jell-O, puddings, meat, gravy, and canned fruit given to the patient in the hospitals. The cancer sufferer may lose 100-150 pounds. This occurs because the body cannot regenerate itself on ordinary food.

• If those individuals were, every day, fed 3-4 glasses of raw vegetable juice and also freshly made fruit juice, their bodies would not suffer from starvation and cachexia.

The extent of the malnutrition is so serious that, in very late stages, spontaneous fractures of various bones occur. This could have been prevented by feeding several glasses of raw vegetable juice every day.

The post-recovery diet: What should I eat after I am well again? Read the two chapters, *Dietetic Principles for Health and Healing* and *Vitamins, Minerals, and other Nutrients.* If you are really serious about keeping well—and not slipping back into a diseased state—then your future can be much brighter.

Fasting, as a method of *preventing* disease, should not be ignored. It is as important for people in good health as it is for those who have succumbed to, or been overwhelmed by, disease.

Once or twice a year, an adequately managed fast of 3-10 days can do wonders for the man or woman who has reached the age of 35 or 40. Because your body is not as filled with morbid wastes, you will feel more comfortable while on the fast than will a person who is sick.

Fasting once or twice a year is a powerful tool to help the body cleanse itself of accumulated wastes. Fatigue, constipation, premature aging, and sclerotic changes of the arteries, nerves, and heart could be prevented by occasional fasting periods, followed by correct dietary programs. Everyone over 35 should do this.

But if you are very thin, it is best to have not more than 3 fasts a year, with only 3 days on each fast. Some individuals do best by skipping only a single meal and going to bed during that time.

If properly done, tumors, in their early degenerative condition, may be reabsorbed by bodily reconstructive changes; chronic ear, nose, and throat conditions can be cleared up.

Remember to always take enemas during a fast.

3 - SIX TILDEN FORMULAS

We are here dealing with a subject which is not commonplace to many people. All that some know is drugging, tubes, and surgery. So it would be well to amplify on the above Tilden principles by giving several examples of how he used them in giving his treatments. (Cross references to these examples will be placed in the main disease sections of this book.)

COMMON COLD

For more on the common cold, see p. 222.

Put the person, whether an adult or a young child, to bed right away. Do not feed a cold. Give an enema. A purgative or laxative may take as long as 10 hours before the cleansing effects occur; but an enema will do it in just 10 minutes. During that 10 hours, much toxic absorption from the bowels into the bloodstream can take place.

Follow the enema with a heat application of one or two heating pads or an electric blanket, to warm up the body parts which are chilled. Cold feet and hands are often found in people with a "head cold." They need to be warmed up quickly. This removes excessive amounts of blood from the congested head and chest areas. Turn the heat down only to the degree that the limbs become warmed.

Give him some fruit juice with water (from half a grapefruit in half a glass of cold water or juice of half a lemon in half a glass of cold or hot water, unsweetened). Do not give food, milk, coffee, regular tea, etc. The body cannot properly digest even good food, much less junk food, while fighting an infectious inflammation. One to 3 days on lemon juice and/or grapefruit juice and water is quite safe.

Give only fruit juice and water until the nose has ceased to discharge watery or thick material. Keep him in bed and quiet.

If a headache is present, place a cold moist towel or icebag on the forehead or on top of the head. When the

headache is caused by congestion and nerve strain, it will clear up quickly without any medicines if the person is allowed to rest quietly in bed, even if he cannot sleep.

Convalescing from a cold requires one week, possibly two, to properly build up strength to resist a future cold. Why so long? Because the whole body is being cleaned out. *This is, in reality, a wonderful process.* Let it work itself out properly; and your life will be more pleasant, freer from later crippling disease, and you will live longer. If you try to stop the process too early, especially by taking drugs, then the problem has been stifled, not eliminated—and years later more serious diseases will result.

Diet during this recovery period will depend on the person's weight and appetite. It is always safe to give a raw fruit diet for several days: lemonade that is sweetened with honey and raw fruits for breakfast, dinner, and supper.

After 3 days on a fruit diet, the noon and evening meal may include steamed vegetables and a small raw salad with some almonds or pecans or a baked potato. Chew it well.

By this time, the bowels should be moving normally and enemas are no longer needed. The cold will have been eliminated without the use of drugs.

ASTHMA

For more on asthma, see p. 580.

Using the Tilden method, the wheezing may be relieved within 4 weeks; but the complete problem will not be eliminated for 2-6 months or more. Asthma tends to be entrenched; and it takes time before it is eliminated.

Breakfast: Juices of two fruits and some solid fruit, for which there is an appetite. The fruit juices are diluted with hot or cold water. A small amount of honey may be added to diluted lemon or orange juice. Asthmatics can eat fresh or stewed fruits, but only in small portions. Cooked fruit must not be sweetened with sugar. Half of the above breakfast is eaten first thing in the morning and the other half in mid-morning.

Lunch: A raw salad is given about noon, as much as he has an appetite for. This salad may be 1/6th of an average head of lettuce, a grated raw carrot, 1/4th of a pear or avocado, some raw celery, and a little orange juice to season it all. No oil or cream dressing. In addition, 2 steamed vegetables (1 green and 1 yellow) may be given instead of bread. No crackers, milk, or cake.

Rest and sleep after this meal, for 2 hours until he is well.

3 or 4 p.m.: Fruit and fruit juice, same as at breakfast.

Supper: An early supper, same as lunch.

No food before bedtime.

No social life, except for a radio by the bed for the first 6 months.

PERNICIOUS ANEMIA

For more on pernicious anemia, see p. 443.

Here is a sample case; remember that the care and diet can vary according to the individual. This person had a good digestive system, did not have a healing crisis, and needed to solve an ongoing problem. So a fuller diet was given to him.

He was given a fresh glass of grapefruit juice first thing in the morning. An hour later, breakfast of raw fruits in season. It consisted of 2-3 kinds of fruit; and he was told to eat only one kind every hour. In addition to the fruit, he was also given a glass of freshly made raw vegetable juice (consisting of celery leaves and stalks, beet tops, carrots, lettuce, and parsley), some almonds (to be chewed slowly and well), and 2 slices of whole-wheat bread with a little vegetable oil on the bread. He was told to eat the nuts and fruit at one time and the bread and some sweeter fruit an hour or two hours after the nuts. Thus his breakfast was divided into 2-3 periods. In his case, he needed to build his blood.

Noon meal: One glass of raw vegetable juice (same as for breakfast), raw salad materials to chew, 2 slightly steamed vegetables (green, average-portion), lentils, and a few almonds (to be chewed well).

Mid-afternoon: Glass of freshly made orange juice and glass of raw vegetable juice.

Evening meal: Some almonds (chewed slowly and well), raw green salad (lettuce, cucumber, celery), 2 servings of steamed vegetables (1 yellow and 1 green), and raw fruit for dessert.

No drugs of any kind, liver, or liver extract were given. The patient was given showers or sponge baths instead of tub baths, which are more debilitating. He was given enemas when the bowels did not move naturally.

After the first 3 weeks of treatment, instead of the nuts at noon, the patient was given a baked potato twice a week with the noon meal, alternating with brown rice or buckwheat once or twice a week.

Because eggs are needed to build up the blood, his breakfast was modified to include 2 eggs every morning. But the evening meal remained the same.

After 5 weeks, he was strong enough to take his own tub bath and walk around outside.

DIABETES

For more on diabetes, see p. 547.

Here are some helpful hints for treating this condition: Raw, fresh vegetables are the safest foods for the diabetic. Salads that are freshly made of raw cabbage, lettuce, celery, radishes, tomatoes, and seasoned only with lemon juice. Do not give him cooked vegetables, meats, bread, etc. He should eat raw salads for breakfast, dinner, and supper.

Raw fruits which are low in sugar can also be used. This would include grapefruits, apples that are not too sweet, peaches, and pears. The sub-acid and acid fruits help burn up excess sugar from the blood and tissues. The raw salads provide alkaline mineral ash, which tends to soak up cellular wastes and help prevent diabetic gangrene and other complications.

Feeding him a breakfast of sour fruits (such as slightly diluted lemon juice, grapefruit, and raw apple) helps reduce sugar in the blood and urine to an impressive degree. Before insulin was discovered, Dr. Da Costa used lemon juice as a medicine, to oxidize excess blood sugar in the body of the diabetic. This is still very useful. The diabetic relishes pure lemon juice. And it quenches thirst very well, because it burns up excess blood sugar without causing insulin shock.

Fasting is very helpful in treating diabetes. It is given

alternately with raw salad and raw fruit feeding. During the fast, only give slightly diluted lemon juice. The juice of 4 lemons is placed in a glass, then filled with water. The diabetic takes this as often he can, without forcing. (Remember not to "chew" lemon juice; swallow it, so as not to injure the teeth.)

Two enemas are given each day (2-3 pints water, plus juice of a lemon).

When he is ready for food other than raw fruits or vegetables, give him slightly cooked leafy green vegetables, without seasoning.

Be very careful about giving him any fats; because he cannot metabolize fat as a normal person can. In him, fats break down in the blood into more severe poisons than excess sugar. Many diabetics are overweight. But if the one you are working with is thin, you must still give him some oil, but only a small amount. Give him a little avocado.

For proteins, give him a few nuts.

Starchy foods must be used in great moderation by diabetics, especially the young. But young people who participate in energy-consuming activities must have some starch.

Insulin may be needed, especially for juvenile diabetics. But, on this diet, they will require only small amounts of insulin. (The less insulin taken, the less likelihood of complications or blindness in later years.) It is much easier to regulate older diabetics without having to give them insulin.

TONSILLITIS

For more on tonsillitis, see p. 703.

Inflamed and infected tonsils can be treated by putting the patient to bed and keeping him there. He should be on a diet of oranges, grapefruit, fresh raw pineapples, and two raw vegetable salads per day. (Anyone, child or adult, can live on such a diet while resting in bed quietly for a month to six weeks.) Within a relatively short time, the tonsillitis problem will be gone. Such a treatment is superior to surgery for diseased tonsils. The bowels must be evacuated twice a day, using enemas if necessary.

ALCOHOLISM

For more on alcoholism, see p. 608.

The food intake during the first three days consists of freshly made orange juice, grapefruit juice, and lemonade (the latter sweetened with a little honey). These are given to the person at 2-hour intervals. At his bedside is always one or two glasses of fruit juice with an ice cube or two in it. Cold drinks are not only soothing, but also a good substitute to satisfy the craving for liquor.

The bowels are cleansed once or twice a day with an enema or colonic.

After 3 days on this program, a building program is begun. By this time, there will be a good appetite for a full breakfast: a slice of toast, a small dish of cereal with almond nut milk on it. Fresh fruit is kept by the bedside, to be eaten whenever desired.

For lunch, a steamed vegetable, baked potato or rice, and a glass of raw vegetable juice.

In the evening, a raw salad, sprinkled with ground nuts (or a small handful is given to be chewed well), steamed vegetables, and a glass of fresh fruit juice.

In concluding this brief overview of one of the giants of the nineteenth and early twentieth centuries' natural healing, it is intriguing to note that Trall, Jackson, Kellogg, or Tilden never used vitamin / mineral supplements. Their nutritional importance was only beginning to be discovered during Kellogg's and Tilden's last years. Nor did those men work much with herbs. Nearly all their remarkable healing work was done with fasting, simple diet, rest, and water therapy.

Therefore, with the additional nutritional information available today (and much of it is included in this book), we should all the more easily be able to resist and overcome disease.

But the counterpoint fact is that, today, we have far more poisons in the air, water, soil, plants, processed foods and animal kingdom than they had back then. In addition, far too many of us pay for high-priced poisons which we regularly take for our many ailments, brought on by the other poisons in our environment and food.

There is no doubt that we need all the help we can get. So, when we become ill, let us not swallow or inject an additional load of toxic substances.

4 - THE HEALING CRISIS

Physicians and laymen have known about the healing crisis for thousands of years. During the healing process, the body tries to throw off toxins and poisons. What is known as the "healing crisis" frequently occurs in illnesses. The body seems overwhelmed with all the toxins and wastes it is trying to throw off. The organs of elimination (bowels, kidneys, lungs, skin, nasal passages, throat, bronchi, and urinary organs) become congested, crowded, and irritated.

During this crisis, that which appears to be disease symptoms appear. These may be open sores, perspiration, diarrhea, boils, colds, kidney and bladder infections, fevers, etc. But this is not a new or intensified disease—it is just part of the healing process. The body knows it must eliminate the wastes before it can begin rebuilding; so it works valiantly to do this.

Physicians sometimes try to stop the process by introducing poisons (drugs) into the system. Immediately, the body stops throwing off wastes—stops the crisis—and turns its attention to the terrible new invader. The body may appear to be resting quietly now, with the symptoms reduced or gone; but, in actuality, it has been prostrated by the drugging.

Let us now return to a healing crisis and its symptoms. They are part of the cure, and should not be feared. Just work with the body, to help eliminate those toxic wastes. Open the channels of elimination by means of drinking water and fruit juices, fasting, enemas, colonics, showers, baths, and water treatments.

Sometimes the pain becomes severe during the crisis. Drugs taken in earlier years are being pulled out of the tissues in an effort to discard them. The damage of many years is being righted.

The body arouses itself in self-defense and brings forth acute elimination of toxins in the form of a fever, cold, inflammations, itching, boils, ulcers, hemorrhages, excessive menstrual discharge, etc. Reactions vary, in accor-

dance with how the person has been living and the condition of the body.

But sometimes this sudden turn in an illness is not a healing crisis, but a change for the worse in a disease. It is important to be able to tell the difference. Consider this:

• Watch the person carefully, as you earnestly work to help him eliminate toxins (water, juices, enemas, sweating, baths, etc.). If not watched properly and helped, the crisis can be extended and his energies weakened.

• If it is a healing crisis, you will generally see a positive change—a change for the better—after three days. The most severe symptoms begin to decrease. Fevers break. The person becomes more relaxed and begins to feel better.

• But if, after three days, the symptoms do not change for the better, then a new course of treatment must be started. However, if the person has low energy and vitality, the crisis may take three to seven days.

• If the individual has a strong constitution and the organs of elimination are working well and are being helped, he may recover without having undergone a healing crisis.

Are there ways to tell when a healing crisis is about to begin? Certain symptoms will intensify, such as sluggishness, fevers, dark urine, coated tongue, weakness, irritability, headaches, and ringing in the ears.

When you see these signs, immediately set to work to help the person's system cleanse more fully. Herbs, massage, water therapy treatments, and enemas can help him through this time.

If no poisons were introduced into the system (in an effort to block the healing crisis) the person will generally keep improving. Right living, right eating, and rest can bring healing.

Additional healing crises may occur before the patient is fully recovered. Each one will generally be milder, only one to three days in length, and be followed by a new level of feeling better.

The intensity of the crisis will depend on how ill the person was. The nature of the crisis will be keyed to where the illness is centered in his body and how easily he can throw off the poisons.

If the wastes can be eliminated through normal pathways, a fever will develop and burn it out; if it does not, it can store it as boils and acne. If the mucous is thick, there will be nasal drip, colds, flu, etc. Constipation may precede diarrhea; lung congestion may come before a respiratory crisis.

Sometimes we feel pain in our kidneys, bladder, or bowels and imagine it is a disease. But, in fact, often the body has selected the strongest organ of elimination to throw off unwanted and excess wastes.

When the crisis is over, the body needs help rebuilding itself. But, throughout the sickness and recovery, never go to extremes in diet. Carry on with a gradual transition back to regular living. Trying to make the system too pure too fast can overly weaken the patient. Work carefully and keep praying for guidance; and, if the patient fully cooperates, all will go well.

5 - THE KELLOGG FORMULAS

In 1866 the Battle Creek Sanitarium opened its doors; and, in 1875, it was placed under the directorship of John Harvey Kellogg, M.D. He was one of the foremost natural healing experts of the late nineteenth and early twentieth centuries.

Ninety-five of his multiple treatments for disease are included in the disease sections of this book, and are identified as "Kellogg Formulas."

6 - ADDITIONAL HEALING PRINCIPLES

We have included the statements of a number of different natural healing pioneers in this volume. Here are insightful comments from the writings of Ellen G. White, who had a profound understanding of the origin and transmission of pathological problems.

"The transgression of physical law is the transgression of God's law. Our Creator is Jesus Christ. He is the author of our being. He has created the human structure. He is the author of the physical laws, as He is the author of the moral law. And the human being who is careless and reckless of the habits and practices that concern his physical life and health, sins against God."—*Counsels on Diet and Foods, 43 (cf. Ministry of Healing, 131).*

"God's law is written by His own finger upon every nerve, every muscle, every faculty which has been entrusted to man."—*Spalding and Magan's Manuscript Testimonies of Ellen White, 40.*

"Health, strength, and happiness depend upon immutable laws; but these laws cannot be obeyed where there is no anxiety to become acquainted with them."—*Healthful Living, 18.*

"The Lord has made it a part of His plan that man's reaping shall be according to his sowing."—*Healthful Living, 25 (Letter, May 19, 1897).*

"To make plain natural law, and urge the obedience of it, is the work that accompanies the third angel's message to prepare a people for the coming of the Lord."—*3 Testimonies, 161 (Counsel on Diet and Foods, 69).*

"There are many ways of practicing the healing art, but there is only one way that Heaven approves. God's remedies are the simple agencies of nature that will not tax or debilitate the system through their powerful properties. Pure air and water, cleanliness, a proper diet, purity of life, and a firm trust in God are remedies for the want of which thousands are dying; yet these remedies are going out of date because their skillful use requires work that the people do not appreciate."—*5 Testimonies, 443.*

"It is the duty of every human being, for his own sake and for the sake of humanity, to inform himself or herself in regard to the laws of organic life, and conscientiously to obey them . . It is the duty of every person to become intelligent in regard to disease and its causes."—*Healthful Living, 19 (Letter, December 4, 1896).*

"God has formed laws to govern every part of our constitutions, and these laws which He has placed in our being are divine, and for every transgression there is a fixed penalty, which sooner or later must be realized."—*Healthful Living, 20.*

"Our first duty, one which we owe to God, to ourselves, and to our fellow men, is to obey the laws of God, which include the laws of health."—*3 Testimonies, 164.*

"The laws governing the physical nature are as truly divine in their origin and character as the law of the Ten Commandments. Man is fearfully and wonderfully made; for Jehovah has inscribed His law by His own mighty hand on every part of the physical structure."—*16 Manuscript Releases, 60 (Letter, August 5, 1896).*

" 'Have I not a right to do as I please with my own body?' —No, you have no moral right, because you are violating the laws of life and health which God has given you. You are the Lord's property,—His by creation and His by redemption. Every human being is under obligation to preserve the living machinery that is so fearfully and wonderfully made."—*Healthful Living, 10 (Letter, May 19, 1897).*

"Our very bodies are not our own, to treat as we please, to cripple by habits that lead to decay, making it impossible to render to God perfect service. Our lives and all our faculties belong to Him. He is caring for us every moment; He keeps the living machinery in action. If we were left to run it for one moment, we should die. We are absolutely dependent upon God."—*Medical Ministry, 275-276 (Letter, October 12, 1896).*

"The health should be as sacredly guarded as the character."—*Medical Ministry, 77.*

"Proportionally as nature's laws are transgressed, mind and soul become enfeebled . . Physical suffering of every type is seen . . Suffering must follow this course of action. The vital force of the system cannot bear up under the tax placed upon it, and it finally breaks down."—*Healthful Living, 24 (Letter, August 30, 1896).*

"Sickness is caused by violating the laws of health; it is the result of violating nature's laws."—*3 Testimonies, 164.*

"Health is a great treasure. It is the richest possession that mortals can have. Wealth, honor, or learning is dearly purchased, if it be at the loss of the vigor of health. None of these attainments can secure happiness if health is wanting."—*Fundamentals of Christian Education, 35.*

"That time is well spent which is directed to the establishment and preservation of sound physical and mental health . . It is easy to lose health, but it is difficult to regain it."—*Review, September 23, 1884.*

"Perfect health depends on perfect circulation."—*2 Testimonies, 531.*

"Many have inquired of me, 'What course shall I take to best preserve my health?' My answer is, Cease to transgress the laws of your being; cease to gratify a depraved appetite; eat simple food; dress healthfully, which will require modest simplicity; work healthfully, and you will not be sick."—*Counsels on Health, 37.*

"An aimless life is a living death. The mind should dwell upon themes relating to our eternal interests. This will be conducive to health of body and mind."—*Counsels on Health, 51.*

"God has pledged Himself to keep this living machinery in healthful action, if the human agent will obey His laws and cooperate with God."—*Counsels on Diet and Foods, 17.*

"Let it ever be kept before the mind that the great object of hygienic reform is to secure the highest possible development of mind and soul and body."—*Counsels on Health, 386.*

"Nature will restore their vigor and strength in their sleeping hours, if her laws are not violated."—*Healthful Living, 46.*

"Close confinement indoors makes women pale and feeble, and results in premature death."—*Healthful Living, 61.*

"Indulging in eating too frequently, and in too large quantities, overtaxes the digestive organs, and produces a feverish state of the system. The blood becomes impure, and then diseases of various kinds occur."—*Counsels on Diet and Foods, 189.*

"The effects produced by living in close, ill-ventilated rooms are these . . The mind becomes depressed and gloomy, while the whole system is enervated; and fevers and other acute diseases are liable to be generated . . The system is peculiarly sensitive to the influence of cold. A slight exposure produces serious diseases."—*1 Testimonies, 702-703.*

"What influence does overeating have upon the stomach? It becomes debilitated, the digestive organs are weakened, and disease, with all its train of evils, is brought on as a result."—*2 Testimonies, 364.*

"The free use of sugar in any form tends to clog the system, and is not unfrequently a cause of disease."—*Counsels on Health, 154.*

"The liability to take disease is increased tenfold by meat eating."—*2 Testimonies, 64.*

"Rich and complicated mixtures of food are health destroying. Highly seasoned meats and rich pastry are wearing out the digestive organs."—*Healthful Living, 63.*

"Drugging should be forever abandoned; for while it does not cure any malady, it enfeebles the system, making it more susceptible to disease."—*5 Testimonies, 311.*

"A neglect of cleanliness will induce disease."—*Adventist Home, 22.*

"If you would have your homes sweet and inviting, make them bright with air and sunshine."—*2 Testimonies, 527.*

"Dwellings, if possible, should be built upon high and dry ground. If a house is built where water settles around

it, remaining for a time, and then drying away, a poisonous miasma arises, and fever and ague, sore throat, lung diseases, and fevers will be the result."—*Counsels on Health, 58-59.*

"It is important also that the clothing be kept clean. The garments worn absorb the waste matter that passes off through the pores; if they are not frequently changed and washed, the impurities will be reabsorbed."—*Ministry of Healing, 276.*

"When we do all we can on our part to have health, then may we expect that blessed results will follow, and we can ask God in faith to bless our efforts for the preservation of health."—*Medical Ministry, 13.*

The book, Ministry of Healing, is a remarkable analysis of human health and divine healing. It is available from the publishers of this book for $5.00 ppd. Overseas: Send U.S. money order and add $3.00 p&h. In Tennessee, add 9.25% tax.

7 - THE USE OF DRUGS

What is the difference between a medicinal drug and an herb? Herbs contain a variety of chemical compounds placed there by God. Over the centuries, many have been found to be extremely useful for physical problems. Medicinal drugs are different. In order to patent them (for exclusive sales and profits), medicinal drugs cannot have the exact formulas found in herbs. Instead, they contain various man-made combinations of chemicals. Because of this, to one extent or another, they are always poisonous. Their "contra-indications" paragraphs verify the fact. The liver, kidneys, and other organs frequently suffer from them.

The following analysis of the nature and effects of medicinal drug medication is taken from the writings of Ellen G White, an influential author and worker in the field of health and natural healing. She was also the founder of a major medical college.

"Drugs never cure disease; they only change its form and location . . When drugs are introduced into the system, for a time they seem to have a beneficial effect. A change may take place, but the disease is not cured. It will manifest itself in some other form . . The disease which the drug was given to cure may disappear, but only to reappear in a new form, such as skin diseases, ulcers, painful diseased joints, and sometimes in a more dangerous and deadly form . . Nature keeps struggling, and the patient suffers with different ailments, until there is a sudden breaking down in her efforts, and death follows."—*2 Selected Messages, 451-452 (Healthful Living, 243).*

"Although the patient may recover, yet the powerful effort nature was required to make to induce action to overcome the poison, injured the constitution and shortened the life of the patient. There are many who do not die under the influence of drugs, but there are very many who are left useless wrecks, hopeless, gloomy, and miserable sufferers, a burden to themselves and to society."—*2 Selected Messages, 442.*

"Every additional drug given to the patient . . will complicate the case, and make the patient's recovery more hopeless . . An evil, simple in the beginning, which nature aroused herself to overcome, and which she would have done had she been left to herself has been made ten-fold worse by introducing drug poisons into the system, which is a destructive disease of itself, forcing into extraordinary action the remaining life forces to war against and overcome the drug intruder."—*2 Selected Messages, 448.*

"There are more who die from the use of drugs than all who would have died of disease had nature been left to do her own work."—*2 Selected Messages, 452.*

"The endless variety of medicines in the market, the numerous advertisements of new drugs and mixtures, all of which claim to do wonderful cures, kill hundreds where they benefit one . . Yet people keep dosing, and continue to grow weaker until they die . . God's servants should not administer medicines which they know will leave behind injurious effects upon the system, even if they do relieve present suffering. Every poisonous preparation in the vegetable and mineral kingdoms, taken into the system, will leave its wretched influence, affecting the liver and lungs, and deranging the system generally."—*Healthful Living, 245.*

"Educate away from drugs, use them less and less, and depend more upon hygienic agencies; then nature will respond to God's remedies—pure air, pure water, proper exercise, and a clear conscience."—*Counsels on Health, 261.*

"A great amount of good can be done by enlightening all to whom we have access, as to the best means, not only of curing the sick, but of preventing disease and suffering. The physician who endeavors to enlighten his patients as to the nature and causes of their maladies, and to teach them how to avoid disease, may have uphill work; but if he is a conscientious reformer, he will talk plainly of the ruinous effects of self-indulgence in eating, drinking, and dressing, of the overtaxation of the vital forces that has brought his patients where they are. He will not increase the evil by administering drugs till exhausted nature gives up the struggle, but will teach the patients how to form correct habits and to aid nature in her work of restoration by a wise use of her own remedies."—*Counsels on Diet and Foods, 449.*

"In treating the sick, the physician will seek God for wisdom; then, instead of placing his dependence upon drugs and expecting that medicine will bring health to his patients, he will use nature's restoratives, and employ natural means whereby the sick may be aided to recover."—*Healthful Living, 247-248.*

"Let the instruction be given in simple words [such as hot water, charcoal, or catnip tea]. We have no need to use the many expressions used by worldly physicians which are so difficult to understand that they must be interpreted by the physicians . . Nature's simple remedies will aid in recovery without leaving the deadly aftereffects so often felt by those who use poisonous drugs."—*Loma Linda Messages, 335.*

"Were I sick, I would just as soon call in a lawyer as a physician from among general practitioners. I would not touch their nostrums, to which they give Latin names. I am determined to know, in straight English, the name of everything that I introduce into my system."—*2 Selected Mes-*

sages, 290; 20 Manuscript Releases, 1.

"Indulging in eating too frequently, and in too large quantities, overtaxes the digestive organs and produces a feverish state of the system. The blood becomes impure, and then diseases of various kinds occur. A physician is sent for, who prescribes some drug which gives present relief, but which does not cure the disease. It may change the form of the disease, but the real evil is increased ten-fold. Nature was doing her best to rid the system of an accumulation of impurities, and could she have been left to herself, aided by the common blessings of heaven, such as pure air and pure water, a speedy and safe cure could have been effected."—*Medical Ministry, 281.*

"Use nature's remedies,—water, sunshine, and fresh air. Do not use drugs. Drugs never heal; they only change the features of the disease."—*The Paulson Collection of Ellen G White's Writings, 17.*

"Experimenting in drugs is a very expensive business . . Nothing should be put into the human system that will leave a baleful influence behind."—*Medical Ministry, 228.*

"Nature's simple remedies will aid in recovery without leaving the deadly aftereffects so often felt by those who use poisonous drugs. They destroy the power of the patient to help himself. This power the patients are to be taught to exercise by learning to eat simple, healthful foods, by refusing to overload the stomach with a variety of foods at one meal. All these things should come into the education of the sick. Talks should be given showing how to preserve health, how to shun sickness, how to rest when rest is needed."—*2 Selected Messages, 281 (Letter 82, 1908).*

"Christ's remedies cleanse the system. But Satan has tempted man to introduce into the system that which weakens the human machinery, clogging and destroying the fine, beautiful arrangements of God. The drugs administered to the sick do not restore, but destroy. Drugs never cure. Instead, they place in the system seeds which bear a very bitter harvest."—*2 Selected Messages, 289.*

8 - NUTRITIONAL EXPERTS SPEAK

"Ninety percent of all conditions other than acute infections, contagious diseases, and traumatisms, are traceable to diet."—*Sir William Osler, M.D., quoted in Foods, Nutrition, and Clinical Dietetics, 13.*

"The food question is infinitely the most important problem of the present day . . and if properly dealt with must result in the disappearance of the vast bulk of the disease, misery and death."—*Sir Arthuthnot Lane, M.D., quoted in The Motive, June 1925.*

"At least nine-tenths of all chronic maladies with which doctors are called upon to deal might be successfully treated without the use of drugs by a physician well acquainted with the varied resources afforded by the science of nutrition."—*John H. Kellogg, M.D., in Good Health, June 1940, 69.*

Major General Sir Robert McCarrison, M.D., D.Sc., F.R.C.P., while serving as Director of Nutritional Research, Pasteur Institute, Coonoor, India, fed pigeons, guinea pigs and monkeys the usual "deficiency diets" eaten by so many today in "civilized nations," and induced in them every known disease of the digestive tract and every other body organ. In a major address in which he discussed his findings, he listed over 30 leading diseases, and said this: "All these states of ill-health had a common cause; faulty nutrition with or without infection . . Of all the medicines created out of the earth, food is the chief."—*McCarrison, quoted in Madras Mail, March 16, 1935. Also see the British medical journal, Lancet, May 23, 1931.*

"The disease and suffering that everywhere prevail are largely due to popular errors in regard to diet."—*Ministry of Healing, 295.*

Man is the only creature given to the practice of self-destroying habits.

"The span of human life has not been lengthened, and there is no prospect that it soon will be. The average duration of life is all that has been altered, and that has been accomplished chiefly by giving more babies a fairer start in life's journey than they used to have. Because more of them get by the early and very difficult hurdles, more of them survive to later ages. But the likelihood that any individual aged seventy today can safely say he will be alive at ninety appears to be not quite as good as they were fifty years ago."—*Raymond Pearl, M.D., "The Search for Longevity," Scientific Monthly, May 1938.*

Why is the truth about the superiority of good nutrition rarely discussed today?

There is more money to be made by selling people junk food, which has little or no nutritional value. It is cheaper to manufacture; and it stores well because no bugs want it.

People have become accustomed to eating fast foods, which they do not have to refrigerate or prepare.

As long as it has a combination of one or more of the following, most people will buy and consume it, even though it contains essentially no food value: sugar, salt, cheap protein, carbohydrates, and grease (trans-fat).

If it tastes good today, why worry about the long-term effects of junk food later on?

Why is the truth about the superiority of natural remedies rarely mentioned today?

There is more money to be made by selling people chemicals (medicinal drugs), surgical operations, and radiation treatments. Good nutrition and natural remedies cannot be patented and sold for a nice profit. If widely used, good diets and home remedies would heavily reduce the income of pharmacies, physicians, hospitals, pharmaceutical firms, hospital equipment, and supply firms. It would also eliminate the immense grants of money given to universities, to produce research findings favorable to those products.

People have become accustomed to wanting fast recovery from a pill. They want to get back to work quickly and continue to ignore the proper care their bodies urgently need.

Many people prefer remedies which do not require a change of diet or living habits, a putting away of bad habits or taking time to learn about (and use) natural remedies.

Do what it takes to live right, and you will be richly repaid later on. It is worth any inconvenience to have good health. Radiant health is a reward worth any price.

"Pure air, sunlight, abstemiousness, rest, exercise, proper diet, the use of water, trust in divine power,— these are the true remedies."

— Ministry of Healing, p. 127

God, our Creator, has provided, in the simple things of nature, many strengthening and remedial agencies. As we look to Him in faith, and use the agencies He has provided for our health, we will have far less suffering and problems.

In this chapter, you will find an overview of these restorative agencies.

The Natural Remedies Encyclopedia

The First Law of Health

The Air You Breathe

The year was 1875; the place, Paris, France. For more than two years, three scientists had worked toward this day; and now they were ready. Carefully, they climbed into the gondola of the balloon, "Zenith," while thousands around them watched.

Determined to set a new altitude record, they wanted to go higher than man had ever risen above the earth. And they did just that,—but at what a cost.

Slowly the large balloon rose into the air, with its human cargo of three men in a basket-shaped gondola swinging just beneath it. All seemed well; they were well on their way toward the goal: to climb higher than any man had ever gone.

Then at 24,430 feet it happened. Tissandier, one of the three, later described it: "Croce is gasping for breath, Sivel is dazed, but can still cut three sandbags loose in order to reach 26,240 feet."

At that point, Tissandier himself was overcome and slumped to the floor, losing consciousness. Some time afterward, as the balloon—freed from the sandbags continued its ascent—he awoke. They had attained a height of 8,600 meters (approximately 28,000 feet)—but two of the scientists lay dead in the gondola of the balloon. Yes, they had conquered the heights, but before it was done the heights had conquered them. There was not enough air, with its precious life-giving oxygen, to sustain life at that great altitude.

Without air, man dies. Air is the most vital element for man and animals. One may live for weeks without food, or for days without water, but deprived of air he will perish within minutes.

Millions of people suffer from a wide variety of ailments that are partly caused by an insufficient supply of oxygen. The problem is that most people do not breathe correctly, and this continually weakens their health, their happiness, and their hold on life itself. One of the finest statements written on the importance of air are these words penned by an outstanding health educator:

> "In order to have good blood, we must breathe well. Full, deep inspirations of pure air, which fill the lungs with oxygen, purify the blood. They impart to it a bright color and send it—a life-giving current—to every part of the body.
>
> "A good respiration soothes the nerves; it stimulates the appetite and renders digestion more perfect; and it induces sound, refreshing sleep . . [If] an insufficient supply of oxygen is received, the blood moves sluggishly. The waste, poisonous matter, which should be thrown off in the exhalations from the lungs, is retained, and the blood becomes impure. Not only the lungs, but the stomach, liver, and brain are affected. The skin becomes sallow, digestion is retarded; the heart is depressed; the brain clouded; the thoughts are confused; gloom settles upon the spirits; the whole system becomes depressed and inactive, and peculiarly susceptible to disease."—*Ministry of Healing, pp. 272-273.*

Every cell of your body must receive a constant supply of oxygen—or they will weaken and die. But that air must be fresh in order to help you the most. When you breathe stale or polluted air, the supply of oxygen is insufficient to keep the cells strong and healthy. Apart from oxygen from the air you breathe, they die within a few minutes.

> "Air is the free blessing of Heaven, calculated to electrify the whole system. Without it the system will be filled with disease, and become dormant, languid, feeble."—*1 Testimonies, p. 701.*

The life-giving air around us is a most precious blessing from Heaven. On the last day of Creation Week, God created man. Having formed him from the dust of the ground, Adam lay before his Maker inert and lifeless—until he was vitalized by the breath of life. And moment by moment, you and I must have fresh air also.

> "Fresh air will prove far more beneficial to sick persons than medicine, and is far more essential to them than their food . . Thousands have died for want of pure water and pure air, who might have lived."—*Counsels on Health, p. 55.*

It is of the highest consequence to your life, health, and happiness, that you keep fresh air in every room in your home, and especially in your sleeping rooms. If you are not able to have your windows open in very cold weather, then leave a door open into another room where a window is open. By day and by night, always keep a current of air flowing through the house. You do not want to sit or sleep in a draft, but some air circulating throughout your home—a lot in the summer, less in the winter—is a necessity to good health.

> "The effects produced by living in close, ill-ventilated rooms are these: The system becomes weak and unhealthy, the circulation is depressed, the blood moves

sluggishly through the system because it is not purified and vitalized by the pure, invigorating air of heaven. The mind becomes depressed and gloomy, while the whole system is enervated; and fevers and other acute diseases are liable to be generated.

"Your careful exclusion of external air, and fear of free ventilation leaves you to breathe a corrupt, unwholesome air which is exhaled from the lungs of those staying in these rooms, and which is poisonous, unfit for the support of life. The body becomes relaxed; the skin becomes sallow; digestion is retarded, and the system is peculiarly sensitive to the influence of cold. A slight exposure produces serious diseases. Great care should be exercised not to sit in a draft or in a cold room when weary, or when in a perspiration. You should so accustom yourself to the air that you will not be under the necessity of having the mercury higher than sixty-five degrees."—*1 Testimonies, pp. 702-703.*

Fresh air should be inhaled as freely indoors as outdoors in warmer weather. In colder weather, your home will need to be heated. But beware of too much heat, for the burning of the fuel itself takes precious oxygen from the air. If necessary, dress more warmly, so that, as much as possible, you can breathe purer air at all times. Students of body health tell us that it requires an abundance of oxygen in the body and surrounding it in order to keep the physical organism in top condition. Why is this so? It is the oxygen in the air that purifies the blood, contributes to the production of body heat and energy, and conveys electrical energy with which to vitalize every organ and tissue.

H.E. Kirschner, M.D., said this:

"I am also in full agreement with Dr. Philip Welsh, who declares: 'Any form of treatment—any program of health which does not give full and due consideration to the first essential of life—pure air—will absolutely fail to get the best results—yes, this one question of supplying the body with pure air is important enough to determine the difference between health and sickness—between life and death!'

"Contrast this, if you will, with the popular notion that air—especially night air—is harmful to the sick. Many of my colleagues in the medical profession have excluded air from the sick room. This is a great mistake, for air is the food God has provided for the lungs—and your lungs, when deprived of fresh air, will be like a hungry person deprived of food. Therefore, air should not be regarded as an enemy, but as a precious blessing."—*H.E. Kirschner, M.D., Nature's Seven Doctors, p. 18.*

Do you have difficulty in going to sleep at night? Try this simple remedy for sleeplessness; it is a good one: Make sure that there is a current of air coming into the room (best from a window). The room should be comfortable and not chilling, but with some fresh air circulating through it. Now relax, pray as you lie there and give your life anew into the hands of God. Then slowly take several deep breaths, holding each one a moment before exhaling it. Let your mind slow down. Your thoughts are upon God, the peace of being with Him, and the need for deep, full breathing. Very soon you will be sound asleep.

"Those who have not had a free circulation of air in their rooms through the night, generally awake feeling exhausted, feverish, and know not the cause. It was air, vital air, that the whole system required, but which it could not obtain. Upon rising in the morning, most persons would be benefited by taking a sponge-bath, or, if more agreeable, a hand-bath, with merely a wash-bowl of water. This will remove impurities from the skin. Then the clothing should be removed piece by piece from the bed, and exposed to the air. The windows should be opened, and the blinds fastened back, and the air left to circulate freely for several hours, if not all day, through the sleeping apartments. In this manner the bed and clothing will become thoroughly aired, and the impurities will be removed from the room."—*Spiritual Gifts, Vol. 4a, p. 143.*

Actually, this is also a good way to start the morning. When you first awake, take several deep breaths, and then as you arise take several more. Before breakfast, go out-of-doors and look on the things of nature and breathe deeply as you silently thank God for another day of life to work for Him. From time to time, throughout the day, repeat this deep breathing practice. At times, take in very deep breaths of air, in order to expand your lungs. (A method, that this writer uses with excellent results, is to exhale strongly and then allow the fresh new air to enter the lungs in whatever amount and rate the body wishes to take it in; then exhale again, and let more in.)

"Air, air, the precious boon [gift] of Heaven, which all may have, will bless you with its invigorating influence, if you will not refuse it entrance. Welcome it, cultivate a love for it, and it will prove a precious soother of the nerves.

"Air must be in constant circulation to be kept pure. The influence of pure, fresh air is to cause the blood to circulate healthfully through the system. It refreshes the body, and tends to render it strong and healthy, while at the same time its influence is decidedly felt upon the mind, imparting a degree of composure and serenity. It excites the appetite, and renders the digestion of food more perfect, and induces sound and sweet sleep."—*1 Testimonies, p. 702.*

Develop a habit of deep breathing. Shallow breathing is a habit easily developed but harmful in its effects on the entire body. Many people only breathe "at the top of their lungs." Take full, deep inspirations of air. Do not just fill the top of your chest.

Here are some additional suggestions that will help you:

Just after eating, and also before retiring, go outside and take eighteen or twenty deep breaths, using the muscles of the abdomen. Inhale and exhale slowly. Some folk extend the arms above their heads while they do this. Take a walk out-of-doors just before you retire for the night. Breathe that fresh night air, relax your mind, talk to your heavenly Father, and thank Him for His continual care and blessings. Give yourself anew to Him. Then, with contentment of heart, go to sleep, forgetting all your present perplexities. Know and believe that He will work them all out at the right time.

Get outdoors as much as possible. Develop hobbies and avocations that are out in the open air. Especially beware of hobbies and recreation that require being bent over with the

chest cramped and the eyes and brain overtaxed.

"A walk, even in the winter, would be more beneficial to health than all the medicine the doctors may prescribe . . There will be increased vitality, which is so necessary to health. The lungs will have needful action, for it is impossible to go out in the bracing air of a winter's morning without inflating the lungs."—*2 Testimonies, p. 529.*

"And while the importance of deep breathing is shown, the practice should be insisted upon. Let exercises be given which will promote this."—*Education, p. 199.*

Colder weather may require additional clothing, but continue to obtain the much needed pure, fresh air.

"In the cool of the evening it may be necessary to guard from chilliness by extra clothing, but they should give their lungs air."—*2 Testimonies, p. 527.*

Keep proper ventilation in mind wherever you may be, whether it be in your home, in the office or shop, at church, etc. Avoid stuffy people who like to sit in stuffy rooms all day talking or watching television. If you are not able to directly help them by word or action, then leave them to their misery and go where there is air.

And beware of tobacco "side stream." Scientific researchers now know that the cigarette smoke in a room can greatly injure adults, and especially children. Only stay with cigarette smokers long enough to help them; then go where you can have a purer atmosphere to breathe.

Do not rent or purchase a home that is in any kind of low concavity. Watch out for homes in hollowed-out places, for they tend to be damp. Research studies by the National Institute of Health in Washington County, Virginia, in the late 1950s and early 1960s, revealed the fact that houses built in such low, miasmic areas frequently had a history of cancer in those who lived in them. This included homes in low places by creeks. Many do not realize the fact that there are continually flowing rivers of air. These currents, flowing into and along narrow valley bottoms, creeks, and rivers, are much more damp than the air found in more elevated places. But living in such damp places induces sickness and disease. If you reside in such a location, you would do well to move somewhere else.

"If we would have our homes the abiding place of health and happiness, we must place them above the miasma and fog of the lowlands."—*Ministry of Healing, p. 275.*

You also do well not to permit too much shrubbery or shading too close to your house. This can keep the purifying air from circulating through the home.

"So far as possible, all buildings intended for human habitation should be placed on high, well-drained ground. This will insure a dry site, and prevent the danger of disease from dampness and miasma. This matter is often too lightly regarded. Continuous ill health, serious diseases, and many deaths result from the dampness . . of low-lying, ill-drained situations.

"In the building of houses it is especially important to secure thorough ventilation and plenty of sunlight. Let there be a current of air and an abundance of light in every room in the house. Sleeping rooms should be so arranged as to have a free circulation of air day and night. No room is fit to be occupied as a sleeping room unless it can be thrown open daily to the air and sunshine. In most countries bedrooms need to be supplied with conveniences for heating, that they may be thoroughly warmed and dried in cold or wet weather."—*Ministry of Healing, pp. 274-275.*

So we can see that it is very important that we keep our houses properly ventilated. It is the fresh, purifying air inside a home that makes it a healthful place in which to live.

When the day is sunny and warm, take the bedding out, hang it on the clothesline, and air it out. The purifying air and sunlight will do much to sterilize it. Take it back into the house before the dampness of the late afternoon sets in. You will notice that it all smells perfectly fresh.

It is of the utmost importance that every room in the house be open to the sunlight and a current of air throughout the day.

"Some houses are furnished expensively, more to gratify pride, and to receive visitors, than for the comfort, convenience and health of the family. The best rooms are kept dark. The light and air are shut out, lest the light of heaven may injure the rich furniture, fade the carpets, or tarnish the picture frames. When visitors are permitted to be seated in these precious rooms, they are in danger of taking cold, because of the cellar-like atmosphere pervading them. Parlor chambers and bedrooms are kept closed in the same manner and for the same reasons. And whoever occupies these beds which have not been freely exposed to the light and air, do so at the expense of health, and often even of life itself."—*2 Selected Messages, p. 462.*

On pages 16-17 of his book, *"Nature's Seven Doctors,"* Dr. H.E. Kirschner explains that the most successful cure for tuberculosis of the lungs requires an unusually large amount of fresh air for the patients, day and night. "Sleeping porches were provided for all patients and . . they were allowed indoors only for meals and other duties . . This required warm sleeping garments and usually a stocking cap." He explains that a similar program was successfully followed for typhoid.

Of course, such a strenuous cold-air regime would not work for many physical ailments, such as pneumonia. In every sickness, provide the patient with fresh air, but in most cases it should be fresh, warm air.

The healing of wounds takes place more quickly in the presence of fresh air and sunlight. (But there are times when dirt may get into a wound if it is not covered, as when a workman has a cut on his finger.)

"It is a well-known fact that wounds exposed to sunshine and fresh air heal more rapidly than when bandaged. In fact, no wound will heal without air. In order, then, for wounds to heal quickly, it is most important that they be exposed to a constant supply of pure, fresh air."—*Kirschner, p. 23.*

Do all you can to avoid poisonous gases in or near your home. This would include the use of unvented gas heaters, leaks from sewer gases, tobacco fumes, and agricultural sprays, such as defoliants, insecticides, mosquito spraying programs, and similar poisonous fumes and vapors.

Specially treated woods are now being used in new house construction. They are supposed to resist insect attack for decades. But poisonous gases were applied to

them; and it has been established that fumes from that wood escape into the house and surrounding air for several years after installation.

Another source of danger is the use of new plastic hard-form insulation panels into walls during house construction or remodeling. Although true that these panels provide better R-factor insulation at a lower price, the fact remains that if the house ever catches on fire,—poisonous fumes from those panels will fill the home!

We live in a chemical age, and the air, water, vegetation, earth, and animal kingdom are being slowly poisoned to death.

In my files I have a clipping that I cut out of a newspaper in July, 1958:

BREATHING HELPS STOP THAT PAIN

It's not the pain-killing properties of aspirin which make it so beneficial for arthritic patients.

"Instead, it's the huffing and puffing produced by large doses of aspirin which really control the aches, pain and stiffness.

"This was suggested here yesterday by Drs. Frederick Kahn, Daniel Simmons, and Howard Weinberger of UCLA and the Los Angeles VA hospitals.

"Physicians have long known, they said, that normal doses of aspirin won't help arthritis patients. It takes dosages of about 15 tablets a day to control arthritic pains.

"But at these doses, they said, aspirin produces what is called "hyper-ventilation"—the patient constantly breathes deeply and rapidly, often while he's at rest. In turn, this hyper-ventilation lowers the amount of carbon dioxide in the blood.

"To check their suspicions, the Los Angeles doctors put victims of arthritis in an iron lung and made them over-breathe without any aspirin.

"The relief of pain and other symptoms, they found, was just as effective as that achieved with aspirin."—*Newsclip, July, 1958.*

The above is valuable information that you and I can use every day of our lives. Deep breathing reduces pain and relaxes the entire system. (But our suggestion is that you not use an aspirin-type product to help you do that breathing: There is a poisonous chemical in "headache pills" which causes the stomach to bleed internally each time it is taken, whether in tablet or powder form.)

It is now known that fallen leaves emit carbon monoxide fumes.

"Shade trees and shrubbery too close and dense around a house are unhealthful; for they prevent a free circulation of air, and shut out the rays of the sun. In consequence of this, dampness gathers in the house. Especially in wet seasons the sleeping rooms become damp, and those who occupy them are troubled with rheumatism, neuralgia, and lung complaints which generally end in consumption. Numerous shade trees cast off many leaves, which, if not immediately removed, decay, and poison the atmosphere. A yard beautified with trees and shrubbery, at a proper distance from the house has a happy, cheerful influence upon the family, and, if well taken care of, will prove no injury to health. Dwellings, if possible, should be built upon high and dry ground. If a house is built where water settles around it, remaining for a time, then drying away, a poisonous miasma arises, and fever and ague, sore throat, lung diseases, and fevers will be the result."—*Counsels on Health, 1951, pp. 58-59.*

The smog that envelopes homes and offices in and near the large cities is now known to be quite harmful in its effects. During morning and evening rush hours, when so much traffic is on the streets, smog will even be found in smaller cities and towns. A major source of the smog is automobile exhaust fumes, which contain two deadly chemicals: vaporized lead and sulfuric acid. Lead fumes, inhaled into the body, cause the destruction of red blood cells. Sulfuric acid is such a powerful toxic agent that it is the primary reason that stone cathedrals and buildings are crumbling throughout Europe.

What is the solution? Move to the country, and not too close to a large city.

A lack of fresh air is a significant factor in causing people to become ill. Yet how few realize this fact.

"Many labor under the mistaken idea that if they have taken cold, they must carefully exclude the outside air, and increase the temperature of their room until it is excessively hot. The system may be deranged, the pores closed by waste matter, and the internal organs suffering more or less inflammation, because the blood has been chilled back from the surface and thrown upon them. At this time, of all others, the lungs should not be deprived of pure, fresh air. If pure air is ever necessary, it is when any part of the system, as the lungs or stomach, is diseased."—*2 Testimonies, p. 530.*

"Many families suffer with sore throat, lung diseases, and liver complaints, brought upon them by their own course of action. Their sleeping-rooms are small, unfit to sleep in for one night, but they occupy the small apartments for weeks, and months, and years . . They breathe the same air over and over, until it becomes impregnated with the poisonous impurities and waste matter thrown off from their bodies through the lungs and the pores of the skin . . Those who thus abuse their health must suffer with disease."—*Healthful Living, p. 173.*

"The health of the entire system depends upon the healthy action of the respiratory organs."—*2 Selected Messages, p. 473.*

"In order to have good blood, we must breathe well."—*Healthful Living, p. 171.*

Since a lack of fresh air can cause sickness, how very important it is that fresh air be supplied to the ill so that they can become well.

"Fresh air will prove far more beneficial to sick persons than medicine, and is far more essential to them than their food."—*Counsels on Health, p. 55.*

"The sick-room, if possible, should have a draft of air through it day and night. The draft should not come directly upon the invalid. While burning fevers are raging, there is but little danger of taking cold . . The sick must have pure, invigorating air. If no other way can be devised, the sick, if possible, should be removed to another room, and another bed, while the sick room, the bed and bedding are being purified by ventilation."—*Counsels on Health, pp. 56-57.*

"Every breath of vital air in the sick-room is of the

greatest value, although many of the sick are very ignorant on this point. They feel much depressed, and do not know what the matter is. A draught of pure air through their room would have a happy, invigorating influence upon them."—*Healthful Living, p. 72.*

Those who are aged, infirm, or invalid also have a very definite need of fresh, pure air to breathe.

"Those who have the aged to provide for should remember that these especially need warm, comfortable rooms. Vigor declines as years advance, leaving less vitality with which to resist unhealthful influences; hence the greater necessity for the aged to have plenty of sunlight, and fresh, pure air."—*Ministry of Healing, p. 275.*

"The sick need to be brought into close touch with nature. An outdoor life amid natural surroundings would work wonders for many a helpless and almost hopeless invalid."—*Ministry of Healing, p. 262.*

"How grateful to the invalids weary of city life, the glare of many lights, and the noise of the streets, are the quiet and freedom of the country! How eagerly do they turn to the scenes of nature! How glad would they be to sit in the open air, rejoice in the sunshine, and breathe the fragrance of tree and flower! There are life-giving properties in the balsam of the pine, in the fragrance of the cedar and the fir, and other trees also have properties that are health-restoring."—*Ministry of Healing, p. 264.*

"For invalids who have feeble lungs, nothing can be worse than an overheated atmosphere."—*2 Testimonies, p. 527.*

"The heated, oppressed atmosphere, deprived of vitality, benumbs the sensitive brain. The lungs contract, the liver is inactive."—*1 Testimonies, p. 702.*

It is frequently necessary, especially in cold weather, to warm the air in the home or office. But we must be careful to do this in moderation, since oxygen from the room is generally consumed in providing the heat (with a few exceptions, such as steam heat sent through pipes from a more distant heat ignition source).

"Stove heat destroys the vitality of the air and weakens the lungs."—*Place of Herbs, p. 21.*

How important it is that we ourselves—and our children also—study and work in rooms with adequate ventilation to the fresh outside air.

"Many young children have passed five hours each day in schoolrooms not properly ventilated, nor sufficiently large for the healthful accommodation of the scholars. The air of such rooms soon becomes poison to the lungs that inhale it."—*3 Testimonies, p. 135.*

"The lungs, in order to be healthy, must have pure air."—*Healthful Living, p. 171.*

"The strength of the system is, in a great degree, dependent upon the amount of pure, fresh air breathed. If the lungs are restricted, the quantity of oxygen received into them is also limited, the blood becomes vitiated, and disease follows."—*Healthful Living, p. 176.*

Buildings should be constructed in such a manner that there is always enough fresh air and sunlight entering them.

"In the construction of buildings, whether for public purposes or as dwellings, care should be taken to provide good ventilation and plenty of sunlight. Churches and schoolrooms are often faulty in this respect. Neglect of proper ventilation is responsible for much of the drowsiness and dullness that destroy the effect of many a sermon and make the teacher's work toilsome and ineffective."—*Ministry of Healing, p. 274.*

Yes, fresh air is important to our health—for it is one of the simple remedies of nature, given by God to His people.

"There are many ways of practicing the healing art; but there is only one way that Heaven approves. God's remedies are the simple agencies of nature, that will not tax or debilitate the system through their powerful properties. Pure air and water, cleanliness, a proper diet, purity of life, and a firm trust in God, are remedies for the want of which thousands are dying; yet these remedies are going out of date because their skillful use requires work that the people do not appreciate. Fresh air, exercise, pure water, and clean, sweet premises, are within the reach of all with but little expense; but drugs are expensive, both in the outlay of means, and the effect produced upon the system."—*Counsels on Health, 1951, p. 323.*

SPIRITUAL LESSONS

God asks us to come to Him that we might breathe the air of heaven. The plan of redemption was designed to give us forgiveness of sin, as well as empowerment to resist temptation and obey the commandments of God. It was given to redeem us so we might live with God and the holy angels forever.

Jesus said that He came "not to call the righteous, but sinners to repentance" (Luke 5:32). Only he who acknowledges himself to be a sinner before God can receive pardon and acceptance. The inquiry bursts from the heart: "Men and brethren, what shall we do? . . What must I do to be saved?" (Acts 2:37; 16:30). "The sorrow of the world worketh death," but "godly sorrow worketh repentance to salvation" (2 Corinthians 7:10).

The cry of the soul is, "I will declare mine iniquity; I will be sorry for my sin" (Psalm 38:18). In heartfelt anguish for what he has done against God, he comes to Christ.

"When a man or woman shall commit any sin that men commit, to do a trespass against the Lord, and that person be guilty; then they shall confess their sin which they have done" (Numbers 5:6-7).

How thankful we can be that Jesus forgives the humble repentant sinner. "For Thou, Lord, art good, and ready to forgive; and plenteous in mercy unto all them that call upon Thee." (Psalm 86:5). "If we confess our sins, He is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness" (1 John 1:9).

Thank God that "as the heaven is high above the earth, so great is His mercy toward them that fear Him." (Psalm 103:11). "Let the wicked forsake his way, and the unrighteous man his thoughts: and let him return unto the Lord, and He will have mercy upon him; and to our God, for He will abundantly pardon" (Isaiah 55:7).

Oh, my friend, as we return to the Lord, He is so very happy to receive and accept us! "When he [the prodigal son, returning from years of sin] was yet a great way off, his father saw him, and had compassion, and ran, and fell on his neck, and kissed him" (Luke 15:20). "Who is a God like unto Thee, that pardoneth iniquity, and passeth by the transgression of the remnant of His heritage? He retaineth

not His anger for ever, because He delighteth in mercy" (Micah 7:18). "Likewise, I say unto you, there is joy in the presence of the angels of God over one sinner that repenteth" (Luke 15:10).

Accepting Christ as his Saviour, the soul experiences the new birth. "Therefore if any man is in Christ, he is a new creature: old things are passed away; behold, all things are become new" (2 Corinthians 5:17).

"Thou hast in love to my soul delivered it from the pit of corruption: for Thou hast cast all my sins behind Thy back." (Isaiah 38:17). "Thou wilt cast all their sins into the depths of the sea" (Micah 7:19).

There is a great blessing for those willing to seek the Lord and forsake their sins. "Blessed is he whose transgression is forgiven, whose sin is covered. Blessed is the man unto whom the Lord imputeth not iniquity, and in whose spirit there is no guile" (Psalm 32:1-2).

This experience is for you and me today! The call of Jesus is clear, and the message is cheering. There is hope for the lowliest. Coming to Christ, we give Him our sins and dedicate our lives to His service. All that He asks of us in His Word, we are now willing to do.

Is this an experience that you want right now? I know it is. Open the doors of your heart and let the fresh air of God's salvation into your heart. It is refreshing and wonderful. It means eternal life.

"Blessed are they that do His commandments, that they may have right to the tree of life, and may enter in through the gates into the city."—*Revelation 22:14.*

The Natural Remedies Encyclopedia

The Second Law of Health

The Sunlight on Your Body

A miracle factory is at work just beneath your skin. And when the ultraviolet rays of the sun touch the skin, the factory sets to work.

It is a most marvelous system; and, without it, you could not remain alive an hour.

There are millions of red corpuscles constantly flowing through very small blood vessels throughout every part of the 3,000 square inches of your skin. And there are also tiny oil glands just beneath the skin which biochemists call sterols. As sunshine strikes them, substances within them, called ergosterols, are irradiated and transformed into vitamin D. Carried to all parts of your body, it enables you to have strong bones, teeth, and nails.

But we are getting ahead of our story—the fascinating story of what one of God's special gifts, sunlight, can do for you.

Every living thing in our world is dependent upon the sun. Without sunshine, nothing could live. Sunlight is composed of energy wavelengths of various types. We will here focus our attention on the visible rays, along with the infrared and ultraviolet rays. In this brief report—you will learn part of this miracle of what sunlight can do for you,—and how it can bring you better health and even a happier outlook on life.

In 1877, two researchers, Downes and Blunt, discovered that sunlight can destroy harmful bacteria. Today, it is used to treat bacterial infections. Sunlight on the body dramatically lowers high blood pressure, decreases blood cholesterol, lowers excessively high blood sugars, and increases white blood cells.

Adequate sunlight on your body will lower your respiratory rate and will cause your breathing to be slower, deeper, and even easier. Your resting heart rate will decrease, and after exercise it will return to normal much more quickly. Sunlight increases the capacity of the blood to carry more oxygen and take it to your body tissues. Even a single exposure to the ultraviolet light in sunlight will greatly increase the oxygen content of your blood. And this effect will continue for several days. Bronchial asthma patients who could hardly breathe, were able to inhale freely after a sunbath.

It is of interest that many of these beneficial effects of sunlight are heightened if a person combines sunbathing with a regular program of physical exercise. For example, fatigue and exhaustion tend to be lessened and the capacity for work is increased. It is now known that part of this is due to an increase in glycogen content of the blood and muscles following sunlight and exercise.

The strength of the heart is steadied and deepened. The pulse rate is lowered because the heart muscle is pumping more blood at each beat. This enables your heart to rest more between beats. And yet the blood output is increased by an average of 39% for several days after a sunbath. Many people worry about their blood pressure; yet regularly taking sunlight on the body lowers it. Sunbaths alone will lower blood pressure by an average of 8%. Combined with

exercise, it is lowered 15%.

And there are those that worry about their blood sugar because they are diabetic. It has been discovered that exposure to sunshine has an insulin-like effect on the body—it lowers the blood sugar. And it does it in exactly the right proportion. Those who have no diabetic problem experience almost no change in blood sugar while diabetics have a striking lowering of it. It is now known that this lowering is caused by the fact that sunlight on the body causes glycogen (stored sugar) to be increased throughout the body, enabling the blood sugar to be lowered. Higher storage levels of glycogen result in more body energy for longer stretches of physical activity, with more endurance and less fatigue. (Warning: A diabetic taking sunbaths should try reducing his insulin intake, lest he inject too much.)

And then there is stress. We all encounter tensions and problems throughout the day. Sunlight can help you more easily glide through the day. A deepened sense of well-being results and better sleep comes at night. You feel better and live better. Because you are more relaxed, the crises of life are met with less difficulty. Sunlight on the body both calms the nerves and increases adrenalin. This relaxation is not merely mental; it is physical also. Both gastric and duodenal ulcer patients have been found to improve under the beneficial effects of sunshine.

The wealth of new scientific insights on the restorative power of sunlight continues to unfold. Sunlight lowers blood cholesterol; an excess of blood cholesterol is one of the problems leading to heart and artery disease. The basic fact underlying this truth goes back to the year 1904, when it was discovered that sunlight changes the cholesterol just under the skin into vitamin D. Because there is so much cholesterol just under the skin, when it is changed by sunlight into vitamin D, cholesterol from the blood is sent to take its place, thus lowering the cholesterol in the blood. Researchers now know that when cholesterol is removed from the blood—cholesterol stored within the plaques deposited on the artery walls takes its place. The result is a beneficial reduction of the dangerous deposits that accompany hardening of the arteries and lead to strokes. Two hours after a sunbath, an average of 13% reduction in human blood cholesterol occurs.

Research carried out in 1970 in Russia disclosed that sunbaths help people with hardening of the arteries of the brain. Their improved mental performance and memory indicates that those harmful blood vessel deposits were lessened by the exposure to sunlight.

Incidentally, one insight that came out of this and other Russian research was the fact that patients were helped more by frequent short exposures to sunlight than by infrequent longer sunbaths. Proof of this was shown in the electrocardiograms: almost twice as good in those receiving shorter, more frequent sunshine on their bodies.

Dramatic evidence of the importance of sunlight on the body is to be found in the fact that dark-skinned races suffer more from certain diseases than light-skinned races. Of all the races, the Negro race is the most susceptible to rickets. The solution is vitamin D, but in order to manufacture it in the body, blacks must have their bodies in the sunlight more than the light-skinned races.

Because blacks require more sunlight on their bodies for good health than whites, blacks tend to have more jaundice, higher blood pressure, tuberculosis, and diabetes.

In our book, "The Water Therapy Manual" (Part Two of "Better Living for Your Home"), we include a section on sunbathing as a healing principle in the treatment of tuberculosis. Tuberculosis of the skin, bone, and lung are all helped by sunbathing.

Streptococcal infections have been found to be reduced when sunlight regularly reaches the skin. In 1929, Dr. Ude introduced sunbathing into America for the treatment of erysipelas (a streptococcal infection of the skin). In 1938, penicillin was discovered and many researchers turned their eyes from sunlight to the wonder drugs. But the many dangerous side effects of these medicinal drugs are less likely to be found in taking a sunbath.

Fungus infections of the feet and toes are especially helped by sunlight. So many different bacteria and viruses exist that it is neither wise nor safe to attempt vaccination against them all. But sunlight on the body is part of the best solution to many of these problems.

Infectious diseases include many physical problems ranging from the common cold to flu,—and even the dangerous spinal meningitis.

How very important it is that we make sure that we frequently obtain the vital sunlight that our bodies so much need in order to maintain good health.

Some people believe that all of the problems of mankind are due to germs, and others think that germs are no problem at all—as long as one lives properly and eats healthfully. We well agree that right living is the most important of all, but germs in the water and air around us are not always harmless.

In 1935, Daryl Hart noted the frequency with which infections developed in people who had just had operations. He wondered whether air-borne germs might have contaminated them while the operation was in progress. He placed petri dishes in an operating room for an hour during an operation, and found 78 colonies of staphylococcus on one place alone. Was there a way that those germs in the air could have been killed? Dr. Hart placed ultraviolet lights overhead—and discovered that all the germs—including very dangerous ones—were killed within ten minutes, if they were within eight feet of those lamps. And this happened even when the lights were so low in intensity that it required eighty minutes for blond skin to be reddened. A similar experiment was done in a naval training center, in which very low-intensity ultraviolet lights were installed in the barracks. The result was a 25% reduction in respiratory infections among the recruits using those sleeping quarters.

(Please, do not set up sunlamps in your bedroom! They are far too high in intensity, and your eyes will be damaged. Instead, draw back the curtains—and let the sunlight in. For it has been scientifically established that sunlight reduces the danger of open-air transmission of disease. Sunlamps must be used with greatest care and for only a few seconds at a time.)

Water purification is now being taken to the sunlight. Chlorination kills many water-borne diseases, but the chlorine has certain carcinogenic (cancer-causing) effects. Researchers are now turning to irradiation with ultraviolet

light.

The four most dangerous water-borne bacterial infections are cholera, typhoid, bacillary dysentery, and hepatitis. It has been demonstrated that sunlight can kill such bacteria to some depth, if the flow of water is slow enough so that the ultraviolet radiations can effectively reach them.

What about germs on the skin? Exposure to sunlight increases the skin's resistance to disease. It does this by directly killing the bacteria on the skin. The shorter ultraviolet wave lengths are the most bactericidal, and do not particularly penetrate beneath the skin. But the longer wavelengths also kill germs, though to a lesser extent, and they penetrate more deeply.

Sunlight not only directly kills bacteria on the skin,—but it changes natural body oils on the skin into bactericidal agents! Even the vapors rising from these irradiated natural skin oils are able to kill bacteria.

Psoriasis and acne are two common skin diseases. Both are being treated with sunlight. Sunlight keeps psoriasis under control, and the purifying power of these rays helps to sterilize acne, and bring to it more rapid healing.

Sunlight also strengthens the body's immune system. This is partly due to the fact that sunlight striking the body increases the number of white blood cells in the body. These are the fighter cells that resist infection by gobbling it up wherever found in the body. There is one particular white blood cell that is the most powerful germ killer of them all: the lymphocyte. Science has now come to the startling conclusion that sunlight increases the number of lymphocytes—more than any other kind of white blood cell.

Antibody production, so important to a successful resistance to infection, is also greatly increased after sunbathing. This is due to the fact that it is primarily the lymphocytes that produce the antibodies, such as the very important gamma globulins. In laboratory animals, this antibody increase can last for two or three weeks.

Neutrophils, fairly common white blood cells, are very important. They spend their life within your body eating up bacteria, fungus, and other harmful invaders. After being exposed to the sun, the neutrophils are, in some unknown way, stimulated to chew up harmful bacteria even more rapidly. Research experiments have disclosed that this increase in gobbling action is doubled after a sunbath.

Did you ever notice that people are more likely during the winter months to contract colds, during spells of lessened sunlight?

An interesting study related to this fact is that of the early polar explorers. After spending months in those icy areas with so little sunlight, they would always develop upper respiratory infections upon returning home. The lack of sunlight for eight months had weakened their immune systems, and their antibodies and white blood cells were markedly decreased.

And, of course, sunlight also affects your bones.

In children without adequate sunlight, the vitamin D needed to calcify the bones is not present in proper amounts for the body to lay down calcium in the bones—and they bend more easily. In adults, when there is not enough vitamin D in the body, the calcium leaves the bones and they become softer.

In one research study, over 800 children were studied; and it was noted that they had more dental cavities during the winter and spring months than during the summer months. The lessened sunlight in the winter would be a factor here. However, it should also be noted that those children probably also had less fresh greens, vegetables, and fruit during the winter months. This would also affect their vitamin C and calcium intake—both important to good bones and teeth.

Newborn and young children in areas of the world with less sunlight have a tendency to develop jaundice. It was a nurse in England that first discovered that sunlight could eliminate the problem. Two blood samples taken of the same infant, one shortly after the other—brought the whole matter to the attention of medical science. The sunlight bath given by the nurse, Mrs. Ward, to that infant dramatically changed its condition.

Further study into this revealed that sunlight through glass could partially but not as effectively help the infants with jaundice.

Jaundice in adults can be caused by a number of different factors; sunlight seems to help in every case.

But of all light available, there is none as healthful to the human body as full-spectrum sunlight taken out-of-doors.

It was centuries ago that the beneficial value of sunlight in the treatment of arthritis was first observed. Many examples of this could be cited, but the moral of the story is this: If you have arthritis, take sunbaths.

Gout is also helped by sunlight. It is thought that the ultraviolet rays increase uric acid excretion.

Sunlight helps heal wounds. Under its influence, they heal better and more rapidly. Part of the reason for this is the greater blood supply to the wounded body area when sunlight has fallen on it. Another reason is the purifying effects of the sun's rays. But there are other factors involved of which we are not yet certain.

Sunlight, which can help heal wounds, can also aid in the treatment of sores and surface ulcers. Older folk can develop such problems due to an inadequate blood circulation. But sunlight increases the circulation.

An unusual new development in sunlight research involves that of poisonous chemicals. Sunbathing helps destroy many of them, such as lead, mercury, cobalt, manganese, cadmium, fluoride, benzene, pesticides, and even aids in the elimination of quartz and coal dust.

For example, lead was removed twice as fast from the bodies of animals receiving adequate doses of sunlight. The principle here is that the ultraviolet light in sunlight apparently increases the number of enzymes that eliminate toxic chemicals by metabolizing them. Russians give sunlight therapy daily to miners to help remove coal, quartz, and other rock dusts from their lungs.

Yet, oddly enough, while toxic levels of heavy metal and rock particles are removed by sunlight—the amount of valuable trace minerals in the blood are increased.

One unusual fact that turned up in the course of sunlight research was the insight that experimental animals receiving sunlight treatments undergo some weight loss. It is thought that this is related to increased thyroid production, which sunlight is known to do. Basal body metabolism is thus increased and more calories are burned up.

Sunlight striking the skin also increases muscle tone;

and this in turn would use up more calories. Sunlight even helps childbirth. Dr. Robert Bradley, an obstetrician of many years experience, has discovered that women who obtained extra sun over all their body in the months before delivery were less likely to tear at childbirth. He found their skin to be more flexible and less brittle at the time of delivery.

The University of Illinois did research on students, and found that the ones who received regular sunbaths showed greater interest in their classes, attended more regularly, and were more alert. F.A. Kummerow found that sunlight treatments favorably affect the mind and help balance the stimulating and depressing nerve impulses. Try sunbathing yourself—and notice how you will gain a feeling of general well-being and a more cheerful outlook on life.

For the healthiest home, let the light in. Push the curtains back so the sunshine can pour in. Yes, it may fade the rug, but the benefits are far greater than the losses. Sunlight purifies the air in the room. Normal air exchange will carry that air to the north rooms of the house and help purify them. Did you know that patients in hospitals tend to recover more quickly when they are in southern exposure rooms, and less quickly when they are in rooms located on the north side? Let the sunlight into your home, as much as possible, and open the doors between the different rooms, so that its quiet, healing influence may permeate your home.

Rooms can be partially purified by skylight (sunlight reflected from the sky) coming in through the windows. See our book, *"Prophet of the End,* pages 69-70, for more information on this.

HOW TO OBTAIN THE NEEDED SUNLIGHT

Not-too-much and often-as-possible is the best formula. Dr. Zane Kime, whose book, *Sunlight,* is a classic in the field, wrote this:

"If too much sunlight is received, it can have a drying effect, and one may occasionally have flaking, dry skin. Exposure to the sun should be progressive, beginning with only a few minutes a day . . If the tissues of the skin are saturated with the necessary vitamins, the sun will not age the skin, but enhance its beauty."—*Sunlight, p. 89.*

If you would like an abundance of scientific background information on the therapeutic value of sunshine, obtain a copy of Dr. Kime's book, *Sunlight.*

On page 267 of that book, you will find a listing of many of the human diseases that sunlight can help alleviate.

Here is another important quotation from Dr. Kime's book:

"Nutrition and sunlight are intimately related. By striking the skin, sunlight can produce certain hormones and nutrients like vitamin D. Unless one has a proper diet, sunlight has an ill effect on the skin. This must be emphasized: Sunbathing is dangerous for those who are on the standard high-fat American diet or do not get an abundance of vegetables, whole grains, and fresh fruits. Those on the standard high-fat diet should stay out of the sun and protect themselves from it; but, at the same time, they will suffer the consequences of both the high-fat diet and the deficiency of sunlight."—*Zane Kime, Sunlight, p. 117.*

The problem here is skin cancer. (1) If you are not eating a healthful diet, and (2) if you are getting too much sunlight on your skin,—your chances of developing skin cancer are greater.

Fortunately, of all the malignancies that plague mankind, skin cancer is the easiest to detect and the easiest to remove. In relation to its frequency of occurrence, there are fewer deaths from skin cancer than from any other type of carcinoma.

But, in view of the advantages—and dangers—of sunbathing,—what is the best way to obtain it? How long should we sunbathe, and how often? Here are some suggestions:

Some people are more sensitive to sunlight than others. They burn more quickly. Such individuals should take less sunlight to start with and never obtain very much at a time. Others can take more. Dark-skinned people will need to spend more time in the sun in order to obtain enough. The higher in the sky the sun is, the stronger its rays. In the winter months, you will want to sunbathe near noontime, since the sun is lower in the winter skies. In the summer, there is a wider range of hours to select from. Keep in mind that the higher the sun is in the sky, the more ultraviolet rays it sends to your body. And those are the rays that purify; they are also the rays that can bring sunburn. Also keep in mind your latitude. The farther north you live, the lower in the sky the sun will be at noon. People sunburn more quickly at the beach than at home. This is due to the fact that light rays reflect back from the sun. (Snow reflects 85% of the ultraviolet; dry sand 17%, water 3-5%, and grass 2.5%.) Wet skin burns more rapidly than dry skin.

Many of the drugs, cosmetics and soaps that people use tend to sensitize the skin so that burning can occur more easily. Another problem is the suntan lotions. These frequently tend to block out the sun's rays, and this you do not want.

Sunbathe under the sun—without any glass or plastic between. Be in the sun regularly; best at about the same time of the day you were last in it. Carefully time yourself. This writer uses a stopwatch and begins at two minutes to a side, and finds that he does best not to later go beyond eight minutes per side. Have it settled in your mind that you want a balanced and regular program of sunbathing, not just a suntan. As we said earlier: You want frequent sunlight on your body, but not too much at a time. This is an ideal that you may not always be able to achieve. But such a program, combined with a good diet, will give you the healing sunlight you need, with little likelihood of skin cancer.

On the first day, start with no more than two minutes to a side, and later lengthen it. Do it every day, every other day, or as often as you are able. Beware: Sunlight is relaxing; do not fall asleep during a sunbath.

If you are able to do so, build an inexpensive solarium where you can take sunbaths in privacy. In this way, each sunbath will bring the healing, purifying, strengthening rays to a larger part of your body than would otherwise be possible.

Carotene and vitamin A in the diet, along with fresh fruits and vegetables, while carefully avoiding free fats (grease, oil, etc.)—will help protect you from the negative

effects of sunlight.

Should you use artificial sunlamps? Only if there is absolutely no way you can get out into the sunlight itself. Never buy or use a sunlamp that produces ultraviolet rays with frequencies below 290 nm. (Only a few firms manufacture sunlamps with safe radiation frequencies—above 290 nm.)

If you use sunlamps, always wear protective glasses to shield your eyes, and work quickly, rotating before the bulb. Sunlamps are dangerous—be careful!

It is possible to purchase ultraviolet window panes—that will let in the ultraviolet from the sun. Apparently, this new development is useful. Overcast skies only filter out about 20% of the ultraviolet rays, so such windows could enable you to take a sunbath in a blizzard.

Sunlight is one of the great blessings given by God to you. Let it help you and your loves ones every day, and thank Him daily for such a wonderful gift.

ADDITIONAL PRINCIPLES

"Shade-trees and shrubbery too close and dense around a house are unhealthy; for they prevent a free circulation of air, and prevent the rays of the sun from shining through sufficiently. In consequence of this a dampness gathers in the house. Especially in wet seasons the sleeping-rooms become damp, and those who sleep in the beds are troubled with rheumatism, neuralgia, and lung complaints, which generally end in consumption. Numerous shade trees cast off many leaves, which, if not immediately removed, decay, and poison the atmosphere. A yard, beautiful with scattering trees and some shrubbery at a proper distance from the house, has a happy, cheerful influence upon the family, and if well taken care of, will prove no injury to health."—*How to Live, p. 64.*

"Rooms that are not exposed to light and air become damp. Beds and bedding gather dampness, and the atmosphere in these rooms is poisonous, because it has not been purified by light and air. Various diseases have been brought on by sleeping in these fashionable, health-destroying apartments . . Sleeping rooms, especially, should be well ventilated, and the atmosphere made healthful by light and air. Blinds should be left open several hours each day, the curtains put aside, and the room thoroughly aired. Nothing should remain, even for a short time, which would destroy the purity of the atmosphere."—*How to Live, pp. 62-63.*

"Life in the open air is good for body and mind. It is God's medicine for the restoration of health. Pure air, good water, sunshine, the beautiful surroundings of nature—these are His means for restoring the sick to health in natural ways. To the sick it is worth more than silver or gold to lie in the sunshine or in the shade of the trees."—*7 Testimonies, p. 85.*

"The guest-chamber should have equal care with the rooms intended for constant use. Like the other bedrooms, it should have air and sunshine, and should be provided with some means of heating to dry out the dampness that always accumulates in a room not in constant use. Whoever sleeps in a sunless room, or occupies a bed that has not been thoroughly dried and aired, does so a the risk of health, and often life."—*Ministry of Healing, p. 275.*

"If those who are well need the blessing of light and air, and need to observe habits of cleanliness in order to remain well, the sick are in still greater need of them in proportion to their debilitated condition."—*How to Live, p. 60.*

"If you would have your homes sweet and inviting, make them bright with air and sunshine. Remove your heavy curtains, open the windows, throw back the blinds, and enjoy the rich sunlight, even if it be at the expense of the colors of your carpets."—*2 Testimonies, p. 527.*

"If the windows were freed from blinds and heavy curtains, and the air and sun permitted to enter freely the darkened rooms, there would be seen a change for the better in the mental and physical health of the children. The pure air would have an invigorating influence upon them, and the sun that carries healing in its beams would soothe and cheer, and make them happy, joyous, and healthy."—*Healthful Living, p. 229.*

"Exercise, and a free use of the air and sunlight . . would give life and strength to many an emaciated invalid."—*Our High Calling, p. 223.*

SPIRITUAL LESSONS

God wants His people to be like the sunshine. They are to be the light of the world. They are to rejoice in His salvation, and share the glorious news of deliverance with everyone they meet.

It is daily consecration which begins this experience. Jesus is calling upon us to make this daily, renewed dedication to Him. "I beseech you therefore, brethren, by the mercies of God, that ye present your bodies a living sacrifice, holy, acceptable unto God, which is your reasonable service" (Romans 12:1).

Each new dedication, lived out in the daily life, makes us more like our Master—the One whom we are trying to be like. "Let this mind be in you, which was also in Christ Jesus" (Philippians 2:5), for He "made Himself of no reputation, and took upon Him the form of a servant" (Philippians 2:7).

The closer we come to Jesus, the more we can understand His character of love, gentleness, and helpfulness. "Take My yoke upon you, and learn of Me; for I am meek and lowly in heart: and ye shall find rest unto your souls" (Matthew 11:29).

It is unselfish ministry to others that makes the difference between the Christian and the worldling. "And whosoever will be chief among you, let him be your servant: even as the Son of man came not to be ministered unto, but to minister, and to give His life a ransom for many." (Matthew 20:27-28). Jesus said, "I am among you as he that serveth" (Luke 22:27).

Sunshine in the life of the Christian means to love God and live to help and bless others. It also means to praise God with all the heart and soul. "By Him therefore let us offer the sacrifice of praise to God continually, that is, the first fruit of our lips giving thanks to His name" (Hebrews 13:15).

Sunshine never stops, but the clouds sometimes keep us from seeing it. Let our praise to the Lord be continual also. "I will bless the Lord at all times: His praise shall continually be in my mouth" (Psalm 34:1). "Every day will I bless Thee; and I will praise Thy name for ever and ever" (Psalm 145:2).

"In every thing give thanks; for this is the will of God in Christ Jesus concerning you" (1 Thessalonians 5:18). "Giving thanks always for all things unto God and the Father in the name of our Lord Jesus Christ" (Ephesians 5:20).

What a wonderful way to live! Always dwelling in the sunshine of God's countenance; always spreading the sunshine to those around you. "Be careful for nothing; but in every thing by prayer and supplication with thanksgiving let your requests be made known unto God" (Philippians 4:6).

When the sunshine of praise is not present, we lapse into doubt, discontent, and darkness. "Because that, when they knew God, they glorified Him not as God, neither were thankful; but became vain in their imaginations, and their foolish heart was darkened" (Romans 1:21).

Whether on the street, about our business, or at church—let us praise the Lord. "My praise shall be of Thee in the great congregation: I will pay my vows before them that fear Him" (Psalm 22:25).

We praise God by telling others how good He has been to us, and the blessings and protection He has brought us. "Come and hear, all ye that fear God, and I will declare what He hath done for my soul" (Psalm 66:16). "My soul shall make her boast in the Lord; the humble shall hear thereof, and be glad" (Psalm 34:2).

In every place and by every means, praise the Lord. "Praise ye the Lord. Praise God in His sanctuary: praise Him in the firmament of His power. Praise Him for His mighty acts: praise Him according to His excellent greatness . . Let everything that hath breath praise the Lord. Praise ye the Lord" (Psalm 150:1, 2, 6). Spread the sunshine.

From age to age, throughout times past and eternity to come, God's people praise Him with song and rejoicing. "Where wast thou when I laid the foundations of the earth? . . when the morning stars sang together, and all the sons of God shouted for joy?" (Job 38:4,7). "Then sang Moses and the children of Israel this song unto the Lord . . The Lord is my strength and song, and He is become my salvation . . and I will exalt Him" (Exodus 15:1-2). "Serve the Lord with gladness" (Psalm 100:2).

"Unto Him that is able to keep you from falling, and to present you faultless before the presence of His glory with exceeding joy."—*Jude 24.*

The Natural Remedies Encyclopedia

The Third Law of Health

The Power of Abstemiousness

To be "abstemious" is to be moderate or sparing in the use of certain things, including an excess of even good food. Temperance has a similar meaning: It means to have moderation or self-restraint.

Temperance can also mean to totally avoid certain substances or activities, and so does abstinence.

We are here speaking of self-control. In order to succeed physically, mentally, and morally in life, we must have temperance in regard to things good and abstinence in regard to things harmful.

"In order to preserve health, temperance in all things is necessary,—temperance in labor, temperance in eating and drinking."—*How to Live, p. 57.*

"True temperance teaches us to abstain entirely from that which is injurious, and to use judiciously only healthful and nutritious articles of food."—*Health Reformer, April 1, 1877.*

The evangelist, Paul, counsels us to be "temperate in all things" (1 Corinthians 9:25). This means that we should shun that which is harmful, avoid unneeded extremes, and be moderate in the enjoyment of those things which are lawful. Health of body, mind, and soul is impossible without careful, temperate living.

Even when eating the most careful diet, you can get too much of a good thing. Too much, even of the best food, is harmful. Too much sunshine can result in severe sunburn; too much exercise can cause excessive exhaustion. The Apostle Paul said, "Let your moderation be known unto all men" (Philippians 4:5). Seneca said, "Man does not die; he kills himself!" Much of the tragic shortening of men's lives—that we so often see around us—is unnecessary. Men and women violate the laws of health; and the law of abstemiousness is one of the most important of these laws.

The well-known American writer, William Cullen Bryant, lived to a very old age. When asked the reason for his excellent health at such an advanced age, he replied, "It is all summed up in one word: moderation." If we would be temperate in all things, self-control must be exercised in our conversation, in our daily diet, in our work habits, in our recreation, in our travels, in our time for sleep, and in our study. Throughout life, we must ever be on guard lest we fall

into intemperance. The strains and injuries of earlier years add up and reveal themselves in the later years. Live carefully, and if you are not doing so,—then immediately turn about and determine that, by the help of God, you will live a better life. Fortunately, whenever we begin living more healthfully, our future happiness immediately begins improving.

The will power to make the needed changes can be found only in Christ, humble submission to Him, and careful obedience to His Inspired Word. It is the will of our heavenly Father that we not only learn and obey His Moral Law, the Ten Commandments, but that we also learn and obey the physical laws that govern our being.

A little later in this chapter will be found a number of very helpful quotations that will explain the importance of studying and living by the laws of health. Moderation is something that but few value as they should. Yet it is the cord that binds together many other health principles.

The Bible says, "Every man that striveth for the mastery is temperate in all things" (1 Corinthians 9:25). As we have mentioned earlier, true temperance includes moderation in things good as well as abstinence in things harmful.

Here are some of the harmful things that should be avoided: Do not use tobacco in any form, for it is a slow but powerful poison. Totally avoid alcoholic drinks. Stay away from poisonous substances and toxic drugs. This includes not only liquids and solids, but also vapors and fumes. Beware of addicting substances and never indulge in them. Included under this category would be not only alcoholic beverages, but also caffeine products (such as coffee, tea, and cola drinks). Caffeine products injure your organs; and, in addition, cola drinks gradually melt your teeth.

The heavily sugared foods (such as candy, ice cream, cake, and chewing gum) are better left alone.

The Bible says not to eat the blood or the fat. Yet it is practically impossible to prepare meat dishes with any taste—after all the blood, fat, and uric acid (urine in the tissues) has been first soaked and boiled out of the raw meat.

Do not use greasy foods. This includes butter, margarine, and animal fat. Any oil that is solid or semi-solid at room temperature should never be put into the body. Beware of trans-fats. These are the partially hydrogenated oils that have been put into margarine and many other foods. An example of this is the peanut butter sold in regular grocery stores. You will notice that it contains no free-flowing ("runny") oil. All of the oil has been solidified by hydrogenation into a grease form.

Chemically, such grease has the same effect in the body that animal fat has. (In addition, some manufacturers remove the expensive peanut oil from the crushed peanuts, and then add to the peanut pulp a cheap oil that has been hydrogenated into grease. This cheap oil additive is sometimes an animal fat, although marked on the label as "vegetable oil.") Meat in the diet has a tendency to rot in the system. This is due to the fact that our digestive tracts are much longer than those of dogs, tigers, and other flesh-eating animals.

Do not cook or eat food in aluminum. Aluminum salts are poisonous to the body. Avoid foods that have been taken apart (such as white flour, white rice, white sugar, white bread, etc). Instead, eat the whole foods: whole-grain bread and cereal, brown rice, honey, etc.

Baking powder and soda should not be used in food preparation; for they damage the delicate lining of the stomach. Vinegar is a powerful acid and should never be in any food that you eat.

The use of spices and condiments disturbs the stomach, creates a thirst that is difficult to satisfy with food, can lead to addictive habits, and has been known to cause disease. For example, white and black pepper can lead to intestinal cancer.

Avoid automobile and tobacco fumes. Car exhaust contains lead; and cigarette smoke has many dangerous chemicals, in addition to nicotine. Stay away from spray painters. Metal lacquer (such as is used by auto body refinishers) is especially harmful to the lungs.

Chlorinated water leads to atherosclerosis. And fluoridated water injures your bones, teeth, and nerves.

Do not eat or drink things that are too hot or too cold. Both upset the stomach and weaken the digestive system.

Food preservatives and insecticide residues are both dangerous in food. It is best to wash fresh fruit and vegetables before eating them, in order to eliminate as much of the insecticide as possible. Try to avoid using processed foods that list preservatives on the label.

Both chocolate and cocoa contain harmful substances.

That which is harmful should be avoided; and many of those things which are good should be used in moderation: Maintain a balance of rest and exercise; not too much work or too little. Regularity in scheduling and the daily routines of life will greatly aid in keeping you in the best health. Try to have a set time for rising, morning worship, prayer, drinking your water, mealtime, quitting time in the afternoon, family worship, evening walk time, bedtime, etc. Maintaining simple routines simplifies life, relaxes the mind, and helps us work more efficiently.

Personal cleanliness is actually another type of moderation.

Cleanliness of body, clothing, bedding, and house are important to good health. Open the windows and let in the purifying sunlight and fresh air. Water is the best cleansing agent known to mankind. It is a gift of God. Keep your environment clean and your life will be a happier one.

Closely related to cleanliness is neatness and tidiness. Keeping things neat and in order is both encouraging to the spirits and helpful to mental efficiency.

Tight compressions about the waist (such as belts, corset, etc.) can induce later pelvic organ disease. Suspend the clothing from the shoulders. Wear clothing that will avoid chilling of the arms and legs.

Refuse to live a life of anxious concern. Worry wears out the life forces. If you cannot solve it in five minutes, give it to God in prayer—and then forget it. Later the solutions will come to mind. That simple habit has been a help to this writer.

Have certain times to work and certain times not to; do the same with your mind. Turn it off at times and just relax. Above all things, keep cheerful, and keep close to God and His Written Word. Permit nothing to keep you continually depressed or anxious. People that are cheerful and relaxed always are healthier and have longer, happier lives than they otherwise would—without exception.

A cheerful, relaxed, unworried attitude; trust in God; prayerful and obedient study of His Scriptures; moderation in living habits; the use of the eight natural remedies; the avoidance of addictive and poisonous substances; trying to be a blessing and a help to those around you (regardless of whether they seem to appreciate your efforts);—this is the seven-fold formula for a happy, satisfying, worthwhile, and long life.

ADDITIONAL PRINCIPLES

"God is the owner of the whole man. Soul, body, and spirit are His. God gave His only begotten Son for the body as well as the soul, and our entire life belongs to God, to be consecrated to His service, that through the exercise of every faculty He has given, we may glorify Him."—*Healthful Living, p. 9.*

"The living organism is God's property. It belongs to Him by creation and by redemption; and by a misuse of any of our powers we rob God of the honor due Him."—*Counsels on Diet and Foods, p. 16.*

"The wonderful mechanism of the human body does not receive half the care that is often given to a mere lifeless machine."—*Gospel Workers, p. 175.*

"The health should be as sacredly guarded as the character."—*Counsels to Parents, Teachers and Students, p. 84.*

"Our very bodies are not our own, to treat as we please, to cripple by habits that lead to decay, making it impossible to render to God perfect service. Our lives and all our faculties belong to Him. He is caring for us every moment; He keeps the living machinery in action; if we were left to run it for one moment, we should die. We are absolutely dependent upon God."—*Medical Ministry, p. 13.*

"It is our duty to study the laws that govern our being, and conform to them. Ignorance in these things is sin."—*Healthful Living, p. 13.*

"From the first dawn of reason, the human mind should become intelligent in regard to the physical structure. We may behold and admire the work of God in the natural world, but the human habitation is the most wonderful."—*Counsels to Parents, Teachers, and Students, p. 125.*

"Ignorance of physiology and neglect to observe the laws of health have brought many to the grave who might have lived to labor and study intelligently."—*Special Testimonies on Education, p. 98.*

"To become acquainted with the wonderful human organism,—the bones, muscles, stomach, liver, bowels, heart, and pores of the skin,—and to understand the dependence of one organ upon another for the healthful action of all, is a study in which most mothers take no interest."—*3 Testimonies, p. 136.*

"Study that marvelous organism, the human system, and the laws by which it is governed."—*Christian Temperance, p. 120.*

"If people would reason from cause to effect, and would follow the light which shines upon them, they would pursue a course which would insure health, and the mortality would be far less . . All who possess common capabilities should understand the wants of their own system."—*How to Live, p. 51.*

"He who hungers and thirsts after God will seek for an understanding of the laws which the God of wisdom has impressed upon creation. These laws are a transcript of His character. They must control all who enter the heavenly and better country."—*Unpublished Testimonies, August 30, 1896.*

"God's law is written by His own finger upon every nerve, every muscle, every faculty which has been entrusted to man."—*Unpublished Testimonies, August 30, 1896.*

"The transgression of physical law is transgression of God's law.

"Our Creator is Jesus Christ. He is the author of our being. He is the author of the physical law as He is the author of the Moral Law. And the human being who is careless and reckless of the habits and practices that concern his physical life and health, sins against God. God is not reverenced, respected or recognized.

"This is shown by the injury done to the body in violation of physical law."—*Unpublished Testimonies, May 19, 1897.*

"God loves His creatures with a love that is both tender and strong. He has established the laws of nature; but His laws are not arbitrary exactions. Every 'Thou shalt not,' whether in physical or Moral Law, contains or implies a promise. If it is obeyed, blessings will attend your steps; if it is disobeyed, the result is danger and unhappiness."—*5 Testimonies, p. 545.*

"Health, strength, and happiness depend upon immutable laws; but these laws cannot be obeyed where there is no anxiety to become acquainted with them."—*Health Reformer, September 1, 1881, p.11.*

"God is greatly dishonored by the way in which man treats his organism, and He will not work a miracle to counteract perverse violations of the laws of life and health."—*Unpublished Testimonies, August 30, 1896.*

"The Lord has made it a part of His plan that man's reaping shall be according to his sowing."—*Unpublished Testimonies, May 19, 1897.*

"God calls for reformers to stand in defense of the laws He has established to govern the human system, and to maintain an elevated standard in the training of the mind and culture of the heart."—*Testimonies to Ministers and Workers, p. 195.*

"It is the duty of every human being, for his own sake and for the sake of humanity, to inform himself or herself in regard to the laws of organic life, and conscientiously to obey them . . It is the duty of every person to become intelligent in regard to disease and its causes. You must study your Bible, in order to understand the value that the Lord places on the men whom Christ has purchased at such an infinite price. Then we should become acquainted with the laws of life, that every action of the human agent may be in perfect harmony with the laws of God. When there is so great peril in ignorance, is it not best to be wise in regard to the human habitation fitted up by our Creator, and over which He desires that we shall be faithful stewards?"—*Unpublished Testimonies, December 4, 1896.*

"The transgression of the physical law is transgression of God's law. Our Creator is Jesus Christ."—

Unpublished Testimonies, May 19, 1897.

"Every law governing the human machinery is to be considered just as truly divine in origin, in character, and in importance as the Word of God. Every careless action, any abuse put upon the wonderful mechanism, by disregarding His specified laws of the human habitation, is a violation of God's law. This law embraces the treatment of the entire being."—*Unpublished Testimonies, January 11, 1897.*

"God has formed laws to govern every part of our constitutions, and these laws which He has placed in our being are divine, and for every transgression there is a fixed penalty, which sooner or later must be realized."—*Healthful Living, p. 20.*

"Our first duty, one which we owe to God, to ourselves, and to our fellow men, is to obey the laws of God, which include the laws of health."—*3 Testimonies, p. 164.*

"The laws governing the physical nature are as truly divine in their origin and character as the law of the Ten Commandments.

"Man is fearfully and wonderfully made; for Jehovah has inscribed His law by His own mighty hand on every part of the human body."—*Unpublished Testimonies, August 5, 1896.*

"It is just as much sin to violate the laws of our being as to break one of the Ten Commandments, for we cannot do either without breaking God's law."—*2 Testimonies, p. 70.*

"A violation of these laws is a violation of the immutable law of God, and the penalty will surely follow."—*Review and Herald, October 16, 1883.*

"All our enjoyment or suffering may be traced to obedience or transgression of natural law."—*3 Testimonies, p. 161.*

"God, the Creator of our bodies, has arranged every fiber and nerve and sinew and muscle, and has pledged Himself to keep the machinery in order if the human agent will co-operate with Him and refuse to work contrary to the laws which govern the human system."—*Unpublished Testimonies, August 30, 1896.*

"Every misuse of any part of our organism is a violation of the law which God designs shall govern us in these matters; and by violating this law, human beings corrupt themselves. Sickness, disease of every kind, ruined constitutions, premature decay, untimely deaths,—these are the result of a violation of nature's laws."—*Unpublished Testimonies, August 30, 1896.*

"Sickness is caused by violating the laws of health; it is the result of violating nature's laws."—*3 Testimonies, p. 164.*

"Everything that conflicts with natural law creates a diseased condition of the soul."—*Review and Herald, January 25, 1881.*

"The moral powers are weakened because men and women will not live in obedience to the laws of health, and make this great subject a personal duty."—*3 Testimonies, p. 140.*

"Satan knows that he cannot overcome man unless he can control his will. He can do this by deceiving men so they will cooperate with him in transgressing the laws of nature, which is transgression of the law of God."—*Temperance, p. 16.*

"If we unnecessarily injure our constitutions, we dishonor God, for we transgress the laws of our being."—*Healthful Living, p. 27.*

"If appetite, which should be strictly guarded and controlled, is indulged to the injury of the body, the penalty of transgression will surely result."—*Unpublished Testimonies, August 30, 1896.*

"Intemperance of any kind is a violation of the laws of our being."—*Review and Herald, September 8, 1874.*

"Eating merely to please the appetite is a transgression of nature's laws."—*Unpublished Testimonies, August 30, 1896.*

"Health is a great treasure. It is the richest possession that mortals can have. Wealth, honor, or learning is dearly purchased, if is be at the loss of the vigor of health. None of these attainments can secure happiness if health is wanting."—*Christian Education, p. 16.*

"The health should be as sacredly guarded as the character."—*Christian Temperance, p. 83.*

"Our physical, mental, and moral powers are not our own, but lent us of God to be used in His service." —*Healthful Living, p. 29.*

"The importance of the health of the body is to be taught as a Bible requirement."—*Unpublished Testimonies, August 30, 1896.*

"All who profess to be followers of Jesus should feel that a duty rests upon them to preserve their bodies in the best condition of health, that their minds may be clear to comprehend heavenly things."—*2 Testimonies, pp. 522-523.*

"That time is well spent which is directed to the establishment and preservation of sound physical and mental health . . It is easy to lose health, but it is difficult to regain it."—*Review and Herald, September 23, 1884.*

"God has not changed, neither does He propose to change our physical organism, in order that we may violate a single law without feeling the effects of its violation . . By indulging their inclinations and appetites, men violate the laws of life and health; and if they obey conscience, they must be controlled by principle in their eating and dressing, rather than be led by inclination, fashion, and appetite."—*Counsels on Diet and Foods, p. 161.*

"Neglecting to exercise the entire body, or a portion of it, will bring on morbid conditions. Inaction of any of the organs of the body will be followed by a decrease in size and strength of the muscles, and will cause the blood to flow sluggishly through the blood vessels."—*3 Testimonies, p. 176.*

"Perfect health depends upon perfect circulation."—*2 Testimonies, p. 531.*

"The health of the entire system depends upon the healthy action of the respiratory organs."—*How to Live, p. 57.*

"If we would have health, we must live for it."—*Health Reformer, December 1, 1870.*

"We can ill afford to dwarf or cripple a single function of mind or body by overwork, or by abuse of any part of the living machinery."—*Review and Herald,*

September 23, 1884.

"A sound body is required for a sound intellect."—*Christian Education, p. 17.*

"A careful conformity to the laws God has implanted in our being will insure health, and there will not be a breaking down of the constitution."—*Health Reformer, August 1, 1866.*

"Blindness mingles with the want of moral courage to deny your appetite, to lift the cross, which means to take up the very duties that cut across the natural appetites and passions."—*Unpublished Testimonies, November 5, 1896.*

"Nature's path is the road He [God] marks out, and it is broad enough for any Christian."—*3 Testimonies, p. 63.*

"Overeating prevents the free flow of thought and words, and that intensity of feeling which is so necessary in order to impress the truth upon the heart of the hearer."—*3 Testimonies, p. 310.*

"Excessive eating of even the best of food will produce a morbid condition of the moral feelings.. Wrong habits of eating and drinking lead to errors in thought and action. Indulgence of appetite strengthens the animal propensities, giving them the ascendancy over the mental and spiritual powers . . Everything that conflicts with natural law creates a diseased condition of the soul."—*Review and Herald, January 25, 1881.*

"The foundation of all enduring reform is the law of God. We are to present in clear, distinct lines the need of obeying this law.

Its principles must be kept before the people. They are as everlasting and inexorable as God Himself.

"One of the most deplorable effects of the original apostasy was the loss of man's power of self-control. Only as this power is regained, can there be real progress."—*Ministry of Healing, p. 129.*

"The less feverish the diet, the more easily can the passions be controlled."—*2 Testimonies, p. 352.*

"A failure to care for the living machinery is an insult to the Creator. There are divinely appointed rules which if observed, will keep human beings from disease and premature death."—*Counsels on Diet and Foods, p. 16.*

"Dearly beloved, I beseech you as strangers and pilgrims, abstain from fleshly lusts, which war against the soul."—*1 Peter 2:11.*

"Parents often make a mistake by giving their children too much food. Children treated in this way will grow up dyspeptics.

"Moderation in the use of even good food is essential."—*Child Guidance, p. 391.*

"Irregularity in eating and drinking, and improper dressing, deprave the mind and corrupt the heart, and bring noble attributes to the soul in slavery to the animal passions."—*Health Reformer, October 1, 1871.*

"A diseased body causes a disordered brain, and hinders the work of sanctifying grace upon the mind and heart."—*Health Reformer, September 1, 1871.*

"If man will cherish the light that God in mercy gives him upon health reform, he may be sanctified through the truth, and fitted for immortality."—*3 Testimonies, p. 162.*

"Every organ of the body is made to be servant of the mind."—*3 Testimonies, p. 136.*

"The brain is the capital of the body, the seat of all the nervous forces and of mental action. The nerves proceeding from the brain control the body. By the brain nerves, mental impressions are conveyed to all the nerves of the body as by telegraph wires; and they control the vital action of every part of the system. All the organs of motion are governed by the communications they receive from the brain."—*3 Testimonies, p. 69.*

"The brain nerves which communicate with the entire system are the only medium through which Heaven can communicate to man and affect his inmost life. Whatever disturbs the circulation of the electric currents in the nervous system, lessens the strength of the vital powers, and the result is a deadening of the sensibilities of the mind."—*2 Testimonies, p. 347.*

"A calm, clear brain and steady nerves are dependent upon a well-balanced circulation of the blood."—*Healthful Living, p. 194.*

"Immediately after eating there is a strong draught upon the nervous energy . . Therefore, when the mind or body is taxed heavily after eating, the process of digestion is hindered. The vitality of the system, which is needed to carry on the work in one direction, is called away and set to work in another."—*2 Testimonies, p. 413.*

"Every wrong habit which injures the health of the body, reacts in effect upon the mind."—*Health Reformer, February 1, 1871.*

"The brain is the citadel of the whole man, and wrong habits of eating, dressing, or sleeping affect the brain, and prevent the attaining of that which the student desires,—a good mental discipline. Any part of the body that is not treated with consideration will telegraph its injury to the brain."—*Christian Education, p. 125.*

"It is impossible for the brain to do its best work when the digestive powers are abused. Many eat hurriedly of various kinds of food, which set up a war in the stomach, and thus confuse the brain . . At mealtime cast off care and taxing thought. Do not be hurried, but eat slowly and with cheerfulness, your heart filled with gratitude to God for all His blessings. And do not engage in brain labor immediately after a meal. Exercise moderately, and give a little time for the stomach to begin its work."—*Gospel Workers, pp. 241-242.*

"The tempted ones need to understand the true force of the will.

"This is the governing power in the nature of man,—the power of decision, of choice. Everything depends on the right action of the will. Desires for goodness and purity are right, so far as they go; but if we stop here, they avail nothing. Many will go down to ruin while hoping and desiring to overcome their evil propensities. They do not yield the will to God. They do not *choose* to serve Him.

"God has given us the power of choice; it is ours to exercise. We can not change our hearts, we can not control our thoughts, our impulses, our affections. We can not make ourselves pure, fit for God's service. But we can *choose* to serve and do according to His good pleasure. Thus our whole nature will be brought under the control of Christ . . A pure and noble life of victory over appetite

and lust is possible to every one who will unite his weak, wavering human will to the omnipotent, unwavering will of God."—*Ministry of Healing, p. 176.*

SPIRITUAL LESSONS

Abstemiousness, or temperance, is simply self-control. Only through the continual aid of our Lord and Saviour Jesus Christ can we be empowered, by His grace, to control ourselves, resist temptation, and obey God's will.

The will of God is revealed throughout the Inspired Writings of Scripture, and especially in the Ten Commandments which summarize many basic principles of godliness.

If you would be like Jesus, then, by His enabling grace, obey the Ten Commandments which He gave on Mount Sinai over 3,400 years ago.

Obedience to God is the basis of all true temperance, the foundation of successful, happy living in this life, and the assurance of life on through eternity with God.

"The law of the Lord is perfect, converting the soul: the testimony of the Lord is sure, making wise the simple. The statutes of the Lord are right, rejoicing the heart: the commandment of the Lord is pure, enlightening the eyes" (Psalm 19:7-8).

It is in the law that we learn God's pattern for our conduct and His will for our lives. "And knowest His will . . being instructed out of the law" (Romans 2:18). "Fear God, and keep His commandments: for this is the whole duty of man. For God shall bring every work into judgment, with every secret thing, whether it be good, or whether it be evil" (Ecclesiastes 12:13-14).

Intemperance in life is sin, and sin is the breaking of God's law. "Whosoever committeth sin transgresseth also the law: for sin is the transgression of the law" (1 John 3:4). "For by the law is the knowledge of sin" (Romans 3:20).

Obedience to God is the passport to heaven. Jesus said, "If thou wilt enter into life, keep the commandments" (Matthew 19:17). "Blessed are the undefiled in the way, who walk in the law of the Lord" (Psalm 119:1). "Moreover by them is Thy servant warned: and in keeping of them there is great reward" (Psalm 19:11).

The rewards of obedience are abundant: "Great peace have they which love Thy law: and nothing shall offend them" (Psalm 119:165). "O that thou hadst hearkened to My commandments! Then had thy peace been as a river, and thy righteousness as the waves of the sea" (Isaiah 48:18). "The fear of the Lord is the beginning of wisdom: a good understanding have all they that do His commandments" (Psalm 111:10). "If ye be willing and obedient, ye shall eat the good of the land" (Isaiah 1:19).

Yet it is only through the enabling strength of Christ's grace that we can keep God's law. Apart from Christ, we are helpless to resist sin.

"I am not ashamed of the gospel of Christ: for it is the power of God unto salvation to every one that believeth" (Romans 1:16). Jesus came to earth and died so we might be delivered from falling into sin. "Thou shalt call His name Jesus: for He shall save His people from their sins" (Matthew 1:21). "We preach . . Christ the power of God, and the wisdom of God" (1 Corinthians 1:23-24). "Behold the Lamb of God, which taketh away the sin of the world" (John 1:29).

By believing in Christ as our Saviour, and acting in accordance with our faith, we are enabled to obey all that God asks of us. "Do we then make void the law through faith? God forbid: yea, we establish the law" (Romans 3:31).

This is the basis of the new covenant: God enables us to obey His commandments as we accept and cling to Jesus, His Son. Christ is our Mediator in Heaven, and He strengthens us to resist temptation and obey God's law (Hebrews 8:6, 10).

Law and grace are closely associated in the plan of redemption. To understand grace, we need to understand the law.

In the beginning, God created man and placed him under law. Man was not just to be a wild man, a law unto himself. He was to obey God. The Moral Law of the Ten Commandments were later written down (Exodus 20). Other laws were also given at that time.

There were civil laws which regulated many matters of the nation of Israel. They applied to the governing of the nation.

Then there were the ceremonial, or sanctuary, laws. These governed the religious services of the nation, and were written in a book which was placed beside the Ark of the Covenant. These ceremonial laws were abolished at the cross, for at that time Christ, the great antitypical Lamb of God died for mankind. No longer need lambs be brought to the earthly sanctuary to be sacrificed. In Christ at Calvary, shadow met substance and type met antitype—and the ceremonial laws were abolished.

"Blotting out the handwriting of ordinances that was against us, which was contrary to us, and took it out of the way, nailing it to His cross" (Colossians 2:14). "Which are a shadow of things to come; but the body is of Christ" (Colossians 2:17).

Then, third, there was the Ten Commandments. It is the Moral Law of God, given by Him to all humanity. It is the universal law of mankind. No one is to commit adultery, or the other sins listed in this holy code.

This was the only law written by the finger of God. It was the only law placed inside the Ark of the Covenant. "He wrote on the tables, according to the first writing, the Ten Comamndments, which the Lord spake unto you in the mount out of the midst of the fire in the day of the asembly" (Deuteronomy 10:4). "And I turned myself and came down from the mount, and put the tables in the ark which I had made" (Deuteronomy 10:5).

The moral Ten Commandment law is eternal. It is God's own covenant, and it is as everlasting as God Himself. "The law of the Lord is perfect, converting the soul" (Psalm 19:7). "Wherefore the law is holy, and the commandment holy, and just, and good." (Romans 7:12). "Thy law is the truth" (Psalm 119:142). "Concerning Thy testimonies, I have known of old that Thou hast founded them forever" (Psalm 119:152).

What does the law do for the sinner?

First, it gives a knowledge of sin. "By the law is the knowledge of sin" (Romans 3:20).

Second, it brings guilt and condemnation. "Now we know that what things soever the law saith, it saith to them who are under the law: that every mouth may be stopped,

and all the world may become guilty before God" (Romans 3:19).

Third, it acts as a spiritual mirror. "If any be a hearer of the Word, and not a doer, he is like unto a man beholding his natural face in a glass: for he beholdeth himself, and goeth his way, and straightway forgetteth what manner of man he was. But whoso looketh into the perfect law of liberty, and continueth therein, he being not a forgetful hearer, but a doer of the work, this man shall be blessed in his deed" (James 1:23-25).

Without the law the sinner is like a man afflicted with a deadly disease, who does not know he has it. Paul said, "I had not known sin, but by the law" (Romans 7:7).

What is the law unable to do for the sinner?

The law of God cannot forgive or justify him; only Jesus can. He died to redeem us. "By the deeds of the law there shall no flesh be justified in His sight" (Romans 3:20).

The law of God cannot keep from sin or sanctify us. "Is the law then against the promises of God? God forbid: for if there had been a law given which could have given life, verily righteousness should have been by the law" (Galatians 3:21).

The law of God cannot cleanse or keep the heart clean. Only Jesus can cast out the evil, and enable man to obey Him.

What does the grace of Christ do for the sinner?

When the law of God and the Spirit of God have made the sinner conscious of his sin, he will feel his need of Jesus Christ. Going to the Saviour, he can receive help. If we come to Him and confess and put away our sin, He forgives us. "If we confess our sins, He is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness" (1 John 1:9).

Through grace, we can receive forgiveness and justification. "Be it known unto you therefore, men and brethren, that through this Man is preached unto you the forgiveness of sins: and by Him all that believe are justified from all things, from which ye could not be justified by the law of Moses" (Acts 13:38-39).

Through grace, we can be saved from sin, or sanctified. "Thou shalt call His name Jesus: for He shall save His people from their sins" (Matthew 1:21). "But of Him are ye in Christ Jesus, who of God is made unto us wisdom, and righteousness, and sanctification, and redemption" (1 Corinthians 1:30).

Grace inspires faith, and encourages us to come to Christ and remain with Him. "By grace are ye saved through faith; and that not of yourselves: it is the gift of God: not of works, lest any man should boast. For we are His workmanship, created in Christ Jesus unto good works, which God hath before ordained that we should walk in them" (Ephesians 2:8-10).

Grace brings us God's power. "I am not ashamed of the gospel of Christ: for it is the power of God unto salvation to every one that believeth; to the Jew first, and also to the Greek" (Romans 1:16).

What is the relationship of a sinner, who is being saved by grace, to the law of God?

The law becomes the standard of his life "This is the love of God, that we keep His commandments" (1 John 5:3).

He permits Christ to fulfill in him the righteousness of the law (Romans 8:3). Christ writes the law on the heart. "This is the covenant that I will make . . I will put My laws into their mind, and write them in their hearts: and I will be to them a God, and they shall be to Me a people" (Hebrews 8:10).

What is the relationship of grace, faith, love and the law?

Grace is unmerited favor, but grace does not sanction continued transgression. "What then? shall we sin, because we are not under the law, but under grace? God forbid" (Romans 6:15).

Faith does not make void, but establishes, the law. "Do we then make void the law through faith? God forbid: yea, we establish the law" (Romans 3:31).

Faith brings overcoming power. "Whatsoever is born of God overcometh the world: and this is the victory that overcometh the world, even our faith" (1 John 5:4).

Love is the fulfilling of the law. "Love worketh no ill to his neighbour: therefore love is the fulfilling of the law" (Romans 13:10).

True love keeps the commandments. "This is the love of God, that we keep His commandments: and His commandments are not grievous" (1 John 5:3).

The Natural Remedies Encyclopedia

The Fourth Law of Health

The Rest Your Body Needs

"Come ye apart . . and rest" are the words of Jesus. Are you weary and worn with the routine of everyday life? Rest is what you need: physical rest, mental rest. Come rest awhile. It is one of God's special healing remedies; and it is just for you, just now.

Let us, for a few minutes, learn some of the blessings that rest can bring, blessings that you may very much need.

Strangely enough, you can read almost any book on remedies and you will find hardly any mention of rest. Most of the directions are about swallow this or inject that. Yet *rest* is one of the most basic healers known to mankind. When you become sick, what is the first thing that you do? You lie down. Can you imagine a hospital in which all the patients only go to bed at night? No, they are lying flat in bed most the day as well as all the night because the restorative power of rest is a key to the success of all other remedial agencies.

But, just now, you are not ill. Do you need rest when you are well? To a startling degree, it is the lack of adequate rest while you are well that causes you to become sick.

Here are some simple principles about rest:

One does not always have to sleep in order to rest. Just a change of pace—doing something different—can bring rest to your mind and body. Different muscles are used, different things are considered, and you begin to relax. The everyday work is set aside and you take time to think more of God and His blessings seen and felt every day of your life.

You can train yourself to relax. Even if you cannot lie down, you can stand by an open window or walk out-of-doors and take several deep breaths. As you do this, think thankful thoughts to God, in heaven, for His blessings. Ask for His help and guidance for the duties just ahead. Believe that He has heard your silent petition and thank Him in advance for giving the help you need.

As you do this, a sense of rest and calm trust will fill your heart; a genuine, quiet relaxation of spirit will come over you.

The "go, go attitude," so common to Western civilization, leads many to nervous breakdowns. They simply did not take time to rest. It was an objectionable word in their thinking. But such an imbalanced pattern of living crowds out thoughts of God and eternal life. And discouragement and despair begins to crowd in.

By the time that George Sheehan, M.D., was 45, he felt ready to collapse. Work, work, work had brought him to the top of the professional ladder, but all he had achieved was a crowded work schedule and little else.

Then one night he recalled to mind something he read in a book: "We never shall have any more time. We have, and we have always had, all the time there is."

George Sheehan vowed then and there that he would immediately change his life style. He began to take time for the healthful exercise and much needed rest he had cheated his body out of for years. And then the better years began for him. They can begin for you just now also.

One reason so many people have nervous breakdowns is that they try to surpass and have the supremacy. So they go at high speed, without adequate rest, until the body machinery breaks under the load. Instead, put Jesus first, others second, and yourself last. Refocus your life. Take time to rest. Just go outside and sit in a chair and do nothing. If the very thought of that sounds ominous to you,—then you are the very one who needs to restudy your attitude toward adequate rest.

Peace of mind does not come by being always in a hurry. And hurry is often concerned with gathering up tomorrow's problems and trying to tackle them all today. All God has given you is one day at a time; how will you use it?

What we want is a better way to live—a new kind of day. Begin the first of your new days by praying to God when you first arise in the morning. Thank Him for His help, dedicate this special day to Him. Ask for His help and thank Him for giving it. Then open His Word—the Bible—and read in it. Where should you read? It is all worthwhile, but, if you wish, start with the book of Ephesians. Read it slowly and thoughtfully, not hurriedly, like a regular book. (On later days, when Ephesians is completed, begin in 1 John, and then the Gospel of John. Try reading in the Psalms—Psalms 37 and 23 for example,—and then go to Genesis, the first chapter. When you finish that, read on through to Revelation 22.)

After time alone with God and His Word, mingling prayer with your reading, arise and begin doing your daily duties, continually sending up little silent prayers of thanks and requests for help. Go out of your way to be a help to others. Too often in the past they have had to go out of their way to adjust to you, but now things are different. It is your concern to help them. Be not concerned if they do not seem to immediately appreciate or even want your help. Keep at it, quietly, thankfully, living to be a blessing to others around you. Even though others may misinterpret your efforts, you can know that you are doing what is right in God's sight. And that awareness will bring a peace and sweet joy into your life that you may not have experienced in years.

If you have children, take time to have morning and evening worship with them. Gather them to you, sing a song of Jesus, kneel down and pray with them, then read a portion from God's Word, and close with prayer, dedicating them that day anew to the care of their heavenly Father.

Yes, true rest of heart and life means taking time for God and living for Him. And such a rest as this will bring tranquillity of mind and lengthening of your days.

Rest with God includes time with Him each day, and it also means time with Him on the Sabbath day. He wisely knew our needs better than we, and back in the beginning (Genesis 2:1-3) He gave us the Seventh-day Sabbath as a weekly day for physical, mental, and spiritual rest. So important was it, that He wrote it into the Moral Law of Ten Commandments. It is the Fourth Commandment (Exodus 20:8-11), and is of equal importance with all the rest. In fact, by carefully observing the Seventh-day Sabbath, we shall be enabled by His grace to keep all the other commandments as well. There is always a blessing in obeying God. And that which He wants us to obey is written in Scripture.

Here are more principles for obtaining the rest that your body so much needs:

No muscle works continually. After some work there is some rest. Even your heart—the hardest-working muscle in your body—rests after each beat. Your lungs rest at the end of each breath. Your stomach should rest for thirty to sixty minutes after each meal. By this we mean that immediately after a meal you should not do hard physical or mental work. (But rest after a meal does not mean lying down. Be up and active after every meal.)

Your heart works for a lifetime—with only one tenth of a second rest stops. Whatever you do to deprive it of that rest will cause serious trouble later.

Rest should be preceded by exercise, or it may not

accomplish its objective. It is the exercise that makes the rest necessary.

And keep in mind that one's best sleep is with the stomach empty, and that sleep out-of-doors in summertime is more restful than sleeping indoors.

It is said that one hour of sleep before midnight is worth two after midnight. They say that some people go to bed with the chickens. Several years ago this writer was told of someone's friend who did it all his adult life. He decided that the chickens knew the best time to retire, and so he went to bed when they did—at sunset—and arose the next morning when they did—long before dawn. That may not fit into your work schedule the best, but let me tell you of another pattern that is very helpful.

Try lying down for a brief rest before lunch every day. Fifteen minutes rest in the middle of the day is equal to 45 minutes or more at night. Oh, but you say, you are not able to fit that into your work schedule. Then do this for sure: When you eventually retire from the 8 to 5 work schedule at the shop or factory,—then give your last years an hour of rest in the middle of the day, just before lunch. And keep active throughout the remainder of the day doing those things which are important. You may thus lengthen your lifespan.

A number of years ago this writer read a report by one of the actuarial experts, at the Social Security Administration, in Washington, D.C. Did you know that the average American dies just three years after he begins receiving social security? This fact is indeed significant. In commenting on it, geriatric authorities believe that it is partly due to the fact that, when retirement is suddenly thrust upon them, many people find that they have lost their purpose in life. The best preparation for retirement is to begin working for God by helping others now. You will then have something very worthwhile to live for when the retirement years come. Rest and work, work and rest is what is needed. But do not slack on the *rest;* you need enough of each in order to fully enjoy both.

The old adage that "a change is good as a vacation" is often true. Overwork, worry, lack of exercise, overeating, and a distressed mind are among the chief causes of fatigue. Living for a purpose—and that purpose being to honor God and help others—helps you rest better at night and makes you feel more restful all through the day.

Adequate rest is necessary in order to protect the alkalinity of the blood. This is due to the fact that waste matter is especially eliminated during those periods when you are resting or sleeping.

The ever-active, ever-growing child requires more sleep than does the adult. Yet we also need it—more than we often think we do.

"Oh," but you may say, "I don't know how to relax and rest day or night!" Go down by a babbling brook, and lie down and listen to the sounds of nature all about you. Gaze upward through the trees and view the glorious panorama of sunlight striking leaves and limbs, with the blue, cloud-flecked sky beyond. Then shut your eyes and listen to the soft chirps of God's little creatures around you. All are telling you softly that God loves you and will do wonderful things in your life as you yield yourself to Him. By now, as you lie therein—God's great out-of-doors—you will find that you are becoming wonderfully relaxed.

Amid the hurry and rush of life, our weary bodies and minds need rest. Even metals can become tired. They lose their vitality from repeated shocks and strains, and become exhausted and break under the load. If you feel as if you are nearing the point of breaking under the load, reread this chapter again—and the chapters in this series on the Eight Laws of Health—and put them into practice. There are answers that will work—for you—just now.

Dr. Frederick Rossiter wrote, "Recreation is a vitalized form of rest." Sleep is important and few are getting enough. But rest is not merely sleep. A change of activity is also needed from time to time. Go outdoors for an hour or two and experience this change. Set aside the vexing perplexities of the everyday world, and relax out in nature. Reading a good book—especially God's book—is also restful. The mind is drawn to better things—higher purposes—and the mind and body are rested. Once again you can return to your daily duties refreshed in heart and soul.

But amusement that consists only of foolishness lacks that deep refreshment that you so much need. You must guard your hours for recreation—making sure that you take time for them. And you must guard what you do during those hours. All true recreation is re-creative; it genuinely refreshes, draws us closer to God, and strengthens us for the better performance of our daily duties.

And we all need sleep, good sound sleep every night. But many have a difficult time obtaining it. So they take such medicines a Sominex, Mytol, Sleep-Ese, Compos, Nite Rest, Sure-Sleep, or something similar. But sleep studies reveal that many nonprescription—and almost all prescription sleep medications—drastically alter sleeping cycles, suppressing the very important REM sleep. And this applies to all the "sleeping pills," containing barbiturates or benzodiazepines, as they do. In order to more fully understand why suppression of REM sleep is harmful, we must delve into the physiology of sleep itself.

In the early presleep phase, body temperature falls and alpha brain waves are prominent. Then comes Stage 1 of sleep as the pulse slows and your muscles relax. About 5 to 10 minutes later, Stage 2 begins. The brain waves become larger and the eyes roll from side to side. Another 20 minutes or so and Stage 3 is entered. Brain waves now become slow and fairly large. Muscles are relaxed and breathing is slow and even. Stage 4 begins next, is called delta sleep, and generally lasts about 20 minutes. Then the sleeper enters REM sleep. REM stands for "rapid eye movement." This is a lighter sleep, and it is quite easy to know when a person is in it, for his eyes move very rapidly as if he were watching something. He is,—this is the dream part of his sleep. The heartbeat becomes irregular and brain waves are similar in the waking state. After about 10 minutes, the sleeper returns to Stages 2, 3, and then delta sleep, in a cycle lasting about 90 minutes. Then REM starts again. There is more delta sleep earlier in the night, and more REM sleep toward morning.

Experimenters have discovered that people who do not get their REM sleep awaken irritable and tired. They become depressed, aggressive, angry, restless and/or apathetic. If kept from their REM sleep, as soon as they are asleep again they will try to get longer sessions of REM

sleep.

But a condition know as "REM withdrawal sleep" occurs when people take sleeping tablets or most other types of put-you-to-sleep pills. The lack of REM sleep, brought on by taking these sleep medications, makes folk feel bad enough that they are convinced more than ever that they need go-to-sleep tablets in order to survive. So they take more and the problem gets worse.

You need your sleep. Try getting it in the natural way and you will be well rewarded. As we said earlier, work and rest during the day. When evening comes, after your evening worship and just before bedtime, go outside and walk in the fresh air, breathing it in deeply. You may not think that you have time to do this, but you have time to lie in bed trying hard to fall asleep. Just before retiring, take that walk out-of-doors in the quiet of the evening, drinking in the fresh air. Then go inside and immediately take a relaxing shower and go to bed. As you lie there if you find that you want to think about something, think about these two things: First, think about God, how good He is to you all the time, and how thankful you are for His watchcare. Second, think about being relaxed and breathing well. Mouth breathing just then will help clear out your mind so that it can drift off to sleep more quickly.

During the sleeping hours, the body is repaired and invigorated for another day of work. So be regular in obtaining your sleep. Try to go to bed at the same time each night and get up at the same time each morning. The most vigorous, enthusiastic people I know are generally individuals who are quite consistent in getting their full sleep. They are usually the ones who retire on a definite schedule every night.

Oxygen intake is an important part of the rejuvenating effect of sleep. Your body is working less, and the air you breathe is used to restore and rebuild body tissue. Therefore, be sure there is a current of fresh air entering the room—preferably outdoor air—while you sleep. If you do not have that fresh air at night, you will tend to awake tired and exhausted.

Keep in mind the words of the wise man: "The sleep of a laboring man is sweet" (Ecclesiastes 5:12). Only those who use their muscles during the day in physical work can enjoy sweet sleep at night.

Go to bed early and arise early. Staying up late and then sleeping in the next morning is a poor way to live.

Calcium in the diet helps you relax. It relaxes your nerves and is even restful to your heart. If you have a history of poor tooth structure, that is an indication that taking a little calcium each day will make life more restful for you, and will help you sleep better at night. Two facts are well known: Older people need more calcium . . and have more sleeplessness at night.

Pantothenic acid (calcium pantothenate), a vitamin of the B complex, will also help you get to sleep at night. Along with this, take some niacin (best taken in its niacinamide form to avoid face flushing) in your meals to aid in sound sleep at night.

Certain nontoxic natural herb teas have been used for years to help folk to go to sleep at night. Two of the best are hops and chamomile. Others include catnip, lady's slipper, yarrow, and mullein. To our knowledge, herbs are not mixed for this purpose. Select one and use it. The first two listed above are, by far, the best of them.

Living on micro-sleep is a poor way to go through life. After only a few hours of sleep loss, the body begins experiencing momentary lapses into sleep, each one of which lasts only a split second. As in real sleep, eyelids droop and heartbeat slows. Each micro-sleep is a period of blankness, or it may be filled with wisps of dreams. As the sleep loss increases, the micro-sleeps increase to two or three seconds at a time. If you are driving when it happens, you may die.

Nervous tension, the use of caffeine products, and too much salt in the diet,—all are items found to cause sleeplessness at night. Anything that increases cerebral (brain) activity causes sleeplessness. Neutral temperature baths for 8 minutes or more are excellent for relaxing and calming the mind, and preparing one for sleep. As you leave the tub, blot your skin dry without undue friction, move slowly, climb into bed, think little, breathe relaxed, thank God for peace of heart, go to sleep.

Dr. Samuel W. Gutwirth, in his book, *How to Sleep Well*, describes a method to help insomniacs learn how to go to sleep. In a quiet room, lie on your back, outstretched. Then tense each group of body muscles for several minutes (the arms, legs, trunk, facial muscles, eye muscles), then relax them. Try to relax them even more. The point here is twofold: to learn what it feels like to relax, and then to do it when you want to—so you can go to sleep at night. If there are any diehard insomniacs out there, you might want to try Dr. Gutwirth's approach. He says that, to start with, you need to do it for 45 minutes at a time.

If you cannot sleep, take a warm bath. It is relaxing and will help induce sleep. Never retire soon after eating. Going to bed within an hour or so after supper is hard on the heart and other vital organs, and exhausts the brain. There appears to be a positive correlation between going to sleep at night after a big meal—and the frequency of heart attacks.

For most adults, eight hours of sleep at night is sufficient. Some appear to do well on less. Older people need less sleep, but at the same time they may have a harder time getting it. If you tend to be sleepless at night, get some active exercise in the day, and take that outdoor walk before retiring. If you still feel tired from lack of sleep, the midday nap will do much to solve your problem. Sleep for an hour or two before lunch. It will not hurt you and can only help you.

Sleep should come naturally and not be induced by drugs. If you are napping during the day, do not fear some sleeplessness at night, for just by laying there you are having a good rest. As you lie there, think cheerful thoughts about God and heaven. From time to time send up little prayers for yourself and your loved ones. Keep positive, for it is sad, gloomy thoughts that kill, not sleeplessness.

During the day, rest your eyes by shutting them occasionally or by gazing outdoors upon the things of nature. Rest your ears by avoiding the loud noises of civilization. Noise exhausts the mind and nervous system, and even damages the heart. Rest your mind by not talking so much. Too much talk wears people out: those who do it *and* those who have to listen to it. Rest your mind by not constantly dwelling upon a particular problem and trying endlessly to

solve it. If you cannot solve it in five minutes, forget it—is a dictum that has helped this writer. Solutions will come to mind later. Rest your body by not being such a workaholic. Work and rest is what is needed; not work, work, work. Rest your lungs by going out-of-doors every so often through the day and drinking in the fresh air deeply. If you live in a city, move out into the country where there is fresh air. If you smoke, stop; if you do not smoke, refuse to work in rooms where people smoke.

Rest your soul by reading God's Word daily, praying to Him, trusting in Him. Refuse to worry but give all into His hands. Peace of heart, peace with God; this is what you want. Few people have it, but it is as near as your silent prayer to your Creator as you go about your duties throughout the day.

ADDITIONAL PRINCIPLES

"Some make themselves sick by overwork. For these rest, freedom from care, and a spare diet, are essential to restoration of health. To those who are brain weary and nervous because of continual labor and close confinement, a visit to the country, where they can live a simple, carefree life, coming in close contact with the things of nature, will be most helpful. Roaming through the fields and the woods, picking the flowers, listening to the songs of the birds, will do far more than any other agency toward their recovery."—*Ministry of Healing, pp. 236-237.*

"All who are under the training of God need the quiet hour for communion with their own hearts, with nature, and with God . . When every other voice is hushed, and in quietness we wait before Him, the silence of the soul makes more distinct the voice of God. He bids us, 'Be still and know that I am God.' . . Amidst the hurrying throng, and the strain of life's intense activities, he who is thus refreshed, will be surrounded with an atmosphere of light and peace."—*Ministry of Healing, p. 58.*

"Nature will restore their vigor and strength in their sleeping hours, if her laws are not violated."—*Solemn Appeal to Mothers. p. 16*

"The influence of pure, fresh air is to cause the blood to circulate healthfully through the system. It refreshes the body, and tends to render it strong and healthy, while at the same time its influence is decidedly felt upon the mind, imparting a degree of composure and serenity. It excites the appetite, and renders the digestion of food more perfect, and induces sound, sweet sleep."—*1 Testimonies, p. 702.*

"The stomach, when we lie down to rest, should have its work all done, that it may enjoy rest, as well as other portions of the body. The work of digestion should not be carried on through any period of the sleeping hours."—*How to Live, p. 162.*

"Rooms that are not freely ventilated daily, and bedding that has not been thoroughly dried and aired, are not fit for use. We feel confident that disease and great suffering are brought on by sleeping in rooms with closed and curtained windows, not admitting pure air and the rays of the sun . . The room may not have had an airing for months, nor the advantages of a fire for weeks, if at all. It is dangerous to health and life to sleep in these rooms until the outside air shall have circulated through them for several hours and the bedding shall have been dried by the fire. Unless this precaution is taken, the rooms and bedding will be damp. Every room in the house should be thoroughly ventilated every day, and in damp weather should be warmed by fires . . Every room in your dwelling should be daily thrown open to the healthful rays of the sun, and the purifying air should be invited in. This will be a preventive of disease . . If all would appreciate the sunshine, and expose every article of clothing to its drying, purifying rays, mildew and mold would be prevented."—*Healthful Living, pp. 142-143*

"One great error of the mother in the treatment of her infant is, she deprives it very much of fresh air, that which it ought to have to make it strong. It is a practice of many mothers to cover their infant's head while sleeping, and this, too, in a warm room, which is seldom ventilated as it should be. This alone is sufficient to greatly enfeeble the action of the heart and lungs, thereby affecting the whole system. While care may be needful to protect the infant from a draught of air or from any sudden and too great change, especial care should be taken to have the child breathe a pure, invigorating atmosphere."—*How to Live, p. 66.*

"Much harm has resulted to the sick from the universal custom of having watchers at night. In critical cases this may be necessary; but it is often the case that more harm is done the sick by this practice than good . . Even one watcher will make more or less stir, which disturbs the sick. But where there are two watchers, they often converse together, sometimes aloud, but more frequently in whispered tones, which is far more trying and exciting to the nerves of the sick than talking aloud. Attendants upon the sick should, if possible, leave them to quiet and rest through the night, while they occupy a room adjoining . . The sick as a general thing are taxed with too many visitors and callers, who chat with them, and weary them."—*How to Live, pp. 58-59.*

"Keep the patient free from excitement, and every influence calculated to depress. Her attendants should be cheerful and hopeful. She should have a simple diet, and should be allowed plenty of pure, soft water to drink. Bathe frequently in pure, soft water, followed by gently rubbing. Let the light and air be freely admitted into the room. She must have quiet and undisturbed rest."—*How to Live, pp. 54-55.*

"Many agitated people on the brink of a psychotic break suffer from severe insomnia."—*Archives of Neurology and Psychiatry.*

"I believe it can safely be said that all human beings need a minimum of six hours' sleep to be mentally healthy. Most people need more. Those who think they can get along on less are fooling themselves."—*Dr. George S. Stevenson, National Association for Mental Health.*

"If we do not get enough sleep, we cannot be fully awake during the day."—*Dr. Nathaniel Kleitman.*

SPIRITUAL LESSONS

Our kind, heavenly Father has not only given us a physical law of rest which we need for optimum health; He also knew we needed time to come apart and rest with Him,—time to worship Him and refresh ourselves in the things of God.

As soon as God created man, He gave him the seventh-

day Sabbath. The Sabbath was designed to stop our ceaseless turmoil of the week, and draw apart to be with our Creator and with our families.

The Bible explains that the Sabbath was also given to remind us that God is our Creator.

"Wherefore the children of Israel shall keep the Sabbath, to observe the Sabbath throughout their generations, for a perpetual covenant. It is a sign between Me and the children of Israel for ever: for in six days the Lord made heaven and earth, and on the Seventh day He rested, and was refreshed." (Exodus 31:16-17).

It is crucial that we remember and honor our Creator, because it is the fact of God's creatorship that makes Him our God. Because of this we are to worship Him.

"Thou art worthy, O Lord, to receive glory and honour and power: for Thou hast created all things, and for Thy pleasure they are and were created." (Revelation 4:11).

God created all things from nothing (Hebrews 11:3), and hung the earth upon nothing (Job 26:7), upholds all things (Hebrews 1:3), and sustains life (Acts 17:28); He is our owner, ruler, and only God.

The Bible Sabbath—the Seventh-day Sabbath—was made before man sinned. It was made on the Seventh day of Creation Week.

"On the Seventh day God ended His work which He had made; and He rested on the Seventh day from all His work which He had made. And God blessed the Seventh day, and sanctified it: because that in it He had rested from all His work which God created and made." (Genesis 2:2-3).

It is the only day of the week on which God rested, and the only day He blessed. In order to change that day to some other, He would have to abolish this world and create a new one! The Seventh day Sabbath is the day, fixed by the God of heaven, on which we are to worship Him.

When God wrote the Ten Commandments, He gave us the Fourth Commandment in its heart:

"Remember the Sabbath day to keep it holy . . The seventh day is the Sabbath of the Lord thy God . . In six days the Lord made heaven and earth . . and rested the Seventh day: wherefore the Lord blessed the Sabbath day, and hallowed it." (Exodus 20:8-11).

God does not change, and neither does His Sabbath change. "I am the Lord, I change not" (Malachi 3:6). "Thou blessest, O Lord, and it shall be blessed forever" (1 Chronicles 17:27). "God is not a man, that He should lie; neither the son of man, that He should repent . . He hath blessed; and I cannot reverse it" (Numbers 23:19-20).

The Sabbath was made for all men, not just the Jews. It was given to mankind 2,000 years before Abraham, the first Hebrew (Genesis 2:1-3). Jesus said, "The Sabbath was made for man, and not man for the Sabbath" (Mark 2:27). This does not mean for Jews only. Woman was created for man (1 Corinthians 11:9), but that does not mean women were only made for the Jews. The Sabbath is universal.

Abraham knew and obeyed God's laws. "Abraham obeyed My voice, and kept My charge, My commandments, My statutes, and My laws" (Genesis 26:5).

God brought forth Israel from Egypt, that they might obey Him and keep His laws. "He brought forth His people with joy, and His chosen with gladness: . . that they might observe His statutes, and keep His laws" (Psalm 105:43-45).

Many blessings were promised to those who kept the Bible Sabbath. "If thou turn away thy foot from the Sabbath, from doing thy pleasure on My holy day; and call the Sabbath a delight, the holy of the Lord, honourable; and shalt honour Him, not doing thine own ways, nor finding thine own pleasure, nor speaking thine own words: then shalt thou delight thyself in the Lord; and I will cause thee to ride upon the high places of the earth, and feed thee with the heritage of Jacob thy father: for the mouth of the Lord hath spoken it." (Isaiah 58:13-14).

The Seventh-day Sabbath was also the Sabbath of Jesus. Since Jesus was the Creator, He made the world and the Sabbath too (John 1:1-3, 14). "He came to Nazareth, where He had been brought up: and as His Custom was, He went into the synagogue on the Sabbath day, and stood up for to read." (Luke 4:16).

Jesus kept all His Father's commandments. He did not come to destroy them, but to show how they should be kept. "If ye keep My commandments, ye shall abide in My love; even as I have kept My Father's commandments, and abide in His love." (John 15:10).

He rested in the tomb on the Sabbath (Luke 23:52-54). His followers sacredly kept it also, for He had not taught them to keep any other day of the week.

"The women also, which came with Him from Galilee, followed after, and beheld the sepulchre, and how His body was laid. And they returned, and prepared spices and ointments; and rested the Sabbath day according to the commandment." (Luke 23:55-56).

His followers honored the Sabbath forty years after His death. He had commanded them to do so. "Pray ye that your flight be not in the winter, neither on the Sabbath day." (Matthew 24:20).

In Matthew 24, Jesus told His disciples what would occur at the destruction of the Temple and Jerusalem, and at the end of the world (Matthew 24:1-2). In verse 20, quoted above, Jesus told them to be sure and keep the Sabbath when those terrible events (the destruction of Jerusalem in A.D. 70, and the end of the world) should occur.

"Sin is the transgression of the law" (1 John 3:4), and Jesus never sinned (1 Peter 2:22). He always kept the Ten Commandments.

In Paul's time, the apostles kept the Bible Sabbath also. "When they departed from Perga, they came to Antioch in Pisidia, and went into the synagogue on the Sabbath day, and sat down." "And when the Jews were gone out of the synagogue, the Gentiles besought that these words might be preached to them the next Sabbath." "And the next Sabbath day came almost the whole city together to hear the Word of God." (Acts 13:14, 42, 44).

Paul, a servant of God, would have no more right than you or I to dishonor God and His sign of creatorship. He was a loyal observer of the Bible Sabbath. "This I confess unto thee, that after the way which they call heresy, so worship I the God of my fathers, believing all things which are written in the law and in the prophets." (Acts 24:14; also Acts 25:8).

The Sabbath will also be kept by the saved in the new earth.

"As the new heavens and the new earth, which I will make, shall remain before Me, saith the Lord, so shall your seed and your name remain. And it shall come to pass, that from one new moon to another, and from one Sabbath to another, shall all flesh come to worship before Me, saith the Lord." (Isaiah 66:22-23).

"Blessed are they that do His commandments, that they may have right to the tree of life, and may enter in through the gates into the city." (Revelation 22:14).

How is the Sabbath related to the work of redemption?

First, redemption involves a work of creation. Since it takes creative power to redeem, God used the Sabbath as a sign of sanctification, or redemption. When He creates the new earth the Sabbath will continue on as the sign of God's peace and power. Throughout all eternity it will carry the double significance of a sign of power to create and to redeem (2 Corinthians 5:17; Psalm 51:10).

Second, the Sabbath is a sign of this sanctifying power.

"Verily My Sabbaths ye shall keep: for it is a sign between Me and you throughout your generations; that ye may know that I am the Lord that doth sanctify you." (Exodus 31:13).

"Moreover also I gave them My Sabbaths, to be a sign between Me and them, that they might know that I am the Lord that sanctify them . . And hallow My Sabbaths; and they shall be a sign between Me and you, that ye may know that I am the Lord your God" (Ezekiel 20:12, 20).

The Bible Sabbath is the special symbol of loyalty to God. It is God's flag. We dare not dishonor it. We are not to disregard it, lower it, or trample it beneath our feet. His Sabbath is a sign of loyalty to Him as Lord and Saviour.

What about the first day of the week (Sunday) in the Bible? It is only found eight times in the Bible. Here they are: The first day of Creation week (Genesis 1:3-5). No mention of sacredness here. It is mentioned six times as the day the resurrection occurred (Matthew 28:1; Mark 16:1-2, 9; Luke 24:1; John 20:1, 9), but no word or hint that it was now sacred. The disciples were in the upper room, but not to keep Sunday holy but "for fear of the Jews" (Mark 16:14: Luke 24:33-37). They were hiding from their enemies. The seventh occurrence of the first day is in Acts 20:7—Sunday is only mentioned once in the book of Acts! Paul spoke to the people, then resumed his traveling, and a couple days later held another meeting. The eighth time is the only mention of the first day by Paul: I Corinthians 16:1-2, where he asks the believers, while they are figuring up their weekly income from the previous week (which they would not do on the Sabbath, since it was holy time), to set aside some money at home for the poor in Jerusalem. Paul intended to later get the money from them.

So there is no Sunday sacredness in the Bible.

In the centuries since the Bible ended, the Seventh-day Sabbath has continued to be kept by faithful ones here and there. As for the weekly cycle, it has not changed over the centuries. There is historical, scientific, linguistic, and astronomical proof of that. Look in any encyclopedia. The number of days in the year have been altered, but the number of days in the week has not changed—going back through time immemorial. Everyone keeps the seven-day weekly cycle and it has never changed. The existence of the Jewish people is profound proof of this. All other Near-Eastern groups have disappeared, but the Jews have continued as a distinct people on down to the present time. And they have always kept the Seventh-day Sabbath. Ask any Jew what day is the Sabbath, and he will tell you: It is the Seventh day of the week, Saturday.

Sunday is the first day of the week. Saturday is the Seventh day of the week. There is no authority for Sunday sacredness in Sacred Scripture. "To the law and to the testimony: if they speak not according to this Word, there is no light in them." (Isaiah 8:20).

Someone tried to change the Sabbath to Sunday. If the change is valid, who authorized it? Nowhere in the Bible do we find the change. God does not change (Malachi 3:6; James 1:17). The Ten Commandments are His own covenant (Deuteronomy 4:13). He will not break the covenant or alter His words (Psalm 89:34). He keeps His covenant for a thousand generations (Deuteronomy 7:9). His acts stand forever (Ecclesiastes 3:14).

We know that Jesus did not change the law and the Sabbath. Christ is the active agent in God's plans, by whom God created all things (Ephesians 3:9; 1 Corinthians 8:6) Christ, as Creator, made the Sabbath in the beginning, so He could not have come to earth to destroy it (John 1:1-3, 14; Genesis 2:1-3). We know, from Scripture, that it was Christ who led the Israelites in the wilderness, and who therefore gave them the law on Mount Sinai (Nehemiah 9:12-13 with 1 Corinthians 10:4).

While here on earth, Christ kept His Father's commandments (John 15:10). Jesus did no sin (1 Peter 2:22), and "sin is the transgression of the law" (1 John 3:4). Indeed, Christ came to fulfill (keep) the law, not to destroy it.

"Think not that I am come to destroy the law, or the prophets: I am not come to destroy, but to fulfil. For verily I say unto you, Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled. Whosoever therefore shall break one of these least commandments, and shall teach men so, he shall be called the least in the kingdom of heaven: but whosoever shall do and teach them, the same shall be called great in the kingdom of heaven." (Matthew 5:17-19).

The Greek word for "fulfill" means "to give a perfect example of." Christ came to magnify the law (Isaiah 42:21; Matthew 5:21-22, 27-28). He Himself kept the Sabbath (Luke 4:16). He openly ignored the Jewish Sabbath laws not found in the Bible (Luke 6:1-11). He indicated that the Sabbath was to be sacredly observed forty years after Calvary. "But pray ye that your flight be not in the winter, neither on the Sabbath day." (Matthew 24:20).

Did Paul change God's law or Sabbath? He would have no authority to do that; only the God of heaven could do that. And Paul specifically said that he did not attempt to do so. "Do we then make void the law through faith? God forbid: yea, we establish the law." (Romans 3:31).

However, keeping of the yearly sabbaths (the ceremonial sabbaths), was eliminated at Calvary (Colossians 2:16). This includes the Passover, Pentecost, etc.

Do men claim that there is Bible proof for the change? Roman Catholics say there is absolutely no Bible proof.

Cardinal Gibbons declared:

"You may read the Bible from Genesis to Revelation, and you will not find a single line authorizing the sanctification of Sunday. The Scriptures enforce the religious observance of Saturday."—*Faith of Our Fathers, p. 89.*

Protestants agree:

"There was and is a commandment to keep holy the Sabbath day, but that Sabbath day was not Sunday. It will be said, however, and with some show of triumph, that the Sabbath was transferred from the Seventh to the first day of the week . . Where can the record of such a transaction be found? Not in the New Testament, absolutely not."—*Dr. Edward T. Hiscox, author of the Baptist Manual, in a paper read to a New York Ministers' Conference, November 13, 1893.*

Historians tell us the change did not come until long after the Bible was finished.

"Unquestionably the first law, either ecclesiastical or civil, by which the sabbatical observance of that day is known to have been ordained, is the edict of Constantine, A.D. 321."—*Chamber's Encyclopedia, article, "Sabbath."*

The Roman Catholic Church made the change over three centuries after Calvary.

"Q. Why do we observe Sunday instead of Saturday? A. We observe Sunday instead of Saturday because the Catholic Church, in the council of Laodicea [A.D. 336], transferred the solemnity from Saturday to Sunday."—*Peter Geiermann, Convert's Catechism of Catholic Doctrine, p. 50 [R.C.].*

For a better way of life, we want to enter more fully into God's rest for our souls. That rest is found, not only in physical rest, but also in the Sabbath rest. And our kind heavenly Father has promised that, if we keep His Sabbath holy, we will receive the blessing He placed in the keeping of that day!

Surely, that is not something we want to miss! We can always know that what God wants to give us—is always the best for us!

Thank the Lord for His wonderful blessings to us! He loves us more than we will ever know!

The Fifth Law of Health

The Exercise You Obtain

God's plan for your life includes active exercise. Just now, for a few minutes, see what it can do for you.

Do you want to live longer? Here is how Dr. Roy J. Shepard, an expert on exercise and aging at the University of Toronto, explains it:

"You'd have to go a long way to find something as good as exercise as a fountain of youth. And you don't have to run marathons to reap the benefits. Little more than rapid walking for 30 minutes at a time three or four times a week can provide ten years of rejuvenation."

One of the early studies on the relationship of exercise to aging was done by Dr. Herbert de Vries. In one study of his, more than 200 men and women, ages 56 to 87 in a California retirement community, participated in a fitness program that included walking, a walk-jog routine, calisthenics, and stretching. After just six weeks, their blood pressure dropped, body fat decreased, maximum oxygen transport increased, and neuromuscular signs of nervous tension diminished. Analyzing the results, de Vries concluded:

"Men and women of 60 to 70 became as fit and energetic as those 20 to 30 years younger." And he added, "The ones who improved most were those who had been the least active and the most out-of-shape."

Later in this chapter we will give more information on how to use exercise to help lengthen your life.

Here is a brief summary of some of the things that regular exercise can begin doing for you right now:

(1) Exercise will improve the tone of your muscles and blood vessels, changing them from weak and flabby tissue to strong and firm tissue, often reducing blood pressure in the process. (2) It will increase the efficiency of your heart in several ways. Gradually it will grow stronger and pump more blood with each stroke, thus reducing the number of strokes needed to supply your body with life-giving blood. (3) It will improve your digestion by quickening the circulation and helping to lift the blood back to the heart from the digestive organs and thus normalizing your bowel action. (4) It will increase the efficiency of your lungs, conditioning them to process more air with less effort. (5) It will increase your maximum oxygen con-

sumption by increasing the amount available and the efficiency of its delivery to body cells. (6) It will improve the overall condition of your body, especially your most vital parts: the lungs, heart, blood vessels, and endocrine system. This will impart added protection against sickness. (7) It can change your whole outlook on life, enabling you to relax, work more efficiently, and handle stress better. When not overdone, it imparts a cheerful quality to the mind. (8) It will enable you to sleep better at night and think better during the day. Exercise strengthens the will. You will be able to get more work done with less fatigue. (9) It will slow down your aging process—by slowing down the natural physical deterioration that old age normally brings. It will give you a new zest for life at a time when you most need it. And there is evidence that it can reduce the likelihood of cancer.

Now, let us look more closely at some of these facts:

Exercise, consistently done with proper moderation as the years advance, can help prevent heart attacks as well as many other ailments.

The blood vessels are carefully lined with smooth muscle fibers and if these special muscles do not receive adequate exercise, they gradually atrophy. The only way you can exercise a blood vessel is to put demand on the blood stream to provide more oxygen. When you exercise, your muscular tissues use up oxygen more rapidly. Your heart has to beat faster to pump along a new supply of oxygen-carrying blood to meet this demand. As your heart increases its pumping action it pushes more blood through the system. The blood vessels expand and contract in order to meet this demand. And this exercises them. Without that exercise, they become flabby and begin to degenerate.

Aside from the physiological benefit that exercise has on the heart, arteries and veins, it also improves muscle tone—which will stand one in good stead in emergencies. Then there is the improvement in digestion that takes place. And, have you had to deal with nervous tension? One of the best ways to counteract tension is the physical fatigue from healthful exercise. And that benefit cannot be stressed too much.

The involuntary muscles of the body—for example those in the stomach and intestinal canal—are strengthened by the exercise of their fibers equally as much as are the voluntary or external muscles. At the same time, the muscular structures of the body, such as the heart and uterus are improved.

Difficult and painful menstruation is often relieved by a general program of physical exercise and a careful diet composed of natural foods.

Physical exercise helps children grow. The proper development of their bones, muscles, and other body organs are keyed to physical activity. For some strange reason, children seem to sense their need of physical exercise more than do their elders.

The nervous system is improved functionally by body movements of any kind.

Exercise provides a powerful increase of oxygen to the body. Ordinarily, a man inhales about 500 cubic inches of air every minute. By walking about four miles per hour, he draws in about 2,500 cubic inches per minute,—or five times more than that absorbed when sitting down.

Physicians are now prescribing exercise as part of the recovery program for speeding up the recovery of surgical and maternity patients; preventing phlebitis, clots, embolisms, kidney stones, and loss of calcium from the bones of bed patients. They require it for the restoration of physical and mental health in elderly invalids. It is given to help rehabilitate those who have has poliomyelitis, strokes, arthritis, accidental injury, and other neurologic and orthopedic disorders.

Researchers have learned that regular exercise tends to reduce blood pressure slightly, increase the pumping efficiency of the heart, and improve oxygen utilization by all the tissues in the body.

Dr. Richard W. Eckstein of Western Reserve University, conducted a significant series of tests. The coronary arteries of several dogs were surgically narrowed to simulate the atherosclerosis of the coronary artery. Half the dogs were then exercised and half were not. Five to eight weeks later, the exercised group showed decidedly more improvement in "collateral circulation." What had happened was that there was an increase in tiny blood vessels to bypass the narrowed artery. Many heart specialists believe that regular, moderate exercise will do the same for many people with coronary artery disease.

A lack of physical activity leads to abnormal or accelerated clotting of the blood in coronary, cerebral, and other arteries, as well as in the veins. In view of this, it is now felt that regular on-going activity all year long may be important in preventing or reducing strokes and coronary heart attacks. But it is thought that spurts of activity at intervals in an otherwise sedentary life will not accomplish this objective. Such physical exercise may even be harmful over a period of time. Yes, exercise is needed at every age of life, but in the later years we must obtain it in a more careful manner.

Other studies have shown that moderate or vigorous exercise can reduce blood cholesterol levels. And this is an important factor, for in atherosclerotic patients this level is often higher than it should be.

One comparative study was made of elderly men, who in college had been physical athletes. For the most part, they died from heart disease about as quickly as the rest of us. This was due to the fact that after leaving college they did not continue to exercise vigorously. Another research study, conducted by Drs. Paul White and William Pomeroy, analyzed the later living habits of 355 men who had been Harvard football players between 1901 and 1930. Their later exercise program—or lack of it—was compared with their health, longevity, and deaths. Across the board, those men who led sedentary lives did not live longer.

Dr. J.N. Morris, of the British Research Council, found that London bus drivers were more likely to die suddenly from coronary thrombosis than their fellow workers, the conductors, who walked about collecting tickets from the passengers. He also discovered that government clerks more frequently suffered from fatal coronary artery infarction than do the government postmen who were out on the streets delivering mail.

Do you want to live a long time? Exercise—regularly—moderately—but exercise. And do it for the rest of your life.

"Eventually we all decline," says Everett L. Smith,

director of the Biogerontology Laboratory at the University of Wisconsin. "But the quality of life is so much higher for the elderly who are physically active than for people who sit waiting for the Grim Reaper."

Aging brings problems. And everyone past twenty is aging, without an exception. Each year after reaching maturity, the heart's ability to pump blood drops about one percent. That is a lot. By the time you are 60, the blood flow is 30 to 40 percent slower than when you were a young adult. With age, the amount of air that you can exhale after a deep breath lessens and your chest wall gradually stiffens. Nerve messages travel through your body at a slower speed: about 10-15% less by the time you have reached the age of 70.

But studies reveal that most of these age-associated declines can be delayed by exercise. For example, exercise lowers the resting heart rate and increases the amount of blood pumped with each beat. Exercise puts stress on the bones and causes them to have more calcium in them, thus making them stronger and less susceptible to fractures.

If you are young, anticipate the aging process and get ahead of it. If you are older, then get to work—begin a moderate exercise program to help keep you in shape for years to come.

Even though you may be older, exercise will improve your heart and respiratory function, increase your muscle strength, give you denser bones, quicker reaction time, and reduced susceptibility to depression and a number of diseases.

But, if you are over 50, exercise carefully. Avoid jumping and pounding activities. Yes, exercise, but do it carefully and properly. A little frequently, with a gradual buildup in your exercise program. And if you get stopped by sickness, start back slowly. The best objective is light exercise, such as walking for 30 minutes, three to five times weekly. Take it slow, gradually move up. Know your limit. Exercise regularly. Warm up first with stretching or slow walking. Cool down afterward by never stopping suddenly when it is done.

One of the great faults of our current civilization is that our young adults at about the age of 25 become "too busy" to exercise. Yet, for the next two decades of their lives, they probably need it even more than when they were children.

Walking is one of the simplest and best exercises. Go outdoors into the open air and walk. Leave all your cares behind you and briskly set off with your arms swinging. Take deep breaths of air as you go. Some people use a pedometer to count the distance walked. Other people, including this writer, employ what to them is a simpler method: clock it. Go for a brisk walk and come back 30 minutes or 60 minutes later.

Jogging is the great way to exercise—or is it? It is fine if you are young and do not stick with it too many years. This is what the experts are now conceding. Even Dr. Kenneth Cooper, the Dallas physician who helped launch the fitness boom in 1968 with his best-selling book, "Aerobics," has shifted gears after suffering from bone fractures and heel problems from years of jogging. "I've changed my mind," he says, "I'm running less and performing better." And that is where the problem lies: the bones and the joints. They were not made to take the punishment of running, day after day, month after month.

People are waking up to the fact that low-impact exercise is more beneficial in the long run than are the high-impact workouts. Instead of weight lifting, basketball, jogging, tennis; more people are turning to walking, hiking, and cycling.

A study published in the spring of 1986, in the "New England Journal of Medicine," described an analysis of nearly 17,000 Harvard alumni who entered the school between 1916 and 1950. It was found that those who engaged in such moderate exercise as walking and climbing stairs lived up to two years longer than their sedentary peers. Most significant of all was the fact that those who engaged in the "high-impact" vigorous exercises, such as jogging, did not gain any significant health advantage or longevity over those whose exercise program was also consistent each day, although less strenuous and exhausting.

The director of the study, Dr. Ralph Paffenbarger, of the Stanford University Medical School, discovered that the major health benefits came with only 2,000 calories burned off by exercise a week—which is only the equivalent of 2 1/2 to 3 hours of brisk walking every week, in addition to normal activity. Jogging may be great for some, but it is well to recognize, in advance, the foot and knee damage that may be developed later because of it.

But do not think that exercise is only for your off hours. Charles F. Kettering, the automotive genius, worked at full speed until his death at 82. Without any formal exercise program, he instead exercised all day long as he worked. There are ways to do this if you will carefully think them through. But it all adds up to more walking and less sitting.

But, please, do not try to get all your exercise at work. You need time to relax, breathe freely out-of-doors, put all your cares and worries behind you and just amble along. Time to look at the birds and listen to them; time to think of all the ways God has helped you; time to thank Him for it. Exercise, when not at work, is re-creative.

Gene Tunney advised his students:

> "Take regular exercise—not violent weekends of golf or sporadic bursts of squash, but a daily drill that becomes as much a part of your life as brushing your teeth."

Dr. Arthur H. Steinhause, dean and professor of physiology at George Williams College, developed an exercise program that would also build some muscle in the process. And we can all use some of that.

> "In a German laboratory where I worked, it was discovered that a muscle can grow at only a certain rate—and a very small amount of the right exercise will start it growing at that rate. If you contract any one of your muscles to about two-thirds of its maximum power and hold that for six seconds once a day, the muscle will grow just as fast as it can.
>
> "Every day there are bound to be intervals when you have six seconds to relax. They can make a tremendous difference. Pull in your stomach. Pull up your chin. Do these exercises on company time. Do them while going from one place to another. Weave them into the day's routine."

Actually, exercising can be fun. And you need it,—both at your place of business and in your off hours.

Here are eight basic exercises which would fit in with

Dr. Steinhaus' recommendations:

(1) Stretch—while sitting, lying, or standing. (2) Straighten your spine—while standing with your back against the wall. (3) Expand your chest. (4) Suck in your stomach—while sitting or bending over. (5) Flex your arms—by pushing, pulling, and reaching. (6) Bend your legs—by squatting, climbing, and walking. (7) Limber your toes and feet. (8) Firm your muscles—by bouncing, pinching, and kneading them.

A SAMPLE EXERCISE PROGRAM

Now, for a few moments, let us consider an ongoing exercise program, designed just for you. There are dozens of ways to do it; here is one:

If necessary, find a friend with whom to do this exercise program. You can help each other stick to it. But, with a friend or without one, the next step is to find your target heart rate (THR).

Your THR will help you exercise at just the right pace for you, so you won't overdo. Your THR is the most effective training pulse rate for maximum cardiovascular function and control of excess fat consumption for a person of your age and current level of fitness.

First, take your pulse. The easiest place to feel it is on the side of your neck. (Or you can take it on the thumbside of your wrist, palm up.) Use your first two fingers (not your thumb). Press lightly and count the number of beats per minute.

Now that you know how to take it, you will want to find your Resting Heart Rate (RHR). To be most accurate, take your pulse for a full minute when you first awake in the morning, while still lying down, on two consecutive mornings. The average of them is your Resting Heart Rate.

You then want to find your Target Heart Rate. Here is how to learn what it is:

Subtract your AGE from 220 to find your Predicted Maximum Heart Rate. This is the fastest that your heart should ever beat at your age. (Example: 220 minus 50 years of age equals 170.)

From your Predicted Maximum Heart Rate, subtract your Resting Heart Rate (the Pulse rate you found while lying in bed upon awakening). (Example: 170 minus 71 equals 99.)

At this point, you will want to select your Target Zone. This is your current level of fitness, and is a percent of your Maximum Heart Rate. If you are a beginning exerciser, this percentage will be 60%. If you are already doing it regularly, it can be 70%. Competitive athletes will use 80%. Now, multiply the above total by this percentage (Example: 99 times .60 equals 59.4, which we will round off to 59.)

Add to this your Resting Heart Rate, and you have your Target Heart Rate. (Example: 59 plus 71 equals 130.)

It only took a few moments to figure, and now you have your Target Heart Rate. In order to quickly determine it later, just now divide your THR by 6. This will give you your 10-second Target Heart Rate. Henceforth, you will only need to take your pulse for ten seconds in order to see how you vary from your THR. (Example: 130 divided by 6 equals 21.6, which rounds to 22.)

Of course, this formula is only a guide. You will want to watch your own body for signs of overexertion (such as pounding in your chest, a dizzy or faint feeling, or profuse sweating). Breathlessness is another important sign to be alert to.

As time passes on this program, you may find that your Resting Heart Rate will lower somewhat.

During your exercise program of fast walking, etc., you will want to take your pulse as soon as you begin sweating lightly and breathing harder. If you are below your Target Heart Rate, then stride, stroke, pedal, or push a little harder. If you are above your THR, then slow down a bit and take it easy.

Then there is your Recovery Rate. This is how long it takes for your pulse to return to normal. To find this, take your pulse once a minute after you stop your main exercise program each day. It is good for your heart that you cool down slowly, and you are checking on your Recovery Rate at the same time. (Example: Ideally, your pulse should have dropped below 100 beats per minute within 3-5 minutes.)

Before you begin your exercise workout, warm up with a few stretching exercises for 5 minutes. Then begin your active program to keep FIT. F—Frequency: Exercise 3-5 times a week. Four times is ideal, with a day off between workouts to avoid "overuse injury." I—Intensity: Work up to your Target Heart Rate, but do not pass it. T—Time: Do it for at least 20 minutes.

What kind of exercise should this be? Select one that is steady, rhythmic, and continuous. It should place an increased oxygen demand on your heart, lungs, and muscles. And it should use the large-muscle groups of your body (legs, arms, and back). Then comes the cooling down period. This should be for at least 5 minutes. By cooling down slowly, you safely lower your pulse from your Target Heart Rate to normalcy. This both protects your heart and helps prevent injuries from stiff muscles, and is the ideal time for stretching exercises, since warm muscles stretch best and feel better later.

One inventive athletic researcher came up with this way to check yourself while exercising: If you can't talk comfortably while exercising, you're working too hard. If you can sing, then you're not working hard enough.

(Of course, before starting any kind of exercise program, you do best to have a medical evaluation first, if you have a heart condition or family history of heart disease, hypertension, diabetes, other medical problem, or it you are overweight, over 35, or use tobacco.)

Some people do "cross-training." They alternate between, say, walking, one day, and then swimming; then, next time, they work out. Each activity is done twice a week to maintain good physical stamina. But if all you have opportunity to keep up is a brisk walk, then do that. There is no better exercise.

You might want to keep an Exercise Log, jotting down each time what you did, how long you did it, and the date.

If your exercise is walking, be sure and do it in a good pair of shoes that are comfortable, good fitting, with soles that are cushioned and flexible.

Here are some sample stretching exercises to limber you up during your 5-minute warm-up period: (1) Roll your shoulders several times in each direction. Imagine each shoulder is a wheel. First, turn the wheels forward, as though they were car tires taking you down the road; then

put the gears into reverse and rotate them backwards several times. (2) Reach your right arm up straight and then stretch your right side up and over toward your left side, as you tilt your body away from that raised arm, all the while keeping your shoulder straight up from your trunk. Then do the other arm, keeping your hips steady throughout. (3) With your head, hips, and feet in a straight line,—pull one knee up to your chest. Then do the other knee. (4) Keeping your knee pointing straight downward to the ground,—reach back and pull your foot up to your buttocks with your opposite hand. Use the other hand to steady yourself, with a slight lean against a wall or tree. (5) With one foot about 12 inches behind the other, bend your front knee, and keeping both knees aimed forward,—press your back heel unto the ground and stretch your calf muscle.

Each of the above exercises was done while standing, and each stretched certain muscles.

With your warm-up stretching completed, for a minute or two, slowly begin walking. Now you can speed up for your regular 20-minute work out, checking your THR as you go.

After your workout is over, slow down for a minute or two, and then stop and begin your cooling-down stretching exercises. These can be the five described just above.

Exercise is one of the most helpful of the Eight Laws of Health, but it works closely with all of the others, especially rest and proper diet. How thankful we can be to God for these many blessings.

ADDITIONAL PRINCIPLES

"By active exercise in the open air every day, the liver, kidneys, and lungs also will be strengthened to perform their work."—*Counsels on Health, p. 54.*

"Without physical exercise no one can have a sound constitution and vigorous health; and the discipline of well-regulated labor is no less essential to the securing of a strong, active mind and a noble character."—*Counsels to Teachers, p. 307.*

"Exercise aids the dyspeptic by giving the digestive organs a healthy tone. To engage in severe study or violent physical exercise immediately after eating, hinders the work of digestion; but a short walk after a meal, with the head erect and the shoulders back, is a great benefit."—*Ministry of Healing, p. 240.*

"Such exercise would in many cases be better for the health than medicine. Physicians often advise their patients to take an ocean voyage, to go to some mineral spring or to visit different places for change of climate, when in most cases if they would eat temperately, and take cheerful, healthful exercise, they would recover health, and would save time and money."—*Ministry of Healing, p. 240.*

"Exercise in a gymnasium, however well conducted, cannot supply the place of recreation in the open air."—*Education, p. 210.*

"What does a person do who has been sitting at his desk for many hours and is tired? Does he lie down? No! He takes a walk. What do children do when they come home from school and are tired? Do they go to sleep? No! They run to the playground. If the body is completely exhausted by strenuous labor, a long hike, a wash-day, or a moving-day, one recuperates best by lying down and permitting the organism to rest. However, if only a certain part of the body is tired—for instance, the brain by long calculations, the hands from many hours of typing, the eyes by too much reading or sewing, or the legs when one has had to stand very long—the tired limb or organ recuperates best if other rested parts of the body are active.

"If one lies down, all the activities of the body are curtailed; in a manner of speaking, the vital furnace of the body is banked. The heart beats slowly, the blood vessels contract, respiration becomes shallow, and the exhausted brain sleeps, so that all the organs are at rest. On the other hand, if one enters into some new activity, if after a long lecture one goes out into the fresh air, thus exposing oneself to new impressions and stimuli, to the cool air and the fragrance of flower beds, respiration is increased, the blood circulates faster, and the glands are more active, thus facilitating the elimination of waste products from the exhausted organ. If you are totally exhausted, go to sleep! If only part of your body is tired, go for a walk or take a swim, engage in athletics, or occupy yourself with your garden. There is no better form of rest for an exhausted organ than the activity of neighboring organs."—*Fritz Kahn, "Man in Structure and Function," Vol. 1, p. 136.*

SPIRITUAL LESSONS

We not only want to maintain a daily physical exercise program, we also need to stretch our spiritual muscles each day as well. Not only are we to accept Jesus as our Saviour, we are to work with Him to help minister to the needs of others.

Just as God gave, we need also to give. "God so loved the world, that He gave His only begotten son, that whosoever believeth in Him should not perish, but have everlasting life." (John 3:16).

Jesus told His followers: "Freely ye have received, freely give." (Matthew 10:8). He also said, "It is more blessed to give than to receive." (Acts 20:35).

Because we have been comforted, in Christ's strength we are able to comfort others. "[God] who comforteth us in all our tribulation, that we may be able to comfort them which are in any trouble, by the comfort wherewith we ourselves are comforted of God" (2 Corinthians 1:4).

There are many in the world who need our help. God calls for helpers, and we must answer the call. "I heard the voice of the Lord, saying, Whom shall I send, and who will go for us? Then said I, Here am I; send me." (Isaiah 6:8).

We are to do the work which Jesus did. "The Spirit of the Lord God is upon Me; because the Lord hath anointed Me to preach good tidings unto the meek; He hath sent Me to bind up the brokenhearted, to proclaim liberty to the captives, and the opening of the prison to them that are bound" (Isaiah 61:1; *cf.* Luke 4:18).

We live our faith, we share our faith, and we come to Jesus to renew and deepen our faith. As we pray and work, work and pray, our experience deepens, and others are helped.

"Who then is a faithful and wise servant, whom his lord hath made ruler over his household, to give them meat in due

season? Blessed is that servant, whom his lord when he cometh shall find so doing. Verily I say unto you, That he shall make him ruler over all his goods" (Matthew 24:45-47).

Every follower of Jesus is assigned the task of helping those around them, and sharing with them the wonderful gospel message of the forgiving and empowering grace of Christ, and the hope of eternal life through Him.

"And He said unto them, Go ye into all the world, and preach the gospel to every creature." (Mark 16:15). "I am not ashamed of the gospel of Christ: for it is the power of God unto salvation to every one that believeth." (Romans 1:16). "And this gospel of the kingdom shall be preached in all the world for a witness unto all nations; and then shall the end come." (Matthew 24:14).

God purposes to use you and me to help many souls who are living in darkness. "I the Lord have called thee in righteousness, and will hold thine hand, and will keep thee, and give thee for a covenant of the people, for a light of the Gentiles; to open the blind eyes, to bring out the prisoners from the prison, and them that sit in darkness out of the prison house." (Isaiah 42:6-7).

We can help the poor and the needy. "I was a father to the poor, and the cause which I knew not I searched out." (Job 29:16). "Pure religion and undefiled before God and the Father is this, To visit the fatherless and widows in their affliction, and to keep himself unspotted from the world." (James 1:27). "He shall deliver the needy when he crieth; the poor also, and him that hath no helper." (Psalm 72:12). "Whoso stoppeth his ears at the cry of the poor, he also shall cry himself, but shall not be heard" (Proverbs 21:13).

We can also minister to the sick, and help them understand the importance of obedience to God's commandments so they might remain in better health. "Pray for one another, that ye may be healed." (James 5:16). "Thou shalt therefore keep the commandments . . and the Lord will take away from thee all sickness." (Deuteronomy 7:11, 15). "[God] who forgiveth all thine iniquities; who healeth all thy diseases" (Psalm 103:3).

As we minister to the needs of others, and bring them the good news of salvation, through the forgiving/enabling grace of Christ, we have the promise that we are working with the angels of God. Even though our efforts may not be appreciated by those on earth, yet the God of heaven accepts us. Thank the Lord!

"For what is our hope, or joy, or crown of rejoicing? Are not even ye in the presence of our Lord Jesus Christ at His coming? For ye are our glory and joy." (1 Thessalonians 2:19-20).

"As the heaven is high above the earth, so great is His mercy toward them that fear Him."—*Psalm 103:11.*

The Sixth Law of Health

The Food You Eat

The human body was created by the God of heaven on the sixth day of Creation Week. It is marvelously made.

Because of this, we have a special responsibility, as His children, to carefully obey His health laws. He has provided bountifully from the things of nature for our care; and it is our responsibility to use these blessings to keep ourselves in good health, so that we may better minister to the needs of those around us.

We can live as did Daniel, in full obedience to all of God's laws. A basic aspect of this is the diet we choose. Our physical health is maintained by that which we eat; for that which you put into your body affects all of your organs and tissues. A wrong diet, or an indulged appetite of a good one, greatly hinders mental and physical efficiency. An improper diet not only injures our bodies, but keeps our minds from functioning as well as they should. For example, an intemperate man cannot be a patient men.

Eating the right amount of the right food, and only at regular hours, is what is needed. The food should be of a simple, healthful quality, and eaten slowly in an atmosphere of cheerful thankfulness to God for His many blessings. In order to understand these matters aright, we need individually to reason from cause to effect, study the Word of God, and act from principle. We dare not let the fads and fashions of the world become our criteria.

All of our enjoyment or suffering may be traced to obedience or transgression of natural law. To make these laws plain, and to urge their obedience in the strength of God—is the special work for our time in history. Men of God in Bible times carefully obeyed the moral and health laws; and we should obey them today. A significant aspect of this is the fact that the body is the only medium through which the mind and the soul are developed for the upbuilding of character. How important it is, then, that we do all in our power to yield ourselves in obedience to God's pattern for

our lives. This is the greatest work we can do. And we can be thankful that He will, by His enabling grace, strengthen us to fulfill His will.

The original diet, given by Heaven to our human family, consisted of grains, fruits, nuts, and vegetables. These foods, prepared in as simple and natural a way as possible, are the most healthful and nourishing. They impart a strength, a power of endurance, and a vigor of intellect, that are not afforded by a more complex and stimulating diet.

This diet that God gave to our first parents did not include meat. It is contrary to His plan to have the life of any of His creatures taken in order to supply us with food. He desires to bring us back to this original plan. He does not want us to subsist upon the flesh of dead animals.

And this diet should be a simple one. It is very easy to take simple food—and make a complicated dish out of it that is hard to digest. Our diet should be simple: composed of simple food, simply prepared. By this is meant simple, healthful food, both raw or properly cooked, free from spices, grease, flesh meats, and complicated mixtures. Raw food is good, but warm food is needed by the system also. Eating only cold food draws vitality from the body to heat it up in the stomach prior to its digestion. Also helpful is the eating of fewer kinds of food at a meal, and eating it with thanksgiving. A cheerful heart will help your food digest better. Simply prepared meals will be more nourishing for your family and guests. Fashionable eating with its many dishes, mixtures, and hurtful foods is an invitation to gluttony. And this, of course, you do not want.

The diet also needs to be adequate. Do not consider it a matter of indifference as to what you eat. Your diet should not be impoverished, but nourishing, for only in this way can your body make good blood. Perfect health is keyed to perfect circulation, and this cannot be done without good blood.

Fruits, grains, vegetables, and nuts, prepared in a simple way—free from meat or spice or grease of every kind,—constitute the most healthful diet. It requires careful thought to prepare nourishing food. This effort requires faith in God, earnestness of purpose, and a willingness to help one another. We are mortal and must supply ourselves with food that will give proper sustenance to the body.

Investigate your habits of diet and study from cause to effect. You do not want a rich, greasy, complicated worldly diet, but neither do you want a skimpy, impoverished one. There are healthful foods that you need. Do not avoid them.

However, in some cases, you will find certain articles of diet that do not agree with you. For example, beans bother some people. In such instances, change the diet; use less of some foods; try other things. And be alert to food combinations; some are healthful and some are not. Individually study this matter for yourself and come to your own decisions as to what you shall eat. There is no doubt but that there is generally an ample variety of foods from which to select.

In making this choice, keep in mind the climate. Certain foods may be suitable for one country and not for another, or for one season of the year and not for another. Then, too, there is the matter of your occupation. If you are engaged in hard, physical labor, you can eat somewhat more amply than can a more sedentary person.

The warmer the climate, the less severe our physical work should be, and the less food is correspondingly needed. In connection with this, too much sugar in the diet, in hot weather or in a hot climate, can cause trouble.

Yet no precise line of diet is marked out for those living in various seasons, climates, and countries. As you depend on Him for help, God will guide you from day to day.

In those lands in which an abundance of fresh fruits, grains, and nuts are available, flesh food is not necessary. And in countries in which there is an extra abundance of fruit throughout most of the year, we should make use of it.

God will guide His children to develop simple, healthful recipes that will help many others. Develop your talents and learn how to develop more healthful meals.

In order to better understand these things, we need to better understand the process of normal digestion within our bodies. Overeating injures the stomach and weakens all the digestive organs. Disease is thus brought on. Too much vital power is being expended in trying to digest so much food. The immediate effect may be headache, indigestion, pain, or temporary stoppage of digestion. Eat sparingly of the best food. Allow nothing to pass your lips that in any way might weaken your health and life. Constantly study from cause effect, as you go from meal to meal, day to day.

That which we need more of is spiritual food—study in God's Word,—for that will give us overcoming power in controlling our selection and intake of physical food.

Overeating has a worse effect on the body than overworking. The excess food only clogs the system, burdens the life, and, if continued, leads to disease. Too much food, even of the right quality, is harmful. Eat moderately, of the right food, and only at regular periods.

Do not study, or do heavy work or violent exercise immediately after a meal. As soon as it is concluded, both the blood and brain power are needed in aiding in its digestion. When the meal is completed, go outside and take a short walk, with your head erect and your shoulders back. This light exercise will greatly help your digestion. Your mind is thus diverted from yourself to the things of nature about you. And that is another benefit of the after-meal walk.

There are far too many people who worry about their food. Eat it cheerfully, with a sense of thankfulness to God. Do the best you can, and then go about your work believing that He will bring the best. If you are in constant fear that your food will hurt you, it most assuredly will. Forget it—and all your other problems too. Think of something cheerful and trust that all will work out for the best.

Pure, fresh air, breathed in through lungs unhindered by tight clothing or belts or lacing, will greatly help your digestion. This is no unimportant detail. It is better to suspend your clothing from the shoulders, instead of using belts. Avoid cramping or compressing your lungs or your abdomen.

Do not spend most of your time thinking about yourself. Act from principle, and then live to bless others.

There are a number of foods which it is best to eliminate or minimize in our diets. A meal of only cold food should not be partaken. Warm it first. Hot drinks and hot food debilitate the stomach; very cold foods require too much vital force in order to be warmed up in the stomach prior to

digestion. Cold water drunk with the meal diminishes the flow of saliva. The colder the food or water, the greater the injury to the stomach. Ice water or ice lemonade stops digestion until it is warmed up. Food that is washed down with liquids results in poor digestion. When liquids are taken with meals, the stomach must absorb the liquid before it can begin to digest the food. Overworking the stomach in many little ways can add up to more serious problems at a later time.

When you sit down to a meal, take time to eat. Chew your food slowly, and do not crowd in a great variety of food at one meal. The benefit derived from food depends less on the quantity eaten than on how thoroughly it was masticated, and digested. The amount of time the food is in the mouth and how well it is chewed are both very important to thorough digestion. In order to do this effectively, it is necessary to eat your food slowly.

Do not have too great a variety at a meal; three or four dishes are plenty. It is more important that we eat that which will agree with us than that we taste of every dish set before us.

It is well not to eat fruit and vegetables at the same meal. Vary the meals from day to day. All mixed and complicated foods are injurious to the health.

And, above all, do not overeat. It is one of the quickest avenues to disease and death. Especially should sedentary workers be careful in regard to this point.

It is best that five hours elapse between meals. Two meals a day are better than three, especially for those who obtain relatively little exercise. Late suppers, just before bedtime, are particularly harmful. If eaten at all, the third meal should be light and several hours before bedtime.

Eat your meals at regular times and between meals eat nothing.

Fruit is a wonderful blessing from God. Whenever it is available, you will want to make use of it. Fresh fruit, freshly picked, is especially good. It would be well to do less cooking and eat more fruit raw. But also preserve them in sealed jars for winter usage. Fruits of different kinds—but not too many kinds—at a meal are very fine. But even fruit should not be eaten after a full meal of other foods.

Never eat fruit if it has any decay on it. Decayed vegetables and fruit ferment in the stomach and poison the blood. As with grains, nuts, and vegetables, prepare the fruit for the table in as simple a manner as possible.

Brain workers do well, from time to time, on a fruit diet for a day or two.

The dried fruits are very helpful in the diet. Apples are one of the best standby storage fruits that you can find.

The grains are another blessing from our Creator. When you eat grains and vegetables, you are obtaining your food first-hand; but when you eat meat, you are getting it second-hand. The needs of the system can be better supplied, and muscular strength maintained without the use of animal flesh. The grains, along with peas, beans, and lentils, are foods that store well. Do not use grease on your grains or in preparing them. This principle applies to the preparation of fruits and vegetables also.

Grains used for porridge or cooked cereal should have several hours' cooking. But even then, they are still less wholesome than dry foods which require careful chewing. For this reason, to eat largely of cereals does not ensure health to the digestive organs, for they are too much like liquid. Instead, eat fruit, vegetables, and bread.

Bread should be thoroughly baked, and should be light and dry. Do not use baking powder or soda when preparing it. The strong alkalinity of soda injures the stomach. Use water in making bread, instead of milk. Milk bread does not keep sweet as long, and ferments in the stomach. The loaves should be small, with no taint of sourness. Never eat fresh raised bread (yeast bread) before it is a day old. And two- or three-day-old bread is more healthful still. (This is because there is no baker's yeast remaining in it by then.) But unleavened bread—without yeast—can be eaten fresh out of the oven.

Zwieback is bread that has been baked a second time. ("Zwieback" means "twice baked.") This transforms the bread into one of the most easily masticated and digestible foods you can find. Simply cut ordinary raised bread into slices and then lay it in a warm oven to dry until the last trace of moisture disappears. Then let it be browned slightly all the way through. If kept dry, zwieback can be kept much longer than regular bread, and it can be reheated before using, to freshen it up. Since it is so easily digested, zwieback does well, along with fruit, for the evening meal.

Beware of partially baked bread. If it is soft, doughy, or sticky inside, do not eat it. Hot, raised biscuits should not be eaten. Sour bread is not healthful either. Do not put sour milk into your bread mix.

Whole wheat bread is far better than white bread. Sweet breads and sweet cookies cause problems in the stomach.

Thank God for the good vegetables that we can serve to our families. They afford us solid nourishment. When picked fresh from the garden, they are the best. Hearty, hard-working men need plenty of vegetables. Such a simple diet is by far the best for us.

God wants to bring His people back to simple fruits, vegetables, and grains. These have the nutritive properties that our bodies need. This is the food needed, not meat or grease.

There are those who are not able to digest certain vegetables as well as others.

Avoid fried foods, or any food that has been prepared with grease or butter (or margarine). These clog the system and lead to serious trouble later on.

Raw and cooked greens are among the most nourishing foods obtainable. Other good foods include such items as tomatoes, corn, or peas. But never use decayed vegetables.

It would be well to obtain a piece of land so you can grow fruits and vegetables.

Sugar is a real problem. People use far too much of it in preparing their food, and yet it causes fermentation in the stomach. Milk and sugar combined is one of the worst combinations you can find, yet the two are mixed into breads, puddings, pastries, and other things.

Sugar clogs the system. Some people try to make sugar supply the place of good food, properly cooked. But the result is sickness and disease. Sugar, overused in the diet, is worse than meat eating. Avoid eating the sweet foods that are prepared. Candies and confections are best kept out of the diet.

A little sweetening, such as honey, mixed in with the

preserved fruits is helpful. It is not wrong to use a little milk or a little sweetening. But only a little sugar is all that is needed. Some put a lot of it on their mush, or use milk and sugar mixtures. But this is not healthful. Milk, eggs, and sugar mixed together in recipes are not good either.

Pies, cakes, pastries, and puddings may taste good, but this does not make them good for you. Many of these desserts are detrimental to health. Rich dinners, highly flavored sauces, sweet delicacies, sweet cakes, sweet puddings, and custards would be better omitted from the diet entirely. Often spices are added, which only makes the mixture worse. The jellies, jams, and all the rest are an active cause of indigestion.

Instead, use fruit. Fruit, fresh or stored in jars, can provide your family with the nourishment that the other treats, mentioned above, lack. But plain, simple pies, with a small amount of sweetening is helpful—as long as you stay with only one piece.

Other worthwhile desserts would include plain cake with raisins, rice pudding with raisins, prunes, and figs.

Always be careful in regard to the sweet things. They are not really needed, and they can be harmful to your system.

Spices and condiments, so frequently used in our world today, are ruinous to the digestion. The less exciting the food, the better. Mustard, pepper, spices, pickles, and similar articles only irritate the stomach and fever the blood. Condiments have a similar effect on the stomach as does drinking alcohol. And both begin a subtle craving for something more stimulating to eat or drink.

In reality, the use of spicy food develops a craving that leads many onward to become alcoholics. Yet many place these luxurious foods before their children,—spiced foods, rich gravies, cakes, and pastries. This highly seasoned food irritates the stomach and causes a craving for still stronger stimulants.

Those who have indulged in such foods find it difficult to sit down to a meal of simple, wholesome food. But if they will stick with it, their enjoyment of simple food will return.

Soda, or baking powder, should never be placed in your breads when you are preparing them. Soda inflames the stomach and often poisons the entire system. But good bread can be made without them.

Do not use much salt in your diet. Some people advocate a no-salt regime, but this is not good. A little salt is needed in the diet, but only a little.

Pickles and vinegar should not be eaten. (Soda and baking powder are very high alkaline products that remain excessively alkaline in the system; pickles and vinegar are the opposite; they are excessively acid and likewise derange the delicate gastrointestinal track.) It would be well if pickles, vinegar, mustard, mince pies, and such things were entirely omitted from the diet.

Folk often put vinegar and oil on their salads. (Mayonnaise is a vinegar, oil, and raw egg combination.) Yet the vinegar causes a fermentation in the stomach, and the food does not digest but instead decays or putrefies. As a consequence of such a diet, the blood is not nourished, but instead becomes filled with impurities. Eventually liver and kidney problems develop.

The effect of butter in the body is quite different than that of cream. (Chemically, cream is composed of oil droplets surrounded by water, and thus is relatively more digestible. When churned, cream becomes butter, which is water droplets locked into an ocean of hardened oil. This grease-like substance causes very serious problems in the digestive system, and later in the blood vessels. Never eat anything that is grease-like.) It is best to dispense with butter and not use it at all.

It has been said that a little milk or cream in the diet is helpful, but you need to know that it is well to work away from their use. Soon there will be no safety in using eggs, milk, or cream. This is due to the increase in animal diseases. God will give His people ability to prepare food without these substances.

If eggs are used at all, they should be from hens that you know to be well-cared for and suitably fed. It is best that children have few, if any eggs. Milk should come from livestock that you know to be healthy, be boiled first, and only used in moderate amounts.

Some individuals, in abstaining from milk and eggs, have failed to supply the system with proper nourishment, and as a consequence have become weak and unable to work. Still others cannot afford the better food, such as nuts and fruit. And there are those who do not know how to properly supply the place of milk and eggs with other foods. They need instruction.

The time has not yet come to prescribe the strictest diet for others to follow. But let the diet be progressive. Let the people be taught how to prepare food without the use of milk. Tell them that soon there will be no safety in using eggs, milk, cream, or butter, because disease in animals in increasing. Do know that the time will come when it will not be safe for anyone to use milk and eggs. (Many believe that that time has already come.)

Animals from which milk is obtained are not always healthy. They may be diseased so that a cow, apparently well in the morning, dies before night. Then she was diseased in the morning, and her milk was diseased, but you did not know it.

Cheese should never be introduced into the stomach. It is wholly unfit for food.

Lard and grease clog the system. The body cannot handle them. Keep grease out of your food. It defiles any preparation of food you may make. It renders the food difficult of digestion (and produces a clogging of the arteries, leading to heart attacks later on). For example, fried potatoes are not healthful, for grease or butter is used in preparing them. Instead of this, serve baked or boiled potatoes with cream and a sprinkling of salt.

Eat only food that is free from grease. Such a diet will prove a blessing to you, and will avoid later suffering and grief.

Olives may be so prepared that they may be eaten with good results at each meal. They can take the place of butter. Olives and nuts, along with the other protein vegetables, can supply the place of butter and flesh meats.

Nuts and nut foods are coming largely into use to take the place of flesh foods. Care must be taken not to use too large a proportion of nuts. Time should be spent learning how to prepare the nut foods, but do not eat too heavily of them.

Some kinds of nuts are not as wholesome as others. Do not reduce the diet to a few articles composed largely of nut foods. They should not be used too freely. Combined in large proportions with other articles in recipes, they make the food so rich that it cannot be properly assimilated. One-tenth to one-sixth part of nuts to other foods is sufficient in recipes, varied according to the combination.

Almonds are preferable to peanuts, but peanuts, in limited quantities, may be used with grains to make nourishing food.

Water is the best liquid possible to cleanse the tissues of the body, but take it between meals rather than with your meals. Especially do not use hot drinks or cold drinks at mealtime. Warm or hot water taken a half hour or so before the meal is helpful.

Tea, coffee, tobacco, alcohol, and the narcotics are not good for your body and should never be used. Such things may at first appear to stimulate and excite the nerves, but later will come trembling nerves and lack of self-control. Tired nerves need rest and quiet, not artificial stimulation. Intemperance begins at our tables, in the use of unhealthful food. Then stimulants are resorted to, and the nerves, artificially excited, borrow from the future. Later comes sickness and nervous prostration. The only safety is to leave them totally alone.

Be careful of apple cider. It is often made of wormy or half-rotten apples. And it may have some alcoholic content.

Fresh and properly prepared fruit juices are wholesome and a blessing from God.

How very thankful we can be that the God of heaven has provided us with wonderfully designed bodies, and so many blessings in nature to keep us in good health. He is our Creator and how we love Him. Let us carefully use each of the Eight Laws of Health—pure air, sunlight, abstemiousness, rest, exercise, proper diet, the use of water, and trust in divine power,—to keep ourselves in the best health in our daily service to Him.

A brief summary of some of the basics in this invaluable instruction would include several of these points:

The meal should be simple, appetizing, but not complicated, or hot, cold, or too liquid. Eat unhurriedly and at regular hours, chewing well, and without overeating. The diet itself is best to consist of fruit, vegetables (especially greens), grains, and some nuts. Be cautious about the many highly processed, sweet, and spiced foods. Exercise afterward and eat nothing between meals. Throughout the day, be cheerful, positive, and live to help and bless others. Let gratitude to God fill your thoughts, and praise Him who cares for you.

ADDITIONAL PRINCIPLES

"God gave our first parents the food He designed that the race should eat . . The fruit of the trees in the garden was the food man's wants required [Genesis 1:29: and afterward, field crops also, Genesis 3:17-18]. God gave man no permission to eat animal food until after the Flood. Everything had been destroyed upon which man could subsist, and therefore the Lord in their necessity gave Noah permission to eat of the clean animals which he had taken with him into the ark [Genesis 9:3] . .

"After the Flood the people ate largely of animal food. God saw that the ways of man were corrupt, and that he was disposed to exalt himself proudly against his Creator and to follow the inclinations of his own heart. And He permitted that long-lived race to eat animal food to shorten their sinful lives. Soon after the Flood the race began to rapidly decrease in size, and in length of years. [Compare Genesis 5:3-32 with 11:10-26]."—*Counsels on Diet and Foods, p. 373.*

"In choosing man's food in Eden, the Lord showed what was the best diet; in the choice made for Israel, He taught the same lesson. [Psalm 105:37]. He brought the Israelites out of Egypt, and undertook their training, that they might be a people for His own possession. Through them He desired to bless and teach the world. He provided them with the food best adapted for this purpose, not flesh, but manna, 'the bread of heaven.' [Exodus 16; Psalm 78:24]. It was only because of their discontent and their murmurings for the fleshpots of Egypt that animal food was granted them, and this only for a short time. Its use brought disease and death to thousands. [Numbers 11:4-12, 31-33; Psalm 78:17-37]. Yet the restriction to a nonflesh diet was never heartily accepted. It continued to be the cause of discontent and murmuring, open or secret, and it was not made permanent."—*Counsels on Diet and Foods, p. 374.*

"Had they been willing to deny appetite in obedience to His restrictions, feebleness and disease would have been unknown among them. [Exodus 23:25; Psalm 107:4-9]. Their descendants would have possessed physical and mental strength. They would have had clear perceptions of truth and duty, keen discrimination, and sound judgment. But they were unwilling to submit to God's requirements, and they failed to reach the standard He had set for them, and to receive the blessings that might have been theirs. They murmured at God's restrictions, and lusted after the fleshpots of Egypt. [Psalm 106:13-15]. God let them have flesh, but it proved a curse to them. [1 Corinthians 10:5-6]."—*Counsels on Diet and foods, p. 378.*

SPIRITUAL LESSONS

We have our physical food which we need to partake of daily. It should be of good quality. But, in addition, we need spiritual food each day.

"And He humbled thee, and suffered thee to hunger, and fed thee with manna, which thou knewest not, neither did thy fathers know; that He might make thee know that man doth not live by bread only, but by every word that proceedeth out of the mouth of the Lord doth man live." (Deuteronomy 8:3).

As the children of Israel journeyed through the wilderness, God provided manna from heaven for their daily food. It was filling and nutritious. But, as the above verse reveals, the giving of the manna was to serve as an object lesson. God's people were always to receive spiritual food from Him every day of their lives.

"But He [Jesus] answered and said, It is written, Man shall not live by bread alone, by every word that proceedeth out of the mouth of God." (Matthew 4:4).

We are to obtain that spiritual food from the Inspired Scriptures. God alone can supply the necessities of the soul. We are to partake of the Word of God. Jesus is the living Word, and His words are found in the Bible.

"In the beginning was the Word, and the Word was with God and the Word was God . . And the Word was made flesh, and dwelt among us." (John 1:1, 14). "In Him was life; and the life was the light of men." (John 1:4).

"And Jesus said unto them, I am the bread of life: he that cometh to Me shall never hunger; and he that believeth on Me shall never thirst" (John 6:35).

Jesus is the spiritual manna from heaven.

"As the living Father hath sent Me, and I live by the Father: so he that eateth Me, even he shall live by Me. This is that bread which came down from heaven; not as your fathers did eat manna, and are dead: he that eateth of this bread shall live forever." (John 6:57-58). "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life" (John 6:63).

As we prayerfully study the Bible, we partake of this life in Christ. "And have tasted the good Word of God, and the powers of the world to come." (Hebrews 6:5). "Give us this day our daily bread." (Matthew 6:11). "Thy words were found, and I did eat them; and Thy Word was unto me the joy and rejoicing of mine heart: for I am called by Thy name, O Lord God of hosts" (Jeremiah 15:16).

We have been bought with a price, and are no longer our own (1 Corinthians 6:19-20). We belong to God and are to eat the food He gives us.

Doing so will bring us the deepest happiness in this life, and bring us salvation unto the world to come.

Receive the manna daily. Study God's Word with prayer every day, and live it in your daily life. If you will be humble and submissive, God will use this to change you and, in turn, use you to help others.

"The righteous eateth to the satisfying of his soul."—*Proverbs 13:25.*
"He will love thee, and bless thee, and multiply thee."—*Deuteronomy 7:13.*

The Seventh Law of Health

The Water that Cleanses

Livestock and wild animals know what to do when physical sickness strikes. They have been observed eating certain plants. Seeking out a stream or lake, they will bathe in the water, or lie in it, to treat their injuries.

A dog that was bitten on the head by a rattlesnake first killed the snake; then he went to a nearby creek, where he lay in the water, off and on, for a week. He recovered completely.

Water is one of the most valuable helpers you have in the daily task of keeping yourself in health or in recovering health when it is lost.

How very important it is that you drink enough water each day! Your kidneys alone filter about 50 gallons of fluid a day. In a 24-hour period, more than 8 quarts of digestive juices flow into the digestive tract. Much of this water is recycled over and over again by your kidneys. But about 2 to 4 quarts of water a day are lost through the urine, lungs, or perspiration. For this reason, if you do not keep drinking water, your kidneys cannot perform their function well, and kidney disease results.

It has been found that water intake can increase physical endurance and ability to work by as much as 80%. When you do not drink enough water, your blood thickens and flows with greater difficulty. This can cause trouble not only in your body tissues and organs, but also to your heart that must pump that sludged blood.

So many people eat far too much salt, sugar, and protein, yet each of these substances requires additional water to process.

In late 1986, the World Health Organization officially stated that the incidence of illness around the globe would fall by 80% if people in the developing nations had access to pure drinking water.

Lack of water not only affects health; it affects work production as well. Athletes, in particular, find that a slight decrease in fluid will greatly affect performance.

It is generally recommended that we drink 8 glasses of water a day. But it is best if you not drink it with your meals, but between them. The very best times for water drinking is first thing upon arising in the morning, and then 30 minutes or so before each meal. One or two warm glasses of water about a half hour before breakfast will help cleanse the stomach and sharpen the appetite. Small amounts drunk from time to time throughout the remainder of the day are also helpful.

Some people drink hot water or cold water drinks with their meal, but this hinders the digestion of the food even more than drinking lukewarm water at mealtime.

The drinking water should be pure, but this is becoming more difficult to obtain. This is unfortunate. One solution is to purchase a reliable water distiller for your home. This will clean the water. Distilled water will not

hurt you; it will only help you, if you are eating a good diet so that you are obtaining your proper amounts of calcium and other minerals from your food. In contrast, regular water often contains an excess of inorganic sodium, chlorine, sulfur, fluorine, iron, chromium, lead, and other undesirable minerals—and in far greater amounts than the body could possibly use. We can be thankful that small, inexpensive home distillers are now easily available.

Joseph M. Price, M.D., has done careful research into the relationship of chlorinated water to atherosclerosis in the arteries. He found so much evidence that he wrote a book about it, entitled, *Coronaries/Cholesterol/Chlorine*. For example, after seven months every chicken fed chlorinated water had developed atherosclerosis, while no chickens fed pure water had it. Here is another interesting fact: American soldiers killed in the Korean War averaged 75% with evidence of coronary atherosclerosis, yet had an average age of only 22! In order to avoid disease, the water given the soldiers in Korea had been very heavily chlorinated.

Cadmium in water increases high blood pressure. Dr. Henry Schroeder has established that people who die of high blood pressure complications tend to have an unusually high level of cadmium in their kidneys. And this most frequently occurs in certain cities with higher cadmium content in the drinking water.

Lead, copper, and sulfur can also be dangerous. Zinc in the water helps to protect the body against cadmium and copper. Patients with either hypertension or atherosclerotic heart disease or an old myocardial infarction generally have higher copper and lower zinc levels in the serum and toenail samples, according to the World Health Organization.

If you have the choice, when drinking water from pipes, it is better to drink hard water than soft water. The hard water, which mainly has calcium and magnesium in it, will lower your chances of acquiring cardiovascular and kidney diseases. The "Journal of the American Medical Association" for October 7, 1974, reported on Monroe County, Florida, where, by changing its source, the hardness of the drinking water was dramatically increased from 0.5 ppm to 200 ppm. "The death rates from cardiovascular disease dropped from a range of 500 to 700 to a range of 200 to 300 only four years after the increase in water hardness."

Oddly enough, you can purchase water-softening equipment and supplies,—but no one sells anything to artificially harden it. Hard water results primarily from the presence of calcium and magnesium salts in the water, while softness is due to the absence of these salts. These two minerals help protect the water from absorbing dangerous minerals from the ground—or from pipes.

The average person will, by the age of 75, have drunk 20,000 gallons of water. Stop and think about it for a moment—and you will agree with the statement of scientists that this is the "water planet." Not only is six tenths of its surface covered by water, but water is the essential factor that makes all life possible. No plant, animal, or living organism can survive long without it.

> "When we come to the individual need for water, it is readily realized that water is certainly our most precious mineral. It is the most essential of all minerals for our bodies. An animal can lose all its fat, about half its protein,—but if it loses as much as one-tenth of its water, it will die."—*Jonathan Forman, M.D., in "Water and Man."*

Your body is 80% water. The countless millions of cells inside of you are constantly being bathed in water. And this is not merely a soaking process, but a rewashing activity done by your blood stream. Water in the blood brings nutrition and oxygen to your tissues, and carries off wastes. If injury occurs, coagulants come out of the fluid and stop the bleeding, while white blood cells emerge from the blood stream and begin attacking poisonous substances. Delicate chemical balances are maintained by the flowing blood, as hormones, digestive substances, and many other vital substances are transported through the body fluids to their appointed place.

It is no wonder that this most precious commodity should be needed by mankind—not only inside but outside as well.

Frequent bathing is a very important health practice. It should be done at least once a week, but a daily bath or shower is even better. Warm baths relax; hot baths prepare for cold ones and strengthen and invigorate; all baths help cleanse the skin. There are millions of tiny pores—little mouths—that open out onto your skin. Bathing cleans them and removes the impurities that they bring to the surface.

But, in all your consideration of the values of water, do keep in mind that a better use of water must be accompanied by corresponding improvements in the diet also.

> "Rest, freedom from care, light, pure air, pure water, and spare diet, are all that they need to make them well."—*2 Selected Messages, p. 458.*

ADDITIONAL PRINCIPLES

> "In health and in sickness, pure water is one of heaven's choicest blessings. Its proper use promotes health. It is the beverage which God provided to quench the thirst of animals and man. Drunk freely, it helps to supply the necessities of the system, and assists nature to resist disease. The external application of water is one of the easiest and most satisfactory ways of regulating the circulation of the blood. A cold or cool bath is an excellent tonic. Warm baths open the pores, and thus aid in the elimination of impurities. Both warm and neutral baths soothe the nerves and equalize the circulation.
>
> "But many have never learned by experience the beneficial effects of the proper use of water, and they are afraid of it. Water treatments are not appreciated as they should be, and to apply them skillfully requires work that many are unwilling to perform. But none should feel excused for ignorance or indifference on this subject. There are many ways in which water can be applied to relieve pain and check disease. All should become intelligent in its use in simple home treatments. Mothers, especially, should know how to care for their families in both health and sickness."—*Ministry of Healing, p. 237.*
>
> "Taken with meals, water diminishes the flow of the salivary glands; and the colder the water, the greater the injury to the stomach. Ice water or iced lemonade, drunk with meals, will arrest digestion until the system has imparted sufficient warmth to the stomach to enable it to take up its work again."—*Review, July 29, 1884.*
>
> "Food should not be washed down; no drink is

needed with meals. Eat slowly, and allow the saliva to mingle with the food. The more liquid there is taken into the stomach with the meals, the more difficult it is for the food to digest; for the liquid must be first absorbed. . Hot drinks are debilitating; and besides, those who indulge in their use become slaves to the habit . . Do not eat largely of salt; give up bottled pickles; keep fiery spiced food out of your stomach; eat fruit with your meals, and the irritation which calls for so much drink will cease to exist. But if anything is needed to quench thirst, pure water, drunk some little time before or after a meal, is all that nature requires . . Water is the best liquid possible to cleanse the tissues."—*Review, July 29, 1884.*

"I am advising the people wherever I go to give up liquid food as much as possible."—*Unpublished Testimonies, October 29, 1894.*

"Twice a week . . take a general bath, as cool as will be agreeable, a little cooler every time, until the skin is toned up."—*1 Testimonies, p. 702.*

"Bathe frequently in pure soft water, followed by gentle rubbing."—*Healthful Living, p. 192.*

"Upon rising in the morning, most persons would be benefited by taking a sponge bath, or, if more agreeable, a hand bath, with merely a wash bowl of water; this will remove impurities from the skin."—*Healthful Living, p. 192.*

"Frequent bathing is very beneficial, especially at night just before retiring, or upon rising in the morning."—*Healthful Living, p. 192.*

"Bathing frees the skin from the accumulation of impurities which are constantly collecting, and keeps the skin moist and supple, thereby increasing and equalizing the circulation."—*Healthful Living, p. 789.*

"See that the children have a daily bath, followed by friction till their bodies are aglow."—*Counsels on Health, p. 103.*

"Persons in health should on no account neglect bathing. They should by all means bathe as often as twice a week. Those who are not in health have impurities in the blood, and the skin is not in a healthy condition. The multitude of pores, or little mouths, through which the body breathes, become clogged and filled with waste matter. The skin needs to be carefully and thoroughly cleansed, that the pores may do their work in freeing the body from impurities; therefore, feeble persons who are diseased surely need the advantages and blessings of bathing as often as twice a week, and frequently even more than this is positively necessary. Whether a person is sick or well, respiration is more free and easy if bathing is practiced. By it, the muscles become more flexible, the mind and body are alike invigorated, the intellect is made brighter, and every faculty becomes livelier. The bath is a soother of the nerves. It promotes general perspiration, quickens the circulation, overcomes obstructions in the system, and acts beneficially on the kidneys and urinary organs. Bathing helps the bowels, stomach, and liver, giving energy and new life to each. It also promotes digestion, and instead of the system being weakened it is strengthened. Instead of increasing the liability to cold, a bath, properly taken, fortifies against cold because the circulation is improved, and the uterine organs, which are more or less congested, are relieved; for the blood is brought to the surface, and a more easy and regular flow of the blood through all the blood vessels is obtained."—*3 Testimonies, pp. 70-71.*

"Upon rising in the morning, most persons would be benefited by taking a sponge bath, or, if more agreeable, a hand bath, with merely a wash bowl of water. This will remove impurities from the skin."—*2 Selected messages, p. 463.*

"If the garments worn are not frequently cleansed from impurities, the pores of the skin absorb again the waste matter thrown off."—*Healthful Living, p. 206.*

"The impurities of the body, if not allowed to escape are taken back into the blood, and forced upon the internal organs. Nature, to relieve herself of poisonous impurities, makes an effort to free the system, which effort produces fevers, and what is termed disease. But even then, if those who are afflicted would assist nature in her efforts, by the use of pure, soft water, much suffering would be prevented. But many, instead of doing this, and seeking to remove the poisonous matter from the system, take a more deadly poison into the system, to remove a poison already there."—*2 Selected Messages, p. 460.*

"Why need anyone be ignorant of God's remedies—hot water fomentations and cold and hot compresses. It is important to become familiar with the benefit of dieting in the case of sickness."—*2 Selected Messages, p. 290.*

"Water can be used in many ways to relieve suffering. Drafts of clear, hot water taken before eating (half a quart, more or less), will never do any harm, but will rather be productive of good. A cup of tea made from catnip herb will quiet the nerves. Hop tea will induce sleep. Hop poultices over the stomach will relieve pain. If the eyes are weak, if there is pain in the eyes, or inflammation, soft flannel cloths wet in hot water and salt, will bring relief quickly. When the head is congested, if the feet and limbs are put in a bath with a little mustard, relief will be obtained. There are many more simple remedies which will do much to restore healthful action to the body. All these simple preparations the Lord expects us to use for ourselves."—*2 Selected Messages, p. 297.*

"Keep the patient free from excitement, and every influence calculated to depress. Her attendants should be cheerful and hopeful. She should have a simple diet, and should be allowed plenty of pure soft water to drink. Bathe frequently in pure soft water followed by gentle rubbing. Let the light, and air, be freely admitted into her room. She must have quiet, and undisturbed rest."—*2 Selected Messages, p. 446.*

SPIRITUAL LESSONS

Not only our bodies need washing, our souls need it as well. We are to be washed by the Word, as we daily study in the Bible. It brings cleansing and strength. "He sent His Word and healed them, and delivered them from their destructions." (Psalm 107:20). "Let the Word of Christ dwell in you richly in all wisdom." (Colossians 3:16).

"Whereby are given unto us exceeding great and precious promises: that by these ye might be partakers of the divine nature, having escaped the corruption that is in the world through lust." (2 Peter 1:4).

There is cleansing power in studying Scripture. By doing it daily, we receive an ongoing washing through the

Word. "Wherewithal shall a young man cleanse his way? by taking heed thereto according to Thy Word." (Psalm 119:9). "Now are ye clean through the word which I have spoken unto you." (John 15:3).

This occurs as we pray for help, learn anew His Word,—and bring it into our souls by living it out in our lives each day. "Thy Word have I hid in mine heart, that I might not sin against Thee." (Psalm 119:11). "By the words of Thy lips, I have kept me from the paths of the destroyer." (Psalm 17:4).

While Jesus was here on earth, He also gave us another example—if we would follow in His steps:

"Then cometh Jesus from Galilee to Jordan unto John, to be baptized of him" (Matthew 3:13). He was baptized by John the Baptist, not because He had sinned, but as an example to us. The Father was pleased with what He had done (Matthew 3:17).

Then Jesus later commanded His disciples to baptize converts from all nations. "Go ye therefore, and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost." (Matthew 28:19).

This is a command of Jesus which we are to follow, after learning God's special truths in Scripture and dedicating our lives to Him.

"Verily, verily, I say unto thee, Except a man be born of water and of the Spirit, he cannot enter into the kingdom of God." (John 3:5).

John was baptized at Aenon, "because there was much water there" (John 3:23). Jesus, our example, "went up straightway out of the water" (Matthew 3:16). It is obvious that this was baptism by immersion, not merely sprinkling. Had John used sprinkling, one pail of water would have sufficed for a great host of people. Philip and the eunuch also went into, and came out of, the water (Acts 8:36-39). Philip had immersed the man in a pool of water by the side of the road.

The very word, "baptize" comes from the Greek word, *"baptizo,"* which means "dip under," "immerse," or "plunge under." The meaning is definitely not "sprinkle" or "pour."

It is clear, from the Bible, that baptism represents a complete death to the old way of life, a burial with Christ, and a rising with Him out of death into a new life. The "old man of sin" is dead and, rising, we become a "new creature" in Christ. This is the meaning of baptism—which obviously must be by immersion. Read this carefully:

"Know ye not, that so many of us as were baptized into Jesus Christ were baptized into His death? Therefore we are buried with Him by baptism into death: that like as Christ was raised up from the dead by the glory of the Father, even so we also should walk in newness of life.

"For if we have been planted together in the likeness of His death, we shall be also in the likeness of His resurrection: knowing this, that our old man is crucified with Him, that the body of sin might be destroyed, that henceforth we should not serve sin." (Romans 6:3-6).

"By which also ye are saved, if ye keep in memory what I preached unto you . . how that Christ died for our sins according to the Scriptures; and that He was buried, and that He rose again the third day according to the Scriptures" (1 Corinthians 15:2-4).

"Buried with Him in baptism, wherein also ye are risen with Him through the faith of the operation of God, who hath raised Him from the dead." (Colossians 2:12).

Before baptism, the candidate must be carefully taught (Matthew 28:19-20); he must believe (Mark 16:16); he must repent of his sins (Acts 2:38); he must be willing to die to sin (Romans 6:3, 11-13); He must be ready to live for God (Romans 6:11, 13).

In addition to baptism, there is another water service that we are to perform: the ordinance of foot washing, in connection with the Lord's Supper. God's plan is for us to keep, in memory, Christ's death and resurrection, and our baptism into it.

Some think that Sunday must be kept holy in commemoration of Christ's resurrection. But, according to Scripture (1 Corinthians 15:2-4, quoted above), the ordinance which commemorates Christ's resurrection is Baptism. In addition to baptism, the Lord's Supper commemorates Christ's death.

"The Lord Jesus the same night in which He was betrayed took bread: and when He had given thanks, He brake it, and said, Take, eat: this is My body, which is broken for you: this do in remembrance of Me." (1 Corinthians 11:23-24).

"For as often as ye eat this bread, and drink this cup, ye do shew the Lord's death till He come" (1 Corinthians 11:26).

"If we walk in the light, as He is in the light, we have fellowship one with another, and the blood of Jesus Christ His Son cleanseth us from all sin" (1 John 1:7). "And truly our fellowship is with the Father, and with His Son Jesus Christ" (1 John 1:3).

"When the poor and needy seek water, and there is none, and their tongue faileth for thirst, I the Lord will hear them, I the God of Israel will not forsake them." *—Isa 41:17*

"Keeping mercy for thousands, forgiving iniquity and transgression, and sin."
—Exodus 34:7

"In God will I praise His Word . . in God have I put my trust: I will not be afraid what man can do unto me." *—Psalm 56:10-11*

"The Lord God is a sun and shield: the Lord will give grace and glory: no good thing will He withhold from them that walk uprightly." *—Psalm 84:11*

The Natural Remedies Encyclopedia

The Eighth Law of Health
Your Trust in God

Individually, you and I need the ministry of God's healing power in our own lives. Oh, how great is our need! Yet, thankfully, it is available.

God has a special healing ministry for you. For it is available to you as you come to Jesus and become His trustful follower, obedient to His Written Word.

Here are the answers that you are looking for, summarized from a special book, *The Ministry of Healing.* **At the close of this book, we will tell you how you may obtain a complete copy of that outstanding book for your very own.**

Our story starts with Jesus. He came to this world at His first advent, to reveal to us the love of God and not only to show us His care for us, but also how we, in His strength, should care for one another.

His work is to give us forgiveness of sin, overcoming power, health, peace, and perfection of character.

Varied were the circumstances and needs of those who besought His aid; and none who came to Him went away unhelped. This help—this healing—is for us today. Wherever there are hearts ready to receive His words—the words of Scripture,—He will bring them the comfort of His own presence, the assurance of their heavenly Father's love.

In all things He brought His wishes into strict alignment with the purpose for His life. He glorified His life by making everything in it subordinate to the will of His Father. His life was one of constant self-sacrifice. He spent His days ministering to the needy and teaching those who desired to learn how to become part of His kingdom. Always patient and cheerful, much of His time was given to minister to the sick and infirm. Yet He made each work of healing an opportunity to implant divine principles of truth in mind and soul. For it was His plan to help men and women physically, so that He could then minister to them spiritually.

At every opportunity He presented the Word—the holy Scriptures—to the people. Never was there such an evangelist as Christ. He was the Majesty of heaven, but He humbled Himself to take our nature, that He might meet men where they were.

He spoke to each one in such kindly, sympathetic, simple words that those words could not fail to be understood. He presented the truth in such a way that it was ever afterward intertwined with their most hallowed memories. His instruction was so direct, His illustrations so appropriate, His words so sympathetic and encouraging,—that His hearers could sense the completeness of His identification with their interests and happiness. What a busy life He led, as He went from home to home ministering to the needy and downcast. Gracious, tenderhearted, pitiful, He went about lifting up the bowed-down and comforting the sorrowful. Wherever He went, He brought blessing and better living.

Jesus sought to reach the poor; He sought also to reach the rich, for they needed His help just as badly. Just now He is seeking to reach you and me and help us in our special needs.

Christ came to this world to show that, by receiving power from on high, one can live an unsullied life. With unwearying patience and sympathetic helpfulness, He met men in their necessities. It mattered not to Him what might be their rank or status in life, for He was not a policy man. That which appealed to His heart was a soul thirsting for the water of life.

> "He passed by no human being as worthless, but sought to apply the healing remedy to every soul. In whatever company He found Himself, He presented a lesson appropriate to the time and the circumstances. Every neglect or insult shown by men to their fellow men, only made Him more conscious of their need of His divine-human sympathy.
>
> "He sought to inspire with hope the roughest and most unpromising, setting before them the assurance that they might become blameless and harmless, attaining such a character as would make them manifest as the children of God.
>
> "Often He met those who had drifted under Satan's control, and who had no power to break from his snare. To such a one, discouraged, sick, tempted, fallen, Jesus would speak words of tenderest pity, words that were needed and could be understood. Others He met were fighting a hand-to-hand battle with the adversary of souls. These He encouraged to persevere, assuring them that they would win; for angels of God were on their side, and would give them the victory."—*The Ministry of Healing, pp. 25-26.*

His sympathy, social kindliness, and concern for their best good,—made men and women long to become worthy of His confidence. Upon their thirsty hearts His words fell with blessed, life-giving power. New impulses were awakened and, though they might be outcasts of society, there opened before them the possibility of a new life.

The same Jesus is calling you to His side today. Whatever your past may have been, regardless of your weakness,—He wants to forgive your past, transform your weakness by His grace, through obedience to His Written

Word, the Holy Scriptures.

Christ neglects no one. Wherever there are hearts open to receive the truth, Christ is ready to instruct them. He reveals to them the Father, and the service acceptable to Him.

Christ was hid in God, and God was revealed in the character of His Son. The evidence of His divinity was seen in His ministry to the needs of suffering humanity. Not by pomp and the overthrowing of kingdoms was Christ to establish His kingdom, but by speaking to the hearts of men by a life of mercy and self-sacrifice. His healing ministry is for you today, that His life might be yours. His objective is that your soul shall be imbued with the principles of heaven; so that then, as you come in contact with others, you will be enabled to impart of Heaven's light to them. Your consistent faithfulness to God and His Word will be a special means of revealing that light.

"Human effort will be efficient in the work of God just according to the consecrated devotion of the worker,—by revealing the power of the grace of Christ to transform the life. We are to be distinguished from the world because God has placed His seal upon us, because He manifests in us His own character of love. Our Redeemer covers us with His righteousness.'—*The Ministry of Healing, p. 37.*

If you are a mother, the Master desires to help you in your work to raise your children for God. Come to Him, and tell Him of your needs, and He will impart strength and blessing, just as He did to the mothers who, so long ago, brought their little ones to Him for a blessing. Come to Him for help that you may be empowered to better take up your daily duties again. Instruct your children in the Word of God, and in after years the memory of the words of Scripture will keep many from straying from the pathway to heaven.

But do not let your un-Christlikeness hinder the little ones from coming to Jesus. Plead with God, alone in prayer, for grace and help in time of need, that you may provide them the example of right living that they desire to see in you.

"We should neglect nothing that would serve to benefit a human being. Let everything be gathered up that will relieve the necessities of earth's hungry ones . . By every word of God we are to live. Nothing that God has spoken is to be lost. Not one word that concerns our eternal salvation are we to neglect . . The miracle of the loaves teaches dependence upon God. When Christ fed the five thousand, the food was not nigh at hand . . The providence of God had placed Jesus where He was, and He depended on His heavenly Father for means to relieve the necessity. When we are brought into strait places, we are to depend on God. In every emergency we are to seek help from Him who has infinite resources at His command."—*The Ministry of Healing, pp. 48-49.*

The Saviour's life on earth was a life of communion with nature and with God. In this communion He revealed for us the secret of a life of power. In study of the Inspired Word, earnest prayer, and careful obedience, the soul is ennobled and enabled to fulfill its mission in life.

All day Christ ministered to the people, but in the evening or at dawn He spent hours in prayer to His heavenly Father. Returning from the time spent in prayer, a look of peace, freshness, and power seemed to pervade His whole being. From hours spent alone with God, He came forth morning by morning, to bring the light of heaven to men. And as He opened to men the treasures of truth, they were vitalized by divine power and inspired by hope and courage. Out of the depths of His pure, compassionate heart, the good Shepherd had only love and pity for these restless, thirsting souls.

Take time as Jesus did to be alone with God, that you also may be strengthened in your own battles with temptation, enabled to live a godly life, and minister to the needs of those around you.

"All who are under the training of God need the quiet hour for communion with their own hearts, with nature, and with God. In them is to be revealed a life that is not in harmony with the world, its customs, or its practices; and they need to have a personal experience in obtaining a knowledge of the will of God.

"We must individually hear Him speaking to the heart. When every other voice is hushed, and in quietness we wait before Him, the silence of the soul makes more distinct the voice of God. He bids us, 'Be still, and know that I am God.' *(Psalm 46:10).*

"This is the effectual preparation for all labor for God. Amidst the hurrying throng, and the strain of life's intense activities, he who is thus refreshed, will be surrounded with an atmosphere of light and peace. He will receive a new endowment of both physical and mental strength. His life will breathe out a fragrance, and will reveal a divine power that will reach men's hearts."—*The Ministry of Healing, p. 58.*

"If I may but touch His garment, I shall be whole" (Matthew 9:21), said the woman, and by her persistent faith she was healed. Christ realized her great need, and He was helping her to exercise faith. As He passed, she reached forward and succeeded in barely touching the border of His garment. That moment she knew she was healed. It is through contact with Christ that we are strengthened and helped. To believe in Christ merely as the Saviour of the world can never bring healing to the soul. The faith that is unto salvation is not a mere assenting to the truth of the gospel. True faith means that we receive Christ as our personal Saviour from sin.

"Many hold faith as an opinion. Saving faith is a transaction, by which those who receive Christ join themselves in covenant relation with God. A living faith means an increase of vigor, a confiding trust, by which, through the grace of Christ, the soul becomes a conquering power."—*The Ministry of Healing, p. 62.*

There is help for those with evil habits that grip them. That help is to be found in Christ. He can break the chains, transform the mind, and remake us into the image of God. Turn the eye not to the dark cave of despair,—but upward to Christ. Fix the eye upon Jesus, and the glory of His unchanging power will do for you that which you could never do for yourself. The centurion came to Christ for help, not fearing to ask Him for help. Not to his own goodness did he trust, but to the Saviour's mercy. His only argument was his great need. So it is with us. In the same way we may come to Him.

"Remember that Christ came into the world to save

sinners. We have nothing to recommend us to God; the plea that we may urge now and ever is our utterly helpless condition which makes His redeeming power a necessity. Renouncing all self-dependence, we may look to the cross of Calvary and say: *'In my hand no price I bring; simply to Thy cross I cling.'*

" 'If thou canst believe, all things are possible to him that believeth.' (Mark 9:23). It is faith that connects us with heaven, and brings us strength for coping with the powers of darkness. In Christ, God has provided means for subduing every evil trait, and resisting every temptation, however strong."—*The Ministry of Healing, pp. 65-66.*

But so many feel that they must first make themselves "right" before they can come to Christ. Yet only Jesus can forgive our past and give us strength to overcome in the future. Coming to Him we receive this help; staying with Him continues this help. Look not to self, but to Christ. In your helplessness, cast yourself upon Him. He will receive you and never, except by your own choice, let you go. As you come, believe that He accepts you—simply because He has promised. You can never perish while you do this, never!

When we pray for earthly blessings, the answer to our prayer may be delayed, or God may give us something other than we ask; but not so when we ask for deliverance from sin. Thank God that that is so. It is His will to cleanse us from sin, to make us His children, and to enable us to live a holy life.

Looking upon the distressed and heart-burdened, those whose hopes have been blighted, Jesus calls them to Himself. He sees their wasted years of seeking to quiet the longings of the soul by the trinkets and tinsel of worldliness and sin,—and He invites them to come unto Him for the peace of heart that they so much want, genuine peace of heart that they can find nowhere else.

He is speaking to you just now: "Take My yoke upon you, and learn of Me; for I am meek and lowly in heart: and ye shall find rest unto your souls" (Matthew 11:29). All are weary and heavy laden with the cares of life. Come, He bids you; come. Only Christ can remove the burdens. And the heaviest load that we bear is the burden of sin.

He knows all the weaknesses of humanity, all of our wants, all of our temptations.

"He is watching over you, trembling child of God. Are you tempted? He will deliver. Are you weak? He will strengthen. Are you ignorant? He will enlighten. Are you wounded? He will heal. The Lord 'telleth the number of the stars;' and yet 'He healeth the broken in heart, and bindeth up their wounds" *(Psalm 147: 3, 4).*

"Whatever your anxieties and trials, spread out your case before the Lord. Your spirit will be braced for endurance. The way will be open for you to disentangle yourself from embarrassment and difficulty. The weaker and more helpless you know yourself to be, the stronger will you become in His strength. The heavier your burdens, the more blessed the rest in casting them upon your Burden bearer.

"Circumstances may separate friends; the restless waters of the wide sea may roll between us and them. But no circumstances, no distance, can separate us from the Saviour. Wherever we may be, He is at our right hand, to support, maintain, uphold, and cheer. Greater than the love of a mother for her child is Christ's love for His redeemed. It is our privilege to rest in His love, to say, 'I will trust Him; for He gave His life for me.' "—*The Ministry of Healing, pp. 71-72.*

As with those that He healed while on earth, Christ watches the first glimmer of faith grow stronger as we are aroused to seek Him. It is Jesus who is convicting your heart, and drawing you to Himself right now. If it were not for the inexpressible love of God and the drawing of His Holy Spirit, none of us would come to Him. Our problems, our sicknesses, are often the result of our own habits. Yet He does not turn us away. He bids us come that He may solve our problems in His own unique way. The solutions may not come in exactly the manner we expected. Sometimes instead of removing the problem, He gives us strength to live with it. In Him we have victory and peace, whatever the circumstances of life around us.

Do not wait to feel that you are made whole. Believe the Saviour's word. Put your will on the side of Christ. Will to serve Him, and in acting upon His word you will receive strength to obey His Moral Ten Commandment Law. Whatever may be the evil practice, the master passion which may bind both soul and body, Christ is able to deliver.

"When temptations assail you, when care and perplexity surround you, when, depressed and discouraged, you are ready to yield to despair, look to Jesus, and the darkness that encompasses you will be dispelled by the bright shining of His presence.

"When sin struggles for the mastery in your soul, and burdens the conscience, look to the Saviour. His grace is sufficient to subdue sin.

"Let your grateful heart, trembling with uncertainty, turn to Him. Lay hold on the hope set before you. Christ waits to adopt you into His family. His strength will help your weakness; He will lead you step by step. Place your hand in His, and let Him guide you.

"Never feel that Christ is far away. He is always near. His loving presence surrounds you. Seek Him as One who desires to be found of you. He desires you not only to touch His garments, but to walk with Him in constant communion."—*The Ministry of Healing, p. 85.*

The soul that turns to Him for refuge, Christ lifts above the accusing and strife of tongues. No man or evil angel can impeach that soul. Christ will unite you to His own divine-human nature, and by faith you will stand beside your Saviour in heavenly places, in the light proceeding from the throne of God.

As a result of the sacrifice of Christ on Calvary, we are henceforth to look on Satan as a conquered foe. Clinging to Christ we are safe, moment by moment.

And now, having found the ark of safety yourself, live now to show others the pathway to it.

"The two restored demoniacs were the first missionaries whom Christ sent to teach the gospel in the region of Decapolis. For a short time only, these men had listened to His words. Not one sermon from His lips had ever fallen upon their ears. They could not instruct the people as the disciples who had been daily with Christ were able to do.

"But they could tell what they knew; what they themselves had seen, and heard, and felt of the Saviour's

power. This is what everyone can do whose heart has been touched by the grace of God. This is the witness for which our Lord calls, and for want of which the world is perishing."—*The Ministry of Healing, p. 99.*

Christ sends the very ones who have been freed from Satan's prison camp—to tell the prisoners who remain behind of the good news. Our confession of what Christ has done for us is Heaven's chosen plan for revealing Him to the world. And everyone has his own unique way of telling that message. Begin sharing it now, for others are waiting to hear it. And as you do so, your own experience will deepen.

"Every true disciple is born into the kingdom of God as a missionary. No sooner does he come to know the Saviour than he desires to make others acquainted with Him. The saving and sanctifying truth can not be shut up in his heart. He who drinks of the water of life becomes a fountain of life. The receiver becomes a giver . . In doing this work a greater blessing is received than if we work merely to benefit ourselves. It is in working to spread the good news of salvation that we are brought near to the Saviour."—*The Ministry of Healing, pp. 102-103.*

In sympathy and compassion we are to minister to those in need of help, seeking with unselfish earnestness to lighten the woes of suffering humanity. We are not to think ourselves detached from the perishing world around us. They are part of the web of humanity; a web that we ourselves are part of.

Millions of human beings, in sickness and ignorance and sin, have never so much as heard of Christ's love for them. Were our condition and theirs to be reversed, what would we desire them to do for us? As far as lies in our power, we must help them. Whatever our talents or abilities, we are, by those abilities, in debt to all less fortunate than ourselves. Our strength must be used to help them in their weakness.

"Jesus did not consider heaven a place to be desired while we were lost. He left the heavenly courts for a life of reproach and insult, and a death of shame. He who was rich in heaven's priceless treasure became poor, that through His poverty we might be rich. We are to follow in the path that He trod."—*The Ministry of Healing, p. 105.*

The strongest evidence of man's fall from a higher state is the fact that it costs so much to return. The pathway of this return can be trod only by hard fighting, inch by inch, hour by hour. One hasty, unguarded act can bring us deep trouble. We dare not act from impulse. Beset with temptations without number, we must resist in the strength of Christ. Live by principle and obedience to the Word of God.

"The life of the apostle Paul was a constant conflict with self. He said, 'I die daily' . . His will and his desires every day conflicted with duty and the will of God. Instead of following inclination, he did God's will, however crucifying to his nature."—*The Ministry of Healing, pp. 452-453.*

It is only by unceasing endeavor that we can maintain the victory over the temptations of Satan. But God will give the strength for this as you cry to Him for help, determining that you will not leave His side.

Only by overcoming as Christ overcame shall we win the crown of life. But we must realize our great need of His help in order to receive it. It is only as we see our utter helplessness and renounce all self-trust, that we can lay hold on divine power.

"It is not only at the beginning of the Christian life that this renunciation of self is to be made. At every advance step heavenward it is to be renewed. All our good works are dependent on a power outside of ourselves; therefore there needs to be a continual reaching out of the heart after God, a constant, earnest confession of sin and humbling of the soul before Him. Perils surround us; and we are safe only as we feel our weakness and cling with the grasp of faith to our mighty Deliverer."—*The Ministry of Healing, pp. 455-456.*

It is faith in Christ and the study of the Inspired Word of God that can bring us this power. The entire Bible is a revelation of what God is like. Within its pages we find the needed strength, and the key with which to unlock it is earnest, humble, dependent, obedient trust in God. It is obedience that makes the difference.

"The truths of the Bible, received, will uplift mind and soul. If the Word of God were appreciated as it should be, both young and old would possess an inward rectitude, a strength of principle, that would enable them to resist temptation."—*The Ministry of Healing, p. 459.*

Apart from the Sacred Scriptures, man's greatest philosophies are only conjectures. It is not men's writings, but the Bible that you need. Let the life, ministry, and death of Christ become your study. And teach Bible principles to your children as well.

"The knowledge of God as revealed in His Word is the knowledge to be given to our children. From the earliest dawn of reason they should be made familiar with the name and life of Jesus. Their first lessons should teach them that God is their Father. Their first training should be that of loving obedience. Reverently and tenderly let the Word of God be read and repeated to them, in portions suited to their comprehension and adapted to awaken their interest. And, above all, let them learn of His love revealed in Christ, and its great lesson: 'If God so loved us, we ought also to love one another.' (1 John 4:11)."—*The Ministry of Healing, p. 460.*

Such a humble, prayerful study of the Word of God can bring the character-changing power of the Holy Spirit into your life. You come to know God by an experimental knowledge, and prove, for yourself, the reality of His Word and the truth of His Scriptures. You are tasting and seeing that the Lord is good. You are setting your seal to the fact that God is true. (Psalm 34:8; John 3:33). This may be your experience:

"He can bear witness to that which he himself has seen and heard and felt of the power of Christ. He can testify:

" 'I needed help, and I found it in Jesus. Every want was supplied, the hunger of my soul was satisfied; the Bible is to me the revelation of Christ. I believe in Jesus because He is to me a divine Saviour. I believe the Bible because I have found it to be the voice of God to my soul.' "—*The Ministry of Healing, p. 461.*

It is our privilege to reach higher and still higher for clearer revelations of the character of God. In His light we shall see light, until mind and heart and soul are transformed into the image of His holiness. As we walk in the path of

humble obedience, fulfilling His purpose, we will learn more and more of the deep things of His Word.

Take the Bible as your guide, and stand firm for principle,—and you may attain the highest level of usefulness as a servant of the living God. And this is what you want for your life now? As you dwell upon His goodness, His mercy, and His love, clearer and still clearer will be your perceptions of truth. The soul dwelling in the pure atmosphere of holy thought is transformed by such continuous contact with God, through the study of His word. Self is lost sight of, and we become more and more like the One whom we have come so much to love.

"The relation that exists between the mind and the body is very intimate. When one is affected, the other sympathizes. The condition of the mind affects the health to a far greater degree than many realize. Many of the diseases from which men suffer are the result of mental depression. Grief, anxiety, discontent, remorse, guilt, distrust, all tend to break down the life forces and to invite decay and death.

"Disease is sometimes produced, and is often greatly aggravated, by the imagination . . Many imagine that every slight exposure will cause illness, and the evil effect is produced because it is expected."—*The Ministry of Healing, p. 241.*

"Courage, hope, faith, sympathy, love, promote health and prolong life. A contented mind, a cheerful spirit, is health to the body and strength to the soul. 'A merry [rejoicing] heart doeth good like a medicine.' "—*The Ministry of Healing, p. 241.*

"There is, however, a form of mind-cure that is one of the most effective agencies for evil. Through this so-called science, one mind is brought under the control of another, so that the individuality of the weaker is merged in that of the stronger mind. One person acts out the will of another. Thus it is claimed that the tenor of the thought may be changed, that health-giving impulses may be imparted."—*The Ministry of Healing, p. 242.*

"Instead of teaching the sick to depend upon human beings for the cure of soul and body . . direct them to the One who can save to the uttermost all who come unto Him. He who made man's mind knows what the mind needs. God alone is the One who can heal."—*The Ministry of Healing, p. 243.*

"Sympathy and tact will often prove a greater benefit to the sick than will the most skillful treatment given in a cold, indifferent way."—*The Ministry of Healing, p. 244.*

"The power of the will is not valued as it should be. Let the will be kept awake and rightly directed, and it will impart energy to the whole being, and will be a wonderful aid in the maintenance of health. It is a power also in dealing with disease. Exercised in the right direction, it would control the imagination, and be a potent means of resisting and overcoming disease of both mind and body."—*The Ministry of Healing, p. 246.*

"Nothing tends more to promote health of body and of soul than does a spirit of gratitude and praise. It is a positive duty to resist melancholy, discontented thoughts and feelings,—as much a duty as it is to pray."—*The Ministry of Healing, p. 251.*

"Abiding peace, true rest of spirit, has but one Source. It was of this that Christ spoke when He said, 'Come unto Me, all ye that labor and are heavy laden, and I will give you rest.' (Matthew 11:28). 'Peace I leave with you, My peace I give unto you: not as the world giveth, give I unto you.' (John 14:27). This peace is not something that He gives apart from Himself. It is in Christ, and we can receive it only by receiving Him . . When the sunlight of God's love illuminates the darkened chambers of the soul, restless weariness and dissatisfaction will cease, and satisfying joys will give vigor to the mind, and health and energy to the body."—*The Ministry of Healing, p. 247.*

SPIRITUAL LESSONS

There are crises in every life. These draw us closer to God as we plead with Him for strength, help, and guidance.

At such times, how very important it is that we learn the deep meaning of faith, prayer, and trust in God.

Here is a brief Bible study to conclude this section. The highest standard of living, something we all want for our lives, is always found in God's holy Word:

1 - HOW DOES THE BIBLE HELP OUR FAITH?

There is yet something important we must mention to help you. Faith, to be strong, must be fed. The Word of God is the food of faith. The Bible is heaven's pantry, on the shelves of which are stored, in unlimited quantity and almost infinite variety, the foods that nourish Christian faith and experience, and abundant delicacies to delight the soul of the Christian (see Jeremiah 15:16). "Sweeter also than honey and the honeycomb." (Psalm 19:10).

But it is so easy to keep on trying to live while neglecting to feed upon this heavenly food. Often the cares and pleasures of this life consume our time and energies to the neglect of God's Word. Sometimes, even in the work of God, it is possible to grow nervous and anxious, to work in haste, if not in fury, to do God's service, while at the same time neglecting to nourish the soul and the spirit with daily, regular feeding on God's Word. The importance of daily Bible reading may be seen by the following:

1. Faith comes by hearing the Word of God.

"So then faith cometh by hearing, and hearing by the Word of God."—*Romans 10:17.*

2. The Christian feeds upon and lives by the Word of God.

"He answered and said, It is written, Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God."—*Matthew 4:4.*

3. His Word is a heavenly light.

"Thy word is a lamp unto my feet, and a light unto my path."—*Psalm 119:105.*

4. It is powerful to resist evil.

"The word of God is quick, and powerful, and sharper than any twoedged sword."—*Hebrews 4:12.*

5. His Word is the sword of the Spirit.

"Take the helmet of salvation, and the sword of the Spirit, which is the Word of God."—*Ephesians 6:17.*

In the wilderness of temptation, Jesus wielded the "sword of the Spirit" with swift and telling strokes—"It is written . . It is written." "It is written." (Matthew 4:4, 7, 10).

"Then the devil leaveth Him, and, behold, angels came and ministered unto Him." (Matthew 4:11). Oh friend, know this Book. Know it well. Use it in temptation to conquer the world and sin. Use it when overwhelmed with sorrow and fear and worry. Use it when doubt and unbelief assail you. Every promise has power. Every command has wisdom. Every warning has deep meaning. Become known as a Bible-believing, Bible-practicing Christian.

2 - WHY IS PRAYER SO ESSENTIAL TO VICTORY?

"Ask, and it shall be given you," said Jesus. "Every one that asketh receiveth." (Matthew 7:7-8). So it is clear that God has made prayer the means for receiving spiritual blessings that we would not otherwise receive unless we asked. We may well remember three things.

3 - PROMISES TO THE OVERCOMER

1. What are we told to overcome?

"Be not overcome of evil, but overcome evil with good."—*Romans 12:21.*

2. What only can overcome the world?

"For whatsoever is born of God overcometh the world."—*1 John 5:4.*

3. What gives us the victory in our conflict with the world?

"And this is the victory that overcometh the world, even our faith."—*1 John 5:4.*

4. What promises are made, by Christ, to the overcomer?

(a) "To him that overcometh will I give to eat of the tree of life, which is in the midst of the paradise of God."—*Revelation 2:7.*

(b) "He that overcometh shall not be hurt of the second death."—*Revelation 2:11.*

(c) "To him that overcometh will I give to eat of the hidden manna, and will give him a white stone, and in the stone a new name written, which no man knoweth saving he that receiveth it."—*Revelation 2:17.*

(d) "He that overcometh and keepeth My works unto the end, to him will I give power over nations: and he shall rule them with a rod of iron; as the vessels of a potter shall they be broken to shivers: even as I received of My Father. And I will give him the morning star."—*Revelation 2:26-28.*

(e) "He that overcometh, the same shall be clothed in white raiment; and I will not blot out his name out of the book of life, but I will confess his name before My Father, and before His angels."—*Revelation 3:5.*

(f) "Him that overcometh will I make a pillar in the temple of My God . . and I will write upon him My new name."—*Revelation 3:12.*

(g) "To him that overcometh will I grant to sit with Me in My throne, even as I also overcame, and am set down with My Father in His throne."—*Revelation 3:21.*

5. In what one promise are all these promises summed up?

"He that overcometh shall inherit all things; and I will be his God, and he shall be My son."—*Revelation 21:7.*

In heaven there will be no parting, no pain to bear;
No care-worn brow, no sigh, no silvery hair:
No death to snatch our loved ones from our side,
No angry waves, no sea, no treacherous tide.

In heaven there'll be no thirst, no cry for bread;
No soul who knows not where to lay his head;
No one to feel the winter's chilling blast,
For there the piercing storms will all be past.

In heaven there'll be no toil without repay;
No building for a brief, ephemeral day;
For all the joys that prophets old have told
'Twill take the endless ages to unfold.

In heaven there'll be no weary pilgrim band;
No seekers for a better, fairer land;
For all who reach that blissful, happy shore,
Will never cry nor sigh, nor wish for more.

4 - IDENTIFYING GOD'S REMNANT (Revelation 14:6-12)

1. God's remnant church in the last days will preach a worldwide judgment-hour message (Revelation 14:6-7).

Heaven's great investigative judgment began in 1844; and at that time God had a people ready to preach that message. Their burden was to reach the whole world; and that work is going forward with lightning speed. This message is being proclaimed in more than seven hundred languages and dialects, and is being printed in more than two hundred languages.

2. It will deliver the message of mystic Babylon's fall (Revelation 14:8).

3. It will give the warning against the beast's image and mark (Revelation 14:9-10).

This unwavering warning has been given from the rise of this movement. Religionists offer first one, then another, explanation of the mark of the beast. But God's remnant people bear the same consistent message through the years.

Fortunately, a people rose up and began the preaching of these three angels' messages. When the time came, in 1844, the people of prophecy arose, bearing the messages of warning.

4. It urges the worship of the Creator above the beast or image (Revelation 14:7).

God foreknew the peculiar times to which His people would come. Not only would the Sabbath sign of the Creator have been set aside centuries before, but in these closing days the theory of evolution was to become widespread, denying Creation as a series of specific acts of God in six days' time. The observance of the seventh-day Sabbath is therefore, in a special sense, the sign of those who believe in, serve, and worship, the Creator.

5. It keeps the commandments of God (Revelation 14:12).

The only way the keeping of God's commandments could help to identify God's people would be for the world

and religion, in general, to be living *contrary* to His commandments. Any particular commandment on which there would be a decided difference would tend to mark them as commandment-keeping people. So, in answer to prophecy, such a people arose in 1844 and 1845 keeping all God's Ten Commandments, including the Sabbath commandment (designating the seventh day).

6. It keeps and exalts the faith of Jesus. (Revelation 14:12).

God knew that modernism would sweep through Christendom. When men deny Creation, they naturally deny the fall of man; and so the law of God is also set aside. If man was not created and had no fall, he would need no atoning blood of Jesus. God's message today is calling men to recognize Creation, the law of God, the Sabbath, and the cross of Christ. God's remnant people proclaim these great doctrines, and cling by faith to Christ the Creator, Christ the Lawgiver, and Christ the Redeemer of Calvary.

7. It believes and holds to the gift of the Spirit of Prophecy.

"The dragon was wroth with the woman, and went to make war with the remnant of her seed, which keep the commandments of God, and have the testimony of Jesus."—*Revelation 12:17.*

"The testimony of Jesus is the Spirit of prophecy."—*Revelation 19:10.*

This church is a church of fulfilling prophecy and believing in God's special direction of His church through a latter-day manifestation of the gift of prophecy and the writings of the Spirit of Prophecy. This is a special feature of this movement.

8. It will endure reproach, scorn, and persecution (Revelation 12:11).

He who keeps God's commandments will meet ridicule at times, and Satan will make war with him; but a new book of Acts is being written as angels record the faithfulness of God's people as they endure whatever comes to them anywhere in the world. A great test awaits them, but also a great reward.

9. It heeds God's voice to come out of Babylon.

"I saw another angel come down from heaven, having great power; and the earth was lightened with His glory. And he cried mightily with a strong voice, saying Babylon the great is fallen, is fallen, and is become the habitation of devils . . And I heard another Voice from heaven, saying, Come out of her, My people, that ye be not partakers of her sins and that ye receive not of her plagues."—*Revelation 18:1, 2, 4.*

Out of confusion, false doctrines, and worldliness, God is calling His people. Thousands of them are coming from every part of the world. They come because God is calling them, and His "sheep hear His voice." They separate from the ways of the world (1 John 2:15-17), lay aside its pride and vanity (1 Timothy 2:9-10, 1 Peter 3:3-4), give up its evil ways (2 Corinthians 7:1), and turn to Jesus for salvation. Then, by His grace, they "keep the commandments of God, and the faith of Jesus" (Revelation 14:12). The true church, therefore, as you can see, must come out and be separate.

He keeps "the commandments of God," (2) "the faith of Jesus," and (3) "has the testimony of Jesus Christ." He observes the Bible Sabbath, the seventh-day Sabbath.

This is God's true church, according to the prophecies of the Bible; but the majority of His true followers are still in the churches of Babylon, are living according to all the truth they have. Will you yourself not answer the call, "Come out of her My people," make your own decision, and by your example help to gather others into the fold of Christ?

Oh, my friend, every day we need a daily victory in Christ! Here is more information on how to experience it:

5 - DAILY VICTORY IN CHRIST

Jesus said, "I am the way, the truth, and the life: no man cometh unto the Father, but by Me." (John 14:6). And the apostle John wrote, "He that hath the Son hath life." (1 John 5:12). Paul wrote, "For to me to live is Christ." (Philippians 1:21). "Nevertheless I live; yet not I, but Christ liveth in me" (Galatians 2:20). "I can do all things through Christ which strengtheneth me" (Philippians 4:13).

The active exercise of living faith in Christ is the one great essential to obtaining and maintaining an experience in the Lord that will bring increasing satisfaction in this life and ultimate deliverance from this world when Christ comes. "Without faith it is impossible to please Him" (Hebrews 11:6). "This is the victory that overcometh the world, even our faith." (1 John 5:4). "God hath dealt to every man the measure of faith" (Romans 12:3). Faith is a gift of God to every man—rich and poor, high and low, free and bond, wise and simple. It is man's duty to nourish and exercise this faith. Though it be as small as a grain of mustard seed, it can grow and be used to move mountains of evil and build temples of righteousness.

However, it is not merely faith, but primarily the *object* of true faith that counts most. Faith in God, in Christ, in the promises of the Holy Scriptures, and in all God's plans and agencies for the accomplishment of His purposes is what we need. It is what *we must* have if we are to be victorious. Let us now see how faith makes us righteous and holy in God's sight.

6 - HOW MAY A SINNER BECOME RIGHTEOUS?

"Being justified [forgiven and made righteous] by faith, we have peace with God through our Lord Jesus Christ."—*Romans 5:1.*

"Be it known unto you therefore, men and brethren, that through this man is preached unto you the forgiveness of sins: and by Him all that believe are justified from all things, from which ye could not be justified by the law of Moses."—*Acts 13:38-39.*

If you will read the story of the Pharisee and the publican in Luke 18:9-14, you will note that the publican sought forgiveness of sin. "God be merciful to me a sinner," he cried. Jesus adds this comment, "I tell you, this man went down to his house justified." In other words, the "forgiveness" that the publican sought, Jesus called "justification." This includes also the merciful gift of righteousness, which God counts to the credit of the repentant sinner for the simple reason that he has no acceptable righteousness of his own! The great store of righteousness upon which God draws, when imputing (counting) this undeserved credit, is

the righteous life of our Lord Jesus Christ.

A man may have been unjust, but by faith he may be counted as just. When an unjust man is thus accounted as a just man, he is "justified." He is forgiven all past sins. God gives him credit as a righteous person (through Christ). Then he has peace. He is counted as though he had never sinned at all.

This justification comes by faith in the blood of a righteous Christ.

"Being justified freely by His grace through the redemption that is in Christ Jesus: whom God hath set forth to be a propitiation through faith in His blood, to declare His righteousness for the remission of sins that are past, through the forbearance of God."—*Romans 3:24-25.*

"If we confess our sins, He is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness."—*1 John 1:9.*

The cleansing from unrighteousness is through the blood of Christ. The sinner is condemned to eternal death for the violation of God's eternal law. The substitute death of another sinner would not atone. No angel of glory could die to save man. Since the divine law is as sacred as God Himself, only one equal with God could make atonement for its transgression.

So Jesus came, lived a sinless life and "died for our sins according to the Scriptures" (1 Corinthians 15:3); and it is He "whom God hath set forth to be a propitiation [satisfaction] through faith in His blood, to declare His righteousness for the remission of sins that are past, through the forbearance of God." (Romans 3:25). Thus do we exercise faith in the blood of a righteous Christ whose righteous life answers for our unrighteous and unjust past. "To declare, I say, at this time, His righteousness: that He [God] might be just, and the justifier of him which believeth in Jesus" (Romans 3:26).

"Him that cometh to Me I will in no wise cast out."—*John 6:37.*

Any man, who will, may come to Christ. Whosoever will, may come. And no sincere seeker will be turned away.

"Come unto Me, all ye that labour and are heavy laden, and I will give you rest."—*Matthew 11:28.*

At conversion, Christ satisfies the claims of the sacred, unchangeable law by counting His righteousness to the sinner's credit. The gracious gift of forgiveness God offers free. It is ours to exercise faith to the point of taking the gift. "Lay hold on eternal life" (1 Timothy 6:12). This is a definite spiritual action and transaction. We give God our sins and He gives us forgiveness. It is by faith that the just shall live (Romans 1:17).

"Do we then make void the law through faith?" This is a very good question. Paul answers, "God forbid: yea, we establish the law." (Romans 3:31). We are forgiven that we might from henceforth be obedient children, walking in all the commandments of the Lord blameless. This life of victory begins by faith in Christ's righteousness. It continues by faith in Christ's righteousness. It ends by faith in Christ's righteousness. It is Christ—Christ—Christ—first, last, and always. He alone is the Saviour—in the beginning, through life, and at death. And faith in Him is the connecting link.

7 - WHAT NEW RELATIONSHIP DOES THE CHRISTIAN ENJOY?

Without reservation the follower of Christ will say to Christ, as Thomas did, "My Lord and my God." (John 20:28). Jesus has a perfect right thus to be honored. He said, "Ye call me Master and Lord: and ye say well; for so I am." (John 13:13). As our Lord and Master, Jesus bids us follow Him.

"He saith unto them, Follow Me . . And they straightway . . followed Him."—*Matthew 4:19-20.*

"Whosoever he be of you that forsaketh not all that he hath, he cannot be My disciple."—*Luke 14:33.*

Too many hear the good news of escape from hell and of a way to heaven, and "with joy" receive it. They want to escape trial and suffering; they have visions of beautiful mansions on high that they will occupy by and by. But they are not concerned with relating themselves to Christ as followers and disciples. They are not prepared to acknowledge Jesus as "my Lord and my God." Jesus gave up heaven, came down here, and risked eternal loss that we might gain heaven. He who would accept this sacrifice intelligently and wholeheartedly will give up this world in order to follow the Saviour (see Philippians 2:5). This means sacrifice. But think—think of the promise:

"Every one that hath forsaken houses, or brethren, or sisters, or father, or mother, or wife, or children, or lands, for My name's sake, shall receive an hundredfold, and shall inherit everlasting life."—*Matthew 19:29.*

For all that we give up, God will return a hundredfold. He takes away, but only to give more and better in return.

"Whosoever heareth these sayings of Mine, and doeth them, I will liken him unto a wise man, which built his house upon a rock: and the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not: for it was founded upon a rock."—*Matthew 7:24-25.*

If we hear and obey, we shall be built upon the solid rock, Christ Jesus, not otherwise. Between these two extremes lie all the shades and colors of professed Christianity.

8 - WHAT IS THE SECRET OF SPIRITUAL POWER?

After the transaction has been made in which faith claims forgiveness for past sins, and after the soul by faith makes a complete surrender of all to Christ as Lord and Saviour, to do God's will and obey all His commandments, the next step is to have faith in Christ as a living Saviour with power to deliver you; yes, and to keep you from the power of sin. To learn this is to discover the secret of spiritual power. It is not enough to believe in the death of Christ. It is not enough to surrender to Christ. We must believe that Christ is a risen, all-powerful Saviour, who can and will bring victory over sin into the life through His indwelling Spirit. All of this is made possible through His resurrection victory. Paul said, "That I may know Him, and the power of His resurrection." (Philippians 3:10). Here are three promises of power made by the risen Saviour.

1. "Jesus came and spake unto them, saying, All power is given unto Me in heaven and in earth . . And, lo, I am with

you alway, even unto the end of the world."—*Matthew 28:18, 20.*

2. "Behold, I send the promise of My Father upon you: but tarry ye in the city of Jerusalem, until ye be endued with power from on high."—*Luke 24:49.*

3. "Ye shall receive power, after that the Holy Ghost is come upon you."—*Acts 1:8.*

4. "He is able also to save them to the uttermost that come unto God by Him, seeing He ever liveth to make intercession for them."—*Hebrews 7:25.*

5. "Let us lay aside every weight, and the sin which doth so easily beset us, and let us run with patience the race that is set before us, looking unto Jesus the author and finisher of our faith."—*Hebrews 12:1-2.*

This power, as in the case of all other blessings, comes through active faith. "This is the victory that overcometh the world, even our faith." (1 John 5:4). "A living faith means a confiding trust, by which the soul becomes a conquering power." And by all means, hold on! "Being confident of this very thing, that He which hath begun a good work in you will perform it until the day of Jesus Christ." (Philippians 1:6). In this way, dear friend, we enter upon the life of victory. In this way, we receive spiritual power for an abiding life of conquest in the Saviour!

1. "Let him ask in faith."—*James 1:6.*

2. "Whatsoever we ask, we receive of Him, because we keep His commandments."—*1 John 3:22.*

3. "He that turneth away his ear from hearing the law, even his prayer shall be abomination."—Proverbs 28:9.

The promise is made that "they that wait upon the Lord shall renew their strength." (Isaiah 40:31). "He ever liveth to make intercession for them." (Hebrews 7:25). So ask, friend, and receive. Pray morning, noon, and night as David and Daniel did, and learn the sweetness of communion with God in the Secret place of power. Oh, yes, and don't forget to always pray in Jesus' name.

9 - WHY IS EVERY CHRISTIAN CALLED TO BE A WITNESS?

Christian service is necessary for soul prosperity. "Take my yoke upon you," said Jesus. (Matthew 11:29). All life is action. We cannot be ever receiving and never giving. By faith we receive forgiveness and appropriate power. We feed on the Word of God and pray for this and that, but we must surrender, not only to do the will of God as between ourselves and Him, but to do His will toward others.

Every soul is born into God's kingdom as a missionary. Every Christian should be a soul winner. Moody said that if a man will read the Word of God fifteen minutes a day, pray sincerely fifteen minutes a day, and spend fifteen minutes a day talking definitely to help some soul to Christ, or heavenward, he will enjoy a good experience. Not only the ministers but the laymen should work to make others Christians. Think about the following texts:

1. "Go ye into all the world, and preach the gospel."—*Mark 16:15.*

God needs you to help spread abroad the story of the saving gospel and the speedy return of Jesus. If you love Him, the saving truth cannot be sealed up in your heart. It will overflow in blessing to others.

2. "Pure religion and undefiled before God and the Father is this, To visit the fatherless and widows in their affliction, and to keep himself unspotted from the world."—*James 1:27.*

Only "faith which worketh by love" (Galatians 5:6) will purify the soul and keep the channel of blessing open. The true Christian will have a special care for the widows, the fatherless, and the poor. (Matthew 25:34-40).

3. "Well done, thou good and faithful servant."—*Matthew 25:21.*

These words of commendation are spoken to servants—faithful servants—who have worked for Christ. These soul-winning Christians are the ones whom He will take to heaven with Him when He comes again. They have exercised the faculties of the soul and become strong even as the muscles of the body become strong by exertion.

10 - ETERNAL LIFE

1. What precious promise has God made to His children?

"And this is the promise that He hath promised us, even eternal life."—*1 John 2:25.*

2. How may we obtain eternal life?

"For God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life."—*John 3:16.*

3. Who has everlasting life?

"He that believeth on the Son hath everlasting life."—*John 3:36.*

4. Where is this everlasting, or eternal, life?

"And this is the record, that God hath given to us eternal life, and this life is in His Son."—*1 John 5:11.*

5. What therefore follows?

"He that hath the Son hath life; and he that hath not the Son of God hath not life."—*1 John 5:12.*

6. What does Christ give His followers?

"I give unto them eternal life; and they shall never perish."—*John 10:28.*

7. Why, after the Fall, was man shut away from the tree of life?

"Lest he put forth his hand, and take also of the tree of life, and eat, and live for ever."—*Genesis 3:22.*

8. What has Christ promised the overcomer?

"To him that overcometh will I give to eat of the tree of life, which is in the midst of the paradise of God."—*Revelation 2:7.*

9. To what is the life of the redeemed compared?

"For as the days of a tree are the days of My people, and Mine elect shall long enjoy the work of their hands."—*Isaiah 65:22.*

10. When will immortality be conferred upon the saints?

"We shall not all sleep, but we shall all be changed, in a moment, in the twinkling of an eye, at the last trump: for the trumpet shall sound, and the dead shall be raised incorruptible, and we shall all be changed. For this corruptible must put on incorruption, and this mortal must put on immortality."—*1 Corinthians 15:51-53.*

11 - THE HOME OF THE SAVED

1. For what purpose was man created?

"For thus saith the Lord that created the heavens; God Himself that formed the earth and made it; He hath established it. He created it not in vain, He formed it to be inhabited."—*Isaiah 45:18.*

2. To whom has God given the earth?

"The heavens, even the heavens, are the Lord's: but the earth hath He given to the children of men."—*Psalm 115:16.*

3. How did man lose his dominion?

Through sin (*Romans 12; 6:23).*

4. When man lost his dominion, to whom did he yield it?

"For of whom a man is overcome, of the same is he brought in bondage."—*2 Peter 2:19.*

5. In tempting Christ, what ownership did Satan claim?

"And the devil, taking Him up into an high mountain, shewed unto Him all the kingdoms of the world in a moment of time. And the devil said unto Him, All this power will I give Thee, and the glory of them: for that is delivered unto me; and to whomsoever I will I give it."—*Luke 4:5-6.*

6. Through whom is this first dominion to be restored?

"And Thou, O tower of the flock, the strong hold of the daughter of Zion, unto thee shall it come, even the first dominion; the kingdom shall come to the daughter of Jerusalem."—*Micah 4:8.*

7. Why did Christ say the meek are blessed?

"Blessed are the meek: for they shall inherit the earth."—*Matthew 5:5.*

8. Whom does David say have the most now?

"For I was envious at the foolish, when I saw the prosperity of the wicked.. Their eyes stand out with fatness: they have more than heart could wish."—*Psalm 73:3, 7.*

9. Where are the righteous to be recompensed?

"Behold, the righteous shall be recompensed in the earth: much more the wicked and the sinner."—*Proverbs 11:31.*

10. What will be the difference between the portion of the righteous and the wicked?

"Wait on the Lord, and keep His way, and He shalt exalt thee to inherit the land: when the wicked are cut off, thou shalt see it."—Psalm 37:34.

11. What promise was made to Abraham concerning the land?

"And the Lord said unto Abram, after that Lot was separated from him, Lift up now thine eyes, and look from the place where thou art northward, and southward, and eastward, and westward: for all the land which thou seest, to thee will I give it, and to thy seed for ever."—*Genesis 13: 14-15.*

12. How much did this promise comprehend?

"For the promise, that he should be the heir of the world, was not to Abraham, or to his seed, through the law, but through the righteousness of faith."—*Romans 4:13.*

13. How much of the land of Canaan did Abraham own in his lifetime?

"And He gave him none inheritance in it, no, not so much as to set his foot on: yet He promised that He would give it to him for a possession, and to his seed after him, when as yet he had no child."—*Acts 7:5.*

14. How much of the promised possession did Abraham expect during his lifetime?

"By faith Abraham, when he was called to go out into a place which he should after receive for an inheritance, obeyed; and he went out, not knowing whither he went. By faith he sojourned in the land of promise: .. for he looked for a city which hath foundations, whose builder and maker is God."—*Hebrews 11:8-10.*

15. Who is the seed to whom this promise was made?

"Now to Abraham and his seed were the promises made. He saith not, And to seeds, as of many; but as of one, And to thy seed, which is Christ."—*Galatians 3:16.*

16. Who are heirs of the promise?

"And if ye be Christ's then are ye Abraham's seed, and heirs according to the promise."—*Galatians 3:29.*

17. Why did not these ancient worthies receive the promise?

"And these all, having obtained a good report through faith, received not the promise: God having provided some better thing for us, that they without us should not be made perfect."—*Hebrews 11:39-40.*

18. What is to become of our earth in the day of the Lord?

"But the day of the Lord will come as a thief in the night; in the which the heavens shall pass away with a great noise, and the elements shall melt with fervent heat, the earth also and the works that are therein shall be burned up."—*2 Peter 3:10.*

19. What will follow this great conflagration?

"Nevertheless we, according to His promise, look for new heavens and a new earth, wherein dwelleth righteousness."—*2 Peter 3:13.*

20. To what Old Testament promise did Peter evidently refer?

"For, behold, I create new heavens and a new earth: for the former shall not be remembered, nor come into mind."—*Isaiah 65:17.*

21. What was shown the Apostle John in vision?

"And I saw a new heaven and a new earth: for the first heaven and the first earth were passed away; and there was no more sea."—*Revelation 21:1.*

22. What will the saints do in the new earth?

"And they shall build houses, and inhabit them; and they shall plant vineyards, and eat the fruit of them. They shall not build, and another inhabit; they shall not plant, and another eat: for as the days of a tree are the days of My people, and Mine elect shall long enjoy the work of their hands. They shall not labour in vain, nor bring forth for trouble; for they are the seed of the blessed of the Lord, and their offspring with them."—*Isaiah 65:21-23.*

23. How readily will their wants be supplied?

"And it shall come to pass, that before they call, I will answer; and while they are yet speaking, I will hear."—*Isaiah 65:24.*

24. What peaceful condition will reign throughout the earth then?

"The wolf and the lamb shall feed together, and the lion shall eat straw like the bullock: and dust shall be the serpent's meat. They shall not hurt nor destroy in all My holy mountain, saith the Lord."—*Isaiah 65:25.*

25. What seasons of worship will be observed in the new earth?

"For as the new heavens and the new earth, which I will make, shall remain before Me, saith the Lord, so shall your seed and your name remain. And it shall come to pass, that from one new moon to another, and from one Sabbath to another, shall all flesh come to worship before Me, saith the Lord."—*Isaiah 66:22-23.*

26. What will the ransomed of the Lord then do?

"And the ransomed of the Lord shall return, and come to Zion with songs and everlasting joy upon their heads: they shall obtain joy and gladness, and sorrow and sighing shall flee away."—*Isaiah 35:10.*

27. How extensive will be the reign of Christ?

"And the kingdom and dominion, and the greatness of the kingdom under the whole heaven, shall be given to the people of the saints of the most High, whose kingdom is an everlasting kingdom, and all dominions shall serve and obey Him."—*Daniel 7:27.*

12 - THE CONFLICT ENDED

1. What statement is made about the completion of the creation process?

"Thus the heavens and the earth were finished, and all the host of them. And on the Seventh day God ended His work which He had made."—*Genesis 2:1-2.*

2. When expiring on the cross, what did Christ say?

"When Jesus therefore had received the vinegar, He said, It is finished: and He bowed His head, and gave up the ghost."—*John 19:30.*

3. At the pouring out of the Seventh plague, what announcement will be made?

"And the seventh angel poured out his vial into the air; and there came a great voice out of the temple in heaven, from the throne, saying, "It is done."—*Revelation 16:17.*

4. And when the new heavens and the new earth have appeared, and the holy city, New Jerusalem, has descended from God and become the metropolis of the new creation, what announcement will then be made?

"And He that sat upon the throne said, Behold, I made all things new. And He said unto me, Write: Write: for these words are true and faithful. And He said unto me, It is done. I am Alpha and Omega, the beginning and the end."—*Revelation 21:5-6.*

5. In the new earth, what will be no more?

"And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall their be any more pain: for the former things are passed away."—*Revelation 21:4.*

"And their shall be no more curse."—*Revelation 22:3.*

6. What will then be the condition of all the earth?

"The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together; and a little child shall lead them. And the cow and the bear shall feed; their young ones shall lie down together: and the lion shall eat straw like the ox. And the sucking child shall play on the hole of the asp, and the weaned child shall put his hand on the cockatrice' den. They shall not hurt not destroy in all My holy mountain: for the earth shall be full of the knowledge of the Lord, as the waters cover the sea."—*Isaiah 11:6-9.*

7. How does the prophet again speak of this time?

"The whole earth is at rest, and is quiet: they break forth into singing."—*Isaiah 14:7.*

8. What will finally be the privilege of God's children?

"And they shall see His face."—*Revelation 22:4.*

9. How perfect will be their knowledge of God?

"For now we see through a glass, darkly; but then face to face: now I know in part; but then shall I know even as also I am known."—*1 Corinthians 13:12.*

10. How long will they possess the future kingdom?

"But the saints of the most High shall take the kingdom, and possess the kingdom for ever."—*Daniel 7:18.*

God's plan for each of us is far greater than we can imagine. The pathway to heaven is found in the Holy Scriptures. Only there will we find the truths which can save the soul, bring the power of Christ into the life, and enable each of us to triumph over all the power of Satan. May our kind Father bless and keep you in the days ahead.

"God is not ashamed to be called their God: for He hath prepared for them a city."
—Hebrews 11:16

"Ye shall walk in all the ways which the Lord your God hath commanded you, that ye may live, and that it may be well with you, and that ye may prolong your days in the land which ye shall possess." *—Deuteronomy 5:33*

"Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love Him." *—1 Corinthians 2:9*

"God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are past away." *—Revelation 21:4*

"The joy of the Lord is your strength." *—Nehemiah 8:10*

Thirty principles that can help you

What are the basic principles of right living, to ensure the best health you can have with the limitations imposed by the body you have?

Here are 121 principles of healthful living:

1 - BASIC PRINCIPLES OF HEALTH

1 - Regularity in meals. Do not eat them early or late, but maintain a regular schedule. Your stomach is used to eating at certain times each day.

2 - Moderation. Only eat as much as you need. Never overeat. Only eat to satisfy hunger, and then stop.

3 - Take small bites. Only put a small amount in your mouth at a time. You will chew and salivate it better, and tend to eat less at that meal.

4 - Relax and eat slowly. If you are too rushed to eat, then do not eat. Do not be hurried, anxious, worried, fatigued, or angry.

5 - Chew your food well. You will derive far more energy out of less food, if you do this.

6 - Do not eat too many things at a meal. Three or four items (plus a little salt, oil, etc.) are all you need.

7 - Avoid complicated mixtures. Say no to the gravies, vegetable loaves, gluten foods, and all the rest. Keep your meal simple.

8 - Avoid peculiar additives, such as vinegar, monosodium glutamate, etc., which only upset your stomach and slow digestion.

9 - Vary your diet from meal to meal. If you ate oatmeal this morning, try rye or wheat tomorrow.

10 - The food should be palatable. But if it is good food, this should not be hard to do.

11 - Never eat anything prepared in aluminum. Never drink water or juice out of an aluminum container. Alzheimer's is worth avoiding.

12 - Aside from fresh, raw juices or the green drink, drink all your liquids (water) between meals, not with your meals.

13 - As a rule, eat your fruits at one meal and vegetables at another. Acid fruits (such as citrus) can be eaten with either.

14 - Greens have more compacted vitamins and minerals than other type of food. They only lack vitamin D, which the body can get from sunlight. But they do not have adequate amounts of trace minerals.

15 - Nova Scotia dulse and Norwegian kelp (two types of seaweed) are the only rich source of trace minerals.

16 - Blackstrap molasses is the only very rich source of iron. It is also a very rich sources of choline and inositol, the two B vitamins used in the largest quantities.

17 - The best pattern is to rest before the meal and walk around after it, not vice versa.

2 - FRUITS

1 - The more natural, the better. Raw fruits and vegetables are better than cooked ones, although some find that a little cooking is necessary. Store-bought canned goods

are even less nutritious.

2 - Wash the fruit before eating it.

3 - Do not eat melons, cantaloupes, and watermelons with other foods; eat them alone.

4 - Always soak dried fruit (prunes, apricots, etc.) before eating them.

5 - Never eat sulphured fruit. It may be golden in color, but the sulphur is not good inside of you.

3 - VEGETABLES

1 - The best is fresh, raw vegetable juice, made from carrots, with some beets, and possibly some celery. This is made in a vegetable juicing machine. It is one of the most valuable appliances you can purchase. Use it every day. The juice is best drunk fresh, within a couple minutes of making it. But, when you know you will be away from home that day, make it in the morning and drink it later as part of a sack lunch.

2 - Also good is the "green drink." This is pineapple juice with some greens whizzed in and is made in a food blender.

3 - Some people's digestive systems cannot tolerate a diet of totally raw vegetables. Each must do that which works best for him.

4 - Eat largely of raw vegetables, with possibly some steamed. A good way to cook vegetables is to keep records on the amount of water used and the time it takes to cook the vegetables, so all the water is gone. For example, broccoli can be lightly cooked for 15 minutes or softer in 30. Find how much water is required to do this; and only have a very small amount of water left in the pan at the end of that time.

5 - Never pour off the vegetable water! Make it part of the meal. For this reason, prepare the food so that very little of the water remains (not over an eighth of a cup) when the cooking is finished. Then drink that water during the meal. Other than the cooking water and a glass of fresh juice, drink no other liquids with the meal.

6 - Beets, potatoes, and squash are excellent foods. Cut out the growing eyes of the white potatoes, but otherwise do not peel them! The outer half inch of the white potato is rich in potassium and is the best part.

7 - All the greens are outstanding, but avoid too much spinach; it is higher in oxalic acid. Enjoy broccoli, brussel sprouts, celery, kale, collards, beet greens, turnip greens, mustard greens, and some lettuce. The deeper the greenness, the more vitamins and minerals it has. (By the way, never eat rhubarb; it is terribly high in oxalic acid.)

8 - Fiber is very important in the diet, for the bowels and the arteries. It can protect you from intestinal problems and heart disease. Oat bran is the best, but whole grains and other vegetable and fruit roughage is very helpful.

4 - GRAINS

1 - Only eat whole grains. This includes whole-grain cereals and breads. Never eat processed grains, such as white-flour products.

2 - If you can eat wheat (many cannot), make zwieback of your bread. Place the slices in the oven and toast them until firm, but not rock-hard. This dextrinizes the starch and renders it more digestible.

3 - Avoid toasted wheat germ; for the oils in it will be rancid. Raw wheat germ should be stored in the refrigerator at the health-food store and in your own refrigerator, when you arrive home. It should smell very fresh.

4 - Oats are one of the best grains. Rye, millet, and buckwheat are also. If you are out on the road and want to have a grain with you which is easily obtained, can be eaten as it is, and is very nourishing, eat Cheerios. Make sure it was recently purchased. Many people are allergic to wheat and products made with wheat.

5 - You are better off having a varied grain diet rather than just rice. Yet rice is a very good food. Make sure it is unpolished (brown rice).

6 - Chew each bite of grain products very well before swallowing. Digestion of starches begins in the mouth.

5 - NUTS AND SEEDS

1 - The nuts and seeds you eat should be fresh. Rancid oil and decaying protein are not good for you.

2 - Nuts, seeds, nut butters, seed butters, and peanut butter are very rich in protein and should only be eaten sparingly. Chew these foods very well. This breaks the food down so the amino acids will be better processed by the stomach acid.

3 - Most commercial peanut butter has the peanut oil removed and cheap oils in its place. These oils are generally hydrogenated; thus they are even more dangerous. Never use peanut butter which does not have floating oil on the top and does not smell fresh.

6 - FATS

According to your body's needs, use little or no added oil. But you do need vitamin F (the essential unsaturated fatty acids). The *best* sources are flaxseed oil (Barleans brand) and wheat germ oil (Viobin Brand); second-best are sunflower seed oil, soy oil, and corn oil. Never use cottonseed oil.

7 - SWEETENING

1 - For your sweetening, only use fresh fruit, dried fruit, a little honey, or blackstrap molasses.

2 - If you want the best, eat a small amount of blackstrap at the end of your meal. It will fill your sweet tooth, is the richest natural source of iron, and one of the richest in calcium and several important B vitamins.

8 - OTHER NUTRIENTS

1 - Salt. Some say that all the salt you need is in the food; but that may or may not be true. You may need to add a little salt; but do not add very much. The best way is to put no salt in the cooking; then add a slight amount of salt to the food at the table. Pour a little into the palm of your hand and sprinkle it where you want it. In this way you will get the exact small amount you need, and no more.

2 - The type of salt to use: Regular store-bought, free-flowing salt has aluminum in it. If you cannot do better, buy iodized salt at the store (never non-iodized).

Better yet, buy a non-free-flowing salt. It will cake somewhat (salt attracts moisture). Even better, use dulse or kelp!

3 - Nova Scotia dulse comes from western Canada. By checking around, you can locate a food source. This is an outstanding source of trace minerals—including iodine, as well as of common salt (sodium chloride). Eat only enough to satisfy your salt intake needs,—and you will have supplied all your iodine and trace mineral requirements as well. Norwegian kelp is an alternate. California kelp is not as good.

4 - Certain kitchen herbs are helpful; and, when used in small amounts, they can be used to flavor foods. This would include sage, dill, garlic powder, dried parsley, thyme, fennel seed, celery seed, oregano, marjoram, summer savory, basil, rosemary, and ginger.

5 - Cayenne is a very useful medicinal herb; but, if used more than a very little at mealtime, this can lead to pleurisy.

9 - VITAMINS AND MINERALS

Here is a brief introduction to principles concerning the use of vitamins and minerals. More technical information and dosages will be found in the chapter, *"Vitamins Minerals, and Other Nutrients."*

1 - Always take a full vitamin / mineral supplement with every main meal. Buy them from a source you are sure is supplying you with new stock, that has not been on a room temperature shelf for a month or two. Keep the bottle in the refrigerator until it is used.

2 - *Vitamin A:* Unless you are ill and need it right away, use a carotene source, not vitamin A. Because it is an oil-soluble vitamin, over a period of time, you can get too much vitamin A.

3 - *Vitamin B complex:* The complete B complex contains a dozen or so different, related, vitamins. Make sure you are getting them all in your supplement(s). These are water soluble, so you can never get too much of them.

4 - *Vitamin C:* Ascorbic acid by itself is not as useful as many believe. Take a "total C" formula, which also contains bioflavonoids (vitamin P). You will pay a little more, but it is worth it. It is also water soluble, so you cannot take too much. (If you oversaturate on C, the excess will be excreted through the bowels as a brief diarrhea. This will tell you that, just then, you have taken a little more than your body needs. This is what it means to take vitamin C "to bowel tolerance.")

5 - *Vitamin D:* Do not take animal or fish liver oil; it can damage your heart muscle. Instead, go out in the sunlight every so often and you will get enough vitamin D. Vitamin D is oil soluble and is the most dangerous vitamin. It is vital that you have some of this for your bones, but you do not want too much.

6 - *Vitamin E:* Make sure your vitamin E supplement says "tocopherols," not "tocopheryls" which is synthetic and worthless. Do not rely on a multivitamin supplement for vitamin E. Take vitamin E capsules, either 200 or 400 IU per capsule. Although it is oil soluble, the possibility of overdosing is rare in the extreme.

7 - *Vitamin F:* This is the essential fatty acids which is best obtained from the flaxseed oil or wheat germ oil, mentioned earlier.

8 - The most important minerals are calcium, potassium, magnesium, iodine, zinc, selenium, and manganese. Avoid phosphorus supplements. Your body always gets all the phosphorus it needs in the food you eat; too much locks with calcium and causes your bones to become weak.

9 - Most people need a calcium supplement. Take half a spoonful of powdered calcium twice or three times a day. Do not use a calcium supplement which has phosphorus in it.

10 - Be careful about iron supplements. They are generally not good for you. Especially avoid them during pregnancy! Use blackstrap instead.

11 - What about the capsules? They are made from animals from the slaughterhouse, generally pigs. If it is a split capsule, open and pour it into a spoon. If it is a sealed capsule, crack it in your mouth and spit out the capsule.

—For MUCH MORE information! See pp. 84-101.

10 - SUMMARY

In summary, some of the best foods for you to eat are these:

1 - Fresh, raw fruits. You may also wish to make some fresh, raw fruit juice.

2 - Fresh, raw vegetables and possibly, some moderately cooked vegetables prepared in a small amount of water, all of which will be used in the meal.

3 - Fresh, raw vegetable juices made from carrots, beets, and possibly some celery. This drink is outstanding! Green drink (pineapple juice and greens) made in a blender is also good.

4 - Beets, potatoes, and squash are excellent foods. Do not peel white potatoes.

5 - Whole grain cereals or bread toasted in the oven into zwieback. Chew starches extra well.

6 - Add some supplemental fiber to your diet. You will be thankful later that you did. Fiber will help your digestive tract, colon, liver, heart, and blood vessels.

7 - A few fresh nuts and seeds, chewed extra well. Brewer's yeast is another good protein source; so are beans. White potatoes are low in protein, but they are very well assimilated.

8 - A good vitamin / mineral supplement, vitamin E capsules, calcium, plus other nutrients as needed. Each person will have special needs.

9 - Eat some kelp or dulse each day for iodine and other trace minerals. You do well to use it instead of salt.

10 - Drink pure water, and only between meals.

11 - Should you use milk and/or eggs? Each one will have to decide that for himself. Both are known to frequently be contaminated with disease germs. Yet some need the blood-building properties in these products. It is well-known that more people are allergic to cow's milk or wheat than anything else. It is best if you can work away from using them.

12 - Do not eat very much.

13 - Be relaxed and thankful, chew your food well; and, aside from the fresh juices or green drink, drink all your liquids (water) between meals.

11 - THINGS TO AVOID

"Avoid" means do not use at all.

1 - Avoid sugar and sugar foods. This is food which has added corn syrup, glucose, or other sugar additives in it. Many canned and processed foods are sugar foods. Do not eat candy.

2 - Do not use white sugar, granulated sugar, or brown sugar.

3 - Avoid spices and condiments which cause stomach upset and worse. This would include black pepper, white pepper, cinnamon, and mustard.

4 - Avoid grease. Grease remains firm at room temperature; this includes Crisco, butter, margarine, and all meat fat.

5 - Avoid hydrogenated oils. An atom of hydrogen has been added to them; so, like grease, they can only be used to coat your arteries and produce fat cells.

6 - Do not use fried foods. Anything fried in oil should be avoided. Your life is too important.

7 - Avoid rich gravies, pastries, ice cream, and all the other delicacies.

8 - Avoid white-flour products: cookies, biscuits, sour bread, bagels, doughnuts, soda crackers, etc. Avoid the glue foods. Along with cheese, these are the sticky, white-flour stuff which is hard on your intestinal tract

9 - Avoid processed foods. This includes a wide variety of "food" which you will find in the store.

10 - Do not eat cheese. In order to normalize your intestinal flora, you may need a little plain yogurt for a time.

11 - Do not eat baker's yeast. This is fresh bread yeast. (Brewer's yeast and torula yeast is all right.)

12 - Avoid junk food and nonfood. This includes soft drinks, cola drinks, potato chips, corn chips, and all the rest. Do not drink non-caffeinated soft drinks.

13 - Do not eat vinegar or foods made with it (pickles and mayonnaise).

14 - Never eat meat or fish! They are heavily contaminated with bacteria, parasites, dangerous fat, and uric acid (urine). As soon as they are slain, the flesh begins rotting.

15 - Avoid the food additives. You will find them listed on the labels of most all processed foods at the store. They lead to arthritic, cardiac, and cancer problems.

16 - Many people are allergic to cow's milk; you may be one of them. Every public health officer knows that meat and milk are the two most contaminated and diseased foods in the country. Eggs rank close behind them. It is best to avoid them also.

17 - Do not use caffeine products. This includes chocolate, coffee, China tea (also called black tea), and caffeinated drinks (such as Coca Cola and Pepsi Cola).

18 - Do not use nicotine products. Tobacco is responsible for an astonishing number of deaths in our world today. Avoid side smoke; do not be in rooms where people are smoking. Chewing snuff causes cancer of the mouth and throat.

19 - Do not drink spiritous liquors: beer, wine, whiskey, or vodka.

20 - Do not use hard (street) drugs.

21 - Avoid medicinal drugs, to whatever extent that you can. Careful living and eating will generally help you avoid having to take them.

22 - Find the foods and other substances you are allergic to, and avoid them. The most common allergenic foods are cow's milk and wheat products.

12 - CAUSES OF INDIGESTION

In his book, *Abundant Health*, Julius Gilbert White lists several special causes of indigestion *(pp. 91-99)*:

- Eating too fast. Food needs to be mixed with saliva.
- Overeating. This applies even to good food.
- Meals too close together. For most people, 4 or 5 hours between meals is needed.
- Eating between meals. This weakens the stomach.
- Eating a large evening meal or late at night. Digestion should be nearly finished before retiring.
- Eating when tired, and especially when exhausted.
- Loss of sleep. Nervousness. Mental Depression.
- Eating Unripe fruit, spoiled fruit, or condiments.
- Eating bread which was not well-baked. If the inside can be squeezed into a dough, do not eat it.
- Eating yeast bread which is not 24 hours old.
- Eating vinegar, fried foods, or complex mixtures.
- Eating vegetables and most fruits at the same meal.
- Eating milk and sugar together, as in ice cream. This is because sugar ferments quickly, yet is enfolded in the milk which digests slowly.
- Eating too much liquid food.
- Eating sugar, tea, coffee, cocoa, liquor, etc.
- Drinking with meals. This dilutes the stomach juices.
- Chewing gum, drinking soft drinks, eating demineralized food or food cooked in aluminum utensils.

13 - ACID-ALKALINE FORMING FOODS

About 80% of your diet should consist of good alkaline-forming foods. The remaining 20% should be good acid foods.

GOOD ACID-FORMING FOODS—Asparagus, beans, brussels sprouts, buckwheat, chickpeas, cornstarch, cranberries, flour, legumes, lentils, oatmeal, olives, plums, prunes, sauerkraut.

GOOD LOW-LEVEL ACID-FORMING FOODS—Canned fruit, dried coconut, dried fruit (most non-sulphured), grains (most), lamb's quarters (type of wild greens), nuts and seeds (most), parsley.

GOOD ALKALINE-FORMING FOODS—Avocados, citrus fruits (become alkaline in body), corn, dates, fresh coconut, fresh fruits (most), fresh vegetables (most, especially onions, potatoes, rutabagas), honey, horseradish, maple syrup, molasses, mushrooms, raisins, soy products, sprouts, watercress.

GOOD LOW-LEVEL ALKALINE FORMING FOODS—Almonds, blackstrap molasses, brazil nuts, chestnuts, lima beans, millet.

BAD ACID-FORMING FOODS—Alcohol, catsup, cocoa, coffee, fish, meat, organ meats, pasta, black pepper, poultry, shellfish, soft drinks, sugar (all foods with added sugar), black tea, vinegar, aspirin, tobacco, drugs (nearly all of them).

BAD LOW LEVEL ACID-FORMING FOODS—Butter, glazed fruit, cheeses, dried sulphured fruit (most).

14 - NON-DIETETIC FACTORS

1 - Obtain fresh air during the day and while sleeping at night. A slight current of air should pass through your sleeping room at night. When you have the opportunity to go outside, breathe deeply of the fresh air. Practice good posture. Negative ions are important for good health; and they are primarily outside the house.

2 - Sunlight is important. Get a little every day. There is a higher rate of breast cancer in localities where there is less sunlight.

3 - Exercise is important; and, as everybody says, walking outside is the best way to get it. If you are going to do vigorous exercise, warm up first. Do some vigorous walking every day.

4 - Rest is of vital consequence. As you grow older, try to rest a little before preparing the meal. Then, when the meal is over, go outside and walk around a little.

5 - Do not do heavy reading or study just before bedtime, or your brain will be congested and it will be harder to go to sleep. Instead, go outside and walk around in the cool night air, breathing deeply. You will more easily drop right off to sleep.

6 - Maintain a cheerful, sunny, thankful, contented attitude. This is a powerful health-building recipe.

7 - Trust in God; He is the only One who can help you through the problems and trials of life.

8 - You need periods of rest and relaxation every so often. Purposive living, when the objective is to help others, is powerful for good—and excellent for your health. But do not overwork.

9 - Cleanliness is important. Keep your yard clean, your house clean, your clothes clean, and your body clean. Wash the outside with water (take a shower every day); and wash the inside by drinking enough liquids. At certain times, take an enema or colonic when needed, especially when you are sick. Showers are generally better than tub baths; they are quicker and more sanitary.

10 - Do not wear belts, corsets, garters. The clothes should be supported from the shoulders, not at the waist. Men should wear suspenders as part of the way to avoid later prostate problems.

11 - The right exercise of the will is crucial. You are well, you become well, you resist disease, you choose not the wrong, and choose to do the right—through the power of the will, strengthened by firm reliance on God and obedience to His Written Word.

12 - As much as possible, live on a scheduled routine. In this way, you will get your meals, water, rest, exercise, and fresh air. You will have time to eat, to think, and make right decisions. Maintaining regular hours is a great benefit to health. Avoid staying up late at night! Use your will and go to bed when you are supposed to.

13 - Avoid chilling or overheating. Avoid drafts. The danger is in chilling or overheating the blood; either can cause trouble. Dress properly; keep the limbs covered. They should be as warm as the trunk.

14 - Fast occasionally. Skip a meal and just drink fruit or vegetable juice instead. If you are in good health, you can carry on your work on a lighter load till the next meal. If you are frail, go to bed and rest. This will do you wonders in rebuilding and strengthening your body, so you will avoid later development of chronic and degenerative diseases.

15 - Keep your blood circulation equalized. Do not chill the extremities. Do not overeat or eat wrong foods. Maintain moderate exercise. Do what it takes to live right, and you will be richly rewarded.

16 - Avoid anger, fear, worry, and enervation. An excellent way to ruin yourself is by indulging in excess sex or forbidden sex. Happiness comes through self-control, not indulgence.

17 - Never overdo your immune system. It protects you, only as you do not make it work too hard in the process.

18 - Do not overwork one body part more than the others. Many occupational injuries occur because this rule is violated. Take time to rest, when you are not busily working. Look a little closer at athletes, boxers, and karate experts. They are usually physically damaged in their joints by the time they are 50. This is not necessary. Live well by living moderately. Too much food, too much work, and too much relaxation can each be a problem. Learn to balance it all.

19 - Have a careful attitude. Avoid falls, blows, hazards, and dangerous activities. More quadriplegia occurs from diving into shallow water than any other single cause. Get extra rest when you work near sick people.

20 - Learn the distant early warning signs. What are the first indications that you are headed toward sickness? Find out what they are—for yourself, your loved ones, and your children. When you see trouble coming, get extra rest; retire earlier. Skip a meal or two, go to bed, and fast on water and lemon juice.

21 - When able to do so, avoid jet lag and traveling in foreign countries. They have different intestinal bacteria, and you can surely get sick over there.

22 - Avoid loud sounds, such as chain saws and other loud machinery. Wear ear protectors.

23 - Avoid dust, smoke, and chemical vapors.

24 - Move out to the country, if you want the best of health! Away from the noise, the fumes, the rush and turmoil. Out to where there is quietness, peace, fresh air, negative ions, and better sunlight.

25 - Do not live in the lowlands, by a creek. Do not live where it is always damp around the house. Settle in an upper area where it tends to be drier.

26 - Do not have trees close to your house. Do not have your windows covered up with curtains; let the sunlight come through. It purifies every room it enters. Skylight is purifying also, but lesser so.

27 - If possible, avoid pets in, or around, the house. If you want a dog or cat in your house, give it a weekly bath. You can contract diseases from dogs, cats, pigeons, birds, and other animals.

28 - Vegetable, fruit, berry, and flower gardening is an outstanding way to maintain your health—in several ways. But avoid using chemical fertilizers, insecticides, and other garden chemicals.

29 - Learn how to give water therapy (hydrotherapy) treatments. Learn how to prepare and use simple herbs. Keep a few on hand. As we try to help others, our own health improves.

THESE THREE CAN KILL YOU 105
YOUR HEART ATTACK RISK 106
HOW LONG WILL YOU LIVE? 106

ABOUT DOSAGES: The dosages listed in this chapter are for adults and children weighing 100 pounds and over. Appropriate dosages for children vary according to age and weight. A child weighing between 70 and 100 pounds should be given ¾ the adult dose; a child between 7 and 70 pounds (and *over* the age of six) should be given half the adult dose. A child under the age of six years should be given nutritional formulas designed specifically for young children. Follow the dosage directions on the product label.

RDA (Recommended Daily Allowances) are specified by the government, but are far too small to provide good health, much less physical healing from disordered conditions. **ODA** (optimum daily amount) is the best for regular living, and **TDA** (therapeutic daily allowances) is what is needed when a particular vitamin is needed to help bring healing. All measures are given as amounts needed for one day. But that total daily amount is generally apportioned out into smaller doses, given at 2 or 3 meals.

Dosages are for **adults**. **For a child** between **12-17**, reduce the dose to three-quarters the recommended amount. For a child between **6-12**, use one-half the recommended dose. For a child **under 6**, use one-quarter the amount.

1 - VITAMINS

IMPORTANCE OF VITAMINS—Without vitamins, you would quickly die. They are crucial to all life functions. Vitamins are called *co-enzymes,* because they work with enzymes (chemical catalysts) and enable them to trigger all body processes. *For more on vitamins, see p. 81.*

B-COMPLEX VITAMINS

VITAMIN B COMPLEX—The dozen or so B vitamins are all important, and should be taken together since they work together. They are as follows: *B_1 (Thiamin), B_2 (Riboflavin), B_3 (Niacin, Niacinamide), B_5 (Pantothenic acid), B_6 (Pyridoxine), (Cobalamin), B_{13} (Orotic acid), B_{15} (Pangamic acid), B_{17} (Nitrilosides, amygdalin [Laetrile]), Biotin, Choline, Folic acid, PABA (Para-aminobensoic acid), Inositol.* For best results with any of them, take all the B vitamins at the same time, for best results with any of them. This is best done in a multivitamin tablet.

Cautions: Prolonged use of large doses of any one of the isolated B-complex vitamins may result in high urinary losses of other B vitamins, resulting in deficiencies of them.

Functions: Nerves, eyes, skin, hair, liver, mouth, muscle tone.

Needed for assimilation: Vitamins C and E, calcium.

VITAMIN B_1 (THIAMINE)—

Dosage: RDA 1.4 mg / ODA 50 mg / TDA 200-500 mg. *Recommended:* 50-100 mg daily. In the elderly with age-related mental impairment (including Alzheimer's): 3-8 grams daily.

Sources: *Richest sources:* brewer's yeast, torula yeast, wheat germ, sunflower seeds, rice polishings, pine nuts peanuts with skins. *Other good sources:* wheat germ, wheat bran, rice polishings, most whole-grain cereals (especially wheat, oats, and rice). All nuts, seeds, nut butters. All beans, especially soy. Milk and milk products. Some vegetables, including beets, potatoes, and leafy vegetables.

Functions: Protects and helps heart, muscle, brain, growth, nervous system, peristalsis, red blood count, circulation. Works with other B vitamins in energy metabolism.

Principle uses: Prevents thiamin deficiency, especially in diabetes, Crohn's disease, multiple sclerosis, and other neurological diseases, including epilepsy. Also used to prevent and treat impaired mental function in the elderly, including Alzheimer's.

Deficiency symptoms: Muscular weakness, slow heart beat, defective hydrochloric acid production, chronic constipation, weight loss, mental depression, diabetes, beriberi, neuritis, edema. Eating lots of sugar, alcohol, or refined foods can lead to deficiency. Severe deficiency results in psychosis (up to 30% of those entering psychiatric wards are deficient in thiamin).

Needed for assimilation: Vitamin B, manganese.

Cautions: Destroyed when the diet includes alcohol, tannins in coffee and black tea, sulfites, or uncooked freshwater fish and shellfish. Magnesium is needed for the conversion of thiamine to its active form.

Safety: Thiamine is not associated with any toxicity.

VITAMIN B_2 (RIBOFLAVIN)—

Dosage: RDA 1.6 mg / ODA 50 mg / TDA 200-500 mg. *Recommended:* 5-10 mg daily. Body cannot absorb more than 20 mg in a single dose.

Sources: *Richest sources:* torula yeast, brewer's yeast, almonds wheat germ. *Other good sources:* whole grains, almonds, sunflower seeds, soybeans, cooked leafy vegetables, milk.

Functions: Aids carbohydrate metabolism; works with vitamin A and other B vitamins. Needed for growth, good eyes, nails, skin, and hair. Helps prevent certain cataracts. Important during pregnancy.

Deficiency symptoms: Eye problems: itching, burning, sensitivity to light, bloodshot. Mouth: sore, cracking of the lips and corners of the mouth, burning and itching of the mouth, lips, inflamed tongue. Oily or dull hair, oily skin, premature wrinkles on face and arms, split nails. Visual disturbances such as sensitivity to light and loss of visual acuity, cataract formation. Other disorders of the mucous membranes. Severe anemia, seborrheic dermatitis. Certain esophageal cancers.

Needed for assimilation: Vitamin B complex, vitamin C.

Uses: Crucial in the production of energy. Primarily used in treating migraine headaches, sickle-cell anemia, and cataracts (but for cataracts, do not use more than 10 mg daily).

Cautions: Destroyed by light, but not by cooking.

Toxicity: No toxicity or side effects, except that cataract patients should not take more than 10 mg daily.

Interaction: Riboflavin works closely with thiamin.

VITAMIN B_3 (NIACIN, NIACINAMIDE, NICOTINIC ACID)—

Dosage: Niacinamide has many of the same effects as niacin; but, for most purposes, is better because it does not cause the flushing of face which niacin will induce for several minutes. Best use niacinamide to avoid face flush). RDA 18 mg / ODA 100 mg / TDA 2,000-6,000 mg (time release). Mega-doses are up to 25,000 mg for schizophrenia, high cholesterol, and arteriosclerosis (but prolonged massive doses might induce stomach ulcers, jaundice, liver damage, colitis, and male impotence). *Recommended:* Take it with meals. Of patients given 1.5 grams daily of niacin for 26 weeks, 23% had lowered LDL (bad) cholesterol, and 33% had increased HDL (good) cholesterol. (However, some patients could not tolerate the face flushing.) Hundreds of patients with rheumatoid arthritis and osteoarthritis were given 900-4,000 mg of niacinamide in divided doses daily and experienced good results.

Sources: *Richest sources:* torula yeast, brewer's yeast, rice bran, rice polishings, wheat bran, peanuts. *Other good sources:* wheat germ, brown rice, sunflower seed, whole-wheat products, green vegetables.

Functions: Maintains and strengthens gastro-intestinal tract, circulation, nervous system, skin. Needed for protein and carbohydrate metabolism. Increases blood flow to skin, and extremities. Good for cold feet and hands. Important in energy production, and metabolism of fat, cholesterol, and carbohydrates. It helps the body produce many hormones. Used in over 50 different chemical reactions in the body. Helps regulate blood sugar, antioxidant mechanisms. Helps lower high cholesterol, and reduce early-onset arthritis and diabetes. It is excellent when used in treating early diabetes (but should not be used for advanced cases).

Deficiency symptoms: *Mild deficiency:* canker sores, irritability, nervousness, diarrhea, insomnia, chronic headaches, digestive problems, and anemia. *Severe:* pellagra, neurasthenia, mental dullness, and disorientation. (The primary symptoms of pellagra are dermatitis, dementia, and diarrhea.)

Needed for assimilation: Vitamin B complex, vitamin C.

Interactions: The body converts tryptophan into niacin. Because niacin works closely with the other B vitamins, they all need to be taken at the same time.

Warning: Do not use sustained-release niacin; it can damage the liver. (In one test, 52% taking it experienced liver damage). Instead, gradually increase dosage of regular pure crystalline niacin over 4-6 weeks (from 100 mg 3 times daily, to 1.5-3 grams daily in divided doses). Inositol hexaniacinate is the safest form of niacin currently taken. Niacin should not be used in advanced diabetes or for those with pre-existing liver disease.

VITAMIN B_5 (PANTOTHENIC ACID, CALCIUM PANTOTHENATE)—

Dosage: RDA 4 mg / ODA 50 mg / TDA 50-200 mg. Researchers have given 1,000 mg daily for 6 months without side effects. Helps in the assimilation of many foods. *Recommended:* 250 mg daily. For rheumatoid arthritis, 2 grams daily. For lowering cholesterol and triglycerides, 300 mg daily.

Sources: *Richest sources:* Brewer's yeast, torula yeast. *Other sources:* wheat bran, wheat germ, whole-grain products, molasses, milk, green vegetables, beans, peas, peanuts, crude molasses, yogurt, and egg yolks. Deficiency is rare since pantothenic acid is found in so many different foods.

Functions: Stimulates metabolism and all life processes, promotes growth. Prevents graying, skin changes. Good for sunburn and skin burns. May protect against skin cancer. Helpful in eczema and lupus. Helps absorption of folic acid. Increases cortisone and other adrenal hormone output. It is an anti-stress factor, and helps the body resist the effects of stress, infection, and premature aging of skin and organs. It helps one recover more rapidly and protects against radiation effects.

Uses: Used to treat adrenal function, rheumatoid arthritis, lower blood cholesterol and triglyceride levels.

Deficiency symptoms: Anemia, eczema, extreme fatigue, infertility, reproductive problems, muscular weakness, stomach distress, constipation, chronic fatigue, tendency to infections, graying and loss of hair, retarded growth, painful and burning feet, insomnia, adrenal exhaustion, low blood sugar, muscle cramps, low blood pressure, skin disorders. Deficiency is one of the causes of asthma. Severe deficiency shown by "burning foot syndrome," and possibly numbness and shooting pains in the feet.

Interactions: Vitamin B complex, vitamins A,C, and E are needed for the assimilation of pantothenic acid. It is used in the manufacture of coenzyme A, and also for ACP. Without this, fats and carbohydrates cannot be used for energy production. It is needed in the production of adrenal hormones and red blood cells.

Cautions: It is possible that continuous ingestion of high doses can cause heart, kidney, and liver problems. Works with folic acid. Also see cautions under *B Complex*, above.

VITAMIN B_6 (PYRIDOXINE)—

Dosage: RDA 2.2 mg / ODA 50 mg / TDA 200-500 mg, combined with other B vitamins. *Recommended:* Therapeutic dosage is 50-100 mg daily, even for long-term use. If use more than 50 mg daily, divide it into 50 mg doses (because the body can only absorb 50 mg at a time). In some instances, 25-50 mg. daily reduces or eliminates epileptic seizures, but must be strictly monitored. It should not be given with anti-seizure drugs. Pregnant women given 30 mg daily experienced significantly less nausea and vomiting. (Ginger root powder did about as well.) In another study, 72% of 106 young women taking 50 mg daily for one week prior and during their period experienced a reduced premenstrual acne flare-up. Over a dozen other studies also produced lowered PMS symptoms.

Sources: *Best sources:* Torula yeast, brewer's yeast, sunflower seeds, wheat germ, soybeans, walnuts, lentils. *Other good sources:* bananas, brown rice, oats, whole wheat, peanuts, avocados, eggs.

Functions: Pyridoxine is used in more body functions than almost any other vitamin. Needed for proper functioning of over 60 different enzymes. Extremely important in the formation of body proteins and structural compounds, red blood cells, chemical transmitters in the nervous system, and prostaglandins. Important in maintaining hormonal balance and proper immune function. Vital in cell multiplication; hence in avoiding miscarriage. Parkinson's has responded to B_6 injections (in combination with magnesium). Vitamin B_6 is required for the absorption of B_{12}, and hydrochloric acid production. Crucial for brain chemistry because involved in production of all amino acid neurotransmitters. Vital to over 100 health conditions, including: asthma, autism, cardiovascular disease, carpal tunnel syndrome, Chinese restaurant syndrome, diabetes, depression, epilepsy, immune enhancement, kidney stones, nausea and vomiting during pregnancy, osteoporosis, premenstrual syndrome.

Deficiency symptoms: Skin disorders, sore mouth and lips, anemia, edema, metal depression, halitosis, eczema, nervousness, kidney stones, insomnia, tooth decay, colon inflammation, migraines, premature senility.

Needed for assimilation: Vitamin B complex, vitamin C, potassium.

Toxicity: This is one of the few B vitamins associated with some toxicity. Doses greater than 2,000 mg daily can produce tingling sensations in the feet, loss of muscle coordination, and degeneration of nerve tissue. Therefore limit dosage to 50 mg. daily.

Interactions: Riboflavin and magnesium are necessary for the body to utilize pyridoxine. Riboflavin interacts with magnesium and zinc, and helps their utilization. Food colorings, certain drugs, oral contraceptives, alcohol, and excess protein intake destroy riboflavin.

VITAMIN B_{12} (COBALAMIN)—

Dosage: RDA 3 mcg / ODA 200 mcg / TDA 1,000 mcg. It is difficult to assimilate therapeutic doses by mouth, so doctors generally give it by injection. A sublingual tablet, available in a health food store, can be placed under the tongue. ***Recommended:*** 2 mcg daily. For pernicious anemia, take 300-1,000 mcg daily. Research shows that B_{12} taken orally (1,000-2,000 mcg daily) is just as effective as injections for pernicious anemia. (Ideal dosage: 2,000 mcg daily for 1 month, followed by daily intake of 1,000 mcg thereafter (Methylcobalamin is preferred over cyanocobalamin). Daily intake of 2,000 mcg greatly improved 18 of 20 patients with asthma. Multiple sclerosis patients given 60 mg (not mcg) daily experienced significant improvement.

Sources: B_{12} is present in vegetables in only small amounts. It is in fortified brewer's yeast, milk, eggs. It can also be taken in a vitamin supplement. You need so little of it, that it generally can be obtained from food sources.

Functions: It is needed for production of red blood cells. Prevents anemia and promotes growth in children. B_{12} is especially used in the treatment of impaired mental ability in the elderly, asthma, depression, diabetic neuropathy, low sperm counts, multiple sclerosis, and tinnitus. (In order to absorb the small amounts of B_{12} found in food, the stomach secretes "intrinsic factor," a special digestive secretion that increases its absorption in the small intestine.).

Deficiency symptoms: Chronic fatigue, numbness or stiffness, sore mouth, difficulty in concentrating. If there is enough B_6 and cobalt, the body will make its own B_{12}. Pernicious anemia is largely caused by B_{12} deficiency. Although the classic symptom of B_{12} deficiency is pernicious anemia, a lack of B_{12} actually affects the brain and nervous system first. This can result in numbness, pins-and-needles sensations, or a burning feeling; or in the elderly a mimic-Alzheimer's effect. B_{12} deficiency is a major cause of depression in older people.

Cautions: Be cautious about taking B_{12} if you have folate (folic acid) deficiency, iron deficiency, any kind of infection, Leber's disease, polycythemia vera or uremia. Otherwise, you are not likely to have problems with B_{12}. If there is enough cobalt in the body, the bowel can make its own B_{12}. Unlike other water soluble vitamins, B_{12} is stored in the liver, kidney, and other body tissues. No one has ever reported toxicity from B_{12}. There are two forms of B_{12}. In clinical trials, methylcobalamin (the more active form) produces better results than cyanocobalamin.

Interactions: B_{12} and folic acid work closely together, and should be taken together. A lack of B_{12} causes melatonin to be undersupplied, resulting in inadequate sleep at night.

VITAMIN B_{13} (OROTIC ACID)—

Dosage: Dosage not known.

Sources: Whey portion of milk.

Functions: Needed for synthesis by the body of nucleic acid. Used in treating multiple sclerosis. Helps cells regenerate.

Deficiency symptoms: Apparently liver disorders, cell degeneration, and premature aging occur. Also overall degeneration, such as multiple sclerosis.

VITAMIN B_{15} (PANGAMIC ACID, CALCIUM PANGAMATE—

Dosage: Regular dose not known. Therapeutic dose is 100 mg daily: take 50 mg in the morning before breakfast, and 50 mg at night. Used extensively in Russia and certain other countries, but not in America.

Sources: Whole grains, whole-brown rice, seeds and nuts.

Functions: Helps regulate fat metabolism, stimulates glandular and the nervous system. Increases tolerance to insufficient oxygen supply. Used in treating angina, heart disease, blood cholesterol, premature aging, and impaired circulation. Given to people who have experienced carbon mon-

oxide poisoning. Given to drunks to detoxify them.

VITAMIN B_{17} (NITRILOSIDES, AMYGDALIN; known as Laetrile when given as a medical dose for cancer)—

Dosage: No set amount, since it is not yet officially listed as a vitamin. Nutritional deficiency of this factor may be unlikely if whole seeds, grains, nuts, and beans are eaten. Therapeutic doses are given for the treatment of cancer.

Sources: Most whole seeds of fruits and many grains and vegetables. Especially rich in apricot, peach and plum pits; also apple seeds, raspberries, cranberries, blackberries and blueberries. Mung beans, lima beans, garbanzos; millet, buckwheat and flaxseed. Deficiency of this factor may be unlikely if whole seeds, grains, nuts, and beans are eaten.

Functions: Laetrile was discovered and developed by Drs. Ernst Krebs Sr. and Jr., of San Francisco, California, and is used in various countries in the treatment of cancer. Its other nutritive functions have not yet been fully examined.

Cautions: If you eat a bucketful of apricot pits each day, you could experience arsenic cyanide poisoning.

BIOTIN—

Dosage: RDA 200 mcg / ODA 300 mcg / TDA 500-3,000 mcg. *Recommended:* 30-300 mcg daily. For cradle cap, give 3,000 mcg daily to nursing mothers. (If not being breast-fed, give 100-300 mcg daily to the infant.) For stronger nails and healthy hair, 1,000-3,000 mcg daily (in one study, 91% experienced improvement).

Sources: *Richest source:* brewer's yeast. *Other good sources:* soy flower, soybeans, unpolished rice, rice bran, rice, germ, rice polishings, peanut butter, walnuts, pecans, oatmeal, other nuts and whole grains.

Functions: Needed for protein and fat metabolism, and hair growth. Prevents hair loss. Has antiseptic qualities and has been used in the treatment of malaria. Increases the strength of nails

Deficiency symptoms: Dry, scaly skin. Dandruff, hair loss, and skin disorders, such as eczema, seborrhea. Nausea, anorexia. Pallor, loss of appetite, confusion, extreme fatigue, drowsiness, hallucinations. Lung infections, heart abnormalities, anemia. (The underlying cause of cradle cap in infants is biotin deficiency.)

Needed for assimilation: Vitamin B complex, folic acid, pantothenic acid, vitamin B_{12}, vitamin C.

Caution: Biotin is extremely safe, and no one has reported side effects from overdose. Raw egg white contains avidin, a protein which binds biotin and prevents its absorption.

Interactions: Biotin works closely with other B vitamins, and with coenzyme Q_{10} and carnitine. But its absorption is damaged by alcohol, and antibiotics.

CHOLINE—

Dosage: RDA 150 mg / ODA 600 mg / TDA 500-1,000 mg. Choline works closely with inositol in carrying on certain physical functions. Not toxic under 6,000 mg. *Recommended:* Take a lecithin product which has 90% phosphatidylcholine, 3 times daily with meals. For the treatment of liver disorders: 350-500 mg daily. To lower cholesterol: 500-900 mg daily. To treat Alzheimer's disease and bipolar depression: 5,000-10,000 mg. daily. Choline, in the form of phosphatidylcholine, is usually used to treat these diseases, since it is more useable in the body.

Sources: *Richest sources:* Both choline and inositol are found abundantly in lecithin, which is the richest source for both. However, egg yolks are equally rich. Blackstrap molasses is a rich source of both choline and inositol. *Other sources:* Choline is found in grains, legumes, and egg yolks primarily as lecithin, and as free choline in vegetables (especially cauliflower and lettuce). If a choline supplement is taken, it should be rich in phosphatidylcholine.

Functions: Lecithin helps the body digest, absorb, and carry fat and fat-soluble vitamins in the bloodstream. It helps less fat and cholesterol to be deposited in the arteries and liver. Without it, the arteries become clogged, leading to hypertension and cardiac problems. Lecithin is not only essential for fat metabolism, but it is needed for the synthesis of nucleic acids (DNA and RNA). Needed for the myelin sheaths of the nerves. Helps liver and gallbladder function. Needed for production of phospholipids. Essential for manufacture of certain neurotransmitters, and for proper metabolism of fats. Without it, fats become trapped in the liver, where they block metabolism. Choline is extremely important in brain and memory function, and is helpful in treating Alzheimer's.

Uses: Choline prevents gallstone formation, high blood pressure, atherosclerosis, kidney damage, nephritis, glaucoma, and myasthenia gravis. It is also used in the treatment of bipolar depression (manic depression). In Germany, choline is used to treat a wide variety of serious liver problems; and phosphatidylcholine is used to significantly lower total serum cholesterol and triglyceride levels, and increase HDL cholesterol levels. (HDL is the good kind of fatty acid.)

Deficiency symptoms: Cirrhosis and fatty liver degeneration, atherosclerosis, high blood pressure, hardening of the arteries, kidney damage.

Cautions: Prolonged massive doses of choline (isolated and separated from inositol) may cause depletion of B_6. Choline should always be taken with other B vitamins, *especially inositol.* (Lecithin is rich in both choline and inoslitol.) Not toxic under 6,000 mg. Choline helps conserve carnitine and folic acid, and works closely with inositol in carrying on physical functions.

INOSITOL—

Dosage: RDA 75 mg / ODA 100 mg / TDA 500-2,000 mg. Frequently said to be the same dosage as for choline. *Recommended:* 100-500 mg daily for general liver support. 1,000-2,000 mg daily to treat diabetes. 12 grams daily for depression or panic disorder.

Sources: Both choline and inositol are found abundantly in lecithin, which is the richest source for both. See *Choline, Functions,* above. One tablespoon of brewer's yeast provides 40 mg each of choline and inositol. Blackstrap molasses is a rich source. Good plant sources include citrus fruits, whole grains, nuts, seeds, and legumes. Wheat germ, bulgar wheat, brown rice. When phytic acid in plant sources is eaten, intestinal bacteria changes some of it into inositol. (Phytic acid, itself, helps protect the body against cancer.)

Functions: See *Choline,* above, for data on what lecithin does in the body. Inositol prevents hair thinning and baldness, increases hair growth. It is needed for the integrity of the heart muscle. Reduces blood cholesterol. Used in treatment of schizophrenia and obesity; also liver disorders, depression,

and diabetes. Both choline and inositol are primary components of cell membranes. Like choline, inositol has a "lipotropic" effect; that is, it promotes export of fat from the liver—which must take place or the liver stagnates and cirrhosis, etc., develops. It is used in treating a wide range of liver disorders. Very useful in treating depression.

Deficiency symptoms: Eczema, eye abnormalities, high blood cholesterol, hair loss, constipation.

Needed for assimilation: Vitamins B complex and C.

Side effects: There are no side effects to inositol.

FOLIC ACID—

Dosage: RDA 400 mcg / ODA 1,000 mcg / TDA 20 mg. Use this amount only with a prescription for osteoporosis). (0.4 mg is the normal amount. Therapeutic amounts to correct anemia are 5 mg or more. Unfortunately, potencies higher than 0.1 mg (100 mcg) in one tablet are available only by prescription. Physicians usually prescribe 5-10 mg daily. But it has proven safe in larger amounts, if given with B complex or brewer's yeast, and B_{12}.) *Recommended:* 400 mg daily for general use and prevention of atherosclerosis and osteoporosis. 10 mg daily for treatment of cervical dysplasia and depression. In the U.S., 1-2 babies per 1,000 have neural tube defects; yet 400 mcg given daily in early pregnancy would reduce this by 58%-80%. When 1-2.5 mg daily is given, elevated homocysteine levels are significantly reduced. Yet high levels are significant cause of heart attack or stroke. 10 mg daily normalizes pap smears, reducing cervical dysplasia. High doses (15-50 mg daily) reduce psychotic depression. (Note: FDA restricts folic acid in supplements to 400 mcg., so significantly larger therapeutic doses require a prescription.)

Sources: *Richest source:* Brewer's yeast. *Other good sources:* blackeye peas, rice germ, soy flour, wheat germ, wheat bran, various beans, Deep green leafy vegetables, white potatoes, nuts, peanuts. There are high concentrations of it in green, leafy vegetables.

Functions: Folic acid works with B_{12} in forming red blood cells. Needed for RNA and DNA production, cell growth and division, protein metabolism, healing processes, skin and hair health. Helps prevent graying hair, and builds antibodies to fight infection. Needed in dropsy, diarrhea, menstrual problems, and stomach ulcers. Also atherosclerosis, anemia, radiation burns, circulation problems, and sprue (a tropical anemia and diarrhea).

Deficiency symptoms: Impaired circulation, hair loss, serious skin disorders, grayish-brown skin pigmentation, megaloblastic anemia of pregnancy and mental depression. Reproductive problems such as difficult labor, spontaneous abortion, high infant-death rate. Without folic acid, cells do not divide properly. It is critical for the development of the nervous system of the fetus. Deficiency during pregnancy is linked to several birth defects, including neural tube defects like spina bifida. Because meat is such a poor source, meat eaters are especially likely to develop deficiency symptoms. A lack of folic acid increases homocysteine in the body, which leads to atherosclerosis and osteoporosis. Inadequate folic acid is also involved in the following health problems: acne, AIDS, anemia, atherosclerosis, cancer, candida, canker sores, cataract, celiac disease, cervical dysplasia, constipation, Crohn's disease, diarrhea, epilepsy, fatigue, gout, hepatitis, infertility, Parkinson's disease, periodontal disease, restless leg syndrome, seborrheic dermatitis, senility, ulcerative colitis. But the principal use of folic acid is in the prevention or treatment of neural tube defects, atherosclerosis, osteoporosis, cervical dysplasia, and depression.

Cautions: Some authorities believe folic acid should not be taken during leukemia and cancer. Folic acid works closely with vitamin B_{12}, and should always be taken with that vitamin. This is because folic acid can mask a B_{12} deficiency, resulting in nerve damage. Folic acid is destroyed by light, heat, drugs, estrogens, barbiturates, and alcohol. High dosage folic acid should not be given to epileptics because it occasionally increases seizure activity.

PABA (PARA-AMINOBENZOIC ACID)—

Dosage: ODA 50 mg. Potencies of PABA higher than 30 mg per tablet are only available by prescription. Yet much higher doses are used, up to several hundred mg.

Sources: Brewer's yeast, whole-grain products, wheat germ, molasses, milk, yogurt, deep greens, and eggs.

Functions: Needed for body growth, metabolism, and all physical functions. Used in combination with pantothenic acid, choline, and folic acid to treat graying of hair and skin changes. When added to salve, it is said to protect against sunburn and skin cancer. (It does this by absorbing ultraviolet-B (UVB) radiation.) Can also be put on burns. Useful in treating various skin disorders, including lupus and eczema. It helps protect against ozone, other air pollutants, and secondhand tobacco smoke. It reduces arthritic inflammation, and increases joint flexibility. It keeps the skin healthy and delays wrinkles.

Deficiency symptoms: Anemia, gray hair, infertility, extreme fatigue, reproductive problems, and patchy areas of white skin (vitiligo).

Needed for assimilation: Vitamin B complex, folic acid, vitamin C.

Cautions: Some authorities suggest that continuous ingestion of PABA can injure the heart, liver, and kidneys. Sulfa drugs block its absorption.

OIL SOLUBLE VITAMINS

VITAMIN A—

Dosage and cautions! RDA 5,000 IU / ODA 5,000 IU / TDA 20,000-300,000 IU. Best to take it only in the form of beta carotene; which is the vegetable-source precursor of vitamin A. The therapeutic dose of Vitamin A (not carotene) would be 25,000 units a day *for only a few days!* It is dangerous to take too much vitamin A (which is oil soluble and stores well). In contrast, carotene is safe. The liver will only convert as much of vitamin A as is needed. During an acute viral infection, a single oral vitamin A dose of 50,000 IU for 1-2 days *(at the most!)* is safe, even in infants. Overdosage of vitamin A is dangerous. *Other dosage cautions!* Do not normally take more than 5,000 IU a day! Do not take large amounts of it for a long period of time! Regular use of 50,000 IU can cause weakness, hair loss, headaches, enlarged liver and spleen, anemia, stiffness, and joint pain. Beware of fish liver oils! They are extremely rich in vitamin A and D, and can damage the heart muscle! Women who might be pregnant must not use vitamin A supplements; instead, use beta-carotene. Accidental ingestion of a single large dose of vitamin A (100,000-300,000 IU) reduced acute toxicity in children; but, if no more is taken, complete

recovery will result. Toxicity occurs in adults who take more than 50,000 IU per day for several years. Women of childbearing age must be careful when taking vitamin A. Daily doses of 10,000 IU (found in some supplements) during the first three months of pregnancy are possibly linked to birth defects.

Toxicity symptoms: Dry and fissured skin, brittle nails, alopecia, gingivitis, chapped lips, anorexia, irritability, fatigue, and nausea. Intracranial pressure with vomiting, headache, joint pain, stupor, papilledema, Prolonged toxicity results in bone fragility and thickening of long bones. *There are never any toxicity symptoms from eating carotenes.*

Sources: Vitamin A (retinol) is a pure yellow, fat-soluble crystal. (Its other name, retinol, comes from the fact that it is found in the retina of the eye.) Vitamin A is found in meat, milk, and eggs.

The safer, and very nutritious carotenes (also called carotenoids) are *pro-vitamin A*. They are found in abundance in fruits and vegetables, and are converted by the liver into vitamin A. It is always safe to take carotene in larger amounts, because the liver only converts the amount needed by the body into vitamin A. *Richest sources:* Dark green leafy vegetables. *Other sources:* Green and orange fruits and vegetables, especially carrots, lighter green vegetables, yams, tomatoes, mangos, Hubbard squash, cantaloupe, apricots. Lesser amounts are in legumes, grains, and seeds.

Beta-carotenes: These are the most active form of carotenes and are most abundant in green plants, carrots, sweet potatoes, squash, apricots, green peppers. (Although it is red, cayenne does not contain pro-vitamin A carotene.) The best supplement form of carotenes is nonhydrogenated palm oil (absorbed 4-10 times better than any other type). In addition, palm oil has minimal fat content.

Carotenes are the most widespread group of naturally occurring pigments in nature, and are intensely colored (red and yellow) fat-soluble compounds. Along with chlorophyl, they are used by plants in photosynthesis to make carbohydrates (sugars, starches, and cellulose). Of the more than 600 carotenes, only 30-50 have vitamin A activity. Beta-carotene has the most pro-vitamin A activity; but several other carotenes have greater antioxidant effects. One of the richest sources of carotenes is freshly made carrot juice.

Functions: Vitamin A (and carotenes) keep mucous membranes healthy; thus it protects against infections, even in infants. Extremely important in fighting infections. It prevents night blindness, eye diseases, weak eyesight. It is important for skin, hair, gastro-intestinal juices and digestion. It prevents premature aging and senility, and increases lifespan. Helps blood capillaries work better and protects against cardiovascular disease. Important in treating skin disorders, dry eyes, cancer, light sensitivity of eyes, and vaginal candidiasis. Affects growth and development, necessary for reproduction, and helps the immune system. Protects against death among children with measles in developing countries. Carotenes provide far more antioxidant effect than vitamin A.

Deficiency symptoms: Prolonged deficiency can produce frequent colds, retarded growth, lack of appetite and vigor, eye infections, poor vision, night blindness, frequent infections, bad teeth and gums, scaly and dry skin, weakened sense of smell and hearing.

Absorption factors: Conversion of carotenes into vitamin A depends on protein status, thyroid hormones, zinc, and vitamin C, D, E, and choline. Both vitamin A and carotene absorption require essential fatty acids and zinc. When an adequate intake of carotenes is achieved after a meal, no further absorption occurs. Vitamins C, D, E, and choline in the diet, and bile action by the liver is needed for absorption of vitamin A and carotenes. The presence of some fatty acids in the meal (vegetable oil, etc.) increases vitamin A and carotene absorption. Liver disease reduces their utilization by the body.

VITAMIN D (ERGOSTEROL, CALCIFEROL, VIOSTEROL)—

Dosage and cautions! RDA 400 IU / ODA 275 IU / TDA 1,000 IU. *Recommended dosage and cautions!* 200-400 USP units. Therapeutic dose is up to 4,000-5,000 units a day for adults, and half that for children, if taken for not longer than one month. It is dangerous to take too much vitamin D! *This is the most dangerous of the vitamins, if too much is taken (vitamin A is second, but far less of a problem).* Vitamin D can be toxic in excessive doses over a period of time, especially by infants. The best way to get vitamin D is by exposing your body to the sunlight. Doses of 1,800 units a day can cause stunted growth in infants and young children. High intake can lead to a coma. Never take over 600 IU a day; half that for children; even less for infants. However, elderly people, not exposed to any sunlight or living in northern latitudes, should take a daily supplement of 400-600 IU.

Toxicity symptoms: Excessive amounts of vitamin E can produce increased blood concentration of calcium (a serious situation), deposits of calcium on internal organs, or kidney stones. Some researchers believe that long-term use of "vitamin D fortified foods" ("vitamin D milk," etc.) increases the risk of atherosclerosis and heart disease (by decreasing magnesium absorption).

Non-dietetic source: Sunlight on the skin will provide all the vitamin D you need. Muslim women, fully clothed in black cloth, get adequate amounts of D just by exposing their bare feet to the sun for a few minutes each few days.

Sources: Vitamin D and Vitamin B_{12} are the only vitamins never found in fruits and vegetables. Leafy greens have all the vitamins except those two. (However, if there is enough cobalt in the body, the bowel can make its own B_{12}.) Vitamin D food sources include milk and egg yolks. Beware of fish liver oils! They can damage the heart muscle. (Recent research indicates that there is some vitamin D in dark green leafy vegetables.) *Also see Calcium, p. 94.*

Functions: Vitamin D is needed for the absorption of calcium, phosphorous and other minerals out of the digestive tract. Needed by the thyroid gland. Parathyroids use vitamin D in regulating calcium levels in the blood. Needed for proper formation of bones and teeth, especially during childhood. Has many anticancer properties, especially against breast and colon cancer. (Both types of cancer are higher in areas where people are exposed to the least sunlight.)

Deficiency symptoms: Pyorrhea, tooth decay, rickets (in children) and osteomalacia (adults), osteoporosis, retarded growth, muscular weakness, and old-age bone problems. Deficiency symptoms primarily occur in elderly people who do not get any sunlight, especially in nursing homes. The result is lack of bone strength and density, and joint pain.

Absorption factors: Vitamins A, C, calcium, choline, es-

sential fatty acids, and phosphorus are needed for vitamin D absorption. Mineral oil, phenobarbital, Dilantin, and certain other drugs interfere with vitamin D absorption and/or utilization.

VITAMIN E (TOCOPHEROLS: Alpha, Beta, Gamma, Mixed)—

Dosage: RDA 15 IU / ODA 400 IU / TDA 1,200 IU. Usually measured in international units (IU), but sometimes in milligrams (mg). One mg is equal to 1.5 IU. *Recommended:* Normal dosage is 400-800 IU daily. Menopausal patients should take 800 IU daily, until hot flashes subside, and then lower to 400 IU daily. Diabetic patients given 1,350 IU daily experienced lowered insulin need, and their glucose tolerance and insulin activity improved. Of 87,000 nurses, those who took 100 IU of vitamin E for two years had a 41% lower risk of heart disease. Dosages of 400-800 IU provide better oxidative protection for those in high-stress situations.

Natural vs. synthetic forms: Be sure you are getting natural vitamin E, not synthetics. Synthetics are worthless; do not purchase or use them. Read the label: Natural E is written "tocopherols" or "d-tocopherol." Natural alpha-tocopherol (the most active form of E) is "alpha-tocopherol" (or "d-alpha-tocopherol"). The synthetic is "tocopheryl" [with a "y"] or "dl-alpha-tocopherol" [with "dl"]). Mixed tocopherols contain alpha, beta, and delta tocopherol. Alpha tocopherol (d-alpha-tocopherol) has the highest level of activity, and is preferred by many specialists. But mixed tocopherols are also good. Another commercial form is "water-soluble vitamin E." Although much more expensive, it is no more absorbable or useful in the body than the natural oil-soluble type.

Sources: *Best sources:* Fresh, cold-pressed wheat germ oil and flaxseed oil. (Because flaxseed oil is also so rich in omega-3 and omega-6 fatty acids, which prevent cancer, it is the best oil to take. Buy cold-pressed, keep it in the refrigerator, and do not cook it. See section later in this chapter on *Flaxseed Oil) Other sources:* Other unrefined, cold-pressed, crude vegetable oils also have vitamin E. Soy oil and sunflower oil are good; corn oil somewhat lesser so. All whole raw or sprouted seeds, nuts, and grains contain vitamin E. It is also in green, leafy vegetables and eggs.

Functions: The principal use of vitamin E is as an antioxidant in protecting against heart disease, cancer, and strokes. It oxygenates the cells and tissues, reduces the need for oxygen. Prevents unsaturated fatty acids and oil-soluble vitamins from being destroyed in the body. Dilates blood vessels and thus improves circulation. Prevents scar tissue formation in burns. Protects and helps capillaries, lungs, reproductive organs. Used in treating heart disease, varicose veins, burns, angina pectoris, emphysema, hypoglycemia, leg ulcers, reproductive problems, infertility (male and female). Lessens likelihood of miscarriages. Vitamin E enters the fatty portion of cell membranes; there it stabilizes and protects them from compounds (such as lead, mercury, and other heavy metals). Also toxic compounds (such as benzene, carbon tetrachloride, cleaning solvents, drugs, radiation, and the body's free-radical metabolites). Because of its strong antioxidant effects, a high-E diet (or taking of worthwhile vitamin E supplements) exerts a protective effect in many common health conditions. It protects the thymus gland and circulating white blood cells from damage. It is important in immune function, especially during stress and chronic viral illnesses (such as AIDS and chronic viral hepatitis). It reduces LDL cholesterol and increase HDL cholesterol. When taken in high doses, it offers significant protection against cancer. (In one study, patients with low vitamin E levels had a 50% greater risk of cancer.) Vitamin E helps relieve many post-menstrual symptoms, including fibrocystic breast disease. It is effective in relieving hot flashes and menopausal vaginal complaints. The list of diseases it protects against would fill this entire page!

Deficiency symptoms: Nerve damage, muscle weakness, poor coordination, involuntary movement of the eyes, and breaking of red blood cells (leading to hemolytic anemia). In premature infants, vitamin E deficiency is characterized by hemolytic anemia and a severe eye disorder (retrolental fibroplasia). Pulmonary embolism, strokes, heart disease, coronary degeneration, testicle degeneration, miscarriages, sterility, muscular disorders, red-blood cell fragility. Fat malabsorption syndromes, such as celiac disease, cystic fibrosis, and post-gastrectomy syndrome. Premature infants. Hereditary disorders of red blood cells, such as sickle-cell anemia and thalassemia.

Needed for assimilation: Vitamins A, C, D, and E.

Cautions: Iron supplements destroy vitamin E. Rancid oil does also. Do not eat any rancid grains or other foods—and that includes even slightly old wheat germ oil. Many of those interested in better health never eat wheat germ, since it is so difficult to obtain fresh and then keep it from going rancid before being eaten. You can consider toasted wheat germ to be rancid. One study suggested that those with high blood pressure, heart conditions, or rheumatic heart disease do best not taking over 400-600 IU of vitamin E daily. But all other reports indicated vitamin E was safe in any quantity. The healing, strengthening power of vitamin E is not perceived until one takes at least 200-600 mg daily.

VITAMIN F (ESSENTIAL FATTY ACIDS (EFA): linoleic, linolenic, and [less important] archadonic acids)—

Dosage: National Research Council says the diet should include "essential unsaturated fatty acids to extent of at least 1 percent of the total calories." *Recommended:* Therapeutic dose would include at least 1 teaspoon to 1 tablespoon of raw, fresh, cold-pressed wheat germ oil or flaxseed oil at each meal.

What it is: Vitamin F (also called polyunsaturates) is a fat-soluble vitamin and consists of the essential unsaturated fatty acids ("essential" because they cannot be made by the body, yet are vital to normal functions). The body daily needs 10%-20% of its total calory intake in essential fatty acids (EFA). The most essential of them is linoleic acid. The two primary types of EFA are omega-3 and omega-6. Omega-3 includes alpha-linolenic and eicosapentaenoic acid. They are found in fish (unfortunately, most of which are now caught in polluted waters; the best sources are flaxseed oil and walnut oil. Omega-6 includes linoleic and gamma-linolenic acids. Sources are raw nuts, seeds, legumes, and unsaturated vegetable oils (grape seed oil, primrose oil, evening primrose oil, sesame oil, soybean oil, borage oil). Considering its lower cost and high levels of both omega-3 and -6, the best single source of EFA is raw, fresh, cold-pressed flaxseed oil. Other high-level sources are generally more expensive.

Functions: Essential fatty acids reduce cholesterol and triglyceride levels. Reduce risk of blood clot formation. Lower blood cholesterol in atherosclerosis, thus preventing heart dis-

ease. Needed by the glands, especially adrenals, for proper functioning. Needed for healthy skin and mucous membranes. Needed for metabolism and growth. Enables calcium and phosphorous to be absorbed by the cells. Protects from radiation. Help prevent arthritis. Beneficial for candidiasis, cardiovascular disease, eczema, and psoriasis. Found in high concentrations in the brain, and aid in the transmission of nerve impulses. Needed by every living cell for rebuilding and producing new cells. Used by the body in the production of prostaglandins, which are hormone-like substances which regulate various body processes.

Deficiency symptoms: Skin disorders include acne, rashes, eczema, dry skin. There is kidney, prostate, menstrual, and other reproductive disorders. It also impairs ability to learn and recall information.

Cautions: Very important! The source of supply must be fresh, raw, and cold-pressed. It cannot be labeled "hydrogenated oil." Other, inferior sources (inferior because of the commercial processing they undergo) include soy oil, sunflower seed oil, and corn oil. Never use cottonseed oil; it can damage the optic nerve. Do not use safflower oil. Do not use hardened (solid) vegetable oil (margarine or butter) or animal fat. They only clog the system and help you die younger. In order for the EFA to be used by the body, the oil must be consumed in pure liquid or supplement form and must not be subjected to heat, either in processing or cooking. Heat immediately destroys essential fatty acids, changing them to dangerous free radicals.

VITAMIN K (MENADIONE)—

Dosage: RDA 70 mcg / ODA 140 mcg / TDA 140 mcg.
Dosage: The best source is eating dark leafy vegetables, either cooked or raw. Possibly take 150-500 mcg of vitamin K_1.

Sources: Green plants, soybean oil, and egg yolks. See sources for vitamin E for more information. Vitamin K is also made by normal bacteria in a healthy colon.

Functions: This is the anti-hemorrhage vitamin. It has essential blood-clotting factors (VII, IX, and X), and it is used in production of prothrombin. It is also needed for normal liver and nerve function. Necessary for building healthy bones, and helps prevent osteoporosis. It converts an important bone protein (osteocalcin) to an active form, so calcium can be retained in the bones. Vitamin K and fat-soluble chlorophyll are used in preventing and treating osteoporosis, excessive menstrual bleeding, and hemorrhagic disease of newborns. (Fat-soluble chlorophyll stimulates hemoglobin and blood-cell production, and relieves excessive menstrual flow.)

Deficiency symptoms: Deficiencies are rare. People normally do not have K deficiencies; yet some individuals do. Hemorrhages (internal or external bleeding) anywhere in the body, due to prolonged blood-clotting time. This would include nosebleeds, bleeding ulcers, etc. Leads to premature aging.

Sources: Dark green leafy vegetables are by far the best. This is because the largest amounts of it are found in chlorophyll, which is fat-soluble. *Richest sources:* kale, turnip greens. *Good sources:* broccoli and other dark green vegetables. *Other sources:* lettuce, cabbage, asparagus.

Cautions: The vitamin has no known side effects or toxicity. Colon bacteria can also produce vitamin K; but their action is stopped by anticoagulant drugs, long-term antibiotics, aspirin, and Dilantin. Some newborns lack this bacteria, and need an intramuscular injection to provide them. The mother should take vitamin K during pregnancy. Do not use liquid chlorophyll as a vitamin K remedy. Because it is not natural (not in its original oil form), it is only useful in treating skin ulcers. In contrast, fresh vegetable juice (kale, etc.) contains much useable chlorophyll for various healing purposes, as well as providing vitamin K.

C-COMPLEX VITAMINS

VITAMIN C (ASCORBIC ACID)—

"Taking it to bowel tolerance": Whether in sickness or health, you can always know when you are getting too much vitamin C: If your body is saturated with it, the extra will be excreted in the bowel; *i.e.*, you will have a temporary diarrhea. So you can never take too much. Of course, you need far greater amounts when you have any kind of infection. So, when you are ill, take vitamin C *"to bowel tolerance"* (a phrase frequently used in this *Encyclopedia*); that is, until it produces a mild diarrhea effect. Keep in mind that, when you are sick, it will only be a few hours and you may need another large dose of vitamin C. The white blood cells use vitamin C to fight and destroy germs in the system; so do not be skimpy on C when you are ill.

Dosage: RDA 60 mg / ODA 1,000-3,000 mg / TDA 10,000 mg. It is best to always take vitamin C with bioflavonoids, if the amount of bioflavonoids is equal to or greater than the C; they help its absorption. The officially recommended amount is 30-70 mg, but far higher amounts are even better. Therapeutically, vitamin C is given in doses of 1,000 to 10,000 mg a day. In acute poisoning, give 1,000-2,000 mg (preferably by injection) every 1-1/2 or 2 hours. Vitamin C is nontoxic, even in massive doses. *Recommended: When you are well,* take at least 500 mg daily. Nobel Prize winner Linus Pauling, an expert on vitamin C, said to take 2-9 grams daily, to maintain good health. Pregnant women should take at least 500 mg daily. *When you are sick,* it has been proven that, when ill, taking a large dose of vitamin C at one time (say, 2,000-5,000 mg) is far better than taking smaller portions of that total amount over many hours. Several hours after taking a large amount, take another large dose. Many chronic conditions require ongoing high C dosage (such as diabetes, cataracts, glaucoma, cancer, Parkinson's disease, plus many others). Keep in mind that supplements generally do not contain other substances (flavonoids and carotenes) which work to enhance the effects of vitamin C. So it is best that you eat lots of fresh fruits and vegetables.

Sources: The very richest sources are acerola, guavas, red sweet peppers, kale leaves, parsley, collard leaves, turnip greens, green sweet peppers, broccoli, Brussels sprouts, and mustard greens. Good sources are all fresh fruits and vegetables (especially green, leafy vegetables). Early explorers learned that, to avoid scurvy, they needed to eat oranges, lemons, limes, berries, or (as the French explorer Cartier did in 1856) spruce tree needles.

Functions: Adele Davis said that vitamin C would cure every disease. That may be an over-statement; yet she was a deep student of nutrition as it relates to disease. Vitamin C is involved in all vital functions of the body. Needed for production of collagen ("cell cement"), the main protein substance of the body, vitamin C literally holds your body together. This is because it is the basis of connective tissue, cartilage, tendons, etc. Vitamin C is also important in the manufacture of certain

nerve transmitting substances and hormones, carnitine synthesis, and the absorption and utilization of other nutritional factors. It is an extremely important antioxidant. It strengthens various immune functions by enhancing white blood-cell function and activity and increasing interferon levels, antibody responses, and secretion of thymic hormones. It also resists chemical stress factors, such as water and air pollutants. It is needed by adrenal and thyroid glands; and it protects against all types of stress, physical and mental. It is a natural antibiotic. Wonderful in dealing with fevers and infections. Used for gastrointestinal problems and treating rattlesnake bites. Counteracts poisonous effects of drugs. Extremely helpful in treating asthma, other allergies, atherosclerosis, high cholesterol, high blood pressure, cataracts, Parkinsons' disease, skin ulcers, wound healing, and pregnancy-related conditions. It overcomes cadmium poisoning. Cancer patients should be urged to take lots of vitamin C. A book could be written on what vitamin C is able to do in your body to help you. It is vital in the treatment of a lengthy list of physical disorders and diseases.

Types of supplements: Vitamin C from the health-food store comes in several forms: powders, crystals, capsules, tablets, and timed-release tablets. *Ascorbic acid* is the most widely used and least expensive. It is usually made from corn. *Buffered vitamin C* has sodium, magnesium, calcium or potassium in it, in order to reduce the immediate acidity of the vitamin C in the mouth and stomach. Sodium ascorbate may not be good for you, since it is best to not eat much sodium. Then there is *"corn-free" vitamin C*, made from the sago palm. This also works well, and is for those who do not have problems eating corn products. *Ester-C* is a new, more expensive product which, it claimed, is absorbed more easily. However, tests reveal that this claim is not correct. Taking supplements containing *vitamin C and bioflavonoids* would be helpful; except that most do not contain enough bioflavonoids to increase absorption of the vitamin. The level of bioflavonoids needs to be equal to or greater than the C content. For most people, plain *ascorbic acid* is the best; by far it is the least expensive and with research-proven effectiveness.

Deficiency symptoms: Soft gums (pyorrhea), tooth decay, skin hemorrhages, anemia, slow healing of sores and wounds, capillary weakness, premature aging, deterioration in collagen, thyroid insufficiency. Also reduced resistance to infections, toxic effects of drugs, and environmental poisons. The classic symptoms of scurvy are bleeding gums, poor wound healing, and extensive bruising; plus susceptibility to infections, hysteria, and depression.

Interactions: Bioflavonoids, calcium, magnesium are needed for vitamin C assimilation. Vitamin C works closely with other nutritional antioxidants, especially vitamin E, selenium, and beta-carotene. When a combination of antioxidants is given, the patient can more easily deal with cancer. Vitamin C increases the absorption of iron, decreases the absorption of copper, and interferes with the blood test for vitamin B_{12}.

Cautions: You cannot get too much vitamin C; the unneeded amount will cause slight diarrhea and be expelled. Exposure to air destroys vitamin C; so it is important to eat fresh foods as quickly as possible. Fresh, sliced cucumbers lose 49% of their C content within 3 hours. A sliced, uncovered cantaloupe in the refrigerator loses 35% within 24 hours. There is the possibility of "rebound scurvy," which are physical problems caused by suddenly stopping high (500 mg or more) daily dosages. This can especially be a concern to pregnant women; so they should terminate its use slowly. Research does not support the theory that high C intake causes calcium oxalate kidney stones. Pollutants (such as cigarette smoke) increase the need for vitamin C intake.

BIOFLAVONOIDS (Vitamin P)—

The bioflavonoids are part of the vitamin C complex. (They are rarely called vitamin P today.) The bioflavonoids are citrin, eriodictyon, flavones, hesperetin, hesperidin, quercetin, and rutin. All are essential. Because the body cannot produce them, they must be included in the diet. Excessive amounts are excreted in urine and perspiration.

Dosage: RDA not established / ODA 500 mg / TDA Therapeutic dosage is 50-200 mg or more. *Hesperidin:* ODA 100 mg. *Rutin:* ODA 25 mg. TDA 50-200 mg or more. Two weeks of 3,000 mg given to a woman, with severe rheumatoid arthritis, eliminated the pain in 2 weeks. Her blood pressure dropped from 190 to 176; and, in 6 weeks, she had more action in joints and much more endurance. In 36 patients with bleeding duodenal ulcers, 3-9 capsules daily (along with orange juice) totally eliminated the ulcers within 22 days, with no recurrence in a year.

Sources: *Richest sources:* Buckwheat, grapes, apricots, black currants, buckwheat, strawberries, black currants, cherries, prunes, blackberries, grapefruit, plums, rose hips, pulp of citrus fruits (especially the white beneath the peel). *Other sources:* Also in other fresh fruits and vegetables. Because they are largely destroyed by cooking, it is important that you eat some raw fruits. There is 10 times the amount of bioflavonoids in fruit pulp than is in the juice.

Functions: Vital in preventing capillary fragility and hemorrhaging by strengthening capillary walls. (The capillaries are the smallest blood vessels.) Protect vitamin C from destruction in the body by oxidation. Work with vitamin C as a synergist, thereby strengthening its properties. Used for hemorrhoids, varicose veins, hypertension, respiratory infections, bleeding gums, hemorrhaging, eczema, psoriasis, radiation sickness, cirrhosis of the liver, coronary thrombosis, arteriosclerosis, and retinal hemorrhages. Often used to treat athletic injuries because they relieve pain, bumps, and bruises. They reduce pain in the legs or across the back, and reduce bleeding and low serum calcium. Promotes circulation, lowers cholesterol levels, stimulates bile production, and prevents and treats cataracts. Useful in treating stomach ulcers and dizziness caused by labyrinthitis, a disease of the inner ear. (Both are caused by capillary weakness.) When taken with vitamin C, they reduce oral herpes, improve muscular dystrophy, improve the disorder of the eye affecting diabetics, and may help prevent habitual miscarriages.

Quercetin (when taken with bromelain and vitamin C, in tablet form) is very useful in treating asthma symptoms. *Rutin,* which comes from buckwheat leaves, is especially helpful in the prevention of recurrent bleeding arising from weakened blood vessels. It is sometimes used in the treatment of hemorrhoids and helps prevent the walls of blood vessels from becoming fragile.

Deficiency symptoms: Purplish or blue spots on the skin, caused by capillary fragility. Reduced vitamin C activity. A deficiency of vitamin C or bioflavonoids may contribute to rheu-

matism and rheumatic fever.

Interactions: Bioflavonoids are essential for vitamin C absorption; so the two should be taken together. In natural foods, they occur together. In supplements, the C is generally not balanced by enough of the bioflavonoids, which should be equal to or greater than the amount of C. Bioflavonoids are totally nontoxic.

OTHER VITAMINS

VITAMIN T ("Sesame seed factor")—

Dosage: Not established.

Sources: This is an oil-soluble vitamin, found in sesame seeds, raw sesame butter (tahini), some vegetable oils, egg yolks.

Functions: Needed for platelet integrity in the blood. It reestablishes blood coagulation and is useful in correcting nutritional anemia. Promotes the formation of blood platelets (the round disks in the blood) and combats hemophilia, a hereditary blood disease that is characterized by slowed rate of clotting.

Deficiency symptoms: Anemia.

VITAMIN U ("Anti-ulcer factor")—

Dosage: Not established.

Sources: Raw cabbage juice is the best source. Other sources include raw cabbage, and homemade sauerkraut.

Functions: This is the anti-ulcer vitamin. It is a specific for peptic ulcers, especially duodenal ulcers.

Deficiency symptoms: Stomach or duodenal ulcers.

2 - MAJOR MINERALS

At least 18 minerals are essential in human nutrition. They are divided into major minerals and minor minerals. Our bodies daily need more than 100 mg of major minerals and less than 100 mg of minor minerals. The major minerals are calcium, phosphorus, potassium, sodium, chloride, magnesium, and sulfur. The minor (or trace) minerals are boron, chromium, copper, iodine, iron, manganese, molybdenum, selenium, silicon, vanadium, and zinc. Make sure you are obtaining a balanced mineral intake.

CALCIUM (Ca)—

Dosage: ***Calcium (Ca):*** RDA 2 / ODA 2,000 mg / TDA 2,000-5,000 mg. *Recommended:* 1,000 mg daily. During pregnancy and lactation, 1,200 mg daily. Especially during pregnancy or lactation, take 1,000-1,400 mg. Calcium supplements are generally well-tolerated at dosages less than 2,000 mg; but higher dosages may increase the risk for kidney stones and soft-tissue calcification (although neither problem has conclusively been shown to be caused by taking calcium supplements).

Sources: *Best sources:* Milk, most raw vegetables, especially the green, leafy ones. Sesame seeds are an excellent source, since they have such a good calcium-phosphorus ratio. Brewer's yeast. *Other sources* include oats, almonds, navy beans, walnuts, millet, sunflower seeds. A good calcium source will contain lots of calcium and relatively little phosphorous.

Calcium supplements: *Calcium citrate* is easily absorbed, can be used if you have low stomach acid levels, and is generally the best form to take. But many products contain lower amounts of elemental calcium. It should contain 21% calcium by weight. *Calcium carbonate* contains 40% calcium, but is not easily absorbed. (Refined forms are produced in a laboratory; unrefined forms are derived from limestone or oyster shells.) *Calcium glu*conate contains 9% calcium, but sometimes causes diarrhea and nausea. *Calcium lactate* contains 13%, along with lactic acid from milk. It is more acid than some of the other supplements. *Calcium phosphorus* contains 30% calcium; but the phosphorus in it tends to lock with the calcium and carry it on out of the system. Do not take calcium phosphorus tablets or powder. Other forms are *dolomite*, which is calcium and magnesium from dolomitic rock, and *bone meal*, from ground-up animal bones (an inferior product because they also contain phosphorus). Most unrefined calcium products have unacceptably high levels of lead. *Calcium citrate* is probably best for lowest lead level, and is absorbed the best. *Calcium lactate* and *calcium gluconate powder* are useable sources. In the opinion of some, the gluconate formula tastes better than the one with lactate. *Also see Vitamin D, p. 90.*

Functions: Needed to build and repair bones and teeth. Essential for heart and muscle action. Protects against radioactive strontium 90 intake. Needed for enzyme and blood clotting. Very important during pregnancy and lactation. Speeds all healing processes. Helps maintain proper balance between sodium, potassium, and magnesium. Needed for treatment of osteoporosis, reducing high blood pressure. Calms heart action, and tends to reduce pain.

Deficiency symptoms: Retarded growth, tooth decay, rickets, osteomalacia, osteoporosis, irritability, nervousness, heart palpitations, muscle cramps, and insomnia.

Needed for assimilation: Vitamins A, C, D, and E. boron, essential fatty acids, magnesium, manganese, phosphorus, lysine.

Interactions: Calcium interacts with many nutrients, especially vitamin D, Vitamin K, and magnesium. High dosages of magnesium, zinc, phosphates, protein, sodium, and sugar reduce calcium absorption. Caffeine, alcohol, phosphates, sodium, protein, and sugar increase calcium excretion. (The weightlessness of space travel also does.) Antacids containing aluminum increase bone breakdown and excretion of calcium.

Cautions: Too much phosphorus in a meal will lock with calcium and render it ineffective. Too much oil at a meal will lock with calcium, turn it into a kind of soap, and both will go out through the bowels. Much more information on calcium will be found elsewhere in this *Encyclopedia* in the article, titled *"Strengthening the Bones (chapter 10)."*

PHOSPHORUS (P)—

Dosage: RDA 800 mg / ODA 0.00 / TDA 0.00. Adults 800 mg. Children and women during pregnancy or lactation: 1,000-1,400 mg.—but everyone gets enough. *Recommended:* This is the one mineral you want to avoid. First, it is practically impossible to have a phosphorus deficiency. Although phosphorus is vitally needed, you always get enough. Second, too much of it at a given meal locks with calcium, rendering it ineffective. Too much phosphorus also causes other difficulties. Avoid supplemental phosphorus whenever possible. *(See Calcium, above.)*

Sources: whole grains, corn, seeds, nuts, legumes, dried fruits, dairy products, egg yolks, meat, fish.

Functions: Phosphorus works with calcium, but only when

in proper balance. They work together to build bones and teeth. It is also needed in maintaining an acid-alkali balance in the blood. It is needed for nerve function and carbohydrate metabolism.

Deficiency symptoms: For practical purposes, hardly ever seen. Symptoms would include poor mineralization of bones, retarded growth, inadequate nerve and brain function, overall weakness.

Needed for assimilation: Vitamin B_6, calcium, iron, manganese, sodium.

MAGNESIUM (Mg)—

Dosage: RDA 350 mg / ODA 1,000 mg / TDA 1,000 mg. ***Recommended:*** Ideal supplement intake should be 6 mg per 2.2 lbs. body weight (154-lb. person should daily obtain 420 mg). For specific problems, described below, take 12 mg per 2.2 lbs. body weight.

Sources: *Richest sources:* kelp, dulse, wheat brain, wheat germ, almonds, cashews, blackstrap molasses, brewer's yeast, buckwheat, Brazil nuts, filberts, peanuts, millet, wheat grain, pecans, English walnuts, rye. *Other sources:* soybeans, other nuts, raw and cooked green leafy vegetables, whole grains, figs, apples, lemons, peaches, apricots, brown rice, collard leaves, other greens. Magnesium chloride is the best form of supplementary magnesium; but other forms can be used.

Functions: Second only to potassium in its concentration within cells. Magnesium is crucial to many functions, including energy production, protein formation, and cellular replication. It participates in more than 300 enzyme reactions in the body. Operates as a catalyst in many functions involving energy (including production of the very crucial ATP); also in utilization of vitamins B and E, calcium, fats, and other minerals. Essential for the heart, muscle tone, bones. It regulates acid-alkaline balances, aids in lecithin production. Like calcium, magnesium is a natural tranquilizer. Because it is required for the activation of the sodium and potassium pump that removes sodium from cells and puts potassium into them, without magnesium, potassium leaves the cells and sodium enters them (which is the basis of a cancer cell). Magnesium also regulates calcium metabolism.

Causes of deficiency: Magnesium deficiency is extremely common in the U.S., especially in the elderly and premenstrual women. Other major causes of deficiency include high calcium intake, surgery, alcohol, diuretics, liver disease, kidney disease, and oral contraceptive use.

Deficiency symptoms: Without adequate magnesium, both calcium and magnesium leave the body. Fatigue, mental confusion, irritability, weakness, muscle cramps, loss of appetite, tendency to stress, nerve problems. Kidney stones, high blood pressure, kidney damage, heart disease, heart attack, insomnia, PMS, menstrual cramps, nervous irritability, confusion and depression, epileptic seizures, premature wrinkles, cancer, and damaged protein metabolism.

Magnesium therapy helps cardiovascular and heart problems, high blood pressure, acute myocardial infarction, asthma, diabetes, fatigue, glaucoma, hearing loss, kidney stones, migraine, osteoporosis, pregnancy toxemia, premature delivery, premenstrual problems, dysmenorrhea,

Needed for assimilation: Vitamins B_6, C, D, calcium, potassium, phosphorus.

Interactions: Because magnesium, potassium, calcium and other minerals interact extensively, dosages of other minerals reduce the intake of magnesium, and vice versa. High calcium intake, fortified with vitamin D, decreases magnesium absorption.

Cautions: Digitalis, insulin (taken by diabetics), antibiotics, diuretics, and hyperthyroidism all tend to cause the body to lose magnesium.

Warning: Although magnesium is usually tolerated well, those with kidney disease or severe heart disease should not take magnesium (or potassium) except by physician's orders. Supplements of magnesium sulfate (Epsom salts), hydroxide, or chloride occasionally causes loose bowel movements.

POTASSIUM (K)—

Dosage: RDA 1,875 mg / ODA 2,500 mg / TDA 5,500 mg. ***Recommended:*** The estimated dietary intake is 1.9-5.6 grams. But this amount will easily be surpassed if you eat largely of fruits and vegetables.

Three electrolytes: Potassium, sodium, and chloride are electrolytes (minerals which, when dissolved in water, conduct electricity). The three are very closely related. They always operate in pairs: a positively charged molecule (sodium or potassium), with a negatively charged one (chloride [chlorine]). Although all are important, potassium is the key—it is the most important of the three.

Sources: It is in all vegetables, especially green leafy ones. Thick white potato peelings are rich in it. Bananas are also excellent.

Functions: There is more potassium in body cells than any other mineral; and you have a great need for *large amounts* of it. Potassium helps maintain proper acid-alkaline balance in the blood and tissues, and prevents over-acidity. It is essential for muscle contraction, promotes hormone secretion, helps kidneys detoxify the blood. Its vital functions include acting as an electrolyte, converting blood sugar into glycogen, and storing blood sugar in the muscles and liver. For example, muscle energy comes from burning glycogen; but, without enough potassium, there is not enough glycogen—and extreme fatigue and muscle weakness results.

Deficiency symptoms: Lack of potassium causes sodium (salt) to accumulate in the body. The result is edema, high blood pressure, and heart failure. The heart muscle can be damaged. Constipation, extreme fatigue, muscular weakness, low blood sugar, and nervous disorders.

Interactions: Potassium works closely with magnesium in many body functions.

Warning: Potassium and sodium must be kept in proper balance at all times, or serious problems develop. Too much sodium in the diet disrupts the potassium / sodium balance in the body. A low-potassium, high-sodium diet helps produce cancer, cardiovascular disease (heart disease, high blood pressure, strokes, etc.). But a diet high in potassium and low in sodium—protects against those diseases! You can easily take too much sodium; but you cannot take too much potassium! *See Sodium, below, for more information.* Restricting salt (sodium chloride) intake does not lower blood pressure, until potassium intake is greatly improved. High-dosage potassium salts (in pill form) can cause nausea, vomiting, diarrhea, and ulcers. There is lots of potassium in fruits and vegetables, and almost none in processed foods. There is relatively little sodium in fruits and vegetables, and far too much (often extremely too

much) in processed foods. There are no ill effects from a diet rich in excess potassium, with one exception: If you have kidney disease, you will need to restrict your potassium intake.

SODIUM (Na)—

Dosage: RDA 1,100 mg / ODA 200-600 mg / TDA 300-3,000 mg. Sodium is a mineral to avoid. You need a little, but not very much. If you want to get it from the salt shaker, sprinkle a tiny (tiny) bit on only one or two foods at the table, having put none in the cooking. *Recommended:* Obtain sodium from natural food alone, plus, at the most, only an extremely slight amount of table salt. The best way to do this is to pour a tiny amount into your hand, so you know you only have a very small amount; then pour it onto your food. (If you pour salt directly on your food, you cannot see how much is going on it.)

The salt problem: Sodium is a mineral you should be very cautious about. You need a little, but only a very little. In America, only 5% of the sodium comes from natural food. Prepared foods add 45%, cooking adds 45% more, and condiments add another 5%. All the sodium the body generally needs is found in the natural (unsalted) food which is eaten. *Also see Potassium, above.* A word about table salt: Most of it has added aluminum, to keep the salt free-flowing. You do not want to eat aluminum (Alzheimer's is not easy to live with)! So-called "sea salt" is just regular salt; it has no other minerals in it. If the salt you buy is free-flowing, you do not want to use it (because of the added aluminum)! But, if you insist on buying regular salt, select iodized salt. Because Americans add too much salt to their meals, they have a potassium-to-sodium ratio of 1:2. (They are eating twice as much sodium as potassium.) What is needed is a 5:1 ratio (5 times as much potassium as sodium) to maintain good health. If you eat a natural diet of fruits and vegetables, you will take in 100:1—100 times as much potassium as sodium. If you will look on any food chart, you will find that all the natural foods have a high potassium to sodium ratio, whereas all the junk food will have a high sodium to potassium ratio. Do not be afraid of potassium; you cannot get too much! DO be afraid of sodium.

Sources: Although it is found in a variety of foods, including romaine lettuce, celery, asparagus, and watermelon, most people like to get it out of the salt shaker. The best source of added salt to your diet is Nova Scotia dulse or Norwegian kelp. Both are full of vitally needed trace minerals.

Functions: Sodium works closely with potassium and chlorine in a number of important functions *(see Potassium, above)*. They maintain proper electrolyte balance; for they change into electrically charged ions which carry nerve impulses. They also control and maintain osmotic pressure into, and out of, the cells. This enables the blood to carry nutrients throughout the body. They also keep the amount of body fluid at the proper level. Sodium is an important constituent of stomach acid.

Deficiency symptoms: It is rare for a person to have a sodium deficiency. But it may be caused by excessive sweating, chronic diarrhea, or overuse of diuretics. Muscular weakness, heat exhaustion, mental apathy, nausea, or respiratory failure can result.

Excess symptoms: Too much sodium in the diet is far more common, and is shown in water retention, high blood pressure, stomach ulcers or cancer, hardening of the arteries, and heart disease.

Needed for assimilation: Vitamin D, calcium, potassium, sulfur.

CHLORINE (Cl)—

Dosage: RDA 1,700 mg / ODA 2,500 mg / TDA 500-2,500 mg. You usually obtain enough in food. There is no recommended daily allowance for chlorine because the average person gets about 3-9 grams daily in the table salt he sprinkles on his food and the salt that is added to most processed foods.

Sources: Kelp, dulse, rye flour, ripe olives, tomatoes, cabbage, endive, kale, celery, turnips, cucumbers, asparagus, oats, pineapple, avocado.

Functions: Chlorine mainly occurs in compound form with sodium or potassium, and is widely distributed throughout the body in the form of chloride. It is needed, along with sodium, for production of hydrochloric acid (stomach acid). Without HCl, minerals cannot be properly absorbed and proteins cannot be digested. Chlorine is also involved in fluid and electrolyte balance, and liver function. It helps regulate the balance of acid and alkali in the blood and maintains pressure that causes fluids to pass in and out of cell membranes until the concentration of dissolved particles is equalized on both sides. It stimulates the liver to function as a filter for wastes and helps clean toxic waste products out of the system. It helps keep joints and tendons in youthful shape and aids in distributing hormones. Chlorine is used to treat diarrhea and vomiting.

Deficiency symptoms: Body fluid levels do not function properly, and digestion is poor. Hair and tooth loss can occur. Poor muscular contraction and impaired digestion can occur.

Caution: Chlorine is commonly added to drinking water (chlorinated water); but it is a highly reactive chemical and may join with inorganic minerals and other chemicals, to form harmful substances. Chlorine in drinking water destroys vitamin E, as well as many of the intestinal flora that help digest food.

IRON (Fe)—

Dosage: RDA 10 mg for men; 18 mg for women / ODA 45 mg / TDA 50-100 mg. Do not take iron supplements unless you have to. Blackstrap molasses is the richest food source of iron and is a good food. Of course, take it in moderation because it is so sweet. Do not take iron *supplements* (tablets) unless you have to; they often contain an iron compound which damages the body.

Sources: Black molasses is the richest source. Eat a half teaspoonful twice a day. Other sources include apricots, prunes, raisins, brewer's yeast, beets, dulse, kelp, peaches, whole grain cereals, leafy greens, seeds, nuts, beans, egg yolks, raisins.

Herbal sources: Alfalfa, burdock root, chamomile, chickweed, dandelion, dong quai, fennel seed, lemongrass, fenugreek, mullein, peppermint, plaintain, raspberry leaf, rose hips, uva ursi.

Functions: Needed for hemoglobin formation in the blood. Hemoglobin enables the red blood cells to fill with oxygen and carry it to the cells. It is also needed for myoglobin, the type of hemoglobin in muscle tissue, and the production of many enzymes. It is needed for growth, energy production, and immune protection.

Deficiency causes: Although primarily due to insufficient intake in the diet, it can result from intestinal bleeding, ul-

cers, poor digestion, a diet high in phosphorus (eating lots of meat), continued use of antacids, or excessive use of coffee or black tea. Heavy and prolonged periods during menstruation, or short menstrual cycles. Rarely a deficiency of pyridoxine (vitamin B_6) or vitamin B_{12}. Heavy perspiration and strenuous exercise depletes body reserves of iron. Taking supplemental calcium with a meal can reduce absorption of iron. Take calcium supplements at bedtime instead. Excessive amounts of zinc and vitamin E can also interfere with iron absorption. Rheumatoid arthritis and cancer can hinder iron utilization in the body.

Deficiency symptoms: Simple (iron) anemia, reduced resistance to disease, headaches, skin that is too pale, brittle hair, digestive disturbances, difficulty in swallowing, fatigue, dizziness, fragile bones, hair loss, inflamed mouth tissues, slowed mental reactions, nervousness, or nails that have lengthwise ridges or are spoon-shaped. People with candidiasis or chronic herpes are likely to be low on iron.

Cautions: Iron is not absorbed unless there is sufficient hydrochloric acid in the stomach. Eating acid fruits helps iron absorption at that meal. Vitamin C also aids absorption while coffee and tea interferes with it. Iron cannot be absorbed without a slight amount of copper. (But an excess of copper destroys vitamin C.). Iron is stored in the body; and excessive amounts of it is another, but less frequent, problem. Too much iron in the tissues results in too many free radicals (increasing the need for vitamin E) and, ultimately, to bronzed skin coloring. (Do not confuse that with the normal—and harmless—slight yellowing of the skin which may occur when carrot juice is drunk.) Do not take iron supplements during an infection; doing so can increase bacterial growth.

Warning: Do not take iron supplements unless absolutely necessary, and definitely not during pregnancy. Avoid multivitamin mineral supplements which contain iron. Never take ferrous sulfate! Instead, choose organic forms of iron (ferrous gluconate or ferrous fumarate). The safer way is to take a daily spoonful of blackstrap molasses.

SULFUR (S)—

Dosage: RDA Not stated / ODA 500 mg / TDA 1,000 mg. ***Recommended:*** You generally obtain enough in food. Normal intake amount is 500 mg; and therapeutic dosage is 1,000 mg.

Sources: *Best sources:* garlic, cabbage, dried beans, Brussels sprouts, eggs, kale, onions, wheat germ, and the horsetail herb. *Other sources:* It is widely found in vegetables and beans. MSM (methylsufonylmethane) is said to be a good source of sulfur.

Functions: This acid-forming mineral, found in all body tissues, is needed for the formation of four amino acids: cysteine, methionine, glutathione, and taurine. It is needed for healthy hair, skin and nails; and utilization of oxygen by the body. It disinfects the blood, protects cell protoplasm, helps the body resist bacteria, stimulates bile secretion, and protects against harmful effects of pollution and radiation. It is used in the manufacture of collagen, a special protein which strengthens skin.

Deficiency symptoms: Dull hair and brittle nails.

Needed for assimilation: Vitamin B_1, pantothenic acid, potassium, biotin.

Cautions: Sulfur is destroyed or damaged by moisture and heat. Do not swallow powdered sulfur! Although thought by some to be a "spring remedy," it may give you a series of boils, extending over a period of many months, as the body tries to discharge this poison from the body.

3 - TRACE MINERALS

Trace minerals are needed by the body in extremely small amounts; yet they are extremely vital to physical function. The richest source is consistently found in sea plants (seaweeds).

IODINE (I)—

Dosage: 150 mcg (which is 0.15 mg). It is crucial that you obtain enough of this mineral. Dulse and kelp (two types of seaweed) are the best sources. Too much iodine can actually inhibit synthesis by the thyroid gland; therefore keep dietary or supplementary levels of iodine (also called iodide) intake below 500 mcg daily. This is a vitally needed element which far too many people do not obtain enough of. The body uses more of this than any other trace mineral.

Sources: *Richest sources:* Nova Scotia dulse and Norwegian kelp (types of seaweed). California kelp is not a good nutritional source. Although Lugol's solution is another source, and is only obtainable by prescription, it is easy to take too much. *Other sources:* garlic, leafy greens, pineapples, pears, artichokes, citrus fruits, egg yolks. Do not use fish liver oils as a source; for they damage the heart muscle!

Bottled iodine can be painted on the bottom of the foot (or elsewhere on the body), and will be partially absorbed. But, of course, you might overdose. It is believed that, if the reddish color of the iodine on the painted area disappears within 24 hours, the body needed the iodine.

One research study found that when cows were given 200 times the "normal" dosage of iodine, they were in better health.

Functions: Thyroxine, the hormone produced by the thyroid gland, is almost pure iodine. Thyroxine (T_3 is the most active form) regulates very much of the total functions of the body, including metabolism, energy production, body weight, heat, etc. Plentiful iodine in the diet can block absorption of radioactive iodine from fallout. Iodine modulates the effect of estrogen on breast tissue.

Two forms: Iodine is the elemental form of iodide; and, in the body, it is most efficient in helping estrogen in breast tissue. Iodide is iodine compounded to sodium or potassium (potassium iodide is better than sodium iodide). In either form, it is absorbed well by the thyroid. However, organic sources of iodine (kelp, dulse, iodine caseinate, etc.) are absorbed by the body about as well as inorganic iodides (potassium iodide and sodium iodide). Iodide caseinate is especially effective in treating fibrocystic breast disease.

Deficiency symptoms: Goiter, thyroid gland enlargement or malfunction. Cretinism, anemia, fatigue, slowed pulse, fatigue, low blood pressure. Frequently a tendency to obesity. In extreme cases, thyroid cancer, high blood cholesterol, and heart disease can result.

Iodine-deficiency disorders: Goiter, cretinism, growth retardation, intellectual disability, neonatal hypothyroidism, increased early- and late-pregnancy miscarriage, increased infant mortality.

Needed for assimilation: Iron, manganese, phosphorus.

Foods which block iodine absorption: These foods are known as *goitrogens* (goiter producers) and include cabbage,

turnips, mustard, soybeans, cassava root, peanuts, pine nuts, and millet. Cooking often inactivates goitrogens.

Cautions: If you are going to sprinkle regular salt on your food, use iodized salt. However, you would maintain better health if you used as little added salt as possible. So-called "sea salt" is just regular sodium chloride, which was produced by ocean water evaporation; it contains no trace minerals, nor iodine. Excessive iodine (or iodide) intake will reduce thyroid absorption, and may cause acne-like skin eruptions. When given at physiological dosages (150-600 mcg), iodine (or iodide) does not interact negatively with any nutrient or drug.

SELENIUM (Se)—

Dosage: RDA not established / ODA 70 mcg / TDA 55 mcg.. **Recommended:** Supplement the diet with 50-200 mcg selenium and 200-400 IU vitamin E. Intake levels above 1,000 mcg daily can produce toxicity; so it is best not to take more than 400 IU daily. For children: Take 1.5 mcg per pound of body weight. Do not take more than 40 mcg daily during pregnancy.

Sources: *Richest sources:* Nova Scotia dulse and Norwegian kelp. *Other good sources:* wheat germ, Brazil nuts. *Other sources:* brewer's yeast (not primary grown yeast), garlic, organically grown foods, cereals, most vegetables.

Functions: A powerful antioxidant. Works closely with vitamin E and has similar functions. Helps E accomplish more, so not as much is needed. Keeps hemoglobin from being damaged by oxidation. Slows the aging process by inhibiting action of free radicals. Helps regenerate liver, especially after cirrhosis. Essential for activity of glutathione peroxidase, an important enzyme. Protects body from mercury, aluminum, lead, and cadmium poisoning. Involved in thyroid hormone production. A principal function is to reduce the oxidation of lipids (fatty acids).

Primary uses: Prevention of cancer, increases immune function, protects against cardiovascular disease. Treats inflammatory conditions (such as rheumatoid arthritis, eczema, and psoriasis). Treats cataracts. Helps ensure proper fetal growth and development (selenium requirements increase during pregnancy; selenium levels are always low in low birth weight babies). Prevents SIDS (sudden infant death syndrome). Improves male fertility. Helps reduce high blood pressure.

Deficiency symptoms: Muscle degeneration, liver damage, premature aging, heart disturbances, muscle weakness. Severe deficiency, over a period of time, can induce cancer of the digestive and intestinal tracts. Keshan disease is a severe heart disorder in China in areas where selenium levels in the soil are low. The most common risk of selenium deficiency is an increased risk for cancer, heart disease, and low immune function.

Excessive intake symptoms: Brittle nails, garlicky breath, hair loss, irritability, liver and kidney impairment, pallor, metallic taste in mouth, skin eruptions, tooth loss, yellowish skin.

Supplement forms: Inorganic salts (sodium selenite, etc.) are not absorbed as well and are less active than organic forms (selenomethionine and selenium-rich yeast).

Interactions: All other antioxidants work well with selenium in strengthening the system.

Cautions: Selenium absorption and utilization is reduced by heavy metals (mercury, cadmium, lead, etc.), high doses of vitamin C (affects sodium selenite more than organic forms of selenium), high intakes of other trace minerals (especially zinc), and various drugs (especially chemotherapy).

ZINC (Zn)—

Dosage: RDA 15 mg / ODA 30 mg / TDA 50 mg. ***Recommended:*** 15-20 mg daily, in addition to average food intake of 10 mg daily. Therapeutic dosage is 30-60 mg daily for men and 30-45 mg daily for women.

Sources: Richest sources: Nova Scotia dulse and Norwegian kelp (types of seaweed) are the best sources. Pumpkin seeds, ginger root, pecans, split peas, Brazil nuts. Other good sources: whole wheat, rye, oats, peanuts, lima beans, almonds, walnuts, buckwheat, other vegetables. Zinc in grains and seeds tends to be locked by phytin, but is unlocked by the fermentation process (when making bread) and by sprouting seeds.

Functions: Needed for RNA and DNA formation, and synthesis of proteins. A component in over 200 enzymes, zinc is in every body cell. It functions in more enzyme reactions than any other mineral. Also crucial to many hormones, it is primarily stored in the muscles, and is highly concentrated in red and white blood cells. It is extremely important during fetal development and results in premature births, low birth weight, growth retardation, pre-eclampsia. Zinc is in insulin, so is involved in carbohydrate and energy metabolism. Needed for normal development of reproductive organs and the function of prostate. Speeds up healing of burns and wounds. Needed for vitamin A metabolism. Very helpful in treating acne, macular degeneration, Alzheimer's disease, and Wilson's disease.

Deficiency symptoms: skin changes, hair loss, diarrhea, mental disturbances, recurrent infections. The elderly are most likely to have marginal zinc deficiencies. Other problems caused by lack of zinc include sleep and behavior disturbances, psychiatric illness, growth retardation, loss of sense of smell or taste, night blindness, abnormal menstruation, alcohol abuse, rheumatoid arthritis, delayed wound healing, mouth ulcers, a white coating on the tongue, marked halitosis. Causes birth defects, retarded growth, reproductive problems, lowered resistance to infections, slow healing of wounds and skin diseases, white spots on finger and toe nails, poor sense of smell and taste. Lethargy, apathy, dandruff, hair loss, atherosclerosis, epilepsy, and osteoporosis.

Supplements: All forms of zinc supplements are absorbed well.

Causes of deficiency: Alcoholism, old age, anorexia nervosa, protein deficiency, acute infections, burns, chronic blood loss, pregnancy and lactation, oral contraceptives, growth spurts and puberty, diarrhea, liver disease.

Needed for assimilation: Vitamin B_6, calcium, phosphorus, copper.

Cautions: Toxic effects of zinc occur with prolonged intake of more than 150 mg daily. This is rare; since vomiting usually occurs and flushes out excess amounts. Zinc is probably the least toxic mineral, and does not negatively react with any drug. If taken on an empty stomach, zinc (especially zinc sulfate) supplementation can result in stomach upset and nausea. High dosages of other minerals (especially calcium and iron) can reduce zinc absorption. For best absorption, zinc supplements are best taken apart from high-fiber foods.

COPPER (Cu)—

Dosage: RDA 2 mg / ODA 3-4 mg / TDA 4-6 mg. ***Recommended:*** Normal need is 1.5-3 mg, and therapeutic dosages are 4-6 mg. But needs are generally supplied by a good diet. Supplemental copper intake is keyed to supplemental zinc intake. The

best zinc to copper ratio is 10:1 (If 30 mg zinc is taken daily, you should also take 3 mg. copper.)

Sources: Foods rich in iron are also rich in copper. *(See Iron, just above.)* Nuts (highest in Brazil nuts, almonds, hazelnuts, walnuts, and pecans) and legumes are the richest source. Grains are next best. Copper is widely distributed in foods.

Functions: Copper works closely with iron in accomplishing the same functions *(see Iron, above)*. Needed for RNA production, protein metabolism, healing processes, and hair color. Involved in brain, nerve, bone, and connective tissue development. Several enzyme systems require copper. The highest concentration (amount per gram of tissue) is in the brain and liver. The estimated 70-80 mg of copper in the body are distributed throughout all the organs and cells.

Deficiency symptoms: Anemia, weakened respiration, digestion, heart function, and graying of hair. Because copper is needed for iron absorption, insufficient copper also results in iron deficiency.

Needed for assimilation: Folic acid, iron, zinc, cobalt. Copper absorption is decreased by chronic antacid intake, chronic diarrhea, high dosage of supplemental zinc or vitamin C.

Caution: Additional copper is needed during pregnancy, lactation, and the teenage years. Chelation therapy, burns, and nephrosis tend to cause copper to be lost from the body. The danger is generally too much inorganic copper in the diet, due to water from copper water pipes and copper sulfate (added to frozen foods to make them greener, especially peas). Copper is an emetic. As little as 10 mg usually produces nausea; and 60 mg will cause vomiting. Keep copper supplements away from children; 3.5 grams can kill a person. It is estimated that daily consumption of 10-35 mg is continually safe. However, such a high dosage would adversely affect zinc absorption and utilization.

MANGANESE (Mn)—

Dosage: RDA 2.5 mg / ODA 5 mg / TDA 2-50 mg. **Recommended dosage:** Most people require 2-5 mg daily. Therapeutic dosages for epilepsy are 15-30 mg daily; and, for diabetes, it is 5-15 mg daily. For strains and sprains, 50-200 mg daily for first 2 weeks, followed by 15-30 mg daily.

Sources: Richest sources: Nova Scotia dulse and Norwegian kelp (types of seaweed). Also good: pecans, Brazil nuts, almonds, barley, avocados. Other sources: other grains, green leafy vegetables, beets, oranges, blueberries, grapefruit, apricots, peas, fresh wheat germ, raw egg yolk.

Functions: Enters into the work of several enzymes which affect metabolism of carbohydrates, proteins, and fats. Aids coordinative action between brain, nerves, and muscles. Involved in reproduction and mammary gland function. Works with choline in fat digestion and utilization. Aids in the formation of mother's milk.

Deficiency symptoms: Digestive disturbances, retarded growth, defects in carbohydrate and fat metabolism, male and female sterility, abnormal bone development, poor equilibrium, myasthenia gravis, and asthma. If manganese deficiency occurs during pregnancy, the offspring exhibit lack of balance, movement incoordination, retraction of the head, hearing problems, heart disorders, high cholesterol, memory loss, muscle contractions, pancreatic damage, rapid pulse, tremors, breast ailments. Deficiencies tend to be rare.

Primary uses: Manganese is primarily used to treat sprains, strains, inflammation, diabetes, and epilepsy.

Absorption: Manganese sulfate or chloride are not as well-absorbed as manganese picolinate, magnesium gluconate, or other chelates.

Needed for assimilation: vitamin B complex, vitamin E, calcium, iron.

Interactions: Needed for utilization of vitamin B_1 (thiamine) and vitamin E. It helps all the B vitamins function better. Essential for people with iron-deficiency anemias.

Cautions: Extremely low toxicity. However, environmental pollution or mining of manganese can lead to "manganese madness" (hyperirritability, hallucinations, and violent acts).

SILICON (Si)—

Dosage: RDA is not established; but 20-40 mg daily is considered safe and probably adequate. Until more is learned, dosages should not exceed 50 mg daily.

Sources: *Richest sources:* Nova Scotia dulse and Norwegian kelp (types of seaweed). *Other very good sources:* oatmeal, brown rice, root vegetables. Oat straw tea and horsetail herb are considered very good sources. *Other sources:* young green plants, such as alfalfa and horsetail. Steel-cut oats, grapes, apples, strawberries, onions, beets, almonds, sunflower seeds, and peanuts.

Functions: Needed for hair, nails, teeth, skin, tendons, and bones. Helps during healing and protects against a variety of diseases, including skin disorders and tuberculosis. Needed for proper development of collagen, the major protein component essential for proper bone and connective tissue integrity. The highest concentrations of silicon is found in the skin and hair. For some unknown reason, the silicon content of the aorta, thymus, and skin declines with age while the amount in other tissues do not.

Deficiency symptoms: Wrinkles, thinning or loss of hair, soft or brittle nails, inferior bone development, osteoporosis, insomnia.

Needed for assimilation: Iron, phosphorus.

Cautions: Silicon is a primary constituent in sand and very hard rocks. Only take it as it naturally occurs in food. Eat nothing which, according to the label, has added silicon in it.

Warning: Avoid exposure to silicon in the air (such as miners inhaled in mines). Silicosis is not a pleasant disease. Increased levels of silicon and aluminum have been found in the neurofibrillary tangle and senile plaque in the brains of Alzheimer's disease patients.

FLUORINE (F)—

Dosage: ***Fluorine (F):*** RDA 1.5 mg / ODA 1.5 mg / TDA 20 mg (Use this amount only with a prescription for osteoporosis.) Needed only in very small amounts.

Sources: Nova Scotia dulse and Norwegian kelp (types of seaweed) are the best sources. Steel-cut oats, garlic, carrots, sunflower seeds, green vegetables, beet tops, almonds, naturally hard water.

Functions: Needed for bone and tooth formation. An internal antiseptic, it protects against infections.

Deficiency symptoms: Not known.

Cautions: An excess of fluoride (sodium fluoride) is added to drinking water in many cities; but it is a poison. It mottles teeth and does not help them. Only the minute traces of fluorine found in food are safe to ingest. Use some type of filtration device to remove chlorine and fluoride from your drinking water, or buy a water distiller.

CHROMIUM (Cr)—

Dosage: RDA 50 mcg / ODA 200 mcg / TDA 300-1,000 mcg. Apparently, we need at least 200 mcg daily in our diet. Experts recommend 400-600 mg daily, for impaired glucose tolerance patients, and as a help to weight loss.

Sources: *Richest sources:* Nova Scotia dulse and Norwegian kelp. Normally present in natural waters, especially hard (highly mineralized) water, brewer's yeast. *Other good sources:* whole-grain bread, raw sugar and cane juice.

Functions: Part of many enzymes, hormones, and insulin. Needed for sugar utilization, cholesterol metabolism, and synthesis of protein in the heart muscle. Contains what is known as the *glucose tolerance factor*. Chromium's key benefit is helping insulin work properly.

Primary uses: Treatment of impaired glucose tolerance (hypoglycemia and diabetes), elevated blood cholesterol and triglyceride levels, acne, and aiding weight loss.

Deficiency symptoms: High or low blood sugar, diabetes, hypoglycemia, hardening of the arteries, heart disease. The primary sign of chromium deficiency is glucose intolerance characterized by elevated blood sugar and insulin levels.

Cautions: White sugar in the diet induces chromium deficiency. (When sugar is made white, the chromium is removed; so when that white sugar is eaten, it unites with chromium in the body in an attempt to again make itself a normal sugar molecule, thus depleting the body of chromium. In the same way, white sugar removes other minerals from the body.)

MOLYBDENUM (Mo)—

Dosage: RDA 15 mcg / ODA 500 mcg / TDA 1,000 mcg. **Recommended:** 200-500 mcg daily. Higher doses are given for Wilson's disease.

Sources: Richest sources: Nova Scotia dulse and Norwegian kelp (types of seaweed). Very good sources: whole cereals, especially millet, brown rice, and buckwheat, brewer's yeast, legumes (lentils and split peas best), and naturally hard water.

Functions: Part of certain enzymes, especially oxidizing enzymes. Protects somewhat against copper poisoning. Needed for carbohydrate metabolism. It is now known that molybdenum deficiency occurs in cases of cancer.

Primary uses: The treatment of Wilson's disease, protection against dental cavities, and prevention of cancer.

Deficiency symptoms: Sulfite toxicity such as increased heart rate, headache, nausea, vomiting, shortness of breath.

Deficiency causes: A primary cause is total parenteral nutrition (food supplied fully by intravenous feedings in a hospital).

Interactions: Molybdenum interacts with copper and fluoride, and with no other substances.

Cautions: Relatively nontoxic. Toxicity only occurs when more than 100 mg per kg body weight is taken. Daily intake of 10-15 mg sometimes produces symptoms of gout, due to increased uric acid production. Fortunately, molybdenum is most completely absorbed in the intestines, is conserved at low intakes, and rapidly excreted in the urine when too much is taken in.

COBALT (Co)—

Dosage: Not established.

Sources: Nova Scotia dulse and Norwegian kelp (types of seaweed) are the best sources. All green, leafy vegetables.

Functions: Part of the vitamin B_{12} (2 molecules). It is therefore necessary for synthesis of this anti-pernicious anemia vitamin. If there is enough cobalt in the system, the body can make its own B_{12}. Working with B_{12}, cobalt is needed to make healthy hemoglobin molecules.

Deficiency symptoms: Pernicious anemia.

LITHIUM (Li)—Measured in milligrams (mg) and micrograms (mcg)

Dosage: Not established. Available in tablets on a prescription basis. Highly toxic in overdoses.

Sources: Nova Scotia dulse and Norwegian kelp (types of seaweed) are the best sources.

Functions: Needed for the metabolism of sodium, and its transport to the nerves and muscles. Important in the proper functioning of the autonomic (involuntary) nervous system. It alters and normalizes the rhythmic cycling of the brain and helps to even out the mood.

Side effects: (when taken as a drug) diarrhea, edema, kidney dysfunction, nausea, tremors, stomach cramps, thirst, thyroid enlargement, weight gain, acne, and psoriasis.

Deficiency symptoms: Mental and nervous disorders, especially paranoid schizophrenia, bipolar disorder (manic depression).

GERMANIUM (Ge)—

Dosage: A dosage of 100-300 mg per day has been used to improve many illnesses, including rheumatoid arthritis, food allergies, candidiasis, elevated cholesterol, chronic viral infections, cancer, and AIDS. A Japanese scientist found that this amount improved many illnesses, including rheumatoid arthritis, food allergies, candidiasis, elevated cholesterol, chronic viral infections, cancer, and AIDS.

Sources: Best sources: Nova Scotia dulse and Norwegian kelp (types of seaweed). Other sources: garlic, onions, shiitake mushrooms, and the following herbs: aloe vera, comfrey, ginseng, and suma. (Now you know part of the reason why those herbs, and garlic, are so beneficial.)

Functions: Improves cellular oxygenation. Keeps immune system functioning properly, helps fight pain and rid body of toxins and poisons. Acts as a carrier of oxygen to the cells.

Deficiency symptoms: Not known.

Cautions: In rare instances, individuals taking excessive amounts have been known to develop kidney problems.

BORON (B)—

Dosage: TDA 2-3 mg. Do not exceed this amount per day.

Sources: *Richest sources:* Nova Scotia dulse and Norwegian kelp. *Other sources:* apples, carrots, grapes, leafy vegetables, nuts, pears, and grains.

Functions: Needed for healthy bones and calcium, phosphorous, and magnesium metabolism. Enhances brain function and promotes alertness. Helps prevent postmenopausal osteoporosis. Aids in the building of muscles. Elderly people do well to take a boron supplement, because of their greater problem with calcium absorption.

Deficiency symptoms: Boron deficiency accentuates vitamin D deficiency. Poor teeth and bones, osteoporosis.

VANADIUM (V)—

Dosage: RDA is not established / 500 mcg / TDA 2-5 mg. *Recommended:* A daily intake of 50-100 mcg is considered safe and adequate to meet nutritional needs. You may already be getting that much in your food. (The problem is that most of that which is eaten is not absorbed.) The amounts promoted by bodybuilding and diabetic advertisers (15-100 mg) are probably unsafe. Of 12 volunteers fed 13.5 mg daily for 2 weeks,

followed by 22.5 mg daily for 5 months, 5 developed cramps and diarrhea at the high dosage. But non-insulin-dependent diabetic patients given 100 mg daily experienced no side effects.

Sources: *Richest sources:* Nova Scotia dulse and Norwegian kelp. *Other sources:* dill, parsley, olives, radishes, snap beans, vegetable oils, mushrooms, and whole grains.

Functions: Needed in formation of bones, teeth, and cell structure. Involved in growth and reproduction, inhibits cholesterol synthesis.

Deficiency symptoms: Vanadium is not easily absorbed. Cardiovascular and kidney disease, increased infant mortality, impaired reproductive ability.

Primary uses: Diabetics and bodybuilders take vanadium (usually vanadyl sulfate) because it either improves insulin action or mimics that action. It can also improve oral glucose tolerance.

Interactions: The only known interaction is with lithium.

Cautions: The use of tobacco decreases vanadium absorption. Take chromium supplements at different times than vanadium; they seem to interfere with one another's absorption. Toxic effects of vanadium include elevated blood pressure, reduction of coenzyme A and coenzyme Q_{10} levels, and interference with cellular energy production.

4 - SPECIAL SUPPLEMENTS

Listed below are nutritive elements which have been discovered more recently. Some may be vitamins, not yet recognized as such. Or they may be enzymes. At any rate, they seem to be helping people. As a rule, they are only obtainable in supplemental capsules and tablets.

Sometimes (as in the case of flaxseed) they are only very rich sources of a very important nutrient.

BETA-SITOSTEROL—Measured in milligrams (mg).

Supplementary dosage: 500 mg. (Taking oat bran would probably accomplish the same task more inexpensively.)

Source: Health-food store.

Functions: Inhibits the absorption of cholesterol into the bloodstream.

BOSWELLIA—Measured in milligrams (mg).

Supplementary dosage: 400 mg.

Source: Health-food store.

Functions: Boswellia is an Asian herb which repairs damaged blood vessels, and inhibits swelling and discomfort in joints.

BROMELAIN—Measured in milligrams (mg).

Supplementary dosage: 500 mg. (Eating fresh, raw pineapple may be less expensive.)

Source: Health-food store.

Functions: Aids stomach digestion of proteins and reduces swelling and discomfort in painful joints.

CHROMIUM PICOLINATE—Measured in milligrams (mg).

Supplementary dosage: 200 mcg. (Chromium may be obtainable in multivitamin-mineral supplements at a lower overall cost.)

Sources: Health-food store. Trace minerals are abundant in certain seaweeds.

Functions: The trace mineral, chromium, is required for the body to make insulin. It also contains hydroxylcitric acid, which helps keep body weight down.

COENZYME B_{12}—Measured in micrograms (mcg).

Supplementary dosage: 250 mcg. (It would be cheaper to just make sure you have enough stomach acid, or take lemon with the B_{12}. If there is enough B_6 and cobolt, the body will make its own B_{12}!)

Source: Health-food store.

Functions: B_{12}, an important vitamin, is made into coenzyme B_{12}; but B_{12} is not always absorbed, due to inadequate hydrochloric acid. Coenzyme B_{12} is absorbed more easily than B_{12}.

COENZYME Q_{10} (CoQ_{10})—Measured in milligrams (mg).

Supplementary dosage: 15-30 mg / TDA 90 mg.

Source: Health-food store.

Functions: Needed by heart for proper operation. Helps convert fat into energy. CoQ_{10} is in the mitochondria of all body cells. CoQ_{10} carries into the cells the protons and electrons used to produce ATP, the primary source of cell energy. This is a constant process because only a small supply of ATP is stored at any one time.

Deficiency symptoms: Shortness of breath, chest pain, low energy, heart trouble. An 80-year-old has half the CoQ_{10} levels of a 20-year-old.

CRANBERRY JUICE EXTRACT—Measured in milligrams (mg).

Supplementary dosage: 500 mg. (Cranberry juice would be less expensive.)

Sources: Health-food store. Cranberries.

Functions: Cranberry juice protects the urinary tract from harmful bacterial which can be there.

DEGLYCERINATED LICORICE (DGL)—Measured in milligrams (mg).

Supplementary dosage: 500 mg.

Source: Health-food store. This is licorice, with the glycyrrhizin removed. Glycyrrhiza can affect blood pressure.

Functions: Licorice promotes healing of the stomach.

GERMANIUM SESQUIOXIDE—Measured in milligrams (mg).

Supplementary dosage: 50-250 mg.

Sources: Health-food store. Trace minerals are abundant in certain seaweeds.

Functions: Germanium helps the whole immune system. It stimulates immune cells, including T cells.

GINGER—Measured in milligrams (mg).

Supplementary dosage: 250 mg. This can be purchased less expensively in herbal (whole) form.

Source: Health-food store.

Functions: Helps the body produce enzymes which help the stomach digest proteins.

GINKGO BILOBA—Measured in milligrams (mg).

Supplementary dosage: 40-60 mg. (50 pounds) of the ginkgo biloba herb is used to make 1 pound of the extract used in supplements.

Sources: Health-food store. Ginkgo can also be purchased from herb companies.

Functions: Strengthens and supports blood vessels and helps keep them flexible and resilient.

GLUCOSAMINE SULFATE (or Glucosamine hydrochloride)—Measured in milligrams (mg).
Supplementary dosage: 500 mg.
Source: Health-food store.
Functions: Needed to build cartilage, ligaments, tendons and joint fluid. It also helps lubricate areas around a joint. Used by the body to reduce joint tenderness and regain mobility in damaged joints.

GRAPE SEED EXTRACT—Measured in milligrams (mg).
Supplementary dosage: 5 mg.
Sources: Health-food store. Or chew or grind up grape seeds and swallow them.
Functions: This is probably the most powerful antioxidant known at this time. Antioxidants fight free radicals, and thus lengthen your life.
Other good antioxidants include: Vitamin E, beta-carotene (provitamin A), milk thistle, coenzyme Q_{10}.

HAWTHORN—Measured in milligrams (mg).
Supplementary dosage: Not established
Source: Health-food store.
Functions: Has high concentrations of flavonoids, which promote metabolic processes of the heart.

HYPERICUM (St. John's Wort)—Measured in milligrams (mg).
Supplementary dosage: 450 mg. This is the herb, St. John's wort, which can be purchased less expensively in herbal form.
Source: Health-food store.
Functions: Helps prevent breakdown of neurotransmitters, so the brain works better.

IRON CHELATE—Measured in milligrams (mg).
Supplementary dosage: 18 mg.
Source: Health-food store.
Functions: Provides a more easily absorbed iron source, which causes fewer side effects.

L-ARGININE—Measured in milligrams (mg).
Supplementary dosage: 500 mg / TDA 1000 daily.. (Taking oat bran would probably accomplish the same cholesterol task more inexpensively.)
Source: Health-food store.
Functions: L-arginine is a precursor to nitric oxide, which inhibits cholesterol build-up in the arteries. Also aids normal blood pressure.

L-CARNITINE—Measured in milligrams (mg).
Supplementary dosage: 125-250 mg.
Sources: Health-food store. Eggs and green, leafy vegetables (but less).
Functions: L-carnitine is needed for proper metabolism of fatty acids. Helps transport fatty acids into muscle cells.

L-TYROSINE—Measured in milligrams (mg).
Supplementary dosage: 500 mg. This is an essential amino acid and is probably obtainable more inexpensively from brewer's yeast or other higher protein sources.
Source: Health-food store.
Functions: Overcomes fatigue, needed for brain chemicals associated with alertness.

MAGNESIUM CHELATE—Measured in milligrams (mg).
Supplementary dosage: 200 mg.
Source: Health-food store.
Functions: Helps maintain a strong heartbeat. Works closely with calcium and potassium in protecting the heart.

MELATONIN—Measured in milligrams (mg).
Supplementary dosage: 1-5 mg.
Source: Health-food store.
Functions: Melatonin is a hormone, produced by the pineal gland, which is associated with natural body rhythms and sleep / wake patterns.
Cautions: Do not use if you have an autoimmune disease or a depressive disorder.

MILK THISTLE—Measured in milligrams (mg).
Supplementary dosage: 100 mg.
Source: Health-food store. Less expensive when obtained as an herb.
Functions: Milk thistle contains silymarin, which protects the liver against pollutants. It helps inhibit the amount of toxins which can penetrate cell walls of the liver. It also helps the liver produce and maintains healthy cells while promoting better antioxidant levels in the liver. It is also an antioxidant.

QUERCETIN—Measured in milligrams (mg).
Sources: Health-food store. Quercetin is one of the bioflavonoids (vitamin P). The bioflavonoids can be obtained in food and are important for physical health.
Functions: Quercetin helps the body block the allergic response of coughing, breathing difficulties, clogged sinuses, and related reactions.

PYCNOGENOL—Measured in milligrams (mg).
Supplementary dosage: ODA 50 mg / TD 100 mg.
Source: Health-food store.
Functions: This is another powerful antioxidant substance; and it is extracted from an evergreen tree in Northwest U.S.

SOY ISOFLAVONES—Measured in milligrams (mg).
Supplementary dosage: 500 mg. (Eating soybeans would be less expensive, although perhaps not as potent.)
Source: Health-food store.
Functions: These are phytochemicals which mimic the activity of estrogen in the body, without the negative effects of taking estrogen.

WILD YAM—Measured in milligrams (mg).
Supplementary dosage: 200 mg. (The herb would be less expensive.)
Source: Health-food store.
Functions: Wild yam contains a natural precursor to progesterone. It can be taken in capsules or in salve which can be rubbed on the abdomen. It works very well for a number of female problems. Another herb, dong quai, works well with it.

5 - SPECIAL FOODS

VEGETABLE OILS: In contrast, we will first consider animal fats. A triglyceride is a saturated fat because the carbon molecules in the fatty acids are "saturated" with all the hydrogen molecules they can carry. These animal fats (butter, lard, tallow) are semi-solid to solid at room temperature. They should never be eaten!

In contrast, unsaturated fats are typically liquid at room temperature and are therefore often referred to as oils. Most vegetable oils primarily consist of unsaturated fats. But many of them are rendered dangerous during processing. This is done by "hydrogenating" them. During the manufacture of margarine and shortening, a hydrogen molecule is added to the vegetable oil's fatty acid molecules, to make it more saturated. The result is "hydrogenation," which changes them from *"cis fatty-acids"* to *"trans fatty acids."* They have become *"trans-fat."* (Butter is essentially the same as margarine, and just as problematic for the body.)

Here is part of what these trans-fats can do to you: heart disease, harmful cholesterol levels, abnormal sperm production, increased likelihood of cancer, diabetes, obesity, prostate disease, decreased testosterone in men, low quality and volume of breast milk, low birth weight infants, and immune suppression.

Thus, neither animal fats nor hydrogenated oils should be used. They cause cardiovascular disease, clogged arteries, and strokes.

Next, let us consider non-hydrogenated oils. There are two types of vegetable oils: Cooking oils and medicinal oils. The best *cooking oil* is olive oil. It is composed chiefly of oleic acid, a monounsaturated oil that is more resistant to the damaging effects of heat and light than are the *highly polyunsaturated oils* (like corn, soy oil, and safflower oil). When polyunsaturated oils are exposed to heat or light, their chemical structure is changed to toxic derivatives which are known as lipid peroxides.

In contrast, *medicinal oils* contain gamma-linolenic acid (evening primrose oil, borage oil, and black current oil), or alpha-linolenic acid (flaxseed oil). These oils do not hold up well when exposed to heat; *but they are the very best oils you can take into your body!* Of them, flaxseed is the least expensive and also the richest in Omega-3 while still containing a balanced amount of the very much needed Omega-6. This *Encyclopedia* highly recommends flaxseed oil.

FLAXSEED OIL: Researchers have found raw, cold-pressed flaxseed oil to be the best nutritional oil you can place in your body. Suggested dosage is 1,000 mg daily. It is the richest plant source of Omega-3 fatty acids. The essential fatty acids help produce hormone-like substances needed for proper functioning of muscular, nervous, cardiovascular, and immune systems. Omega-6 comes from mostly good vegetable oils and eggs; Omega-3 is best found in flaxseed oil.

You can take a few capsules with each meal, along with other oils in your diet. But a better way is to use flaxseed oil alone. Here is how to do this: Purchase a quart of *Barlean's Flaxseed Oil;* and immediately pour some into a small pint jar. Put it into the refrigerator and put the larger container in the freezer. During your meal, pour a little oil into a tablespoon; and either pour it on your plate of food or put it directly into your mouth with some other food. Occasionally refill the small jar (after cleaning it) from the larger one, shaking it first in order to stir up the lignins. You are eating the best oil in the world; and it can only help you. Eat 2-4 tablespoons of it daily and no other fatty acid in any form. Barlean's also contains natural, brown lignins (the dark stuff at the bottom), which are excellent for lowering cholesterol and preventing gallstones.

CHLORELLA AND SPIRULINA: *Chlorella* is a tiny, single-celled water-grown alga filled with chlorophyll, plus protein (58%), carbohydrates, all of the B vitamins, vitamins C and E, and rare trace minerals. It is nearly a complete food and contains more B_{12} than liver. Chlorella is one of the few edible species of water-grown algae. Very high in RNA and DNA, it protects against ultraviolet radiation, and cleanses the bloodstream. It is an excellent source of protein. Take 1 teaspoon or 4 tablets, 1-2 times daily. This outstanding "green food" algae is grown in purified freshwater which contains all essential vitamins (except D), plus alpha-linolenic acid.

Spirulina is another waterborne microalgae. It produces 20 times as much protein as soybeans, grown on an equal amount of land. Spirulina contains as astounding array of nutrition: gamma-linolenic acid, vitamin B_{12}, iron, 60%-70% protein, RNA and DNA, chlorophyll, and phycocyanin (a blue-green pigment which protects against cancer). It increases mineral absorption, protects the immune system, reduces cholesterol, curbs the appetite, and stabilizes blood sugar.

GARLIC: This amazing food has helped people for thousands of years, and (especially raw or in supplement form) should be eaten daily. Garlic aids digestion, lowers blood pressure, thins the blood by keeping platelets from clumping (reducing risk of blood clots and helping prevent heart attacks). It is a natural antibiotic (probably the best among all foods) and stimulates the immune system. It lowers serum cholesterol levels and helps in the recovery from bacterial disease.

It can be used to treat fungal infections (athlete's foot, candidiasis, yeast vaginitis), which can be so hard to eliminate. It reduces arthritis, circulation problems, and certain viruses (such as fever blisters, a type of influenza, the common cold, genital herpes, and smallpox). During World War I, it was used to treat wounds and infections, to prevent gangrene.

To make garlic oil, wash your hands well, peel whole garlic cloves, rinse them, and place them in a quart of olive oil. This will prevent mold from forming. Keep the oil refrigerated; it will last a month. Add it to salad dressings and put in on your food. The active ingredient, *allicine,* is destroyed by heat.

KELP AND DULSE: Nova Scotia dulse and Norwegian kelp are the best natural sources of trace minerals you can find. Both are types of seaweed which can be eaten raw, in leaf form, or ground into powder. Sprinkling a little on your food (about a teaspoonful twice a day) will provide both salt and vital trace minerals. It is also a good source of protein. Excess minerals will be excreted in the skin or urine. California kelp is not as good a product for nutritional purposes; however, it is useful as a fertilizer, to enrich the soil.

LECITHIN: Lecithin primarily consists of choline, plus linoleic acid and inositol. Most lecithin is derived from soybeans. It is a type of lipid needed by every cell in the body; it is especially important in the brain and entire nervous system, where it coats nerve fibers.

Most commercial lecithin contains only 10%-20% phosphatidylcholine; but some newer preparations contain up to 98%. These are the best ones to use when large doses are needed to treat disease.

Lecithin helps prevent cardiovascular disease and arteriosclerosis; improves brain function, and promotes energy. It aids absorption of thiamine by the liver and vitamin A by the intestines, and repairs liver damage caused by alcoholism. An extremely important function is its ability to enable fats (in-

cluding cholesterol) to be dispersed in water, so they can be removed from the body. Sprinkle 2 tablespoons of lecithin on cereals or soups, or add it to juices or breads. The best kind of lecithin to use is granulated rather than liquid. If you want to spend more money, buy capsules.

BREWER'S AND TORULA YEAST: This is a remarkably rich source of many vitamins and minerals, plus easily absorbed protein. Both contain all the B vitamins (except B_{12}), 16 amino acids, and 14 minerals.

Brewer's yeast is grown on hops; and *torula yeast* is grown on blackstrap molasses or wood pulp. Never use live yeast (called baker's yeast). Because the yeast cells are still alive, they absorb B vitamins in your body. Nutritional yeast is useful in treating eczema, gout, heart disorders, nervousness, and fatigue. It helps control sugar metabolism. It is best to avoid all types of yeast if you have a problem with candidiasis. Because it has large amounts of phosphorus, additional calcium should be taken; however, yeast should be avoided in cases of osteoporosis.

BLACKSTRAP MOLASSES: This is another wonderful substance which you will want to add to your diet. There are several steps in the processing of sugar (either from sugar beets or from sugar cane). The final result is pure white sugar crystals which, because they are totally devoid of vitamins and minerals, are dangerous to eat (because they absorb minerals out of your body). But earlier production stages include molasses, which has some vitamins and minerals, and blackstrap molasses, which is even richer. Add a spoonful to your meal, and you will be the healthier for having done so. Blackstrap molasses is an excellent source of choline, inositol, and calcium. It is an outstanding supplement.

FIBER: Fiber is cellulose. It is needed in the body to help lower blood cholesterol, stabilize blood sugar levels, remove toxic metals from the body. It prevents constipation, colon cancer, obesity, hemorrhoids, and a variety of other problems. Processed foods lack fiber, while whole natural foods have it. If you are not getting enough fiber gradually add some (such as bran) until your bowel movements are the right consistency. Excessive amounts of fiber may decrease the absorption of iron, calcium, and zinc. Take supplemental fiber separately from other medications or supplements, since it can lessen their effectiveness. Make sure there are high-fiber foods in your diet, such as whole-grain cereals and breads, brown rice, bran, dried prunes, nuts, seeds (especially flaxseed), beans, and fresh raw fruit and vegetables.

GREEN PAPAYA: This is a very good source of vitamins, minerals. It especially contains the papain enzyme which helps digest proteins, carbohydrates, and fats. Papain, in your stomach, has very powerful digestive activity and will help you digest your meals. You can either eat the fresh fruit or take a powdered supplement.

OLIVE LEAF EXTRACT: This remarkable herbal supplement is effective against nearly all the viruses and bacteria. It helps protect against infection by influenza, herpes, and other viruses. It is used to deal with sore throat, rashes, skin diseases, sinusitis, pneumonia, and chronic infections. It is good for bacterial infections, and even stubborn fungal infections.

6 - ANTIOXIDANTS

Although essential to life, oxygen is very active and combines with many compounds in our body. Some of them can cause damage. During cellular respiration (which produces needed energy), some oxygen molecules are converted into free radicals which are oxidizing agents. Because they are unstable, these radicals try to combine with other compounds which can be damaging to the body. You need to obtain antioxidants and avoid free radicals.

Some of the free radicals you want to avoid: unsaturated fat in your diet, cigarette smoke (active and passive), heavy metals (mercury, cadmium, lead, etc.), hydrogen peroxide, ozone and nitrous oxide (primarily from car exhaust), excessive exposure to the sun, cosmic rays, medical X-rays, and a number of other chemicals and compounds in food, water, and air.

Antioxidant nutrients: Antioxidants destroy free radicals. Vitamins, enzymes, and certain minerals act as antioxidants in your body. Here are some of these antioxidant nutrients which it would be well to include in your diet: vitamins C, E, A, the carotenoids (alpha-carotene, beta-carotene, lycopene, lutein, and zeaxanthin), flavonoids, vitamin B_3 in the form of niacin, vitamin B_2, vitamin B_6, coenzyme Q_{10}, cysteine, silymarin, and pycnogenol.

Herbs which act as antioxidants: These also help eliminate free radicals in your body: garlic, bilberry, burdock, turmeric (which contains curcumin), grape seed extract, pine bark extract, and ginkgo biloba.

Substances made within the body which fight free radicals: glutathione and melatonin. There are also several others.

Two important minerals which act as antioxidants in the body: selenium (working with vitamin E) and zinc.

7 - ENZYMES

Enzymes are catalysts, which are substances that precipitate and hasten hundreds of thousands of biochemical reactions in the body. Without enzymes, these reactions would take place too slowly to sustain life. Enzymes are not destroyed or exhausted during these reactions. Each enzyme has a specific function which no other enzyme can fulfill. The substance an enzyme acts upon is called a *substrate*.

There are two types of enzymes, digestive and metabolic. *Digestive enzymes* are produced in the stomach and small intestines. The three main types are *amylase, protease, and lipase.* These break down carbohydrate, protein, and fat.

Metabolic enzymes catalyze various chemical reactions within the cells, such as energy production, construction of new parts, and detoxification. They work within the blood, organs, and tissues. Each body part has its own set of enzymes. The whole thing is mind-boggling; yet, without each of those millions of enzymes, you could not exist. People who desire a proof that God exists and made our bodies need only consider the enzymes. There is no way that they could have been made by the random changes of so-called evolution. There are literally hundreds of thousands of different enzymes; yet each one is important and vital to life. Each enzyme is made of a different, complicated protein formula. Yet research scientists have discovered that so-called "evolution" (random action over a period of many years) could not produce even one protein molecule in billions and billions of years, much less all the different types of protein

in your body.

While the body manufactures many enzymes, it also gets others from food. *—And those are the ones which you can safely eat in order to improve digestion:* Avocados, papayas, pineapples, bananas, and mangoes are all high in enzymes. Pineapples (bromelain) and unripe papaya (papain) are excellent sources. Both bromelain and papain are *proteolytic enzymes* which break down proteins.

Many fat-containing foods contain lipase, an enzyme which helps break down fat in your intestines.

Superoxide dismutase is an important enzyme which is found in broccoli, brussels sprouts, cabbage, and most dark green leaves.

Enzymes require the help of *coenzymes* to do their work. Among the most important are the B vitamins, vitamins C and E, and zinc.

Most commercial enzyme products are made from animal enzymes, such as *pancreatin* and *pepsin*. The problem here is that you will be eating raw meat which may contain mad cow disease or other animal diseases.

Fortunately a number of excellent, and very safe, enzymes are available from plant sources; these include *lipase, amylase, protease, cellulase, glucoamylase, invertase, lactase,* as well as other enzymes. Bromelain and papain are also excellent, plant-based digestive enzymes.

8 - NUTRIENT THIEVES

Here is a partial list of substances which rob your body of important nutrients. Nearly all of them are purchased at your local drugstore. After the dash are listed robbed vitamins and minerals. If you take any of the following deleterious substances, you would do well to take extra amounts of the stolen nutrients.

Allopurinol (zyloprim) – Iron
Antiacids – B complex, vitamins A, C, calcium, phosphorus
Antibiotics – B complex, vitamin K, friendly colon bacteria
Antihistamines – Vitamin C
Aspirin – B complex, vitamins A, C, folic acid, calcium, potassium, iron
Barbiturates – Vitamin C
Beta-blockers (Corgard, Inderal, Lopressor, etc.) – Pantothenic acid, choline, chromium
Caffeine – Vitamin B_1, biotin, inositol, potassium, zinc
Carbamazepine (Atretol, Tegretol) – Sodium
Chlorthiazide (Aldoclor, Diuril, etc.) – Potassium, magnesium
Cimetidine (Tagamet) – Iron
Clonidine (Catapres, Combipres) – B complex, vitamins, calcium
Corticosteroids – Vitamins A, B_6, C, and D, calcium, potassium, zinc
Digitalis (Crystodigin, Digoxin, etc.) – Vitamins B_1, B_6, zinc
Diuretics – Vitamins B_2, C, calcium, potassium, magnesium, iodine, zinc
Estrogen preparations – Vitamin B_6, folic acid.
Ethanol (alcohol) – Vitamins C, D, E, K, B complex, magnesium
Flouride – Vitamin C
Glutethimide (Doriden) – Vitamin B_6, folic acid
Guanethidine (Esimil, Ismelin) – Vitamins B_2, B_6, potassium, magnesium
Hydralazine (Apresazide) – Vitamin B_6
Indomethacin (INH, etc.) – Niacin, vitamin B_6
Laxatives (not including herbal) – Vitamins A, K, potassium
Lidocaine (Xylocaine) – Calcium, potassium
Nitrate / nitrite coronary vasodilators – Vitamins C, E, niacine, pangamic acid, selenium
Oral contraceptives – B complex, vitamins C, D, and E.
Penicillin – Vitamin B_6, niacin, niacinamide
Phenobartial – Vitamins B_6, B_{12}, D, K, folic acid
Phenylbutazone (Cotylbutazone) – Folic acid, iodine
Phenytoin (Dilantin) – Vitamins B_{12}, C, D, K, folic acid, calcium
Prednisone (Deltasone, etc.) – Vitamins B_6, C, potassium, zinc
Quinidine – Vitamin K, pantothenic acid, potassium, choline
Reserpine – Vitamins B_2, B_6, potassium, phenylalanine.
Spironolactone (Aldactone, etc.) – Folic acid, calcium.
Sulfa drugs – Para-aminobenzoic acid, friendly bowel bacteria
Synthetic neurotransmitters – Vitamins B_2, B_6, potassium, magnesium
Thiazide diuretics – Vitamin B_2, potassium, magnesium, zinc
Tobacco – Vitamins A, C, E
Triamterene (Dyrenium) – Folic acid, calcium
Trimethoprim (Bactrim, Septra, etc.) – Folic acid

9 - THESE THREE CAN KILL YOU

According to statistics, most deaths in the United States do not occur in the home: 80% of all deaths occur in the hospital; 70% who die each year are over age 65 and 5% are under age 15.

A 1985 health report disclosed that 50% of all deaths and illnesses are either unnecessary or premature. **After studying the most prevalent deaths in the U.S., the Carter Center at Emory University concluded that a healthy lifestyle is twice as effective as medical technology at increasing life expectancy.**

The number one cause of premature death is ***cigarette smoking***: 360,000 deaths each year are directly attributable to smoking. Most occur as heart attacks, strokes, diabetes, cancer, and chronic lung disease. Tobacco is the most deadly carcinogen known, with an estimated 6,000 chemicals (most are poisonous) in cigarette smoke.

Alcohol ranks second in causing death, causing 75,000 per year in the U.S. Of that number, about 20,000 are due to illness. 24,000 are due to motor vehicle accidents. And 32,000 are due to falls, fires, drownings, homocides, and suicides.

It is estimated that 80% of middle-aged men have excessively ***high cholesterol*** levels, primarily from eating meat. The chance of dying from heart disease rises as the amount of blood cholesterol increases: It is 29% if a person has 182-202 mg. cholesterol. From 203-220 mg., the risk is 73%. From 221-244 mg., the odds skyrocket to 121%. As of 1986, the average cholesterol level among middle-aged U.S. men and women is about 215 mg. Heart attacks rarely occur if the cholesterol level is less than 150 mg.

—And now: how to live longer! Please turn the page.

10 - YOUR HEART ATTACK RISK

Take this heart health evaluation to determine your risk for cardiovascular disease. In each category circle the one number which reflects your lifestyle:

Cigarette Smoking

Never smoked or inhaled secondhand smoke	0
Quit smoking 3 or more years	1
Don't smoke, but exposed to secondhand smoke	2
Stopped smoking within the past 3 years	3
Smoke regularly	4
Smoke regularly and exposed to secondhand smoke	5

Total Blood Cholesterol

Lower than 160	1
160-199	2
Don't know	3
200-239	4
240 or higher	5

HDL "Good" Cholesterol

60 or higher	1
56-60	2
Don't know	3
35-55	4
Lower than 35	5

Systolic Blood Pressure

Lower than 120	1
120-139	2
Don't know	3
140-159	4
160 or higher	5

Excess Body Weight

Within 10 pounds of desirable weight	1
11-20 pounds above desirable weight	2
21-30 pounds above desirable weight	3
31-50 pounds above desirable weight	4
More than 50 pounds above desirable weight	5

Physical Activity

Job requires very hard physical labor at least 4 hours per day *OR* exercise 4 or more times per week for 20 or more minutes	1
Exercise 3 times per week for 20 minutes	2
Job requires walking, lifting, carrying, or other moderately hard work for several hours per day *OR* spend much leisure time doing moderate activities (gardening, walking, housework, etc.) *OR* exercise 1-2 times per week	3
Occasionally exercise	4
Never exercise	5

Heredity

No known history of heart disease among relatives	1
One relative with heart disease after age 60	2
Two relatives with heart disease after age 60	3
One relative with heart disease before age 60	4
One relatives with heart disease before age 60	5

Age

10-20 years	1
21-30 years	2
31-40 years	3
41-50 years	4
51 or more years	5

Eating Habits

Vegetarian or rarely eats meat and dairy products	1
Eats meat and low-fat milk fewer than 6 times per week	2
Eats most lean meat and low-fat milk 6-12 times per week	3
Eats meat, cheese, eggs, and whole milk 12-24 times per week	4
Eats meat, cheese, eggs, and whole milk over 24 times per week	5

For your Total Score:

Add the numbers you circled to get your total score, which is an estimate. Neither a high nor low score indicates that you will or will not have a heart problem. ***If your Total Score was***

9-21 - your heart attack risk is **low**
22-33 - your heart attack risk is **moderate**
34-45 - your heart attack risk is **high**

11 - HOW LONG WILL YOU LIVE?

This life-expectancy quiz is typical of questionnaires used by insurance companies. Of course, it cannot be 100% accurate. But, though exceptions exist (and barring sudden accidents), it is likely that your predicted life span may be somewhere in that range.

You will start with the number **74**. So write down that number at the top of a sheet of paper. If you are a male, **subtract 2**. If a female, **add 4**. If you live in an urban area of over 2 million people, **subtract 2**. If you live in a rural area with a population under 10,000, **add 2**. If any grandparent lived to be 85, **add 2**. If all four grandparents lived to be 80, **add 6**. If either parent died of a stroke or heart attack before the age of 50, **subtract 4**. If any immediate relative (parent, brother, sister) under 50 has—or had—cancer or a heart condition, or has had diabetes since childhood, **subtract 3**. If you earn over $50,000 a year, **subtract 2**. If you finished college, **add 1**. If you have a graduate or professional degree, **add 2 more**. If you live with a spouse or friend, **add 5**. If not, **subtract 1** for every 10 years alone, since age 25. If you work behind a desk, **subtract 3**. If your work is physically demanding, **add 3**. If you exercise 3-5 times a week for at least 30 minutes, **add 4**. If you exercise twice a week, **add 2**. If you sleep more than 10 hours per night, **subtract 4**. If you are generally relaxed and easygoing, **add 3**. If you are generally happy most of the time, **add 1**. If you are generally unhappy most of the time, **subtract 2**. If you smoke a pack of cigarettes a day, **subtract 7**. If you smoke 2 packs or more a day, **subtract 8**. If you smoke half-a-pack a day, **subtract 3**. If you drink more than 1½ oz. of liquor a day, **subtract 1**. If you are overweight by 10-30 pounds, **subtract 2**. If overweight by 30-50 pounds, **subtract 4**. If overweight by 50 pounds or more, **subtract 8**. If you are between 30-40, **add 2**. If you are between 40-50, **add 3**. If you are between 50-70, **add 4**. If you are over 70, **add 5**.

Your Total Score will be the estimated number of years you may live. **But there is more:** ***You are likely to live even longer if your*** blood pressure is less than 130 / 75 and your cholesterol is less than 200. Your resting pulse rate is less than 60 beats per minute, with no breathing problems, asthma, or history of chronic illness. You presently live with a pet and still work after age 62. You are a light eater, do not skip breakfasts, and have social contacts besides your spouse.

Your Life is likely to be shorter if your blood pressure is greater than 140 / 90 and your cholesterol greater than 200. It take a long time to recover after exercise. You are anemic and suffer illnesses more than the average person your age. Also you are easily winded, with a resting pulse rate greater than 80 beats per minute. You are a heavy eater, skip breakfasts, and have no social contacts besides your spouse.

The Natural Remedies Encyclopedia

Healing Herbs and How to Use Them

This chapter provides you with a complete, working guide to the use of herbs, and their healing power.

At the back of this Encyclopedia, you will find a list of herbal supply companies (806-807).

CONTENTS

1 - INDEX TO 126 IMPORTANT HERBS 107

2 - PURCHASING HERBS 109
Deciding what you want to buy.

3 - GATHERING HERBS 109
When to get them in fields and woods.

4 - DRYING HERBS 109
How to dry them properly.

5 - STORAGE OF HERBS 109
How to store herbs for later use.

6 - THE PREPARATION OF HERBS 109
There are five different ways herbs can be prepared for use. Select the one that best fits your situation. Here is how to do it.

7 - IMPORTANT FACTS ABOUT HERBS 110
Basic facts which will greatly help you use herbs more effectively for your physical needs.

8 - TYPES OF HERBAL APPLICATIONS 112
Six basic ways herbs are applied.

9 - TWENTY-TWO USEFUL POULTICES 112
Some of the most useful poultices and how to prepare them.

10 - TWENTY ESSENTIAL OILS 113
The most-used of these special oils.

11 - HERBAL PROPERTIES 114
How to find the type of herb you need right now. Choosing the right herb from among the 48 different herbal functions.

12 - *HERBS YOU WILL USE THE MOST* 117
Basic herbs for your herbal shelf.

13 - *THE 126 MOST IMPORTANT HERBS* 118
All the basic information you need: name, part of plant, body parts affected, preparation, amount given, purposes, warnings.

1 - INDEX TO THE 126 MOST IMPORTANT HERBS

Agrimony *(Agrimonia eupatoria)* 118
Alfalfa *(Medicago sativa)* 118
Aloe Vera *(Aloe vera. var. officinalis)* 118
Angelica *(Angelica archangelica)* 119
Astragalus *(Huang chi)* 119
Barberry *(Berberis vulgaris)* 119
Bayberry *(Myrica cerifera)* 120
Bistort *(Polygonum bistorta)* 120
Blackberry *(Rubus villosus)* 120
Black Cohosh *(Cimicufuga racemosa)* 120
Black Haw *(Viburnum prunifolium)* 121
Black Walnut *(Juglans nigra)* 121
Blessed Thistle *(Cerbenia benedicta)* 121
Blue Cohosh *(Caulophyllum thalictroides)* 121
Boneset *(Eupatorium perfoliatum)* 122
Buchu *(Barosma betulina)* 122
Buckthorn *(Rhamnus frangula)* 122
Bugleweed *(Lycopus virginicus)* 122
Burdock *(Arctium lappa)* 123
Calendula *(Calendula officinalis)* 123
Cascara Sagrada *(Rhamnus purshiana)* 123
Catnip *(Nepata cataria)* 124
Cayenne *(Capsicum anuum)* 124
Celery, Wild *(Apium graveolens)* 124
Chamomile *(Matricaria chamomilla)* 124
Chaparral *(Larrea divaricata)* 125
Charcoal *(Carbon)* 125
Chickweed *(Stellaria media)* 125
Cleavers *(Galium aparine)* 126
Cloves *(Caryophyllus aromaticus)* 126
Coltsfoot *(Tussilago farfara)* 126
Comfrey *(Symphytum officinale)* 126
Corn Silk *(Zea mays)* 127
Cramp Bark *(Viburnum opulis)* 127

Dandelion *(Taraxacum officinale)* 127
Devil's Claw *(Harpagophytum procumbens)* 128
Dong Quai *(Angelica siensis)* 128
Echinacea *(Echinacea angustifolia)* 128
Elder *(Sambucus nigra)* 128
Elecampane *(Inula heminum)* 129
Eyebright *(Euphrasia officinalis)* 129
False Unicorn *(Chamailirium luteum)* 129
Fennel *(Foeniculum vulgare)* 130
Fenugreek *(Trigonella foenum graecum)* 130
Flaxseed *(Linum usitatissimum)* 130
Fo-Ti *(Polygonum multiflorum)* 130
Garlic *(Allium sativum)* 130
Gentian *(Gentiana lutea)* 131
Ginger *(Zingiberis officinalis)* 131
Ginseng *(Panax ginseng)* 131
Goldenseal *(Hydrastis canadensis)* 132
Gotu Kola *(Centella asiatica)* 132
Gravel Root *(Eupatorium purpureum)* 132
Hawthorn *(Crataegus oxycantha)* 133
Hops *(Humulus lupulus)* 133
Horehound *(Marrubium vulgare)* 133
Horseradish *(Cochleria armoracia)* 133
Horsetail *(Equisetum arvense)* 134
Hyssop *(Hyssopus officinalis)* 134
Irish Moss *(Chondrus crispus)* 134
Juniper Berries *(Juniperus communis)* 134
Kelp *(Fucus vesiculosus)* 135
Lady's Slipper *(Cypredium pubescens)* 135
Lemon Balm *(Melissa officinalis)* 135
Licorice Root *(Glycyrrhiza glabra)* 135
Lobelia *(Lobelia inflata)* 136
Lungwort *(Pulmonaria officinalis)* 136
Mandrake *(Podophyllum peltatum)* 136
Marshmallow *(Althea officinalis)* 136
Motherwort *(Leonurus cardiaca)* 137
Mugwort *(Artemisia vulgaris)* 137
Mullein *(Verbascum thapsus)* 137
Myrrh *(Commiphora myrrha)* 138
Nettles *(Urtica urens)* 138
Oat Straw *(Avena sataiva)* 138
Olive *(Olea europaea)* 138
Onion *(Allium cepa)* 139
Oregon Grape Root *(Berberis aquifolium)* 139
Parsley *(Petroselinum sativum)* 139
Passionflower *(Passifloria incarnata)* 140
Pau D' Arco *(Tabebuia)* 140
Pennyroyal *(Hedeoma pulegioides)* 140
Peppermint *(Mentha piperita)* 140
Pipsissewa *(Chimaphila umbellata)* 140
Plantain *(Plantago major, and lanceolata)* 141
Pleurisy Root *(Asclepias tuberosa)* 141
Prickly Ash *(Zanthoxylum americanum)* 141
Psyllium *(Plantago psyllium)* 142
Pumpkin Seed *(Curcubita pepo)* 142
Quassia *(Picraena excelsa)* 142
Raspberry *(Rubus strigosus)* 142
Red Clover *(Trifolium pratense)* 143
Rue *(Ruta graveolens)* 143
Sage *(Salvia officinalis)* 143
Sarsaparilla *(Smilax ornata)* 143
Sassafras *(Sassafras officinale)* 144
Saw Palmetto *(Serenoa serrulata)* 144
Senna *(Cassia acutifolia)* 144
Shavegrass—*see Horsetail* 134
Shepherd's Purse *(Capsella bursa-pastoris)* 145
Skullcap *(Scutellaria lateriflora)* 145
Slippery Elm *(Ulmus fulva)* 145
Spearmint *(Mentha viridis)* 146
Spikenard *(Aralia racemosa)* 146
Squaw Vine *(Mitchella repens)* 146
St. John's Wort *(Hypericum perforatum)* 146
Stoneroot *(Collinsonia canadensis)* 147
Tansy *(Tanacetum vulgare)* 147
Tea Tree *(Melaleuca alternifolia)* 147
Thyme, Garden *(Thymus vulgaris)* 147
Thyme, Mother of *(Thymus serpyllum)* 148
Uva Ursi *(Arctostaphylos uva ursi)* 148
Valerian *(Valeriana officinalis)* 148
Vervain, Blue *(Verbena officinalis)* 148
White Oak Bark *(Quercus alba)* 149
White Pine *(Pinus strobus)* 149
White Willow *(Salix alba)* 149
Wild Cherry Bark *(Prunus serotina)* 149
Wild Yam *(Dioscorea villosa)* 150
Wintergreen *(Gaultheria procumbens)* 150
Witch Hazel *(Hamamelis virginiana)* 150
Wood Betony *(Betonica officinalis)* 150
Wormwood *(Artemisia absinthium)* 151
Yarrow *(Achillea millefollum)* 151
Yellow Dock *(Rumex crispus)* 151
Yerba Santa *(Erlodictyon californicum)* 152

2 - PURCHASING HERBS

Try to locate the best sources (a list of herbal sources is at the back of this *Encyclopedia*). Do you want the flowers, leaves, seeds, berries, barks, resins, or roots? What form do you want the herb in: whole form (all of the leaves together, not cut up, etc.), pieces, or powdered?

3 - GATHERING HERBS

Collect herbs in clear, dry weather and in the morning, after the dew has disappeared.

Leaves—Gather the leaves as soon as fully matured, just before the flowers appear, just before they fade, or at the maturing of the fruit. (Biennials do not perfect their leaves until the second year.)

Stems—Cut herbaceous stems after the foliage appears, but before the blossoms develop. Cut ligneous (woody) stems in the autumn, after the foliage falls.

Stalks—Collect stalks in the autumn.

Twigs—Collect twigs in the autumn.

Bulbs—Gather bulbs after the new bulb is developed, just before the leaves decay.

Rhizomes and roots—Gather the roots of *annual plants* just before they flower. Gather the roots of *biennial plants* soon after the leaves have fallen in the autumn of the first year. Gather the roots of *perennials* in the autumn, after the leaves and flowers have fallen, or in the spring, before vegetation begins.

Barks—Gather barks in the spring, before flowering season begins, or in the fall, after the foliage has fallen. Separate and discard all decaying matter. Only use the inner bark of the slippery elm.

Flowers—Gather flowers when they are about to open from the bud. But if it is the buds that you want, gather the buds when they are nicely formed.

Berries, Fruits, and Seeds—Gather them when they are fully mature and ripe.

Aromatic Plants—Peppermint, Spearmint, pennyroyal, etc., are best gathered after the flowers are formed and nearly ready to open. Gather them in dry weather.

4 - DRYING HERBS

How to Dry—Dry the various herb materials in a clean room which has no dust, away from sunlight and where it is not too hot or cold. Do not dry them too fast; for too much heat spoils the herbs.

Guard them from mold—In order to protect them from becoming moldy, turn them occasionally; so no mold will form. Or hang the herbs, so they dry equally throughout.

Leaves—Dry aromatic leaves in the shade. Then place in the sun a short time to prevent fungus. Unscented leaves may be dried in the sunlight; but it is best to dry them in an airy, dry place.

Flowers—The strength of the flower can be judged by the intensity of its color; so dry flowers carefully, but rapidly, in order to preserve the color. Give special care to flowers which have volatile oils. Spread the flowers loosely on white paper (although some can be tied in loose bunches and hung with a string from a rafter, etc., in a airy room). Dry the flowers only in the shade; but place them in the sun a brief time, to prevent fungus growth.

Plants and tops—If the plants are not too juicy, they may be strung in bunches across the top of an airy, dry room.

Bulbs—Peel off the outer membranes. Then cut the bulbs into transverse (straight across) slices, each about ½ inch in length. Stir them every so often while they dry and move several times, to prevent mold from forming.

Barks, twigs, and woods—Dry in the sunlight or in thin layers in the open air. Do not dry wild cherry bark in the sun.

Fleshy roots and rhizomes—As you did with the bulbs, cut them in transverse slices, about ½ inch in length. Stir and move several times during the drying process.

Fibrous roots—Dry these in the sunlight or artificially at temperatures between 65° and 80° F.

5 - STORAGE OF HERBS

Once the herbs are dry, and as long as they remain in a dry place, they should be good for quite some time. It is generally best to store the herbs in paper sacks in a cool, dry area. The fruits and berries, of course, will be jarred or dried. They are all a blessing from God in heaven.

It is important that you store your herbs properly for longest shelf life. An alternative to storing them in brown paper sacks is to place them in a tight container, not made of plastic (which contains formaldehyde). The container can be a waxed carton if it is given a wax seal; but glass bottles are best (unless you are able to seal a steel can). Never store anything in aluminum!

The stored herbs should be labeled, dated, and well-organized in the herbal medicine chest or cabinet. If the particular herb will not be used within a year, then fill the jar to the top, to crowd out oxygen, and then seal it with wax.

Herbal oils must be stored in brown bottles, sealed tightly, and kept out of the sun and extreme heat. Powdered forms of herbs will keep up to a year or more and retain fairly full potency, when stored in a fairly cool place. Powdered herbs generally do not need refrigeration. At room temperature, they will keep 6 months. When hermetically sealed with wax, they will keep 2 or 3 years. Herbal powders containing oils (such as cayenne) cannot be stored even a short time in paper, but must be wax sealed in a tight container. Tinctures are best kept in tightly capped 3-oz. colored glass bottles.

Flowers may be stored in bunches in a dry, airy room or placed in labeled brown paper bags. Fold bags to prevent insect attacks.

6 - THE PREPARATION OF HERBS

1 - Infusion (steeping): One pint boiling water is poured over 1 oz. dried herb. Cover it with a tight fitting lid, so steam will not escape. Let it stand (steep) 20 minutes. Strain off the clear liquid. Immediately use or keep

in the refrigerator a short time till used. Average dose: 1 Tbsp. of the herb per teacup. Take 3 times a day. An infusion is used when the volatile oils in herbs are needed, as in peppermint and spearmint, or when the herb is composed of flowers or leaves.

A "sun tea" is made in this way: Put the 1 oz. of dried herb and a pint of water into a large glass jar. Place this in the sun for 2-4 hours; and the heat from the sun will extract the herb into the liquid.

*2 - **Decoction (boiling):*** (1) Place 1 oz. dried herb (or 2 oz. fresh herb) in 1½ pints of cold water. Boil for 20-30 minutes (or longer if roots are very hard). Strain off the clear liquid. (2) Here is an alternative method (which requires more time): Take 1 oz. dry herb or 2 oz. fresh herb (pulverize for best results), soak for 3-12 hours in 1½ pints of cool water. Then simmer in warm water for 30 minutes. Strain liquid into a clean container. Allow to settle and cool slightly. Drink liquid while still warm. *Average dose:* 1 Tbsp. to 1 ounce water. Take 3 times a day. In order to extract the deeper healing qualities of stems, roots, and barks, the herbs must be simmered for 15-25 minutes. Many times it is left uncovered during the simmering, to evaporate some of the water.

Infusions and decoctions require a brief period of time for their preparation; and both must be used before they sour or growth of the undesirable materials starts (usually within 24-72 hours).

*3 - **Tincture:*** 1-2 oz. dried herbs are steeped in 1 pint cold grain alcohol (brandy or vodka) for 2 days. During that time, vigorously shake it 3 times a day. Then strain and store for use. *Average dose:* One tablespoon clear liquid, taken 3 times a day. *Advantage:* The herb or herbal compound (several herbs mixed together) are ready for instant use whenever needed, with no aging problems. *Disadvantage:* You will be drinking alcohol.

*4 - **Fluid extracts:*** This is a tincture which may be as concentrated as a regular tincture, but may be as much as 5 times more concentrated.

*5 - **Concentrated herbs:*** These are relatively new products on the market. Some herbs need to be taken in larger doses to be effective. For those who take many capsules of an herb daily, using concentrated herbs is a great help. The concentration is often 4-6 times that of the original herb. Concentrated herbs are taken one step further than herbal extracts; they are freeze-dried to remove the moisture content. The result is a solvent-free product—*with no added alcohol!* This powder has all the nutrients in a form that will digest quickly in the bloodstream. They work quickly for the relief of pain.

*6 - **Capsules (dry powder):*** Dry herbs are powdered, then placed in a 2-piece gelatin capsule. A #0 ("one ought") capsule contains about 400-450 mg. But this varies with the density of the herb and whether the herb is a root or leaf. A #00 ("double ought") capsule has about 500-600 mg. The lesser-used #000 ("triple ought") contains about 650-850 mg. The capsule may be opened and emptied into hot water for tea; this can be made into a paste for poultices, tinctures, decoctions, infusions or just swallowed. If there is a problem swallowing the capsules, they can be moistened by dipping them in water or a little vegetable oil. Capsules should be stored in a cool, dry place, so they will not lose moisture and become brittle. Also excess heat and moisture will soften the capsules and they will stick together. *Advantages:* A capsule is ready for use; and strong acrid herbs, like valerian root or wormwood, are more pleasant to take. Capsules can also be inserted in the rectum easier than tablets, to treat hemorrhoids and other rectal diseases. *Disadvantages:* If swallowed, you are taking powder, not the steeped or boiled liquid; and the powder in the capsules gradually ages. A major disadvantage is that many capsules are made from boiled tissues derived from slaughtered livestock; so only use capsules made from vegetable gelatin.

*7 - **Tablets:*** Dried herb (plus an excipient [binder or carrier]) is pressed into a tablet shape. The tablet can be used in the same way as a capsule. *Advantages:* Tablets do not tend to stick together and will resist a warmer climate better than capsules. You can make the tablets yourself and know exactly what is in each one. *Disadvantages:* Do not let your supply of herbal powder become too old; for it will be difficult to be dissolved in the stomach.

There are two ways to prepare your own tablets: (1) Purchase an inexpensive tablet machine. It will press them into shape. Mix the herb with 1/10 binder (slippery elm, etc.), before making tablets. (2) Another way is to grind the herb fine and add to it a small amount (1/10 of the total) of slippery elm, an herbal syrup, or other mucilaginous herb. Add small amounts of water while mixing, keeping the preparation firm. Then roll them into small pills, about the size of a pea. Dry (1) by spreading them out onto a pie dish and left to dry at room temperature or (2) by placing them in an oven: Preheat the oven to 250°, then turn it off and place the pie dish in the oven for 15-30 minutes. Check them every 5 minutes. When dry, bottle them and keep in a cool, dry place, such as a refrigerator. When giving them to children, they can be dipped in honey, molasses, or peanut butter to cover the taste.

*8 - **Electuary:*** This is an herbal preparation which is mixed with honey, maple syrup, peanut butter, or slippery elm, to form a paste and then rolled into balls. These are then given to children to swallow with juice. Any powdered herb can be mixed with honey and given immediately without any advance preparation. Measure the exact amount of herb and then add the sweetening to it.

7 - IMPORTANT FACTS ABOUT HERBS

*1 - **Storage:*** Herbs are best stored in glass jars. Do not expose them to the sunlight for long periods of time.

*2 - **Weight factor:*** Larger persons require larger amounts than smaller or underweight individuals. Women generally require smaller doses than men, due to their lower average weight. Children and elderly people need smaller doses.

*3 - **Climate:*** The medicinal effect of herbs is intensified in hot climates, therefore give less at such times.

*4 - **People vary in their reactions:*** Some people are more intolerant to herbs than others are. It is best to

initially give a smaller dose and see the reaction. It is always safe to start with the smaller child's dose, then build up to a larger dose if that seems best. Increase slowly, remaining on each level for 2-3 days, to observe for unusual reactions.

*5 - **Amounts for children:*** Here is the formula: Divide 150 (the assumed average adult weight) by the child's weight. Example: A child weighs 50 pounds. This is 1/3 of the average adult weight (of 150 pounds). Therefore give him only a third of the regular dose.

*6 - **During pregnancy:*** Women respond to herbs differently when they are pregnant. At such times, it is best to give smaller herbal doses and observe response. Sometimes mild and nutritive herbs are best. Some herbs should not be given during pregnancy (including diuretics, purgatives, and emmenagogues; all of these are active in the pelvic area and should be avoided.)

*7 - **Nervous people:*** Give them smaller doses than robust individuals.

*8 - **People with high blood pressure:*** These people should avoid herbs that stimulate the heart or constrict the blood capillaries and arteries (licorice root, ephedra, and lily of the valley are examples). But cayenne and garlic can be used in normal amounts.

*9 - **When herbs are combined:*** Herbs are frequently combined; but, if not done properly, one herb may overpower or neutralize the effects of others.

*10 - **Laxative herbs:*** Give slow-acting laxatives in the morning, so as not to disturb sleep. They may take 1-3 days to work; whereas fast-acting ones usually take 4-8 hours. Do not increase the amount until a 3-day period is over, using the same amount every day. Then, if the desired result is not obtained, you may increase the amount. The desired objective is generally 2 bowel movements a day.

*11 - **Sedatives and antispasmodic herbs:*** Give them on an empty stomach or just before bedtime.

*12 - **Astringents and minerals:*** Astringent herbs should not be taken at the same time as nutritional supplements containing iron. The tannins in astringent herbs will leach calcium, iron, and other important minerals out of the intestines. Therefore, only give astringent herbs for a short period of time.

*13 - **Blood-purifying herbs:*** Take these herbs on an empty stomach.

*14 - **Strong, bitter herbs:*** To avoid nausea, be sure and give enough water with them.

*15 - **Powerful herbs**:* Be careful in giving herbs which have powerful effects. These include lobelia, juniper berries, black cohosh, poke root, aconite, and shavegrass (horsetail).

*16 - **Bitter pills:*** They have a tonic effect on the stomach, digestion, and related organs.

*17 - **Herbal temperatures:*** A hot infusion or decoction is used to help induce sweating. Cool teas are used for tonic effect, and warm teas produce a feeling of relaxation. (Vervain is the best for inducing sweating.)

*18 - **Tablets vs. capsules:*** Tablets are easier to work with than capsules in hot climates; the latter tend to stick together. Vegetarians either open and empty capsules or use tablets, since capsules are made from slaughterhouse products.

*19 - **Herbs at mealtime:*** To avoid taking too much liquid, capsules or tablets are preferable to teas at mealtime.

*20 - **Varying the intensity of the amount given:*** Here are several principles to keep in mind:

- For a slow, gradual, general effect, give the herbs in small quantities of syrup or milk between meals. This will retard absorption.
- To aid the appetite, increase digestive secretions or, for a local effect on stomach or intestines, give herbs before meals. Give the herbs in acacia gum or olive oil for a localized effect on stomach or intestines.
- To reduce the irritation of certain herbs, give them in syrup or soy milk.
- To increase absorption of the herbs and produce a more rapid effect, give them 1-2 hours after the meal.
- To reduce the bitter taste of herbs, without reducing the bitterness, take the dose in a large quantity of fluid, syrup, or honey. The bitter taste is often necessary for the proper effect to take place, but the bitterness can be disguised to the taste buds.
- Fluids which do not taste good can be taken more easily by drinking them cold, followed by a drink of plain water.

*21 - **Weekly rest day:*** In order for herbs to work best, they should not be taken one day each week. Then, after 2-3 weeks of treatment, no herbs should be taken for 3 days in a row. During this rest period, observe the patient. (1) If his energy remains low during that time or if the symptoms worsen, at the end of the rest period put him back on the herb dosage. (2) If he improves during the rest period, then extend the rest period a day or so and then continue the treatment with smaller doses than were used before. (3) If he seems to completely recover during the rest period, then the treatment can be changed to a more tonic, nutritive approach. (4) New symptoms or problems may reveal themselves at this time. If so, an herb formula or new therapy should be instituted to meet it. (5) If he seems to get stronger during each rest period, begin reducing therapy and extending the rest periods.

*22 - **Types of teas:*** When bitter teas are taken, they have a tonic effect on digestion and related organs. A cool infusion or decoction is used for tonic effects. Hot teas are used during sweating therapy. Warm teas will create a feeling of relaxation.

*23 - **Types of herbs:*** Flowers and leaves, being more delicate, are usually made into infusions. A decoction is used when trying to extract healing properties from most roots, barks, twigs, and seeds.

*24 - **Determining the dosage:*** First study the suggested dosages for each herb. Next consider whether the disease is chronic or acute; whether the patient is a child or an adult; and whether he is strong, weak, or pregnant. Perhaps lactation or menstruation is present. Consider the age, temperament, sex, and size of the individual. It is always safer to start with a smaller dose; and, if that works well, increase it slowly to the normal dosage. If a child will take the herb, give him only part of that which an adult would receive: Assuming 150 pounds for an av-

erage adult, if the child is 50 pounds, then 150 divided by 50 = 1/3 of the adult dose.

*25 - **Herbs for children:*** Only give mild herbs to children and adults who are experiencing an acute ailment, not harsh laxatives and strong cleansing herbs. Mild herbs can be given in large amounts, usually 1 cup of tea per dose. Here are the mild herbs: peppermint, chamomile, catnip, comfrey leaf, nettles, chickweed, spearmint, and alfalfa. The strength and energy level of the individual tells a lot.

8 - TYPES OF HERBAL APPLICATIONS

*1 - **Fomentation:*** These are cotton towels soaked in an herbal tea infusion or decoction which is as hot as can be tolerated. Placed on a body part. This stimulates blood and lymph circulation; warms joints and other body parts; reduces internal inflammations; and relieves colic and pain. By alternating hot and cold fomentations, healing blood moves more rapidly into and out of the affected area. This is especially helpful for sluggish circulation, constipation, urine retention, etc. After soaking it in the herbal tea, fold and wring the hot towel slightly and place it on the affected area. Over that place a layer of plastic. To keep the heat in, place a dry towel or heating pad on top. Every so often, resaturate the hot, soaked towel.

*2 - **Poultice:*** This is a small pile of powdered or pulverized herbs, moistened with water (and/or tinctures, infusions, decoctions, salves, oils) and applied to the surface of the skin. Fresh herb can be applied without moistening. If there will be body movement, wrap a cloth around the poultice to hold it in place, perhaps taping it slightly. Poultices are used to reduce inflammation, and withdraw pus and embedded particles. Ginger and cayenne increase circulation; echinacea and garlic reduce infectious sores. Valerian and kava kava reduce pain. Lobelia tincture added to a poultice will reduce pain very well. Clay poultices, with or without herbs, made into a thick, doughy consistency, are good at drawing out poisons. Clay can be purchased at health-food stores. Mixed with mashed cabbage leaves, the clay poultice is good for boils and tumors. Mixed with powdered cayenne or ginger, painful arthritic joints can be treated.

*3 - **Salves:*** Salves are used to treat boils and dry or itchy skin. Astringent herbs (white oak bark, bayberry) tone the skin. Demulcent herbs (comfrey) soften and keep the surface moist and healthy looking. Salves are a thick consistency of herbal oil, herbs, and a little oil (never mineral oil) to cover the mixture, baked in a covered pot at 125°-200° for 2-4 hours. Melt beeswax (about 1½ oz. to 1 pint oil) and stir it into the oil. Preserve the salve by adding ½ tsp. vitamin E per cup of solution to 1 oz. of salve.

*4 - **Oils:*** Oils are usually made from mints and aromatic herbs, and are applied to increase circulation and warmth to the area, and treat skin diseases and painful joints. They are also used when giving massages, for dry skin; these are to be rubbed on the surface of the skin before a poultice, hot pack or fomentation is applied.

Add 1 oz. olive oil to 2 oz. macerated herb. Mix carefully and bake in the oven at 115°-200° until the herbs become crisp (about 2-4 hours). When that happens, the oils have left the herbs and entered the olive oil. Strain out the herbal oil. Add to it the oil from one 400 I.U. vitamin E capsule to every cup of herbal oil (as a preservative). Put the oil in a dark bottle. Olive oil usually has a long shelf life before it goes rancid.

Certain oils will be absorbed by the skin faster than others. When you want the oil to remain on the skin for a long period to help heal external sores, etc., use olive or peanut oil, or avocado. (Wheat germ, sesame, and sunflower oil absorb much faster.). Essential herbal oils can also be purchased in a health- food store and are more highly concentrated.

*5 - **Douches:*** These are used to treat vaginal infections and excessive secretions. They are prepared by making a strong infusion or decoction using herbs such as goldenseal, myrrh, slippery elm, plantain, and (if there are excessive secretions or bleeding) white oak bark. One Tbsp. of apple cider vinegar should be added to 1 quart tea, to help maintain an acid pH. While the tea is warm, carefully insert the douche. Retain for 3-5 minutes. Use once daily for 5-7 days, and only during the infection. Thereafter, only used once a month. Pregnant women should not use douches.

*6 - **Bolus:*** This is a suppository inserted into the rectum or vagina, to draw out toxins and treat swellings, infections, cysts, tumors, inflammations, and hemorrhoids. For vaginal infections, boluses are only used when douches are not successful. The herbs used in boluses are astringents (white oak bark, bayberry, witch hazel), demulcents (slippery elm, comfrey root), and antibiotic herbs (garlic, goldenseal, chaparral, myrrh). To make a bolus, add 10% powdered slippery elm (by volume or weight) to your selection of herbs. Mix the herbs well, either by stirring or blending. Slowly pour water into the mixture until it becomes a thick, doughy consistency. Then roll into strips about ½-inch thick and ¾-inch long. If necessary, put the mixture into the refrigerator to cool awhile before rolling the suppositories. When formed, let them dry by being exposed to the sun or in an oven under low heat. Do not burn them. Then put them in a jar and keep in the refrigerator. Before inserting the bolus, let it set at room temperature 15-20 minutes, to warm up. To make insertion easier, dip in olive oil or warm water and quickly insert. Insert before long rest periods in bed.

9 - TWENTY-TWO USEFUL POULTICES

For much more on poultices, go to pp. 183-184.

*1 - **Cabbage poultice:*** Pulverize the leaves and lay it on the skin. This will draw out poisons and pus. When it feels hot, replace it with a fresh one. Another way to prepare the cabbage: Wash a leaf, lay it flat on a breadboard, roll it with a rolling pin to break ridges and veins, then attach to the sore.

*2 - **Garlic poultice:*** Crush fresh garlic and add warm water and flour. It relieves pain, pus, and infection.

*3 - **Potato poultice:*** Place grated raw potato on

bruises, sprains, or boils.

4 - Carrot poultice: Take the pulp (remaining after juicing carrots or finely grating carrots) and place it on bruises, sores, chapped skin, and nipples.

5 - Comfrey poultice: Mash the leaves, then moisten them with comfrey tea. It is good for open sores, wounds, or swellings.

6 - Fig poultice: Heat figs for 3 minutes, cut open, and apply to infected sores. It will bring them to a head.

7 - Flaxseed: Boil in water to extract the healing oil in the outer skin of the flaxseed. Stir briskly with a wooden spoon. Stir in a little olive oil (just enough to dissolve hardened lumps). Place in cloth bag, dip in hot water and apply hot to the painful area.

8 - Ginger: Simmer ginger root in water or add powdered ginger to boiling water. Soak a folded cloth in water and apply to relieve pain or to bring blood to the surface of a congested area.

9 - Hops: Steep it for 10 minutes and apply. It soothes inflammations and boils, and reduces the pain of toothache.

10 - Oatmeal poultice: Cool cooked oatmeal; then place it in a soft, cotton cloth. Put it over inflammations and insect bites, and cover with a dry cloth. Apply a heating pad.

11 - Onion: Pack roasted onion on bruised, inflamed, and injured areas. In emergencies, use raw onions. Like carrots and turnips, onions have exceptional drawing power.

12 - Plantain: Apply a leaf of this invaluable weed, either crushed or mashed on a swollen or running sore. Wrap around a finger for whitlow (felon). Attach with tape or bandage. Discard if it gets hot and apply fresh plaintain.

13 - Potato: Put a raw / grated white potato on a sprain, bruise, boil, carbuncle, or boil.

14 - Rice: Soak whole rice in a small amount of water. Either cook it briefly or discard the water and crush the raw rice into a paste. Apply to the wound.

15 - Sage: Apply the cool tea, or hot-leaf mash, to rough abrasions and injuries.

16 - Salt: Heat 1-2 pounds of coarse salt. Put it in a pillow case and apply to the injured or painful area.

17 - Slippery elm: Squeeze out the cake, chop it up, add a teaspoon of ginger, then flour till it thickens. This will draw out inflammation and fever.

18 - Tofu poultice: Squeeze out the soy cake, add a tablespoon or so of wheat flour, and apply to the inflammation. Alternate this poultice with a hot ginger poultice to help reduce pain.

19 - Witch hazel: The herb poultice is outstanding for reducing surface swellings on the body or eyes. Distilled witch hazel, obtainable from a drugstore, can be applied to bruises, sunburns, and cuts. Apply it with absorbent cotton to small areas, including the eyes. Use a saturated cloth for larger applications.

20 - Yarrow: Steep the leaves in water and apply. It is good for reducing swellings and eases earaches. It will soothe bruises and abrasions. It can be applied in a tea for nursing mothers with sore nipples or as a wash for rashes, eczema, and poison ivy.

21 - Charcoal: This is an outstanding remedy. Apply dampened charcoal in a poultice to a surface infection. For deeper infections, wrap the charcoal in a pack and apply it overnight; then change again in the morning. This is good for deeper infections, not only for the surface ones.

22 - Clay poultice: Get clay from a place where it is found and sterilize it in the oven. Or buy it at the health-food store (either regular clay or bentonite clay). Mix the clay with just enough water or herb tea to make a consistency that is thick, like bread dough. Apply to bruises and infections. Mix clay with crushed cabbage leaves and place the mixture on boils or tumors. Mix clay with cayenne or ginger and apply to sore arthritic joints.

10 - TWENTY ESSENTIAL OILS

Essential oils are always applied externally; they are never, never swallowed! Taking them internally may be fatal. They are applied to the skin and used as an aroma, to help certain physical conditions.

Purchase small bottles, since the oxygen in the bottle gradually deteriorates the oil. Make sure the label says "pure essential oil." Some oils cannot be extracted (such as peach oil or apple blossom oil); products so advertised are not genuine.

Directions for use: Dilute a small amount of the essential oil in either water or another oil (a carrier oil). Either apply or inhale it. The best carrier oils include olive oil, almond oil, apricot oil, grapeseed oil, or jojoba oil.

Facial oil: Add 6 drops essential oil to 1 oz. jojoba oil.

Massage oil: Add 25 drops essential oil to 2 oz. olive oil, almond oil, or apricot oil.

Baths: Add 8 drops essential oil to 1 cup water and put in bath.

Hair rinse: Add 10 drops essential oil to 16 oz. water.

Hair conditioner: Add 1 drop essential oil to 4-6 oz. unscented conditioner.

Antiseptic cleaning: Add 25 drops essential oil to 2 gallons water.

Cedarwood - Antiseptic, astringent, and sedative. Good for bronchial problems.

Chamomile - Pain reliever, reduce spasms, good for headaches when applied in a compress to the head.

Clary sage - Anti-inflammatory, antidepressant. Helps induce sleep. Do not use during pregnancy.

Cypress - Antiseptic, astringent, antispasmodic. Constricts blood vessels, reduces coughing.

Eucalyptus - Antiseptic, antiviral, decongestant (rubbed on chest), expectorant. Reduces fevers and aches.

Frankincense - Anti-inflammatory, antiseptic, sedative. Useful for bronchitis.

Geranium - Antidiabetic, antidepressant, antiseptic. This mildly sedating oil is useful for nervous tension, PMS.

Grapefruit - Reduces appetite, water retention. Detoxifies the skin and helps weight reduction.

Hyssop - Detoxifies, cleanses, an antiseptic. Clears the lungs of congestion and aids breathing.

Juniper - Detoxifier, diuretic, an antiseptic. Helps

arthritic conditions and cellulitis. Do not use during pregnancy.

Lavender - Calms and normalizes, fights bacterial and fungal infections. Good for acne, burns, eczema.

Lemon - Excellent germ killer. Good for varicose veins and reducing swellings.

Peppermint - Useful for headaches, fatigue, congestion, fever, muscle soreness, sinus problems.

Rose - Tonic astringent, antiseptic, antidepressant. Good for nervousness and insomnia.

Rosemary - Among the best of the oils; good for pain, infection, spasms, dandruff, cellulite, headaches.

Rosewood - Good for anxiety, depression, headaches, nausea, tension, and PMS. It is antiseptic and calming.

Sandalwood - Antiseptic, expectorant, antidepressant. Also good for bronchitis, nervousness, and as a skin moisturizer.

Tea Tree - Antiviral, anti-infective, fungicide, antiseptic. Athlete's foot, dandruff, bronchitis, ringworm.

Thyme - Antiseptic, expectorant, antispasmodic. Herpes, skin infections, calming effect.

Yarrow - Improves digestion, reduces blood pressure, fights infection and spasms.

11 - HERBAL PROPERTIES

Medicinal herbs produce certain effects on the body. A list of all these possible effects is called "herbal properties." One herb will produce certain effects while another may produce some of the same ones, plus certain others. Listed below are the major categories of herbal properties. The *"examples"* are some of the best herbs containing those properties.

To this list has been added a *"goes with"* section. This is because herbs with certain properties work best with herbs containing certain other properties. The *"goes with"* sections, below, will tell what these are. Experienced herbalists select one or two herbs which have one target property (example: *antipyretic*, or fever reducing). To this will be added one or two other complementary herbs which accomplish a related objective. As you learn to combine herbs, you become a skilled herbalist!

Basic herbal formula: Here is a general outline for preparing an herbal formula for acute ailments:

(1) Use a large proportion (about 70%-80% by weight) of 1 to 3 herbs that possess the primary property required to treat the ailment (*expectorant* for coughs, *antibiotic* and *blood purifying* properties for infections, *warming* properties for colds, etc.).

(2) Add a small amount of a *stimulant* herb (cayenne works well), to promote the action of the primary herbal medicine.

(3) Add a small amount of an *antispasmodic* herb, to reduce tensions in the body.

(4) Add a small amount of a *carminative* or *demulcent* herb, to provide gentle action and protection to the system.

1 - Alteratives (Blood purifiers): These are herbs which purify the blood. They promote the cleaning action of the spleen, liver, kidneys, and bowels and should be used over a long period of time in order to gradually detoxify the bloodstream; this in turn will improve digestion, assimilation, and glandular secretions. Bad habits must also be corrected. Impure blood causes infections, arthritis, skin disease, cancer, etc. **Examples:** Alfalfa, red clover, garlic, barberry, black cohosh, cayenne, chaparral, comfrey, echinacea, eyebright, goldenseal, gotu kola, plantain, sassafras, uva ursi, wood betony, yellow dock. **Goes with:** Add a *stimulant* herb, such as cayenne, to speed the action of the alterative. Ginger will also do this, plus increase action in the genito-urinary area. Add an *aromatic*, to cover the taste of the *alterative*. Peppermint is both an *aromatic* and an *alterative*.

2 - Anodynes: Herbs which relieve pain by reducing the excitability of the nerves and nerve centers. They can be used as fomentations on the surface or internally as teas, tinctures, or powders. *Anodynes* are closely allied to the *antispasmodics*. **Examples:** Skullcap, chamomile, valerian, echinacea, ginger, hops, lobelia, vervain. **Goes with:** *Antispasmodic* and *nervine* herbs go well with *anodynes*; often using cayenne (a *stimulant* herb) as an accentuator.

3 - Anthelmintics: Herbs which kill or expel intestinal worms and parasites. ***Vermicides*** destroy worms without always causing their expulsion from the bowels; and vermicides should be followed by, or combined with, laxative or cathartic herbs. **Examples:** Garlic, black walnut. ***Vermifuges*** expel worms from the bowels. ***Examples:*** Cascara sagrada, gentian, wormwood. **Goes with:** *Laxatives* are almost always used with anthelmintics. *Nervines* are often added to relax a certain area made tense by worms.

4 - Antiacids: Herbs which correct acid conditions in the stomach, blood, and bowels. **Examples:** Comfrey leaves or root, flaxseed, raspberry, slippery elm, wood betony. **Goes with:** *Stimulant* herbs, such as ginger and cayenne, to accentuate. *Demulcent* herbs soothe and relieve pain in specific areas.

5 - Antibiotics: Herbs which not only inhibit the growth of (and destroy) viruses and bacteria, but help promote the body's own immunity. **Examples:** Chaparral, echinacea, garlic, goldenseal, myrrh, pau d'arco.

6 - Anticatarrhals: Herbs which eliminate mucous conditions. **Examples:** Angelica, bayberry, bistort, cayenne, comfrey, elecampane, garlic, ginger, wild cherry, yerba santa. It is best to increase elimination by also including laxative herbs or diuretic teas.

7 - Antiemetics: Herbs which relieve sickness of the stomach and prevent vomiting. **Examples:** Ginger, cloves, goldenseal, lobelia (very small doses), peppermint, red clover, spearmint. **Goes with:** We want to not only relieve the vomiting, but also settle the nerves. Antispasmodics will ease the area and nervines will settle the nerves (for sometimes vomiting is continued from a nervous condition alone). The source of the nausea is key here. A demulcent will soothe the stomach area and hepatic herbs (such as barberry) will ease the liver. A cleansing laxative enema is always used to clean out the bowel, greatly reducing the chance of nausea.

8 - Antipyretics (refrigerants): Herbs which cool

the system and reduce fevers. **Examples:** Alfalfa, chickweed, lemons, licorice, limes, oranges, skullcap, valerian. **Goes with:** Stimulant herbs (cayenne, ginger) are used to increase circulation as rapidly as possible and carry off the poisons. Diuretic and diaphoretic herbs (raspberry leaf, peppermint) combine well. Tonic herbs rebuild the entire body.

9 - Antiseptics: Herbs which prevent the growth of bacteria. **Examples:** Garlic, echinacea, goldenseal, myrrh, barberry, bistort, black walnut, saw palmetto, white oak bark. **Goes with:** Stimulant herbs (cayenne, ginger) speed the healing.

10 - Antispasmodics: Herbs used for cramps, muscular spasms, and convulsions. **Examples:** Black cohosh, blue cohosh, cayenne, fennel, garlic, lobelia, peppermint, raspberry, sage, skullcap, valerian, vervain, wild yam. These herbs are helpful during tetany, extreme irritability, feebleness, hysteria, intestinal and leg cramps, menstrual cramps, intestinal worms which cause spasms, infantile convulsions, etc. **Goes with:** A stimulant herb (cayenne, ginger) accentuates and speeds this along.

11 - Aperients: Herbs which produce a mild laxative effect, softening the stool without purging. **Examples:** Figs, flaxseed, fruit, licorice root, olive oil, prunes, raisins. **Goes with:** Use a mild stimulant and a nervine to assist.

12 - Aromatics: Herbs which have a fragrant odor and an agreeable taste. Their essential oils stimulate the gastro-intestinal mucous membrane. Their spicy taste aids digestion and expels wind from the stomach and bowels. They are used to mask the taste of bitter herbs. Do not use them if the stomach is inflamed. **Examples:** Anise seed, barberry, cloves, coriander seed, fennel, ginger, juniper berries, peppermint, rosemary, sage, sassafras, spearmint, wood betony. Also see *Carminatives,* below. **Goes with:** These work well with almost every other class of herbs, not altering their medicinal values, but helping the other herbs taste better.

13 - Astringents: Herbs which increase the tone and firmness of the tissues, and reduce mucous discharge from the nose, intestines, vagina, and draining sores. **Examples:** White oak bark, witch hazel, bayberry, cayenne, eyebright, fenugreek, gravel root, mullein, plantain, raspberry, sage, slippery elm, squaw vine, uva ursi, vervain, wild cherry bark, yarrow, yellow dock, yerba santa. **Goes with:** When taken internally, add an aromatic to improve the taste.

14 - Cardiacs: Herbs that increase the power of the heart. **Examples:** Black cohosh, hawthorn berries, motherwort. **Goes with:** Add cleansing herbs which tone the heart, including cayenne. Also add wheat germ oil. Add nutritional and alterative herbs, to help heal the heart. At times a nervine will help reduce pain, but an antispasmodic will work more quickly to cut the pain.

15 - Carminatives: Herbs containing volatile oils which stimulate expulsion of gas from the gastro-intestinal tract. They also increase the tone of its muscular wall, thus stimulating peristalsis. Aromatic herbs are also carminatives. **Examples:** Anise, caraway, coriander, cumin, dill, fennel, sassafras, spearmint, thyme, peppermint, angelica, catnip, cayenne, chamomile, garlic, ginger, juniper berries, myrrh, parsley, sarsaparilla, valerian. **Goes with:** You can speed the action with a stimulant (cayenne, etc.), and antispasmodics help with the pain.

16 - Cathartics: Herbs which produce a rapid evacuation of the contents of the entire intestinal tract and bowel. **Examples:** Cascara sagrada, aloe vera, senna. **Goes with:** Use ginger as a guiding factor to carry into the abdominal area. In addition, stimulant herbs (a little cayenne) accelerate the action, nervines condition the peristaltic muscles, and antispasmodics alleviate any pain. Carminatives (wild yam, celery seed, etc.) will cut the gas. Always add a demulcent or emollient to soothe the area, because cathartics may be sharp in action.

17 - Cholagogues: Herbs which promote the flow of bile. **Examples:** Barberry, beets, bistort, boneset, cascara sagrada, cayenne, elecampane, gentian, goldenseal, hops, hyssop, olive oil, Oregon grape root, vervain, wild yam, wormwood, yellow dock.

18 - Demulcents: Herbs which soften and relieve irritation of the mucous membranes (which are the walls of all inner cavities of the body). **Examples:** Agar-agar, Irish moss, flaxseed, psyllium seed, slippery elm, aloe vera, burdock root, chickweed, coltsfoot, comfrey root (not leaf), corn silk, fenugreek, kelp, licorice root, marshmallow, mullein. (These herbs are also routinely combined with other herb powders, to bind them in making herb tablets.) **Goes with:** Demulcents are compatible with all other herbs.

19 - Deobstruents: Herbs which remove obstructions. **Examples:** Barberry (liver, gallbladder), Culver's root (bowel), goldenseal (glands), gravel root (kidneys), hydrangea root (kidneys), plantain (blood, kidneys). (For treating the intestines, see *Aperients* and *Laxatives.*) **Goes with:** Combine with nervine or antispasmodic herbs and often a demulcent in order to give ease, because some damage is often done to the bowel by the obstruction. Marshmallow or comfrey will help rebuild, or restore, the area.

20 - Diaphoretics (Sudorifics): Herbs which increase perspiration. They affect the entire circulatory system and fall into three subtypes: ***Stimulating diaphoretics:*** **Examples:** Angelica, blessed thistle, boneset, buchu, garlic, ginger, peppermint, spearmint, yarrow. ***Neutral diaphoretics:*** **Examples:** Horehound, safflower, sarsaparilla, sassafras. ***Relaxing diaphoretics:*** **Examples:** *Blue vervain,* catnip, chamomile, lemon balm, motherwort, pleurisy root, thyme, vervain, white willow, wild yam. **Goes with:** Stimulant herbs (ginger, mustard, cayenne) must always be added, to accentuate the sweating and water treatment. Always use moist heat in the cold sheet and whatever therapeutic process you use, also plenty of liquids or teas. Nervines relax the tissues, open the pores, and assist the action. Diaphoretics blend with most herbs.

21 - Discutients: Herbs which dissolve and remove tumors and abnormal growths. These are used in poultices, fomentations (see section on *Hydrotherapy*), and taken internally as teas. **Examples:** Red clover, chaparral, garlic, black walnut, burdock root, devil's claw, poke root (only used externally). **Goes with:** Stimulant herbs (cayenne) and demulcents.

22 - Diuretics: Herbs which increase the flow of urine. Of course, one should drink additional water when

taking diuretics. They are generally combined with *demulcents,* to soothe any irritation from acids or gravel. Diuretics are important in helping to care for water retention, bladder ache, kidney stones, scalding urine, obesity, prostatitis, backache, gonorrhea, skin eruptions, and lymphatic swelling. **Examples:** Corn silk, gravel root, pleurisy root, black cohosh, blue cohosh, burdock root, chaparral, cleavers, dandelion, false unicorn, fennel, gotu kola, Hawthorn berries, juniper berries, cranberry, mullein, plantain, squaw vine, white oak bark, white willow. **Goes with:** Ginger will help direct the herb action into the kidney/urethral area. Use stimulant herbs (cayenne) in order to speed up the action; and use nervine tonics, to relax the tube ends and open up the valves for an easier flow of fluids and to tone up the area.

*23 - **Emetics:*** Herbs which induce vomiting. They are generally given as teas or tinctures. **Examples:** Lobelia (tincture or ½ cupful tea), bayberry, chaparral, false unicorn (large doses), mandrake (large doses). **Goes with:** Emetics are generally used alone, but a light stimulant (peppermint tea) can be added, to allay pain due to muscular wrenching.

*24 - **Emmenagogues:*** Herbs which promote menstrual flow. **Examples:** Squaw vine, motherwort, angelica, black cohosh, blessed thistle, blue cohosh, chamomile, gentian, goldenseal, myrrh, pennyroyal, prickly ash, rue. **Goes with:** These combine well with stimulant herbs, nervines, demulcents and emollients. Emmenagogues depend on the stimulant ginger as a carrier. Sometimes gas is generated, for which a carminative is used.

*25 - **Emollients:*** Herbs which soften and soothe, when applied externally in salves, poultices, and fomentations. They may also be taken internally for their *demulcent* quality. **Examples:** Flaxseed, slippery elm, wheat germ oil, Irish moss, chickweed, coltsfoot, comfrey root (not leaf), fenugreek, marshmallow, plantain. **Goes with:** These combine well with almost all herbs or herb combinations.

*26 - **Expectorants:*** Herbs which help excrete mucus from the throat and lungs. They are generally combined with demulcents, which are soothing. **Examples:** Garlic, chaparral, comfrey, elecampane, fennel, fenugreek, horehound, lobelia, lungwort, mullein, myrrh, nettles, plantain, pleurisy root, thyme, vervain, wild cherry, yerba santa. **Goes with:** These combine with demulcents, emollients, stimulant herbs, antispasmodics, and nutritives.

*27 - **Febrifuges:*** Herbs which reduce fevers. **Examples:** Boneset, catnip, dandelion, hyssop, peppermint, shepherd's purse, white willow, yarrow. **Goes with:** These are compatible with stimulant herbs, antispasmodics, and with most diaphoretics.

*28 - **Galactagogues:*** Herbs which help secretion of milk from a nursing mother. **Examples:** Anise seed, blessed thistle, cumin, dandelion, fennel, fenugreek, raspberry, vervain. **Goes with:** Galactagogues work best alone. There are a number of herbs which a nursing mother should not take. *(See the chapter on Herbs for Pregnancy, pp. 722-726)*

*29 - **Hemostatics:*** Herbs which stop internal bleeding or hemorrhaging. **Examples:** Bayberry, beet root, blackberry, mullein, nettles, white oak bark, witch hazel, yarrow. Also see *Astringents*. **Goes with:** These combine well with stimulant herbs and antispasmodics, but do not combine with any herb that will expand the pore structure (such as diaphoretics).

*30 - **Hepatics:*** Herbs which strengthen, tone, and stimulate the secretive functions of the liver. **Examples:** Aloe vera, barberry, bayberry, buckthorn, carrot, dandelion, wild yam, wood betony, yellow dock. **Goes with:** These work well with stimulant herbs (cayenne, ginger), with antispasmodics, and with carminatives. Often aromatics are added, to cover some of the bitterness.

*31 - **Laxatives:*** Cascara sagrada, flaxseed, psyllium seed, agar agar, boneset, buckthorn bark, cleavers, goldenseal, motherwort, Oregon grape root, senna, yellow dock. **Goes with:** Combine with emollients, demulcents, stimulant herbs, nervines, antispasmodics, carminatives; and, often, aromatics are added.

*32 - **Lithotriptics (Resolvents):*** Herbs which dissolve and discharge urinary and gallbladder stones and gravel. **Examples:** Gravel root, corn silk, barberry, buchu, cascara sagrada, chaparral, dandelion, juniper berries, marshmallow, Oregon grape root, Uva ursi. **Goes with:** Add demulcents and emollients when cutting stone adhesions loose or breaking them up from a stony mass, because passing them though the urethral or gall ducts is very painful. Olive and natural oils are excellent to ease the passing, but *never* use mineral oil. Nervines relax tension in the tract itself, wherein the tubes expand and the stones are more easily discharged.

*33 - **Lymphatics:*** Herbs which stimulate and cleanse the lymphatic system. **Examples:** Garlic, black walnut, chaparral, dandelion, echinacea, Oregon grape root, yellow dock. **Goes with:** Alteratives and stimulants are helpful.

*34 - **Mucilages:*** Herbs which soothe inflamed parts. **Examples:** Agar agar, flaxseed, slippery elm, marshmallow root, okra, chickweed, comfrey root, lungwort, mullein. Also see *Demulcents*. **Goes with:** These combine with nutritional herbs, demulcents, and most herbs, as mucilages act as carriers.

*35 - **Nervines:*** Herbs which act as a tonic to the nerves. They relieve pain and regulate the nervous system. **Examples:** Hops, lobelia (small amounts), skullcap, cramp bark, gravel root, lady's slipper, mistletoe, motherwort, mugwort, passionflower, peach bark, pleurisy root, vervain, wood betony. **Goes with:** Combine with antispasmodics and stimulant herbs.

*36 - **Nutritives:*** Herbs which provide a substantial amount of nutrients and aid in building and toning the body. **Examples:** Alfalfa, spirulina, parsley, comfrey leaves, comfrey root, red clover, rose hips, slippery elm, yellow dock. **Goes with:** All herbs are partially nutritive. With specifically nutritive herbs, add demulcents and emollients, to soothe the digestive area, and sometimes a stimulant herb (cayenne), to seed the absorption.

*37 - **Opthalmics:*** Herbs which help heal the eyes. **Examples:** Eyebright (first and foremost), chickweed, fennel, mullein, rue. **Goes with:** These often require

nervines because the pain in the eyes is so severe. Also helpful are antispasmodics (an accentuator, such as cayenne) and, in many cases, a demulcent.

38 - Oxytocics (Parturients): Herbs which assist labor and promote easy childbirth. **Examples:** Angelica, black cohosh, blue cohosh, juniper berries, raspberry, squaw vine. **Goes with:** Nervines combine well here, plus antispasmodics; stimulant herbs; and nearly always such an herb as raspberry leaf, to relax the pelvic area.

39 - Parasiticides: Herbs which kill and remove parasites from the skin. **Examples:** Black walnut, cassia, wormwood, cloves, chaparral, echinacea, false unicorn, garlic, gentian, rue, thyme, wood betony. **Goes with:** Add demulcents and emollients, to soothe the digestive area.

40 - Purgatives: Herbs which have a very strong enema effect. **Examples:** Buckthorn bark, castor oil, mandrake root, senna. Combine these with *carminatives,* to lessen griping. **Goes with:** Antispasmodics, emollients, and demulcents are best added. Nervines mix well and carminatives will cut the flatulence.

41 - Rubefacients: Herbs which are applied locally, to stimulate and increase the blood flow to the surface. **Examples:** Cayenne, mustard seed, peppermint oil, rosemary oil, thyme oil, prickly ash, rue. **Goes with:** Stimulant herbs, such as cayenne or ginger.

42 - Sedatives: Herbs which calm the functional activity of an organ or body part. They influence the circulation, reducing nervous expenditure. **Examples:** Catnip, all mints, hops, skullcap, black haw, hawthorn berries, hyssop, kava kava, lemon balm, passionflower, peach bark, red clover, rue, saw palmetto, sorrel, valerian, wild cherry bark, witch hazel, wood betony.

43 - Sialagogues: Herbs which promote an increased flow of saliva. **Examples:** Cayenne, ginger, licorice, prickly ash, echinacea. **Goes with:** Ginger and a few other stimulants work well here; for they excite the salivary glands.

44 - Stimulants: Herbs which assist the functional activity of the body, thereby increasing energy. **Examples:** Cayenne, garlic, ginseng, ginger, red clover, angelica, bayberry, boneset, elder flowers, elecampane, false unicorn, fennel, fo-ti, gravel root, juniper berries, mandrake, myrrh, pennyroyal, prickly ash, raspberry, rosemary, rue, sassafras, shepherd's purse, wild cherry bark, yarrow, yerba santa. **Goes with:** These combine well with most herbs.

45 - Stomachics: Herbs which strengthen the functions of the stomach. Although usually bitter, they promote and improve digestion and appetite. In Britain they are known as "bitters." **Examples:** Agrimony, barberry, blessed thistle, elecampane, juniper berries, mugwort, peach bark, rue, wormwood. **Goes with:** Demulcents and emollients are often needed for soothing. Nutrients; mucilages; and, in most cases, stimulants are also added. If there is severe pain, nervines and antispasmodics can be mixed with them.

46 - Styptics: Herbs (usually astringent) which stop bleeding, hemorrhaging, and draining of wounds. They may be used externally or internally. **Examples:** White oak bark, witch hazel, bistort, shavegrass, plantain leaves, yarrow. **Goes with:** Stimulant herbs will help seed the action.

47 - Tonics: Herbs which increase energy and strengthen the body. They increase muscular strength and tone the nervous system while improving digestion and assimilation, resulting in a general sense of well-being. *Gallbladder tonics:* **Examples:** Goldenseal, Oregon grape root, parsley, wild yam. *Heart tonics:* **Examples:** Bugleweed, hawthorn berries motherwort, ginseng. *Intestinal tonics:* **Examples:** Barberry, blackberry leaves, cascara sagrada, goldenseal. *Kidney tonics:* **Examples:** Buchu, burdock root, cleavers, fo-ti, kava kava, parsley, pipsissewa, saw palmetto, uva ursi. *Liver tonics:* **Examples:** Barberry, buckthorn bark, cascara sagrada, dandelion, eyebright, fo-ti, goldenseal, mandrake. *Lung tonics:* **Examples:** Bethroot, comfrey, elecampane, fenugreek, garlic, lungwort, pleurisy root, wild cherry. *Nerve tonics:* **Examples:** Chamomile, hops, lady's slipper, valerian. *Stomach tonics:* Agrimony, blessed thistle, elecampane, gentian, goldenseal, mugwort, raspberry, wild cherry bark, wormwood. **Goes with:** Use demulcents and emollients, to soothe; and often combine mucilage herbs with stimulant herbs, antispasmodics, and carminatives in order to cut gas. Tonic herbs combine well with most herbs, and usually require aromatics to make them more pleasant.

48 - Vulneraries: Herbs which promote the healing of cuts, wounds, and burns by protecting against infection and stimulating cellular growth. **Examples:** Aloe vera, tee tree oil, garlic, black walnut, comfrey (leaves or root), fenugreek, lungwort, mullein, plantain, slippery elm, yarrow. **Goes with:** Stimulant herbs, such as cayenne, and can be used alone as vulneraries. When there is pain, add antispasmodics and nervines with it. For fresh wounds, oils and mucilage herbs keep the vulneraries fresh for faster healing. A favorite here is slippery elm.

12 - HERBS YOU WILL USE THE MOST

One of the biggest problems which people have when they want to use herbs—is where to start! There are so many of them. Which are the most important for my small cupboard space? Here is a list of the herbs you will use the most. You will find every one explained in detail in the next section on the 126 most important herbs.

The five most valuable herbs:

Cayenne, charcoal, garlic, goldenseal, peppermint.

The next five most valuable herbs:

Echinacea, cascara sagrada, catnip, corn silk, hops.

The next five most valuable herbs:

Comfrey, flaxseed, ginger, slippery elm, witch hazel.

The next five most valuable herbs:

Lobelia, myrrh, skullcap, vervain, red clover.

The next ten most valuable herbs:

Chamomile, chickweed, dong quai, eyebright, licorice root, red raspberry, squaw vine, valerian, wild cherry bark, wild yam.

The next twenty most valuable herbs:
Barberry, black cohosh, burdock root, chaparral, cramp bark, cloves, dandelion, fenugreek, mullein, oats, parsley, plantain, pleurisy root, psyllium, sage, sassafras, white oak bark, wormwood, yarrow, yellow dock.

13 - THE 126 MOST IMPORTANT HERBS

Here you will find basic information you need to know about the most important medicinal herbs, plus charcoal:

• *Which herbs are the most valuable* • The common name of each plant • *Its scientific name* • The portions of the herb which are used for therapeutic purposes • *The special properties of each herb* • The parts of the body which are affected by the herb • *The several ways to prepare the herb for use* • The amount to take and frequency • *The purposes for which the herb is primarily used* • Additional information about the herb • *Warnings and cautions about the use of the herb.*

This wide-ranging collection of data (especially the medicinal uses), on more than a hundred of the most important herbs, exceeds that which you can find in most other books on herbs. Yet, in the Natural Remedies Encyclopedia, it is only part of an even larger collection of home remedy information.

AGRIMONY

(Agrimonia eupatoria) Part used: Herb. *Properties:* Hepatic, stomachic, astringent, diuretic, tonic. *What it affects:* Stomach, liver and intestines.

Preparation and amount: *Decoction:* 1 oz. to 1¼ pints of water. Simmer down to 1 pint. Take 3-5 Tbsp. 3-4 times daily. *Tincture:* Take 30-60 drops 3-4 times daily. *Fluid extract:* Take ¼-1 tsp. 3-4 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: *Internally,* American Indians used agrimony as a tonic to strengthen the whole system. It is specifically used for all digestive disorders and for strengthening the stomach, intestines, liver, gallbladder, and kidneys. A strong decoction of root and leaves is used to treat pimples, skin blotches, and ulcers. An infusion of the leaves can treat jaundice and other liver problems. It is used for inflammatory diseases. When combined with a demulcent (mullein or slippery elm), a douche made from the leaves can be effectively used for excess vaginal secretions.

Externally, a fomentation containing agrimony is applied to athlete's foot, sores, wounds, insect bites, and skin eruptions. It can also be taken internally for bites and stings. A tincture applied to the skin will draw out thorns and splinters.

Note: Gentian root *(Gentiana)* works like agrimony as a bitter tonic, to stimulate the digestive organs. For this purpose, both herbs are prepared as a tea, using one ounce to a pint of water. Agrimony is quite bitter and contains about 5% tannins, which adds to its astringency.

Warning: It should not be used when there is a dryness of the body secretions.

ALFALFA

(Medicago sativa) Part used: Tops. *Properties:* Alterative, nutritive, antipyretic. *What it affects:* Stomach and blood.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. 3 times daily. *Tincture:* Take 5-15 drops 3 times daily. *Fluid extract:* Take ½ to 1 tsp. 3 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: *Internally,* alfalfa must be used in fresh, raw form in order to provide essential nutrients—which alfalfa is full of. Every vitamin and major mineral is in alfalfa, with the exception of vitamin D. Alfalfa aids in the assimilation of protein, fats, and carbohydrates and is an excellent blood purifier. It can be added to soups and salads. Eight alfalfa tablets, taken at mealtime (preferably chewed before swallowing) provide a fiber bulk which greatly aids in maintaining bowel regularity.

Alfalfa sprouts are a great favorite with many people; but rinse them thoroughly before serving, to remove mold and bacteria. Because it has similar properties, alfalfa has been substituted for red clover blossoms. It is good for lowering fevers. Alfalfa detoxifies the body and alkalinizes it. It lowers cholesterol, balances blood sugar and hormones, and promotes pituitary function. It acts as a diuretic, attacks fungi, reduces inflammations and helps reduce various types of bleeding.

Alfalfa is good for ulcers, disorders of the skin, digestive system, bones, and joints. It lowers cholesterol and balances hormones and blood sugar. It is good for arthritis and other disorders of the bones and joints. Taken every day, it improves the appetite, relieves urinary and bowel problems, eliminates retained water, and even helps cure peptic ulcers.

It was named *al-falfa,* "father of plants," by the Arabs. They were among the first to recognize its marvelous properties. Alfalfa is commonly added to other herbs for its nutritive qualities. It may be added as 10%-20% of the formula.

ALOE VERA

(Aloe vera, var. officinalis) Part used: Gel from the leaves. *Properties:* Demulcent, emollient, laxative, vulnerary, emmenagogue. *What it affects:* Skin, colon, and stomach.

Preparation and amount: *Gel:* Take 2 oz. each time, up to 1 pint daily. *Tincture:* Take 10-40 drops 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily.

Purposes: The gel from the leaves of this desert plant is invaluable. It is best used freshly picked from a plant. Keep several plants growing; you cannot have enough! Because of its nauseating taste, when used as a purgative it is generally taken in powder or pill form. It also tends to gripe and cause a constipative reaction, so that it should be combined with a *carminative* herb (such as peppermint) for best results.

Externally, the fresh leaves of the aloe can be split, to expose the gelatinous juice and then rubbed onto the skin. The gel inside the leaves has the capacity to heal even the most severe burns (including sunburns) and irritated skin rashes. It can be used for insect bites and stings, poison oak and ivy, "detergent hands," acne and itchy skin. It is used for abscesses, infection in wounds, skin irritations, and ulcers. It is said to help heal wounds by preventing or drawing out infection. As a first-aid remedy for burns and surface irritations, break off a leaf and squeeze the gel onto the affected area. When applied to the skin for severe burns and skin rashes, it can be left on for two days without changing the application. A tea made from the dried juice makes a good wash for wounds and for the eyes.

Internally, the aloe is good for chronic constipation, gastritis, hyperacidity, and stomach ulcers. It is a laxative and regulator of the bowels. Because, when used alone, it might cause griping (bowel cramping), it is best combined with ginger root. Combine 4 parts aloe powder and 1 part ginger root powder and fill "00" gelatin capsules. Take 2 capsules, 3 times a day. Taken internally, it increases blood-vessel generation in the lower extremities of those with poor circulation. In the 1950s, it was discovered to be invaluable in reducing radioactivity. It is also helpful for eliminating AIDS.

Another way to treat gastro-intestinal ulcers is to take the bitter aloe gel in small quantities at regular intervals (totaling a pint a day for ulcers), along with a tea of ginger and licorice root, to help prevent any adverse reactions to the bitter taste.

Aloe plants are readily obtained and grow well in the home. You only need to water them once a week. Place them in a south window. There are several other aloe plants, but aloe vera is the best for medicinal purposes.

Warning: Do not use it during pregnancy, nor in large doses when there are hemorrhoids. Some people are allergic to aloe. First apply a small amount behind the ear or under the arm. If stinging or rash occurs, do not use it.

ANGELICA

(Angelica archangelica) Parts used: Root and leaf. *Properties:* Carminative, diaphoretic, emmenagogue, stimulant, alterative, expectorant, tonic. *What it affects:* Circulation, heart, stomach, intestines, and lungs.

Preparation and amount: *Infusion (leaf):* Steep herb 15 min. Drink 1-2 oz. 3 times daily. *Decoction (root):* Simmer 10-15 min. Drink 1-2 oz. 3 times daily. *Tincture:* Take 5-15 drops 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Powder:* Take 3-5 #0 (15-30 grains) 3 times daily.

Purposes: *Internally,* angelica tea improves circulation and warms the body. It is one of the best herbs to use for coldness in the winter. Its regular use will create a distaste for alcoholic drinks.

Angelica tea stimulates appetite, relieves flatulence, heartburn, and muscle spasms (including spasms of the stomach and bowels), and stimulates kidney action. It is useful for all sorts of stomach and intestinal difficulties, including ulcers, vomiting, and stomach cramps. It can also be used for intermittent fever, nervous headache, colic, and general weakness. It is a good herb to add to treatments for lung diseases, coughs, colds, fevers, pleurisy, and all lung diseases.

Externally, angelica tea is useful in the treatment of rheumatism, with a pint of boiled water poured over an oz. of the bruised root. The usual dose is 2-3 Tbsp. 3 times daily.

Note: Gather the rootstock and roots in the second year.

Warning: Used in large doses, angelica has a negative effect on blood pressure, heart action, and respiration. It is a strong emmenagogue and should not be taken by pregnant women. Diabetics should avoid using angelica, as it tends to increase the sugar in the blood. Be cautious when harvesting the plant in the wild, because it can be confused with European water hemlock, which is a deadly poison. There is a second herb, called "angelica" *(Angelica sylvestris);* but it is a different herb, with different properties, and used far less by herbalists.

ASTRAGALUS

***(Huang Chi)**—Part used:* Root. *Properties:* Stimulant, diuretic, tonic. *What it affects:* Spleen, kidneys, lungs, and blood.

Preparation and amount: Take 4 to 18 grams, several times a day.

Purposes: *Internally,* astragalus helps neutralize fevers and improves digestion. It is one of the most valuable tonics, especially used for those under 35 years of age. It is a specific for all wasting and exhausting diseases because it strengthens the body's resistance. It aids adrenal gland function and digestion. It increases metabolism, produces spontaneous sweating, promotes healing, and provides energy to combat fatigue and prolonged stress. It helps protect the immune system and increases stamina. It is good for colds, flu, and immune-deficiency-related problems, including AIDS, cancer, and tumors. Those with chronic lung weakness are helped by it.

Warning: Do not use it if a fever is present.

BARBERRY

(Berberis vulgaris) Parts used: Root bark. *Properties:* Antiseptic, hepatic, stomachic, alterative, aromatic, tonic. *What it affects:* Liver, spleen, digestive tract, blood.

Preparation and amount: *Infusion:* ½ oz. to 1 pint water. Steep 10 min. Take 1-4 cups daily before meals. *Decoction (root bark):* Simmer 10 min. Take 1 Tbsp. as needed. *Tincture:* Take ½-1 tsp. as needed. *Fluid extract:* Take ½-1 tsp. as needed. *Powder:* Take 2-5 #0 capsules (15-30 grains) 3 times daily.

Purposes: *Internally:* The bark of barberry root contains an alkaloid which promotes the secretion of bile. This makes it outstanding for various liver complaints. Barberry is primarily used for all sluggish liver conditions; and, because of its bitterness, it is best taken in small quantities. An infusion is very helpful for swollen spleen and chronic stomach problems when taken in tablespoon amounts several times a day, especially before meals. Barberry dilates the blood vessels, thereby lowering blood pressure. It decreases the heart rate, reduces bronchial constriction, and slows breathing. It destroys bacteria on

the skin and stimulates intestinal movements. A teaspoon of the root will purge the bowels. Combined with cayenne, goldenseal, and lobelia, it is a specific for jaundice and hepatitis.

Externally, a decoction of either berries or the bark makes a good mouthwash or gargle for mouth and throat irritations. The fresh juice of the fruit will strengthen the gums and relieve pyorrhea, when brushed on or applied directly to the gums.

Warning: It should not be taken during pregnancy.

BAYBERRY

(Myrica cerifera) Part used: Root. *Properties:* Astringent, emetic, stimulant. *What it affects:* Circulation, stomach, and intestines.

Preparation and amount: *Decoction (root):* Simmer 10-15 min. Take 1 Tbsp. as needed. *Tincture:* Take 15-30 drops as needed. *Fluid extract:* Take ½-1 tsp. as needed. *Powder:* Take 4-10 #0 capsules (25-60 grains) per day.

Purposes: *Internally,* bayberry is useful wherever an astringent is required. White oak bark may be substituted, but it does not have the stimulating qualities of the bayberry bark. Bayberry is a stimulating astringent that raises the vitality of the system. This valuable herb can be made into a tea using one teaspoon to a cup of hot water. Taken as a warm infusion, bayberry will induce perspiration, improve circulation, and tone all the tissues it contacts. In large doses, it acts as an emetic. It may be used as a gargle for sore throat. A fomentation made from this tea can be applied externally at night to relieve, cure, and prevent varicose veins. Small amounts are used to aid digestion and treat chronic gastritis, enteritis, diarrhea, leukorrhea, and dysentery. It will reduce fevers; and it is good for circulatory disorders and ulcers. It is also good for the eyes and the immune system.

Bayberry can be used with all mucous membrane conditions and can be substituted for myrrh. It is used to treat prolapsed uterus; excessive menstrual bleeding; and may be used in a douche, to treat vaginal discharge. It will stop hemorrhage of the bowels, lungs, and uterus. The powder may be taken in gelatin capsules, two at a time as needed. Direct application of the powder to the gums is good for managing pyorrhea.

Externally, bayberry is good for canker sores, sore throat, varicose veins, and leukorrhea.

Warning: Bayberry should not be used in large quantities or for prolonged periods. It may temporarily irritate sensitive stomachs. Do not confuse bayberry bark with barberry bark; they are very different herbs.

BISTORT

(Polygonum bistorta) Part used: Root. *Properties:* Astringent, styptic, antiseptic. *What it affects:* Bowels, lungs, and stomach.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take 1 Tbsp. several times daily. *Tincture:* Take 5-15 drops several times daily. *Fluid extract:* Take ½-1 tsp. several times daily. *Powder:* Take 1-5 #0 capsules (5-30 grains) several times daily.

Purposes: *Internally,* bistort is a powerful astringent. A teaspoon of the powdered root in a cup of boiling water, steeped for 10 minutes and drinking freely several times a day, is a successful treatment for diarrhea, dysentery, and hemorrhages from the lungs and stomach, even bloody diarrhea. It can be used as a wash for internal sores and hemorrhage. A douche can be used for leukorrhea.

Externally, bistort is good for sprains, tonsillitis, wounds, and hemorrhoids. The decoction can be used as a mouthwash for gum problems and for inflammations of the mouth (stomatitis). It can be used as a gargle for throat infections. When directly applied to a wound, the powder will stop the bleeding.

BLACKBERRY

(Rubus villosus) Parts used: Leaves, root, bark. *Properties:* Astringent, hemostatic, styptic, diuretic, tonic. *What it affects:* Stomach and intestines.

Preparation and amount: *Decoction (root, bark):* Simmer 5-15 min. Take 4 oz. 3-4 times daily. *Tincture:* Take ½-1 tsp. 3-4 times daily. *Fluid extract:* Take ½-1 tsp. 3-4 times daily. *Powder:* Take 2-5 #0 capsules (15-30 grains) 3-4 times daily.

Purposes: *Internally,* blackberry leaves and roots are a long-standing remedy for watery diarrhea, especially in children. Prolonged use of the tea is beneficial for enteritis, chronic appendicitis, and leukorrhea. It has expectorant properties as well. The leaves made into an infusion are helpful for milder cases of diarrhea and for sore throats. Both root and leaves are good for poor digestion, when caused by deficient glandular secretions of the stomach and intestines. Made into a syrup, it is useful for children with weak stomachs, no appetite, and skin pallor.

BLACK COHOSH

(Cimicufuga racemosa) Part used: Rhizome. *Properties:* Antispasmodic, emmenagogue, alterative, diuretic. *What it affects:* Uterus, nerves, lungs, and heart.

Preparation and amount: *Infusion:* Take 1 tsp. every 30 min., up to 3 Tbsp. every 3 hours, according to need. *Decoction (root):* Simmer 5-15 min. Take 1-2 oz. 3-4 times daily. *Tincture:* Take ½-1 tsp. 3 times daily. *Fluid extract:* Take 5-30 drops 3 times daily. *Syrup:* Take ½-1 Tbsp. 3-4 times daily. *Powder:* Take 1-5 #0 capsules (5-30 grains) 3 times daily.

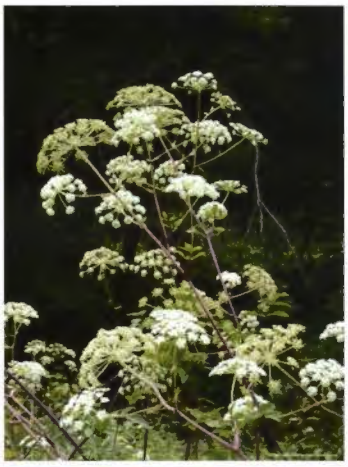
Purposes: *Internally,* black cohosh is a helpful antispasmodic for all nervous conditions, fits, convulsions, spasmodic afflictions, cramps, and pains. American Indians used it for all pelvic conditions, uterine troubles, to relieve the pains of childbirth and the menstrual cycle, including back pain. It will help to bring about menstrual flow that has been retarded by exposure to cold. It lowers blood pressure and cholesterol levels. It induces labor and aids in childbirth. Many herbalists recommend taking it 2 weeks before childbirth. It is good for morning sickness and pain.

Black cohosh reduces mucous production. It is a potent remedy for hysteria and spasmodic problems such as whooping cough, consumption, and chorea (St. Vitus' Dance). Both the infusion and decoction have been used for rheumatism and chronic bronchitis, as well as neural-

HOW TO IDENTIFY COMMON HERBS

THIS OUTDOOR GUIDE WILL HELP YOU IDENTIFY, IN THE FIELD AND WOODS, MORE THAN 110 HEALING HERBS AND PLANTS. THE ACCOMPANYING TEXT DESCRIBES (1) WHETHER IT IS AN ANNUAL, BIENNIAL, OR PERENNIAL, (2) DESCRIPTION OF THE LEAVES, (3) COLOR AND SHAPE OF THE FLOWERS, (4) WHEN IT CAN BEST BE FOUND, AND (5) GENERAL LOCATION. Whenever collecting herbs, caution should always be used. Most of the photos are by Karen Shelton, www.altnature.com.

Agrimony *(Agrimonia eupatoria)* p. 118 Perennial; 3-6 ft. Stem hairy. Leaves divided; main stem leaves with 11-19 *unequal* leaflets. Leaflets smooth above, hairy below; strongly serrated, 1-3 in. long. Tiny yellow flowers, in *slender branched wands.* July-Sept. Found in damp thickets, in clumps. Conn. to Fla., Nebr. to Fla.



Angelica *(Angelica atropurpurea)* p. 119 // Smooth biennial; stem is smooth purple or purple-tinged; 4-9 ft. Leaves with 3 leaflets, each divided again 3-5 times. Upper leafstalks have inflated sheaths. Flowers in large, semiround heads. June-Aug. Found In rich, wet soil, NE and N central states. Warning: grows in the same locations as Poison Hemlock, so do not collect unless you are certain.

Alfalfa *(Medicago satvia)* p. 118 // Deep-rooted perennial; 1-3 ft. Leaves clover-like, but leaflets elongate. Violet-blue flowers In loose heads ¼-½ in. long. Apr-Oct. Pods loosely spiral-twisted. Found in fields and roadsides. Often cultivated. *Warning:* Consuming large quantities saponins may cause bloating in livestock. Sprouts may cause recurrence in dormant cases of lupus.

Amaranth *(Amaranthus retroflexus)* Grayish, downy annual; 6-24 in. Leaves oval, stalks stout. Flower spikes to 2½ in.; blunt, chaffy, interspersed with bristly bracts; Aug.-Oct. Found: throughout North America.

Allspice, Carolina, Sweet Shrub *(Calycanthus floridus)* Aromatic shrub; 3-9 ft. Leaves oval, opposite, not toothed, soft fuzz beneath. Flowers terminal, maroon-brown, about 2 in. across; on an urn-shaped receptacle, April-Aug. Flowers have a strong strawberry-like scent when crushed. Where found: Rich woods. Va. to Fla.; Ala. to W. Va.

Arrowhead *(Sagittaria latifolia)* Aquatic perennial. Leaves arrow-shaped; lobes half as long to as long as main part of leaf. Flowers white; petals 3, rounded; filaments of stamens smooth. Flowers June-Sept. The bracts beneath the flowers are blunt-tipped, thin, and papery. The beak of the mature fruit projects at a right angle from the main part of the fruit. Found in ponds and lakes in North America.

Basil, Sweet *(Ocimum basilicum)* A small fragrant garden annual commonly used for culinary purposes. Leaves are oval, edges tip towards the center spine, giving a ruffled look.

Black Cohosh *(Cimicufuga racemosa)* p. 120 // Perennial and 3-8 ft. Leaves thrice divided, sharply toothed, terminal leaflet 3-lobed with middle lobe largest. Flowers white in very long spikes; May-Sept. Stamens in tufts, conspicuous. Found in Rich woods. S. Ont. to Ga.; Ark., Mo. to Wisc.

Birth root; Bethroot *(Trillium Erectum)* Perennial; 6-16 in. Leaves triangular-oval; 3, in a single whorl. Flowers dull red to white, with 3 triangular petals and sepals; April-June. Where found: Rich forests. N.S. to Ga. mountains, Fla.; Tenn. to Mich., Ont.

Black Walnut *(Juglans nigra)* p. 121 // Tree to 120 ft. Stem pith light brown. Leaves pinnate, with 12-23 leaflets; slightly alternate, heart-shaped or uneven at base. Leaf stalks and undersides slightly hairy; hairs solitary or in pairs, not in clusters. Fruits rounded; Oct.-Nov. Found in Rich forests. W. Mass. to Fla.; Tex. to Minn.

Blackberry *(Rubus villosus)* p. 120 // Shrub with arching canes that root at tips. Stem glaucous, with curved prickles. Leaves whitened beneath; sharply double-toothed. Flowers white; April-July. Fruits purple-black; July-Sept. Rows of white hairs between drupelets. Cultivated throughout N.A. Alien.

Blue Cohosh *(Caulophyllum thalictroides)* p. 121 // Perennial; 1-2 ft. Smooth-stemmed; stem and leaves covered with bluish film. Leaves divided into 3 or sometimes 5 leaflets with 2-3 lobes. Flowers greenish yellow clusters in April-June, before full leaves. Found in moist rich forests. N.B. to S.C.; Ark., N.D. to Manitobia.

Borage (*Borago Officinalis)* Hardy annual. Stems and leaves, dark blue-green, prickly white hairs cover whole plant, giving it a silvery cast. Stems are hollow, succulent; the leaves are alternate, wrinkled, and about 3 inches long. Blue, star-like flowers, with black anthers.

Blue Vervain *(Verbena simplex)* Perennial; 2-4 ft. Stem square, grooved. Leaves mostly lance-shaped, sharp-toothed; base sometimes lobed. Blue-violet flowers; tops branched in pencil-like spikes; July-Sept. Found in fields and thickets.

Bugleweed *(Lycopus virginicus)* p. 122 Perennial; 6-40 in. Leaves lance-shaped, strongly toothed; lower leaves with long, narrow bases. Flowers in axils, with broadly triangular calyx lobes, shorter than the nutlets; July-Oct. Found in wet places. N.S. to Ga.; Ark. to Okla., Neb. to Minn.

Boneset *(Eupatorium perfoliatum)* p 122 // Perennial; 1-4 ft. Leaves wrinkled, perfoliate. The stem appears to be inserted through middle of leaf pairs. Flowers white to pale purple, in flat clusters; July-Oct. Found in moist ground, thickets. N.S. to Fla.; La., Tex. to N.D.

Burdock *(Arctium lappa)* p. 123 // Biennial; 2-9 ft. Lower leaves large, rhubarb-like. Stalk solid, celery-like - grooved above. Reddish purple, thistle-like flowers, 1-1½ in. across; long-stalked, in flat-topped clusters; July-Oct. Seeds in familiar "burs" which stick to clothing. Found in waste places. Canada south to Pa., N.C.; west to Ill., Mich.

Calendula *(Calendula officinalis)* p. 123 // Hardy annual, bright green leaves and stems with a yellow tinge. Bushy plant, leaves, and stems slightly sticky and rather hairy. Flowers, rich orange-yellow, open and close in rhythm with sunlight.

Catnip *(Nepata cataria)* p. 124 // Perennial; 12-24 in. Leaves stalked, ovate, slightly heart-shaped; strongly toothed. Scent of crushed leaves is attractive to cats. Flowers in crowded clusters; June-Sept. Flowers whitish, purple-dotted; calyx soft and hairy. Found in much of N.A.

Chickweed *(Stellaria media)* p. 125 // Annual or biennial prostrate weed; 6-15 in. Leaves oval, smooth with long, hairy leafstalks. Flowers small, white; March-Sept. Petals 2-parted, shorter than sepals. Found in waste places.

Cattails (*Typha latifolia)* Perennial; 4-8 ft., forming thick stands. Leaves sword-like. Stiff, erect flowering stalks, topped with yellow, pollen-laden male flowers above furry hot dog-shaped, brown female flower heads. May-July. Found in freshwater marshes, ponds.

Chicory *(Cichorium intybus)* Biennial or Perennial. 2-4 feet. Leaves at the base are like a dandelion while those on the stalk are small. Flowers usually blue, rarely white or pink.

Chamomile *(Matricaria chamomilla)* p. 124 // Smooth, apple-scented annual; 6-24 in. Leaves finely divided. Flowers daisy-like, 3/4 in. diameter; receptacle hollow within. Flowers May-Oct. Commonly found in much of North America. Alien.

Cleavers *(Galium aparine)* p. 126 // Weak-stemmed, often drooping annual; 1-2 ft. Stem raspy, with prominent prickles. Leaves lance-shaped; usually 8, in whorls. Modest whitish flowers on stalks from leaf axils; April-Sept. Found in thickets. Throughout eastern and central area. Alien.

:omfrey *Symphytum ifficinale)* p. 126 / Large-rooted erennial; 1-3 ft. eaves large, rough nd hairy; broadly val to lance haped. Bell-like owers in furled lusters; may be urple, blue, pink, or hite; May-Sept.)ften cultivated.

Dong Quai *(Angelica siensis)* p. 128 // Perennial, glabrous, smooth, purplish stem, light linear striations. 6 in. to 3 ft. high. Lower leaves, tripinnate, upper leaves pinnate; leaflets oval, toothed; sheathed; bracts rudimentary. Flowers of 10-14 umbels, with 12-36 flowers per umbel. White, with 5 petals, June - July. Fruit, July - Aug. Found in the Orient.

Cranesbill *(Geranium maculatum)* Perennial; 1-2 ft. Leaves broad, deeply 5-parted; segments toothed. Flowers pink to lavender, occasionally white, 6-petaled; April-June. Distinct "crane's bill" in center of flower enlarges into seed-pod. Found in forests. Me. to Ga.; Ark., Kansas to Manitobia.

Echinacea *(Echinacea angustifolia)* or *purpurea* p. 128 // Tap-rooted perennial; 6-20 in. Leaves lance-shaped; stiff and hairy. Flowers with prominent cone-shaped disk surrounded by pale to deep purple spreading rays; ***purpurea*** has orange disks and larger petals and leaves. June-Sept. Rays about as long as width of disk (to 1 in.). Found in the prairies.

Dandelion *(Taraxacum officinale)* p. 127 // Familiar weed; 2-18 in. Flowering stalk hollow, with milky juice. Leaves jagged-cut. Flowers yellow; March-Sept. Bracts reflexed. Found commonly in lawns, fields, waste places.

Elder *(Sambucus canadensis)* p. 128 // Shrub; 3-12 ft. Stem with white pith. Leaves paired, compound, with 5-11 elliptical to lance-shaped leaflets; sharply toothed. Fragrant white flowers in flat, umbrella-like clusters; June-July. Fruits purplish black; July-Sept. Found in rich soils. Eastern and central N.A.

Eyebright *(Euphrasia officinalis)* p. 129 // Slender, semi-parasitic, as its root attaches to grasses. Annual; 4-8 in. Leaves tiny, bristle-toothed. Flowers June-Sept. 3 lower lobes notched, with purple lines. Variable. Found in dry or moist fields, roadsides, waste places. Subarctic south to Quebec, and northeastern states.

Feverfew (Chrysanthemum parthenium) Bushy perennial; 1-3 ft. Leaves pinnately divided into ovate divisions; coarsely toothed. Flowers like small daisies, with a large disk and stubby white rays; June-Sept. Found in roadsides. Escaped from cultivation.

Flaxseed *(Linum usitatissimum)* p. 130 // Delicate annual; 8-22 in. Leaves linear; 3-veined. Flowers with slightly overlapping blue petals (¼-¾ in. across); June-Sept. Found in waste places and cultivated.

Garlic *(Allium sativum)* p. 130 // To 3 ft. Leaves extend almost to middle of stem. Note the 2- to 4-in. long, narrow, papery green spathe around flowers. Planted and occasionally escaped from cultivation to grow in fields and roadsides.

Fennel *(Foeniculum vulgare)* p. 130 // Smooth herb; 4-7 ft. Strongly anise- or licorice-scented. Leaves threadlike. Yellowish flowers in flat umbels; June-Sept. Found on roadsides over much of N.A.

Gentian *(Gentiana lutea)* p. 131 // Perennial; 6-30 in. Stem squared. Leaves oval, clasping. Tubular flowers, in tight, often 5-flowered clusters; Aug-Oct. Found in Rich forests or moist fields.

Gravel Root *(Eupatorium purpureum)* p. 132 // Perennial grows up to 12 ft. tall; stems green, purple at leaf nodes. Pale pink-purple flowers, in a somewhat rounded cluster; July-Sept. Found in thickets. North and Central states.

Hawthorn *(Crataegus oxycantha)* p. 133 // Many varieties of spiny shrubs. Leaves simple, toothed, cut or lobed. Flowers mostly white, usually with 5 petals; calyx tube bell-shaped, 5-parted. Flowers spring-early summer. Fruits are dry red berries; each berry has 1-5 hard seeds. Abundant in Eastern and Central U.S.

Ginseng *(Panax ginseng)* p. 131 // Perennial; 1-2 ft. Root fleshy, sometimes resembling human form. Leaves palmately divided into 4-5 or 3-7. sharp-toothed, oblong-lance-shaped leaflets. Flowers whitish, in round umbels; June-July. Fruits 2-seeded red berries. Found in rich forests. North and Central states.

Hops *(Humulus lupulus)* p. 133 // Rough and prickly, twining perennial. Leaves mostly with 3-5 lobes, notches, rounded; yellow resinous granules beneath. Male and female flowers on separate plants; July-Aug. Fruits (strobiles) inflated. Found in waste places and cultivated.

Goldenseal *(Hydrastis canadensis)* p. 132 // Hairy perennial; 6-12 in. Usually 2 leaves on a forked branch; one leaf larger than the other; each rounded, with 5-7 lobes; double-toothed. Flowers single, with greenish white stamens in clusters; April-May. Berries like those of raspberry. Found in rich forests of North and Central states.

Horehound *(Marrubium vulgare)* p. 133 // White, woolly, rank-scented perennial; 12-20 in. Leaves round-oval; toothed, strongly wrinkled. Flowers in whorls; May-Sept. White calyx with 10 bristly, curved teeth. Found in waste places over much of N.A., but not native.

Horsetail *(Equisetum arvense)* p. 134 // Stiff-stemmed, apparently leafless herb; to 1 ft. Internodes elongate sheaths of nodes with 8-12 distinct teeth which are the leaves. Branchlets radiating upward from nodes. Fertile stalks without branches; to 18 in. Variable. Found in damp, sandy soil.

Lemon Balm *(Melissa officinalis)* p. 135 // Perennial; 1-2 ft. Leaves strongly lemon scented, opposite, oval, round-toothed; Flowers whitish, inconspicuous, in whorls; May-Aug. Found in barnyards, old house sites, open woods.

Juniper Berries *(Juniperus communis)* p. 134 // Shrub or small tree; 2-20 ft. Bark reddish brown, shredding off in papery peels. Needles taper to a spiny tip, in whorls of 3's. Fruits on short stalk, round or oval, bluish black, usually with 3 seeds. Found in rocky, infertile soils. Canada, Alaska, most of N. America.

Lobelia *(Lobelia inflata)* p. 136 // Hairy annual; 6-18 in. Leaves oval, toothed; hairy beneath. Small white to pale blue flowers, in racemes; to ¼ in.; June-Oct. Seed pods inflated. Found in fields, waste places, and open forests in Eastern and Central states.

Lady's Slipper *(Cypredium pubescens)* p. 135 // A highly aromatic perennial ranging from 6 to 24 inches in height. Leaves are ovate and alternate, originating around the stem. Sac-like flowers, in color from greenish yellow to purplish brown.

Mandrake, May-apple *(Podophyllum peltatum)* p. 137 // Perennial; 12-18 in. Leaves smooth, paired, umbrella-like; distinctive. A single waxy white flower, to 1 in. across, droops from crotch of leaves; April-June. Found in forests and clearings. Eastern and Central states.

Milk thistle *(Silybum marianum)* Annual or biennial thistle; grows to 6 ft. Leaves mottled or streaked with white veins; sharp spines, clasping. Flowers purple tufts; receptacle densely bristle spined. Flowers June-Sept. Alien from Europe, escaped from cultivation, common in Calif.

Mullein *(Verbascum thapsus)* p. 138 // Biennial; 1-8 ft. in flower. Leaves, large, broadly oval, very hairy (flannel-like); hairs branching. Flowers yellow, in tight, long spikes; July-Sept. Found in poor soils throughout North America.

Motherwort *(Leonurus cardiaca)* p. 137 Square-stemmed perennial; 3-5 ft. Leaves 3-lobed; toothed lobes. Pinkish flowers in whorls in axils; May-Aug. Upper lip furry. Common weed in eastern and Central area.

Nettles *(Urtica urens)* p. 138 // Perennial; 12-50 in. Stiff stinging hairs. Leaves mostly oval; bases barely heart shaped. Flowers greenish, in branched clusters; June-Sept. Male and female flowers on separate plants or branches. Found in waste places over much of North America. Not native.

Mugwort *(Artemisia vulgaris)* p. 137 // Aromatic weed; 2-4 ft. Leaves deeply cut, silvery and woolly beneath. Erect flower heads; July-Aug. Found in waste ground. S. Canada to Ga.; Kansas, Mich.; occasionally in the West.

Oregon Grape Root *(Berberis aquifolium)* p. 139 // Shiny green leaves resembling holly leaves in shape, color, and smoothness. Flowers, small and yellow-green. Dark purple berries, like small bunches of grapes.

Mulberry (Morus alba) Leaves are less hairy than Red Mulberry and coarsely toothed, often with 3-5 lobes. Fruits whitish to purple. Where found: Planted and naturalized in much of Eastern and Central area. Originally introduced from Asia for silkworm production.

Parsley *(Petroselinum sativum)* p. 139 // Biennial, small, bright green herb with numerous juicy stems ornamented with sprightly, curly, or flat leaves, depending on the variety.

Passionflower *(Passifloria carnata)* p. 140 // Climbing vine, to 30 ft; tendrils are like springs. Leaves split, with 2-3 slightly toothed lobes. Flowers large, showy, unique; whitish to purplish, with numerous threads radiating from center; July-Oct. Fruits are egg-shaped and fleshy. Found in sandy soil. Pa. to Fla.; East. Texas to South Montana.

Raspberry *(Rubus strigosus)* p. 143 // Upright shrub; canes do not root at tips. Smooth, bristly stem, with or without hooked prickles. 3-7 oval leaflets. Flowers white; June-Oct. Drupelets not separated by bands of hairs. Where found: Cultivated throughout N.A. European alien.

Pennyroyal *(Hedeoma pulegioides)* p. 140 // Aromatic, soft-hairy annual; 6-18 in. Leaves lance shaped, small, may be toothed or entire. Bluish flowers in leaf axils; July-Oct. Calyx 2-lipped, with 3 short and 2 longer teeth. Found in dry forests, most of N.A.

Red Clover *(Trifolium pratense)* p. 143 // Familiar biennial or short-lived perennial; to 18 in. Leaves divided into 3 oval leaflets; leaflets fine-toothed, prominent "V" marks. Flowers pink to red, in rounded heads; May-Sept. Found in Fields and roadsides. Throughout N.A.

Peppermint *(Mentha x piperita)* p. 140 // Perennial; 12-36 in. Stem purplish; smooth, with few hairs. Leaves opposite, stalked; distinct odor of peppermint. Flowers pale violet; in loose, interrupted terminal spikes; all summer. Found in wet places. Although alien, it is very common and has escaped cultivation.

Sage *(Salvia officinalis)* p. 143 // Evergreen shrub native to the Mediterranean region. About 18 inches tall with numerous slightly woody stems with paired silver-green leaves, finely wrinkled and veined, and hairy. Purplish flowers displayed in whorls. Cultivated in sandy soils.

Plantain *(Plantago major, and lanceolata)* p. 141 // Low perennial with broad leaves. The flowers grow at the apex of erect spikes. Grows in poor soils along roadsides and in fields, lawns, and the edges of woods. Throughout N.A.

Sarsaparilla *(Smilax glauca)* p. 144 // Entangling, climbing shrub, with stiff prickles. Leaves with a whitish film; oval, base rounded or heart-shaped; white beneath. Flowers not showy. Berries blue to black; July-winter. Found in Thickets. South New England to Fla.; Texas to Oklahoma and Indiana.

Sassafras *(Sassafras officinale)* p. 144 Tree: 10-100 ft. Leaves in 3 shapes: oval, mitten-lobed, or 3-lobed; fragrant, mucilaginous. Yellow flowers in clusters; before leaves. April-May. Fruits blue-black, one-seeded. Found in poor soils. South Me. to Fla.; Texas to East. Kansas.

Shepherd's Purse *(Capsella bursa-pastoris)* p. 145 // Annual; 4-23 in. Basal leaves in rosette, dandelion-like; stem leaves small, clasping. Flowers tiny. Seedpods heart shaped. Found in waste places throughout Central and Eastern states.

Saw Palmetto *(Serenoa serrulata)* p. 144 Shrub; to 6 ft., with horizontal creeping stems above ground. Leaf stalks have saw-like teeth. Leaves fan-like, with sword-shaped leaf blades radiating from a central point. Flowers whitish green, with 3-5 petals; May-July. Fruits black, fleshy, 1 in. long, surrounding 1 large seed; in large, branched clusters; Oct.-Nov. Found in Low pine woods, savannas, thickets. Southern States.

Skullcap *(Scutellaria lateriflora)* p. 145 // Perennial; 1-3 ft. Leaves opposite; oval to lance shaped, toothed. Flowers violet-blue, hooded, lipped; May-Sept. Flowers are in 1-sided racemes from leaf axils. Found in rich forests and moist thickets in much of Eastern and Central States.

Senna *(Cassia acutifolia)* p. 144 // Erect perennial; 3-6 ft. Compound leaves, with 4-8 pairs of elliptical leaflets. Rounded gland at base of leaf stalk. Yellow flowers in loose clusters at leaf axils; July-Aug. Seedpods with joints twice as wide as they are long. Found in dry thickets. Pa. to Fla.; Kansas to Iowa.

Slippery Elm *(Ulmus fulva)* p. 145 // To 40-60 ft., with large, rust-hairy buds. White, mildly scented, inner bark is very mucilaginous. Leaves oval; 3-7 in. long, to 3 in. wide; sides of base distinctly unequal. Leaves sandpapery above, soft and hairy below; sharply double-toothed. Papery, winged, yellow-green, simgle-seeded fruits, without hairs on margins; March-May. Found in moist woods. Me. to Fla.; Texas to N.D.

Sheep Sorrel *(Rumex acetosella)* Slender, smooth, sour-tasting perennial; 4-12 in. Leaves arrow shaped. Tiny flowers in green heads, interrupted on stalk; turning, reddish or yellowish; April-Sept. Found on acid soils. Warning: May cause poisoning in large doses, due to high oxalic acid and tannin content.

Solomon's Seal *(Polygonatum multiflorum)* Perennial; 1-3 ft. Leaves oval to elliptical; alternate. Flowers tubular, drooping in pairs from leaf axils; May-June. Found in rich forests in Conn. to Fla.; Tex., Neb. to Mich.

Spearmint *(Mentha viridis)* p. 146 // Creeping perennial; 6-36 in. Leaves opposite; short or no stalks; distinct odor of spearmint. Flowers pale pink-violet; in slender, elongated spikes; all summer. Found in wet places. Although alien, it is very common and has escaped cultivation.

Sweet Majoram *(Origanum marjorana)* Tender perennial, usually treated as an annual. Leaves are small and ovate, white flowers, with knot-like shapes before opening, prompting one of its common names, knotted marjoram. Native to Portugal but commonly cultivated.

Squaw Vine *(Mitchella repens)* p. 146 // Leaves opposite; rounded. Flowers white or pink; 4-parted, terminal, paired; May-July. Fruit a single dry red berry lasting over the winter. Found in forests in Nfld. to Fla.; Tex. to Minn.

Sycamore *(Platanus occidentalis)* Large tree; to 150 ft. Mottled, multi-colored, peeling bark. Leaves broadly oval, with 3-5 lobes; 5-8 in. long and wide, with round, shallow sinuses. Fruits globular; to 2 in. across. Found in moist soils, swamps, lake edges, and stream banks. East and Central States.

St. John's Wort *(Hypericum perforatum)* p. 146 // Perennial; 1-3 ft. Leaves oblong, dotted with translucent glands. Flowers yellow; stamens in a bushy cluster; petals 5, with black dots on margins. Flowers June-Sept. Found in fields and roadsides throughout N.A.

Tansy *(Tanacetum vulgare)* p. 147 // Strong scented perennial; 1-4 ft. Leaves fern-like. Flowers button-like, in flat terminal clusters. June-Sept. Where found: roadsides and fields. Scattered throughout our area. *Warning:* Oil is lethal - half an ounce can kill in 2-4 hours. It is illegal to sell this herb as food or medicine.

Sunflower *(Helianthus annuus)* Annual; 6-10 ft. Leaves mostly alternate, rough and hairy, broadly heart- or spade-shaped. Flowers orange-yellow; disk flat; July-Oct. Where found: prairies and roadsides. Minn. to Tex.; Ancestor of domesticated sunflower.

Thyme, Garden *(Thymus vulgaris)* p. 147 // Perennial herb, with woody, fibrous root, numerous hard-branched stems 4 to 10 inches. Tiny, paired, elliptical, gray-tinted leaves; little blossoms white or lilac colored. A spreading plant that makes good ground cover.

Uva Ursi *(Arctostaphylos uva ursi)* p. 148 Trailing shrub; bark and fine hair. Leaves are shiny and leathery, spatula shaped. Flowers white, urn shaped; May-July. Fruit a dry red berry. Found in sandy soil and rocks. Much of North America.

White Oak Bark *(Quercus alba)* p. 149 // Tall tree, 60-120 ft. Bark light, flaky, flat-ridged. Leaves with evenly rounded lobes, without bristle tips; glabrous and whitened beneath when mature. bowl-shaped cup covers a third or less of acorn. Found in dry forests Me. to North Fla.; east Texas to Minn. *Warning:* Tannic acid is potentially toxic.

Valerian *(Valeriana officinalis)* p. 148 // Perennial; 4-5 ft. Leaves strongly divided, pinnate; lower ones toothed. Tiny, pale pink to whitish flowers, in tight clusters. Escaped cultivation. June-July. Where found: along roadsides, especially in northeast U.S., Quebec., M.E. to N.J., Pa.; Ohio to Minn. Alien (from Europe).

White Pine *(Pinus strobus)* p. 149 // Evergreen tree; to at least 150 ft. Needles in bunches of 5; slender, pale green, glaucous. Cones cylindrical; to 8 in. long. Where found: common in East from Canada to Ga. mountains; west to north Ill., central Iowa.

Vervain, Blue *(Verbena officinalis)* p. 148 // Perennial, to 4 feet. Leaves, serrated edges, three lobed, two sharp lobes arising from base. Blue to blue-violet flowers on numerous terminal spikes. Grows in many habitats in Eastern USA.

White Willow *(Salix alba)* p. 149 // To 90 ft. Branchlets pliable, not brittle at base; silky. Leaves lance-shaped, mostly without stipules; white hair above and beneath. Found naturalized in moist woods, along stream edges. Alien.

Watercress *(Nasturtium officinale)* Creeping perennial, 4-36 in., forms large colonies. Mustard-flavored leaves divided into 3-9 leaflets or strongly divided. Tiny flowers; March-June. Where found: Widespread in cool running water.

Wild Cherry Bark *(Prunus serotina)* p. 149 // Tree, 40-90 ft. Rough bark, dark, reddish beneath. Leaves oval to lance-shaped, blunt-toothed; smooth above, pale beneath, with hairs on midrib. Flowers in drooping slender racemes; April-June. Fruits are dark cherries. Found in dry forests. *Warning:* Bark, leaves, seeds contain prunasin, which converts when digested to highly toxic hydrocyanic acid. Toxins most abundant in bark harvested in fall.

Wild Onion *(Allium cernuum)* Perennial; 1-2 ft. Leaves soft, flat. Stem arching at top. Flowers pink-white; July-Aug. Found in open forests and rocky soil. In much of N.A.

Wood Betony *(Betonica officinalis)* p. 150 // Perennial with thick, woody root. 1 to 2 ft., Stems are slender, square, furrowed, with a few pairs of oblong, stalkless leaves that are 2 to 3 inches long, with roughly indented margins. The majority of the leaves spring from the root; and these are larger, longer stalks which are drawn-out, heart shaped Leaves, rough to touch, fringed with short, fine hairs and dotted with glands of bitter aromatic oil.

Wild Yam *(Dioscorea villosa)* p. 150 // Slender twining climber that has male and female plants. Leaves, symmetrical, cordate. Flowers, greenish with panicles. Rhizomes, knotted, woody, elongated, tough and yellowish. No odor; taste is starchy and insipid.

Wood Sorrel, Yellow *(Oxalis corniculata L.)* Creeping perennial; 6-10 in. Leaves clover-like, with large, brownish stipules. Flowers yellow; spring to frost. Seedpods deflexed. Found in waste places throughout N.A. *Warning:* Large doses may cause oxilate poisoning.

Wintergreen *(Gaultheria procumbens)* p. 150 // Wintergreen scented; to 6 in. Leaves oval, glossy. Flowers waxy, drooping bells; July-Aug. Fruit a dry red berry. Where found: woods, openings. Canada to Ga.; Ala. to Wise., Minn. *Warning:* Essential oil is highly toxic; absorbed through skin, harms liver and kidneys.

Wormseed, Mexican tea *(Chenopodium ambrosioides)* Stout aromatic herb; 3-5 ft. Leaves wavy toothed. Greenish flowers, in spikes, among leaves; Aug.-Nov. Seeds glandular-dotted. Found in waste places of Eastern and Central States.

Witch Hazel *(Hamamelis virginiana)* p. 150 // Deciduous shrub or small tree; to 15 ft. Leaves obovate, wavy toothed; end buds distinctly scalpel-shaped. Flowers yellow, in axillary clusters; slender petals to 1 in. Flowers bloom after leaves drop in the fall. Found in forests of Eastern and Central N.A.

Wormwood *(Artemisia absinthium)* p. 151// Aromatic perennial; 1-4 ft. Leaves silver-green, strongly divided; segments blunt, with silky silver hairs on both sides. Flowers tiny, drooping; July-Sept. Found in waste ground. Not native. Escaped cultivation in U.S.

POISONOUS PLANTS

THE DEGREE OF TOXICITY IS INDICATED IN THE DESCRIPTION ACCOMPANYING EACH HERB ON THIS AND THE NEXT PAGE.

Yarrow *(Achillea millefolium)* p. 151 Soft, fragrant perennial; 1-3 ft. Leaves lacy, fine. Flowers white, may be pink, in flat clusters; May-Oct. Each tiny flower head has 5 petal-like rays that are usually slightly wider than long; each ray has 3 teeth at tip. *Warning:* May cause dermatitis. Large or frequent doses taken over a long period may be potentially harmful.

Yellow Dock *(Rumex crispus)* p. 151 // Perennial; 1-5 ft. Leaves large, lance shaped; margins distinctly wavy. Flowers green, on spikes; May-Sept. Winged, heart-shaped seeds; Roots yellowish in cross-section. *Warning:* Large doses may cause gastric disturbance, nausea, diarrhea, etc.

Buttercup *(Ranunculus sceleratus)* Erect annual or perennial; 2-3 ft. Leaves palmately divided into 5-7 stalkless, lance-shaped, toothed segments. Flowers shiny; golden yellow within, lighter outside. *Warning:* Extremely acrid. Causes intense pain and burning of mouth, mucous membranes; blisters skin. Avoid use. Similar warning applies to many other plants in the buttercup family.

Yellow Sweet Clover *(Melilotus officinalis)* Straggly biennial; 2-6 ft. Leaves in clover-like arrangement. Leaflets narrow, elongate, slightly toothed. Flowers small, yellow, pea-like, in long, tapering spikes; fragrant when crushed.

Castor Bean Plant *(Ricinus communis)* Large annual or perennial (in South); 5-12 ft. Leaves large, palmate, with 5-11 lobes. Flowers in clusters, with female ones above and male ones below. July-Sept. Seed capsule with soft spines. *Warning:* Seeds a deadly poison. One seed may be fatal to a child. After oil is squeezed from seeds, the deadly toxic protein, ricin, remains in seed cake, causing dermatitis.

Yucca *(Yucca Filamentosa)* Perennial; to 9 ft. in flower. Leaves in a rosette; stiff, spine tipped, oblong to lance shaped, with fraying, twisted threads on margins. Flowers: whitish green bells on smooth branched stalks; June-Sept. Found: Sandy soils. S. N.J. to Ga.

Nightshade, Black *(Solanum nigrum)* Perennial; 1-2½ ft. Leaves broad and triangular; irregularly toothed. Flowers white stars with protruding yellow stamens and petals curved back; Fruits are black berries. *Warning:* Some varieties contain solanine and steroids. Deaths have been reported from use. In India, some varieties are eaten, but similar varieties may be violently toxic.

Horse Chestnut *(Aesculus hippocastanum)*
Tree to 100 ft. Leaflets 5-7; to 12 in. long; without stalks, toothed. Buds large, very sticky. Flowers white with bits of red and yellow. Fruits spiny or warty. *Warning:* Outer husks poisonous; all parts can be toxic. Fatalities reported. Seeds contain 30-60 percent starch, but can be used as a foodstuff only after toxins have been removed.

Poison Oak *(Toxicodendron pubescens)*
Generally similar to Poison ivy, but always erect. Leaflets varied, blunt tipped, obviously hairy on both sides. May be lobed like oak leaves. Fruits usually hairy. The irritating effects of Poison oak are similar to those of Poison ivy. Height to 10.' Some experts believe it is a species of Poison Ivy.

Mistletoe, American *(Phoradendron Flauescens)*
Parasitic, thick branched perennial; semi-evergreen. Leaves oblong to obovate; to 3 in. long. Flowers small. Fruits translucent white. *Warning:* Often considered poisonous. Unconfirmed reports of deaths have been attributed to eating berries. May cause dermatitis.

Pokeweed *(Phytolacca americana)* Coarse, large-rooted perennial; 5-10 ft. Stem often red at base. Leaves large, toothless, and oval. Flowers greenish white, petal-like sepals; July-Sept. Fruits purple-black, in drooping bunches. *Warning:* All parts are poisonous. Pokeweed plant juice can cause dermatitis, even damage chromosomes.

Poison Hemlock *(Conium Macualatum)*
Branched perennial; 2-6 ft. Stems hollow, grooved, and purple-spotted. Leaves are carrot-like, but more triangular and with more divisions. Leaves are foul smelling when bruised. Leafstalks are hairless. Flowers white umbels. *Warning:* Deadly poison. Ingestion can be lethal. Contact can cause dermatitis. Juice in highly toxic.

Tobacco, *(Nicotiana tabacum)* Acrid, rank clammy, hairy, large annual; 3-9 ft. Leaves lance shaped to oval. Funnel shaped flowers, to 3 in. long; greenish to pink, 5-parted; Aug.-Sept. *Warning:* Addictive narcotic. Hazards of Tobacco use are well- known. Source of toxic insecticidal alkaloid, nicotine.

Poison Ivy *(Toxicodendron radicans)*
Variable, trailing, climbing vine or erect shrub. Leaves on long, glossy to hairy stalks; 3 variable leaflets, outer one has a longer stalk. *Warning:* Touching it can cause severe dermatitis. Internal consumption may cause serious effects. Smoke from burning plants, even when dried, can cause dermatitis.

Virginia Creeper *(Parthenocissus quinquefolia)* Climbing or creeping vine with adhesive disks on many-branched tendrils. Leaves divided into 5 leaflets; elliptical to oval, sharply toothed. *Warning:* Berries reportedly toxic. Leaves toxic; touching autumn foliage may cause dermatitis.

gia and bronchial spasms. It has a sedative effect on the nervous system, but it also acts as a cardiac stimulant. Small doses are helpful for diarrhea in children. It has been used for dropsy, spinal meningitis, and as an emetic. It even helps in case of poisonous snakebites. It can be used for eruptive diseases, such as measles; and, by equalizing the circulation, it is an excellent remedy for high blood pressure. Combined in a tincture or in capsules with equal parts of elecampane and wild cherry bark and taken with a tea of yerba santa, it is an excellent remedy for whooping cough, respiratory spasms, asthma, and bronchitis.

Note: Black cohosh is often combined with blue cohosh, since they complement one another.

Warning: Large doses can cause nausea and dizziness. Some herbalists say not to use either blue cohosh or black cohosh in teas, because some of the active principles are not soluble in water.

BLACK HAW

(Viburnum prunifolium) Part used: Bark of the root. *Properties:* Antispasmodic, emmenagogue, sedative, tonic. *What it affects:* Uterus, nerves, stomach, and intestines.

Preparation and amount: *Infusion:* Steep 30 min. Take 3 oz. 3-4 times daily. *Decoction:* Take 1 oz. herb to 1 quart water. Simmer 30 min. Take 1 Tbsp. 3-4 times daily or as needed. *Tincture:* Take ½-1 tsp. 3-4 times daily. *Fluid extract:* Take ½-2 tsp. 3-4 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3-4 times daily.

Purposes: *Internally,* black haw is another very helpful herb for female problems. It acts as a tonic and sedative to female reproductive organs. It eases cramps and contractions in the pelvic organs. It is excellent for painful menstruation, whether due to nerve debility or congested tissue. It is extremely helpful for scanty menstrual flow accompanied by a severe bearing-down feeling with intermittent pain. It is valuable in chronic uterine inflammation, congested uterus, and leukorrhea. Lastly, unlike some other "female herbs," black haw can be used during pregnancy, and gives a tonic effect.

BLACK WALNUT

(Juglans nigra) Parts used: Leaves and bark. *Properties:* Antiseptic, astringent, vermicide, alterative. *What it affects:* Blood, intestines, and nerves.

Preparation and amount: *Infusion (leaves):* Take 6 oz. 1-4 times daily. *Decoction (inner bark):* Simmer 10-15 min. Take 1 Tbsp. 3-4 times daily. *Tincture:* Take 10-20 drops 3 times daily. *Fluid extract:* Take 1-2 tsp. 3-4 times daily. *Syrup:* Take 1 Tbsp. 1-2 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: Black walnut is rich in organic iodine and tannins which provide antiseptic qualities. *Internally,* It helps heal mouth and throat sores, aids digestion and acts as a laxative. It cleanses the body of some types of parasites. As an infusion, it is good for all toxic blood conditions. It may help lower blood pressure and cholesterol levels. Use the infusion as an injection for vaginitis, bleeding, piles, intestinal worms, dysentery, prolapsed intestines, and prolapsed uterus.

Externally, black walnut is good for bruising, fungal infection, herpes, poison ivy, warts, ringworm, and scabies. The tincture can be used to paint sores and pimples. Apply tincture or powdered leaves to bleeding surfaces or moist skin diseases.

BLESSED THISTLE

(Cerbenia benedicta) Part used: Tops. *Properties:* Emmenagogue, galactagogue, stomachic, tonic, alterative. *What it affects:* Stomach, heart, blood, mammary glands, and uterus.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. as needed. *Tincture:* Take 5-20 drops as needed. *Fluid Extract:* Take ½-1 tsp. as needed. *Powder:* Take 5-10 #0 capsules (30-60 grains) as needed.

Purposes: *Internally,* blessed thistle is an excellent stimulant tonic for the stomach, by increasing stomach secretions. It is a tonic for the heart, for it strengthens it. It aids circulation and helps resolve all liver problems. It is useful for all lung and kidney problems also. It stimulates the appetite, acts as a brain food, and stimulates memory. It lessens inflammation and cleanses the blood. As a blood purifier, combine it with yellow dock and burdock root. It is good for female disorders and increases milk flow in nursing mothers. The warm tea, mixed with equal parts of raspberry leaves and marshmallow root, increases mother's milk.

Warning: If taken in excess, blessed thistle will act as an emetic. Do not use it during the first two trimesters of pregnancy. It should not be taken alone or in large amounts during the remainder of pregnancy.

BLUE COHOSH

(Caulophyllum thalictroides) Part used: Rhizome. *Properties:* Antispasmodic, emmenagogue, oxytocic, diuretic. *What it affects:* Uterus, nerves, joints, and urinary tract.

Preparation and amount: *Infusion:* Take 3 oz. 3-4 times daily. *Decoction:* Simmer 5-15 min. Take 1-2 oz. 3-4 times daily. *Tincture:* Take ½-1 tsp. 3-4 times daily. *Fluid extract:* Take 10-30 drops (1/6 to ½ tsp.) 3-4 times daily. *Powder:* Take 1-5 #0 capsules (5-30 grains) 3-4 times daily.

Purposes: *Internally,* blue cohosh is used to regulate menstrual flow, especially for suppressed menstruation. The Indians used it to induce labor, for children's colic, and for cramps. Indian women made sure they took it during the last month of pregnancy, to aid in a speedy and painless delivery.

Blue cohosh eases muscle spasms and stimulates uterine contractions for childbirth. It is useful for nervous disorders and memory problems. It is used as an antispasmodic in cough medicines and to treat lung problems and all female spasms.

Note: Blue cohosh is often combined with black cohosh because the herbs have complementary properties beneficial for the nerves and a strong antispasmodic effect on the entire system. It is also combined with other herbs, to promote their effects in treating bronchitis, nervous disorders, urinary tract ailments, and rheumatism.

Warning: Blue cohosh should always be given only

in combination with other herbs indicated for the condition being treated. Blue cohosh can be very irritating to mucous surfaces and can cause dermatitis on contact. Children have been poisoned by the berries. It is best not to use either blue cohosh or black cohosh in teas, because some of the active principles are not soluble in water. Because of its emmenagogue properties, it is not to be used by pregnant women, except during the last month of pregnancy.

BONESET

(Eupatorium perfoliatum) Part used: Tops. *Properties:* Diaphoretic, stimulant, antipyretic, laxative. *What it affects:* Stomach, liver, intestines, and circulation.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. 3 times daily. *Tincture:* Take 10-40 drops 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Powder:* Take 4-10 #0 capsules (20-60 grains) 3 times daily

Purposes: *Internally,* boneset is a specific for treating severe fevers, especially intermittent fevers. Taken as a warm infusion (drink 4-5 cups while in bed, to encourage sweating), it is widely used for flu, catarrh, and bronchitis. It helps relieve fever-induced aches and pains. It is a decongestant, loosening phlegm, reducing fever, increasing perspiration, and calming the body. An American Indian in Colonial times became famous for curing typhoid with boneset. For decades thereafter, the plant was named after him: Joe Pye weed.

The tea is made using an ounce of herb to a pint of water, steeped 10 minutes. One-half cup is taken 3 times daily. When taken cold, it is a tonic stimulant and a mild laxative. Taken warm, it is diaphoretic and emetic; it can be used to break up a common cold, an intermittent fever, and the flu. The hot tea is both emetic and cathartic; and is used for sweating therapy, using 4-5 half-cup doses while in bed.

Warning: Long-term use can result in toxicity.

BUCHU

(Barosma betulina) Part used: Leaves. *Properties:* Antiseptic, diuretic, diaphoretic. *What it affects:* Kidneys and bladder.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. 3-4 times daily (do not boil leaves). *Tincture:* Take ½ tsp. 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Powder:* Take 2-3 #0 capsules (10-15 grains) 3 times daily.

Purposes: *Internally,* buchu leaves are one of the best diuretics known. The herb is used for all acute and chronic bladder and kidney disorders, including inflammation of the urethra, nephritis, cystitis, and catarrh of the bladder. It is a specific for bladder infection and good for urine retention. It lessens inflammation of the colon, gums, mucous membranes, prostate, sinuses, and vagina. It is good for diabetes in the first stages, digestive disorders, fluid retention, and prostate disorders.

As with most diuretics, buchu works better if it is given as a cool infusion. Buchu is commonly combined with uva ursi for the treatment of water retention and urinary tract infections. Make an infusion, using one ounce of buchu leaves to a pint of water.

When given warm, buchu is used to treat enlargement of the prostate gland, burning urine, and irritation of the membrane of the urethra. It can be used in fever remedies. It is also used for venereal disease.

Some herbalists recommend it as an after-dinner beverage, to replace coffee: Buchu leaves (2 parts), uva ursi (2 parts), orange peel (1 part), peppermint (1 part), chamomile (1 part), comfrey leaves (1 part). Use ¼ oz. of the herb mixture in a pint of boiled water and steep 10 minutes. This will strengthen the kidneys.

Note: Do not boil buchu leaves or uva ursi, because their active principles are volatile oils.

BUCKTHORN

(Rhamnus frangula) Part used: Bark. *Properties:* Hepatic, laxative, galactagogue, emollient. *What it affects:* Liver, gallbladder, intestines, and blood.

Preparation and amount: *Decoction:* 1 oz. bark to 1 quart water, boiled down to 1 pint. Take as needed. *Tincture:* Take 5-60 drops 3 times daily. *Fluid extract:* Take ½-2 tsp. 3 times daily. *Powder:* Take 4-10 #0 capsules (20-60 grains) 3 times daily.

Purposes: *Internally,* buckthorn is a purgative and works without irritating the system. It can be used for all conditions caused or associated with constipation, including liver and gallbladder problems. It produces no constipative backlash during purgation as some other remedies do; neither does it become less effective with repeated use. The decoction will produce sweating, when taken hot. Internally, it will keep the bowels regulated. It is helpful for colic, obesity, dropsy, hemorrhoids, rheumatism, gout, and all skin diseases.

Externally, use buckthorn as a fomentation for dry or itchy skin problems, and skin diseases. It is also used for warts.

Note: Do not confuse this buckthorn *(Rhamnus frangula)* with its relative, cascara sagrada *(Rhamnus purshiana),* called "California buckthorn," which is a different herb.

Warning: Fresh bark and unripe fruit can cause symptoms of poisoning. Storage for a year or heating to 212° F. will render the bark safe to use. Do not use during pregnancy.

BUGLEWEED

(Lycopus virginicus) Part used: Whole herb. *Properties:* Astringent, sedative, tonic. What it affects: Heart, lungs, and circulation.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. frequently. *Tincture:* Take ½-1 tsp. frequently. *Fluid extract:* Take ¼-1 tsp. frequently. *Powder:* Take 5-10 #0 capsules (30-60 grains) frequently.

Purposes: *Internally,* bugleweed is especially good for hemorrhages from the lungs and bowels. It is excellent for heart diseases marked by irregular heartbeat (whether functional or organic). Because it acts like digitalis in quieting the pulse, it is useful for pericarditis and endocarditis. Bugleweed is also good for chronic inflammation of the lungs, all chest congestive diseases, and coughs. In addition, it is used for conditions in which the

blood flow needs to be reduced, such as reducing hemorrhoids, stopping intestinal bleeding, nosebleeds, excessive menstruation, or blood in the urine. When treating these conditions, it is best to add demulcent herbs to the mixture.

BURDOCK

(Arctium lappa) Parts used: Root (especially), seeds, and leaves. *Properties: Root:* Alterative, diaphoretic, diuretic, demulcent. *Seeds:* Alterative, diuretic. *Leaves:* Tonic.

Preparation and amount: *Infusion (leaves):* Take 1 cup 3-4 times daily. *Decoction (root or seeds):* 1 oz. root to 1½ pints water, boiled down to 1 pint. Take 3 oz. 3-4 times daily. *Tincture:* Take 30-60 drops 3-4 times daily. *Fluid extract:* Take ½-1 tsp. 3-4 times daily. *Powder (root or seed):* Take 10-20 #0 capsules (60-120 grains) daily. *Powder (leaves):* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: *Internally,* burdock is used to promote kidney function and works through the kidneys to help clear the blood of harmful acids. It is one of the best blood purifiers for chronic infection, rheumatism, arthritis, skin diseases, and sciatica.

Burdock is used for skin disorders, such as carbuncles and boils, and relieves gout and menopausal problems. It aids elimination of excess fluid, uric acid, and toxins; and it has antibacterial and antifungal properties. It acts as an antioxidant and may help protect against cancer, by helping control cell mutation.

The diaphoretic property of burdock is due to a volatile oil which, taken internally, is eliminated from the sweat glands, thus removing toxic waste. Sweating has a cooling effect on the body. So it is used to reduce fevers and heat conditions such as boils, sties, carbuncles, canker sores, and infections. For this purpose, use ½ cup of the decoction 3 times daily. An infusion of the leaves is used as a stomach tonic and for indigestion.

Burdock contains 27%-45% inulin, the source of most of its curative ability. Inulin is a form of starch. Burdock also has an abundance of iron, which makes it of special value for the blood. It is also a blood purifier. That is why it is so helpful in treating arthritis, rheumatism, sciatica, and lumbago. When the seeds are made into a tincture or extract, they are good for skin and kidney diseases. It is excellent for all skin diseases, taken alone or with other blood purifiers, such as sarsaparilla. Take it internally for acne, boils, chicken pox, eczema, psoriasis. Make a decoction of the root, using 1 oz. to 1½ pints of water, and simmer until the volume is reduced to 1 pint. Take ½ cup 3 times daily. For sweating, simmer in covered pan for 10 minutes; then drink 1 cup of the tea before taking a hot bath.

Externally, take it for boils, eczema, itching, poison ivy, and poison oak.

Warning: May interfere with iron absorption, when taken internally.

CALENDULA

(Calendula officinalis) Part used: Flower. *Properties:* Astringent, vulnerary, antispasmodic, diaphoretic. *What it affects:* Blood and skin.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 1 Tbsp. each hour or 1 cup daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Powder:* Take 3-10 #0 capsules (15-60 grains) 3 times daily.

Purposes: *Internally,* calendula can be used as a non-irritating fomentation or salve for sores, burns, bleeding hemorrhoids, and wounds. It reduces inflammation and is soothing to the skin. It is used internally as a warm infusion—to treat fevers, ulcers, cramps, and eruptive skin diseases. It has been successfully used as a nasal wash for sinus problems.

An infusion of the flowers (either the rays or the whole head) can be used for such gastro-intestinal problems as ulcers, stomach cramps, colitis, and diarrhea. As a warm infusion, it is useful internally for fever, boils, abscesses, and to prevent recurrent vomiting. The fresh juice of the herb or flowers can substitute for the infusion.

Calendula tincture helps gastritis and menstrual difficulties, vaginal infections, ulcers, and cramps. An infusion can be used in treating smallpox and measles.

The tea, made with 1 oz. of herb per pint of water, may be taken hourly for acute ailments. It is commonly used in making salves and is a very good first-aid remedy.

Internally, Calendula can be used with oil in a salve or poultice in order to stop bleeding, soothe pain and irritation, and promote mending and healing of wounds. A very good salve for wounds can be made from the dried flowers or leaves, from the juice pressed out of the fresh flowers, or from the tincture. The salve or diluted tincture is also good for bruises, sprains, pulled muscles, sores, and boils. To get rid of warts, rub on the fresh juice. The oil is put in ears and left overnight for earaches. A strong tea can be used as a sitz bath for bleeding hemorrhoids. A fomentation is good for varicose veins. It is also good for bee stings and skin ulcers. You can wash wounds with it.

CASCARA SAGRADA

(California Buckthorn)—(Rhamnus purshiana) Part used: Bark. *Properties:* Hepatic, laxative, antispasmodic. *What it affects:* Colon, stomach, liver, gallbladder, and pancreas.

Preparation and amount: *Decoction (bark):* Simmer 5-15 min. Take 1 tsp. 3-4 times daily before meals or 1 cup during the day, cold. *Tincture:* Take 5-20 drops, morning and evening. *Fluid extract:* Take ½-1 tsp. at night before retiring. *Syrup:* Take ½-2 tsp. 2-3 times daily. *Powder:* Take 6-12 #0 capsules (10-100 grains) daily.

Purposes: *Internally,* cascara is one of the safest laxatives for chronic constipation. If used too much, it is habit forming. It is one of the best, commonest, and safest plant laxatives. It encourages peristalsis by irritating the bowels. The bitter principles in cascara stimulate the secretions of the entire digestive system—including the liver, gallbladder, stomach, and pancreas.

Cascara is excellent for intestinal gas, liver, and gallbladder problems, especially enlarged liver. It is also used for gastric and intestinal disorders, indigestion, and jaundice.

In order to use it for its gentle, laxative effect, cascara is best taken not as a tea, but as tincture or in capsules.

This is because it is so bitter.

Note: The bark must be at least a year old before being used. Do not confuse cascara segrada *(Rhamnus purshiana)*, sometimes called "buckthorn," with buckthorn *(Rhamnus frangula)*. They are both good, but different herbs.

CATNIP

(Nepata cataria) Part used: Tops. *Properties:* Carminative, diaphoretic, sedative, nervine. *What it affects:* Nerves and intestines.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 1 oz. to 1 cup as needed (do not boil herb). *Tincture:* Take ½-1 tsp. as needed. *Fluid extract:* Take ¼-1 tsp. as needed. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: *Internally,* it is wonderful for children and infants when gas, stomach cramps, or nervousness occur. This is the children's herb, but it is also helpful to grown-ups. It is famous for its gentle sedative effect on the nervous system, reducing nervous tension.

Catnip is used for mumps, painful swellings, chronic bronchitis, and diarrhea. Use catnip as an enema, to expel worms. Drink the tea for headaches caused by indigestion. It is frequently used in enemas, to relax and gently restore the tone of the bowels. It is an excellent herb for children, especially when mixed in a tea with chamomile, spearmint, and lemon balm. It is also good for insomnia.

Catnip is also used for colds, bronchitis, dizziness, fevers, gas, diarrhea, headaches, hysteria, insomnia, morning sickness, mumps, smallpox, and urine retention. It quickly reduces fevers when a catnip tea enema is taken. It stimulates the appetite.

Externally, use catnip as a fomentation for mumps and painful swellings.

CAYENNE

(Capsicum anuum) Part used: Fruit. *Properties:* Carminative, stimulant, antispasmodic, astringent. *What it affects:* Heart, circulation, stomach, and kidneys.

Preparation and amount: *Infusion:* 1 tsp. to 1 cup boiling water, taken in ½ fluid oz. doses. Pour water over cayenne. *Tincture:* Take 5-15 drops 3 times daily. *Fluid extract:* Take 10-15 drops 3 times daily. *Oil:* For toothache, clean the cavity and place cotton, saturated with the oil, into the cavity; use sparingly, as it is very potent. *Powder (internal):* Take 1-2 #0 capsules (1-10 grains) 3 times daily. *Powder (external):* For external bleeding, powder may be placed directly on the wound.

Purposes: Dr. Christopher, a well-known herbalist of the mid-twentieth century, said that if he only had two herbs, he would select charcoal and cayenne. Cayenne is powerful in its ability to attract blood to a body part. Since it is the blood which brings healing, this is an important quality.

Internally, When added to herbal formulas, cayenne stimulates the action of other herbs. It stops heart attacks; and is used for flus, colds, indigestion, and lack of vitality. It is good for treating the spleen, pancreas, kidneys; and it is effective as a fomentation for rheumatism, inflammation, pleurisy, sores, and wounds.

Cayenne is useful for arteriosclerosis, arthritis, asthma, bleeding, high or low blood pressure, bronchitis, chills, colds, convulsions, coughs, indigestion, infections, jaundice, ulcers, and varicose veins.

Externally, cayenne is used for frostbite, painful joints, swellings, and varicose veins. It can be rubbed on toothaches and swellings. Sprinkled on bleeding cuts, it will immediately stop the bleeding.

Warning: Very excessive use can damage the kidneys and lead to pleurisy or gastro-enteritis. Prolonged application to the skin can cause dermatitis and raise blisters. When cooked, it becomes an irritant. It is best to use cayenne primarily as a medicine, and only very small amounts as a food additive. Apply it with a glove.

WILD CELERY

(Apium graveolens) Parts used: Root, seeds. *Properties:* Carminative, diuretic, nervine, stimulant, tonic. *What it affects:* Kidneys, bladder, and nerves.

Preparation and amount: *Decoction (root, seeds):* Simmer 5-15 min. Take 1 oz. 3 times daily. *Fluid extract:* Take 10-30 drops as needed. *Essential oil:* Take 1-2 drops 3 times daily. *Powder:* Take 4-10 #0 capsules 3 times daily.

Purposes: *Internally,* wild celery is good for arthritis, gout, and kidney problems. It acts as a diuretic, antioxidant, and sedative. It reduces blood pressure, relieves muscle spasms, and improves appetite. A decoction of celery seed is useful for incontinence of urine, dropsy, rheumatism, neuralgia, and to aid in ridding the body of excess acid. It can be used for gout, tendencies toward overweight, flatulence, chronic pulmonary catarrh, and deficiency diseases. The root can be eaten raw or made into broth, to treat the same problems. The whole plant can be used to treat kidney ailments and rheumatism. It also promotes the onset of menstruation. When eaten as a salad vegetable or made into a tea, it will help clear up skin problems.

Warning: During pregnancy, the seeds of wild celery should not be used, nor large amounts of the herb. It is a strong diuretic and should not be used when acute kidney problems exist (but moderate use is all right when kidney problems are not chronic).

CHAMOMILE

(Camomile)—(Matricaria chamomilla) Part used: Flowers. *Properties:* Emmenagogue, nervine, sedative, carminative, diaphoretic, tonic. *What it affects:* Nerves, stomach, kidneys, spleen, and liver.

Preparation and amount: *Infusion:* Steep 10-30 min. (do not boil flowers). Take 6 oz. 2-3 times daily. *Tincture:* Take 30-60 drops 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: *Internally,* chamomile is good for insomnia and nervousness. It increases appetite and helps those with weak stomachs. It reduces inflammation, and aids digestion and sleep. Six ounces of the infusion or 1-2 teaspoons of the tincture at a time is good for menstrual cramps, kidney, spleen, or bladder problems. It acts as a

diuretic and nerve tonic, and is a useful remedy for stress, anxiety, and indigestion.

Chamomile can be safely used for children with colds, indigestion, and nervous disorders. It helps relieve cramping associated with the menstrual cycle and will bring on the period. It can also be used as a relaxing antispasmodic, anodyne bath additive. It is good for dizziness, gas, hysteria, jaundice, kidney problems, measles, and swellings. It is also good for lumbago, rheumatic problems, and rashes.

Externally, chamomile can be used as a mouthwash for minor mouth and gum infections. The tea is a good wash for sore eyes and open sores. Use it as a wash or compress for skin problems and inflammations, including inflammations of the mucous tissues. Keeping a mouthful in the mouth for a time will temporarily relieve toothache. Use it for a sitz (sitting) bath, to help hemorrhoids, or as a foot- or hand-bath for sweaty feet or hands. For hemorrhoids and wounds, the flowers are also made into a salve. To help asthma in children or to relieve the symptoms of a cold, try a vapor bath of the tea. A fomentation can be used for cramps, gas, and swellings.

Note: This is German chamomile *(Matricaria chamomilla).* Do not confuse it with Roman chamomile *(Anthemis nobilis),* which is also a good but lesser-used herb; it is quite different in its properties and applications, yet sometimes it is also called chamomile.

Warning: Chamomile should not be used daily for a lengthy period, for this could lead to constipation, or ragweed allergy. Those allergic to ragweed should use it with caution (same family). It should not be used with sedatives or alcohol.

CHAPARRAL

(Larrea divaricata) Part used: Leaves. *Properties:* Alterative, antibiotic, antiseptic, parasiticide. *What it affects:* Stomach, intestines, and blood.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. 3 times daily. *Tincture:* Take 10-20 drops 3 times daily. *Powder:* Take 2-10 #0 capsules (10-60 grains) 3 times daily.

Purposes: *Internally,* chaparral is one of the best herbal antibiotics. It is useful against bacteria, viruses, and parasites, both internally and externally. It fights free radicals and chelates heavy metals. It has anti-HIV activity. It protects against harmful effects of radiation. It may be taken internally for colds and flus, inflammations of the respiratory and intestinal tracts, diarrhea, and urinary tract infections.

Chaparral protects against the formation of tumors, cancer cells, and over-exposure to sunlight. It contains a substance called NDGA (nordihydroguararetic acid), which is a powerful antioxidant, useful in preserving fats and oils, and a powerful anti-tumor agent. American Indians used it to treat cancer. It relieves pain and is good for skin disorders. It is excellent as an addition to an herbal formula in the treatment of kidney and bladder infections.

Externally, chaparral is applied to wounds as an antiseptic. As a fomentation, it is applied to the skin for skin diseases, psoriasis, herpes, scabies, eczema, arthritic pains, skin parasites; it is to the scalp as a hair tonic and for dandruff. It makes a good hair rinse. A liniment made from chaparral or a bath made by soaking the leaves in the water is used for rheumatism.

Note: Chaparral is very bitter and is usually mixed with other herbs or taken in tincture form. Pau d'arco *(Tabebuia heptaphylla),* also called lapacho or taheebo, has similar antibiotic and anti-cancer properties, but is less harsh than chaparral.

CHARCOAL

(Carbon) **Preparation and amount:** *Powder:* Take ½-1½ tsp. in ½-1 cup water—swallowed, spread onto a poultice, or taken as a slurry (see below for details). *Tablets:* 4-8 chewed in mouth and then swallowed.

Although not an herb, yet charcoal is invaluable in a number of ways. It is pure carbon and will adsorb (not absorb, but bind with) 29 of the 30 most dangerous poisons, thus neutralizing them.

Purposes: Usually obtained from a hard wood, charcoal is produced by slow combustion in a relative absence of oxygen. If you do not have any available, in an emergency, you can burn a piece of hard wood and scrape or chip the charcoal from the charred wood. After moistening it with water, force it through a food grinder. Commercial sources are usually made from coconut shells. (Burnt toast or charcoal briquettes *are not* charcoal!) Treatment with superheated steam can produce "activated" charcoal, which is capable of much greater adsorptive effect. This is because more surfaces of the charcoal have been exposed. The surface area of charcoal is astounding, for it has millions of micropores with surface areas ranging from 400 to over 1,800 square meters per gram! There are 50 million charcoal particles in one pound.

Internally, charcoal cannot adsorb all poisons, but it can bind with, and thus neutralize many of them. Here are but a few of the many things it adsorbs: *Many industrial toxins, including:* DDT, dieldrin, strychnine, malathion, and parathion. *Many medicinal drugs, including:* aspirin, barbiturates, cocaine, opium, nicotine, morphine, penicillin, and sulfas. *Many inorganic chemicals, including:* mercury, phosphorus, chlorine, iron, lead, and silver.

In any type of acute poisoning, the best thing to do is to induce vomiting, followed with a large dose of activated charcoal, diluted in water, to render most substances harmless. Usually 30-60 grams (about ½ cup) is needed, suspended in water and taken as soon as possible after the injection of any toxin.

Charcoal can also be taken to stop intestinal gas (about a spoonful in half a glass of water, followed by another glass of water). It is also very good for diarrhea.

In cases of colitis or unusual chronic inflammations of the bowel, a charcoal slurry solution can be made by stirring powdered activated charcoal into water. Then use only the cloudy solution which results after the liquid has set for a couple hours. This "slurry enema" will reduce inflammation locally, giving considerable relief.

Externally, you can use it as a poultice on wounds, skin infections, and above inflamed body areas.

CHICKWEED

(Stellaria media) Part used: Tops. *Properties:*

Antipyretic, demulcent; alterative. *What it affects:* Blood, liver, lungs, kidneys, and bladder.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. 3-4 times daily, between meals. *Decoction:* 1 oz. to 1½ pints boiling water, simmered down to 1 pint. Take 3 oz. 3-4 times for every 2-3 hours when needed. *Tincture:* Take ½ tsp. as needed. *Fluid extract:* Take ½-1 tsp. as needed. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: *Internally,* this common weed is invaluable for treating blood toxicity, fevers, inflammations, and other "hot" diseases. Chickweed relieves nasal congestion. Useful for bronchitis, pleurisy, circulatory problems, bowel inflammation, colds, coughs, skin diseases, and hoarseness. This mild herb is as safe to take as any garden vegetable, and is full of vitamins and minerals. People often eat it as a salad green. Therefore it can be used in high dosages. Because it lowers blood lipids, it is particularly useful in reducing excess fat having both mild diuretic and laxative properties. Drink the tea, to build the blood.

Externally, chickweed can be applied as a poultice to warts, boils, and abscesses. Made into an oil and ointment, it is used for a wide variety of sores and other skin diseases. Add the tea to a bath, to soothe rashes and skin irritations. Make it into a salve for dry, itchy skin. It can also be used for mouth sores.

CLEAVERS

(Galium aparine) Part used: Tops. *Properties:* Alterative, astringent, diuretic, antipyretic, laxative. *What it affects:* Kidneys, bladder, blood, and skin.

Preparation and amount: *Infusion:* Let 3 oz. to 2 pints cold water stand 3-4 hours. Take 3 oz. (cold) 3-4 times daily or 1½ oz. to 1 pint of warm water. Steep 2 hours. Take 1 cup 3-4 times daily. *Tincture:* Take ½-1 tsp. 3-4 times daily. *Fluid extract:* Take ½-1 tsp. 3-4 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3-4 times daily.

Purposes: *Internally,* cleavers is excellent for breaking up fevers. Highly recommended for kidney problems, including suppressed urine, inflammations of the kidneys and bladder, obstructions of the urinary tract (stones and gravel), and scalding urine during gonorrhea. It is a powerful diuretic and will rid the body of excess fluid. It will clean the blood and strengthen the liver. Combine it with equal parts uva ursi, buchu, and one-quarter part marshmallow root for urinary problems. Because it is a powerful diuretic, it is useful in reducing weight and treating edema. It is also good, taken internally, for skin diseases and eruptions. Its cooling properties make it a good treatment for fevers.

Externally, cleavers is used in a salve for scalds, burns, and external tumors.

CLOVES

(Caryophyllus aromaticus) Part used: Fruit. *Properties:* Antiseptic, aromatic, carminative, stimulant, anodyne, antiemetic. *What it affects:* Mouth, stomach, intestines, circulation, and lungs.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 1-2 Tbsp. 3 times daily. *Fluid extract:* Take 8-30 drops 3 times daily. *Oil:* Take 1-2 drops 3 times daily. *Powder:* Take 1-5 #0 capsules (2-10 grains) 3 times daily.

Purposes: *Internally,* a few drops of the oil in warm water will stop nausea and vomiting. Cloves have antiseptic and antiparasitic properties, and also aid digestion. It stimulates and warms the system, helping those with cold extremities. If you have a bitter herb formula, add cloves to cover the taste and improve digestion and circulation. It promotes sweating in colds, flus, and fevers and can be used to treat whooping cough. As a carminative, it is good for expelling gas and stopping intestinal spasms.

Externally, apply clove oil directly to a toothache, to stop the pain.

Warning: Clove oil is very strong and can cause irritation if used in its pure form. Dilute the oil in olive oil or distilled water. Do not take the undiluted oil internally.

COLTSFOOT

(Tussilago farfara) Part used: Leaf. *Properties:* Demulcent, emollient, expectorant. *What it affects:* Lungs, stomach, intestines.

Preparation and amount: *Infusion:* Steep 30 min. Take 6 oz. frequently. *Tincture:* Take ½-1 tsp. as needed. *Fluid extract:* Take ½-1 tsp. as needed. *Powder:* Take 10-20 #0 capsules (60-120 grains) as needed.

Purposes: *Internally,* coltsfoot is a long-used remedy for respiratory problems. Use it for coughs, colds, hoarseness, bronchitis, bronchial asthma, pleurisy, and throat catarrh. It can also be used for diarrhea. Its name, *tussilago,* means "cough dispeller," and it is one of the best cough remedies available. For relief of asthma, bronchitis and difficulty in breathing, it can be taken as a tea, especially in combination with horehound and marshmallow. As a cough syrup combination, combine coltsfoot with horehound, ginger, and licorice root. Add it to all spasmodic lung problem remedies. It is soothing to the stomach and intestines when there is inflammation and bleeding.

Externally, it speeds the healing of wounds and many skin conditions. It is helpful for bedsores, bites, stings, bruises, inflamed bunions, burns, dermatitis, and dry skin. The crushed leaves, or a decoction, can be applied externally for insect bites, inflammations, general swellings, burns, erysipelas, leg ulcers, and phlebitis. It is good for bleeding hemorrhoids, leg ulcers, nosebleeds, psoriasis, scabies, sunburn, and skin rashes.

COMFREY

(Symphytum officinale) Parts used: Leaves and root. *Properties:* Demulcent, expectorate, mucilage, vulnerary; alterative, astringent, nutritive. *What it affects:* Bones and muscles, general effects on whole body.

Preparation and amount: *Infusion (leaves):* Steep 30 min. Take 6 oz. 3 times daily. *Decoction (root):* Simmer 30 minutes. Take 3 oz. frequently. *Tincture:* Take ½-1 tsp. 3 times daily. *Fluid extract:* Take ½-2 tsp. 3 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: Comfrey is an all-around good remedy.

It has a healing, soothing effect on every organ it contacts. It may be used both *internally* and *externally* for the healing of fractures, wounds, sores, and ulcers. It aids cell proliferation, helping to heal wounds rapidly.

Internally, comfrey is excellent for dysentery; one of the best for internal bleeding; excellent for coughs; catarrh; ulcerated bowels, stomach, and lungs. It helps the pancreas in regulating blood sugar levels. It helps relieve irritations associated with the gallbladder, kidneys, small intestines, and stomach. It helps promote the secretion of pepsin and is a general aid to the digestion. Comfrey has the highest content of mucilage of any of the herbs. Its demulcent properties, especially of the root, have been used to treat lung troubles and coughs. It is used for anemia, arthritis, asthma, internal bleeding, as a blood purifier, bronchitis, calcium deficiency, colitis, coughs, diarrhea, dysentery, emphysema, and gallbladder inflammation.

Externally, comfrey is used for boils, bruises, burns, psoriasis, and sprains. It is good for bedsores, bites and stings, leg ulcers, nosebleeds, psoriasis, scabies, skin rashes, and sunburn. For bleeding, use a strong decoction of the root, using ½-1 oz. of the root every two hours until the bleeding has stopped. Bruise the fresh leaves and apply as a poultice to wounds, burns, open sores, gangrene, and moist ulcers. The tea can also be put on them.

Keep some comfrey growing in your garden. Once established, it will keep coming up year after year. It is extremely prolific and versatile. A small piece of the root will reproduce itself in any shady, moist area in a very short time.

CORN SILK

(Zea mays) Part used: Leaves. *Properties:* Diuretic, lithotriptic, demulcent. *What it affects:* Kidneys, bladder, and prostate.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. as needed. *Tincture:* Take 5-20 drops 3 times daily. *Fluid extract:* Take ¼-½ tsp. 3 times daily. *Powder:* Take 1-5 #0 capsules (5-30 grains) 3 times daily.

Purposes: Corn silk is the best single herb for increasing urine flow, thus helping to eliminate kidney and bladder problems.

Internally, corn silk tea is used for bed-wetting, chronic cystitis, inflammation of kidneys and bladder, kidney stones, prostatitis, excess uric acid, and urine retention. It is a good remedy for all inflammatory conditions of the urethra, bladder, prostate, and kidney; it can remove gravel from the kidneys, bladder, and prostate. It helps the aged, when their urine is scanty and has heavy sediment. Use it with other kidney herbs, when the urinary tract needs to be opened up or when there is mucus in the urine. It lessens the frequency of bed-wetting, when taken several hours before bedtime. It is good for dropsy and edema, when a weak heart is the cause. It is used for carpal tunnel syndrome and prostate disorders.

CRAMPBARK

(Viburnum opulus) Part used: Bark. *Properties:* Antispasmodic, astringent, nervine. *What it affects:* Nerves, heart, and reproductive organs.

Preparation and amount: *Infusion:* Steep 30 min. Take 3 oz. 3-4 times daily. *Decoction:* 1 oz. herb to 1 qt. water. Simmer 30 min. Take 1 Tbsp. 3-4 times daily or as needed. *Tincture:* ½-1 tsp. 3-4 times daily. *Fluid extract:* Take ½-2 tsp. 3-4 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3-4 times daily.

Purposes: Cramp bark is especially helpful for the relief of menstrual cramps. It can be combined with equal parts of ginger, angelica root, three parts chamomile and taken as a warm tea for all cramps and convulsions. It is also useful for any spasms of involuntary muscles, hysteria, and painful or excessive uterine bleeding. It helps alleviate acute heart palpitation and rheumatism. For asthma, make a decoction of ½ oz. of the bark to a pint of water; take 1 Tbsp. frequently as needed.

Note: Cramp bark has properties very similar to black haw; one can generally substitute for the other.

Warning: It is useful for heart palpitations, cramps during pregnancy, and to prevent miscarriage. Avoid using it in the third trimester of pregnancy.

DANDELION

(Taraxacum officinale) Parts used: Leaf and root. *Properties:* Cholagogue, diuretic, hepatic, lithotriptic, stomachic, alterative, astringent, galactagogue. *What it affects:* Liver, kidneys, gallbladder, stomach, pancreas, intestines, and blood.

Preparation and amount: *Infusion:* Steep 30 min. Take 3-4 cups daily, hot or cold. *Decoction:* Simmer root 30 min. Take 6 oz. frequently or 3-4 times daily, hot or cold. *Tincture:* Take 30-60 drops (½-1 tsp.) frequently. *Powder (leaves):* Take 10-20 #0 capsules (60-120 grains) frequently. *Powder (root):* Take 5-10 #0 capsules 30-60 grains frequently.

Purposes: *Internally,* dandelion is especially important in promoting the formation of bile and removing excess water from the body in edematous conditions resulting from liver problems. The root decidedly affects all forms of secretion and excretion from the body. By removing poisons from the system, it acts as a tonic and stimulant as well. It cleanses the blood and liver. It is especially good as a blood cleanser for diabetes, dropsy, and eczema. Because of its high mineral content, it is used to treat anemia. It reduces serum cholesterol and uric acid levels. Lukewarm dandelion tea is useful for dyspepsia with constipation, fever, and insomnia.

Dandelion improves the functioning of the pancreas, kidneys, spleen, and stomach. An infusion of the fresh root is good for gallstones, jaundice, and other liver problems. For stomachaches, drink ½ cup of the infusion every ½ hour until relief is obtained. The root is a specific for hypoglycemia. Take a cup of the tea 2-3 times a day and maintain a balanced diet. With a good diet, the root tea can eliminate adult-onset diabetes. The root tea will also help lower blood pressure, thus aiding the action of the heart.

Dandelion relieves menopausal symptoms and is useful for boils (taken internally), breast tumors, cirrhosis of the liver, constipation, liver and spleen enlargement, fluid retention, hepatitis, jaundice, bronchitis, low blood sugar, and rheumatism. It may help prevent age spots on the

skin. Serious cases of hepatitis have been cured with the use of dandelion root tea within a week or two when the diet is controlled properly and limited to easily digested foods.

The fresh juice is particularly effective, but a tea can also be prepared. Dandelion leaves are healthful as salad greens, especially in springtime. The roasted root is a coffee substitute.

DEVIL'S CLAW

(Harpagophytum procumbens) Part used. Root. *Properties:* Alterative, discutient, lithotriptic, stimulant. *What it affects:* Liver, stomach, joints, and kidneys.

Preparation and amount: *Infusion:* Steep 30 min. 1-2 cups daily. *Decoction:* Simmer 15 min. Take 6 oz. 3 times daily. *Tincture:* Take ½-1 tsp. 3 times daily. *Powder:* Take 2-3 #0 capsules (15-30 grains) 3 times daily.

Purposes: *Internally,* devil's claw is primarily used for rheumatism, gout, lumbago, and arthritis. It is a blood cleanser which removes deposits in the joints and aids in elimination of uric acid from the body. It reduces inflammation and relieves pain. Acting as a diuretic, sedative, and digestive stimulant, it is good for allergies, liver, gallbladder, kidneys, arteriosclerosis, and menopausal symptoms.

Warning: Do not use during pregnancy.

DONG QUAI

(Tang Kwei, Dong Kwei, Dang Quai)—*(Angelica sinensis) Part used:* Root. *Properties:* Diuretic, antispasmodic, anodyne, uterine alterative. *What it affects:* Uterus, blood, and muscles.

Preparation and amount: Take 4-7 grams, several times a day.

Purposes: *Internally,* dong quai is useful for almost every female gynecological problem. It is especially useful for menstrual cramps, irregularity, delayed flow and weakness during the menstrual period. It also helps relieve the symptoms of menopause. It is useful in treating hot flashes, premenstrual syndrome, and vaginal dryness. It strengthens the reproductive system and helps the body use hormones.

Dong quai is useful for treating insomnia, hypertension, and cramps. It nourishes the blood, helps treat anemia, and is a valuable blood purifier. It acts as a mild sedative, laxative, diuretic; and it relieves spasms and pain. It is warming to the circulation and is used to moisten the intestines and thus treat constipation.

Warning: It should not be used during pregnancy or with excessive menstrual flow.

ECHINACEA

(Echinacea angustifolia) Part used: Root. *Properties:* Alterative, antiseptic, lymphatic, parasiticide, sialagogue. *What it affects:* Blood, lymph, and kidneys.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take 1 Tbsp. 3-6 times daily. *Tincture:* Take 30-60 drops 3-6 times daily. *Fluid extract:* Take ½-1 tsp. 3-6 times daily. *Powder:* Take 2-5 #0 capsules (15-30 grains) 3-6 times daily.

Purposes: Echinacea is the most effective blood and lymphatic cleanser of all the herbs; and it is tolerated by the system in fairly large amounts. The plant is apparently nontoxic; although, in some people, it may cause mild dizziness and nausea for a time. But combining it with a small amount of licorice root, or making the tea with 2-3 dates, will reduce those symptoms.

Use echinacea *internally* and *externally* for acne, bad breath, boils, gangrene, infections, skin diseases, tonsillitis. It is said to be effective against all venomous bites from insects, snakes, other animals, and reactions to poison oak and ivy. It is used for open wounds and painful surface swellings.

Internally, echinacea is used for bladder infections, blood poisoning, blood purifier, fevers, inflammation of mammary glands, intestinal antiseptic, leukopenia (reduction in blood leukocytes), lymphatic congestion, uremic poisoning, venereal disease, and all chronic and acute bacterial and viral infections. It has been used for years for syphilis, gonorrhea, and in douches for all vaginal infections. Combine it with myrrh, to rid the body of pus, abscess formations, and for typhoid fever. The rootstock helps dispel flatulence. Echinacea aids digestion and is a digestive tonic.

Echinacea is an excellent antibiotic, and ranks with goldenseal and red clover. For acute ailments, it must be taken every hour or two, as a tincture (one tsp.) or a powder in two #00 capsules.

Externally, echinacea is used for acne.

Note: Do not use the rootstock once it has lost its odor.

Warning: It should be used with caution by those who are pregnant, or allergic to ragweed or plants in the sunflower family. Because it stimulates the immune system, it should *not* be taken for lengthy periods by those with autoimmune disorders. Only take 1 week at a time.

ELDER

(Black Elder)—*(Sambucus nigra) Parts used:* Flowers, bark, berries, and root. *Properties:* Diaphoretic, alterative, laxative, stimulant. *What it affects:* Blood, circulation, lungs, bowels, and skin.

Preparation and amount: Infusion (flowers): Steep 15 min. Take 6 oz. 3 times daily. *Decoction (bark, berries, root):* Simmer 15 min. Take 1 cup at a time. *Tincture (flowers):* Take 15-30 drops 3 times daily. *Fluid extract (flowers):* Take ½-1 tsp. 3 times daily. *Powder (bark):* Take 5-10 #0 capsules (30-60 grains) 3 times daily. *Powder (leaves):* 10 #0 capsules (60 grains) 3 times daily.

Purposes: *Internally,* both the bark of young branches and the root (the inner bark which is used) are purgative and diuretic in proper dosage. In large doses they are emetic, strongly purgative, and can cause inflammation in the gastro-intestinal tract.

Elder flowers taken warm induce sweating. They are used in the first stages of colds and flus. Combine equal parts of the flowers with peppermint, to make a tea (1 oz. per pint of water) and drink as hot as possible. Take the tea in bed or just before taking a hot bath; and then sweat out the cold or flu during sleep.

For cases of neuralgia, sciatica, or lumbago, follow a

juice cure regimen, taking about 2 Tbsp. warm or cold juice 2 times a day until results are obtained.

Externally, elder flowers are also used in salves for the treatment of burns, rashes, and minor and serious skin ailments, as well as hemorrhoids, sprains, and wounds.

Note: The "elder" described here is black elder *(Sambucus nigra).* Do not confuse it with three other "elders," used less frequently by herbalists as "elder": elder *(Sambucus canadensis),* elder *(Sambucus racemosa),* and elder *(Sambucus ebulus)*—all of which are different herbs, less often used, and each containing different properties.

Warning: Because it is used by many herbalists, black elder is described here. But, because it can be difficult and toxic, the author advises that you use other herbs internally instead of black elder. Here are additional significant warnings about this plant: Only use black elder bark and root which has been grown in Europe. The bark and root in North America contain larger amounts of both hydrocyanic acid and sambuline, a nauseating alkaloid also found in fresh paint. The stems of the plant should always be avoided, since they contain cyanide and can be very toxic. North American black elder flowers appear safe, but other parts may cause a toxic reaction. Do not use any part of the elder herb during pregnancy. All parts of the fresh plant can cause poisoning. Fresh juice will cause vomiting and diarrhea. Children have been poisoned by chewing or sucking on the bark. Cooked berries are safe and are commonly used in pies and jam.

ELECAMPANE

(Inula heminum) Part used: Root. *Properties:* Cholagogue, diuretic, expectorate, stomachic, astringent, stimulant. *What it affects:* Lungs, stomach, and spleen.

Preparation and amount: *Infusion:* Steep 15-30 min. Take 1-2 cups daily, hot or cold. *Decoction:* Simmer 15-30 min. Take 1 Tbsp., as needed or 1-2 cups daily. *Tincture:* Take 30-60 drops (½-1 tsp.) 1-2 times daily. *Fluid extract:* Take ½-1 tsp. 1-2 times daily. *Powder:* Take 3-10 #0 capsules (20-60 grains) 1-2 times daily.

Purposes: *Internally,* Elecampane tea is frequently used to quiet coughing, to stimulate digestion, and to tone the stomach. It is useful for all respiratory problems, including bronchitis, urinary and respiratory tract inflammation. For chronic lung ailments, combine with wild cherry bark, white pine bark, comfrey root, and licorice. The oil is excellent for treating respiratory and intestinal catarrh, chronic diarrhea, chronic bronchitis, and whooping cough.

Elecampane promotes expectoration and is good for whooping cough, weak digestion, and poor assimilation. The decoction taken in 1 Tbsp. dosages will counteract stomach poisons and increase digestive power. The Chinese use it to counteract ingested poisons. A decoction is made using 1 ounce of the root, simmered in a pint of water for 1 hour, then taken in doses of 2 tsp. as needed. The powdered root is taken in capsules (1 capsule) or ½ tsp. of the tincture for each dose, 3 times daily. The decoction or tincture also expels worms. When combined with echinacea, it is excellent for tuberculosis.

Externally, elecampane can be used as a wash or fomentation for skin problems, such as scabies, itches, and skin diseases.

EYEBRIGHT

(Euphrasia officinalis) Part used: All that is above ground. *Properties:* Alterative, astringent, tonic. *What it affects:* Eyes, liver, and blood.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. frequently. *Tincture:* Take 30-60 drops frequently. *Fluid extract:* Take 1 tsp. frequently. *Powder:* Take 10 #0 capsules (60 grains) frequently.

Purposes: *Internally,* eyebright is the best single herb for the eyes. Drink the tea liberally and on a daily basis, to treat all eye problems. It aids in stimulating the liver to clear the blood and relieve those conditions that affect the clarity of vision. It relieves discomfort from eyestrain or minor eye irritation. It is good for itchy and or watery eyes. It has a cooling and detoxifying property that makes it especially useful in combating inflammation. It is also useful with inflammations of the nose and throat.

Eyebright is also used for allergies, diabetes, cataracts, hay fever, impure blood, indigestion, nose and throat congestion, and upper respiratory problems.

Externally, eyebright is used as an eyewash, especially combined with goldenseal, rue, or fennel for conjunctivitis, eye weakness, ophthalmia, burning and sore eyes, and other eye diseases. The infusion is made using 1 oz. herb to a pint of boiled water, steeped 20 minutes. A beverage tea can be made, using ½ oz. herb steeped in a pint of water.

FALSE UNICORN

(Chamailirium luteum [Helonias]) Part used: Root. *Properties:* Emmenagogue, tonic, diuretic, emetic, parasiticide, stimulant. *What it affects:* Uterus and kidneys.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take 6 oz. 3 times daily. *Tincture:* Take 15-30 drops 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Powder:* Take 2-5 #0 capsules (15-30 grains) 3 times daily.

Purposes: *Internally,* the primary use of this herb is in the treatment of female sterility and impotence. Taking it is said to increase the likelihood of getting pregnant. It balances sexual hormones, helps treat infertility, and prevent miscarriage. For these purposes, it may be taken daily for several months. One or 2 #00 capsules of the powdered root are taken 3 times daily for a number of months, either alone or in combination with other herbs.

The root is also used in the treatment of painful or irregular menstruation, or the lack of it. It is also good for leukorrhea and menorrhagia. Small amounts may be taken during the early part of pregnancy, to relieve morning sickness.

False unicorn is used for glandular tonic, prolapsed uterus, uterine and ovarian problems, and uterine displacement.

This herb is also used for prostrate disorders, spermatorrhea, diabetes, digestive tonic, intestinal weakness, and urinary tract tonic.

False unicorn root is usually combined with other herbs, such as cramp bark or black haw; but it can be taken alone. During threatening situations, 15 drops of the tincture or ½ tsp. of the fluid extract can be taken every hour.

Note: Do not confuse false unicorn root with true unicorn root *(Aletris farinosa)*, also known as star grass; this has similar properties, but is primarily used as a diuretic.

FENNEL

(Foeniculum vulgare) Part used: Seed. *Properties:* Antispasmodic, aromatic, carminative, diuretic, expectorant, galactagogue, stimulant. *What it affects:* Stomach, nerves, intestines, and eyes.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. 3 times daily. *Fluid extract:* Take 5-60 drops 3 times daily. *Oil:* Take 1-5 drops 3 times daily. *Powder:* Take the average dose of 3 #0 capsules (15 grains).

Purposes: *Internally,* although the seeds are mainly used, both the seeds and root of fennel are excellent stomach and intestinal remedies. It promotes the function of the kidneys, liver, and spleen, and helps clear the lungs. It helps to arouse the appetite, and relieve colic and abdominal cramps. It relieves abdominal and colon disorders. It expels mucous accumulations. It is especially used to reduce gastro-intestinal tract spasms and expel flatulence. For this purpose, take fennel oil with honey or as a saturated solution in water. Add it also to gargle for coughing and hoarseness. It is used to treat acid stomach, colic, and cramps. In larger doses, it removes obstructions of the liver, spleen, and gallbladder. Fennel will increase the flow of urine, menstrual blood, and mother's milk.

Externally, fennel can be used as an eyewash.

FENUGREEK

(Trigonella foenum graecum) Part used: Seed. *Properties:* Demulcent, emollient, expectorant, aphrodisiac, astringent, galactagogue, tonic. *What it affects:* Lungs, stomach, intestines, and reproductive organs.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 1 cup during the day, hot or cold. *Decoction:* Simmer 5-15 min. Take 6 oz. 3 times daily. *Tincture:* 30-60 drops 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Powder:* Take 2-10 #0 capsules (10-60 grains) 3 times daily.

Purposes: *Internally,* Fenugreek is one of the oldest medicinal plants, dating back to Hippocrates and the ancient Egyptians. It is useful for all mucous conditions of the lungs. Large amounts of the decoction are given to strengthen those suffering from tuberculosis or recovering from an illness. It is also good for fevers, bronchitis, stomach, ulcers, diabetes, gout, asthma, emphysema, hay fever, heartburn, hoarseness, migraines, neuralgia, sciatica, and gas. By reducing mucus, it helps asthma and sinus problems. Promotes lactation in nursing mothers. Helps lower cholesterol and blood sugar levels. Good for the eyes.

Externally, fenugreek is used for boils, carbuncles, abscesses, sore throat, dry skin conditions. The tea is excellent for sore throats (drink and gargle). Make a poultice of pulverized seeds and place over wounds, fistulas, tumors, sores, areas of gouty pains, swollen glands, and skin irritations.

Note: The taste can be improved by mixing it with peppermint oil, lemon extract, or honey.

FLAXSEED

(Linum usitatissimum) Part used: Seed. *Properties:* Demulcent, emollient, laxative, mucilage, nutritional. *What it affects:* Lungs, throat, intestines, and stomach.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 1 cup daily. *Decoction:* Take 2 oz. 3 times daily. *Tincture:* Take 15-40 drops 3 times daily or as needed. *Fluid extract:* Take 15-30 drops 3 times daily or as needed. *Powder:* Take 10-20 #0 capsules (60-120 grains) once daily.

Purposes: Flaxseed is even more mucilaginous than slippery elm and useful for a variety of problems. It is better than olive oil, for the purposes for which it is used.

Internally, flaxseed is used for asthma, bronchitis, catarrh, constipation, coughs, diarrhea, enteritis, flatulence, hemorrhoids, stomach ulcers, pleurisy, and lung, and chest problems. It is also good for all intestinal inflammations.

Eating the seeds intact is good for constipation. Take 1-2 Tbsp. whole seeds and swallow with lots of water if necessary. Then eat stewed prunes. The seeds swell up in the intestines, encouraging elimination by increasing the volume of fecal matter.

To eliminate gallstones, take 1½-2 Tbsp. flaxseed oil and lie down on your left side for half an hour. The gallstones will pass into the intestines and be eliminated from there.

Externally, flaxseed is excellent in poultices for sores, boils, inflammations, and tumors. Combine it with slippery elm for boils, oozing sores, and burns.

Caution: It is best to avoid flaxseed if you have diverticulitis.

FO-TI (Ho Shou Wu)

(Polygonum multiflorum) Part used: Root. *Properties:* Stimulant, tonic, astringent, diuretic. *What it affects:* Liver, stomach, kidneys, and reproductive organs.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take 2 oz. 2-4 times daily. *Tincture:* Take 15-30 drops 3 times daily. *Fluid extract:* Take 5-20 drops 3 times daily. *Powder:* Take 2-3 #0 capsules (10-15 grains) 3 times daily.

Purposes: *Internally,* fo-ti focuses on helping the endocrine glands by strengthening them. It acts as a tonic and nutritive herb. It is also a digestive tonic. Take it either as a decoction or as a powder.

GARLIC

(Allium sativum) Part used: Bulb. *Properties:* Alterative, antibiotic, antispasmodic, diaphoretic, expectorant, stimulant. *What it affects:* Lungs, circulation, nerves, and sinuses.

Preparation and amount: *Tincture:* Take 30-60 drops (½-1 tsp.) 3-4 times daily. *Juice:* Take 10-30 drops 3-4 times daily. *Oil:* Take 2-3 drops or 1 tsp. *Syrup:* Take 1 Tbsp. 3-4 times daily. *Powder:* Take 5-10 #0 capsules

(30-60 grains) 3-4 times daily.

Purposes: Garlic is one of the most powerful antiseptic substances ever discovered. It is also one of the most readily available, easily used medicinal substances. In the 1950s, Soviet scientists found it to be equal to penicillin, yet without the harmful effects of that powerful drug.

Internally, garlic detoxifies the entire body and protects against infection by enhancing immune function. It is good for virtually every infection and disease. Its beneficial effect on blood circulation and heart action can bring relief for many common body complaints. It is used for all lung and respiratory ailments, colds, tuberculosis, fevers, and blood diseases; and it can be used as a tea or added to syrups for coughs.

It is used for arteriosclerosis, cancer, contagious disease, coughs, cramps, diverticulitis, emphysema, gas, heart problems, high blood pressure, indigestion, liver congestion, rheumatism, sinus congestion, and ulcers. It aids in the treatment of arthritis, asthma, circulatory problems, cold and flu, digestive problems, heart disorders, insomnia, liver diseases, sinusitis, ulcers, and yeast infections.

Garlic regularizes the action of the liver and gallbladder. It stimulates the digestive organs and thereby relieves various problems associated with poor digestion. It helps stabilize blood sugar levels. As an expectorant, it is useful for chronic stomach and intestinal catarrh, as well as chronic bronchitis. A cold tea can be taken as an enema for worms and pinworms. A warm enema tea is good for bowel infections. Use the fresh extract oil or eat the raw cloves.

Garlic is helpful in all intestinal infections, including dysentery, typhoid, cholera, and paratyphoid fever. It lowers blood lipid levels. It works to eliminate putrefactive intestinal bacteria. Because garlic lowers blood pressure, it helps to counteract arteriosclerosis.

Externally, garlic is used for ringworm, skin parasites, tumors, and warts.

Warning: People who take anticoagulant (blood-thinning) drugs should not take garlic, since it also thins the blood somewhat.

GENTIAN

(Gentiana lutea) Part used: Root. *Properties:* Cholagogue, stomachic, tonic, anthelmintic. *What it affects:* Stomach, liver, blood, spleen, and circulation.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take ¼-1 tsp. 3 times daily to ½-1 cup daily. *Tincture:* Take ½-2 tsp. 3 times daily. *Fluid extract:* Take ¼-½ tsp. 3 times daily. *Powder:* Take 2-4 #0 capsules (10-30 grains) 3 times daily.

Purposes: *Internally,* gentian primarily works on the liver and stomach. Because it is a bitter tonic herb, it quickens intestinal action and tends to overcome slow digestion. It improves the appetite, increases digestion, and improves circulation. It is good for pancreatitis, female problems, slow urination, colds, and gout.

Note: Because of its bitterness, combine gentian with aromatic herbs, such as ginger, peppermint, sassafras, spearmint, or wood betony.

GINGER

(Zingiberis officinalis) Part used: Rhizome. *Properties:* Aromatic, carminative, diaphoretic, stimulant, diuretic. *What it affects:* Stomach, intestines, joints, muscles, and circulation.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 1 fluid oz. at a time. *Decoction:* Simmer 5-15 min. Take 2 oz. 3 times daily. *Tincture:* Take 15-60 drops 3 times daily. *Fluid extract:* Take 5-20 drops 3 times daily. *Syrup:* Take ½-1 tsp. 3 times daily. *Powder:* Take 2-4 # 0 capsules (10-20 grains) 3 times daily. Take every 2 hours for nausea and vomiting.

Purposes: *Internally,* ginger promotes cleansing of the system through perspiration. Taken hot, the tea is good for suppressed menstruation and scanty urine. It brings heat into the system and stimulates digestion. Taken in frequent doses, it will raise body temperature. It is *without a peer* among herbs dealing with sea sickness, air sickness, and every other kind of motion sickness. It is helpful in reducing flatulent colic; and, when taken with laxative herbs, it makes their effect milder. It fights inflammation, cleanses the colon, reduces spasms and cramps, and stimulates circulation. Take it at the onset of a cold, to ease the effects of the usual symptoms. It is used for contagious diseases, coughs, cramps, indigestion, gas, headache, colon spasms, morning sickness, nausea, sinus congestion, and stomach spasms. It is a *strong antioxidant* and germ killer for sores and wounds. To stimulate the flow of saliva and soothe a sore throat, chew the rootstock as is. It protects the liver and stomach, and is useful for bowel disorders, arthritis, fever, hot flashes, indigestion, muscle pain, and vomiting.

Externally, ginger is used as a fomentation in cases of mumps.

GINSENG

(Panax ginseng) Part used: Root. *Properties:* Alterative, stimulant, stomachic, tonic. *What it affects:* Heart and circulation, general effects on the whole body.

Preparation and amount: *Decoction:* Simmer 15-60 min. Use about ¼ oz. of herb to 1 pint water. Take 4 oz. 3 times daily. *Tincture:* 20-60 drops 3 times daily. *Fluid extract:* ½-2 tsp. 3 times daily. *Powder:* 2-5 #0 capsules (15-30 grains) 3 times daily.

Purposes: *Internally,* ginseng is especially used for feverish and inflammatory illnesses, for hemorrhage, and for blood diseases. Women take it for everything from normalizing menstruation to easing childbirth. It strengthens the adrenal and reproductive glands. It promotes lung functioning, enhances immune function, and stimulates the appetite. It helps digestive disturbances. It is mildly stimulating to the central nervous system and the endocrines. It is useful for bronchitis, diabetes, infertility, lack of energy, and stress. It protects against the effects of radiation exposure and helps in withdrawal from cocaine. Because it is a demulcent, the tea taken hot is effective for colds, chest troubles and coughs. It helps to normalize blood pressure, tone the heart, increase circulation and reduce cholesterol. It reduces blood sugar, which is helpful for diabetics. Its nutritional qualities help alleviate ane-

mia.

Note: Only use thoroughly dried roots. The value of ginseng is overblown, but it is still a useful herb. Do not take it at night, for it will keep you awake.

Chinese ginseng *(Panax ginseng)* is thought to be far better than the North American variety. But, in reality, American ginseng *(Panax quinquefolius)* is essentially the same as the Chinese version! So much so, that the bulk of the U.S. crop (most of which is grown under cultivation in Wisconsin) is shipped to Europe and Asia, to supplement the supply from the Orient (which is primarily grown in Korea).

GOLDENSEAL

(Hydrastis canadensis) Part used: Rhizome. Properties: Alterative, antibiotic, antiseptic, emmenagogue, stomachic, tonic, laxative. *What it affects:* Stomach, intestines, spleen, liver, eyes, all mucous membranes.

Preparation and amount: *Infusion* (powered root): Steep powder until cold. Take 1-2 tsp. 3-4 times daily. *Decoction:* Simmer 15-30 min. Take 1-2 tsp. 3-4 times daily. *Tincture:* Take 20-90 drops (1/3 to 1½ tsp.) 3 times daily. *Powder:* Take 2-5 #0 capsules (10-30 grains) 3 times daily or 2-3 #00 capsules (5 is average dose) per day.

Purposes: Goldenseal is a powerful antiseptic (germ killer). Like echinacea, it is good for nearly every disease. Taken with any herb, it increases the tonic effects on the specific organs being treated. Add it when giving eyebright for the eyes, squaw vine for the female genitourinary system, gotu kola for the brain, and cascara segrada for the lower bowel. Add it to salves for the skin, douches for vaginal infections, and reducing hemorrhoids. It especially acts on mucous membranes and can be used for all catarrhal conditions, including those in the intestines. Used at the first sign of possible symptoms, it can stop a cold, flu, or sore throat.

Internally, goldenseal is good for alcoholism, allergies, asthma, bad breath, bladder diseases, bronchitis, canker sores, chicken pox, colds, diabetes, eczema, hay fever, stomach ailments, heart weakness, hemorrhoids, herpes, indigestion, infections, inflammations, leukorrhea, liver problems, lymph congestion, measles, mammary and ovarian tumors, ulcers. It is a douche for vaginal infections. Used with cascara sagrada, it is a bowel tonic. As a retention enema, it will reduce swollen hemorrhoids. It is good for allergies, ulcers, and disorders affecting the bladder, prostate, stomach, or vagina. Small doses will relieve nausea (morning sickness) during pregnancy, but see the warning below. Combine it with myrrh when treating ulcers of the stomach. For hemorrhoids and prostate problems, combine 2 parts goldenseal and 1 part wild alum. It increases the effectiveness of insulin and strengthens the immune system. It reduces blood pressure, stimulates the central nervous system, regulates the menses, and decreases uterine bleeding.

Externally, goldenseal is used for burns, canker sores, eye inflammations, herpes sores, leukorrhea, mouth sores, ringworm, skin inflammation, tonsillitis, and wounds. Use it with a toothbrush or as an antiseptic mouthwash for bleeding gums or gum infections. Use it as a gargle for tonsillitis and other throat problems. Goldenseal can be used on open sores, inflammations, eczema, ringworm, or itchy skin conditions. It is a specific for all kinds of mucous membrane problems. Snuffed up the nose, the powder is good for nasal congestion or catarrh. For ringworm, wash it with the tea, then sprinkle powdered root on it. For a soothing eyewash, mix it with boric acid (1 tsp. powdered root and 1 tsp. boric acid to 1 pint boiling-hot water); stir; let cool; and pour off the liquid. Add 1 tsp. of the liquid to ½ cup of water for the eyewash.

Warning: Goldenseal is a powerful alkaloid and should not be overused. Two or three #00 capsules per day are safe and adequate for most conditions. Normally, do not use it more than a week at a time, then switch to echinacea or another antibiotic herb (myrrh, chaparral, pau d'arco). Excessive use diminishes vitamin B absorption, by killing certain intestinal bacteria. Over a prolonged period, use no more than 2-3 #00 capsules a day. Do not use large amounts during hypoglycemia. Those with high blood pressure or insomnia should not use it. Eating the fresh plant produces ulcerations and inflammation of mucous tissue.

Because large doses of goldenseal contract the uterus, women who have a tendency to miscarry should avoid the use of it unless, for morning sickness, it is used in this formula: Less than ¼ tsp. goldenseal, plus ¼ tsp. cloves; the powders taken in gelatin capsules are not to exceed 2 capsules per day and taken with spearmint tea.

GOTU KOLA

(Centella Asiatica) Part used: Tops. *Properties:* Nervine, tonic, alterative, antipyretic, diuretic. *What it affects:* Brain, nerves, kidneys, bladder, heart, and circulation.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. 3 times daily. *Tincture:* Take 15-30 drops 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Powder:* 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: Gotu kola is a very common medicinal plant throughout India and the tropical countries. *Internally,* it is one of the best herbs for the nerves and brain, including epilepsy, schizophrenia, and loss of memory. It decreases fatigue and depression, and stimulates the central nervous system. To treat nervous disorders, gotu kola oil is applied externally over the entire body, including the scalp. This oil (called Brahmi oil) is an herbal extract in sesame oil. To make it, add enough sesame oil to cover the herb; cover and let stand 14 days; then squeeze out the oil.

Gotu kola has remarkable rejuvenating properties similar to those of fo-ti and ginseng. It neutralizes blood acids and cools the blood, thus making it of great value in all fevers and inflammations. It is both a blood purifier and diuretic. It is good for heart and liver function. It helps eliminate excess fluids. It promotes the healing of wounds and is good for varicose veins. It is used to treat rheumatism, blood diseases, connective tissue disorders, poor appetite, kidney stones, and sleep problems.

GRAVEL ROOT

(Queen of the Meadow)—(Eupatorium purpureum) Part used: Root. *Properties:* Diuretic, lithotrip-

tic, astringent, nervine, stimulant. *What it affects:* Kidneys, bladder, nerves, and joints.

Preparation and amount: *Infusion (herb):* Steep 5-15 min. Take 1-2 cups daily. *Decoction (root):* Simmer 6-15 min. Take 1-2 oz. as needed up to 2 cups daily. *Tincture:* Take 30-60 drops (½-1 tsp.) 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Powder:* 5 #0 capsules (30 grains) 3 times daily.

Purposes: *Internally,* gravel root is one of the best remedies for gravel and stones in the kidneys and bladder. It is also used to treat the uric acid deposits in joints, which make them so painful. It also works to reduce water retention and deal with prostate disorders. A strong decoction is used: 1 oz. of the root boiled in a pint of water for one hour. Take a quarter cup at a time, as needed. When using a tincture, take 1 tsp. at a time.

In addition, gravel root is a nerve tonic and used for many female problems, alone or in combination. This includes dysmenorrhea, endometritis, leukorrhea, chronic uterine disease, labor pains, and threatened abortions. Gravel root is also used for cystitis, edema, gout, rheumatism, weak pelvic organs, gonorrhea, cystitis, bright's disease, bloody urine, and backache.

HAWTHORN (Hawthorne)

(Crataegus oxycantha) Part used: Fruit. *Properties:* Tonic, antispasmodic, astringent, diuretic, sedative. *What it affects:* Heart, circulation, nerves, and kidneys.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 1 cup 2-3 times daily. *Decoction:* Simmer 5-15 min. Take 6 oz. 3 times daily. *Tincture:* Take 15-30 drops (½-1 tsp.) 3 times daily. *Fluid extract:* Take 10-15 drops 3 times daily. *Powder:* Take 10 #0 capsules (60 grains) 3 times daily.

Purposes: This is the herb for the heart! *Internally,* hawthorn normalizes blood pressure by regulating heart action. It dilates the coronary blood vessels. Those are the ones that nourish the heart itself. Taking the herb over a period of time will generally lower blood pressure. (Keep in mind that a key factor in lowering blood pressure is drinking enough water every day!) But it normalizes blood pressure, helping to elevate low blood pressure. It helps rapid or arrhythmic heartbeat, inflammation of the heart muscle (myocarditis), arteriosclerosis, and nervous heart problems. It is good for heart muscles weakened by age. Taking it regularly strengthens the heart muscle. It helps prevent hardening of the arteries; it is excellent for feeble heart action, valvular insufficiency, and irregular pulse.

Hawthorn tea is also good for nervous conditions, particularly insomnia. A decoction of the berries is good for sore throats and acid conditions of the blood. American Indians used it to treat rheumatism. In China, it is used to aid digestion.

HOPS

(Humulus lupulus) Part used: Strobiles. *Properties:* Nervine, stomachic, anodyne, antibiotic, carminative, cholagogue, tonic. *What it affects:* Nerves, stomach, blood, liver, and gallbladder.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. 3 times daily, hot or cold. *Tincture:* Take 15-30 drops (½-1 tsp.) 3 times daily. *Fluid extract:* Take 10-15 drops 3 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: Hops is an excellent nervine and will produce sleep when insomnia is present. *Internally,* it has a very calming effect on the entire system. It is used for nervous diarrhea, insomnia, restlessness, headaches, shock, weak nerves, hyperactivity, nervousness, pain, stress, nervous stomach, and relieves anxiety.

But it also has other uses. Hops is used for coughs, fever, indigestion, jaundice, morning sickness, stomach tonic, throat, bronchial tubes, chest ailments, toothache, and ulcers. It will stimulate the appetite, dispel flatulence, and relieve intestinal cramps. It is useful for cardiovascular disorders, sexually transmitted diseases, toothaches, and ulcers. Cold tea before meals will increase digestion. The dry herb that is placed inside a pillow will induce sleep.

Externally, it is used for boils, bruises, earaches, inflammations, rheumatic pains, skin ailments, and ulcers.

Note: Hops lose their effectiveness as internal medication rapidly when stored.

HOREHOUND

(Marrubium vulgare) Part used: Tops. *Properties:* Diaphoretic, expectorant, tonic. *What it affects:* Lungs, chest, and stomach.

Preparation and amount: *Infusion:* Steep 20 min. Take 6 oz. at a time, frequently. *Tincture:* Take 20-60 drops 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Syrup:* Take ½-1 tsp. 3 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: *Internally,* horehound is especially useful as a remedy for coughing and bronchial problems. As an expectorant for bronchial catarrh, it can be taken as a tea or syrup. It is used for acute and chronic bronchitis, as well as coughs and hoarseness. It is useful in chronic sore throats and pulmonary problems. Use it in syrup form for children.

Horehound is also used for typhoid fever. It is said to restore the normal balance of secretions by various organs and glands. It is used for heart conditions, to calm heart action. It is also used for asthma, dyspepsia, hay fever, bloating, fevers, and jaundice. It boosts the immune system. Taken warm, it is diuretic; taken cold, it makes a good stomach tonic.

Externally, the tea or the crushed leaves of horehound can be applied for temporary or persistent skin problems.

HORSERADISH

(Cochleria armoracia) Part used: Root. *Properties:* Diaphoretic, diuretic, expectorant, stomachic. *What it affects:* Sinuses, stomach, gallbladder, and urinary tract.

Preparation and amount: *Decoction:* Simmer 5-15 minutes. Take 6 oz. 1-2 times daily, cold; or take warm, 2-3 Tbsp., 3 times daily.

Purposes: *Internally,* promotes stomach secretions. A syrup of horseradish is excellent for sinus congestion and promotes digestion. Good for dropsy, urine retention, and helps the pancreas. Used for colds, coughs, asthma,

arthritis, dropsy, hoarseness, sciatica, worms.

Externally, it is used for liver and spleen swellings.

Warning: Left in contact with the skin, it will cause blistering. Avoid contact with the eyes.

HORSETAIL

(Shavegrass, Scouring Rush)—*(Equisetum arvense) Part used:* Tops. *Properties:* Astringent, diuretic, lithotriptic, emmenagogue, galactagogue, nutritive, vulnerary. *What it affects:* Kidneys, blood, heart, and lungs.

Preparation and amount: *Infusion:* Steep 45 min. Take a mouthful 4 times daily or 1-2 cups daily. *Decoction:* Simmer 5-15 min. Take 2 oz. 3-4 times daily. *Tincture:* Take 5-30 drops 3-4 times daily. *Fluid extract:* Take 5 drops 3-4 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3-4 times daily.

Purposes: *Internally,* shavegrass is a reliable diuretic and used for all urinary disorders. Take a decoction of 1 cup 2-3 times a day or 2 Tbsp. every hour. The early settlers used shavegrass as a diuretic in kidney problems and dropsy. It is specific, not only for urine retention, but for internal bleeding. It stops bleeding by helping to coagulate the blood.

Shavegrass can be used for skin and eye conditions, and is good for glandular swellings and discharges of pus. It clears fevers, releases nervous tension, and calms an overactive liver. It strengthens the heart and lungs and removes gravel from the bladder and kidneys. Fractured bones heal more quickly when shavegrass is taken. The Chinese use it as a healing eyewash. It can also be used for bed-wetting, gallbladder diseases, skin diseases, edema, and spitting of blood. Use it for muscle cramps and spasms. It is used for bone diseases, including osteoporosis and rickets.

Early settlers used shavegrass to scour their pots and pans, hence its other name. Because it is ridged with silica, it is an outstanding scouring pad. Fine cabinetmakers use it for polishing wood finishes.

Externally, a fomentation can be placed on bleeding wounds, ulcers, and burns.

Note: Early spring shavegrass is the best to use.

Warning: Excessive use of shavegrass will irritate the kidneys and intestines; so only take it infrequently and in small doses for a short time. After 2-3 weeks, do not use it for a week. Then the treatment can be repeated. Continued use interferes with the absorption of thiamine (vitamin B_1).

HYSSOP

(Hyssopus officinalis) Part used: Leaves. *Properties:* Diaphoretic, expectorant, cholagogue, stimulant, vulnerary. *What it affects:* Lungs, sinuses, and circulation.

Preparation and amount: *Infusion:* Steep 5-15 min. 1-2 cups daily or frequently. *Tincture:* Take ½-1 tsp. frequently. *Fluid extract:* Take 1-2 tsp. frequently. *Powder:* Take 10 #0 capsules frequently.

Purposes: *Internally,* hyssop is used in the treatment of lung ailments, especially chronic catarrh. It is a valuable expectorant, promoting expulsion of mucus from the respiratory tract and thus relieving congestion. It is used for coughs and colds, due to congestion.

Hyssop is used the same as sage, with which it is sometimes combined, to make a gargle for a sore throat. It is used for colds, coughs, asthma, sluggish circulation, and weak digestion. It regulates blood pressure, dispels gas, and helps with breast and lung problems, nose and throat infections, mucous congestion in the intestines, asthma, scrofula, dropsy, and jaundice. A warm infusion, mixed with equal parts of horehound, is good for asthma and heavy mucous conditions. The infusion of hyssop alone is helpful for gas and to promote sweating, when trying to break fevers. A decoction will help relieve inflammations. It is used for epilepsy, gout, and weight problems.

Externally, hyssop is used for the healing of wounds. Poultices from fresh green hyssop help heal cuts. A fomentation made from the leaves will relieve muscular rheumatism and bruises. A decoction can be used as a wash for burns, bruises, skin irritations, and as a gargle for sore throat or chronic catarrh.

Warning: Do not use extensively for extended periods.

IRISH MOSS

(Chondius crispus) Part used: Whole plant. *Properties:* Demulcent, emollient, nutritive. *What it affects:* Lungs, kidneys, and skin.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 2 oz. 2-3 times daily, up to 2 cups daily. *Tincture:* Take 30-60 drops (½-1 tsp.) 2-3 times daily. *Fluid extract:* Take ½-1 tsp. 2-3 times daily. *Powder:* Take 4-6 #0 capsules (20-40 grains) 2-3 times daily.

Purposes: Irish moss is a seaweed that grows among submerged rocks off the coast of France and Ireland. A significant factor in its healing qualities is its high nutritional mineral content.

Internally, it is a remedy for tuberculosis, coughs, bronchitis, and intestinal problems. Because it is very high in mucilage, it is an excellent demulcent for soothing inflamed tissues and is used in all lung and kidney complaints. When making a decoction, you may wish to sweeten it with licorice root, honey, or an aromatic herb. Irish moss is also used for anemia, thyroid difficulties, goiter, and throat and stomach ulcers.

Externally, use Irish moss in hair rinses for dry hair. It is also used for dry and burning skin diseases, and surface inflammations. It can be used externally, to soften skin and prevent premature wrinkling.

Note: Irish moss and other seaweeds (especially Nova Scotia dulse and Norwegian kelp) are rich sources of minerals and the best sources of trace minerals. Include a little every day in your diet.

JUNIPER BERRIES

(Juniperus communis) Part used: Fruit. *Properties:* Antispasmodic, diuretic, anodyne, aromatic, astringent, carminative, lithotriptic, stimulant. *What it affects:* Kidneys and stomach.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. 1-3 times daily. *Decoction:* Simmer 5-15 min. Take 1-2 cups daily. *Tincture:* Take 5-20 drops 3 times

daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Oil:* Take 1-3 drops 2 times daily. *Powder:* Take up to 10 #0 capsules (up to 60 grains) daily.

Purposes: *Internally,* juniper berries act as a stimulating diuretic and are beneficial in the treatment of urine retention, catarrh of the bladder, gravel, and pains in the lower back. It is also good for bladder discharges and uric acid buildup. Take 1-3 drops of the oil, plus honey, 2 times a day. It is usually taken internally by eating the berries or making a tea from them. The berries eliminate excess water. The tea is a good douche for vaginal infections. It is helpful in the treatment of asthma, fluid retention, and prostate disorders. It is also used for diabetes, cystitis, bladder diseases, allergies, arthritis, bed-wetting, hay fever, lumbago, and nephritis.

Juniper berries are used for gastro-intestinal infections and cramps, leukorrhea, gonorrhea, gouty and rheumatic pains. It is an excellent digestive tonic. It helps in cases of reduced production of stomach acid (hydrochloric acid) and in regulating blood sugar levels.

As a spice, the berries are used to enhance flavor, stimulate appetite, and counteract flatulence. The berries can be made into a jam or syrup as an appetizer. A few dried berries can be chewed and taste good.

Externally, juniper oil, derived from the berries, penetrates the skin easily and is good for bone and joint problems. Inhaled in a vapor bath, it is useful for bronchitis and infection in the lungs. The berries can be boiled and then sprayed in a room where sick people have been, to disinfect it. It is said that those who are nursing patients with serious diseases should chew a few berries, to protect themselves from pathogenic substances which might be inhaled.

Warning: Large doses of juniper berries can be irritating to the kidneys and urinary passages. It may interfere with the absorption of iron and certain other minerals. It should not be used during pregnancy, nor by persons with kidney disease. It should not be used for a lengthy period of time by those with urinary tract or inflammatory diseases. The pure oil, placed on the skin in large quantities, can cause inflammation and blisters.

KELP

(Fucus vesiculosus) Part used: Whole plant. *Properties:* Demulcent, nutritive, alterative, diuretic. *What it affects:* Thyroid, nerves, brain, kidneys, and bladder.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 1-2 cups daily. *Tincture:* Take 5-10 drops 1-2 times daily. *Fluid extract:* Take 10 drops 1-2 times daily. *Powder:* Sprinkle on food. Take 1 tsp. 1-2 times daily. *Powder:* Take 3-5 #0 capsules (10-30 grains) 1-2 times daily.

Purposes: California kelp, Norwegian kelp, Nova Scotia dulse, and European Irish moss are all primarily useful for the trace minerals they contain. (California kelp is not as nutritionally good as the others.)

Internally, this seaweed provides an abundance of natural iodine which is missing from much of the soil on the continents. In addition to their nutritive value, when eaten, the seaweed absorbs waste from the body fluids, binds with poisons, and carries them off. A factor, called sodium alginate, in kelp binds with radioactive strontium-90 in the intestines and carries it out of the body. This is an extremely important discovery.

Warning: It is said that, because of their high iodine content, very large quantities of seaweed could produce goiter-like symptoms. But, in reality, the excess trace minerals tend to, rather quickly, be eliminated in the sweat and through the kidneys.

LADIES SLIPPER

(Cypredium pubescens) Part used: Root (fresh). *Properties:* Antispasmodic, nervine, sedative. *What it affects:* Nerves.

Preparation and amount: *Infusion:* Steep 60 min. Take 1 Tbsp. every hour. *Decoction:* Simmer 60 min. Take 1 Tbsp. in 6 oz. water 3-4 times daily. *Tincture:* Take 5-30 drops 3 times daily. *Fluid extract:* Take ¼ tsp. 3 times daily. *Powder:* Take 2-10 #0 capsules (5-60 grains) 3 times daily.

Purposes: *Internally,* lady's slipper is an excellent nervine and acts as a tonic to an exhausted nervous system. It is said to be the best nervine relied upon for chorea, epilepsy, hysteria, headache, insomnia, and general nervousness. It is good for nervous indigestion. It has no narcotic (addictive) properties. Combined with ginger and a small amount of lobelia, it can be used for nervousness associated with fevers. Combined with chamomile or dandelion, it is a useful treatment for stomach or liver problems, including hepatitis. Combined with skullcap, it is used for headaches and hysteria. It is also good for cholera, epilepsy, and nervous exhaustion.

LEMON BALM

(Melissa officinalis) Part used: Tops. *Properties:* Diaphoretic, sedative, antitryptic, antispasmodic. *What it affects:* Nerves and circulation.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. as needed frequently. *Tincture:* Take 30-60 drops (½-1 tsp.) as needed. *Fluid extract:* Take ½-2 tsp. as needed. *Powder:* Take 10 #0 Capsules (60 grains) as needed.

Purposes: *Internally,* lemon balm is a specific for children and infants when indications of colds, flus, or fever appear. Sweeten the tea with honey and give it hot to feverish children while they are covered with warm blankets. Or first put them into a hot bath with copious amounts of the tea; and then bundle them under blankets, to sweat it out.

Lemon balm is frequently used to cure melancholy and depression-induced sicknesses. It is also good for hysteria, cholera, insomnia, epilepsy, headache, nervous indigestion, and hepatitis.

LICORICE ROOT

(Glycyrrhiza glabra) Part used: Root. *Properties:* Demulcent, expectorant, laxative, alterative. *What it affects:* Lungs, stomach, intestines, spleen, and liver.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take 1 Tbsp. as needed. *Tincture:* Take 30-60 drops (½-1 tsp.) 2-3 times daily. *Fluid extract:* ½-1 tsp. 2-3 times daily. *Syrup:* Take 1 tsp. to 1 Tbsp. as needed. *Powder:* Take up to 10 #0 capsules (60 grains) daily.

Purposes: *Internally,* licorice is primarily used for bronchial problems, coughs, hoarseness, mucous congestion, and similar problems. It can also be taken for stomach problems, such as peptic ulcers and bladder and kidney ailments.

Added to bitter tonics, licorice root makes them more palatable and helps balance the herbal formula. It is excellent for all kinds of stomach and intestinal ulcers. It fights inflammation and viral, bacterial, and parasitic infection. It is a specific for colds, flus, and lung congestion, and is frequently added to cough syrups. It cleanses the colon, reduces muscle spasms, increases the fluidity of mucus in the lungs and bronchial tubes. It is a mild laxative and is effective for children and the elderly. It helps to inhibit the formation of plaque and prevents bacteria from sticking to tooth enamel. For hoarseness and throat problems, combine it with sage, ginger, horehound, and coltsfoot.

Licorice root is useful for asthma, allergies, chronic fatigue, emphysema, depression, enlarged prostate, fever, herpesvirus, hypoglycemia, and glandular infection. For children's throat and lung problems, combine licorice root powder with other herbs. Use it for inflammatory bowel disorders, premenstual syndrome, and menopausal symptoms. A strong decoction makes a good laxative for children and may also help reduce fever. Add it to other herbal medicines (and even drug medications), to make them more palatable. Use it for upper respiratory tract infections. It protects against atherosclerosis.

Licorice stimulates the production of interferon and may help inhibit replication of HIV. There is also evidence that it may prevent hepatitis C from causing liver cancer and cirrhosis.

Licorice extract has been shown to have activities similar to those of cortisone and, to a lesser extent, estrogen. It induces the adrenal cortex to produce larger amounts of cortisone and aldosterone. Glycyrrhizin, a chemical in licorice, has a chemical structure similar to human steroid hormones. Three other herbs (ginseng, wild yam, and sarsaparilla), all of which combine well with licorice, also have hormone-like substances in them. In Europe, licorice is used to help those with ulcers to recover.

Note: Licorice candy is useless because of its white sugar content and because it primarily consists of anise, not licorice.

Warning: Licorice should not be used by persons with diabetes, glaucoma, heart disease, high blood pressure, or those who have had strokes. It should not be taken by those with severe menstrual problems or who are pregnant. It should not be used over seven days; for it can cause high blood pressure, even in those who have low or normal pressure. In addition, extended use can result in water retention or low potassium levels.

LOBELIA

(Lobelia inflata) Parts used: Plant and seeds. *Properties:* Antispasmodic, emetic, nervine, expectorant. *What it affects:* Nerves, lungs, stomach, muscles, and circulation.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 1 Tbsp. as needed. *Tincture:* Take 10-30 drops as needed. *Fluid extract:* Take 5-30 drops as needed. *Powder:* Take 1-2 #0 capsules (1-10 grains) as needed.

Purposes: Lobelia is both a relaxant and stimulant, and is a powerful helper.

Internally, in *very small doses* (5-10 drops of the tincture or one gelatin capsule), it is extremely relaxing for all spasms, both internally and externally; and it is used for lung congestion and as an antispasmodic in herbal formulas. In *slightly larger doses* (15 drops), it acts as a sedative. In *large doses* (40 drops of the tincture, or 2 gelatin capsules or more), it is a powerful emetic, and can be used to vomit up something which you want to get out of the stomach fast! For most conditions (unless you want to induce vomiting), you will only use *small doses.*

In small doses: Lobelia is very good for asthma and whooping cough. It is outstanding for relieving spasms associated with lung and respiratory conditions. As an expectorant, it is useful in all respiratory treatments, especially the spasmodic type, in expelling phlegm. Add it to all cough medicines. Combine it with lady's slipper for convulsions. Lobelia is also used for headache, heart palpitation, indigestion, allergies, arthritis, asthma, chicken pox, contagious diseases, fevers (all kinds), jaundice, pleurisy, pneumonia, St. Vitus dance, teething, toothache. It relaxes the heart and lowers rapid pulse. Combined with skullcap and lady's slipper, it is good for lock jaw.

In large doses: It is invaluable for clearing the stomach of its contents, food poisoning, etc.

Small doses: Externally, lobelia is a wash for infected or itchy skin diseases. It is put in baths, fomentations, poultices, and liniments for muscle spasms. A few drops of the tincture placed in the ear will relieve earaches. It is used in poultices for bruises, sprains, felons, ringworm, erysipelas, poison ivy, snake and insect bites, poison ivy, and tumors. Add it to liniments for sore muscles, pains, and rheumatism.

Warning: Do not give very large doses of lobelia! Although it is poisonous in large amounts, it will be vomited so fast as to unlikely cause any permanent harm.

LUNGWORT

(Pulmonaria officinalis) Part used: Leaves. *Properties:* Demulcent, emollient, expectorant, mucilage, astringent, tonic, vulnerary. *What it affects:* Lungs, bronchials, intestines, and liver.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. at a time. *Tincture:* Take 15-30 drops 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Powder:* Take 10 #0 capsules (60 grains) 3 times daily.

Purposes: *Internally,* lungwort tea is used primarily for the respiratory system, especially when there is bleeding of the lungs. It is reliable for coughs, asthma, colds, and bronchial and catarrhal problems. It will help heal tissues and counteract inflammation. It is also used for diarrhea, hemorrhoids, and hoarseness. It is also mildly diuretic.

Externally, lungwort tea is used for all kinds wounds and swellings. It is a good wash for infected sores.

MANDRAKE

(American)—(Podophyllum peltatum) Part used: Root. *Properties:* Cholagogue, hepatic, laxative, alterative, emetic, stimulant. *What it affects:* Liver, gallbladder, intestines, and skin.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take 1 Tbsp. (cold) 2 times daily. *Tincture:* Take 1-10 drops 2 times daily. *Fluid extract:* Take ¼-½ tsp. 2 times daily. *Powder:* Take 1-3 #0 Capsules 2 times daily.

Purposes: *Internally,* mandrake is a powerful glandular stimulant and should be taken in small amounts. It is used for lymphatic problems, all skin diseases, liver diseases, and obstructions of the liver and gallbladder (gallstones and jaundice), as well as digestive problems. It is best taken in small doses in combination with ginger, licorice, or Oregon grape root. American Indians used it as a cathartic. It is said to eliminate poisoning from mercury ingestion.

Externally, the concentrated tincture (by gently cooking it down) is directly applied to warts, to rapidly remove them. But it must only be put on the wart and not on the surrounding skin. Indians used the crushed rootstock on warts, but doing so could produce dermatitis. A diluted solution is applied to skin diseases.

Note: European mandrake *(Mandragora officinarum)* is a different herb, with different properties.

Warning: Only take mandrake in small doses. Large doses, even applied externally, produces nausea, vomiting, and inflammation of the intestines and the stomach lining. An overdose could be fatal. Taking it during pregnancy could cause birth defects. Placing it undiluted on the skin may cause dermatitis.

MARSHMALLOW

(Althea officinalis) Parts used: Root, flowers, and leaves. *Properties:* Demulcent, diuretic, emollient, lithotriptic, alterative, nutritive, vulnerary. *What it affects:* Intestines, kidneys, and bladder.

Preparation and amount: *Infusion (flowers and leaves):* Steep 5-15 min. Take 1 cup at a time, frequently. *Decoction (root):* Simmer 5-15 min. Take 6 oz. 3 times daily. *Tincture:* Take 30-60 drops (½-1 tsp.) 3 times daily. *Fluid extract:* Take 1-2 tsp. 3 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: Marshmallow soothes and heals skin, mucous membranes, and other tissues, externally and internally. *Internally,* it is the best source of easily digested mucilage. It helps the body lubricate joints, to protect them against dryness and irritation. Because digestive fluids contain mucilage, marshmallow also acts as a counter-irritant to the digestive tract and aids in diarrhea, dysentery, and ulcers. It is also used for lung problems and as a douche in vaginal infections. It is good for bladder infection.

Use marshmallow with other laxative herbs for chronic constipation that is associated with dryness or lack of roughage. In combination with other diuretic herbs, such as parsley root, use it as tea for kidney stone attack and to help expel gravel. It is also used for headache, sinusitis, sore throat, asthma, allergies. Marshmallow is often used as 10% of the formula in various herbal mixtures.

Externally, as a poultice, marshmallow can be applied with a pinch of cayenne on a daily basis in order to treat open wounds, burns, gangrene, septic wounds, bruises, and blood poisoning. The tea is good to bathe sore eyes.

MOTHERWORT

(Leonurus cardiaca) Part used: Tops. *Properties:* Emmenagogue, nervine, tonic, antispasmodic, diaphoretic, laxative. *What it affects:* Nerves, heart, and uterus.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. 3-4 times daily. *Tincture:* Take 30-60 drops (½-1 tsp.) 3-4 times daily. *Fluid extract:* Take ½-1 tsp. 3-4 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3-4 times daily.

Purposes: *Internally,* motherwort is most commonly used for nervous heart problems and for stomach gas and cramps. For this purpose, a good combination is equal parts of motherwort, cramp bark, and calendula. It relieves childbirth pain and is excellent for suppressed menstruation and other female problems, including amenorrhea. It is a good tonic for the heart and may be combined with hawthorn berries for an effective heart tonic and antispasmodic. This can be used to prevent heart attack and treat palpitations, pericarditis, and neuralgia. It is good for all nervous conditions, sleeplessness, convulsions, neuritis, neuralgia, and hysteria. It is used for shortness of breath, goiter, and congestion of respiratory passages. It is also used for menopausal symptoms and vaginitis. It is used for headache, thyroid, insomnia, vertigo, fevers, rheumatism, and suppressed urine. In general, it has similar properties to valerian, and can be used like it.

Warning: Contact with the plant may cause dermatitis in some individuals.

MUGWORT

(Artemisia vulgaris) Part used: Tops. *Properties:* Emmenagogue, nervine, stomachic, diaphoretic, diuretic. *What it affects:* Nerves, circulation, stomach, and uterus.

Preparation and amount: *Infusion:* Steep 20 min. Take 1 tsp. as needed. *Tincture:* Take 30-60 (½-1 tsp.) as needed. *Fluid extract:* Take 1 tsp. as needed. *Powder:* Take up to 10 #0 capsules (up to 60 grains) as needed.

Purposes: *Internally,* mugwort is excellent for nervousness, insomnia, and controllable shaking. It is also good for female problems, such a suppressed menstruation and menstrual cramps. It is especially good when combined with cramp bark, marigold, and black haw for these problems. It will bring on the menstrual period; and it is used with cramp bark to treat menstrual cramps and other female problems. The tea is useful in treating stomach disorders. For this purpose, it is diluted 3 times, to overcome the strong taste. For pains in the stomach and bowels, drink the tea in small frequent doses and apply a fomentation of the infusion over the painful area. It is good in kidney herb combinations for stones or gravel. American Indians used it for colds and flus, bronchitis and fevers. Drink it hot for a sweating therapy. It is also

used for asthma, difficulty in breathing, bronchitis, hay fever, earache, epilepsy, and swollen glands.

Externally, mugwort may be applied as a poultice to boils, carbuncles, and abscesses.

MULLEIN

(Great Mullein)—(Verbascum thapsus) Part used: Leaf. *Properties:* Demulcent, expectorant, antispasmodic, astringent, diuretic, vulnerary. *What it affects:* Lungs, glands, and lymph.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. frequently. *Tincture:* Take 30-60 drops (½-1 tsp.) frequently. *Fluid extract:* Take ½-1 tsp. frequently. *Oil:* Take 2-3 drops 2-3 times daily. *Powder:* Take up to 10 #0 capsules (60 grains) frequently.

Purposes: *Internally,* mullein tea is a good remedy for coughs, bronchitis, bronchial catarrh, and whooping cough. It is commonly used as a nervine and antispasmodic. It can be used for gastro-intestinal catarrh and cramps in the digestive tract. It is useful for hemorrhoids, diarrhea, hemorrhages of the lungs, and shortness of breath. For lungs and coughs, use a tea made of mullein, yerba santa, wild cherry bark, licorice, and comfrey root. It is used in kidney formulas, to soothe inflammations. The leaves are also used to treat lymphatic congestion. It is also used for hay fever, swollen glands, diarrhea, asthma, sinus congestion, and tumors.

Externally, mullein oil is one of the best remedies for ear infection. Put 2-3 drops of the warm oil in the ear overnight or 2-3 times daily. It is also used for the lymphatic congestion that results in earaches, as well as toothaches. For external use on inflammations or painful skin conditions, use the tea or a fomentation of the leaves boiled or steeped in vinegar and water. It is also used for diaper rashes and inflamed eyes.

Note: Four different herbs are called "mullein." The primary medicinal one is described here. The others are black mullein *(Verbascum nigrum)* and two European species: common mullein *(Verbascum phlomoides)* and orange mullein *(Verbascum phlomoides).* The last two have medicinal properties similar to great mullein.

MYRRH

(Commiphora mayrrha) Part used: Gum. *Properties:* Antiseptic, emmenagogue, carminative, expectorant, stimulant. *What it affects:* Stomach and lungs.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. 3-4 times daily. *Tincture:* 30-60 drops (½-1 tsp.) 3-4 times daily. *Powder:* Take 2-6 #0 capsules (10-40 grains) 3-4 times daily.

Purposes: Myrrh is a strong antiseptic and works well with goldenseal. Mix them in equal parts.

Internally, myrrh is a powerful antiseptic, and ranks with goldenseal and echinacea. It is often combined in equal parts with goldenseal as a specific for intestinal ulcers, intestinal catarrh, bad breath, and other mucous membrane problems. It is an antiseptic, disinfectant, expectorant, and deodorizer. Myrrh destroys putrefaction in the intestines and prevents blood absorption of toxins. The tincture added to water is an excellent mouth wash for spongy gums, pyorrhea, and all throat diseases. It destroys putrefication in the intestines. It stimulates the immune system and gastric secretions; and it is good for sinusitis, sore throat, herpes simplex, and ulcers. It treats chronic diarrhea, lung disease, and general body weaknesses.

Use myrrh for hemorrhoids, bedsores, asthma, boils, cankers, chronic catarrh, colitis, coughs, digestive tonic, bleeding gums, herpes, indigestion, infections, leukorrhea, mouth sores, skin disease, thrush, and ulcers. Small doses will help remove toxins from the stomach and intestines.

Externally, myrrh is used for cankers, cuts, bleeding gums, leukorrhea, abscesses, boils, mouth sores, skin disease, thrush, and wounds. It is a good wash for wounds and skin diseases. The powder will dry up most skin problems. It is excellent for most problems involving pus, externally or internally. It helps fight harmful bacteria in the mouth. Insert the tincture of myrrh in the sinuses for all sinus infections and inflammations. If the sinuses are too sensitive, dilute it with water.

Note: Other gums and resinous materials from conifers, such as pine and fir, have similar properties.

Warning: Myrrh and other gums should not be used in large amounts over a long period of time, for they contain potent volatile oils that are toxic in large amounts.

NETTLES

(Urtica urens) Part used: Tops. *Properties:* Alterative, nutritive, antiseptic, expectorant, hemostatic. *What it affects:* Lungs, kidneys, bladder, and blood.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. frequently. *Tincture:* Take 5-15 drops frequently. *Fluid extract:* Take ½-1 tsp. frequently. *Powder:* Take 3-10 #0 capsules (20-60 grains) frequently. *Juice:* 1 tsp. as needed.

Purposes: *Internally,* nettles is considered a specific for asthma when taken over a prolonged period, providing an expectorant and antispasmodic. The tea will expel phlegm from the lungs. Combine it with equal parts of comfrey, mullein, and a pinch of lobelia. Make a tea from this formula; and, using an ounce of herbs steeped in a pint of boiled water, take 4 times a day. The seeds are used in cough medicines. The leaves can be pounded and used as a poultice for rheumatic pains. The tea made from the root will help cure dropsy.

Nettles is good for benign prostatic hyperplasia, anemia, hay fever, and other allergic disorders. The tea is good for kidney problems, diarrhea, dysentery, arthritis, inflammatory conditions, hemorrhoids, goiter, mucous conditions of the lungs, and gravel in the kidneys. To stop intestinal bleeding, extract the fresh juice and take 1 tsp. every hour. Use it as a tea for anemia in children. The fresh leaves may be used in salads.

Externally, a poultice of nettles and slippery elm will stop bleeding when applied to the skin. Use fresh leaves. It stimulates hair follicle growth, and reduces a buildup of scalp oils. Use it as a hair rinse, to restore natural color.

Note: An antidote to poisoning from nettle sting is fresh bruised yellow dock that is rubbed over the affected area.

OAT STRAW

(Avena sataiva) Parts used: Stem and fruit. *Prop-*

erties: Nervine, tonic, antispasmodic, stimulant. *What it affects:* Nerves, uterus, stomach, and lungs.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. 3 times daily. *Tincture:* Take 30-60 drops 3 times daily. *Fluid extract:* Take 1 tsp. 3 times daily. *Powder:* Take up to 10 #0 capsules (60 grains) 3 times daily.

Purposes: *Internally,* oat straw tea is recommended for chest and kidney problems. It acts as an antidepressant and a restorative nerve tonic. It increases perspiration. For bed-wetting, give this tea to children. It is also good for insomnia, colic, depression, stress, epilepsy, heart palpitation, occipital headaches, weak muscles from nerve exhaustion, nervous diseases, and stomach problems.

Externally, oat straw tea is used in Europe for various baths which, when taken regularly, is helpful for a number of ailments. *Full bath* (adding a gallon of the tea to the bath): good for rheumatic problems, paralysis, lumbago, liver ailments, gout, kidney and gravel problems. *Sitz bath:* bladder and abdominal problems, intestinal colic, and bed-wetting. *Local wash:* skin diseases, frostbite, flaky skin, wounds, chilblains, and eye problems.

Fresh oats (not oat straw): An extract made from fresh oat berries, picked when the milky substance is in the grain, is good for the brain and functions of the body. It is a specific for weak nerves and can be used as a nerve tonic. It will overcome most diseases caused by nervous disorders and physical exhaustion, including ovarian and uterine disorders.

OLIVE

(Olea europaea) Parts used: Leaves, bark, fruit. *Properties: Oil:* Cholagogue, demulcent, emollient, laxative. *Leaves:* Antiseptic, astringent, febrifuge, tranquilizer. *What it affects:* Digestive tract, other internal organs, blood.

Preparation and amount: *Infusion:* Steep 1-2 tsp. of leaves in 1 cup of water for 10 min. Take 2 tsp. *Decoction:* Boil 2 handfuls of leaves or bark in 1 quart water until 1 cup of liquid remains. *Oil:* As a laxative, take 1-2 fluid oz.; as a cholagogue, take 1-2 tsp. at a time.

Purposes: The olive has been used for food and medicine from earliest times. *Internally,* a decoction of the leaves or inner bark of the tree is effective against fever. An infusion of the leaves has a calming effect on nervous people.

Olive oil, taken internally, increases the secretion of bile and acts as a laxative by encouraging muscular contraction in the bowels. It is soothing to the mucous membranes and is said to dissolve cholesterol.

The leaf of the olive helps the system resist colds and flus. It fights bacteria, viruses, fungi, and parasites; and it is good for most infectious diseases. It appears to lower blood pressure. It is also used for diarrheal diseases, inflammatory arthritis, psoriasis, and chronic fatigue syndrome.

Externally, olive oil is useful for insect bites, sprains, burns, bruises, and intense itching (pruritus). Combined with rosemary, it is helpful in treating dandruff.

Note: Olive oil is frequently used as a base for liniments and ointments. Only use cold-pressed olive oil.

ONION

(Allium cepa) Part used: Bulb. *Properties:* Anthelmintic, antiseptic, antispasmodic, carminative, diuretic, expectorant, stomachic, tonic. *What it affects:* Digestive tract, other internal organs, blood.

Preparation and amount: *Juice:* Take 1 tsp. 3-4 times a day. *Cold extract:* Soak a chopped onion in 1 cup of water for 24 hours and strain. Take ½ cup daily. *Decoction:* Boil a medium-size, chopped onion in a little more than a cup of water until 1 cup of liquid remains. Take 1 Tbsp. several times a day for several days.

Purposes: *Internally,* onion juice is most often used as a diuretic or expectorant. But it has been used, for ages, for worms and spasms. It expels gas, is a general tonic, and tones the stomach. As an antiseptic, it helps to eliminate putrefaction and fermentation processes in the gastro-intestinal tract. It helps strengthen the heart and lower blood pressure. Mixed with honey, onion juice is good for hoarseness and coughs.

Externally, onion juice can be placed on suppurating wounds.

Warning: A California research study of volunteers found that onion oil, used heavily over a period of time, will cause very serious iron anemia.

OREGON GRAPE ROOT

(Berberis aquifolium) Part used: Root. *Properties:* Alterative, antiseptic, cholagogue, laxative, tonic. *What it affects:* Liver, stomach, intestines, blood, and skin.

Preparation and amount: *Infusion:* Simmer 10 min. Take 3 oz. 3 times daily. *Decoction:* Steep 10 min. Take 3 oz. 3 times daily (before meals, made fresh each day). *Tincture:* Take 30-60 drops (½-1 tsp.) 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Powder:* Take 2-5 capsules (15-30 grains) several times a day.

Purposes: *Internally,* Oregon grape root stimulates the secretion of bile. In this way, it aids in digestion and is a good blood purifier. It cleanses the liver. By stimulating the liver and gallbladder, it helps to overcome constipation.

Although almost identical to barberry in its action, Oregon grape root affects the liver more strongly and stimulates the thyroid. It is a tonic for all the glands and helps the assimilation of nutrients. Its antiseptic qualities favorably affect the kidneys.

Oregon grape root is useful in the treatment of all skin diseases which are due to toxins in the blood. This includes psoriasis, eczema, herpes, and acne. It is also used in treating bronchial congestion, hepatitis, and rheumatoid arthritis. Its mild antiseptic effects makes it useful in douches for vaginitis. It acts as a laxative.

Note: Oregon grape root acts on the body in a manner quite similar to goldenseal and barberry. It is good for chronic skin problems, including acne, eczema, herpes, and psoriasis.

PARSLEY

(Petroselinum sativum) Parts used: Root, leaves, seeds. *Properties:* Nutritive, diuretic; carminative, expectorant, nervine, tonic. *What it affects:* Kidneys, bladder,

stomach, liver, and gallbladder.

Preparation and amount: *Infusion (leaves):* Steep 5-15 min. Take 6 oz. 2-3 times daily. *Decoction (root and seeds):* Simmer 5-15 min. Take 6 oz. 2-3 times daily. *Tincture:* Take 30-60 drops (½-1 tsp.) 2-3 times daily. *Fluid extract:* Take ½-1 tsp. 2-3 times daily. *Fresh juice:* Take 2 oz. 2 times daily. *Powder:* Take 2-5 #0 capsules (10-30 grains) several times daily.

Purposes: *Internally,* parsley tea (especially that made from the seeds, leaves, and also the fresh juice) is used for dropsy, asthma, coughs, and suppressed or difficult menstruation. The root is good for jaundice. It is excellent for difficult urination, stones, and obstructions of the liver and spleen. It helps the function of the thyroid. The leaves have repeatedly been used for bladder infections, especially when taken with equal parts of echinacea and marshmallow root. However, parsley is a warming herb; so it is best avoided during acute infections and inflammations, especially in the kidneys. It expels worms, relieves gas, and freshens breath.

A few slices of parsley root, cooked in soup, will strengthen weak or sensitive persons. The fresh juice of the leaves (2 oz. daily in apple juice) is an excellent blood tonic and remedy for simple anemia. It is good for bedwetting, fluid retention, high blood pressure, indigestion, obesity, and prostate disorders. The root can be prepared as a decoction, in combination with dandelion, chicory, and burdock, making a total of 1 oz. of roots per pint of water simmered for about 1 hour.

Parsley contains a substance that prevents the spread of cancer cells. In addition, the high chlorophyll content of the leaves makes this herb very useful in treating cancer. The seeds contain apiol, which is considered a safe and efficient emmenagogue, used for amenorrhea and dysmenorrhea. Combine it with buchu, cramp bark, and black haw for female problems. It is good to drink the fresh juice daily.

Externally, parsley juice has been used successfully in treating conjunctivitis and inflammation of the eyelids (blepharitis).

PASSIONFLOWER

(Passifloria incarnata) Parts used: Plant and flower. *Properties:* Antispasmodic, sedative, diaphoretic. *What it affects:* Nerves and circulation.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 1 cup during the day. *Tincture:* Take 15-60 drops in water as needed. *Fluid extract:* Take 10-20 drops as needed. *Powder:* Take 1-2 #0 capsules (3 -10 grains) as needed.

Purposes: *Internally,* Passionflower is most commonly used for nervous conditions—such as restlessness, insomnia, nervous headaches, and hysteria. It is normally used with other herbs as part of a prolonged treatment. It is helpful for anxiety, neuritis, anxiety, and stress-related disorders. It is used for nervousness in children, such as muscle twitching and irritability. In the elderly, it is good for nerve debility and sciatica. It has a gentle sedative effect and helps reduce blood pressure.

Passionflower is also used for hiccups, spasms, coughs, eye tension, convulsions, and back tension. It is used for headaches, fevers, and reduced pulse during high fevers. It stimulates perspiration.

Note: Some herbalists recommend that you only use professionally prepared herbal medications.

Warning: Passionflower should not be taken during pregnancy, since it may cause uterine stimulation.

PAU D'ARCO

(Lapacho or Taheebo) (Tabebuia heptaphylla)—Pau d'arco is a South American herb which, *internally,* fights bacterial and viral infections; cleanses the blood; and is useful for AIDS, cancer, tumors, ulcers, candidiasis, smoker's cough, allergies, cardiovascular problems, inflammatory bowel disease, rheumatism, and all types of infections. Only the inner bark is used. It has similar antibiotic and anti-cancer properties to chaparral, but is less harsh.

PENNYROYAL

(American Pennyroyal)—*(Hedeoma pulegioides) Part used:* Tops. *Properties:* Diaphoretic, emmenagogue, carminative, stimulant. *What it affects:* Circulation, uterus, and lungs.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. frequently. *Tincture:* Take 30-60 drops (½-1 tsp.) frequently. *Fluid extract:* Take 1-2 drops frequently. *Powder:* Take 3-10 #0 capsules (20-60 grains) frequently.

Purposes: *Internally,* pennyroyal is especially used for all fevers and lung infections. It drives out the heat and inflammation through the pores of the skin and helps the circulation. The warm infusion used freely will promote perspiration. It is good for nervous headaches, intestinal pains, cramps, hysteria, nervousness, and colds. It is also used for convulsions, lung congestion, and colic.

A warm infusion promotes menstruation. Use hot footbaths of the tea, to bring on the menstrual flow. It is thus useful in regulating menstrual flow and for relieving cramps. But it should not be used by those who have a tendency toward excessive menstruation.

Externally, because it is a very strong smelling mint, pennyroyal is used to repel insects such as mosquitoes, flies, and fleas. It is also used for itching and skin diseases.

Note: The American species *(Hedeoma pulegioides)* and the European species *(Mentha pulegium)* have similar properties. So either one can be used.

Warning: It is urgent that penneyroyal not be taken during pregnancy!

PEPPERMINT

(Mentha piperita) Part used: Leaves. *Properties:* Aromatic, carminative, diaphoretic, stimulant, antispasmodic. *What it affects:* Stomach, intestines, muscles, and circulation.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. 3 times daily. *Tincture:* Take 30-60 drops 3 times daily. *Fluid extract:* Take ½-2 tsp. 3 times daily. *Oil:* Take 5-10 drops 3 times daily. *Powder:* Take up to 10 #0 capsules (up to 60 grains) 3 times daily.

Purposes: Peppermint is an old household remedy

and useful for a variety of conditions.

Internally, peppermint slightly anesthetizes mucous membranes and the gastro-intestinal tract. The tea or oil is useful for insomnia, migraine, measles, menstrual cramps, migraines, morning sickness, muscle spasms, chills, headache, nausea, nervous disorders, colic, fevers, dizziness, gas, vomiting, diarrhea, dysentery, heart trouble, poor appetite, rheumatism, spasms, and hysteria. It increases stomach acidity, aiding digestion, and is useful for irritable bowel syndrome. It will stop vomiting due to nervous causes.

Externally, peppermint leaves make a cooling and slightly anodyne application. They can also be made into a salve or a bath additive for itching skin conditions. Peppermint is used for toothache and to provide local anesthetic to pains and inflamed joints. For example, to open up the sinuses, put 5-10 drops into 2 quarts hot water and breathe it in through the mouth and nostrils. Cover the head with a cloth as you do this.

Note: Peppermint tea makes a good substitute for coffee or tea. The other mints are spearmint and catnip; both of these are included in this herb list.

PIPSISSEWA

(Prince's Pine)—*(Chimaphila umbellata) Part used:* Tops. *Properties:* Alterative, diuretic, astringent, tonic. *What it affects:* Urinary tract, liver, skin, and circulation.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. as needed. *Tincture:* Take 15-60 drops as needed. *Fluid extract:* Take ½-1 tsp. as needed. *Powder:* Take 5-10 #0 capsules (30-90 grains) as needed.

Purposes: *Internally,* pipsissewa is a good remedy for kidney and bladder problems. It is especially good at producing diuretic action without irritant side-effects. Combined with dandelion, goldenseal, and yellow dock, it is good for all blood troubles and diseases of the urinary organs. It excellent for burning urine, urethral and prostate irritation, catarrh of the bladder, and relaxed bladder. Prolonged use of the leaf tea is said to dissolve bladder stones. For most liver, kidney, joint, and skin problems, a combination of this herb with Oregon grape root, taken frequently throughout the day, will prove very helpful.

It is also used for rheumatic problems, scrofula, dropsy, albuminuria, hematuria, chronic kidney problems, and gonorrhea. One cup of tea, 3 times daily (or 20 drops of tincture, 3 times a day), is the usual dosage. Karok Indian women in their late eighties would drink a quart or two a day for stiffness and genito-urinary problems.

Externally, a tea or poultice made from pipsissewa can be applied to blisters, ulcerous sores, tumors, and swellings.

PLANTAIN

***Common Plantain** (Plantago major) and **Lance-leaf Plantain** (plantago lanceolata). Parts used:* Leaves and seeds. *Properties:* Diuretic, emollient, alterative, antiseptic, astringent, deobstruent, expectorant, vulnerary. *What it affects:* Kidneys, veins, intestines, and externally on the skin.

Preparation and amount: *Infusion (leaf):* Steep 5-15 min. 3 oz. 3-4 times daily. *Decoction (seed):* Simmer 1 oz. seeds in 1½ pints of water; reduce to 1 pint; sweeten with honey. Take 1 Tbsp. 3-4 times daily. *Tincture:* Take 2-60 drops 3-4 times daily. *Fluid extract:* Take ½-1 tsp. 3-4 times daily. *Powder:* Take up to 10 #0 capsules (up to 60 grains) 3-4 times daily.

Purposes: There are several plantains, but they all have the same properties. The two primary ones are common plantain *(plantago major),* which has an almost circular leaf, and the lesser-used lance-leaf plantain *(plantago lanceolata),* which has very narrow leaves. The wider the leaf, the greater the diuretic effect.

Internally, plantain has soothing, cooling properties which make it effective in a wide range of maladies, including infections, inflammations, diarrhea, ulcers, bronchitis, and excessive menstrual discharge. Make an infusion using an ounce of the herb in a pint of water. It acts as a diuretic and is soothing to the lungs and urinary tract. It is excellent for acute neuralgia; for this, take 2-5 drops of tincture every 20 minutes. It is a good remedy for cough irritations, hoarseness, gastritis, and enteritis. It is helpful for all respiratory problems, especially those involving mucous congestion. It is useful for indigestion and heartburn.

It is useful in the treatment of water retention and kidney and bladder infections. It will neutralize stomach acids and normalize all stomach secretions. It may slow the growth of tuberculosis bacteria.

The seeds are similar to psyllium seeds. And, if taken in amounts of 1 tsp. of powdered juice 3 times a day, it will provide an excellent bulk laxative. Soaked overnight in water, this will produce a gel. Then bring it to a boil, turn off the fire, and let it steep for 10 minutes. Press the gel through a strainer and use for ulcers, intestinal pains, and spitting up of blood. Inject a cup of the tea several times a day into the colon for hemorrhoids. Use it as a douche for vaginal difficulties. The fresh juice, pressed from the whole plant, is good for chronic catarrhal problems, gastro-intestinal difficulties, and worms.

Externally, plantain has a healing, antibiotic, and styptic (blood stanching) effect when applied to sores and wounds. It is commonly known to neutralize the toxins of insect and snakebites. Put freshly ground leaves (or chewed slightly) onto the bites of snakes, insects, and bees. A decoction of the dried leaves promotes coagulation of blood. Place a salve of it on boils, carbuncles, and eczema. The fresh juice extract is good for itchy skin. At the same time, swallow a tablespoon of the fresh juice. Plantain is an excellent remedy for skin infections, cuts, scratches, and chronic skin problems. It is used in a variety of salves and ointments, alone or in combination with other herbs (such as chickweed, comfrey, mugwort, and angelica). Apply the fresh leaves to wounds, sores, insect bites, ringworm, and even hemorrhoids. Chewing the rootstock will give temporary relief from toothache.

PLEURISY ROOT

(Asclepias tuberosa) Part used: Root. *Properties:* Diaphoretic, expectorant, antispasmodic, carminative, diuretic, nervine, tonic. *What it affects:* Lungs, kidneys, and nerves.

Preparation and amount: *Infusion:* Steep 30 min. Take 1-2 cups daily; children should take 1-5 drops in hot water every 1-2 hours. *Decoction:* Simmer 5-15 min. Take 2-3 oz. as needed. *Tincture:* Take 30-60 drops every 3 hours. *Fluid extract:* Take ½-1 tsp. 3-4 times daily. *Powder:* Take 3-5 # 0 capsules (20-30 grains) 3-4 times daily.

Purposes: *Internally,* pleurisy root was widely used as an expectorant in the nineteenth century. It is ideal for pleurisy and pneumonia. In severe cases, combine equal parts of it with an infusion of skullcap, given in small amounts (2 oz.) every half hour while the patient is warmly tucked in bed. It is an excellent sweating agent to break up colds, flus, pleurisy, and bronchial problems. Sometimes it is given with cayenne at the beginning of a cold. American Indians chewed the dried root or made a tea, by boiling the root, as a remedy for chest problems or dysentery. It reduces the inflammation of the pleural membranes of the lungs, stimulates the lymphatic system, and encourages the flow of normal lung fluids. It is also good for children's stomach and bowel disorders. For bowel problems, use 1 tablespoon to a quart of boiling water; steep for 30 minutes and use warm as an enema for this.

Warning: Animals have been poisoned by eating the leaves and stems. The fresh root may also produce toxic effects.

PRICKLY ASH

(Xanthoxylum americanum) Part used: Bark. *Properties:* Stimulant, alterative, antispasmodic/astringent, emmenagogue, rubefacient. *What it affects:* Blood, circulation, and stomach.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take 1-2 oz. 3-4 times daily. *Tincture:* Take 5-20 drops 3-4 times daily. *Fluid extract:* Take ½-1 tsp. 3-4 times daily. *Powder:* Take 2-5 #0 capsules (10-30 grains) 3-4 times daily.

Purposes: *Internally,* prickly ash is a stimulant that greatly increases blood circulation throughout the body. For this reason, it is used for impaired circulation, cold extremities and joints, wounds that are slow to heal, lethargy, rheumatism, and arthritis. It will promote warmth during chills. Add a carminative herb (such as peppermint or catnip) to prickly ash, to increase the effect. Because it is so warming to the stomach, it is used for weak digestion, as well as colic and cramps. If an excess amount of unwanted sweating occurs, reduce the amount by a fourth, until the amount taken is producing the desired effect. This herb will produce sweating when all else fails.

Externally, prickly ash bark was a toothache remedy for both the Indians and early settlers. Indians also boiled the inner bark to make a wash for itching skin. Herbalists today use boiled fresh bark (inner and outer) for the same purpose. It is applied as a poultice, to help dry up and heal wounds.

Note: As a stimulant, prickly ash bark is very similar to bayberry bark.

PSYLLIUM

(Plantago psyllium) Part used: Seeds. *Properties:* Demulcent, laxative. *What it affects:* Intestines.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 2-4 tsp. after each meal; children take 1 tsp. after each meal. *Powder:* Take 1 tsp. in warm water or juice, 3 times daily. *Powder:* Take 6-8 #0 capsules (50-60 grains) 3 times daily.

Purposes: *Internally,* psyllium seed is a faithful standby. Either the powder or the soaked seed will assist easy bowel movements during colitis, inflamed ulcers, and hemorrhoids by increasing water content in the colon. Take a teaspoon of the powder in warm water or juice 3 times a day, to clean the intestines and remove putrefactive toxins. Make the dose one-half teaspoon for children.

Externally, psyllium seed powder is very often added to poultices as a binder (to hold it all together). For this purpose, add a small amount while pouring water over the ingredients and stir until it becomes thick, similar to dough. Psyllium will draw pus from boils, sores and carbuncles.

Note: Psyllium seed powder can also be added to unleavened bread as a binder.

PUMPKIN SEEDS

(Curcubita pepo) Part used: Seeds. *Properties:* Anthelmintic. *What it affects:* Intestines.

Preparation and amount: Crush 7-14 oz. of seeds for children and up to 25 oz. for adults; stir into fruit juice, to make a mash to be eaten. Two or three hours later, take castor oil to drive out the worms.

Purposes: *Internally,* pumpkin seed is the classic means of eliminating parasites—worms—from your intestines and large bowel. These are the seeds from the pumpkins harvested in your garden in the fall. As you know, each pumpkin is full of them. Take large amounts of pumpkin seeds as a safe anthelmintic (worm expeller). It is safe for both children and adults. The seed is also used to treat prostate disorders and irritable bladder.

Externally, pumpkin seed oil is used for healing wounds, especially burns, as well as for chapped skin.

Note: Take care with tapeworms, that the entire worm is expelled.

QUASSIA

(Picraena excelsa) Part used: Wood. *Properties:* Anthelmintic, febrifuge, stomachic, bitter tonic. *What it affects:* Gastro-intestinal system.

Preparation and amount: *Infusion:* steep 1 tsp. quassia wood in 1 cup water. Take 1 cup a day. *Tincture:* One dose is 2-5 drops.

Purposes: *Internally,* the primary value of quassia is to kill round worms. Taken as an enema, it kills pinworms. An infusion of quassia wood is used to treat fever, rheumatism, and dyspepsia. A bitter tonic for the stomach can be obtained by letting water stand overnight in a cup made of quassia wood or glass cup with many wood chips. The result is a weak infusion which, in a drink, will help strengthen the stomach. The tea is also said to destroy an appetite for alcohol.

Externally, an infusion can be used as a scalp rinse, to counteract dandruff.

RASPBERRY

(Rubus strigosus) Part used: Leaf. *Properties:* Antispasmodic, astringent, alterative, stimulant, tonic. *What it affects:* Stomach, liver, blood, genito-urinary system, and muscles.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. frequently. *Tincture:* 30 drops (½-1 tsp.) frequently. *Fluid extract:* Take 1-2 tsp. frequently. *Powder:* Take 5-10 #0 capsules (30-60 grains) frequently.

Purposes: *Rubus idaeus* is the regular red raspberry you like to grow in your garden. *Internally,* the leaf tea is good for diarrhea and one can also drink it as a beverage. Because it is perfectly safe, it is one of the best herbal teas for pregnancy: to relieve nausea, prevent hemorrhage, reduce pain, and ease childbirth. It is also used freely to reduce menstrual cramps. Combined with other herbs, such as uva ursi and squaw vine, it is used for the treatment of vaginal discharge, hot flashes, and other female problems. Combine it with peppermint, to treat uterine hemorrhage or morning sickness. It is a stimulating, astringent tonic to the mucous membranes. As a douche or enema for dysentery, combine it with myrrh or goldenseal in equal parts. It will stop uterine hemorrhages. It is also used for measles.

Raspberry relieves urinary irritation, and soothes the kidneys and entire urinary tract. For relief of kidney infection, chronic dysentery, and hemorrhage, mix 1 part raspberry, slightly over 1 part goldenseal, and 2½ parts witch hazel.

Raspberry is also a reliable treatment for acute stomach problems, fevers, colds, and flus. The fresh juice, mixed with a little honey, makes an excellent refrigerant beverage, to be taken in the heat of a fever in order to reduce it. Steep an ounce of the herb in a pint of boiled water for 20 minutes. It promotes healthy nails, bones, teeth, and skin.

Externally, because of its astringent qualities, raspberry is used as a gargle, mouthwash, or an external wash for sores, wounds, burns, canker sores, and skin rashes. It is also used as an eyewash. The above formula, using goldenseal and witch hazel, is also a helpful gargle for throat diseases.

Note: Wild red raspberry *(Rubus strigosus)* has somewhat similar properties, but is not used very much; since the garden variety is so easy to obtain.

RED CLOVER

(Trifolium pratense) Part used: Flowering tops. *Properties:* Alterative, nutritive, sedative, stimulant. *What it affects:* Nerves, lungs, blood, liver, and lymph.

Preparation and amount: *Infusion:* Steep 30 min. Take 1-2 oz. frequently or 4-6 cups daily. *Tincture:* 5-30 drops frequently. *Fluid extract:* Take 1 tsp. frequently. *Powder;* Take 5-10 #0 capsules (30-60 grains) frequently.

Purposes: *Internally,* red clover is considered among the very best anti-cancer herbs. It is a powerful blood purifier, either used alone or in combination with yellow dock, dandelion root, sassafras, or other blood purifiers. It fights infection, suppresses appetite, relaxes the system, stops spasms, and induces expectoration. It is soothing to the nerves and is good for whooping cough, psoriasis, rheumatism, and stomach problems. It is used for coughs, bronchitis, inflamed lungs, kidney problems, liver disease, weakened immune system, bacterial infections, HIV, and AIDS.

Externally, it can be applied as a poultice or fomentation on cancerous growths.

RUE

(Ruta graveolens) Parts used: Herb, leaves. *Properties:* Antispasmodic, emmenagogue, rubefacient, stimulant. *What it affects:* Nerves, tendons, circulation, and uterus.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 2 oz. 3 times daily between meals. *Tincture:* Take 5-20 drops 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Oil:* Take 1-5 drops 3 times daily. *Powder:* Take 2-5 #0 capsules (10-30 grains) 3 times daily.

Purposes: *Internally,* rue is a valuable antispasmodic herb useful in treating hypertension, nervous complaints, neuralgia, trauma, and bowel cramps. As a warm infusion, it is an excellent help for stomach problems, gas pains, colic, spasms, dizziness, nervousness, and congestion in the female organs. It relieves gouty and rheumatic pains and treats nervous heart problems, such as palpitations in women going through menopause. It improves appetite and digestion. It is a good herb to add to cough medicines, especially when poor digestion and gas are also present. It is widely prescribed as a first-aid medicine for strained tendons and muscles. The Chinese use a tincture of rue for sedation and rheumatism. It is used by them to decrease swelling, increase local circulation, and improve metabolism.

Externally, an infusion will help eliminate worms. A poultice placed on the forehead will relieve certain types of headaches. Used as a poultice, the fresh, bruised herb is an irritant which helps sciatica. It is used as a rubefacient, to promote local circulation. (A rubefacient increases the flow of blood to the surface and increases redness of the skin.) It is best to first rub a vegetable oil on the body part where the poultice will be placed.

Warning: Do not take too much rue at a time; small, frequent doses are best. If adverse symptoms develop from overuse, a small amount of goldenseal root will act as an antidote. Because it is an emmenagogic, it should not be used during pregnancy.

SAGE

(Salvia officinalis) Part used: Leaves: *Properties:* Antispasmodic, astringent, anthelmintic, aromatic, vulnerary. *What it affects:* Bowels, sinuses, bladder, mucous membranes, and nerves.

Preparation and amount: *Infusion (leaves):* Steep 5-15 min. Take 1 Tbsp. as needed or 1-2 cups daily, hot or cold. *Tincture:* Take 20-60 drops 3-4 times daily. *Fluid extract:* Take ¼-1 tsp. 3-4 times daily. *Powder:* Take 2-5 #0 capsules (10-30 grains) 3-4 times daily.

Purposes: *Internally,* sage's best-known effect is its ability to reduce perspiration, which will begin about 2 hours after it is taken. The effect may last several days. This makes it useful in treating night sweats which often

occur in tuberculosis. A nursing mother, whose child has been weaned, can take sage tea for a few days, to help stop the flow of milk. It also reduces salivation and decreases secretions of the lungs, sinuses, throat and mucous membranes. It also helps eliminate mucous congestion in the respirator passages and the stomach.

Sage tea is good for stomach troubles, diarrhea, gas, dysentery, colds, and flus. It is good for hot flashes and other symptoms of estrogen deficiency, whether in menopause or following hysterectomy. It will expel worms in children and adults. It is used for nervous conditions, trembling, depression, and vertigo. It is used for inflamed throat and tonsils, laryngitis, and tonsillitis.

Sage tea can be combined with equal parts of peppermint, rosemary, and wood betony for a very helpful headache remedy. It is used for leukorrhea, dysmenorrhea, and amenorrhea. As an astringent, it is used for diarrhea, gastritis, and enteritis.

Externally, sage tea is an excellent gargle when combined with freshly squeezed lemon juice and honey for all mouth diseases. It is a good wash for wounds that are slow to heal. It is a useful hair rinse to eliminate dandruff, stimulate hair growth, and promote shine in the hair. As a gargle, the tea is good for laryngitis, tonsillitis, and sore throat. Crushed, fresh sage leaves can be used as first aid for insect bites.

Warning: Extended or excessive use of sage can cause symptoms of poisoning.

SARSAPARILLA

(Smilax ornata) Part used: Root. *Properties:* Alterative, carminative, tonic, diaphoretic. *What it affects:* Blood, skin, circulation, and intestines.

Preparation and amount: *Decoction:* Simmer 15-30 min. Take 3 oz. 3 times daily. *Tincture:* Take 5-15 drops 3 times daily. *Fluid extract:* Take 2-4 tsp. 3 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: *Internally,* sarsaparilla tea increases the flow of urine; and, taken hot, it induces sweating to help break fevers. It is good for skin problems, flatulence, catarrhal problems, and scrofula. It is used for disorders of the nervous system. Steep 1 tsp. rootstock in 1 cup water; take 1-2 cups a day. It is used for arthritis, rheumatism, and gout.

Sarsaparilla tea is a blood cleanser, and is often taken as a "spring tonic." It promotes the excretion of fluids, increases energy, protects against radiation exposure, and regulates hormones.

It contains a hormone-like substance which makes it useful in glandular formulas. It is useful for frigidity, hives, infertility, impotence, and psoriasis.

Externally, sarsaparilla tea is a good eyewash. Use it as a wash or poultice on ringworm. Pustules and sores may be washed with a tea made from the root. Use it for ringworm and skin eruptions.

SASSAFRAS

(Sassafras officinale) Parts used: Root, bark. *Properties:* Alterative, aromatic, carminative, diaphoretic, diuretic, stimulant. *What it affects:* Blood, skin, circulation, and intestines.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take 3 oz. 3-4 times daily. *Tincture:* Take 15-30 drops 3-4 times daily. *Fluid extract:* Take ¼ to 1 tsp. 3-4 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3-4 times daily.

Purposes: *Internally,* sassafras is one of the oldest and most respected herbal remedies in America. It is a spring tonic and blood purifier. After a heavy winter, it thins the blood, stimulates and cleans the liver of toxins, and promotes perspiration and urination. When used to purify the blood, it is usually combined with other alterative herbs. Therefore, it is recommended for rheumatism, gout, arthritis, and skin problems. Indians used it as an infusion, to reduce fevers.

The bark of the root contains a volatile oil that has anodyne and antiseptic properties. The bark has been used as a pain reliever and also to treat venereal disease. It is given during painful menstruation, and will relieve suffering in childbirth and the afterpains.

For chronic blood disorders, sassafras is often combined with other alteratives—such as sarsaparilla, licorice, burdock, and echinacea.

Internally and externally, use sassafras to treat skin problems and ulcers of various kinds, including acne. Apply the oil externally as a disinfectant and for rheumatic pains.

Warning: The oil can be used externally, but must never be used internally.

SAW PALMETTO

(Serenoa serrulata) Part used: Fruit. *Properties:* Diuretic, tonic, antiseptic, sedative. *What it affects:* Lungs, throat, reproductive organs, and kidneys.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. 2-3 times daily. *Tincture:* Take 15-16 drops 2-3 times daily. *Fluid extract:* Take 10 drops 2-3 times daily. *Powder:* Take 2-4 #0 capsules (10-20 grains) 2-3 times daily.

Purposes: *Internally,* saw palmetto berries are especially useful for colds, asthma, and bronchitis. They are good in all throat conditions, whooping cough, and head and nose congestion. Catarrhal problems and mucous congestion respond to a tea made from the dried berries. It is a diuretic and urinary antiseptic. The tea is a general tonic, to build strength during convalescence from illness. It is used to treat diseases of the male and female reproductive organs. It is especially helpful in promoting a quicker recovery from glandular diseases. It inhibits production of dihydrotestosterone, a form of testosterone that contributes to enlargement of the prostate. Steep 1 tsp. dried berries in 1 cup water. Take 1-2 cups a day.

SENNA

(Cassia acutifolia) Parts used: Leaves, pods. *Properties:* Laxative, vermifuge, diuretic. *What it affects:* Intestines.

Preparation and amount: *Infusion:* Steep 30 min. Take 2 oz. 3 times daily. *Tincture:* Take 30-40 drops 2-3 times daily. *Fluid extract:* Take ½ tsp. 2-3 times daily. *Powder:* Take 2-10 #0 capsules (10-60 grains) 2-3 times

daily.

Purposes: *Internally,* senna is one of the most reliable laxatives and increases the intestinal peristaltic movements.

It should be combined with a carminative herb (such as ginger, anise, fennel, or coriander), to avoid griping (bowel cramps). Use 6-12 pods for adults and 3-6 pods for children. (The pods are preferred, since they are milder than the leaves.) Make an infusion of an ounce of senna to 1 pint water. To this add 10% of an aromatic herb. Steep for 20 minutes and drink it cold. (There is less cramping if one drinks it cold.) Do not make more than will be immediately used (about ½-1 cup at a time.) Senna is also combined with other anthelmintics, to get rid of intestinal worms.

Externally, senna is useful as a mouthwash for halitosis and a bad taste in your mouth.

Note: There are four primary senna herbs: Alexandrian senna *(Cassia acutifolia),* from northern Africa, and the lesser-used American senna *(Cassia marilandica).* Both have the same properties, work in the same manner, and have the same cautions. There are also two other senna herbs: tinnevelly senna *(Cassia angustifolia)* which is weaker in its properties, and not sold very often, and purging cassia *(Cassia fistula)* which is grown in India. It is stronger and the herb generally included in most commercial cassia pods and many packaged preparations.

Warning: Senna should not be used if there is inflammation anywhere in the intestinal tract, if there are prolapsed intestines, rectum, or piles. It should not be used during pregnancy. It is addictive if used too long.

SHEPHERD'S PURSE

(Capsella bursa-pastoris) Part used: Tops. *Properties:* Astringent, diuretic, stimulant. *What it affects:* Kidneys, bladder, and blood.

Preparation and amount: *Infusion:* Steep 30 min. Take 6 oz. 1-2 times daily. *Tincture:* 20-60 drops 1-2 times daily. *Fluid extract:* ¼-½ tsp. 1-2 times daily. *Powder:* 2-10 #0 capsules (15-60 grains) 1-2 times daily.

Purposes: Shepherd's purse is an outstanding blood coagulant which can be used to stop internal or external bleeding. *Internally,* it is an excellent astringent which will stop bleeding of the lungs, colon, kidneys, and bladder. The tops should be used fresh for this purpose, but an infusion of dried herb can also be used. It is also good for excessive menstrual bleeding and bed-wetting. Because it acts to constrict the blood vessels, it raises blood pressure. But it will also regulate blood pressure and heart action, whether the pressure is too high or too low.

It is good for intermittent fevers, hemorrhoids, and especially good for stopping diarrhea. It promotes uterine contracts during childbirth and can improve intestinal and bowel action. Steep 1 tsp. fresh or 2 tsp. dried herb in ½ cup water. Take 1 cup a day, unsweetened, a mouthful at a time.

Externally, put the juice in an ear to stop pain. Doing this will also stop strange noises in the ear. It is also used in washes and poultices for wounds on the body and especially on the head. It will also stop surface bleeding.

Note: Do not store shepherd's purse longer than a year.

SKULLCAP

(Scutellaria lateriflora) Part used: Tops. *Properties:* Antispasmodic, nervine, antipyretic. *What it affects:* Nerves and stomach.

Preparation and amount: *Infusion:* Steep 15-30 min. Take 3 oz. 4-5 times daily. *Tincture:* Take 10-40 drops 3-4 times daily. *Fluid extract:* Take ¼ tsp. 3-4 times daily. *Powder:* Take 3-5 capsules (15-30 grains) 2-3 or more times daily.

Purposes: Skullcap is one of most needed herbs for your collection, and is very good for almost any nervous problem. It is a very safe and reliable nerve sedative. It is food for the nerves, supporting and strengthening them as it gives immediate relief of all chronic and acute diseases stemming from nervous affections and debility. Whatever the nerve problem, mild or chronic, skullcap can provide help. Combine it with other tonic, nervine, and antispasmodic herbs (such as hops, wood betony, lady's slipper, and passionflower). It may be used freely and is essentially nontoxic. Use an ounce of the herb steeped in a pint of boiled water, for 10 minutes.

Internally, skullcap is good for drug and alcoholic withdrawal symptoms, insomnia, epilepsy, neuralgia, convulsions, coughs, indigestion, insanity, muscle cramps, pain, stress, anxiety, fatigue, headache, nervous headache, hyperactivity, hysteria, restlessness, spasms, or excitability. It is used to wean people from barbiturates, excessive use of valium, and other addictions. In combination with American ginseng (¼ oz.) and skullcap (½ oz.), taken in small frequent doses, it is a good treatment for alcoholism. First make a decoction of ginseng root, then an infusion of skullcap, then combine the two.

American Indians used skullcap to promote menstruation. It will reduce pains of ovarian or uterine origin. It strengthens the heart muscle. It is said to be effective against rabies.

Note: Skullcap should be used as fresh as possible, otherwise its activity rather quickly dissipates.

SLIPPERY ELM

(Ulmus fulva) Part used: Inner (not outer) bark. *Properties:* Demulcent, emollient, nutritive, astringent. *What it affects:* Generally effects the whole body.

Preparation and amount: *Infusion (powder):* Slowly pour 1 pint of boiling water over 1 oz. powdered bark, stirring constantly. Simmer 5-15 min. Take 6 oz. 3-4 times daily. *Decoction (whole bark):* Simmer 5-15 min. Take 3 oz. 3-4 times daily. *Tincture:* Take 15-30 drops 3-4 times daily. *Fluid extract:* Take ½-1 tsp. 3-4 times daily. *Gruel:* Mix 1 tsp. powder with sufficient cold water to make a thin and very smooth paste. Stirring steadily, pour 1 pint of boiling water onto the paste. Flavor with honey and lemon rind. Take ½-1 pint (warm) 1-3 times daily. *Syrup:* 1 Tbsp. as needed. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3-4 times daily.

Purposes: It is the inner *white* bark of the slippery elm tree that should be kept on hand. (The outer *dark* bark is also sold, but is useless.)

Internally, slippery elm is used for bladder inflammation, bronchitis, colitis, constipation, ovarian cramps, coughs, cystitis, diarrhea, diverticulitis, dysentery, eczema, flu, gas, hemorrhage, hemorrhoids, hoarseness, lung congestion, stomach problems, tonsillitis, ulcers, ulcerative colitis, gastritis, leukorrhea, rheumatoid and gouty afflictions. It is beneficial for Crohn's disease. It is an excellent cleanser and can be used in a douche or enema.

Slippery elm makes a nourishing gruel for children, for the elderly with weak stomachs, for those with ulcers, and those who are recovering from diseases. It can be made into a gruel by gradually adding a small amount of water and mixing until the proper consistency is obtained. This can be sweetened with a little honey. It is an excellent food whenever there is difficulty holding and digesting food.

Externally, slippery elm is used for burns, gangrenous wounds, hemorrhoids, tumors, open sores, and wounds. It is also used to treat painful rheumatic and gouty areas.

Note: Slippery elm is an excellent binder. A small amount can be added to other herbs with a little water, and then rolled into small pills. By adding a little maple syrup, it can be used to make lozenges for coughs and sore throats. It can also be used to make suppositories, boluses, and to hold unleavened bread together. If used as a douche or enema, it must be diluted with water, so it will not plug the apparatus (since it is a mucilaginous herb).

SPEARMINT

(Mentha viridis) Part used: Leaves. *Properties:* Aromatic, carminative, diaphoretic, stimulate, antispasmodic, diuretic. *What it affects:* Stomach, intestines, muscles, and circulation.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. 3-4 times daily. *Tincture:* Take ½-1 tsp. 3-4 times daily. *Fluid extract:* Take ¼-½ tsp. 3-4 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3-4 times daily.

Purposes: *Internally,* the *Mentha spicata* species of spearmint shares many of the properties of peppermint. It is often given for common women's problems and for suppressed or painful urination. An infusion combined with horehound is sometimes given to children for fever.

The *Menta viridus* species is also nontoxic, and similar to peppermint in its uses. This herb is mainly used during colds, flus, cramps, indigestion, gas, and slight spasms. Combined with horehound, it is used to break fevers in children. It is good to stop vomiting and excellent when used as an enema for restlessness. Combined with pleurisy root and skullcap, it is a good remedy for pneumonia and pleurisy.

Note: Do not boil the herb, for the volatile oil will be steamed off. Use it in bitter herb combinations, to add flavor.

The other mints are spearmint *(Mentha spicata)* and catnip *(Nepeta cataria);* both of these are dealt with elsewhere in this herb list.

SPIKENARD

(American)—(Aralia racemosa) Parts used: Rootstock and roots. *Properties:* Diaphoretic, expectorant, stimulant.

Preparation and amount: *Infusion:* steep 1-2 tsp. powdered rootstock and roots in 1 cup water. Take 1-2 cups daily.

Purposes: *Internally,* the powdered root of spikenard is for rheumatism, asthma, and coughs. Taking the tea for some time before labor will make childbirth easier. American Indians used the plant for backache.

Externally, Indians would pound the root into a pulp and use it for poultices. It is used for skin problems, wounds, swellings, bruises, and inflammations. A fomentation is placed over the chest, to reduce internal pains.

Note: Spikenard is a close relative of sarsaparilla. There is also a second herb called "spikenard" *(Aralia nudicaulis),* or wild sarsaparilla. Its properties are much like those of sarsaparilla, discussed elsewhere in this herb list.

SQUAW VINE (Partridge Berry)

(Mitchella repens) Part used: Whole plant. *Properties:* Emmenagogue, astringent, diuretic. *What it affects:* Uterus, bladder, colon.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. 3-4 times daily. *Tincture:* Take 15-60 drops 3-4 times daily. *Fluid extract:* Take ½-1 tsp. 3-4 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3-4 times daily.

Purposes: *Internally,* American Indians used squaw vine throughout pregnancy and especially during the last few weeks, to make childbirth faster and easier. It was also used to improve lactation. It is used for the same purposes today. It is a uterine tonic and also relieves congestion of the ovaries. It is also good for painful or absent menstruation. As a fomentation for sore nipples, crush the berries, mix them with myrrh, boil, and then let steep for 3 days and strain. During pregnancy, combine it with raspberry leaf. Mix it with cramp bark, raspberry leaves, and a small portion of lobelia in order to prevent miscarriages. The same formula is good for vaginal discharges.

Squaw vine (especially combined with witch hazel) is also used for leukorrhea. Also use this combination for dysentery and bleeding piles.

As a diuretic, it can be used for gravel and urinary problems. It is also used for insomnia. For general use, make a decoction, using an ounce of herb in a pint of water. Take ½ cup 3 times a day.

Externally, squaw vine tea makes a good wash for sore eyes and skin problems.

Note: Squaw vine is similar in properties and effects of pipsissewa.

ST. JOHN'S WORT

(Hypericum perforatum) Part used: Tops. *Properties:* Astringent, alterative, diuretic, nervine, sedative. *What it affects:* Stomach, bladder, blood, liver, and nerves.

Preparation and amount: *Infusion:* Steep the leaves 5-15 min. Take 1 oz. when needed, up to 1 cup

daily. *Tincture:* 10-20 drops as needed. *Fluid extract:* Take ½-1 tsp. as needed. *Powder:* Take 5-10 #0 capsules (30-60 grains) as needed.

Purposes: *Internally,* St. John's wort purifies the blood and is used for diarrhea, dysentery, jaundice, boils, suppressed urine, as well as uterine and afterbirth pains. It is good for bed-wetting, hysteria, coughs, irregular menstruation, uterine disorders, muscle pains and bruises, tenderness and pain in the spine. It is a good expectorant for bronchial and lung problems. The herb should be taken close to meals.

Externally, Steep the flowers in olive oil for 2 weeks and then apply. The extracted oil of St. John's wort can be applied to bruises, wounds, and other skin problems, especially those that are sensitive. Also apply the oil to hard tumors, ulcers, burns, and swollen breasts.

Warning: St. John's wort makes the skin more light-sensitive. Those who have light skin should avoid exposure of the area (where the herb has been applied) to strong sunlight and other sources of ultraviolet light, including tanning beds. If used to support treatment of depression, its effectiveness should be checked by a nutritionally oriented doctor after 4-6 weeks. It should not be used at the same time as prescription anti-depressants, or during pregnancy or lactation.

STONEROOT

(Collinsonia canadensis) Part used: Root. *Properties:* Astringent, diuretic, hepatic. *What it affects:* Veins, liver, and colon.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take 1 Tbsp. 3 times daily or up to 1 cup during the day. *Tincture:* Take 30-60 drops 3 times daily. *Fluid extract:* Take ¼ to 1 tsp. 3 times daily. *Powder:* Take 2 #0 capsules (5 grains) 3 times daily.

Purposes: *Internally,* stoneroot is primarily used in the treatment of hemorrhoids. Its astringency restores the tone of flaccid veins and is thus useful for both hemorrhoids and varicose veins. An infusion makes a good diuretic for urinary problems, constipation, and excessive water retention. It is often included with other herbs as part of a urinary formula. Use it with bladder root in the removal of bladder stones. It is very good taken for pain after surgical operations of the rectum for piles, ulcers, or fistula. It breaks up mucus and is helpful for headache, cramps, indigestion, and bronchitis. Its continued use strengthens the heart through improvements in the circulation. It is especially good for the heart when it has been tired from sickness or fever.

Externally, in addition to taking stoneroot internally for varicose veins, apply it externally to them. Mix a salve with equal parts goldenseal and a small amount of tea tree oil. The fresh leaves of stoneroot can be used as a poultice or fomentation, to help heal bruises and wounds. Small amounts are good for a hoarse voice.

Note: The fresh rootstock of stoneroot is better than the dried herb.

Warning: If used in large doses, it may cause nausea.

TANSY

(Tanacetum vulgare) Parts used: Herb, seed, root. *Properties:* Anthelmintic, emmenagogue, stimulant, tonic. *What it affects:* Intestines.

Preparation and amount: *Infusion (herb):* Steep 30 min. Take 1 tsp. 3-4 times daily. *Decoction (seed, root):* Simmer 5-15 min. Take 3 oz. 3 times daily. *Tincture:* ½-1 tsp. 2-3 times daily. *Fluid extract:* Take ½-2 tsp. 2-3 times daily. *Syrup (root):* Take 1 tsp. 2-3 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 2-3 times daily.

Purposes: *Internally,* tansy is primarily used for expelling worms in children and adults. Take an infusion teaspoonful morning, noon, and evening. Pour 1 cup of the infusion over ½ cup raisins. Let the raisins swell with the liquid. Then take 3 tsp. doses of the liquid daily.

Tansy is used to promote suppressed menstruation, hysteria, kidney weaknesses, nervousness, and fever.

Externally, an infusion of leaves and flowers is a good wash for skin problems and blemishes, as well as for bruises and sprains. A hot fomentation is used for arthritic and rheumatic pains.

Warning: Tansy is a mild irritant when used in small doses. It can be poisonous, even when applied externally. An overdose of tansy oil or tea can be fatal. It would probably be best to avoid using tansy.

TEA TREE

***(Tee Tree) (Melaleuca alternifolia)**—Part used:* Essential oil. Properties: Disinfectant.

Preparation and amount: Pure or diluted oil, used in poultices, fomentations, and douches.

Purposes: *Externally,* tea tree oil is a powerful disinfectant of wounds. It is the "skin herb," and heals all skin conditions, including cuts and scrapes, acne, boils, fungal infections, athlete's foot. It is used for hair and scalp problems, herpes, scabies, warts, and insect and spider bites. Add it to water and use as a douche for vaginitis and a gargle for colds, sore throat, and mouth sores. But do not swallow it.

Warning: Only use tea tree oil externally. It can be toxic if swallowed. If irritation occurs, discontinue its use, or dilute it with distilled water, vegetable oil, primrose oil, or vitamin E oil. If irritation continues after its dilution, discontinue its use.

THYME, GARDEN

(Thymus vulgaris) Part used: Tops. *Properties:* Antiseptic, carminative, diuretic, antispasmodic, expectorant, parasiticide. *What it affects:* Intestines, lungs, throat, stomach, and skin.

Preparation and amount: *Infusion:* Steep 30 min. Take 1 oz. frequently, up to 2 cups a day. *Tincture:* Take 30-60 drops (½-1 tsp.) 2-3 times daily. *Fluid extract:* Take 1 tsp. 2-3 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 2-3 times daily.

Purposes: *Internally,* thyme is especially used in throat and bronchial problems, including laryngitis, bronchitis, croup, and whooping cough. It eliminates gas and reduces fever, headache, and mucus. A warm infusion

promotes perspiration and relieves flatulence. It is used for all stomach and intestinal problems, including diarrhea, chronic gastritis, lack of appetite, and colic. It is also used for asthma, and fever. An infusion of the leaves will relieve headache. For coughs and spasms, use the fresh plant. It has strong antiseptic properties and lowers cholesterol levels.

Externally, thyme is used for itching of the scalp and flaking caused by candidiasis. A salve of thyme, goldenseal, and myrrh is good for herpes and other skin problems. Use it as a useful antiseptic wash for all wounds. The tincture or oil, diluted with vegetable oil (1 part thyme to 10 parts oil) is a helpful antiseptic for scabies, athlete's foot, ringworm, crabs, and lice. For itchy skin, add 15 drops of tansy oil to a hot bath and soak 45 minutes.

THYME, MOTHER OF

(Thymus serpyllum) Parts used: Leaf and flower. *Properties:* Antispasmodic, carminative, expectorant, rubefacient, tonic.

Preparation and amount: *Infusion:* Steep 1-2 tsp. herb in 1 cup water. Take 1-1½ cups daily. *Bath additive:* Add 3-4 oz. flowers for a strong decoction of the herb to the bath water. *Alcohol cure:* Add a handful of the herb to 1 qt. boiling-hot water. Steep in a covered pot for 30 minutes. Give (or take) 1 Tbsp. every 15 minutes.

Purposes: *Internally,* mother of thyme is useful for respiratory problems and helps clear mucous congestion from the lungs and respiratory passages.

As a bath additive, it stimulates the flow of blood toward the surface, thus alleviating nervous exhaustion. An infusion of leaves relieves the headache of a hangover.

A tonic for the stomach and nerves, it is used for gastro-intestinal problems—such as enteritis, stomach cramps, and mild gastritis. It is also good for anemia, insomnia, and painful menstruation.

Mother of thyme is useful in breaking the alcohol habit by inducing vomiting, diarrhea, sweating, thirst, and hunger, along with a revulsion for alcohol. This may have to be repeated several times (generally at longer and longer intervals), until the person is weaned from the habit.

Externally, mother of thyme is used for bruises, tumors, stab wounds, arthritis, and rheumatism.

Note: Except when used for gastro-intestinal problems, it can be sweetened with honey.

UVA URSI

(Arctostaphylos uva ursi) Part used: Leaves. *Properties:* Astringent, diuretic, alterative, tonic. *What it affects:* Kidneys and urinary tract.

Preparation and amount: *Infusion:* Steep 30 min. Take 3 oz. as needed, up to 3 cups a day. *Tincture:* Take 10-20 drops 3 or more times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily.

Purposes: *Internally,* uva ursi is a specific for kidney and bladder infections. When combined with marshmallow root, it will eliminate stones from those organs. It is useful as a postoperative medicine, to reduce hemorrhaging. Put a cup of leaves in a stocking and add to a hot tub of water as a good bath for just after childbirth. Also use this bath after inflammations, hemorrhoids, and skin infections. It is used as a douche for vaginal infections and other pelvic problems.

It also helps restore the womb to normal size. Because of its astringent qualities, uva ursi leaves are good as a tonic for chronic diarrhea, piles, and diabetes, dysentery, and profuse menstruation. Use it for gonorrhea.

Note: Uva ursi is often used with buchu leaves; but do not boil buchu leaves or uva ursi, because their active principles are in their volatile oils.

VALERIAN

(Valeriana officinalis) Part used: Root. *Properties:* Antispasmodic, nervine, carminative, stimulant. *What it affects:* Nerves.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take 3 oz. 3 times daily. *Tincture:* Take ½-1 tsp. 3 times daily. *Fluid extract:* Take ½ tsp. 3 times daily. *Oil:* 5 drops 3 times daily. *Powder:* Take 2-3 #0 capsules (10-15 grains) 3 times daily.

Purposes: *Internally,* valerian is a very calming and sedating herb for all emotional disturbances and pain. However, it stimulates a few people (because the essential oils were not changed into valerianic acid, the calming principle). In everyone, it will be stimulating for a little while until the oils are changed.

Valerian is especially useful when under emotional stress and pain. It is good for nervous conditions, migraine, and insomnia. It is also helpful for fatigue, low fevers, colds, colic, hysteria, neurasthenia, gravel in the bladder, as an enema for pinworms, and stomach cramps that cause vomiting. The tea will lessen menstrual cramps, intestinal cramps, stomach cramps, bronchial spasms, and muscle pains. It is also used for afterbirth pains, gas, hangover, measles, palsy, paralysis, high blood pressure, irritable bowel syndrome, and ulcers. It reduces mucus from colds.

Valerian is widely used in many nervine herbal formulas. A well-known bedtime tea for insomnia is ½ tsp. valerian root and ½ tsp. hops, steeped in a cup of hot water.

Externally, valerian can be used as a wash for pimples and sores; and, at the same time, take it internally.

Note: Valerian should not be boiled, for this will dissipate the essential oils. Hops has very similar properties and may be substituted.

Warning: Large doses or extended use of valerian may produce symptoms of poisoning. Take the tea twice daily for no more than 2 weeks at a time. Large doses can bring on depression. Do not combine it with alcohol.

BLUE VERVAIN

(Blue Vervain)—(Verbena officinalis) Part used: Tops. *Properties:* Antipyretic, antispasmodic, diaphoretic, astringent, expectorant, galactagogue, vulnerary. *What it affects:* Circulation, lungs, and intestines.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. frequently. *Tincture:* Take 10-20 drops frequently. *Fluid extract:* Take ½-1 tsp. frequently. *Powder:* Take 3 #0 capsules (15 grains) frequently.

Purposes: *Internally,* vervain is excellent for inducing sweating and, in this way, reducing fevers; but large

amounts will act as an emetic. Take the hot tea every few hours, to induce good sweating. Combine it with boneset for fevers, and take ½-1 hot cup every hour. By strengthening the nervous system, it is a natural tranquilizer and is used for nervous problems and insomnia. The warm tea, taken often, is recommended for fevers and colds, and especially good for getting rid of all types of congestion in the throat and chest, including pneumonia. It is used for most lung ailments. It promotes liver and gallbladder health, as well as menstruation. It increases mother's milk. The tea will settle a nervous stomach.

It is used for convulsions, coughs, fevers, headaches, measles, nerve weakness, pain in the bowels, and pleurisy. It is helpful for rheumatism, neuralgia, sciatica, and swellings of the spleen. It is often effective in eliminating intestinal worms. It is a popular remedy for griping (intestinal cramps).

Vervain is good for pneumonia, asthma, and other chest diseases. Put the tea on sores, to aid in healing. Use it for coughs and upper respiratory inflammations. It is good for mild depression. Use it as a poultice (mixed with wheat flour or bran) on swellings of the spleen. Vervain is bitter and can be made more palatable if combined with lemon grass or peppermint and honey. Start with 1 tsp., when treating children, and increase as needed. For adults, give 1 Tbsp. to 1 cup.

Externally, vervain tea can be applied to sores and wounds, to increase healing. Put it on toothaches.

Warning: Large amounts act as an emetic. Taken in large doses, the herb is poisonous. It should not be used during pregnancy, as it stimulates uterine contractions.

WHITE OAK BARK

(Quercus alba) Part used: bark. *Properties:* Astringent, antiseptic, diuretic. *What it affects:* Skin, gastrointestinal tract, and kidneys.

Preparation and amount: *Decoction:* Simmer 5-10 min. Take 3 oz. as needed. *Tincture:* Take 15-30 drops as needed. *Fluid extract:* Take ½-1 tsp. as needed. *Powder:* Take 3-10 #0 capsules (15-60 grains) as needed.

Purposes: *Internally,* white oak bark is the most commonly used astringent and is extremely good for this purpose. It is used for ulcers, spleen problems, and diarrhea. The tea is taken for bleeding of the stomach, lungs, and rectum. It will stop the spitting up of blood. It will remove gallstones and kidney stones, and increase the flow of urine. Use it for diarrhea. Simmer an ounce of the bark in a pint of water for an hour. The decoction is good as an injection for vaginal infections or hemorrhoids. It is also used for bladder weakness, herpes, leukorrhea, nose bleeds, and prolapsed uterus.

Externally, white oak bark is applied to poison oak, bee stings, insect and snakebites. Use it to bathe sores, scabs, burns, and wounds. Use it on the gums, to tighten them and prevent the loss of teeth. Apply a fomentation of it, overnight, to swollen glands, canker sores, tumors, goiter, mumps, fever blisters, and lymphatic swellings. Use it for herpes, leukorrhea, mouth ulcers, pyorrhea, ringworm, skin diseases, thrush, and tonsillitis, Tie a fomentation over broken capillaries and weak blood vessels. It is excellent for varicose veins. For this purpose, use the tea internally as well as externally.

Warning: Do not use during pregnancy. It may interfere with the absorption of iron and other minerals, when taken internally. It should not be used by people who are allergic to aspirin.

WHITE PINE

(Pinus strobus) Parts used: Inner bark, young shoots, sap. *Properties:* Expectorant, antiseptic.

Preparation and amount: *Infusion:* Steep 1 tsp. of the inner bark or young shoots in 1 cup water. Take a mouthful at a time, as needed. *Tincture:* 2-10 drops in water is a dose. *Mixture:* Steep 1 tsp. white pine bark and 1 Tbsp. each of wild cherry bark, sassafras bark, and American spikenard root in 1 pint boiling-hot water for 30 minutes. Take 1 tsp. every hour.

Purposes: *Internally,* the inner bark is valued as a remedy for coughs and congestion due to colds. It is used as a tea (or as an ingredient) in cough syrup. The resinous sap and young leaves are used as cold remedies.

Externally, make a poultice of the inner bark or the sap of the white pine as a dressing for wounds and sores. The sap of the white pine is legendary for its ability to heal surface cuts and wounds.

WHITE WILLOW

(Salix alba) Part used: Bark. *Properties:* Anodyne, antispasmodic, tonic, astringent, diaphoretic, diuretic, febrifuge. *What it affects:* Stomach, kidneys, intestines, and head.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 1 cup during the day. *Decoction (bark):* Simmer 5-15 min. Take 1 cup during the day. *Tincture:* Take 15-60 drops as needed. *Fluid extract:* Take ¼-1 tsp. as needed. *Powder:* Take 6-10 #0 capsules (30-50 grains) as needed.

Purposes: *Internally,* white willow alleviates pain and reduces fevers. Because it contains salicin, it is a natural alternative to aspirin. It is the "pain herb," and good for headache, allergies, nerve pain, pains in the joints, backache, inflammation, and menstrual pain. It is used for fevers, neuralgia, gout, rheumatism, and arthritic pains. It is especially useful for kidney, urethra, bladder irritabilities, and acts as an analgesic to those tissues.

Externally, apply it to injuries and toothache. Use the tea as a good eyewash. Sniff it up your nose, to stop nose bleeds. Willow bark is a strong antiseptic and a good fomentation and poultice for infected wounds, ulcerations, eczema, and all other skin diseases. Gargle with it for throat and tonsil infections. Use it for other surface bleeding.

Warning: Not recommended for use during pregnancy. Should not be used by those allergic to aspirin.

WILD CHERRY BARK

(Prunus serotina) Part used: Dried inner bark. *Properties:* Sedative, stomachic, astringent, stimulant tonic. *What it affects:* Lungs, stomach, and nerves.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. 3-4 times daily between meals. *Decoction:* Simmer 5-15 min. Take 2 oz. 3 times daily. *Tincture:* Take

30-60 drops 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Syrup:* Take ½-2 tsp. 3 times daily. *Powder:* Take 5 #0 capsules 3 times daily.

Purposes: *Internally,* wild cherry bark is frequently used in the treatment of chronic coughs, especially those with a lot of mucus. It acts as an expectorant, a mild sedative, and is a tonic to the respiratory and digestive tracts. It is a good remedy for heart palpitations, when caused by a stomach disorder. It soothes nerve irritations of both the stomach and lungs, and loosens mucus in the throat and chest. It improves digestion by stimulating the gastric glands. It is good for coughs, colds, asthma, bronchitis, diarrhea, dyspepsia, tuberculosis, whooping cough, and a nervous stomach.

Warning: Wild cherry bark should not be used during pregnancy. The leaves, bark, and fruit contain hydrocyanic acid, which can be poisonous.

WILD YAM

(Dioscorea villosa) Part used: Root. *Properties:* Cholagogue, antispasmodic, diaphoretic. *What it affects:* Muscles, joints, uterus, liver, and gallbladder.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take 2-3 oz. in water 3-4 times daily, up to 2 cups per day. *Tincture:* Take 10-40 drops 3-4 times daily. *Fluid extract:* Take 1 tsp. 3-4 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3-4 times daily.

Purposes: *Internally,* wild yam relaxes muscle spasms and is a valuable antispasmodic used for colic, bowel spasms, abdominal cramps, and menstrual cramps. It contains steroid-like substances which are used in many birth control pills. It is included in many gland-balancing formulas. It promotes perspiration and reduces inflammation; and it is good for gallbladder disorders, hypoglycema, kidney stones, irritable bowel syndrome, neuralgia, and rheumatism. It is used for a variety of female problems, including premenstrual syndrome and menopause-related symptoms.

Combined with other blood cleaners, wild yam will aid in removing wastes from the system, and relieving stiff and sore joints. It strengthens the function of the gallbladder and liver. To prevent miscarriage, combine it with ½ teaspoon of dried ginger and 1 tsp. of raspberry. Steep in 1 pint of water for 20 minutes, strain, and take a mouthful every half hour when threatened by miscarriage. Use 2 oz. with added honey, to counteract nausea. For arthritic and other pains, take the following tinctures in a cup of warm water 3 times a day: 20-30 drops of wild yam, 20 drops of burdock root, 15 drops of motherwort, and 15 drops of black cohosh.

Warning: Wild yam is used in many commercial hormonal products; but the wild yam in them is often extracted from plants treated with fertilizers and pesticides, which could end up in the products. While some herbalists suggest using wild yam to avoid miscarriage (see above), others say not to use it during pregnancy.

WINTERGREEN

(Gaultheria procumbens) Part used: Leaves. *Properties:* Analgesic, astringent, carminative, diuretic, stimulant.

Preparation and amount: *Infusion:* Steep 1 tsp. of leaves in 1 cup water. Take 1 cup daily, a mouthful at a time.

Purposes: The medicinal qualities of wintergreen are in the oil of wintergreen which can be obtained by steam distillation. That active principle consists primarily of methyl salicylate (90%), a close relative of aspirin.

Internally, wintergreen leaves have long been used for headache, toothache, muscle pain, rheumatic pain, other aches, and inflammations. It stimulates the circulation and is good for arthritis. The leaves are also used for urinary problems and flatulence.

Externally, wintergreen leaf tea can be used as a gargle for sore mouth and throat, as a poultice for skin diseases, and a douche for leukorrhea. Place a cloth soaked with the oil over painful joints.

Note: Collect the leaves in the fall.

Warning: The pure oil can cause irritation, so it must be used cautiously.

WITCH HAZEL

(Hamamelis virginiana) Parts used: Bark, leaves. *Properties:* Astringent, hemostatic, tonic, sedative. *What it affects:* Skin, stomach, and intestines.

Preparation and amount: *Infusion (leaves):* Steep 10-15 min. Take 6 oz. as needed. *Decoction (bark):* Simmer 10-15 min. Take 3 oz. as needed, up to 2 cups daily. *Tincture (bark):* Take 15-60 drops as needed. *Fluid extract (bark):* Take ½ tsp. as needed. *Powder (bark):* Take 5-10 #0 capsules (30-60 grains) as needed.

Purposes: Witch hazel is an excellent astringent herb and one of the best remedies for stopping excessive menstruation, hemorrhages from the lungs, stomach, uterus, and bowels. It is also very good for stopping bleeding from the lungs, uterus, and other internal organs. It is because the inner bark has sedative and hemostatic properties, that it is so good for stopping bleeding.

Internally, witch hazel is used for diarrhea, diphtheria, hemorrhoids, leukorrhea, prolapsed bowel, varicose veins, and uterine problems. It is used as a vaginal douche.

Externally, witch hazel is primarily used for insect bites, varicose veins, minor burns, and to stop bleeding of wounds. It is also used for bruises, poison ivy, sore breasts, sore muscles, and tonsillitis. A poultice made from the inner bark is used for hemorrhoids, varicose veins, and eye inflammation.

Witch hazel can be used as an injection for bleeding piles, vaginal discharges, and infections. As a fomentation or poultice, it is good for bedsores, oozing skin diseases, and sore and inflamed eyes. It is good for almost any internal or external inflamed condition. Mixed with a small amount of peppermint oil, it is useful as a mouthwash, for a sore throat, or inflamed gums.

WOOD BETONY

(Betonica officinalis) Part used: Tops. *Properties:* Nervine, alterative, aromatic, hepatic, parasiticide. *What it affects:* Nerves and liver.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. 3-4 times daily. *Tincture:* Take 30-60 drops (½-1 tsp.) 3-4 times daily. *Fluid extract:* Take ½-1 tsp. 3

times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3-4 times daily.

Purposes: *Internally,* wood betony is excellent for headaches, hysteria, and other nervous afflictions. It is most frequently used in combination with other nervines, to calm the nerves. It benefits the function of the liver. It is also useful in treating diarrhea, convulsions, and nerve twitching in the face, as well as palsy, insanity, neuralgia, and cramps. Prepare powder herbs of equal parts of wood betony, marjoram, plus a pinch of eyebright, and sniff it up the nose. It is said that this will stop the most stubborn headaches. It stimulates the heart and relaxes muscles. It improves appetite and digestion. Combine it with other blood purifying herbs, in the treatment of rheumatism and gout. Combine it with other nervines in the treatment of nerve diseases and to calm the nerves, when stress is present from sickness and disease. An infusion, taken 3-4 times a day in 3 oz. doses, will kill worms and open up obstructions of the liver and gallbladder. It is good for colds, hyperactivity, nerve pain, anxiety attacks, and cardiovascular disorders.

Externally, a poultice of the fresh green herb will draw out splinters, help heal open wounds, and relieve back pains and stitches in the side.

Note: Because it has a similar flavor, but lacks the caffeine and harmful acids, wood betony can be used as a substitute for commercial black tea. Use ½ oz. and steep in a pint of boiled water for 10 minutes.

Warning: Avoid the use of wood betony during pregnancy.

WORMWOOD

(Artemisia absinthium) Parts used: Tops, leaves. *Properties:* Antihelmintic, antiseptic, aromatic, diaphoretic, tonic. *What it affects:* Liver, gallbladder, stomach, intestines, uterus, and joints.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 3 oz. as needed, up to 2 cups daily. *Tincture:* Take 10-30 drops 3-4 times daily. *Fluid extract:* Take 15-60 drops 3-4 times daily. *Powder:* Take 2-4 #0 capsules (5-20 grains) 3-4 times daily.

Purposes: *Internally,* because it is an intensely bitter herb, the special work of wormwood is that of a stomach medicine. It is useful for indigestion, gastric pain, increasing stomach acidity, and improving appetite, as well as related problems of heartburn and flatulence. It stimulates the uterus and will help bring on suppressed menstruation. It is helpful for liver insufficiency by stimulating liver and gallbladder secretions. It induces sweating and lowers fevers. It can reduce migraine headaches and will relieve pain during childbirth.

Wormwood tea has been used for years for gastritis, stomach ulcers, dysentery, tuberculosis, liver and spleen conditions, and kidney and bladder problems. It expels roundworms and pinworms; and it is often used with black walnut, to remove parasites. If there is bleeding from the bowel, inject the tea and hold it for 5 minutes several times daily as needed.

Externally, it is good for healing wounds, blemishes, skin ulcers, and insect bites.

Warning: Wormwood definitely must not be used during pregnancy. With long-term use, it can be habit forming.

YARROW (Milfoil)

(Achillea millefolium) Parts used: Flowers and leaves. *Properties:* Astringent, diaphoretic, hemostatic, stimulant. *What it affects:* Circulation.

Preparation and amount: *Infusion:* Steep 5-15 min. Take 6 oz. 3-4 times daily. *Tincture:* Take 5-20 drops 3-4 times daily. *Fluid extract:* Take ½-1 tsp. 3-4 times daily. *Oil:* Take 5-20 drops 3-4 times daily. *Powder:* Take 5-9 #0 capsules (30-60 grains) 3-4 times daily.

Purposes: *Internally,* yarrow is extremely good for the early stages of flus and colds. It is also given as a strong infusion for children with the measles and other eruptive diseases. It is also excellent for stomach upset, stopping hemorrhages and bleeding from the lungs, and shrinking hemorrhoids. Take it as a warm infusion (an oz. of the herb steeped in a pint of boiled water for 20 minutes) for cramps and to help stop menstrual bleeding. For piles, hemorrhage, or vaginal secretions, use as a douche or enema. If there is swelling or bleeding of the bowel, inject 2 oz. into the colon after each bowel movement. If there is much pain, inject a warm tea (112°-115° F.), to soothe and reduce that pain. Make a bolus or salve for bleeding piles. It is used for anemia and liver disease. It is also used for blood in the urine, epididymitis, leukorrhea, menorrhagia, amenorrhea, measles, and uremic poisoning.

Externally, it can be applied directly to wounds, to stop bleeding.

YELLOW DOCK

(Rumex crispus) Part used: Root. *Properties:* Alterative, astringent, cholagogue, laxative, nutritive. *What it affects:* Blood, skin, spleen, liver, and gallbladder.

Preparation and amount: *Decoction:* Simmer 5-15 min. Take 1 Tbsp. in 6 oz. water 3 times daily. *Tincture:* Take 5-30 drops 3 times daily. *Fluid extract:* Take ½-1 tsp. 3 times daily. *Syrup:* Take 1 tsp. 3-4 times daily. *Powder:* Take 5-10 #0 capsules (30-60 grains) 3 times daily.

Purposes: *Internally,* yellow dock acts as a blood purifier and cleanser, as well as a general tonic. It is an astringent blood purifier used in treating diseases of the blood. It tones up the entire system. Because it stimulates the flow of bile, it acts as a laxative. It improves colon and liver functions; and it is good for tumors, liver, gallbladder problems, and ulcers.

Use it in formulas for jaundice and hepatitis. Because of its high iron content, it is used in the treatment of anemia. It is good for inflammation of the nasal passages and respiratory tract. It is good for the spleen. Combine it in teas and salves with echinacea, burdock root, and sarsaparilla.

It is also used for cancer, acne, boils, jaundice, leukorrhea, psoriasis, and piles.

Externally, yellow dock is used for skin diseases such as eczema, psoriasis, skin itch, ulcers, rashes, and hives. Combined with sarsaparilla, it makes a tea for chronic

skin disorders. It makes a good salve for itchy skin diseases and swellings of glands. Apply it to bleeding piles and wounds. It is good for running of the ears, scurvy, ulcerated eyelids. In addition, drink 3 cups of the tea daily. Indians applied crushed yellow dock leaves to boils and pulverized roots to cuts.

Warning: Do not put yellow dock in salads, soups, etc. Its high oxalic acid content can cause poisoning.

YERBA SANTA

(Eriodictyon californisum) Part used: Leaves. *Properties:* Expectorant, astringent, stimulant. *What it affects:* Lungs and stomach.

Preparation and amount: *Infusion:* Steep 30 min. Take 2-3 oz. 3 times daily. *Tincture:* Take 10-30 drops, 3-4 times daily. *Fluid extract:* Take ½-1 tsp. 3-4 times daily. *Powder:* Take 2-10 #0 capsules (15-60 grains) 3-4 times daily.

Purposes: *Internally,* yerba santa is used for all types of bronchial congestion. It is used in all types of chronic skin disorders. It is a good treatment for diarrhea and dysentery, as well as colds and flus. It is an excellent remedy for acute and chronic chest conditions, including asthma. Combine it with equal parts of nettles, mullein, comfrey root, and a small amount of licorice in a tea.

"And God said, Let the earth bring forth grass, the herb yielding seed, and the fruit tree yielding fruit after his kind, whose seed is in itself, upon the earth: and it was so. And the earth brought forth grass, and herb yielding seed after his kind, and the tree yielding fruit, whose seed was in itself, after his kind: and God saw that it was good. And the evening and the morning were the third day." *—Genesis 1:11-13*

"And God said, Behold, I have given you every herb bearing seed, which is upon the face of all the earth, and every tree, in the which is the fruit of a tree yielding seed; to you it shall be for meat. And to every beast of the earth, and to every fowl of the air, and to every thing that creepeth upon the earth, wherein there is life, I have given every green herb for meat: and it was so. And God saw every thing that He had made, and, behold, it was very good. And the evening and the morning were the sixth day." *—Genesis 1:29-31*

"The fruit thereof shall be for meat, and the leaf thereof for medicine." *—Ezekiel 47:12*

"The hay appeareth, and the tender grass sheweth itself, and herbs of the mountains are gathered." *—Proverbs 27:25*

"Who cut up mallows by the bushes, and juniper roots for their meat." *—Job 30:4*

A poultice: "And Isaiah said, Take a lump of figs. And they took and laid it on the boil, and he recovered." *—2 Kings 20:7 (Isaiah 38:21)*

"At our gates are all manner of pleasant fruits, new and old." *—Song of Solomon, 7:13*

"Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles? Even so every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit." *—Matthew 7:16-17*

"In the midst of the street of it, and on either side of the river, was there the tree of life, which bare twelve manner of fruits, and yielded her fruit every month: and the leaves of the tree were for the healing of the nations." *—Revelation 22:2*

DISEASE INDEX 209

This supplement to the Third Edition of the *Natu-l Remedies Encyclopedia*, is taken from the book, *he Water Therapy Manual*, by Vance Ferrell, and pub-shed by the Harvestime Books, the publisher of the *ncyclopedia*.

God has placed in the simple things of nature—ich things as water, nonpoisonous herbs, rest, nour-hing food, sunlight, fresh air, and moderate exercise—ie elements needed to bring health to our human bod-s. Let us thank Him for these simple methods and se them carefully and wisely. Let us dedicate our lives Him and obey His laws of health; for He has given us ese blessings because He loves us.

2 - Hot Gauze Compress 179
3 - Hot-Water Bottle 179
4 - Paraffin Bath, Hot Paraffin Pack, Hot Paraffin Dressing, Hot Paraffin Wrap 180
5 - Kidney Stone Pack 181
6 - Sinus Pack 182
7 - Heat Lamp 182
8 - Poultices (including Charcoal, Clay and Glycerin, Clay, Flaxseed, Garlic, Comfrey and Smartweed, Hops, and Mustard, and Charcoal as a non-poultice) 183
5 - LOCAL AND LARGER HOT 184
1 - Full Hot Blanket Pack 185
2 - Hot Trunk Pack 186
3 - Hot Hip-and-Leg Pack 186
4 - Hot Leg Pack 186
5 - Hot Packs with Ice Bags 186
6 - TONIC FRICTIONS 187

1 - Wet-hand Rub 187
2 - Cold Mitten Friction 187
3 - Cold Towel Rub 188
4 - Wet-sheet Rub 188
5 - Dripping Sheet Rub 189
6 - Ice Rub 189
7 - Salt Glow 189

7 - SPONGING 191
1 - Fever Sponges (including Hot, Cold, Tepid, and Neutral) 190

PART 2 - DIRECT WATER APPLICATIONS

8 - PAIL POURS 191
1 - General Pail Pour 191
2 - Local Pail Pours (including Local Hot, Neutral, Cold, Alternate Hot and Cold, and Special Applications) 191

9 - PARTIAL BATHS 192
1 - Contrast Baths (including Contrast Bath to the Hand or Arm, Feet, Legs, and Special Applications) 192
2 - Hot Footbath 193
3 - (Shallow) Cold Footbath 194
4 - Sitz Baths (including Cold, Cold Rubbing, Prolonged Cold, Neutral, Very Hot, Revulsive, and Hot and Cold) 194

10 - FULL BATHS 195
1 - Hot Tub Bath (Hot Full Bath) and Moderate Hot Bath 195
2 - Neutral Bath (Neutral Full Bath) and Continuous Bath 195
3 - Cold Tub Bath (Cold Full bath) and Cold Rubbing Bath 196
4 - Cold Shallow Bath (Cold Shallow Rubbing Bath) 194
5 - Plunge Bath 197
6 - Graduated Bath 197

11 - SHOWER BATHS 197
1 - Hot Shower 197
2 - Continuous Hot Shower 198
3 - Cold or Cool Shower 198
4 - Neutral Shower 198
5 - Graduated Shower 198
6 - Revulsive Shower 198
7 - Alternate Hot and Cold Shower 198

12 - MISCELLANEOUS BATHS 199
1 - Steam Baths (including Russian Bath and Sauna) 199
2 - Steam Chair (Steam Sweat) 200
3 - Vapor Inhalation (Steam Inhalation) 201
4 - Radiant Heat Bath (Electric Light Bath) 201
5 - Oatmeal Bath 202
6 - Soda Alkaline Bath 202
7 - Starch Alkaline Bath 202
8 - Sunbath 202
9 - Sea Bathing 203
10 - Sun, Air, and Water Bath 203
11 - Wet Grass Walk 204
12 - Summer Spray 204

13 - IRRIGATIONS 204
1 - Enemas (including Hot, Warm, Tepid, and Cold) 204
2 - Colonics 205
3 - Other Irrigations (including irrigation of the ear, nose, eye, and throat) 206

14 - DOUCHES (Hand-held Sprays) 206
Special note: These hand-held sprays are not included in this chapter in the *Encyclopedia*, because they fill many pages and are generally used only by professionals.

DISEASE INDEX 209

INTRODUCTION: IMPORTANT

The material in this *Encyclopedia Supplement on Basic Hydrotherapy* is from the 294-page *Water Therapy Manual*, written by the author of this *Encyclopedia*.

It is important that you understand that this material was written by a reporter, not by a trained physician. It provides source material for those who enjoy reading historical monographs in the medical field. It has also been prepared for use in your own home, under the direction of a qualified physician (or his nurse or physical therapist) in one of the following ways: (1) as emergency therapy during an acute attack; (2) as more prolonged therapy in a chronic condition, whether temporary or permanent; (3) as convalescent therapy following a period of sickness; and (4) as tonic applications to rebuild strength and vitality, both in those who are convalescing and those who are well.

This chapter will provide you with information as to the manner in which certain qualified physicians, nurses, and physiotherapists use water applications. And it will also provide you with warnings, cautions, and contraindications that these experts in this field have expressed in regard to various hydrotherapy applications and complicating conditions and situations.

Everything in this chapter, with the exception of several Biblical and historical quotations, is based on the writings of twentieth-century medical personnel who are qualified in the field of *physiotherapy* (the modern name for *hydrotherapy*, or *water therapy*,—the giving of *water treatments*).

This entire chapter is the result of a careful study of over 2,700 pages of hydrotherapy material; most it now out-of-print.

This chapter is based on the writings of the following thirteen authorities: George Knapp Abbott, M.D.; Clarence W. Dail, M.D.; Kathryn Jensen-Nelson, R.N., M.A.; John Harvey Kellogg, M.D.; Ethel M. Manwell,

B.S., R.N., A.R.P.T.; J. Wayne McFarland, M.D.; Gertrude Muench, R.N., R.P.T.; Fred B. Moor, M.D.; Mary C. Noble, B.S., R.N.; Stella C. Peterson, R.N., B.S.N.E.; Charles S. Thomas, Ph.D.; Agatha M. Thrash, M.D.; Calvin L. Thrash, M.D. Most, and probably all of the above medical authorities, were (at the time of their writing) either teachers in medical schools or directors of physical therapy departments in leading hospitals or sanitariums. John Kellogg's 1,193-page *Rational Hydrotherapy*, which has been out-of-print for over half a century, was an especially rich source.

You have a right to care for sickness within your home; but you should realize that it is current medical opinion that anything you do to regain or improve your health should be done under the direction of a qualified physician.

As stated above, this chapter is here provided to be used in your home, under the direction of the physician of your choice. If difficulties of any kind develop, immediately contact him. Treatments carried on without his aid or counsel are treatments carried on at your own risk. —*Vance Ferrell*

HOW TO USE THIS SECTION

This section on hydrotherapy is remarkably complete in providing you with **HOW to do the water treatments**. in order to find what you are looking for, you can use its table of contents *(pp. 153-154)* and Disease Index *(pp. 209-211)*. This section also tells **WHAT conditions to use the therapies on.** But you will find a great abundance of additional information in the Kellogg formulas, scattered throughout this *Encyclopedia*. They tell what diseases to use hydrotherapy on. To locate it, use the large *Encyclopedia* Disease Index at the back of the book to locate them. Water therapy is a most wonderful blessing.

— PART ONE —

THE LIVING STREAM

Within the Sacred Scriptures is to be found one of the most basic laws of the human body:

"For the life of the flesh is in the blood."—*Leviticus 17:11.*

What is it that makes you alive? According to the Bible, it is the blood flowing through your body. Your brain and nerves, glands, and internal organs, are all very important. But there is no "Life" intrinsically in any of them. They are only alive because living blood is flowing through them every moment—bathing and nourishing their every fiber, tissue, and cell.

The life is not in your heart; for it is only a fluid pump. Neither is it in your body secretions, limbs, lymphatic tissue, eyes, or nerve cells. The only life in your body—which imparts life to all your body by a continual drenching process—is in your blood.

"Flesh with the life thereof, which is the blood thereof, shall ye not eat."—*Genesis 9:4.* "Be sure that ye eat not the blood: for the blood is the life; and thou mayest not eat the life with the flesh."—*Deuteronomy 12:23.*

How does healing come to afflicted parts of your body? Your internal organs, especially your liver, are very important. So also is your brain. But it is the blood that brings the healing to your body. Not only does it contain life, it is also the only means of bringing vital nutrition from your digested food to all of your body parts. And it also brings that spark of life, precious oxygen, without which you would quickly die.

But more: Blood, as it rapidly moves through your body, not only brings food and oxygen; it also carries away waste products from each cell in your body. Thus, the blood not only imparts life, it also heals and restores. And it does this continually. Your blood pump (the heart) need only skip one beat, and you may not recover; two beats skipped and you are dead. That is how important the flow of blood is within your body. Every day, your heart pumps an amazing quantity of blood throughout your body. But without it you would die. For flowing from your heart—issuing from it—is your very life.

"Keep thy heart with all diligence; for out of it are the issues of life [for, flowing from it, is the life]."—*Proverbs 4:23.* What does water therapy do? It is the most powerful, natural, nonpoisonous means of quickly moving the nourishing, healing blood into and out of afflicted, diseased body parts. Let us now turn our attention to how and why water therapy can do this so well:

First, let us take a brief look at two of the many important things that are in the blood. This miraculous fluid contains several different types of cells. One is the *Red Blood Cell* (RBC). This cell, which is the red color of the blood, is the carrier of nutrition and oxygen to every tissue and fiber of your body. And it also takes away carbon dioxide and other waste products. Thus it both nourishes and cleanses. RBCs are so tiny that 3,000 of them could lie side by side in a distance of but one inch. In an amount of blood smaller than a tiny drop (one cubic millimeter), there are about 4½ to 5 million RBCs. Then there is the *White Blood Cell* (WBC). These colorless micro-dots protect the body against toxins, disease organisms, and various irritants. Our heavenly Father gave us the RBCs to bring nourishment to the entire system; and He gave us the WBCs to attack and destroy disease wherever it may be found throughout the body. When a person is well, there are normally about 7,000 to 9,000 WBCs in every tiny blood drop. But when infection is present, this increases to 15,000 to 25,000.

There are many types of cells and factors in the blood; but we will not mention them here, even though they are also important. All in all, there are about 25 trillion blood cells in your body. Laid end-to-end, they

would reach to nearly four times around the earth.

As the healing, life-giving blood enters the injured or infected area, it brings nourishment and oxygen. It also brings phagocytes (another name for the White Blood Cells), which literally gobble up the infection and foreign substances. And the blood also provides the materials with which the body can rebuild the torn, diseased structures in the body.

But there are two limitations to the blood:

(1) There really is not enough of it. Your heart would have to be several times larger than it is, in order to provide you with all the blood you need. This is why you should not swim for thirty minutes after a meal: There is not enough blood to care for initial digestion and muscle activity at the same time. It is the same when there is a problem in part of your body: You need more blood—or a quicker flow of blood—than normal in order to bring healing. In connection with this, keep in mind that, at any given time, at least one quarter of all the blood in your body is in your lungs. And what is it doing there? It is rapidly moving past the 1,200 square yards of lung surface area in order to receive a fresh supply of air. Every second, 2 trillion blood cells pass by the air chambers of the lungs. But, at any one time, one-fourth of your body's five quarts of blood are in the lungs, being refreshed there.

(2) The blood has a tendency to congest, or pool, in a damaged or infected part of your body. The result is a clogging up of too much blood in one place. The blood circulation to that part has slowed and the pooled blood has less ability to nourish and heal.

So, we need to bring larger quantities of blood to the afflicted areas; and we need to move it in and out again more rapidly. We need to loosen up, speed up, and equalize the blood circulation. We do not want it pooling in one area. We want it moving back and forth through the body at a good pace; for this is what keeps the blood healthy, full of fresh oxygen from the lungs and abundant nourishment from the liver and portal vein.

And, interestingly enough, as the blood quickens in healthy activity, the bone marrow begins to make more blood than it normally would!

God has provided that carefully given applications of hot and cold to the body will provide the needed help. But what shall we use to place this hot and cold in contact with the body? The answer, in large measure, is water—the most abundant, natural source of hot and cold to be found on our planet. Water: the substance that can retain heat and cold better than any other common element around us. Water: the substance that can cleanse better than anything else in the world.

Water, like blood, is a very special gift of God to mankind.

You, yourself, are about 65 percent water and this wonderful liquid is a continual necessity to your existence both within your body and outside of it.

Fortunately, water is one of the most common substances on Planet Earth. It covers more than 70 percent of the earth's surface and fills the oceans, rivers, and lakes; also it is in the ground and the air we breathe.

— PART TWO —

PRINCIPLES AND CAUTIONS

In order to make the best use of water therapy, we need to understand a number of principles and cautions. In this present section, we will provide you with an overview of these basic principles and cautions.

Hot and cold water can powerfully help to bring healing to your body. The following statement by medical and nursing authorities in the field, although written in somewhat technical language, will give you an idea of the effective help that water therapy can bring you in your own home. Here are some of the effects of water when applied to your body:

"Following all sorts of cold procedures associated with mechanical stimulation, and after hot baths or douches [the name in hydrotherapy for water sprays], when they are followed by cold applications, there is a decided increase in the number of [blood] cells in the peripheral circulation. This increase often amounts to from 20 to 35 percent in the red corpuscles [RBCs] and from 200 to 300 percent in the white corpuscles [WBCs]; the hemoglobin also shows an increase of 5 percent or more.

"Not only does the activity of the peripheral blood vessels keep the blood cells evenly distributed, but the normal movements of the spleen *(ie.,* its alternate dilation and contraction) are also a factor in distributing the white blood cells evenly throughout the body. Various applications to the abdomen and over the spleen stimulate this organ to increased activity. The splenic douche [water spray], alternate hot and cold applications, and cold friction to the abdomen are especially efficient in this respect.

"Another factor in changes in blood counts is the increase of blood volume (fluid) found to occur with applications of heat, so that heat alone may result in a relative lowering of the hemoglobin and the red cells. Strange as it may seem, both hot and cold baths cause an absolute increase in the white blood cells. But, in induced fever therapy, the white cells in the periphery increase up to 10,000 or 15,000. The more or less permanent increases in these elements after a course or series of tonic treatments must be attributed to an entirely different mechanism and can scarcely be explained in any other way than by the stimulation of the blood-forming organs.

"The earlier experiments done by the Winternitz school [of water therapy studies] indicated a rather notable increase in the completeness of absorption of nitrogenous food and the hastening of nitrogenous ca-

tabolism, as shown by the lessening of nitrogen in the feces on days when tonic cold baths were given, and an increase in the percent of nitrogen in the urine at the same time. On these treatment days the excretion of urea was increased about 20 percent and uric acid about 30 percent. The excretion of ammonia was increased as much as 50 percent, and the alkaline phosphates 25-30 percent. After the bath period the more completely burned nitrogenous extractives of the urine sank as low as 0.5 or 1.0 percent of the total nitrogen excreted; whereas the extractives usually take up from 3 to 4 percent of the total nitrogen. With hot treatment these changes were very slight unless it was much prolonged or frequently repeated.

"In one experiment the middle finger was able before complete fatigue to execute work equal to 5.139 kilogram-meters (a kilogram-meter is equal to 1/75 of a horsepower). After a cold bath at 500 F. for fifteen seconds, the same muscles were able to do work equivalent to 9.126 kg-m before complete fatigue . . Even after the muscles have been fatigued by active work and are able to work but a very short time longer, the giving of cold treatment restores them to their usual capacity for work, or the working ability may even be increased over the normal.

"Hot baths have the opposite effect; *i.e.*, the muscles become more quickly fatigued and are able to do less work. On an average, various cold treatments increase the working ability about 30 percent, and hot treatments decrease muscular capacity to the same extent . .

"All alternate hot and [then] cold applications have the same effect in varying degree, according to the nature of each treatment. General cold treatments, such as the cold-mitten friction, cold-towel rub, wet-sheet rub, cold shallow bath, pail pour, and even the salt glow, are powerful means of restoring the muscles to conditions for renewed activity.

"Sugar from foods is the source of muscle energy. In muscular activity it is changed to lactic acid, the accumulation of which produces fatigue. But increased circulation carrying plenty of oxygen quickly changes the lactic acid back into a source of energy. Tea and coffee, while acting as muscle stimulants, add a fatigue poison, which is not easily or quickly gotten rid of, thus lengthening the recovery time, lessening the work done, and decreasing endurance.

"Mechanical effects alone, such as massage, also raise the working capacity of the muscles, but to a lesser degree than hydriatic [water therapy] procedures. Cold applications should be properly graduated to suit the needs and reactive ability of each individual case.

"These beneficial effects cannot be produced by any medicinal stimulus reputed to possess the power of increasing working capacity. The effects of strychnine [for example] are irregular and transient. It is a whip only, and in no sense a real tonic, since it does not tend to restore to a normal condition.

"On the other hand, those drugs which are used to give relief from fatigue, such as the coal-tar products, bromides, caffeine, etc., do not promote normal rest, but only deaden the nerve centers so that there is not a true appreciation of the worn-out condition of the body. For this reason, the body when under the influence of tea or coffee (caffeine), goes on working when it should rest, and hence to its own damage. A warm bath, however, gives no such false sense of energy, but is conducive to the perfect relaxation and quiet which normal rest and sleep require in order that the powers of the body may be recuperated."—*G.K. Abbott, M.D., F.B. Moor, M.D., K.L. Jensen-Nelson, R.N., Physical Therapy in Nursing Cure, pp. 52-53, 50-51, 54-55, 55-56.*

We mentioned, earlier, that there were two problems about the blood: (1) *There may not be enough of it for emergency needs and* (2) *it has a tendency to congest, or pool, in infected or damaged areas.* But water therapy can help provide solutions to both of these situations. For water treatments can speed up the circulation of the blood; bring it more powerfully into and out of the afflicted area; and, over a period of time, even increase the total amount of blood in the body. Water therapy brings the blood where it is most needed. But when a congestion of blood has occurred, the skillful use of water applications drains away the congestion and brings a refreshing quantity of fresh newly circulating blood to the area needing it. In addition, there is the *"peripheral heart"* factor. The heart, itself, pumps the blood all over the body. But in the more distant parts, the pumping action of the heart cannot send the blood along very fast. But the blood vessels, themselves, have the ability to dilate (enlarge) and contract (reduce) in size and thus pump the blood along also. Oh, how wondrously our God has made us! This is called the "peripheral circulation." And in reaction to hot or cold water applications, this peripheral circulation really jumps into high gear. This pumping action of the heart, which normally occurs four or five times a minute, powerfully increases under many different water treatments.

Here are a few additional principles that will help you to better understand some of the effects of hot, cold, and neutral (lukewarm) water on the human body:

1 - It is the *heat* and *cold* of the water that produces the results. *Neutral* temperatures are quite relaxing, but they do not produce the powerful effects that hot and cold can give.

2 - Heat is measured in degrees by a thermometer. In this chapter on water therapy, we will only use *Fahrenheit*. Scientists may prefer centigrade, but your home and my home only has Fahrenheit thermometers; so that is what we will use.

On this scale, normal body temperature taken by the mouth is 98.6 ° F. Temperature is important in water therapy, and so we will provide you with some very helpful temperature information later in this supplement.

3 - Water is capable of absorbing and storing a larger amount of heat than nearly any other substance. It has high *"specific heat."* This means that when water is applied to the body (in a cloth, bath, shower, etc.), it will impart more heat (or cold) than any other substance at the same temperature. Because water stores so much heat and gives it off so readily, it will seem to the body to be hotter or colder than other substances. (Example: Step from a room at 75° F. into a bathtub at the same temperature!) One substance has a higher specific heat at body temperature—and that is paraffin *(see page 181).*

4 - Without going into the technical details, ice is, in its effects, far colder than its temperature of 32° F.; and steam is far hotter than 212° F. This is known as *"latent heat."* This gives water a very wide heat and cold range. (In connection with this, keep in mind that steam can burn!)

5 - Water must be in contact with the body for awhile in order to impart heat or cold. But it only needs contact for a moment in order to give a *"thermic impression"* that can be quite strong. For example, plunge your arm for only a moment into a pail of very cold water. It was only there for a moment, but the effect on the circulating blood in the arm will be powerful. This is "thermic impression," and it is important; for you do not have to cool the body with lengthy cold in order to have it react strongly to that cold.

6 - In the Cold Mitten Friction, the impression of cold from the brief application of water is combined with the mechanical stimulus of *"friction"* (the rubbing of the cloth on the arm). Both acting together produce a much greater effect on the body than either alone. The same is true of sprayed water and pail pours. The water "hits" the skin (there is *"percussion"* on the skin) and deepens the reaction of the body to the cold.

7 - Water is the world's greatest *solvent*. As a result it can cleanse better than anything else. It can remove wastes. But it can also hold nutrients placed within it for the body to absorb. Keep this in mind: Many of the diseases of mankind would not exist if people drank an adequate amount of water.

8 - When the body remains in contact with *cold for a long time*, its real effects are seen. Body functions are slowed or depressed; the respiration and pulse are less rapid; the circulation slows; sense of touch is blunted; muscles move sluggishly and clumsily; digestion is retarded or stopped. These are the effects of long-continued cold; but, in water therapy, we rarely give a "long cold" to the body. (Dangerously high fevers are among the only exception.).

9 - *Moderate heat* stimulates the life processes. It quickens the circulation, pulse rate, respiration, digestion. It makes the muscles more active and the skin sensations more sensitive. Many water treatments consist of moderate heat.

10 - *Brief cold* has dramatic, powerful effects and is one of the primary types of water treatment. These effects are caused by *"reaction."* The body receives only a quick cold application that makes the body react to the "thermic impression." Recognizing cold as a depressing agent, the body reacts in several ways: The heart beats more rapidly and forcibly, the circulation is quickened, the nerves tingle with new life. Breathing becomes at first rapid, then slow and deeper. Muscles are energized and have new power for work.

11 - A *prolonged hot* application to the body will, eventuality, depress all body processes. Therefore, we only apply a very hot application for a fairly short period of time; and we generally *conclude it* with a brief cold application, to strengthen the body and equalize its circulation.

12 - When giving a brief cold application, be sure the one receiving it has a good reaction. *This will be shown by* the reddening of the skin, the increase of body heat, and the tingling of the nerves to new life. An *"incomplete reaction"* will result in duskiness of the skin, goose flesh, chilliness, shivering, cold hands or feet, a feeling of fullness in the head, or faintness. Immediately do something about this! First, warm him up with a hot application and then give another, less severe, brief cold application. Or, give no cold at all. Quickly dry him and put him into a warm bed in a warm room, free from drafts. (Normally, if healthy and having had a good reaction, he will dry, dress, and then exercise.)

13 - A set of two or three cycles of hot and cold may be given. This is called *"repeated reactions."* But after two or three, give no more immediately. Note that in order to maintain or increase the height of reaction, the *second and third* applications of hot and cold must either be more intense than the first, or friction or percussion must be added.

14 - Sometimes it is best to *"suppress the reaction."* This is frequently done in local applications of intense cold, such as an ice bag. Some-

times overactivity in an area, because of infection or inflammation, requires a cooling effect. An ice pack, ice bag, or a cold cloth (frequently renewed) may be applied. When this is done the usual changes produced by reaction do not occur, simply because the cold has been continued so long.

15 - If it is desired to suppress or prevent a reaction, following the *removal* of a prolonged application, a brief application of heat may be immediately given after the cold is removed.

16 - Neither *infants* nor *aged persons* bear cold treatment well. Some people chill after almost any kind of cold application. Remember: They are only being helped if they react well to the cold application. If they don't, then they are not being helped! Conditions which do not always react well to cold would include anemia, emaciation, asthenia, extreme thinness, etc. If they cannot be benefited by cold, then apply mild heat alone.

17 - The body should be warm before the cold is applied. Exercise, friction, percussion all help bring a good reaction. Hot given beforehand to warm the body also aids it. (Remember: The body should always be warm before the cold is briefly applied, or there will not be a good reaction. It is very important that the skin and feet be warm.) He should receive the cold in a room with warm air and no drafts, and he should remain in a warm room without drafts until the desired reaction occurs.

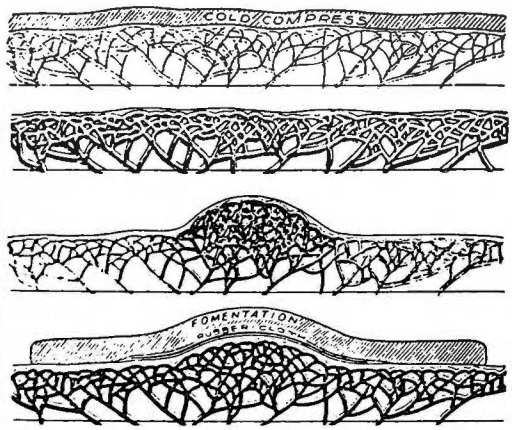
18 - Another excellent help is to apply hot to the feet before the cold is given and—if needed—after the cold is given. After the cold is given, it may be necessary to provide him with additional covering (either bedding or clothing) in order to secure the full reaction.

19 - The *colder* the water, the greater the reaction. The reaction will come more quickly if the cold is accompanied by friction (rubbing) or percussion (the splashing, pouring, or spraying sensation of the water on the skin). The *larger* the cold application or the more general the surface treated, the less promptly will the reaction appear. A *"combination treatment"* is the keeping of hot on part of the body at the same time that the cold is given for purposes of reaction. This will help the reaction. (Example: Continue to keep hot applications, such as a hot footbath and fomentations, in place while a cold mitten friction is given.)

20 - The cold treatment should be given quickly. As soon as it is completed, *quickly* dry him. Friction with the dry hand or the rubbing of a rough towel, following the drying, will help the developing reaction to be a good one. Percussion (light slapping on the skin) has the same effect. He must be dried well and very quickly. If moisture is left on the surface, the resulting evaporation will cool his body, delay the reaction, and make it less complete. Dry him in a warm room near the place where the last application of cold water was given. Have his clothes all ready for him to put on or have a warm bed in a warm room ready for him. This requires planning ahead! *Carelessness after the cold* can undo all the value that could have been gained from it.

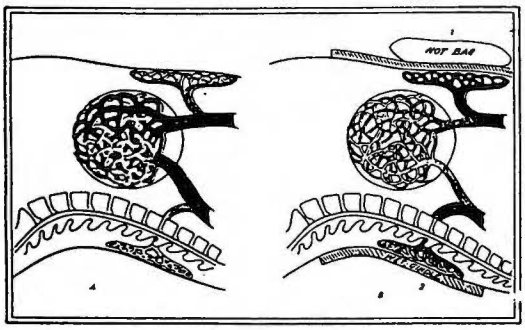
21 - By *alternating the hot and cold* applications, the beneficial properties of both hot

RELIEVING SURFACE CONGESTIONS



The illustrations above show superficial (at or near skin surface) congestions and sample ways they are dealt with. (1) A congested skin area has the congestion reduced by a cold compress over it. (2) A small cutaneous (skin) congestion (such as a boil) is relieved by a fomentation which dilates (enlarges) the surrounding blood vessels.

RELIEVING DEEPER CONGESTIONS



The illustration above shows typical ways in which the congestion in a deeper organ is relieved: (1) A hot water bottle (or a fomentation, hot blanket pack, moist abdominal bandage, etc.) is placed above the inflamed organ (or it is placed over a surface area reflexly related to that organ). (2) A wet girdle (a wrap-around moist abdominal bandage), given at the same time, aids in diverting blood from the congested area. (3) A hot foot and leg pack [not shown] will draw the blood away from the congested organ to the legs and feet by derivation.

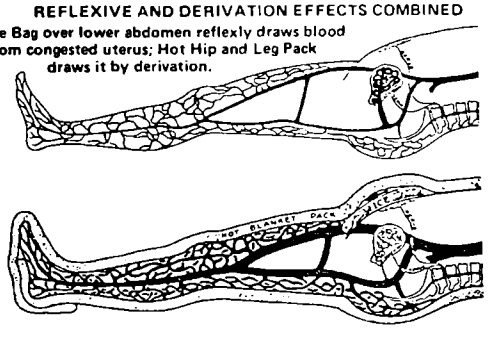
and cold may be obtained without many of the disadvantages of either. Thus, the congestion that tends to come with the application of heat is overcome by the cold application following it. The depressant effect of the cold is counter-balanced by the heat preceding it (and following it, if a series is given). The reaction will stimulate metabolism; this increases circulation, oxidation of toxins, enzyme action, and nerve tone. One example is the contrast bath (hot and cold bath to a limb) as an aid in the healing of fractures. Heat alone may hinder the calcification process, and even induce decalcification. But hot and cold together speeds up the formation of new bone. Another example is alternate hot and cold applications in conquering infections in the extremities. A powerful new surge of blood is brought to the infected hand, arm, foot, or leg, as it is alternately plunged into the hot pail of water and then into the cold. A more speedy recovery is the result.

22 - Water therapy tends to do one or more of six things: (1) Bring blood to an afflicted part. Frequently, this will be an area that is closer to the surface and outside of the trunk. **(2) Pull blood from a deeper internal organ to the skin just above it.** This deeper, congested area is often in the trunk; and the hot application (or a cold-to-heating application) was placed on the skin just above that organ. **(3) Draw blood away from a deeper congested organ** by placing the application on a *reflex area* somewhere else on the body instead of on the skin just above the internal organ. We will discuss this more below. **(4) Pull blood from the internal organ to a distant body part** (usually the legs and/or feet). This is called *"derivation"* and is frequently done at the same time that an application, just above the internal organ (or to a reflex area connected to it by nerves), is given to also pull blood away from that congested organ. The Hot-Hip-and-Leg Pack is one of the best therapies for *"derivative treatments."* **(5) A *"proximal compress,"* consisting of a cold application, may be placed on an extremity.** Here is how this works: Place an ice bag on your upper forearm, and you will lessen the amount of blood supplied to everything below it (the lower arm and the hand). Place an ice compress around the neck, and you will greatly reduce the amount of blood flowing into the head. More information on proximal compresses is given later. **(6) A full application to most of the body, to relieve congestion, equalizes the circulation and brings warmth** from that application (a hot pack—applying heat) or by reaction to it (a heating compress—applying cold for the body to heat).

23 - We will now consider the principle of *"reflex areas."* Internal organs are connected by reflex nerves to various surface portions of the body. In most instances, the area they are connected with is the skin surface directly above that organ. But it has long been known that there are other special reflex areas. These exceptions are primarily the brain, the mucous membrane of the upper respiratory tract, and the organs within the pelvis. But before describing them, here is an example of reflex nerve action: Place the left hand in hot water, and the right hand (as well as the left) will quicken in its blood flow; place either hand in cold water, and the circulation of blood will lessen in

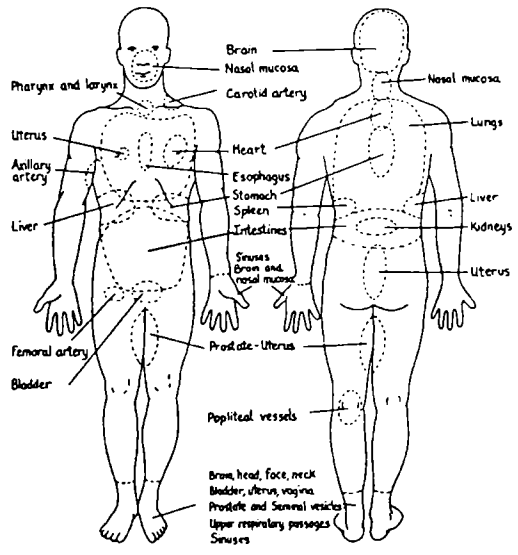
REFLEXIVE AND DERIVATION EFFECTS COMBINED

Ice Bag over lower abdomen reflexly draws blood from congested uterus; Hot Hip and Leg Pack draws it by derivation.



Depletion by Simultaneous Hot and Cold. Upper Figure Shows a Congested Uterus. Lower Figure Shows Depletion of the Uterus Secured by the Harmonious Action of an Ice Bag Acting Reflexly, and a Hot Hip and Leg Pack Acting Hydrotherapeutically (Derivation).

MAJOR BODY REFLEX AREAS



both hands.

24 - The special reflex areas normally used are shown on a nearby chart. Here is a brief description of them:

"1. The skin areas of the face, scalp, and back of the neck are reflexly related to the **brain**. 2. The skin of the neck is reflexly related to the **pharynx** and **larynx**. 3. The back of the neck is reflexly related to the mucous membrane of the **nose**. 4. The skin of the chest (front, back, and sides), dorsal region, and shoulders has reflex relations with the **lungs**. 5. The precordia (area above the heart) is in very perfect reflex relation with the **heart** through its accelerator nerves (sympathetic). 6. The hands are reflexly related to the **brain** and the **nasal** mucous membrane. 7. The skin over the lower right chest relates to the **liver**. 8. The skin over the lower left chest relates to the **spleen**. 9. The lower dorsal and lumbar spine relates to the **kidneys** and **intestines**. 10. The skin of the central abdomen, from the naval to the pubes [pubis], is in reflex relation with **kidneys** and **ureters**. 11. The lower lumbar and sacral spine [both on lower back] relate to the **pelvic organs** (uterus, ovaries, bladder, and rectum). 12. The epigastrium [see "stomach" on chart] relates to the **stomach**. 13. The skin of the entire abdomen, especially that of the umbilical [naval] region, is reflexly related to the **intestines**. The fact that the pain of colic, appendicitis, etc., is referred to the region of the umbilicus [naval] is an evidence of a similar nervous connection. 14. The lower abdomen, including the groin and the upper inner surfaces of the thighs, are reflexly related to the **pelvic organs**. 15. The saddle-shaped area covered by a sitz (sitting) bath is in reflex relation with the **prostate** and **seminal vesicles**. 16. The skin of the feet and legs is reflexly related to the **brain**, the **lungs**, and the **pelvic organs**. 17. The breasts are reflexly related to the **pelvic organs**."—*G.K. Abbott, M.D., F.A.C.S., F.B. Moor, M.D., K.L. Jensen-Nelson, R.N., M.A., Physical Therapy in Nursing Care, pp. 60-61.*

In some instances, heat to a reflex area will produce a different response than cold: Cold to the thighs will cause vigorous movement of the stomach, with little or none in the small or large intestines. Cold to the thighs will decidedly increase stomach acidity in most people.

— PART THREE —

SPECIAL CAUTIONS

There are a number of **CAUTIONS** that should be observed in giving hydrotherapy treatments. The next several paragraphs will provide you with far more general cautions than you will find in many modern textbooks on hydrotherapy. (In addition, many cautions relating to specific therapies and diseases will be found later in this chapter.) ***You MUST KNOW the following paragraphs:***

1 - Always keep the feet warm. In case of any kind of heart problem, keep cold over the heart. It is **often necessary to keep cold to the forehead and back of the neck. Too lengthy a water treatment may cause "hydrotherapy headache"** for a while afterward. Dry him quickly and well. He should be kept warm after that for a time. ***Here are three things that could cause this headache:*** (1) Applications that are too long, an incomplete or an excessive reaction, or insufficient time in bed afterward to obtain the needed reaction. (2) Failure to place a cold compress on the head or neck, when giving a heating treatment. Any time the body temperature goes over 100 F., a cool washcloth should be laid on the forehead, with the face and neck sponged occasionally. Do this for all kinds of elevated temperatures: fevers as well as fevers induced by water treatment.

2 - The lower the temperature, the shorter should be the application: only 1-5 seconds for very cold applications. Neutral and warm applications can be continued for quite some time. **Very hot applications should rarely be more than a minute in length.** When used to reduce fevers, cool applications without percussion or friction can be prolonged to 15-20 minutes. **The neutral bath** can continue for any length of time. It has been used for months on people afflicted with insanity. But in such instances, the temperature was **carefully watched, so that there would be no negative reaction or chilling**. Normally, from 30 minutes to 1-2 hours is the usual time for a neutral bath.

3 - Try to train him to progressively react to the coldest applications. The best and most durable effects come from short cold applications, frequently repeated. **Few people are helped by long cold**; remember that. Exercise before and after a cold treatment is good, but not always feasible.

4 - Here is a list of the people that perhaps should not receive certain water treatments: those who are **anemic**, very **thin**, overly **feeble**, **neurasthenics**, **chronic inebriates** (alcoholics), **hysterical** or **exhausted** by loss of sleep, or other causes: These should only receive short cold treatments. This would also include those with **neuralgia**, **myalgia**, **painful congestions**, or **chronic rheumatism** with **painful joints**. Some, such as those with **painful neuritis**, cannot take any cold. Those that can only take a very brief cold should first receive a hot application. This would also apply to those who are very **sensitive**, **timid**, or **hypochondriac** in temperament. In connection with this, be sure to **always explain what you are going to do next**.

5 - Only give mild cold to those with a weak heart, organic heart disease, Bright's disease and other forms of kidney disease, diabetes, or to children under seven. Avoid cold baths during menstruation, pregnancy, and old age (especially if the aged have **arteriosclerosis** and **similar degeneration, cardiac weakness, emphysema, or bronchitis**). Those with **aneurism of the aorta, advanced arteriosclerosis, or a tendency to apoplexy (stroke)** should also avoid it.

6 - Very hot applications should be avoided in such conditions as cardiac disease, aneurism of the aorta, advanced arteriosclerosis, apoplexic tendency, or aortic stenosis. For such, non-percussion of moderate temperature applications should be used. In giving hot applications, keep in mind that you should **never apply heat at a temperature higher than 102°-104° F. to the feet of an insulin-dependent diabetic.** This is because, not sensing heat as well in their extremities, they can be more easily burned. **Do not apply heat to an abscess in a closed space.** An example of this would be an inflamed **appendix. Heat over it can cause the appendix to swell and burst.** Contrariwise, moist heat over a boil will soften it, bring it to a head better, and help the pus to come up and out.

7 - Regarding ability to give a good **reaction to cold water**, we have already discussed this; however, we will here mention that **very fleshy persons do not at first react so well as lean people, but they bear prolonged application much better**, due to their large heat-making resources. **Lean folk react well, but their powers of reaction are very quickly exhausted; hence they are more likely to suffer from secondary chill**, etc. Thick-skinned people of calm temperament readily tolerate very cold applied with strong pressure in the stream of water; that is, if no other negative symptom is present (such as heart disease, etc.).

8 - On the topic of hot and cold precautions, here is some additional counsel from Dr. John Harvey Kellogg:

"Precautions: 1. **When fatigued** as the result of the loss of sleep or severe muscular exercise, a cold application should be preceded by a hot immersion bath for 3 to 7 minutes. 2. **If but slightly fatigued**, a cold friction may be substituted for the cold bath. 3. **A very cold bath should always be short, and should never be administered when the body surface is cold or chilly.** The hot bath carried to the point of gentle perspiration is an excellent preparation for a cold application. 4. The temperature of the **air of the room in which the cold bath is taken should always be higher [hotter] than that of the bath.** 5. **Avoid frequent hot baths** at all seasons, and especially in winter, as they are depressing, and lessen vital resistance to cold and other disturbing influences. The best time for hot or warm bath in cold weather is just before retiring."—*J.H. Kellogg, M.D., "Rational Hydrotherapy," p. 396.*

9 - *Here are still more cautions in regard to cold applications*, whether for tonic or recovery purposes: **Extremely feeble persons** are the ones most needing tonic treatment, especially those who have the least tolerance for cold water. Therefore, begin with very gentle measures, such as the Cold Wet-hand Rub, Salt Glow, Cold Mitten Friction, Alternate Hot and Cold to the spine, etc. Confine the first applications to small areas, rubbing each, drying it well, then passing on to the next. Do this symmetrically: right arm and hand and then left arm and hand, etc. Feeble people often experience a very unpleasant and discouraging sense of fatigue after tonic applications, especially when the course of treatments first begin. So **use great care to avoid exhausting him with much cold**. This will discourage him and blight his prospects for recovery. (In his writings, Kellogg tells of the time when the famed Bavarian water therapist, Joseph Kneipp, was called to the Vatican to treat an aged pope who had chronic rheumatism. Upon his arrival, he was received with great honors; but the first cold bath given to the aged prelate, entirely unaccustomed to such heroic treatment, caused the pope to quickly send Kneipp back home.) Instead, **begin with mild cold applications while his feet are in a hot footbath.** The impression of heat on his feet helps him take the cold elsewhere. Also he can be **prepared for the cold by giving him a very hot spray or shower (110°-120° F.) for 1-3 minutes beforehand.** This hot application should be of gradually increasing temperature, then turned off and the cold applied.

10 - [Special attention needed in this paragraph: These external sprays, in hydrotherapy called "douches," are not explained in this Supplement.] Be on guard to avoid the cold douche (cold hand-held spray, not the modern meaning of "douche") with strong pressure to the upper part of the chest. The effect on the respiratory nerve centers can cause temporary coughing and a sense of distress. Also avoid the cold douche over the stomach, loins, and abdomen in cases of hyperpepsia, ulceration of the stomach, hemorrhage from the bowels or any form of uterine hemorrhage, as menorrhagia or metrorrhagia. (Obviously, because it would increase blood circulation, and hence internal bleeding, in the afflicted part.) Again, care must be taken to avoid the abdomen, the chest, and particularly the region of the heart in nervous cases—especially those in which hysteria, heart disease, or asthma is a well-known symptom.

11 - In certain instances, **one water application can nullify the effect of another.** Kellogg was a master in the field of water treatments, so we will let him give us the following cautions:

"*Hydriatic [hydrotherapy] Incompatibilities:* Wise discretion must be used in the combination of procedures, lest one measure shall undo the therapeutic work

accomplished by another. The combination of hydriatic [water therapy] processes in such a manner as to enable one procedure to intensify or to prolong the effect of another is perhaps the best test of a physician's experience and skill. The following meager suggestions barely touch the surface of the subject:

"1. **Tonic procedures** [quick cold and/or rubbing] must be carefully avoided when a sedative effect is desired, such as cold and neutral baths or other measures. The tonic application may be accidental. The contact with pure cold air after a neutral bath or of the feet with a cold floor may destroy the sedative effect of the bath altogether.

"2. **Sedative** [relaxing, sleep-inducing] measures must be as carefully suppressed when tonic procedures are employed for their specific effects. When a hot bath precedes a cold bath, if too prolonged, or if the cold application is too short, or if the patient is exposed to an overheated atmosphere after the bath, the tonic effect will be lost.

"3. In the use of **antipyretic** [fever reducing] measures, the procedures must be so managed that heat production will not be increased so much as to more than counter-balance the increase in heat elimination; hence . . short cold or cool applications may be injurious [by making him hotter]. Cool sponging often raises the temperature by increasing heat production."—*Kellogg, "Rational Hydrotherapy," pp. 978-979.*

— PART FOUR —

COMPARATIVE SUMMARY

OF THE CHIEF EFFECTS OF COLD AND HEAT

To conclude this chapter of basic principles, we will give you several ***water therapy classifications*** that may help you more clearly obtain a broad view of the general categories they fall into and their relationships to one another.

1 - Scientists have discovered that water therapy can help the human body in so many ways. For example, Crawford was the first to observe that brief cold applications will increase the difference in color between arterial and venous blood. This is the result of increased oxidation. Liebig discovered that cold air, cold water, and exercise, habitually employed, are the most powerful of all means of stimulating tissue activity. And Strasser has shown that general cold applications increase the alkalinity of the blood, the reduction in acid phosphate amounting sometimes to fifty percent. On *page 164* is a special chart. It is Dr. J.H. Kellogg's *"Comparative Summary of the Chief Effects of Cold and Heat."* It is taken from pages 194-195 of his immense book, *Rational Hydrotherapy.*

2 - Charles S. Thomas has, for years, made a careful study of the field of hydrotherapy. As a university professor teaching the subject, he is uniquely qualified to speak. ***Here, slightly adapted, is his classification of the water therapies by their effects:***

SHORT COLD and CONTRASTS: *The predominate effect is that of a reaction—*

General applications that give a tonic effect: Tonic sprays, tonic frictions, hot and cold and revulsive compresses, pail pours, plunges, cold shallow bath.

Local applications that give a stimulating effect: Contrast baths, hot and cold and revulsive compress, local tonic frictions.

Reflex applications that give a tonic effect: Contrast baths, hot and cold and revulsive compresses, local tonic frictions.

PROLONGED COLD: *The predominate effect is that of intrinsic action—*

General applications that give an antipyretic (fever-reducing) effect: Graduated spray and bath, sponges, ice pack and rub, enemas and colonics, wet-sheet pack, exposure to air, fanning.

Local applications that give a decongestive and depressant effect: Ice pack, ice bag, cold local bath, cold compress, direct ice application.

Reflex applications that give a constriction (lessening of blood) effect: Ice pack, ice bag, cold local bath, cold compress, direct ice application.

MILD HEATING (without perspiration): *The predominate effect is that of a reaction—*

General applications that give a sedation (sleep-inducing) effect: Continuous flowing bath, wet-sheet pack, local warm bath, fomentations.

Reflex applications that give a relaxing effect: Heating compresses, Kenny packs, mild fomentations, warm bath.

MODERATE HEATING (with only a moderate rise in body temperature): *The predominate effect is that of a reaction—*

General applications that give a diaphoresis (increase of sweating) effect: Hot bath (partial and general), Hot blanket pack, wet-sheet pack, fomentations.

MARKED HEATING: *The predominant effect is that of a reaction with a marked intrinsic action—*

General applications that give a peripheral vasodilation (enlargement of blood vessels distant from the heart) effect: Warm full bath, hot local bath. Hot blanket pack, wet-sheet pack, steam bath, fomentations.

General applications that give a stimulation of blood circulation and body metabolism: Hot full bath, steam bath, fever cabinet (for fever therapy), insulating blanket.

Local applications that give a stimulation of circulation and metabolism: Whirlpool (circulating) partial bath, Fomentations, Kenny packs (5 minutes), hot-water bottle, paraffin bath, thermal mud baths, heating appliances, hot air applications.

Reflex applications that give a relaxation and counter-irritation effect: same as those listed immediately above.

COMPARATIVE SUMMARY OF THE CHIEF EFFECTS OF COLD AND HEAT

COLD	*HEAT*
General	**General**
Primary: depressant	*Primary:* excitant
Short: excitant by tonic reaction	*Short:* depressant by atonic reaction
Prolonged: depressant	*Prolonged:* mixed, excitant, and depressant
Special	**Special**
Skin: Action, diminished activity	*Skin:* Action, increased activity
Reaction: increased activity	*Reaction:* diminished activity
Diminished sensibility	*Diminished* sensibility
Heart: First quickened, then slowed	*Heart:* First slowed, then quickened
Increased force	Decreased force
Vessels: Action, contraction	*Vessels: Action,* contraction, then dilatation
Reaction, dilatation	*Reaction,* contraction
Increased tone and activity	Lowered tone-paralysis. Local hyperemia, collateral anemia
Local anemia, collateral hyperemia	*With reaction,* local anemia, collateral hyperemia
With reaction, local hyperemia, collateral anemia	*Short,* reflex fluxion and derivative effects
Short, reflex dilatation of visceral vessels	*Nerves:* Excites
Nerves: Benumbs and paralyzes	*Depresses* by atonic reaction
Excites by tonic reaction	*Muscles:* Short, lessening fatigue effects
Muscles: Short, increased excitability and capacity	*Prolonged,* diminished capacity, excitability
Prolonged, lessened excitability, capacity	*Lungs:* Quickens and facilitates respiration
Lungs: Slows and deepens respiration	Diminished amount of respired air
Increased amount of respired air	Decreased CO_2
Increased CO_2	Diminished respiratory quotient
Increased respiratory quotient	*Stomach:* Decreased HCl and motor activity
Stomach: Increased HCL and motor activity	*Kidneys:* renders anemic and lessens activity
Kidneys: Congests and excites	*Animal Heat: Short,* diminished heat production
Animal Heat: Short, increased heat production	*Prolonged,* increased heat production
Prolonged, diminished heat production	*Blood:* Decrease in number of red cells
Blood: Increased blood count	Increase in number of leucocytes
especially leucocytes	*Metabolism:* Decreased CO_2
Metabolism: Increased CO_2	Increased urea and general protein waste
Increased urea, and improved oxidation	
Tonic Reaction	**Atonic Reaction**
1. Vasodilatation	1. Vasoconstriction
2. Skin red	2. Skin pale
3. Pulse slowed	3. Pulse rate increased
4. Arterial tension increased	4. Arterial tension diminished
5. Skin action increased	5. Skin action decreased
6. Temperature lowered	6. Temperature lowered
7. Feeling of invigoration	7. Languor
8. Muscular capacity increased	8. Muscular capacity decreased
9. Amount of respired air increased	9. Amount of respired air decreased
10. Heat production increased	10. Heat production decreased

—J.H. Kellogg, M.D., "Rational Hydrotherapy," pp. 188-189

—The preceding is adapted from Simple Water Treatments for the Home, by Charles Thomas, Ph.D., Loma Linda, California, 1983 Revision, pp. 100, 47-48.

3 - Water, applied to the body, can do seventeen different things. Dr. Abbott called them the *"remedial properties"* of water. Here they are:

"Remedial Properties of Water - The terms listed below are commonly used to designate the various physiologic or therapeutic effects of water. The definitions given should be studied thoroughly and memorized.

"1. TONIC - A tonic effect is one in which vital

activities are increased so as to restore the body to a normal tone or condition. The nutrition, circulation, and other body functions are promoted.

"**2. PURE STIMULANT** - A stimulant arouses the body to unusual activities. It may be compared to a whip, and is used chiefly in emergencies. Like a tonic it increases vital activities, but to a much greater degree. Between a pure stimulant and a tonic there are various graduations which might be designated as mild stimulant, extreme tonic, etc.

"**3. SEDATIVE** - A sedative or calmative agent is one which lessens vital activity and is conducive to relaxation and rest.

"**4. ANTISPASMODIC** - The relaxing of spasm or relieving of convulsions.

"**5. DEPRESSANT** - A depressant effect is one in which heightened or normal body activities are decreased to a marked degree. Such an effect is desirable only in cases in which a function is greatly overactive.

"**6. ANODYNE** - An anodyne effect refers to the relief of pain.

"**7. SPOLIATIVE** - A spoliative treatment is one which increases the oxidation and breaking down (catabolism) of tissue, which tends to reduce weight.

"**8. DIAPHORESIS** - The production of sweating. An agent that produces sweating is said to have a diaphoretic or sudorific effect.

"**9. DIURESIS** - Increasing the excretion of urine.

"**10. ELIMINATIVE** - An eliminative effect consists in promoting and hastening excretion from the kidneys (diuresis), the skin (diaphoresis), and the lungs.

"**11. DEPLETION** - Depletion is the lessening of the amount of blood in a given part. Practically, it is the reduction of congestion.

"**12. DERIVATIVE** - Derivation is the drawing of blood or lymph from one part of the body by increasing the amount in another part. The term "depletion" is also applied to this process, but refers particularly to the result produced. [The blood was pulled away by derivation; the result was depletion, or less blood in the congested part.]

"**13. FLUXION** - Fluxion consists in greatly increasing the rapidity of the blood current in a particular part. It is the production of active or arterial hyperemia.

"**14. ANTIPYRETIC** - The lowering of body temperature in fever.

"**15. REFRIGERANT** - Relieving of thirst and restoring the alkalinity of the blood by such means as free water drinking and the use of fruit juices.

"**16. REVULSIVE** - A term used to designate a treatment consisting of a single prolonged application of heat followed by a single very brief application of cold. This meaning is not strictly adhered to, as the term is also used where three applications of such proportionate duration are made.

"**17. ALTERNATE** - The expression "alternate hot and cold" is used in this text to describe treatments in which the duration of the cold application is from one-fourth to one half that of the heat (in a few cases equal to it), and in which three or more changes from heat to cold are made."—*G.K. Abbott, F.B. Moor, K.L. Jensen-Nelson, Physical Therapy in Nursing Care, pp. 70-72.*

4 - Throughout the treatment, give him the best of care: The room should be warm, free of drafts, and with no bright lights shining in his eyes. Avoid possible water damage by covering bedding, rugs, furniture, etc. Avoid distracting noise (such as overly talkative people, radios, etc.) where the treatment is being given. Plan ahead in the giving of each treatment; this will help everything go smoothly and will eliminate undue delays that might overheat or chill the one you are working with. This includes assembling everything you need ahead of time. Briefly explain beforehand what you are going to do. Stay with him or within easy calling distance throughout the treatment. Quietly tell him at each step what is coming next and the effect desired. While not too talkative, you are continually studying your patient—noting his words, feelings, and actions. Are the applications helping him or not? Why? Make the changes quickly. Be neat and pick up, clean up, as you work. Use both time and materials carefully and economically, and put everything away when finished.

Know when to talk and when to keep quiet. Talking and extra noise wearies the sick. But do keep a cheerful outlook and express cheerful, hopeful comments from time to time. Pray with and for the one you are helping. Bring him to God; there he will find the strength and courage that he needs.

5 - Helping him is what it is all about: He must be warm before you begin. Apply a cold compress to the head or neck when giving a heating application. Do not unnecessarily expose him,—but rather only the part under immediate treatment. He should be comfortable at all times. Protect him from falling, burns, chilling, and uncomfortable positions. He should not be chilled or sweating when the treatment ends, but should be warm and dry. When cold is given, he must have a good reaction or you must do something to restore proper warmth to his body. If necessary, put him in a warm bed in a warm room for 30-60 minutes.

6 - Here are some basic nursing observations that you should keep in mind: Note signs and symptoms without his realizing it; otherwise he will tend to exaggerate every little ache and pain. It is equally important to note the symptoms and signs that are not present. The general appearance of his face, skin, expression, movements, along with what he says will tell you a lot. Keep in mind that symptoms can point to a number of different things; so do not quickly jump to conclusions. (Indicators of a common cold, such as runny nose, sneezing, coughing, hoarseness, difficulty in breathing, and sore throat can be symptoms of other conditions also).

Here are additional things to watch for: Skin - Any discoloration, itching, swelling, rash, etc.? **Mouth** - Are the gums pink and firm? How about the **tongue**? **Voice** - Anything unusual about it? **Appetite** - Any loss of appetite? **Weight** - Unusual weight changes? Continued loss or gain? Is **Sleep** easy or difficult to obtain? General **fatigue** indicators - and why? **Fever** - Is the skin moist or dry? Cool or hot, or alternating cool and hot?

Take his temperature (1) when he complains of feeling ill or shows signs of it, (2) once or twice daily during illness, (3) when there is a sudden change in his condition (chills, restlessness, pain, etc.) or (4) when he has a headache, chest or abdominal pain, sore throat, chills, vomiting, diarrhea, or skin rash. A fever in addition to the above signs indicates a significant illness or condition demanding immediate attention.

Pulse and respiration - Is it different than normal for him? **Pain** - Another warning indicator. Pain in the abdomen should be relieved quickly by rest, drinking charcoal in water, and skipping a meal; if not—call a physician. **Nausea and vomiting** - What is the color, general appearance, and amount of material vomited? **Bowel movements** - Note number, frequency, color and consistency. **Urinary problems** - Is there inability to urinate, pain or burning sensation, incontinence, presence of blood? Are they too frequent?

7 - In the next chapter, we shall discuss a large number of practical water therapy applications. But just before concluding this present chapter, ***we shall let three experts in the field tell us how useful such simple water treatments can be in the home:***

"Hydrotherapy may be given with very meager facilities. The procedures are not so difficult but that a layman of average intelligence may be taught how to give them with a little practical instruction. ***With the following materials available in the home, all the effects of hydrotherapy may be accomplished:***

"**Procedures:** Fomentations, compresses, hot-water bottle, ice bag, heating compress, cold mitten friction, cold hand and towel rubs, sponging, alcohol rub, partial bath, sitz bath, hot half bath, full immersion bath, hot blanket pack, wet-sheet pack, shower (optional), pail pour, enema, vaginal irrigation. **Materials [needed to give the treatments]:** Blankets, old blanket that may be cut up (part wool), hand towels, Turkish towels (towels made of cotton terry cloth), sheets, old sheet that may be cut up, newspapers, hot-water bottle, ice bag, bathtub, shower (optional), pails, washtub, small basins, enema can and tube with rectal and vaginal tips, ice, hot and cold water."—*Fred B. Moor, M.D., Clarence W. Dail, M.D., J. Wayne McFarland, M.D., Hydrotherapy, 1980, p. 2829. (This book is a partial reprint of their medical college textbook, Physical Therapy, Textbook for Medical Students and Practitioners of Medicine, 1944.)*

— PART FIVE —

21 BASIC OBJECTIVES

Before turning to the individual water therapy applications, we need to understand the 21 objectives of water therapy. This knowledge will better help us use hydrotherapy in our own homes. *The following section is summarized from pp. 327-329, 968-978, and 194-200 of Kellogg's 1,199-page Rational Hydrotherapy:*

WATER THERAPIES WHICH INCREASE BOTH HEAT PRODUCTION AND HEAT ELIMINATION - This listing is arranged in order from the most to the least powerful, and is primarily composed of tonic and fever-reducing applications:

Graduated bath. Cooling wet-sheet pack. Cold friction bath. Prolonged tepid full bath at 88° F. Cold full bath followed by a short hot full bath, pail pour, or sprinkling (shower). Tepid pail pour. Cold pail pour. Cold compress. Graduated compress. Evaporating sheet. Cold to head and neck. Cold to spine. Cold to abdomen. Cold over heart. Cold colonic. Tepid or cold enema. Cold water drinking, a measure that should be combined with all the others named above. Cold air bath.

WATER THERAPIES WHICH INCREASE THE ELIMINATION OF HEAT - These are the best methods to use when a fever is present and the cold bath should be avoided. This one is also arranged in a list from the most to the least powerful:

Hot bath for 2-3 minutes, followed by a cold bath with friction for 1 minute. Hot blanket pack. Hot evaporating sheet. Hot sponge bath. Fomentation to the back. Fomentation to the abdomen, followed by the cold enema. Fomentation to the back, followed by a cold wet-sheet pack. Hot blanket pack, followed by graduated bath. Hot blanket pack, followed by prolonged tepid bath. Hot blanket pack, followed by cold friction. Dry friction (rubbing the skin with a dry cloth). Cold friction.

WATER THERAPIES WHICH ENCOURAGE THE DESTRUCTION OF TOXINS - These are procedures which encourage vital resistance to disease while, at the same time, encouraging the destruction of toxins by stimulating the toxin-destroying cells of the thyroid, liver, spleen, lymphatics, and other tissues. (From this point forward, the listings will not be in order of decreasing strength, unless otherwise stated.)

WATER THERAPIES WHICH ENCOURAGE THE ELIMINATION OF TOXINS - Radiant Heat Bath. Sweating wet-sheet pack. Steam bath. The elimination of producing sweat and washing it away is very important:

"In observations made upon rabbits some seven or eight years ago, the writer demonstrated that the per-

spiration of the ordinary healthy man contains toxic substances in such quantity that from 100 to 200 c.c. of the liquid collected from the surface of a sweating man is, when injected intravenously, capable of killing a rabbit weighing one kilogram."—*Kellogg, Rational Hydrotherapy, p. 970.*

WATER THERAPIES WHICH GREATLY INCREASE LEUCOCYTIC ACTION - The following applications help increase white blood cell formation. WBCs, as you know, are a primary body fighter against toxins and bacterial infection. General cold bath. Heating compress frequently renewed. Alternate heating compress.

WATER THERAPIES WHICH GREATLY ENCOURAGE ELIMINATION OF BACTERIA BY THE SKIN AND KIDNEYS - Especially: Steam bath. Sweating wet-sheet pack. Prolonged neutral bath. Also good: Sweating baths. Copious water drinking. Each of these should be followed by a cold mitten friction, cold towel rub, or some other cold procedure.

WATER THERAPIES WHICH INCREASE OXIDATION - Cold baths increase the absorption of oxygen, the elimination of carbon dioxide, and the oxidation of fat and carbohydrates. Thus, all cold applications will tend to do this; but here are some of the best: Prolonged cold baths, such as: Dripping sheet rub. Rubbing shallow bath. Cold full bath. Plunge (quick dip into a bathtub of cold water). Cooling wet-sheet pack.

WATER THERAPIES WHICH ARE THE MOST EFFICIENT MEANS OF STIMULATING NITROGEN OXIDATION - Hot applications are what are needed for this, and here are Kellogg's top recommendations:

Hot full bath. Heating wet-sheet pack. Dry pack. Steam bath. Hot air. Sunbath. Radiant Heat Bath. (Kellogg called this the "electric-light bath," a device he invented consisting of a boxful of incandescent bulbs for heating purposes.) We have changed it to "Radiant Heat Bath," with the thought in mind that electric space heaters, or something similar, could be used in your home for this same purpose.) In each case, follow these general hot applications with a very short general cold application.

WATER THERAPIES WHICH EXCITE THE CENTRAL NERVE GANGLIA - The following are especially helpful in adynamic fevers, many neurasthenic conditions, hypopepsia, kidney insufficiency, and various visceral congestions; these are primarily very hot followed by very cold applications. But, of course, much of the time you will have to gradually work up to "very" hot and "very" cold. Alternate spinal sponging. Alternate spinal compresses. Alternate full bath, followed by various forms of cold. Alternate localized compresses.

WATER THERAPIES WHICH ENCOURAGE METABOLIC PROCESSES - In most forms of chronic disease, there is a grave disturbance of the general nutrition, arising from failure of the tissues to maintain normal metabolism. The most permanent effects toward improving the metabolism, either locally or generally, come from somewhat prolonged hot applications followed by a brief cold application. Here are the most effective:

Apply one or more of the following to the skin area affecting the body part(s) you wish to help: Alternate or heating compress.

WATER THERAPIES WHICH INCREASE BLOOD FORMATION - General cold applications, whether mild or more severe, are the best hydriatic means of promoting the processes of blood formation. The metabolic applications listed, just above, also increase blood formation and glandular activity, but the following ones are especially helpful for anemia. Short general cold baths are the best; the lower the temperature, the better, but the applications must be very short. The cold mitten friction and the cold towel rub applied 2-3 times daily are especially valuable for this purpose.

WATER THERAPIES WHICH INCREASE GENERAL BLOOD MOVEMENT AND LOCAL BLOOD SUPPLY - The ability to move fresh vitalized blood into and out of key areas is very important in providing nutrition and oxygen, carrying away wastes and toxins, and in fighting disease. Here are some suggestions:

Cold applications to the surface of the body excite the heart, increase blood pressure, and increase blood and lymph movement throughout the body. All tonic measures may be used for this purpose. The cold compress over the heart area can be used in many cases, when general cold applications are ruled out. In cases of fever, heart or kidney disease, in neurasthenia with general feebleness, and in chronic tuberculosis and other wasting diseases, the cold mitten friction and the cold towel rub are especially useful in reinforcing the energy of the heart and strengthening the circulation.

General hot applications are not helpful here. They ultimately lower the blood pressure, diminish heart energy, and lessen blood flow. So avoid them. If a hot application must be made, guard against heart failure by applying a cold compress to the heart area while the hot application is being given. This especially applies to steam baths and hot full baths.

WATER THERAPIES WHICH INCREASE HEAT PRODUCTION - It is the impression of cold on the thermic nerves of the skin that best increases heat production. The more intense (and sometimes prolonged) this impression, the greater the desired effect. The most intense effects are produced by prolonging the application until the temperature of the body has been slightly lowered. But if the cold is greatly prolonged, or is repeated at short intervals, the heat-rise effect fails.

WATER THERAPIES WHICH INCREASE THE ELIMINATION OF HEAT - Nearly all types of fever cases need an increase of heat elimination. Elevation of temperature in fever is due less to increased heat production than to decreased heat elimination.

Vigorous rubbing in a cold full or shallow bath. Wet-sheet rub. Wet-sheet pack. Very short hot applications followed by short cold to the surface. Cold friction bath. Cold towel rub. Cold water drinking. Cold enema. Cold applications to the spine. In certain cases, the hot blanket pack, evaporating wet-sheet pack, and similar measures may also be used.

WATER THERAPIES WHICH RELIEVE PAIN AND NERVOUS IRRITABILITY - Hydrotherapy applications can greatly help in this area also.

The general neutral bath is very effective in relieving nervous irritability, inducing sleep, in insomnia, delirium, and even acute fevers. Moist abdominal bandage. Cool head cap. Heating spinal compress, in certain cases. For relieving localized pain and irritability, the hot fomentation and the heating compress are both good. The cold compress and ice compress are both valuable in those instances in which the pain is in superficial (near the surface) parts and the applications can be made directly to the area of pain.

WATER THERAPIES WHICH COMBAT BACTERIAL DEVELOPMENT - This is done by increasing blood movement through the infected parts while, at the same time, increasing white blood cell activity.

Prolonged applications of cold, when it can be applied directly to the parts involved. For deeper areas of infection, it is best to increase blood alkalinity by means of general cold applications and by measures for increasing local leucocytic action, such as the frequently renewed heating compress and the alternate compress.

WATER THERAPIES WHICH CONTROL BLOOD MOVEMENT AND VOLUME - The slowing of blood and lymph encourages morbid processes as waste and toxic materials accumulate in the tissues.

Apply to inflamed or congested parts the measures (mentioned earlier) which encourage leucocytic (white blood cell) activity. Also helpful: Derivative measures (such as hot leg-and-foot pack, hot footbath, etc.). Cold compress over the affected part. Revulsive measures of all sorts.

WATER THERAPIES WHICH LESSEN HEAT PRODUCTION - Heat production must be discouraged in fever cases; it is best inhibited by short hot applications to the surface and by prolonged or frequently repeated cold applications.

The best heat applications for this purpose would be: short hot full bath. Hot blanket pack. Fomentations to the spine. Hot evaporating sheet. The best cold applications would be: Graduated bath. Prolonged tepid bath. Cooling wet-sheet pack.

WATER THERAPIES WHICH LESSEN HEAT ELIMINATION - It is seldom necessary to discourage the elimination of heat by the body. But fainting is an exception.

These help prevent excessive heat loss: Dry pack. Hot blanket pack. Hot enema. Hot water drinking. Avoid exposing him to cold while changing applications. It is wise to alternate the hot application by a short cold application, such as vigorous cold wet-hand rubbing and cold mitten friction.

WATER THERAPIES WHICH DIMINISH GENERAL METABOLIC ACTIVITY - Above all, maintain absolute rest in bed. Also good is the neutral bath. Diminishing activity of an overexcited gland (such as in hypopepsia [inadequate stomach HCl] or catarrh of the intestines or uterus) may be lessened by various derivative measures (leg and footbaths, etc.) which will draw blood away from the part.

WATER THERAPIES WHICH CONTROL BLEEDING - Hemostatic (stopping of bleeding) effects may be obtained either directly by application to the bleeding area or indirectly through applications to a reflex area.

To obtain direct effects, either very hot (110°-115° F.) or very cold (32°-40° F.) applications must be used. The most valuable hot applications is the hot compress. A jet of hot vapor has also been used successfully. Here are some examples of hot applications: Hot nasal spray and sponging the face with very hot water for nose bleed; hot vaginal douche for menorrhagia; hot uterine irrigation in metrorrhagia and postpartum hemorrhage.

The most convenient cold applications are ice and ice compresses. These should be applied directly to the bleeding area or (as a proximal compress) across the trunk of a main artery supplying the bleeding part. An example of this would be an ice collar (ice cravat) for nosebleed.

Here are some indirect or reflex applications: Cold applications to the upper spine is a most excellent measure for checking nosebleed. Placing the hands in ice water while applying ice to the base of the cranium (lower back of head) and to upper part of the spine. Placing the feet in cold water will also help stop nosebleed. For hemorrhage of the lungs, place cold compresses over the chest and very hot fomentations between the shoulders and over back of the neck and upper spine. Ice applied to the nostrils will also contract the blood vessels in the lungs. For stomach hemorrhage, swallow lumps of ice, and place ice compresses over the reflex area that affects the stomach *(see reflex chart on page 160)*. In apoplexy, the ice cap and ice-cold compresses to the head, face, and neck are very helpful.

THE WATER THERAPIES

— PART ONE —

CLOTH AND BLANKET APPLICATIONS

In the preceding section, we learned the great importance of blood and of the careful use of water in aiding the blood to bring both restoration and increased physical capacity. And we learned many basic facts about

how to apply neutral, hot, and cold to the human body.

In this present chapter, we shall consider over a hundred different water therapy applications, under fifteen major categories. In preparing this list of the water therapies, as in the rest of this chapter, the author has tried to combine simplicity with thoroughness and clarity with cautions. This entire chapter is the result of a careful study of over 2,700 pages of hydrotherapy material. Extracting the best and making it as simple and usable as possible is the objective of the present writer.

That which in centuries past was called "home remedies" or "water treatments," became known in the early and mid-nineteenth century as "water cure," as Drs. Thatcher Trall and James Jackson helped thousands in their "water-cure institutes." By the beginning of the twentieth century, it gained the title of "hydrotherapy" and "hydriatics"; and, for several decades now, it has been called "physical therapy" or "physiotherapy" by the medical world.

We will here use the humble title of "water therapy." Yet whatever name you care to give it,—it is still a most wonderful blessing of God to mankind.

Here is the first of the two sections that will explain to you over one hundred water therapies:

— SECTION ONE —
LOCAL COLD

WHAT THEY ARE—These are localized applications of cold water, which means that they are applied only to smaller parts of the body.

These cold applications can also be used as a "proximal compress" (pp. 170, 195) to reduce blood flow to a limb.

1 - COLD COMPRESS

WHAT IT IS—A Cold Compress is a local application of cold given by means of a cloth wrung out of cold water. Either hand towels or cotton cloths may be used.

HOW IT CAN HELP YOU—The Cold Compress is very helpful in cases of fever, pain due to edema or trauma (such as sprains). And they are used for congestion in the sinuses and for congestive headaches (for both of these, use a Cold Compress along with a Hot Footbath *(p. 194)*. In addition, they are helpful for tachycardia (heartbeat over a 100 per minute).

HOW TO APPLY IT—*(See picture below.)*

1 - Use Turkish towels to protect the bedding, as well as his clothing, from becoming wet.

2 - Fold the towels (or cloth) to a desired size; then dip into cold water and wring them out—but only enough to prevent dripping. (Better: Take the wet cloths off a block of ice and quickly apply them. In this way the compresses will be far colder.)

3 - Lay them on the afflicted part.

4 - Change the compress for a fresh cold one every 1-5 minutes. A set of two compresses will be needed, so they can be continually alternated. If this is not done, the compress quickly warms up. The thicker the compress, the less often will it have to be changed for a new one.

5 - Cold compresses can be placed on the head, neck, over the heart or lungs, and to the abdomen, spine, etc. When applied to the head, they need to be pressed down firmly—especially over the forehead and temporal arteries (these arteries are to the right and left of the front forehead, just above and to the front of the ears). The compresses can be placed over the abdomen in typhoid fever.

ADDITIONAL POINTS—Unless the application is quite thick, and always when it is left on too long (over 3-5 minutes), the application changes from a cold compress to a heating compress. And when you are applying a Cold Compress, you do not want it to turn into a Heating Compress! *(For more information on Heating Compresses, see pages 171-174.)*

2 - ICE PACK

WHAT IT IS—Although not given that name, this is actually an ice compress; and it will always produce a stronger cold effect than cold cloths wrung out of water.

HOW IT CAN HELP YOU—It can be used over the heart and chest, to slow the heart. It has been used for sprains or torn ligaments, acute joint inflammation, in rheumatic fever, acute infectious arthritis, bursitis, and burns. (In hospitals, it has been used successfully to slow the heart and limit thermic reaction following surgical operations for exophthalmic goiter.)

HOW TO APPLY IT—

1 - Pound ice into snowy bits and pieces or use snow itself.

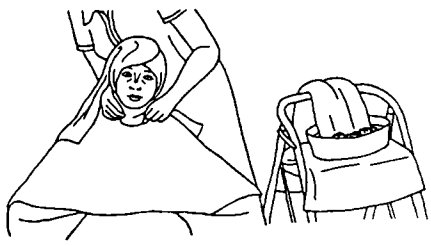
2 - Wrap the body part in flannel (to keep it from freezing).

3 - Pack the snow or pounded ice very closely around it, until the pack is about one inch thick.

4 - Wrap a large flannel cloth over it all to keep everything in place. Pin it together.

5 - Interrupt the ice pack frequently in order to prevent freezing. Rub the part with snow or apply a hot fomentation over the body part, to bring a local heating reaction.

COLD COMPRESS



3 - ICE CRAVAT

WHAT IT IS—The Ice Cravat is basically the same as the Ice Pack, described just above. Instead of being laid around part of the body and then wrapped, the snow or crushed ice is placed inside a towel and then wrapped around the neck or another joint area of the body. The Ice Cravat is thus easier to work with than is the Ice Pack.

When wrapped around the neck, the Ice Cravat becomes an Ice Collar (ice neck pack). But it can also be laid around a shoulder, elbow, knee, or ankle.

The effect is that of a proximal application *(Proximal Compresses are explained at end of this page)*; the carotid arteries in the neck and the vertebral arteries by the spine that go into the head, along with their small branch arteries, are all contracted. Thus the blood supply to the brain and the head is lessened.

HOW IT CAN HELP YOU—The Ice Cravat is frequently used in fever, congestive headache, acute epidemic meningitis, sunstroke, and whenever prolonged sweating treatments are given, as in eclampsia and uremia. Contraction of the blood vessels slows down the oozing of blood into the injured tissues; thus edema is prevented. It can also help prevent black-and-blue swelling when tissue has been injured (by sprains, contusions, etc.). In addition, it is used for rheumatoid arthritis, acute infectious arthritis, and the acute joint inflammation of rheumatic fever.

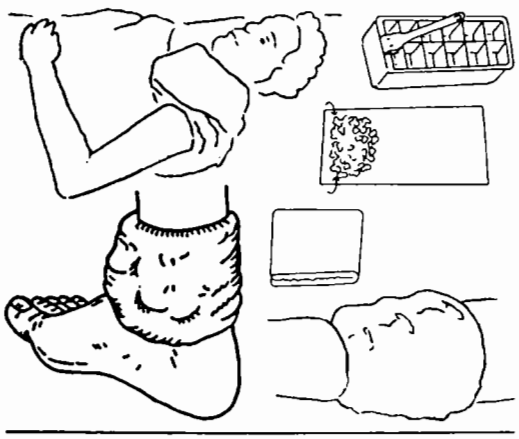
HOW TO APPLY IT—*(See picture below.)*

1 - Crush ice and place it in a towel. (Instead of placing snow or crushed ice inside of a dry towel, you can wring the towel from cold water without putting ice or snow inside it. But this will not be as cold and must be changed much more frequently.)

2 - Fold the towel until it is about 3 inches wide, and long enough to encircle the neck.

3 - Put it in place around the neck.

ICE PACK and ICE CRAVAT



4 - If, instead of being applied to the neck, it is to be placed on a different body joint area: Use a piece of flannel that is at least 12 by 12 inches for the shoulders and knees and 8 by 9 inches for the elbows or ankles.

4 - ICE BAG (ICE CAP)

WHAT IT IS—Ice bags and ice caps can be purchased or ordered from your local drugstore. Ice bags come in various shapes and sizes. (One example is the spinal ice bag, which is about 3 inches wide by 7-10 inches long.) The best ones are made of pure natural gum rubber, and all come with screw caps.

HOW IT CAN HELP YOU—The Ice Bag (or Ice Cap) prevents or reduces swelling, relieves pain, checks bleeding, and reduces congestion and inflammation.

A second value lies in their reflex effects: They can relieve congestion and inflammation of deeper internal organs, such as in appendicitis and salpingitis. For this purpose, the application must be placed over the reflex area that affects that deeper organ. *(See pages 160-161 for additional information on reflex effects.)*

A third use is to strengthen and slow the activity of the heart when the pulse is rapid and weak.

HOW TO APPLY IT—*(See pictures on page 170.)*

1 - Fill the ice cap or ice bag about one-half full with finely chopped ice. Press it down to expel the air; and, then, screw the cap on tightly. Dry it and test for leaks.

2 - Cover it with a flannel or hand towel, and apply it where needed. Never apply an ice bag or ice cap directly to the skin; always place a cloth over the body part first.

3 - Continually watch to see that there is no danger of injuring the skin through frostbite.

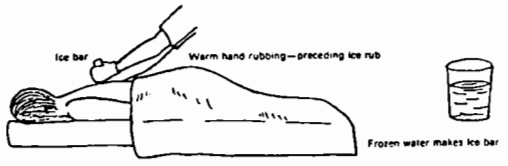
4 - When the ice melts, refill it with more ground ice.

SPECIAL POINTS—Choose a bag that is light in weight; if it is used continually (especially on the abdomen or chest), you may want to suspend it in a cradle, to take off part of the weight. When it is filled, if all the air is not expelled, the ice will melt more rapidly.

5 - PROXIMAL COMPRESS

WHAT IT IS—A Proximal Compress is any type of cold compress, ice bag, etc., that is placed over a large artery in order to reduce blood circulation in the part of the body or limb served by that artery. It is not al-

ICE BAR



ays convenient to apply a wet cloth to an afflicted part. ıis is especially true with open wounds, which need be kept very clean.

HOW TO APPLY IT—

1 - A Cold Compress *(page 169)* is wrung out of ıter (60°-70° F.) and then placed over the artery sup- ying the afflicted part. Instead of a Cold Compress, ı Ice Bag *(page 170)*, filled with ice or ice water, can used.

2 - The compress must be frequently changed in der to maintain the cold effect.

WHERE TO APPLY IT—What one needs to know is ıere to apply the cold Proximal Compress. Here are e most useful places to put it and the corresponding eas in which the temperature and blood supply will reduced:

1 - To the knee and the calf of the leg (to affect the ɔt).

2 - To the femoral artery on the inside of the leg, to e whole thigh, or an ice bag to the back side of the ıee (to affect the portion of the leg below the knee).

3 - An ice bag to the groin (to affect the whole leg).

4 - A cold compress around the elbow joint (to af- ːt the hand).

5 - To the whole upper arm (to affect the forearm).

6 - An ice bag to the arm pit (to affect the whole m).

7 - An ice bag at the bend of the elbow (to affect the ınd).

8 - An ice collar or cold, wet towel, around the neck ɔ affect the brain). This application helps reduce con- stion in the brain, reduce laryngeal inflammation, and ıs in meningitis.

9 - Over the carotid arteries, which are located on ɔth sides of the neck (to affect the brain).

— SECTION TWO—
COLD-TO-HEATING

WHAT IT IS—These are applications of cold cloths, ıvered with flannel, to a body area. The body reacts ıd heats up the pack; and the result is improved cir- ılation and a better flow of healing blood in and out of e afflicted area.

THROAT COMPRESS / JOINT COMPRESS

1 - HEATING THROAT COMPRESS AND DRY THROAT COMPRESS

WHAT IT IS—This is a cold compress that is so covered up that warming soon takes place. The effect produced is that of a mild, prolonged application of moist heat.

HOW IT CAN HELP YOU—Gradually, over several hours, a throat compress can reduce inflammation and bring healing to a body part. A cold, wet cloth is placed about the throat, then covered with dry flannel to prevent air circulation, thus increasing body heat in that area. Mothers will often place a heating compress on a child with a sore throat in the evening and take it off the next morning. The compress should be dry by then.

PROBLEMS IT CAN HELP SOLVE—The Throat Compress is a very common household remedy for sore throat, hoarseness, tonsillitis, pharyngitis, laryngitis, quinsy, and eustachian tube inflammation.

WHAT YOU WILL NEED—2 or 3 thicknesses of ordinary cotton cloth about 3 inches wide and long enough to encircle the neck twice. Two thicknesses of flannel not less than 4 inches wide. Safety pins. Possibly a piece of bandage.

HOW TO APPLY IT—*(See picture on page 171.)*

1 - Prepare your materials for the neck compress. If it is to go on one who is too frail to warm it up, then use a Dry Throat Compress, which is prepared in the same manner as the regular Heating Throat Compress, but without being first wrung out of cold water.

2 - In giving a regular Heating Throat Compress, wring the cotton cloth from cold water and place it around the neck. This should be about 2-3 thicknesses about the neck.

3 - Cover it well with the flannel (single or double thick, depending on the weight of the material). Fit the flannel snugly but not too tightly that it will be uncomfortable. Pin it securely.

4 - In tonsillitis, quinsy, and inflammation of the eustachian tube, the compress should extend upward about the lower part of the ear. You may need to hold up this part of the compress (that is by the lower part of the ear) with a bandage that is fastened to it and goes over the top part of the head and back down to it on the other side.

5 - Remove it the next morning. It should be entirely dry. When first put on, it can be quite wet but should not drip. But the next morning it must be dry.

6 - As soon as you have removed the compress, rub the neck with a cloth wrung out of cold water.

2 - HEATING JOINT COMPRESS AND DRY JOINT COMPRESS

WHAT IT IS—This compress is quite similar to the Heating Throat Compress, described above. The primary difference lies in the fact that this heating compress is applied to one of the joints (foot, ankle, knee, elbow, hand, or wrist) instead of to the neck.

PROBLEMS IT CAN HELP SOLVE—The Heating Joint Compress is most frequently used in cases of rheumatism and rheumatic fever. But there are other painful joint conditions that it may also alleviate.

HOW TO APPLY IT—*(See picture on page 171.)*

1 - You will need similar materials to those listed above under the Heating Throat Compress. If the one it is to be placed upon is too weak or frail to heat up a wet compress, it may be best to make it a Dry Joint Compress (several layers of flannel, with or without dry cotton beneath it).

2 - You may wish to place solution (such as oil of wintergreen, camphorated oil, menthol, mustard water, etc.) on the cotton before it is wrapped around the joint. This helps relieve pain; and, by its counter-irritant action, it enhances the heating effect by increasing the blood circulation at the painful joint.

3 - Two thicknesses of cotton cloth are wrapped around the afflicted joint(s). Sometimes gauze is used, but cotton will enable you to bring the material closer to the skin surface. This is then held in place either with a three-inch roller bandage (obtainable from a drugstore) or with a broad flannel cloth.

3 - MOIST ABDOMINAL BANDAGE AND PARTIAL ABDOMINAL BANDAGE PROTECTED JOINT BANDAGE WET GIRDLE

WHAT IT IS—This is a heating compress applied over the stomach and intestinal area. It is an application of cold, wet sheeting, covered up with dry flannel, which the body then warms up into a very helpful heating pack. This Moist Abdominal "Bandage" is also called a "binder," "girdle," or "pack." When only the front part is moistened, it is called a Partial Abdominal Bandage.

HOW IT CAN HELP YOU—The Moist Abdominal Bandage (or Binder) is one of the most useful of the heating compresses. It is recommended in nearly all forms of atonic indigestion, neurasthenia, anemia of the liver, insomnia, catarrhal jaundice, constipation, and similar conditions. For these purposes, it is generally worn only at night.

With a hot-water bottle *(pages 179-180)* placed over the stomach, it is also useful in milder cases of nausea and vomiting. If plastic is placed over the flannel to prevent the cotton from drying out, it is called a Protected Binder; and it is used for hyperacidity and also to obtain relaxation in the abdominal organs. A protected binder, by keeping the cotton from drying out, will induce a stronger perspiration than would otherwise occur.

WHAT YOU WILL NEED—One thickness of cotton sheeting, linen, or 3-4 thicknesses of gauze. It should be 8-9 inches wide, no matter what this material is made of, and a little longer than 1½ times around the body. Over this will go an outer flannel covering that is about 12 inches wide, about the same length as the linen or slightly longer. Safety pins, and possibly plastic, will also be needed.

HOW TO APPLY IT—*(See picture below.)*

1 - Prepare the sheeting for a Moist Abdominal Bandage by dipping it into cold water.

2 - (If the one receiving the treatment is too frail to warm up the large wet surface of the cotton wrapping, give him a Partial Abdominal Bandage: Only wet that portion of the cloth that is over the front (over the abdomen). Or, only place a smaller, wet cloth over the abdomen, and let the rest of the encircling covering be flannel alone. These two variations of the Partial Abdominal Bandage are milder forms of the Moist Abdominal Bandage.)

3 - The dry flannel is placed across a table; the linen (or gauze), wrung nearly dry from cold water, is placed over it.

4 - The one not feeling well now lies back on the bandage. The lower edge of the cloth and flannel should touch below his hipbones (below the iliac crests).

5 - Pull each end of the wet cloth tightly over his abdomen and tuck them under the opposite side.

6 - Cover quickly and snugly with both ends of the flannel, and securely fasten the ends with safety pins. Also pin darts at each side, to make the binder fit better. The flannel piece should project 1½-2 inches beyond the wet gauze or linen.

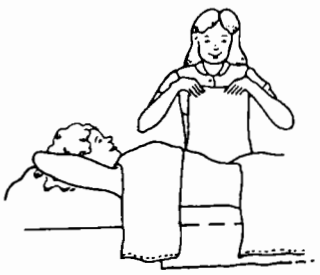
7 - (If plastic is now placed over the flannel to keep it from drying out (for hyperacidity), it now becomes a Protected Bandage; but understand that this is not the usual way of preparing Moist Abdominal Bandages.

8 - A hot-water bottle is sometimes placed outside the flannel, over the stomach area.

9 - When you later remove the binder, wash the area with cold water and dry thoroughly.

THE WET GIRDLE—The Moist Abdominal Bandage is a heating compress over the front of the abdominal area. Kellogg frequently made use of the "Wet Girdle." This is a wraparound Moist Abdominal Bandage. It covers the front, sides, and back of the lower trunk. "The region to which it is applied is bounded by the nipple line above and the hip joints below" (Kellogg). In nearly every instance in which the "Hot Abdominal Pack" is given in the Kellogg Water Remedies section of this

MOIST ABDOMINAL BANDAGE



chapter, the "Wet Girdle" is the application referred to. *(See pictures on page 172.)*

4 - HEATING CHEST PACK

WHAT IT IS—The Heating Chest Pack is similar in some respects to a fomentation over the chest. The difference lies in the fact that, instead of continually applying and changing fomentation cloths, a piece of wet cotton sheeting is wrapped around the chest and then covered. Thus, a slow buildup of heat occurs over a longer period of time.

One alternative is the **Partial Chest Pack** *(see pictures on this page)*, in which a wet cloth is placed only over the chest. This is used when the person would be too frail to heat up the full wet pack. Another alternative is the **Dry Chest Pack** *(picture below)*, which has no moist compress within it. It is especially helpful between other treatments; however, those who are thin, aged, and those in the early stages of pneumonia do not react well to cold applications. The Heating Trunk Pack *(picture below)* is a chest pack that covers the entire chest, abdomen, and pelvic area.

HOW IT WORKS—These chest packs gradually build up heat in the skin above the chest, and thus aid in relieving various congestions in the chest and lungs.

Of the above packs, the Heating Chest Pack is the most powerful (but not immediately as powerful as Fomentations to the chest: *See pages 177-178*); the Partial Chest Pack has far less strength; the Dry Chest Pack is the mildest.

PROBLEMS IT CAN HELP SOLVE—Here are some of the conditions the Chest Pack is used for: Bronchial and respiratory colds that hang on. Influenza of the respiratory type. Pneumonia. Only use a Dry Chest Pack during the acute stage of pneumonia; only use a Heating or Partial Chest Pack during later convalescence from it. During pneumonia, the skin does not have its normal ability to adjust to changes in outside temperature. Pleurisy: When treating this condition, if he is robust, use the heating pack immediately after an application of heat, such as a Fomentation *(page 178)*; but if he has lessened vitality, only use a Dry Chest Pack, with a hot-water bottle applied outside the pack. These chest packs are also helpful for whooping cough, croup, asthma, and similar conditions.

WHAT YOU WILL NEED—The chest pack can be made in several ways; but, since you will be using it many times on the same person, we will here describe the simplest: the fitted chest pack.

Take flannel material and cut it with scissors into two fitted pieces. One will go over his chest, upper shoulders, and sides; the other will cover his back, lower shoulders, and side. Allow for overlapping under the arms and on the shoulders. This will be pinned together each time it is used.

You will also need a cotton cloth (such as old sheeting material) if a wet cloth (inside a regular Heating or Partial Chest Pack) is to be used. You will not need it if a Dry Chest Pack is being applied.

HOW TO APPLY IT—*(See picture on page 173.)*

1 - Warm up his chest with fomentations or a heat lamp over his chest.

2 - If a moist cloth is to be applied, wring it thoroughly from tap water and place it on his chest (Partial Pack), or wrap it about his chest and upper back (Heating Pack).

3 - (At this point, you may wish to put warm camphorated oil, or something similar, on the wet sheeting over his chest.)

4 - (If you wish to increase the sweating, place plastic over the moistened cloth.)

5 - Cover quickly with the fitted flannel that you earlier cut out for this purpose. He should be covered well, but not too tightly. Pin securely.

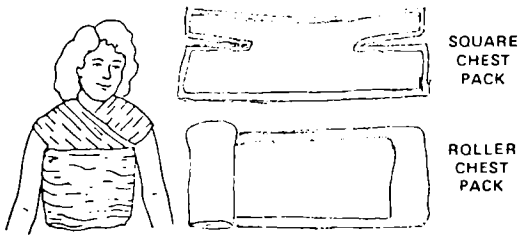
CAUTIONS—The wet compress should be wrung out thoroughly and then covered well, to avoid chilling and to aid in a prompt reaction. The pack must be snugly applied at all places, but not so tight as to restrict the movements of the chest in breathing. The pack should be comfortable and should feel warm in a very short time. If not, remove it and apply a milder pack (a Partial or Dry Chest Pack). Use a Dry Chest Pack (not a Heating Chest Pack) during the acute stages of pneumonia. When caring for pleurisy, it is best to only use the Dry Chest Pack. Both the Partial and Dry Chest Pack are described just below:

5 - PARTIAL CHEST PACK

WHAT IT IS—The Partial Chest Pack is identical to the Heating Chest Pack, described just above, with the exception that the wet cloth is only placed over the chest.

HEATING CHEST PACK

HEATING CHEST PACK / DRY CHEST PACK



HOW IT CAN HELP YOU—This pack can enable you to give a heating-type chest pack to one who is too frail to warm up the full wet pack (the Heating Chest Pack).

HOW TO APPLY IT—

1 - The cotton covering for the partial pack can be cut to any desired shape, since it will only go over part of the chest.

2 - Wring it out wet and apply it over the chest.

3 - Cover it with the flannel.

Since most of the chest is covered with dry material, this pack is quite similar in effect to the Dry Chest Pack.

CAUTION—Only use the Dry Chest Pack during the acute stage of pneumonia; only use a Heating or Partial Chest Pack during later convalescence from it.

6 - DRY CHEST PACK

WHAT IT IS—The Dry Chest Pack is also like the Heating Chest Pack, with one primary exception: It does not have any wet cloth between the skin and the blanket.

HOW IT CAN HELP YOU—This pack is especially helpful between other water treatments. It is also well-adapted to the special needs of the thin and the aged who are not able to react and heat up the moist cloth used in the Heating Chest Pack. The dry pack is also the best method for the early stages of pneumonia.

HOW TO APPLY IT—

Only the flannel is used, and should be applied over a thin undergarment that he is wearing.

The dry Pack is necessary for thin, weak people because it is almost impossible to pin the wet pack tightly enough to prevent air from circulating under the edges of the pack and yet be loose enough to be comfortable and not restrict the breathing.

CAUTION—Only use the Dry Chest Pack during the acute stage of pneumonia; only use a Heating or Partial Chest Pack during later convalescence from it.

— *SECTION THREE* —
LARGER COLD-TO-HEATING

WET-SHEET PACK

STAGE ONE: COOLING WET-SHEET PACK
STAGE TWO: NEUTRAL WET-SHEET PACK
STAGE THREE: HEATING WET-SHEET PACK
STAGE FOUR: SWEATING WET-SHEET PACK

WHAT IT IS—This is a bed sheet wrung out of cold water and then quickly draped around a person who is covered with a blanket or two. The body, in reaction, quickly begins warming up the sheet; and fairly soon it turns into a moist heating pack.

HOW IT CAN HELP YOU—According to how long it is left on, the Wet-sheet Pack has one or more of four different effects. This is due to the fact that, according to the degree of warming that it undergoes, the Wet-sheet Pack passes through four stages: (1) the Cooling Stage, (2) the Neutral Stage, (3) the Heating Stage, and (4) the Sweating Stage. The stage that you stop at—or prolong—is determined by the effect that you wish to produce. We will conclude this explanation of the Wet-sheet Pack with a careful look at each of these four stages.

HOW TO APPLY IT—*(See picture on p. 175.)*

1 - Having all the materials ready, explain the treatment to him. An enema *(page 204)* or colonic *(page 205)* is considered to be an important preliminary step. Also, if needed, give him a 10-minute Hot Footbath *(page 193)*, with a Cold Compress *(page 169)* to his head; for the entire body should be warm before beginning the Wet-sheet Pack. If not, precede it with a Hot Full (tub) Bath.

2 - Place a plastic or rubber sheet on the bed. Over it, place a double blanket, folded lengthwise, with the edge of the far side hanging longer than the near edge. The upper end of the blanket should cover the lower half of the pillow.

3 - Take the wet sheet from the cold water and wring it as dry as possible. Place it on the blanket, with the upper end a little below the top of the blanket.

4 - Now help him lie on his back on the sheet, with his shoulders 3-4 inches below the upper edge of the sheet.

5 - As his arms are held up, you quickly wrap the short side of the sheet around his trunk, and also around his nearest leg.

6 - Draw the sheet smoothly in contact with the skin in all places. Tuck it under on the opposite side.

7 - Lower his arms, and then wrap the other side of the sheet smoothly over his arms, trunk, and his farther leg. Fold the sheet over his shoulders, and across his neck. Tuck it in. Important: Wrap him in the sheet quickly. The wet sheet must come in close contact with the skin at all points.

8 - Wrap the narrower edge of the blanket around his body and tuck it in. Do the same on the opposite edge, pulling it snugly around him. At this point, pull the remainder of the blanket over and tuck it also under his body and under his feet. Important: Wrap him in the blanket quickly. The dry blanket must prevent circulating air or he may become chilled. Warming up should begin immediately.

9 - It may be best to now cover him with a second blanket. Additional blankets may be laid over him and tucked in on the sides and about the feet, if needed.

10 - Place a Turkish towel around his neck, to protect him from the blanket and to keep out the air. Put the hot-water bottle to his feet to hasten warming.

11 - Sponge his face with a Cold Compress *(page 169)* at the beginning of the pack and also after the first 10 minutes when the reaction begins (when he begins sweating).

12 - His feet must be kept warm at all times. Take his temperature before and after the pack is given.

13 - When the pack is removed, give a Cool Sponge *(page 190)*, with brisk drying to the body.

14 - Repeat with another Wet-sheet Pack later that day or give it daily until the fever comes down. Duration of each Wet-sheet Pack is 15-20 minutes. Have him rest afterward. Liquid nourishment is best.

FOUR TYPES OF WET-SHEET PACK—As mentioned at the beginning of this section, there are four stages to the Wet-sheet Pack. The stage you bring him up to and stop at—or prolong—will determine the objectives you are going to achieve:

1 - Cooling Wet-sheet Pack—This is the first stage of the pack before the sheet has been warmed to the temperature of the body. 5-12 minutes is needed to reach this stage. At the end of this time the effect can be intensified by removing the sheet and applying another (wet, cold) sheet or by folding back the blanket and sprinkling cold water on the wet sheet that covers him.

This cooling pack is a powerful way to lower a high temperature, and is especially useful in typhoid fever and other continued fevers.

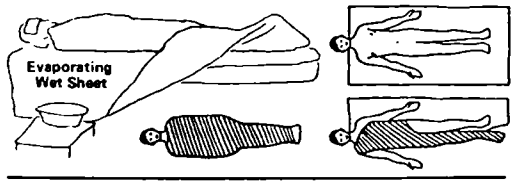
2 - Neutral Wet-sheet Pack—This begins when the temperature of the pack reaches, or slightly exceeds, skin temperature. After body warming has well begun, this second stage can be prolonged by removing all but one or two dry coverings over the wet sheet. But the body must continue to be evenly warm, with no circulating air reaching it.

This neutral pack is excellent for insomnia, and helps put the sleepless to sleep. It is also used for mania, alcoholic delirium, and restlessness. A neutral bath will accomplish the same purpose as a neutral pack—and probably do it better.

3 - Heating Wet-sheet Pack—This begins when the warming pack has raised the body temperature slightly above its usual degree; and it ends when general perspiration begins. Once achieved, this should, for best results, be continued for about 20 minutes.

This heating pack helps warm the body and lessens localized congestions, wherever they may be in the body.

4 - Sweating Wet-sheet Pack—This last stage begins with the onset of general sweating. The sweating may be increased or prolonged by additional coverings, hot-water bottles between blanket layers, or by drinking hot water or lemonade. The cold compresses on the head should not be very cold or renewed too frequently.



This sweating pack is excellent for childhood fevers, capillary bronchitis, colds, and also for obesity and obese rheumatism.

Heating and sweating packs are also used for alcoholism, gout, influenza, and the elimination of nicotine from the body (which lessens the physical craving for more tobacco).

One of the most useful treatments for the fevers of early childhood is this: Give him a Full Hot Tub Bath *(page 195)*, followed by a cold Wet-sheet Pack, as described above. The child, so exhausted by the fever on his body and head, will often fall into a quiet sleep after the pack reaches the heating stage.

SECTION FOUR
LOCAL HOT AND COLD

1 - ALTERNATE COMPRESS

WHAT IT IS—This is an application of very hot and very cold compresses in alternation (one following the other).

HOW IT CAN HELP YOU—There is probably no other procedure which is capable of so intensely and rapidly exciting the flow of blood in various parts of the body. Thus it helps to eliminate pus formation, avoid bed sores (which are so likely to appear in typhoid fever, tuberculosis, and other wasting diseases). It can also be applied to paralyzed limbs and to parts affected by chilblains as a means of stimulating absorption in dropsy of the abdomen or of the chest. It is also used in chronic pleurisy and pneumonia, in which the parts damaged by the acute inflammatory process have not been fully restored.

Alternate Compresses to the spine are a very effective means of arousing one from morphine-derivative poisoning, alcoholic intoxication, and similar problems.

"The author recalls very vividly a case of opium poisoning to which he was called in consultation some twenty-five years ago, in which a patient's pulse was reduced to less than twenty and respiration to four per minute. Thoroughgoing hot and cold applications to the spine quickly brought the pulse to a nearly normal count. The respiration became twelve per minute within five minutes; and the change in the entire aspect of the case was so marvelous as to seem little short of a miracle to the bystanders who had never before witnessed the powerful stimulating effects of thermic applications properly managed."—*Kellogg.*

HOW TO APPLY IT—

1 - This is a Fomentation application *(page 178)*, with the addition of a Cold Compress *(page 169)* after it: When the fomentation cloth is removed, a hand towel, wrung from cold water or ice water, is placed on the

body part. The cold application will need to be renewed frequently in order to keep it cold; but it may be left on nearly as long, or as long as the hot application (but never longer).

2 - Then it is removed and the surface dried well. Another fomentation is then applied. Three changes from hot to cold are usually given. The procedure must always begin with a hot application and end with a cold one.

2 - REVULSIVE COMPRESS

WHAT IT IS—This hot and cold application differs from the Alternate Compress, described just above, only in the different timing of the heat and cold. In the Alternate Compress, the applications are of equal time; or, at least, the hot application does not exceed the cold. In the Revulsive Compress, the hot application is decidedly longer.

HOW IT CAN HELP YOU—This compress is very helpful in relieving pain in many, many physical problems. (Neuralgia is but one example.)

(It should be understood that pain is sometimes best relieved by very hot applications, in others by cold ones, and in still others by alternate hot and cold. But in many instances, pain is increased as the affected nerves are excited (especially when inflammation is present). At such times, alternate hot and cold will best help reduce the pain.)

The Revulsive Compress is also a powerful aid in reducing congestion, such as gastric congestion, gastritis, enteralgia, acute sciatica, neuritis, painful affections of the eye, and spinal irritation. It often affords immediate relief from the heavy pain of toothache.

HOW TO APPLY IT—

1 - Follow the directions for giving a Fomentation *(page 177)*. But when each hot application has been lifted off, place a hand towel, wrung from cold water or ice water (according to his ability to react to cold) on the surface. Let it remain there a few seconds; then turn it over to remain a few seconds more.

2 - The skin is now dried and the next fomentation is applied. Three changes of hot and three of cold are usually given.

3 - ALTERNATE HOT AND COLD TO THE HEAD

There two totally different hot and cold application to the head. We are placing them here together, one right after the other, so that you will make no mistake regarding which one to use. First, we shall describe the Alternate Hot and Cold to the Head:

WHAT IT IS—This is an alternation of hot and cold to the head. It means that first you place hot to the head and then cold; then hot and then cold again, for three complete cycles.

HOW IT CAN HELP YOU—This set of applications causes fluxion, or an increase of blood, to the afflicted area. Thus it can work to improve the circulation of blood within the head and relieve an anemic headache (a headache caused by a lack of blood in the brain). It is also helpful in remitting passive congestion and cold in the head.

WHAT YOU WILL NEED—Two pieces of Turkish toweling or thick hand towels (about 12 inches square) for wet compresses. Two ice bags, filled with finely chopped ice and then covered with a thin cotton cloth (or cheesecloth). A hot-water bottle, partly filled with hot water and then covered either with a dry fomentation cloth or with a towel. A bowl of ice water and a pail of boiling water.

HOW TO APPLY IT—

1 - Place the hot-water bottle crosswise over the back of the neck, bringing it well up under the back of the head and over the neck.

2 - Wring the toweling compress out, lightly, from ice water and then apply it to the face. It should cover the face, top of the head, and the ears. Press down firmly over the forehead and the temporal arteries (these arteries are just above and in front of the ears).

3 - Renew this compress every minute.

4 - After three minutes, remove the hot-water bottle and put two cloth-covered ice bags where it had been. And also replace the cold compress over the face by another wrung, quite dry, from hot water. Follow the cautions listed under "cautions," below, in applying hot cloths to the face.) Renew this hot compress every minute.

5 - In another three minutes begin the cycle over again: Replace with the first applications of the hot-water bottle to the back of the neck and the cold compress to the face.

6 - Continue these alternations for three complete cycles. Then cool all the parts by wiping off with a cold compress and dry thoroughly, especially the hair.

CAUTIONS—The bed should be protected with plastic sheeting. The hot compress should not be pressed to the face. The eyes should be protected from the heat with a thick compress or towel.

4 - SIMULTANEOUS HOT AND COLD TO HEAD

WHAT IT IS—Again, hot and cold is placed to the head; but, instead of alternating back and forth (first hot and then cold) to those places, the hot is kept on certain areas and the cold is kept on others. A primary difference is that the cold application is placed over a reflex area of a deeper part, or over a large artery supplying blood to it. This produces depletion, or a removal of blood from the head. Thus, the effect produced is the exact opposite of that produced by alternate hot and cold to the head.

HOW IT CAN HELP YOU—This treatment is very effective in reducing congestion in the head and relieving congestive headache (headache caused by an excess of blood in the brain).

WHAT YOU WILL NEED—Essentially the same ar-

ticles are needed for this, the Simultaneous Hot and Cold, as were used for the Alternate Hot and Cold, described just above.

HOW TO APPLY IT—

1 - Place an ice bag to the base of the brain (the back of the neck) and a second ice bag (or better, an ice cap [both are obtainable at your local drugstore]) to the top of the head. A cold, wet towel on the hair will intensify the cold application to the top of the head (do this instead of wetting the hair).

2 - Also place ice bags or ice compresses (ice inside a folded towel) over the carotids. (The carotid arteries are on both sides of the neck, and are the arteries near the surface that bring blood to the brain.)

3 - Then apply a Fomentation *(this page)* to the face, covering the ears and forehead. Cotton sheeting material (or gauze or cheesecloth) should be used under the fomentation when it is applied to the face. The nose should not be covered by the fomentation, for it is better that he be able to breathe cooler air.

4 - Conclude the treatment by first pouring hot, and then cold, water onto the feet. Keep a cold neck and head compress (cold, damp toweling) on him while pouring the water on the feet.

5 - ALTERNATE HOT AND COLD TO THE SPINE

WHAT IT IS—This is a Revulsive Compress (page 176); except that, instead of the cold compress, a small piece of ice is rubbed over the part. Thus, it is a regular set of Fomentation applications *(this page)*, plus the use of ice between each hot application.

HOW IT CAN HELP YOU—This alternate hot and cold application to the spine acts as a strong stimulant and tonic, and is used in a large number of conditions which are helped by such a general treatment. It improves the circulation, increases muscular tone, and stimulates vasomotor nerve action.

HOW TO APPLY IT—

1 - The Revulsive Compress is described on page 176, and is a variation of the standard Fomentation *(page 178)*. Give Alternate Hot and Cold to the Spine in the same manner as the Revulsive Compress, with the following exception:

2 - When each fomentation is removed, instead of briefly placing a cold compress on the part, as is done in the Revulsive Compress, a small piece of ice is quickly rubbed back and forth over the area, making three to five or more to-and-fro movements. The part is then dried and another fomentation is placed there. (In making these applications, it IS important that the next fomentation be ready before the ice is applied.)

— *SECTION FIVE* —
LOCAL HOT

1 - FOMENTATIONS

WHAT IT IS—A Fomentation is an application of moist heat to part of the body. The moist heat is produced by cloths wrung from hot water and then laid upon the afflicted part. Of all methods of applying heat to the body, there is no more effective or simpler method than the use of cloths wrung out of very hot water.

Heat can be applied as dry heat or moist heat, but moist heat is the more powerful of the two. When given to relieve pain, this heat is best given locally, that is, to only part of the body. A fomentation is one of the simplest and most effective means of applying moist heat to various parts of the body.

HOW IT CAN HELP YOU—A fomentation can relieve pain; but, if the heat is more moderate and the application more prolonged before being renewed, it can also relax and enable a person to go to sleep. It also increases the circulation of white blood cells and the flow of blood to the skin, thus relieving internal congestion. It relieves muscle tension and spasms, and pain in muscle joints and internal organs. It promotes sweating, thus increasing the elimination of toxins. And it either stimulates or relaxes, according to the temperature of the application. Fomentations are excellent for chest congestion due to colds, bronchitis, or pleurisy.

WHAT YOU WILL NEED—You will need a kettle of boiling water (or a steamer), at least four fomentation cloths, one or two Turkish towels, a washcloth, and a basin of cold water. Here is how to make your own fomentation cloths: The material can be cut from blankets or purchased especially for this purpose. The size should be 30-36 inches square, so four cloths can be cut from one regular-sized blanket. It is best when it is part wool and never all cotton. In fact, it is ideal when it is 50% wool (to retain heat) and 50% cotton (to retain moisture). Some folk use quilted 36-inch-square cloths made of 50-50 wool and cotton. These are considered best if a steamer is used to heat the cloths; yet, ultimately, they are somewhat less effective than the single folded cloths (cut from blankets) wrung out of boiling water.

(If the cloths are placed in a steamer to heat up instead of being wrung out from a pot of boiling water, there is also more danger of burns; since steam is so much hotter than boiling water. With all this in mind, we will only describe below the boiling water, not the steamer method.)

HOW TO APPLY IT—*(See pictures on pages 178-179.)*

1 - The room should be warm (75°-80° F.), with no drafts; and the water on the stove should be boiling. Fold one fomentation cloth into about three thicknesses.

2 - Grasp the ends and partially twist them. Now immerse all, but the ends you are holding, into the boiling water. Lift out and twist tightly, as you hold the dry ends. Stretch or pull the twisted fomentation, to

wring it as dry as possible. Then untwist it quickly (by dropping one end while holding the other end) and wrap it in a dry fomentation cloth. For moderate heat, use only one wrung-out cloth inside the dry one; for stronger moist heat, place two inside the dry fomentation cloth.

3 - With the hot, moist fomentation quickly placed inside it, quickly fold over the dry fomentation cloth onto itself and carry it to the bedside.

4 - Unfold and place the inner side of the dry cloth on the area to be treated. (The moist ones are still inside it.) Cover with a towel. A fomentation should be large enough to cover a much larger area than the afflicted part of the body.

(If the treatment is to be given at some distance from the stove, three sets of fomentation cloths may be wrung out and placed in the bottom of a pail lined with large, dry fomentation cloths. They will preserve their heat for 30 minutes or longer. If thought necessary, a hot-water bottle can be placed at the bottom of the pail and a second one at the top, over the three cloth sets.)

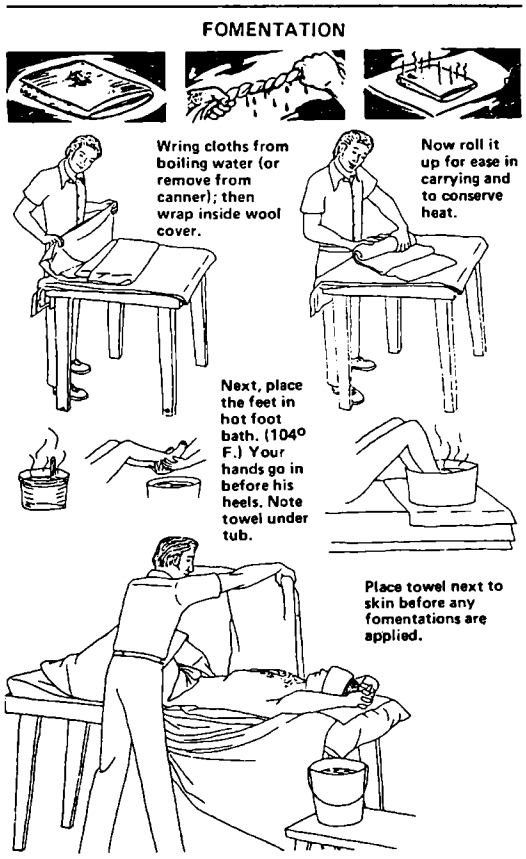
5 - If the fomentation is unbearably hot to the one it is placed upon, rub underneath it until it can be tolerated. Always ask if the fomentation is burning him. If it is too hot, place another towel (best a rough or Turkish towel) between him and the fomentation.

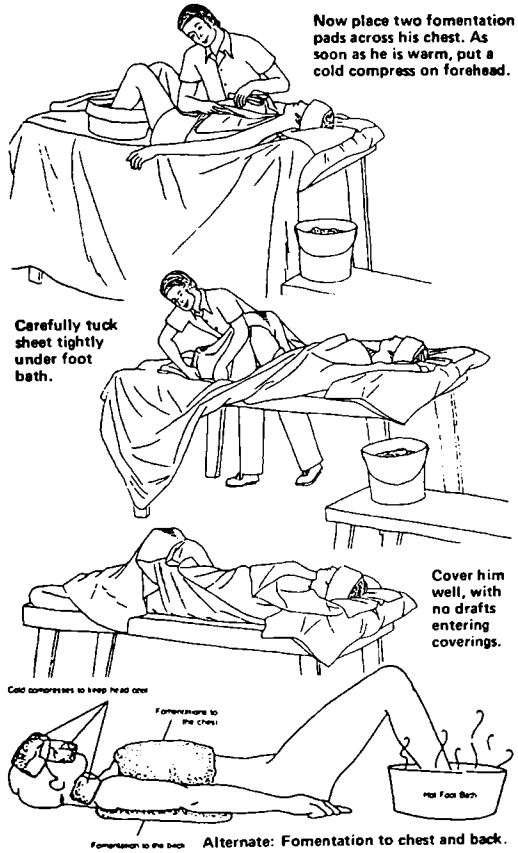
6 - The outer, dry, fomentation cloth should lie in close contact with the skin and should be changed every 3-5 minutes, unless a relaxing effect is all that is desired *(see next paragraph)*. In case of pain, very hot applications should be used; they should be changed as soon as they begin feeling comfortable.

7 - When given for insomnia or only to remove pain, milder heat should be applied for a longer time (6-10 minutes); it is best placed over the spine or, if there is spasticity of the bowel, over the abdomen.

8 - Have another fomentation ready to replace the one being removed. Be sure and quickly wipe the moisture from the skin before applying the next application. Work quickly to expose the area as little as possible.

9 - Usually three successive applications are made. When the last fomentation is removed, cool the area with a washcloth wrung from cold water (or a wet-hand



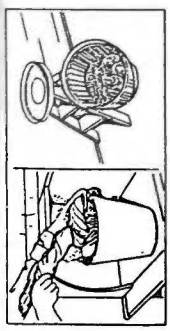


rub, a cold compress, or a rub with a cold and wet towel); then dry thoroughly and cover at once, to prevent chilling.

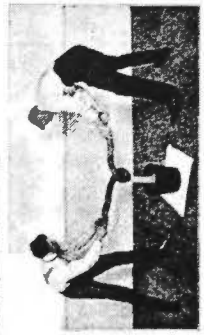
IMPORTANT POINTS—It is important that the room be warm. Be especially careful when working with thin or aged persons, or with children. Avoid chilling him during or after the treatment. Keep his feet warm. Wipe moisture from the skin before applying each fomentation (it is moisture on the skin that can cause burns). All changes should be made quickly. A cool cloth on the forehead or neck may be necessary. Keep the head cool. In fomentations to the face or other sensitive parts, first apply gauze next to the skin. If perspiration continues after the treatment is ended, give a general cold friction, wet-hand rub, or wet-towel rub. Sensitive surfaces, especially bony prominences (and also scars and metal implants) should be protected by extra coverings of flannel or Turkish towel. If he is liable to congestion in the head, always in case of fever or general perspiration, lay cold compresses (cloths wrung out from cold water) on his head and neck. In case of heart disease, usually in fever and with rapid pulse from any cause, place an ice bag over the heart. Where there is extreme pain, have the fomentation as hot as can be tolerated. Omit the cold afterward in extreme pain, as in pleurisy, kidney pain, and dysmenorrhea. In such cases, at the end of the fomentations, the part is dried—without the cold application—and immediately covered with flannel or other dry covering.

STEAMER METHOD—An alternate method is the use of a steamer. This is also a good method and is often easier to do; but one must remember that the cloths have been taken out of a steamer pot and therefore are much hotter than the regular method. Be careful not to burn yourself or the one receiving the Fomentation! Here is how it is done: Sprinkle the fomentation cloths (the cut-up blankets) as you would do to clothes you are about to iron. Then place them in the steamer. (This is the type of steamer, or canner, used to cook jars of fruit or vegetables for canning. It should have a second bottom in it (above the floor of the steamer), with approximately 3-inch diameter holes in it. Below this second bottom is water in the bottom of the steamer.) After sprinkling, roll up the cloths and stack them in the steamer vertically. Cover and let it steam for 20 minutes. Then remove and proceed as normally, except that you need not now wring out excess moisture.

FOMENTATION



LEFT & BELOW: The fomentation can be heated in boiling water, then wrung out. RIGHT: An alternate method is to place quilted cloths in a canner. Above is pictured an improvised "steamer"—a can with a lid with a false (second bottom) in it to keep the cloths out of the boiling water (so only steam penetrates them).



CAUTIONS—Do not give fomentations when the sick person is unconscious, has paralyzed body parts, malignancy, tendency to bleed (hemorrhage), or stomach or bowel ulcers. Do not place fomentations on the legs or feet of a diabetic, or on the legs or feet of one with edema, varicose veins, or advanced vascular disease in these extremities. Never place hot of any kind directly on an open eyeball.

2 - HOT GAUZE COMPRESS

WHAT IT IS—This is an application of heat to a small and delicate part of the body, such as an eye or a fresh wound.

And for both, sterile (perfectly clean) dressings should be used. This small heating compress of gauze has an effect similar to that of a Fomentation. *(See pictures on pages 177-179).*

HOW IT CAN HELP YOU—These small compresses are most generally used to relieve localized congestion and inflammation, and to stimulate circulation in the afflicted part.

HOW TO APPLY IT—

1 - Dip the gauze into boiling water and then wring it out.

This is done in a manner similar to that of Fomentations *(page 178)*, in which the ends are kept dry and the boiling hot center part is twisted. Care must be taken not to apply too hot a compress. For this purpose, a temperature of 120° F. is best.

2 - Be very careful to place no pressure on the cloth; for you do not want it to touch the eyeball. While one eye is being treated, the other should be protected with a clean, dry dressing or with a shield of some kind.

3 - The eye should be dried well before the next hot compress is applied, in order that burning will not occur. Because the compress is usually quite small and uncovered, it cools quickly, and must be changed about once a minute. 10-15 minutes of such compress changes will usually bring the desired results.

4 - The treatment should be concluded by cooling the body part with a cool cloth, then drying thoroughly and covering it to keep it warm.

CAUTION—Memorize this sentence: No hot cloth should ever directly touch an eyeball, with the eye open.

3 - HOT-WATER BOTTLE

WHAT IT IS—This is a soft rubber bag filled with hot water that is laid on or beside a body part. Most people are well-acquainted with hot-water bottles; but many do not realize the several precautions that should

accompany their use.

HOW IT CAN HELP YOU—The hot-water bottle provides localized heat just where it is needed; and it does it with relatively little effort. A hot-water bottle can be used to relieve pain and congestion, provide relaxation and rest (if prolonged), and reinforce or prolong the effect of Fomentations *(pages 178)*.

WHAT YOU WILL NEED—A hot-water bottle (obtainable at your local drugstore), a flannel cover or a Turkish (rough surface) towel, a pitcher or jar with water (at 115°-125° F.), and a bath thermometer if you need to test its temperature.

HOW TO APPLY IT—*(See picture on this page.)*

1 - Fill the pitcher with water (115°-125° F.); and, from the pitcher, fill the hot-water bottle a third to half full. Place the bottle on its side, tip up its mouth, and press lightly until the water comes up to the top; this expels the air within it. (Expelling the air from the bottle enables it to lie flat, be less bulky and difficult to use, and thus provide the most heat.) Then close it tightly and test for leaks. Cover the bottle with a flannel cover or a Turkish towel. (It is best to sew a cover with a button flap for the bottle instead of wrapping it in a towel. For movement can cause it to become separated from the towel and possibly burn him.)

2 - The value of a hot-water bottle is in the temperature of the water within it. Therefore you will need to refill it regularly during the time it is being used.

3 - Later, store the hot-water bottle by hanging it up, bottom up, with the stopper out.

ADDITIONAL POINTS—The hot-water bottle can be wrapped in a moist cloth, which is then covered by a dry one. This will give the effect of a mild Fomentation *(page 178)*. And Fomentations, themselves, may be reinforced or prolonged by the use of hot-water bottles placed outside of them.

CAUTIONS—The hot-water bottle should only be partly filled with water, never full. Test the water temperature in some way (thermometer is best), so that you are not placing water that is too hot inside it. Water temperature is especially important if the bottle will be warming a dazed, unconscious, or overly weak person. Be very careful about placing a bottle by a paralyzed or diabetic person, lest he be burned. Always test the bottle for leaks; and always cover it with flannel or toweling. Watch the position of the bottle; for, if he is restless, it may be moved and burn him. Avoid unnecessary weight on him. Never leave the hot-water bottle doubled on itself or in contact with anything oily (oil rots rubber).

4 - HOT PARAFFIN BATH, PACK, DRESSING, AND WRAP

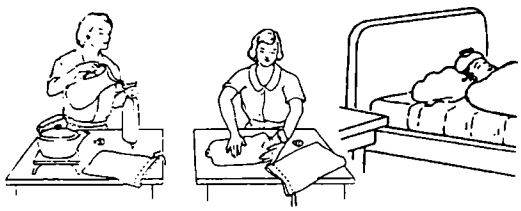
WHAT IT IS—This is a warm bath for an extremity (often an arthritic hand). It is especially helpful because of certain properties of paraffin, described just below.

PARAFFIN AND HEAT—Paraffin is a waxy, white, tasteless, odorless substance that can be a real blessing in your home. One of the important properties of water is its high heat conduction. This means that it can quickly transfer heat to something else. But paraffin has a low heat conduction. This means that it can be used to apply heat for a longer period of time to a local area. Paraffin will hold heat longer than water, because it has a heat capacity of .62 as compared with 1.0 for water. Thus it is about half that of water. But its heat-retaining qualities are greatly increased by the fact that it solidifies only a few degrees above tolerable temperature. Therefore if you place your hand in paraffin just above the melting point, a solid layer, or glove, of paraffin quickly coats the skin, and just as quickly becomes a temperature that is not too hot. All the rest of the paraffin in the bowl will continue to be too hot for your hand; however, the hand will continue to feel nicely warm for quite some time. This is due to the low heat conductivity of the paraffin and the absence of convection currents next to the skin. Also, the actual skin temperature can be hotter than otherwise possible without burning, pain, or any injury because the covering of the paraffin will not permit the coated skin to sweat. Paraffin does not lose heat by evaporation or by convection once it is hardened. Last but not least, it has a "latent heat" of 35 calories, and water has no latent heat so near to body temperature.

HOW IT CAN HELP YOU—The Paraffin Bath is used for painful, arthritic-type joints in the arms or the legs. Most often it is used on the hand. It soothingly relieves pain as it greatly increases the blood circulation to the afflicted body part. Even the smallest blood vessels become dilated as the nourishing, healing blood courses through the painful extremity. In addition, the temperature of the surrounding areas are elevated, thus helping them to resist the disease.

The Paraffin Bath (or Paraffin Pack, Dressing, and Wrap) can help in conditions of arthritis, gout, and sciatica. It is also helpful for stiff joints, tendon repair, sprains, strains, tenosynovitis, old burns, skin grafts, and following fractures. —But do not use it if there are open sores or lesions on the area to be treated. Those with diabetes, or any tendency to lessened skin sensi-

HOT WATER BOTTLE and ICE CAP



bility, must use it with caution.

WHAT YOU WILL NEED—2-4 pounds of paraffin wax and 4 tablespoons of mineral oil. Double boiler. Bath towel. Piece of oiled silk. Thermometer.

Paraffin wax which is used in household preserving can be used. It is best to add some mineral oil to it, so that the solid paraffin is less brittle and melts more easily. The added oil also helps the tissues to be softened, preparatory for later massage. Use 1 pint mineral oil to 5 pounds of paraffin.

HOW TO APPLY IT—*(See picture on this page.)*

(1) THE PARAFFIN BATH

1 - Melt the paraffin in a double boiler or crock pot, and let it cool until a thin film begins to form on top.

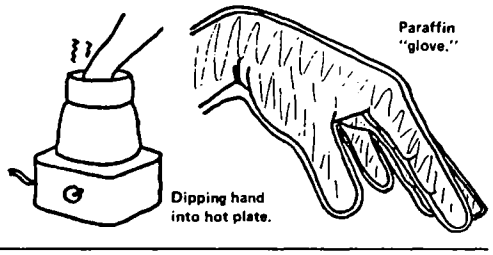
2 - Examine the skin for open sores, lesions, unhealed scars, and skin infections. Never use the paraffin bath if there are sores, open wounds, etc. Hairy areas on the part to receive the paraffin should previously be clipped, shaved, or oiled. Now wash and dry very carefully the hand (hands, foot, etc.) to be treated. (We will here assume that only one hand is be treated.)

3 - Dip the hand quickly into the paraffin, keeping the fingers separate. If the wrist needs to be coated also (because it also is in pain), the container should be deep enough for this to be done. (Or paint the paraffin with a brush over the parts that cannot be dipped.) If both hands are to be treated, then dip one hand in first, remove and wrap it in plastic while the other hand is being coated. The effect is prolonged by treating the opposite hand also. Instruct him to hold the fingers or toes in a relaxed position without moving - in order to avoid cracks in the paraffin "glove."

4 - Remove the hand until the paraffin hardens; then dip it again. Repeat this (10 times) until a thick glove forms.

5 - When the glove is thick enough, immerse the hand into the paraffin in the pot for 10-15, or up to 30, minutes or longer (or wrap the hand in plastic, towel, and wool fomentation cloth and leave for 15 minutes). Be careful with elderly or weak people. Have a rack in the tank, so their fingers do not touch the bottom. Read all of the directions below in order to learn additional variations.

PARAFFIN BATH



6 - Leaving the hand in the paraffin bath does not macerate the skin as might happen if it were left in water for the same amount of time.

7 - When finished, remove the wax by peeling off the "glove," and put the glove back into the pot of paraffin.

8 - Massage and exercise can now be given to the hand; this will help it retain the better blood circulation that it received during the bath. For exercise, squeeze and mold a piece of warm paraffin in the hand.

9 - While the paraffin was on the hand, it absorbed some of the acids in the hand. You can clean this "glove" by placing it in a different pot, if you wish, and then heating it to the boiling point, then removing from the fire. The acids and other wastes quickly boil off. When cold, place the chunk of paraffin back into the regular paraffin pot. When not in use, keep this pot covered at all times.

(2) HOT PARAFFIN PACK

1 - Heat the paraffin in the double boiler (or any double container with water in the lower pot and the paraffin in the upper one). Again, add some oil.

2 - By means of a soft paint brush, about 3 inches wide, the paraffin is applied to the area in successive coats, each of which is allowed to harden enough so that the next one can be put on. Usually about ten coats are sufficient. You have now made a "hot Paraffin Pack" on the afflicted part. It will remain warm for about an hour.

(3) HOT PARAFFIN DRESSING

This is similar to the Pack, except that the layers of paraffin are alternated with a gauze bandage. Such dressings are applied to arthritic joints which are acutely inflamed, for they furnish both heat and immobilization. This Dressing may be kept on overnight.

(4) HOT PARAFFIN WRAP

This is yet another variation that is especially helpful for sciatica. The paraffin is applied rapidly with a brush, 10-12 coats, then covered with oiled silk or wax paper, then a towel or flannel. It may be kept warm with a heat lamp for 10-30 minutes.

5 - KIDNEY STONE PACK

WHAT IT IS—This is a hot application over a painful kidney when sharp pains from a kidney stone are felt.

HOW IT CAN HELP YOU—A Kidney Stone Pack is placed over the painful kidney area at a time of a kidney stone attack (sharp pain from the stone). The pack, renewed as frequently as needed, is kept on for hours until the stone passes or the pain stops.

WHAT YOU WILL NEED—Heating pad. Plastic square or garbage bag. Hot fomentation pack. Towel. Sheet. Blankets. Cold compresses. Radio.

HOW TO APPLY IT—

1 - Spread a half-sheet across the middle of the bed. Over this place a heating pad turned up high, with a plastic square or garbage bag over it. On top of this, place a hot pack *(see Fomentation on page 178)*, with a towel over it. This is a large, very hot fomentation and should be applied quickly while the heat is still almost unbearable. The electric heating pad will keep it hot.

2 - Position the sufferer on the bed so that his painful kidney is centered over this fomentation. Bring up the sheet on each side and pin it snugly around the body, to help hold the pack in place.

3 - Plug a radio into the same electrical outlet that the heating pad is connected to. Tune the dial to an area of no radio reception, and then turn the volume to high. (If moisture accidentally gets on the electrical units of the heating pad, the short will cause static on the radio, thus alerting you.)

4 - Keep the head cool with cold compresses.

5 - Conclude the application when the stone passes or the pain ceases. Then keep him covered and warm. It is well to let him sleep awhile afterward.

6 - SINUS PACK

WHAT IT IS—This is a combined set of applications applied simultaneously, to reduce sinus pain.

HOW IT CAN HELP YOU—These applications can help relieve the pain of a sinus attack.

WHAT YOU WILL NEED—Fomentation cloths. Two trays of ice cubes. Two small dry towels. Hot footbath. Hot spinal fomentation.

HOW TO APPLY IT—*(See picture on next page.)*

1 - Put one end of the bed (or treatment table) against the wall. Then place a set of three hot fomentations to the chest (3 minutes hot, with 30 second cold applications between them). There should be no delay between the removal of the hot fomentation and the placement of the cold compress on the chest. Leave it there a full thirty seconds. The third fomentation should remain on the chest throughout the remainder of the treatment.

2 - Put one tray of ice cubes in a small dry towel; fold it over to a 5" x 10" size. Then make a second ice pack in the same manner.

3 - Place one ice pack under the back of the neck, centered over the lower edge of the skull. Wet the top of the head slightly and then place the second ice pack on the top of the head. Hold the pack in place with a pillow.

4 - Fold a small towel lengthwise; and, holding it in its center edge with one hand, fold the ends down 90° from the central point. *(See picture on page 183.)*

5 - Place it on the face for protection (especially to protect the eyes), leaving the nose exposed through the opening made in the middle (see picture).

6 - Using a single hot fomentation, fold it as the towel was folded, and place it over the towel on the face for exactly three minutes. Then remove both the fomentation and the towel beneath it.

7 - Wring another small towel from ice water and place it on the face over the reddened area. Make this change quickly and leave it on for a full thirty seconds.

8 - End by drying briskly—and then repeat steps 4 through 7 three times. Conclude with a cold mitten friction, beginning with the face. A hot and cold shower can be taken instead of the mitten friction.

7 - HEAT LAMP

WHAT IT IS—This is an ordinary incandescent light (or an infrared heat lamp, if you prefer), used as a local hot application. Either way, we will here call it a "heat lamp," but we highly recommend that, in most cases, you use an incandescent and not an infrared lamp (and never an ultraviolet lamp for this purpose). *Do NOT use a sun lamp as a heat lamp!*

HOW IT CAN HELP YOU—Some conditions are best cared for with a heat lamp. An outstanding example is its use in clearing out stuffy, swollen nasal passages. Another example would be earaches. It can also be used for other local heating applications, such as limbs, perineal care, etc.

WHAT YOU WILL NEED—The simplest and least expensive is a shop lamp with a wire screen over it. Screwed into this is a regular incandescent light bulb. Different size wattages may be used for different heating effects; but, normally, a 100-watt bulb will suffice for most purposes. The shop lamp should have a clamp attached to it or should be attached to a clamp. This clamp can then be attached to a bed headboard, chair, or some other bracket above the bed.

An infrared bulb can also be used. But this is more expensive and actually somewhat less useful over an extended period of time, due to its intense heat. (Be very careful to follow the directions on the package.) But in certain situations an infrared lamp can be helpful in the house.

Do NOT use an ultraviolet lamp as a heat lamp! It can cause severe sunburn and permanently damage the eyesight. Ultraviolet rays are powerful; they are intended only for sunbathing purposes in the wintertime. When used (if at all), they should only be turned on for a few moments and at a distance from the body.)

HOW TO APPLY IT—*(See picture on next page.)*

1 - Firmly set the incandescent heat lamp over the part to be treated. The lamp can be clamped either to the bed headboard or to a temporary arm or bracket.

2 - A folded, wet facial tissue or thin cotton cloth should be laid over the part to be heated with the lamp. If he is laying down in bed, the rest of his body should be covered and kept warm.

3 - The average timing is 20-30 minutes; but, in

certain conditions, such as earache, it might be used for several hours, so that he can obtain rest.

SPECIAL APPLICATIONS—Here are several specialized uses for a heat lamp:

1 - Opening nasal passages - Place a 100-watt (incandescent) shop lamp about 2 inches from the nose. Two small squares of moistened tissue can be placed over the eyes to protect them. The heat wonderfully opens up the stuffed nose and lets it drain. (Be sure that the person is drinking enough water; this alone will open up many stuffed noses!)

2 - Earache - Use a 100-watt regular light bulb. Even children and small babies will lie still as they quickly feel the relief from the pain.

3 - Postpartum perineal care - Following a childbirth, pain from damaged tissue can be relieved during the healing process by occasional use of the lamp. No assistance is needed; it is simple to use. The lamp is also helpful and soothing after a hot sitz bath.

8 - POULTICES

CHARCOAL POULTICE, CLAY AND GLYCERIN POULTICE, CLAY POULTICE, FLAXSEED POULTICE, GARLIC POULTICE, COMFREY AND SMARTWEED POULTICE, HOPS POULTICE, MUSTARD POULTICE, AND CHARCOAL AS A NON-POULTICE

WHAT IT IS—This is a salve of one or several things combined with a little hot water, which is then spread on a damp cloth and placed over an infection which is generally, but not always, on or just below the surface of the skin. —*More poultices on pp. 112-113.*

HOW IT CAN HELP YOU—Poultices can help in a number of ways in dealing with problems in local, surface portions of the body. Here are some of them: (1) To reduce inflammation. (2) To relieve pain and congestion and act as a counter-irritant. (3) To absorb poison (one of its outstanding advantages!). (4) To adsorb and thus neutralize chemical toxins, insect bites, and stings. (5) To hasten the formation of a head in an abscess or boil. (6) to reduce swelling and tension. (7) To deodorize in the best way: by eliminating the cause of the odor. (8) To help treat wounds. (9) Because of the above help, to act as an effective and safe antiseptic and disinfectant.

WHAT YOU WILL NEED—You will need warm water, a bowel, a spoon, clean muslin sheeting or flannel, wool cloth, piece of plastic, pin or tape, ice or a cold wet cloth. You will also need the ingredients of the salve to be used in this poultice. This may include one or more of the following: charcoal; clay and glycerin; flaxseed; comfrey and smartweed; hops; mustard; garlic.

HOW TO APPLY IT—*(See picture on page 184.)*

1 - Assemble everything and prepare the poultice in a warm room.

2 - Several poultice formulas are given below.

3 - Place the salve on a damp cloth; then place that on the area to be treated. Cover with the plastic, and then with the wool cloth over that. Pin or tape it in place. Leave it on overnight.

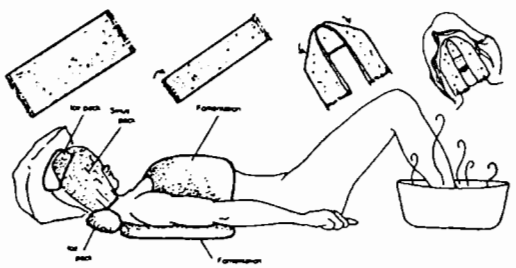
4 - When removing it, be careful not to spill charcoal, etc., on the floor. Rub the part with ice or with a very cold, wet washcloth. You may wish to renew the poultice with fresh salve and clean cloths.

POULTICE FORMULAS—A number of different mixtures can be prepared for use in poultices. Here are several of the more common ones:

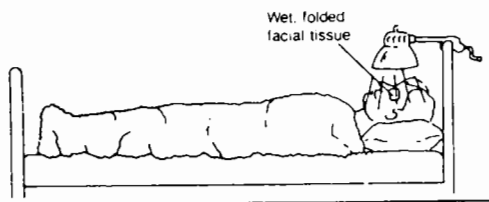
1 - Charcoal Poultice - Charcoal has an amazing absorptive (adsorptive, the experts call it) ability to pull into itself toxins and poisons, thus neutralizing them. This is due to its large chemical surface and the fact that charcoal is pure carbon. The carbon hungrily unites with other substances. Poisons, gases, chemicals, toxins, bee and insect stings and bites—all can be adsorbed by charcoal. Charcoal can also be put in a poultice and placed over the abdomen, in instances of diarrhea and similar intestinal problems (see "Charcoal as a non-poultice," below). Charcoal can adsorb far more than its own weight. A cube that is 2/5 of one inch square can adsorb 33 square yards of poison! Most of the major poisons known to mankind can be adsorbed and thus neutralized by charcoal.

With a spoon in a bowl, mix equal parts of powdered charcoal and ground flaxseed. Add enough hot water to make a paste. Quickly place this salve on a piece of warm, damp cloth before it cools. Spread it to the desired size; and place the cloth on the afflicted

SINUS PACK



HEAT LAMP



area. Follow the remaining directions as described above, under "How to Apply It."

2 - Clay and Glycerin Poultice - Dig up some good-quality clay from several inches below the surface. It should be fine and with no pebbles, etc., in it. Heat and sterilize it in the oven at 350° F. Add some water to moisten it again; add several tablespoons glycerin. It is best to use this only once, after which renewing the poultice with a fresh mixture. Clay also absorbs. It is the primary ingredient in mud baths for arthritis.

3 - Clay Poultice - Prepare the clay as described above, but do not mix with glycerin. Cover and keep moist with frequent applications of water (because no glycerin was used as a moisturizer).

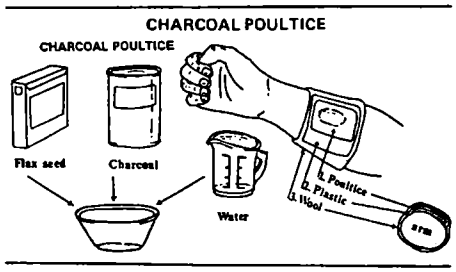
4 - Flaxseed Poultice - Obtainable from a health-food store, one tablespoon of flaxseed should be ground up and mixed with a cup of water brought to a boil. This yields enough paste to cover the front of the abdomen. Spread the mixture on a strip of dampened, wrung out, old sheet, or directly on skin. Cover with a larger piece of plastic; hold in place with a 50-60 inch strip of cloth (or an ace bandage, obtainable at the drugstore). Leave it on for 30 minutes or longer (even overnight). Remove it, wash the area with a washcloth, then give a cold mitten friction to it. Shower if necessary. Dry thoroughly.

5 - Garlic Poultice - This is a powerful way to neutralize certain poisons. It can help reduce abscesses, fungus skin infections, eczema, dermatitis, boils, and is used to neutralize the acids in arthritis and similar conditions. Make a pulp of raw garlic and place it on a cloth and then over the affected part. This is not a painless remedy, but the results are usually well-worth the effort.

6 - Comfrey and Smartweed Poultice - Fresh or dried leaves of comfrey and smartweed are whizzed in a blender with a little water and then spread on the area needing attention. Apply as for Flaxseed poultice, above.

7 - Hops Poultice—Using the same methods as for Comfrey and Smartweed Poultice, and Flaxseed Poultice, above, apply the hops poultice. Hops is a plant; the dried, powdered leaves of this are obtainable from your health-food store.

8 - Mustard Plaster—Mix 1 tablespoon dry mustard to 4 tablespoons wheat flour (for a child: 1 to 8; for an infant: 1 to 12). Add enough lukewarm water to make a thin paste that is not runny. Spread it on a cloth that is on a dinner plate. Place one thin cotton cloth over the affected part (use a mustard plaster for arthritic joint pain, backache, and to improve circulation). Put on the poultice; and, over it, place a large piece of plastic and then a towel. A fomentation can be applied over this, to increase the heat. Do not leave the plaster on for more than 20 minutes. Remove it earlier if it is burning or stinging, or the skin has become well-reddened. Wipe the area with a cloth or paper tissue dipped in vegetable oil, to remove all mustard traces! Cover the area with a warm blanket; pin in place and leave on overnight.



CAUTIONS—Certain poultices (especially mustard) can cause blistering. Especially use mustard with caution, and be ready to remove it as soon as needed. A poultice applied after pus develops is sometimes a detriment; for the salve can cause bacterial development. Do not use poultices over active suppuration (pussing). Keep in mind that the heat in the poultice is often as important as the poultice, so keep it warm. In pneumonia, peritonitis, and other deeper inflammations, the poultice should be large enough to cover a surface area as large as the organ being treated. The poultice should be covered with plastic and removed if it becomes cold. A cold poultice or an old poultice do not accomplish much.

CHARCOAL AS A NON-POULTICE—Charcoal can also be used without being placed in a poultice. Here are two of the ways: (1) In case of stomach or small intestinal upset, obtain five (or so) charcoal tablets and a glassful of water. Chew up the first tablet in some of the water and swallow it. Repeat this with the remaining tablets. Include at least 3/4 of a glassful of water—for it is the water that carries the charcoal to the stomach and intestines. (2) In case of diarrhea, drink one tablespoon (or 12 tablets) of charcoal powder to one glass hot water, twice a day. An alternate method is to mix the charcoal in olive oil, and take it 3 times a day. When the stomach or bowels are very tender and irritated, let the charcoal stand in 2 quarts of water and only use the water off the top. This, of course, will not provide as powerful a mixture. See your doctor if the diarrhea is not promptly stopped. *—More poultices on pp. 112-113.*

— SECTION SIX —
LOCAL AND LARGER HOT

WHAT IT IS—Hot blankets are wrapped around part of the body in order to impart heat to it. There are several types of Hot Blanket Packs. We will here describe each of the important ones.

"HOT ABDOMINAL PACK"—That which is listed in Kellogg's *Rational Hydrotherapy* as "Hot Abdominal Pack" should read "Wet Girdle." The Wet Girdle (a

heating trunk pack) is described on *page 172* of this chapter.

1 - FULL HOT BLANKET PACK

HOW IT CAN HELP YOU—The Hot Blanket Pack is a vigorous sweating measure, and also is very helpful in drawing blood away from congested internal organs. (The congested internal organs are generally the ones beneath where the Hot Blanket Pack is placed.) Any sweating treatment reduces internal congestion, but this application is much more effective when the wet blanket is placed next to the skin. In those instances in which the congestion is not localized in some particular part, but consists of a general internal congestion, a general sweating treatment is usually sufficient for its relief. And this is especially true in the first stages of many fevers, in colds, gripe, etc.

Thus, the Hot Blanket Pack helps in two ways: (1) induce vigorous sweating, and (2) reduce congestion.

PROBLEMS IT CAN HELP SOLVE—The strong sweating effect of the Hot Blanket Pack is a decided help in uremia, eclampsia, acute Bright's disease, kidney insufficiency and congestion, pneumonia, and sometimes typhoid fever. It is especially helpful for kidney and gallstone pain.

This will help illustrate how hot blanket packs work: When there is congestion and high blood pressure in the kidney, a Hot Blanket Pack laid over it will reduce both of these problems. And with the alleviation of these two conditions, the kidney will soon be able to function again.

WHAT YOU WILL NEED—Two double blankets or one single blanket and one double blanket. Four hot-water bottles half filled with hot water (160° F.). A pail, bowel or wash basin of ice water. Compresses for the head, neck, and heart *(see Cold Compress, page 169)*. Also needed are two Turkish towels, a tumbler, drinking tube, and a pitcher of hot water for drinking.

HOW TO APPLY IT—*(See picture on next page.)*

1 - Give a Hot Footbath *(page 193)* and have him drink hot water.

2 - Spread a double blanket on a table or bed. Place a Cold Compress *(page 169)* to his head while his feet are still in the Hot Footbath.

3 - Fold the single blanket (or another double blanket - for holding the heat longer) lengthwise in a convenient width for wringing them (either by hand or through a wringer).

4 - Dip the center of the folded blanket in boiling water; and then wring it by twisting. *(See page 178 of "Fomentation" for how to do this.)* Too much water left in the pack will make it feel very hot at first, but it will then cool much more rapidly than if it had been wrung nearly dry. Therefore, wring it as dry as possible. *(For an alternate, non-wringing method, see "Fomentation, Steamer Method" on pages 178-180.)*

5 - Quickly unfold and spread out the moist blanket over the dry blanket on the table.

6 - Help him to lie on the hot blanket. If he is too weak, you may need to lift him onto it. As quickly as possible (or as rapidly as he can bear it), cover the entire body (except the head) in the hot blanket. The wet blanket should come in contact with the body over its entire surface, so that no air spaces will be left.

7 - Place a hot-water bottle between the legs with one thickness of dry blanket between it and the moist blanket. Place a second hot-water bottle at the feet. The other two hot-water bottles should be placed along the sides of the trunk. Each one should have the dry flannel between it and the moist flannel. Fomentations *(page 178)* may be used to reinforce the pack instead of hot-water bottles. If used, the fomentations should be changed for fresh ones about every 10 minutes. If there is not enough covering between the hot-water bottles and the skin, there is danger of burns. If he complains, immediately place more covers between the bottles and his body.

8 - Tuck in the wet blanket well, and then the dry blanket over it. Be sure both are tucked in well about the feet, shoulders, and neck.

9 - Place Cold Compresses *(page 169)* about the head and neck, and use a soft dry towel in order to protect the chin from being touched. Change the compresses to fresh ones before they are warmed very much.

10 - (If the pulse becomes too rapid, also place a Cold Compress or an Ice Bag *[page 170]* to the heart.)

11 - General, free perspiration should be induced by the pack. Important: Long-continued heat without perspiration is not good for him. For general sweating purposes, a dry blanket may be placed between him and the wet blanket. But for stronger effects, the wet blanket should be next to the skin.

12 - He should begin perspiring very soon, within 10 minutes. If not, give hot water to drink or a Hot Footbath, or both. In giving the Hot Footbath, the blankets should hang down over the legs to keep air from circulating inside.

13 - For sweating effects, continue the pack for 20-30 minutes or until it ceases to have a heating effect. (If only given to tone up the body for tonic effect, the pack should only last 5-10 minutes.)

14 - When finished, remove one part of the blanket at a time and give that body part a Cold Mitten Friction *(pages 187-188)* or a Cold Towel Rub *(pages 188-189)*. Then recover it with a dry blanket or bedding.

15 - Remove the blanket from another body part and repeat the process. Best: Begin with the arms, then chest and abdomen, then legs. Entirely remove the wet blanket and do his back last of all.

CAUTIONS—Be careful that you not burn him with a blanket, initially too hot, next to his skin. Be equally watchful of the hot-water bottles. Give attention to his pulse and apply cold to his heart, if necessary. He must begin perspiring within 10 minutes!

When giving packs to those having paralyzed sensations, are unconscious, or have diabetes or dropsy (edema), it is safer if a thickness of dry blanket intervene between the person and the wet blanket. Hot-water bottles should be more thoroughly covered, and should contain water at a lower temperature.

2 - HOT TRUNK PACK

WHAT IT IS—The Hot Trunk Pack is a Hot Blanket Pack applied only to the trunk of the body, not to the limbs.

HOW IT CAN HELP YOU—Its general effects are similar to those of the Full Hot Blanket Pack, described above. It is especially helpful in digestive disturbances and relieving kidney, bile, and intestinal pain.

HOW TO APPLY IT—

1 - Begin with a Hot Footbath, both before and during the time that the pack is given.

2 - The hot, wet blanket should cover the body from the arm pits down to the bottom of the pelvis. It should not cover the arms or legs. Under it should be a large dry Fomentation cloth *(see pages 178-180 for details on these cloths).*

3 - The outside dry blanket should cover the whole body, but this is only to provide the protection of uniform warmth; so it should not be wrapped tightly about the arms and legs.

4 - Place one hot-water bottle over the abdomen between the folds of the dry blanket. Put two more on either side of the trunk.

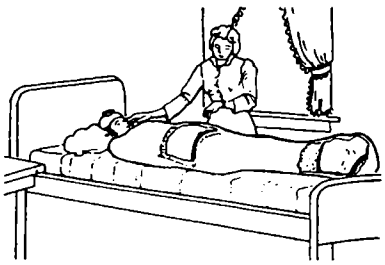
5 - The Hot Trunk Pack should last 20-30 minutes, and should normally close with a cold friction treatment. But if the pack is given for the relief of pain, omit the cold friction.

(For many more details on the giving of Hot Blanket Packs, see Full Hot Blanket Pack, above, on page 185.)

3 - HOT HIP-AND-LEG PACK

WHAT IT IS—This is a Hot Blanket Pack that is applied to a number of problems in the pelvis, legs, and feet. It is also one of the most efficient derivative measures used in water therapy.

HOT BLANKET PACK



This is a "cutaway view" showing the various layers, towels, fomentations, plastic sheeting and blankets. An ice bag is on his head and a helper is taking the pulse at the temple.

HOW IT CAN HELP YOU—Not only is the Hot Hip-and-Leg Pack useful for a number of lower body conditions, but it is extremely helpful in derivation: the application of heat to one area in order to draw blood from a congested area somewhere else. *(For more on "derivation," see pages 160-162.)*

HOW TO APPLY IT—*(See Illustration on page 186.)*

1 - The hot, wet blanket, and the dry blanket over it, should reach from slightly above the top of the hip-bone (the crests of the iliac) on down to the full covering of the feet.

2 - One hot-water bottle should be placed at the feet, within the folds of the dry blanket, and another one between the legs.

3 - In order to powerfully increase the derivation effects, place an ice bag over the congested part. The pack draws the blood away from this congested part (derivation); and the ice bag drives it away (depletion).

4 - Conclude with a Cold Mitten Friction, applying it to one limb at a time. This will help retain the blood in the legs after the treatment is ended.

(For much more detail on Hot Blanket Packs, see page 185.)

4 - HOT LEG PACK

WHAT IT IS—The Hot Leg Pack includes the feet, legs, and half or more of the thighs.

HOW IT CAN HELP YOU—This pack is given for the same purposes as the Hot Hip-and-Leg Pack, above; yet it is less efficient than the Hot Hip-and-Leg Pack. Why then is it used? It is used when it is undesirable to move the pelvis.

HOW TO APPLY IT—

1 - It is given in the same manner as the Hot Hip-and-Leg Pack, above. You will also want to read about the Full Hot Blanket Pack *(on page 185)* for much more complete details.

2 - Except for the smaller coverage (the hips are not included), the application of the moist blanket, dry blanket, hot-water bottles, and concluding cold friction are all the same.

3 - A large Fomentation *(page 178)* may be used over the front and sides of the pelvis at the same time that the pack is given. In this way, almost as much surface is covered as in the Hot Hip-and-Leg Pack.

5 - HOT PACKS WITH ICE BAGS

WHAT IT IS—This is the most powerful and efficient means of derivation known to hydrotherapy. Blood can so concentrate in a state of congestion in a deep organ within the body, that it is difficult to restore a normal flow of blood in and out of that organ. "Derivation" does it by pulling the excess blood away from the congested part.

HOW IT CAN HELP YOU—These packs are espe-

cially helpful in reducing internal congestions, reducing or terminating local inflammation of deep parts, and relieving the pain that accompanies the inflammation. For all of these purposes, these packs are used only in the acute stage of the inflammatory process.

PROBLEMS IT CAN HELP SOLVE—The hot pack draws the blood away from the congested area that is choked with an excess of blood. You can call this a "pull effect." The ice bag drives the blood away from the afflicted area by reflexively contracting its deep blood vessels. This is a "push effect." The Cold Mitten Friction (given at the close) causes the extremity, where the packs were placed, to hold the excess blood longer than they otherwise would; this helps the body to maintain the restored organic circulation for a longer period of time.

HOW TO APPLY IT—

1 - This water therapy can be used with any of the three Hot Blanket Packs, described above *(page 185)*. Simply follow the instructions given under each one while adding the ice bag over the congested area.

2 - Do remember that it is best to use the Hot Packs with Ice Bags only in the acute stage of the infection.

EXAMPLES OF HOW IT CAN BE USED—Here are but a few of the many ways in which Hot Packs with Ice Bags can be employed to reduce inflammation:

1 - Mastoiditis - Hot Hip-and-leg Pack or a Full Blanket Pack and Ice Cravat *(page 170)* or Ice Bag *(page 170)* over the carotid artery (slightly to the right and above each ear), plus Ice Cap *(page 170)* to the head and Fomentations *(page 177)* to the mastoid (just below the ear).

2 - Alveolar Abscess - Same treatment as for Mastoiditis, except that you give a Fomentation to the jaw.

3 - Kidney Congestion - Hot Trunk Pack or Full Blanket Pack and Ice Bag to lower third of sternum.

4 - Peritonitis - Hot Hip-and-leg Pack, leg Pack only, Ice compress (see Ice Pack, 169) or Ice Cap (170) to abdomen. See a physician!

5 - Appendicitis - Hot Hip-and-leg Pack and Ice Bag to the appendix region. See a physician!

6 - Puerperal Infections and Acute Salpingitis - Full Hot Blanket Pack or Hip-and-leg Pack and ice to pelvis (over pubic area).

— *SECTION SEVEN* —
TONIC FRICTIONS

WHAT THEY ARE—These are applications of cold water that are given with friction (vigorous rubbing of the body) in order to increase body circulation and heat. From the mildest to the most vigorous, these applications are: (1) the Wet-hand Rub, (2) the Cold Mitten Friction, (3) the Cold-towel Rub, (4) the Wet-sheet Rub, (5) the Dripping-sheet Rub, and "(6) the Ice Rub. In addition to this, the Salt Glow is often used on those who have a difficult time reacting well to the Cold Mitten Friction.

One or more of the first four frictions, listed above, are often given in an advancing pattern, aimed at building up the body. When the person is able to react with sufficient heat to one tonic measure, one may wish to begin treatments with the next one that is more severe.

HOW THEY CAN HELP YOU—Each of these water treatments can produce a vigorous stimulation of the whole body, depending upon: (1) which tonic friction is used, (2) the amount of "vigor" you put into it as you give it, and (3) the body's general reaction to the vigorous cold rub. With this in mind, these tonic frictions can provide a wholesome and vigorous circulation. They stimulate blood-vessel activity and circulation, heighten muscular tone and activity, increase nerve tone and sensibility. Also they stimulate muscular, glandular, and metabolic activities of internal organs. And they increase heat production and oxidation, increase phagocytosis and bactericidal antibody production in infectious fevers, and increase oxidation and elimination of bacterial toxins in infectious fevers.

But, more commonly, they are used to build up general body resistance, improve sluggish circulation, overcome generalized weakness, lack of endurance, low blood pressure, and strengthen one who has frequent colds.

WHAT YOU WILL NEED—The items needed for all of the tonic frictions are simple enough; depending on the treatment given, it will require several of the following:

A wash basin or small tub of water. 1-3 pails. Cold water or ice water for a more vigorous effect. Possibly ice, snow, or salt. 1-3 sheets. 1-2 small washcloths or one or two "friction mitts" made of rough Turkish toweling. (If used frequently, the mitts are well-worth sewing together; for they are so much easier to use than hand-held washcloths.) Plastic sheeting and towels for the bed and bedding, if the friction is given to one who is in bed. A warm, dry towel to dry him with afterward.

Here are the seven types of tonic frictions:

1 - WET-HAND RUB

WHAT IT IS—This is the mildest of the frictions and is only given to those who are too weak or infirm for a more vigorous tonic friction.

HOW TO APPLY IT—

1 - The Wet-hand Rub should be given in the same order and manner as the Cold Mitten Friction (explained just below), with the following exceptions:

2 - The Body should only be rubbed with a wet hand, dipped several times in cold water. Only one part is exposed for rubbing at a time; it is rubbed, then dried, then briskly rubbed with the dry towel and with the hands.

2 - COLD MITTEN FRICTION

WHAT IT IS—This is the most commonly used tonic friction, and is applied with a washcloth or two friction mitts, rubbed on the skin.

WHAT YOU WILL NEED—Pail or wash bowl of ice water at 50°-60° F. A sheet and three Turkish towels. Two friction mitts or two washcloths. Compresses (wet cloths) for the head and neck, if he is ill or infirm. Protective bed coverings, such as plastic sheeting is laid down (or special blankets that will later be dried out).

How to make your own friction mitts: The Cold Mitten Friction is such an invaluable help, to be used so frequently, that you will want to make your own mitts, since they are so much easier to work with then a hand-held washcloth. Have someone handy with a sewing machine make you some mittens out of rough (Turkish-type) toweling material. Simply cut apart an old pair of mittens and use it for a pattern.

HOW TO APPLY IT—*(See picture on page 188.)*

1 - The room should be warm and without drafts. If he is ill, first bathe his face and neck with cold water, or apply cold cloths to the head and neck. If he has valvular heart disease, place an ice bag over the heart before beginning the tonic friction. (If the person is feeling better, the friction can be given to him as he stands. Many people give it to themselves each morning.)

2 - Wring the washcloths or mitts from cold water, so that they are as dry as possible. Then begin quickly rubbing, drying, re-dipping, wringing, etc. Here is the order to follow:

[1] *Arm and forearm:* Rub vigorously until the skin is pink. This should require only a few seconds. Then dry them thoroughly and cover them well.

[2] *The other arm and forearm:* Dip and wring the cloths and do the other arm and forearm; dry thoroughly and cover with bedcovers.

[3] *Chest:* Repeat the dipping, wringing, rubbing, drying, and covering.

[4] *Trunk, thighs, and then legs.*

(When giving the treatment to a person with heart disease, some prefer to begin with the chest instead of the arms.)

3 - The entire tonic rub must be given rapidly, especially during the time that the part is barred and the cloth or mitten is in contact with the skin.

ADDITIONAL POINTS—The severity and tonic effect can be varied by the temperature of the water, frequency of dipping, amount of water left in the cloth after wringing, and the vigor with which the skin is rubbed.

3 - COLD TOWEL RUB

WHAT IT IS—This is the third most vigorous friction; but is not used as often as the Cold Mitten Friction (described above) or the wet-sheet rub (described below), or the Salt Glow *(page 189)*.

HOW TO APPLY IT—*(See picture on next page.)*

Give the Cold Towel Rub in the same manner as the Cold Mitten Friction, described just above, with the exception that a plain hand towel is used instead of the washcloth or mitts.

4 - WET-SHEET RUB

WHAT IT IS—This is a vigorous tonic that, used in a continuing buildup with the other frictions, will help improve one's overall health.

WHAT YOU WILL NEED—Three sheets. Foot tub of hot water at 105° F. Pail of water at 60°-70° F. Two compress cloths (light hand towels). Pail of ice water. Turkish towel.

HOW TO APPLY IT—*(See pictures on the next page.)*

1 - The room should be warm, without drafts. The one receiving the Wet-sheet Rub should come to the room with a good circulation and feeling warm. Otherwise the treatment should not be given.

2 - He should stand in the foot tub of hot water, and a cold compress should be put on his head and neck.

3 - Lightly wring a sheet out of the cold water (60°-70° F.) and quickly wrap it about him in the following manner: As he holds up both arms (or someone holds them up for him), the upper left-hand corner of the sheet is placed under his right arm. He then lowers the right arm, thus holding the sheet in place.

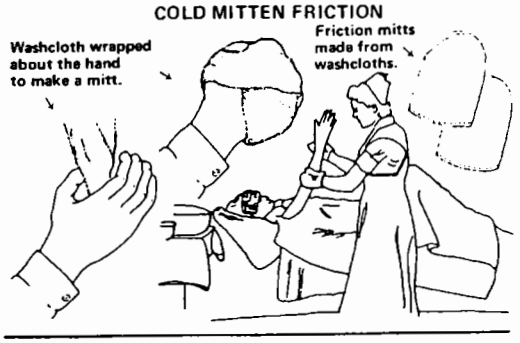
4 - Pass the sheet quickly across the front of his body and then under his right arm. He then lowers his right arm, thus holding the sheet in place.

5 - Pass the sheet quickly across the front of his body and under his left arm, which is then lowered to hold it.

6 - The sheet is carried across his back (behind him) and then up and over his right shoulder. From there it goes across his chest, around his neck, and over his left shoulder. The corner is then tucked under the edge of the sheet toward the back.

7 - Then tuck the sheet between his legs, thus bringing the wet sheet in close contact with every part of his body.

COLD MITTEN FRICTION



8 - Rub vigorously and give percussion (slight slapping) over the sheet. But note: Do not rub him with the sheet, but over the sheet. Work quickly, covering the whole surface as quickly as possible.

9 - The sheet should quickly become warm. When the treatment is finished, follow it by drying him thoroughly with a dry sheet and towels.

SPECIAL POINTS—He must be warm before it begins, and should previously have shown a good ability to react to cold towel rubs, pail pours, or cold percussion sprays. Do not expose him anymore than necessary, but work quickly to avoid chilling him. If he does not obtain a decidedly warm reaction, and soon, the value of the treatment is lost. Two helpers are needed to give the best results in Wet-sheet Rubs.

5 - DRIPPING SHEET RUB

WHAT IT IS—This is a Wet-sheet Rub, with the addition of a second and third pail pour.

WHAT YOU WILL NEED—3 pails of cold water (70°, 65°, and 60° F. respectively) in addition to what you would use for a Wet-sheet Rub *(page 188)*,

HOW TO APPLY IT—

1 - Follow the same procedure as with the Wet-sheet Rub, described just above, but with the following exceptions:

2 - Use the water from the 70° pail, to wring the sheet from. Give the Wet-sheet Rub treatment (as explained above), but after he and the sheet are warmed by rubbing and percussion. Without removing the sheet, pour the second pail of water (65°) over his shoulders and, again, rub vigorously until he is warm. Then pour the coldest pail (60°) of water over him; and, again, rub till warm.

3 - Conclude with the usual drying.

SPECIAL POINTS—Obviously, this and the next friction are the most severe; so, when given as a tonic measure, they should only be given to those who have shown themselves able to react with sufficient heat in response to milder cold friction treatments. (Do understand that the Dripping Sheet Rub is as strong a tonic as you will normally give. The Ice Rub, below, is generally used, to bring down fevers, not as a tonic treatment.)

6 - ICE RUB

WHAT IT IS—This is a rub that uses a piece of ice instead of a wet hand or cold mitten.

HOW IT CAN HELP YOU—The Ice Rub is not used very often for general tonic purposes. Its value lies in its powerful fever-reducing ability. When given to lower a fever, each part should be rubbed for some time and then dried without friction or percussion with the hands. Its prolonged application to the spine is more powerfully antipyretic (fever reducing) than the same length of ice rub elsewhere on the body.

HOW TO APPLY IT—

The Ice Rub is given in about the same manner as the Wet-hand Rub *(page 187)* and Cold Mitten Friction *(pages 187-188)*. But the Ice Rub will require much more careful covering of the bedding with plastic and towels. Tuck Turkish towels about each part, so that the water will be absorbed as it runs off the skin. The cake of ice may be held in the hand, but it is better if wrapped in a thickness or two of gauze.

CAUTIONS—Cold compresses (hand towels wrung out from cold water) should be applied to the head and the neck, and also to the heart, if necessary. In cases of typhoid fever, do not apply the cold treatment to the abdomen.

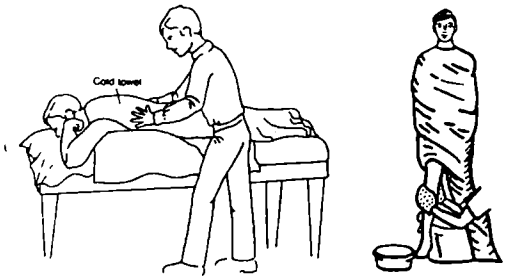
7 - SALT GLOW

WHAT IT IS—This is a tonic friction that has the same general mildness as a Cold Mitten Friction in its effect,—but less body heat reaction is needed to favorably respond to it.

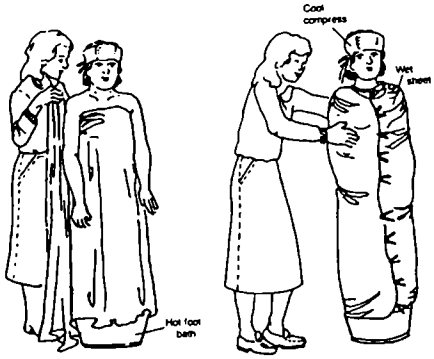
The Cold Mitten Friction is somewhat easier to use and is most often used. But for those who have a difficult time reacting to cold, the Salt Glow is ideal.

HOW IT CAN HELP YOU—Since no great amount of cold water is applied to the body, the Salt Glow does not require as much ability to react to cold. This is what makes it so helpful. It is useful in building up

COLD TOWEL RUB / DRIPPING SHEET RUB



WET SHEET RUB



general body resistance, improving sluggish circulation, low blood pressure. And it helps those with generalized weakness, low endurance, and frequent colds.

WHAT YOU WILL NEED—Two pounds of salt (best if it is coarse salt). Foot tub of water at 105° F. Two Turkish Towel Washclothes. Shower cap. One sheet.

HOW TO APPLY IT—*(See picture below.)*

1 - Make sure the room is definitely warm, without drafts.

Moisten the salt with cold water. (Moisten it just enough that it will cling to the skin when applied. If it is too wet, it will not produce the needed friction. This is important; so test it out on your own arm ahead of time, so you will know how moist to make it.)

2 - The one receiving the Salt Glow can stand or sit on a stool. Either way, his feet should be in a tub of hot water.

3 - Standing by his side, do each body part separately. Wet the entire skin surface of the shoulder, arm, and hand with hot water from the foot tub. Next apply some of the wet salt, spreading it evenly over the skin. With one hand holding the arm, rub with back-and-forth motions until the skin is in a glow. Use less friction if his skin is sensitive.

4 - Do the next body part, in this order: right arm, left arm, right leg, left leg, front and back of trunk (both done at once), sides of trunk and hips, front and back of hips (he must stand while his hips are done).

5 - Conclude with a shower or a dip in the bathtub to thoroughly wash off the salt. Then dry him with Turkish towels, rubbing briskly.

— *SECTION EIGHT* —
SPONGING

FEVER SPONGES
HOT SPONGE
COLD SPONGE
TEPID SPONGE
NEUTRAL SPONGE

WHAT IT IS—Sponging a person when in fever is an old-time remedial help that has been forgotten by many in our modern generation. For this purpose, a wet washcloth is normally used instead of a "sponge."

HOW IT CAN HELP YOU—Sponging greatly helps to reduce fevers; we all know how dangerous they can be if body temperature goes too high. It is important to keep in mind that a person with a fever may (1) have a hot, dry skin (because his body is not giving off heat as rapidly as it is being produced) or (2) he may have cold, clammy skin (because his temperature-regulating mechanism is not working properly, due to the infection). The sponging will be different for hot, dry skin than it will be for cold, clammy skin. And always remember: When in a fever, a person needs water to drink. As in burning buildings, water helps put out the fire.

WHAT YOU WILL NEED—You will need a blanket or extra sheet, a basin of water, two or three Turkish (rough) towels, one or two washcoths (or a soft sea sponge), a hot-water bottle, and a bath thermometer.

HOW TO APPLY IT—*(See picture on page 191.)*

1 - Cover him with a cotton blanket instead of the regular bedcovers (so they will not become wet). Protect the bed with towels as each part is sponged.

2 - Sponge one part at a time, in this order: arms, chest, abdomen, legs, feet, and finally the back.

3 - Sponge each part with no rubbing or friction. (The water left on the skin will evaporate, taking heat from the fevered body.)

4 - When you have completed sponging each part, cover it with a dry towel and dry it lightly. The skin may be left slightly moist, unless he shows a tendency to chill. Be sure he is dry before his bedclothes are put on again.

5 - Be certain that there are no drafts in the room during or after the sponging; and watch for a tendency for him to chill.

6 - A hot-water bottle may be placed at his feet afterward if he is likely to chill easily. Take his temperature about 30 minutes later.

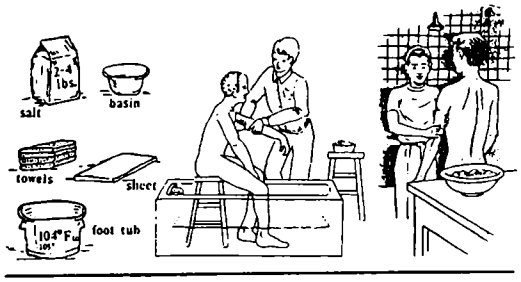
FOUR TYPES OF SPONGES—Here are the four basic types of fever sponges:

Hot Sponge - The water should be as hot as he can tolerate. The Hot Sponge relaxes and helps one go to sleep. But it is primarily used to reduce fever in those instances in which chilliness exists. And if he is chilling, also give him a Hot Footbath *(page 193)* or Fomentations *(page 177)* in order to help him perspire and increase the blood supply to the skin.

When the Hot Sponge is continued for 40-45 minutes, his temperature will not rise as rapidly afterward, as it would have done after a Cold Sponge. When giving any sponge, always do it in the following order: arms, chest, abdomen, legs, thighs, back. Bare one part at a time; then dry thoroughly and cover before doing the next. For the Hot Sponge, the cloth should be dipped several times for each part.

Cold Sponge (70°-80° F.) - This is the sponging temperature most frequently used when the skin is hot

SALT GLOW



and dry and there is no tendency to chilliness. Each part should be gone over several times and/or the entire process can be repeated until the desired effect is obtained. The temperature of the water and the duration of the treatment will determine the results.

A cold compress or washcloth may be placed on the forehead or in the armpit. Friction (rubbing) is used to bring blood to the surface, to increase the rate of circulation, and to hasten the cooling process.

Tepid Sponge (80°-92° F.) and **Neutral Sponge** (94°-98° F.) - Both of these are given to rest, relax, and help him to go to sleep. The effects are those of the Neutral Bath *(see page 195)*. Sometimes these two sponges are used to reduce fever, but they are not very effective for that purpose. Their primary value lies in bringing relaxation to one who is unable to go to sleep.

As you apply either of these two sponges, dry the skin gently, with as little rubbing as possible. To cool him, the treatment may be prolonged to allow for more evaporation. Then, quietly cover and let him go to sleep.

— PART TWO —
DIRECT WATER APPLICATIONS

— SECTION NINE —
PAIL POURS

WHAT IT IS—This is the pouring of water from a pail over part of the body or all of it. Quick and relatively easy to do, the Pail Pour is often used with other water therapies, often to conclude them.

HOW IT CAN HELP YOU—The Pail Pour (today termed "affusions" by the professionals) can produce an effect unequaled by that of any other water therapy. It is a flow of a considerable amount of water over part or all of the body; no other application has exactly this effect. Also, it is easily used in any home.

1 - GENERAL PAIL POUR

WHAT IT IS—This is a Pail Pour to the entire body.

HOW IT CAN HELP YOU—The General Pail Pour is normally used as a tonic measure, to strengthen the body. For this purpose, over a period of time, these pail pours may be given at gradually lowered water temperatures.

HOW TO APPLY IT—*(See picture on page 192.)*

1 - This may follow or conclude another water therapy, or it may be the entire treatment. If is often used after a Full Bath *(page 195)*, Salt Glow *(page 190)*, etc. See the Tonic Frictions for more information on many of these tonic applications *(pages 187-190)*.

2 - He should be warm beforehand. If given in a bathtub, he may sit or stand. If standing, his feet should be in a tub of hot water. Either way, a Cold Compress *(page 169)* should be placed on his head.

3 - Prepare three pails of water, each at a different temperature, according to the effect you wish to obtain.

4 - For the first pour, use pails of water at 100°, 90°, and 85,° or 80° F. respectively. This will provide a mild tonic effect. (If he has just come from a warm bath, a lower temperature may be used for each of the three pails or only two pails may be used.)

5 - In succeeding pail pours, lower the temperature of the pails until the third pail is 50°-60° F.

6 - Each time, after the last pail is poured, rub him vigorously, and dry him well with a sheet and towels.

2 - LOCAL PAIL POURS INCLUDING
LOCAL HOT POUR
LOCAL NEUTRAL POUR
LOCAL COLD POUR
LOCAL ALTERNATE HOT AND COLD POUR
SPECIAL APPLICATIONS

WHAT IT IS—These are "water pours" upon only part of the body.

HOW IT CAN HELP YOU—These are simple, brief water applications that are used in a number of situations. Primary among these is (1) a cold pail pour to the hips, after a hot half (shallow) bath, and after a Hot Sitz Bath *(page 194)*. In both instances, this pail pour is given to balance the circulation in the pelvis, which could afterward become chilled. (2) Smaller or larger pours to local body areas for specific physical problems. These special applications are discussed just below.

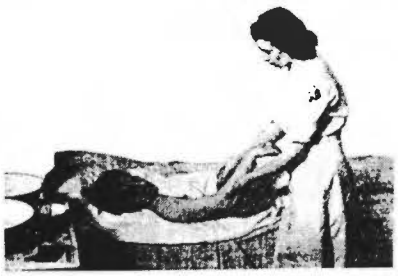
HOW TO APPLY IT—*(See pictures on the next page.)* (In giving local pours, the water should fall a distance of at least 3-4 inches, on up to 1-2 feet, before it strikes the body part. The condition of the part and the effect desired will determine this distance.)

Local Hot Pour—Relieves pain, wherever applied. Because the hot is so quickly given, the prompt aftereffect is tonic and strengthening.

Local Neutral Pour—This is relaxing; and, especially when applied to the spine, it helps relax nerves and induce sound sleep.

Local Cold Pour—If very brief, it is stimulating and tonic in effect; but, if prolonged, it reduces congestion and inflammation, and encourages white-blood cell

SPONGE



activity in overcoming disease. A long, cold pour to the head is strongly fever-reducing.

Local Alternate Hot and Cold Pour—This is a powerful tonic and stimulant. It produces fluxion (an increase of blood) in the part treated and derivation (drawing of blood) from other parts. It also increases white-blood cell activity. Thus, it is very helpful in treating an infected body part, when it is impossible or impractical to immerse the part in water (as with boils or carbuncles about the trunk or thighs).

PAIL POUR - SPECIAL

SPECIAL APPLICATIONS—Here are several special uses for these localized water pours: 1 - Local Pour to the Arm, Hand, Foot, etc.: Hold the body part over a small tub while the water is poured from a pail or large container. 2 - Local Pour to the Spine: Let him sit on the edge of a bathtub or on a stool in the bathtub. Then pour the water over the affected part. 3 - Local Pour to the Head: He should lie down on a bed or table, with his head resting over the end and a tub underneath. You may want to place a hand beneath his head to help support it.

— *SECTION TEN* —
PARTIAL BATHS

1 - CONTRAST BATHS

CONTRAST BATH TO THE HAND OR ARM
CONTRAST BATH TO THE FEET
CONTRAST BATH TO THE LEGS

SPECIAL APPLICATIONS—

WHAT IT IS—This is the immersion of the hand, arm and hand, foot, or leg and foot into a basin or tub of water. It is both simple and effective.

HOW IT CAN HELP YOU—A Contrast Bath (also known as Alternate Hot and Cold) is an alternating plunge of part of the body into hot water, then into cold, and back again. This results in a powerful alternate contraction, then dilatation of the blood vessels, and a general improvement of body circulation. For the particular body area being treated, it removes waste products and greatly improves rapidity of blood flow. And the quantity of fresh oxygen, nutriments, and white and red blood cells is also increased.

Contrast Baths to the hands, feet, arms, or legs are very helpful for fractures, arthritis (both rheumatoid and osteoarthritis), congestive headaches, edema, sprains, strains, trauma (after 24 hours), infections, lymphangitis (2-3 times a day), impaired venous circulation, and indolent ulcers.

WHAT YOU WILL NEED—For a contrast bath, you will need two containers, large enough for the water in them to come up over the extremities to be treated. If necessary, thoroughly cleaned buckets can be used. Medical personnel recommend that an antiseptic be placed in the water if there are open wounds. You will also need a bath thermometer and a bath towel. You may also need a pitcher, to add more hot water from time to time, and ice cubes for the cold water bucket. Sometimes a cold compress (hand towel wrung from cold water) or ice bag is also needed.

HOW TO APPLY IT—*(See pictures and diagram on next page.)*

1 - Place the limb in the hot water (105°-110° F.) for 3-4 minutes. Then put it into the cold (cold tap water or ice water) for one-half to one minute.

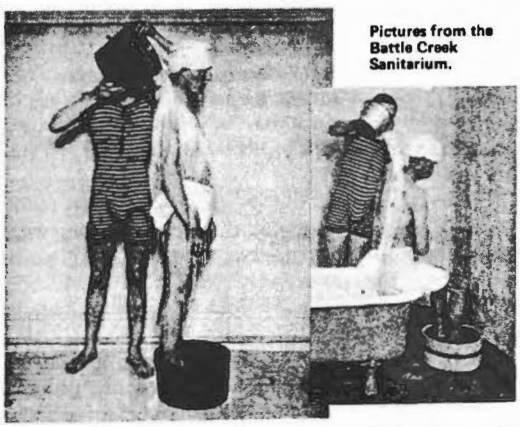
2 - Begin with the hot water and end with the cold. Change from one temperature to the other 6-8 times (3-4 complete cycles). Time spans are generally 3-4 minutes in the hot and, then, one-half to one minute in the cold. Begin hot immersion at lower temperature limits, increasing the temperature as you continue on through the treatment. Add hot water by pouring it over your own hand; add it while the limb is in the cold water. A cold compress (hand towel wrung out of cold water) or ice bag may be needed on the head or back of neck, if a large part of the body is being treated and always if he feels faint. Place an ice bag to the heart if his pulse is over 80 beats per minute. (In serious cases, it is best to check his pulse every 5 minutes during treatment.)

3 - End by drying the limb thoroughly. Have him rest afterward for a half hour.

ADDITIONAL POINTS—Do not normally use hot water temperatures above 110° F.; in blood vessel disease of the legs and feet, do not go over 105° F. Extremes of hot and cold should not be used in diabetes or in peripheral vascular disease. When working with rheumatoid arthritis, end with the hot instead of the cold.

THREE SPECIAL CONTRAST BATHS—Here are

PAIL POUR



Pictures from the Battle Creek Sanitarium.

three special Contrast Baths which may prove to be of help to you:

Contrast Bath to the Hand or Arm—Two very deep pails may be used. Use the procedure described above. The hot water should be as hot as can be borne. This bath is very helpful for blood poisoning in an infected arm or hand. It is also of value in controlling nosebleed.

Contrast Bath to the Feet—This bath, consisting of alternate hot and cold to the feet (using two tubs), is especially helpful in congestive headache, in which case it is well to apply a cold compress to the head (or head and neck) at the same time. It is also used in treating infections of the foot, Charcot's joint at the ankle, tuberculosis of the ankle, bones of the foot, and in gangrene (to hasten the formation of the line of demarcation).

Contrast Bath to the Legs—This is an alternate hot and cold leg bath, and requires two tubs deep enough to immerse the legs to the knees, or deeper. (Galvanized garbage cans, thoroughly cleaned, can be used.) Cold head and neck compresses will be needed, and perhaps an ice bag over the heart. 2-3 minutes in the hot followed by 20-30 seconds in the cold, for 5-30 minutes. (When used for varicose ulcer, the hot should only be one minute in length, or the ulcer will become worse!) This contrast bath is especially useful in treating edema of the legs. After 2-3 treatments, pieces of ice may be added to the cold water. The treatment may be concluded with heavy friction to the feet and legs.

FIVE SPECIAL APPLICATIONS FOR CONTRAST BATHS—Here is information you may be able to use:

1 - **Arthritis (osteoarthritis)** - Begin with a temperature of 110° F.; then, after four minutes, change to tap water for one minute. Change back and forth 4-6 times, and end with the hot water. The hot water should gradually be raised to 115°-120° F., and the tap water gradually lowered to that of ice water. Give this treatment once or twice a day.

2 - **Infections and cellulitis** - The contrast of (difference between) the hot and cold should be as great as can be tolerated. Begin with 110° F. and increase temperature to tolerance. One can usually start with ice water. End with ice water. Change 5 to 6 times. Give 2-3 times daily.

3 - **Poor circulation** caused by blood vessel disease - Begin with a temperature of 105° F. for 3 minutes; change to cold for one-half minute.

4 - **Sprained ankle** - Use hot water at 110° F. and ice water for the cold application. End with ice water. (Note that an alternation of hot and cold is here used. When cold water alone is used, both the pain and recovery time is lengthened.)

5 - **Weak, pronated feet** - Use the same treatment as for arthritis.

2 - HOT FOOTBATH

WHAT IT IS—This is not a contrast bath for the feet, as described in the previous therapy ("Contrast Baths"); it is a continuous bath in hot water.

HOW IT CAN HELP YOU—When the feet are placed in hot water, the excess blood which is congesting other parts of the body is brought to the legs and feet. This helps the entire blood circulation in the body and relieves congestion in the brain, lungs, abdominal, and pelvic organs. The blood is shifted from one part of the body to another; the entire body is helped.

The Hot Footbath also helps to ward off infection and sickness in cold weather, when one is beginning to catch a cold, sore throat, etc. The body has become chilled, and a hot footbath warms the entire body and stimulates the circulation.

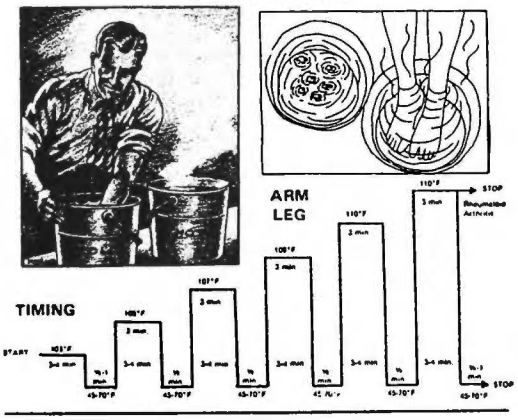
Lastly, when an individual is nervously fatigued, the feet are generally cold and the blood circulation is poor and unequal. A hot footbath will relieve the nervous tension, lessen congestion in the brain, and balance the circulation.

Thus, the Hot Footbath can prevent or shorten colds, relieve headaches, stimulate the circulation when the feet are cold, relieve pelvic cramps, relieve chest and pelvic congestion, stop nosebleed, aid relaxation, and prepare one for a cold water treatment (such as a cold shower, etc.).

WHAT YOU WILL NEED—A foot tub or similar container large enough and deep enough—such as a five-gallon can, large mouthed bucket, or deep dishpan. Thermometer to test the water or test it with your elbow (103°-110° F.). Bath towel. Teakettle or pan for boiling water. Basin of cold water. Pitcher or dipper to add hot water. Two blankets to wrap about him. Cold compress (hand towel wrung out of cold water), if needed for the neck. Floor or bedding protection (rubber sheeting, plastic, or newspaper).

HOW TO APPLY IT—*(See picture on next page.)*

CONTRAST BATHS



1 - The room should be warm with no drafts. Place the plastic, with towel over it, on the floor under the feet. Fill the foot tub with water (about 104° F.), so that the ankles are fully covered. Test with the thermometer or your elbow.

2 - Instruct him beforehand as to what you are going to do. Place his feet in the tub and cover him with the blanket. (If he is sitting up, wrap him well.) If he is lying down, do not let the calf of his leg touch the foot tub.

3 - Slowly add hot water, to increase the temperature up to 112° or 115° F. Pour the water against the inside of the tub with your hand between the flowing water and his feet, stirring the water as it is added.

4 - Continue the bath for 10-30 minutes, depending on the effect desired. Keep his head cool with a cold compress. A cold head compress is especially important if the footbath is continued for any length of time, if he is in a sitting position, and always if there is a tendency to faintness.

5 - When the feet are removed from the hot water, pour a dash of cold water over them quickly. This cold water should come in contact with both the dorsal (side) and plantar (bottom) surfaces of the feet. In some cases, the cold water is omitted.

6 - Quickly place the feet on the towel and remove the foot tub. Dry the feet well, especially between the toes. If he is perspiring, dry him thoroughly with a towel.

CAUTION—Do not give a Hot Footbath to one who has hardening of the arteries of the feet or if there is a loss of skin sensation (no sense of feeling) in the feet.

3 - (SHALLOW) COLD FOOTBATH

WHAT IT IS—This is a footbath in a tub of shallow cold water.

HOW IT CAN HELP YOU—The shallow Cold Footbath causes reflex contraction of the blood vessels of the brain, pelvic organs, and liver. It also contracts the muscles of the uterus, bladder, stomach, and intestines.

HOW TO APPLY IT—

1 - This footbath is given in practically the same way, with the same equipment, as for the Hot Footbath.

2 - The water should only be about 2-4 inches deep; its temperature should be about 45°-60° F.

3 - Everything should be ready beforehand. His feet should be previously warmed. During the bath the feet should be rubbed with the hands or one foot against the other.

4 - The bath should last from 1-5 minutes. When completed, dry the feet well, and make sure that they are warm afterward.

CAUTION—The Cold Footbath should not be given during the menstrual period or in case of acute pulmonary, abdominal, or pelvic inflammation.

4 - SITZ BATHS

COLD SITZ BATH
COLD RUBBING SITZ BATH
PROLONGED COLD SITZ BATH
NEUTRAL SITZ BATH
VERY HOT SITZ BATH
REVULSIVE SITZ BATH
ALTERNATE HOT AND COLD SITZ BATH

WHAT IT IS—"Sitz" comes from the German word, "sitzen," and means to sit. Sitting in water is taking a sitz, or sitting, bath. Priessnitz, the Austrian who used water as a curative remedy, used the Sitz Bath in treating constipation and other abdominal and pelvic conditions.

HOW IT CAN HELP YOU—The Sitz Bath is very helpful for many different pelvic problems. These are more fully described below under "Five Different Sitz Baths."

WHAT YOU WILL NEED—Natural therapy hospitals (they are called "sanitariums") use special sitz tubs (with a second foot-bathtub beside it), but you can use an ordinary washtub. It should be slightly tipped and set up with blocks of wood to make it immovable. A smaller tub or bath pan may be used to give the foot-bath (which should always be given with the Sitz Bath). An ordinary bathtub can be used for a Hot Sitz Bath, but the water should be deep enough to reach to the navel. (Technically, this latter is called a Hot Half Bath, not a Sitz Bath; but the effects are pretty much the same.)

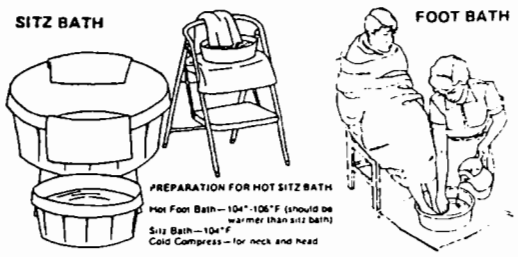
HOW TO APPLY IT—*(See picture on page 194.)*

The temperature of the water changes the effect of the sitz Bath. First, we will explain how to give a Sitz Bath; then we will tell you about the five types of Sitz Baths and how they can help in time of need.

1 - Help him into the tub and protect him from contact with it by placing towels behind his back and under his knees. Then cover him with a blanket, arranging it so that it will not become wet. Sufficient water should be used to cover the hips and reach to the abdomen. The temperature of the footbath *(see pages 193-194 for Footbaths)* should be several degrees hotter than that of the Sitz Bath.

2 - The duration of the Sitz Bath depends on the temperature used and the effect desired. It is most of-

SITZ BATH - FOOT BATH



ten 3-8 minutes.

3 - Friction (rubbing) can be used with the Cold Sitz Bath if he feels chilly or to intensify the effect. Hot Sitz Baths may be concluded by cooling the water to neutral for a minute or two or by pouring cold water over the hips and thighs. Cold compresses (hand towels wrung out of cold water) to the head and neck must be used with the Hot Sitz.

SIX DIFFERENT SITZ BATHS—Here are the five primary ways in which Sitz Baths are given:

Cold Sitz Bath—55°-75° F. (The footbath is 105°-110° F.) Time: 1-8 minutes. Enough water should be used to cover the hips and come up on the abdomen. Rub the hips to promote circulation. Friction mitts may be used. If the water is kept circulating (moving) in the tub, the effect will be heightened. If it is only 2-4 minutes in length, the Cold Sitz Bath greatly stimulates pelvic circulation and the muscles of the bowels, bladder, and uterus. These effects are intensified if the water is 55°-65° F. and vigorous friction (rubbing) is given. This makes it the Cold Rubbing Sitz Bath, which is very helpful in constipation, sub-involution, and hastening the absorption of residual thickening after pelvic inflammations.

Prolonged Cold Sitz Bath—If it is 15-40 minutes in length, the Cold Sitz Bath is called the Prolonged Cold Sitz Bath. This sitz bath is 70°-85° F. and the footbath is 105°-110° F., but it may be started at a higher temperature and slowly lowered to that point. This bath should not at any time cause chilliness, and rubbing is not desirable. If needed to give a sensation of warmth, a fomentation or wrapped hot-water bottle can be placed to the spine. This Prolonged Cold Sitz Bath causes powerful and lasting contraction of the pelvic blood vessels and of the muscular wall of the uterus. It is used in sub-involution.

Neutral Sitz Bath—92°-97° F. (with 102°-106° F. for the footbath). This bath is 20 minutes to 1-2 hours in length. It relaxes and helps one go to sleep.

Very Hot Sitz—Begin at 100° and rapidly go up to 106°-115° F. (Footbath: 110°-120° F. As usual, always keep the footbath two degrees hotter than the Sitz bath it accompanies). The normal length is 3-8 minutes. Keep the head cool. End by cooling the bath to neutral for 1-3 minutes. If sweating has been produced, pour cold water over the shoulders and chest. Very helpful for dysmenorrhea and pelvic pain from various causes. In dysmenorrhea, the bath should not be cooled.

Revulsive Sitz Bath—Begin at 100° and increase rapidly to 106°-115° F. (Footbath: 110°-120° F.), for 3-8 minutes. Keep the head cool with cold cloths over the forehead or around the back of the neck. Finish with a cold (55°-65° F.) pail pour on the hips. The Revulsive Sitz is a powerful help in heating chronic inflammatory pelvic problems (salpingitis, parametritis, cellulitis, prostatic hypertrophic nocturia, etc.).

Alternate Hot and Cold Sitz Bath—For this bath you will need two sitz tubs, side by side. Fill one with hot (106°-115° F.) water and the other with cold (55°-65° F.) water. (Footbaths for both: 105°-115° F.) Apply cold compresses to the head and neck.

— SECTION ELEVEN —
FULL BATHS

WHAT IT IS—Full Tub Baths (also called Full Immersion Baths) are just tub baths, with most of the body immersed in the water. The difference between these and regular tub baths lies in the careful control of the water temperature and a careful observation to see that the desired effects are obtained.

Many different kinds of full immersion baths can be used, but there are only six that you will probably need in your home. Here they are:

1 - HOT TUB BATH (HOT FULL BATH) AND MODERATE HOT BATH

HOW IT CAN HELP YOU—The temperature and duration of the tub bath will determine the effect produced. The temperature of this bath is generally 100°-106° F. The time is usually 2-30 minutes. It may be used as a preparation for a cold treatment. If it is much prolonged (or the temperature is quite high), profuse sweating will be produced.

The Hot Bath can induce perspiration, relieve the pain of muscular rheumatism, reduce the muscular spasm of arthritis and its pain as well. It helps induce mild fever effects, when needed (as in undulant fever). It can also help increase metabolism and peripheral circulation. It can elevate body temperature and relieve pain, fatigue, and congestion of the internal organs.

If it is only a Moderate Hot Bath (100°-102° F.), it will be helpful in relieving opisthotonos (tetanus dorsalis) in tuberculosis meningitis and other diseases associated with spasticity of the muscles.

HOW TO APPLY IT—

1 - Place him in a full hot bath at about 98° F., and then gradually raise it to 100°-106° F. The bath should normally continue for two minutes onward, not over 20 minutes. Give him cold water to drink freely and keep his head cool. You may need to apply an ice bag to the heart and the back of the neck. Watch him closely.

2 - The bath may be finished by gradually cooling it, by a cold pour (if he is vigorous enough for it), or a shower immediately after he rises from the bath.

CAUTIONS—Do not give this bath where there is heart and valvular diseases, diabetes, vascular disorders, high blood pressure, or malignancies.

2 - NEUTRAL BATH (NEUTRAL FULL BATH) AND CONTINUOUS BATH

HOW IT CAN HELP YOU—The Neutral Bath (94°-97° F.) is given to relax people and help them go to

sleep. It does this by equalizing the circulation and thus reducing the amount of blood in the brain and spinal chord. When used for insomnia, give it just before retiring for the night.

It is also excellent for relaxing nervous tension. Try it on yourself when you are full of nervous tension and see how nicely it relaxes you!

The Neutral Tub Bath is also used for anxiety, chronic diarrhea, multiple neuritis, burns (only the area burned need be in the water), nervous exhaustion or irritability, and diseases of the blood and blood vessels (when more extreme hot or cold cannot be used, as in diabetes and arteriosclerosis).

Last but not least, the Neutral Tub Bath has been successfully used by experts in treating insanity. In this condition, there is an excess of blood in the brain (because of the highly tense and excited state of the mind). The Neutral Bath quietly, but inexorably, equalizes the blood circulation throughout the body. Experts have placed a person in a Neutral Tub for days at a time. Proper circulation removes the fevered state of the brain and brings better nourishment to it, thus helping to restore him to a normal condition.

"As this bath is used chiefly in maniacal cases, the patient must be watched constantly. Very excited or violent patients should be wrapped in a sheet or blanket pack, which must be securely pinned about them, before they are placed in the tub. The duration of the bath depends upon the degree of sedative [quieting] effect obtained. It [the neutral bath] may last for hours or days. In the latter case the patient must be removed once or twice in twenty-four hours, the bowels given proper attention, and the skin anointed with oil in order to prevent too great maceration. The continuous-flowing bath is perhaps the most useful treatment in excited cases of insanity. It, together with the wet-sheet pack, has revolutionized the treatment of mania."—*Abbott, et al.*

HOW TO APPLY IT—*(See picture on next page.)*

1 - Place him in a full bathtub with the water temperature at 94°-97° F. The water should, if possible, cover his shoulders. Place a folded towel on the edge of the bathtub under his head for a pillow, and cover his body with a bath towel. Keep his face cool and evenly maintain the temperature of the bathwater. Wet his forehead and face in cool water.

2 - The bath is usually 15-30 minutes in length, but it can go on for 34 hours.

3 - End the bath by cooling the water 2°-3° F. at the close. Dry him with no unnecessary rubbing and avoid unnecessary conversation. Dim the lights, if possible, and help him into bed so that he can go to sleep.

ADDITIONAL POINTS—A bath thermometer is needed to keep the temperature constant. He should be warm before beginning, during, and after the bath. If necessary, give a Hot Footbath *(page 193)* before the Neutral Tub Bath begins. He should be comfortable in the tub. An invalid rubber ring may be placed under his buttocks if he is very thin. A rolled bath towel under his knees is also helpful. And be sure to place the folded towel on the edge of the bathtub under his head.

CAUTIONS—Certain cases of eczema and great weakness of the heart should not receive Neutral Tub Baths.

CONTINUOUS BATH—Here is some additional information on the Neutral Bath, when it is continued for a lengthy period of time: Suspend a hammock or sheet within the bathtub. It should not touch the bottom when a person is in it. Place a rubber pillow beneath the head and heels. Some authorities recommend keeping the feet out of the water.

Once a day, help him out of the tub; give him a cleansing bath with soap and a soft brush or cloth. He should then exercise somewhat, followed by having Vaseline or lanolin rubbed on him. During the time out of the continuous bath, the tub should be cleaned with soap and water. Some suggest placing an antiseptic on it, especially if infection is a problem. After thoroughly (thorough!) rinsing it, run fresh water into the tub so he can again enter it.

The Continuous Bath has been successfully used to aid in very difficult problems, such as extensive burns, pain, paresthesia, spasms, itching, pemphigus, extensive gangrene, profuse or offensive pus from various open abscesses, foul-smelling fistulas, and to bring quiet and rest to agitated mental problems, mania, or alcoholic delirium tremens.

3 - COLD TUB BATH (COLD FULL BATH) AND COLD RUBBING BATH

HOW IT CAN HELP YOU—When given for only a few minutes, the Cold Tub Bath is a stimulant and tonic. But when it is used for a longer time, it becomes antipyretic (fever reducing). And, thirdly, when it is given as a Cold Rubbing Bath, it becomes a most excellent method of treating typhoid fever.

This bath is most frequently used for colds, flu, and fevers.

HOW TO APPLY IT—

1 - The temperature of the water will be 55°-90° F. And the length of time will be a plunge only, on up to 20 minutes or more (depending on the temperature, the effect desired, and the robustness of the one receiving it).

2 - His face should be bathed in cold water before he enters the bath; and his skin must be warm before it begins.

3 - Throughout this tub bath, it will be necessary to rub him constantly or at frequent intervals.

CAUTION—He must be warm before the bath begins. Test by feeling the warmth of his skin. Afterward, place him in bed and make sure he is warm. The short cold bath is very helpful in cases of diabetes, obesity, skin diseases, infections, scarlet fever, and poor blood circulation. Also chronic diseases, when the body func-

tions are below normal.

But the short cold bath should not be used on those who are cold, have excessive fatigue, poor kidney function, heart or blood vessel disease, or hyperthyroidism (overactive thyroid).

4 - COLD SHALLOW BATH (COLD SHALLOW RUBBING BATH)

HOW IT CAN HELP YOU—The Cold Shallow Bath is one of the most powerful tonics used in water therapy.

HOW TO APPLY IT—

1 - Fill the tub only 4-6 inches deep with water at 65°-75° F.

His feet should be warm before entering the tub, and his head should be kept warm by cold wet towels.

2 - He sits down in the cold water and rubs his arms, legs, and chest vigorously while you rub his hips and back. Cold water dipped, from the tub, is splashed over his shoulders and back; and they are rubbed again. Then he lies down in the tub and rubs his chest and abdomen while you rub his legs. This can be repeated once or twice, as desired.

3 - It should last for 24 minutes; he should leave the tub with a definite glow to his skin. If not, the desired effect has not been obtained. He should be warm afterward, with no tendency to chilliness.

5 - PLUNGE BATH

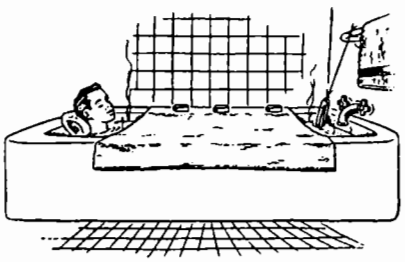
WHAT IT IS—This is a quick dip into a bathtub of cold water. It can be a shallow or full tub of water. In some respects, the shallow tub is better for most people; for it involves more splashing and less actual coldness on the body. But those built up to it may desire a fuller tub of water.

HOW IT CAN HELP YOU—The effects of the Plunge Bath would be those of any of the other tonic baths and frictions. Actually, this bath is very similar to the Cold Shallow Bath *(page 197)*. The primary difference is that the Plunge Bath is more of a quick-in and quick-out, and thus a less powerful tonic than the Cold Shallow Bath.

6 - GRADUATED BATH

WHAT IT IS—This is a prolonged bath that begins with warm water which is gradually lowered to a fairly cool temperature.

NEUTRAL BATH and CONTINUOUS [Neutral] BATH



HOW IT CAN HELP YOU—The Graduated Bath is especially designed to lower fever temperature in a manner that is easier to take than a prolonged cool bath would be. Most often used to lower fevers, such as in typhoid, this bath can also be used for tonic purposes on someone who is well.

HOW TO APPLY IT—

1 - The initial temperature of the tub water should be about 98° F. or higher. His body temperature will determine this. The water temperature should be about 3-5 degrees lower than his mouth temperature. His skin should be warm before the bath is begun.

2 - Help him into the tub, where he can be laid on an air pillow and a hammock (made by tying a sheet across the tub, and then fastening the corners and sides underneath).

3 - Apply cold compresses (cloths wrung out of cold water) to his head. Begin to reduce the bath temperature. Gradually lower it to about 85° F.

4 - When it is below 90° F., or as soon as he feels chilly or shows goose flesh, he should be rubbed constantly to keep the blood in the skin. This will prevent or overcome chilling. A spine bag (a long-narrow hot-water bottle) may be laid along his spine for the same purpose. Both his pulse and temperature should be closely watched throughout the bath. His temperature should be taken every 12-15 minutes.

5 - As soon as he is taken out of the bath, wrap him in a sheet and dry him briskly. If there is any tendency to goose flesh or chilliness, rub him briskly with your hands until the blood returns to the skin. If he very cyanotic (bluish), put him into a Hot Blanket Pack *(page 185)* for a few minutes, and then, upon removing it, give him a Cold Mitten Friction *(page 187)*.

— SECTION TWELVE —
SHOWER BATHS

WHAT IT IS—Special showers are used in natural-healing sanitariums; but the shower in the average home can give similar results.

1 - HOT SHOWER

HOW IT CAN HELP YOU—The Hot Shower is mainly used as a preparation for a Cold Shower *(page 198)*.

HOW TO APPLY IT—

1 - Begin the Hot Shower with very warm water (100°-105° F.), and gradually raise the temperature to 110°-115° F. or slightly higher. Time: thirty seconds to two minutes.

2 - A Cold Compress *(page 169)* to the head may be needed during the shower.

3 - If no other treatment is to follow the Hot Shower, then conclude by rapidly cooling the water to 90° or 85° F.

4 - Dry quickly with towels and a sheet. You may wish to finish by fanning the patient cool with a dry sheet.

2 - CONTINUOUS HOT SHOWER

WHAT IT IS—This is a continuous fine stream of hot water for several hours to a body part.

HOW IT CAN HELP YOU—This shower is used for sciatica, brachial neuritis, refractory lumbago, and similar conditions. It is also used with good success on limbs that have painful edema. It does not matter if open ulcers and unhealed wounds are present.

HOW TO APPLY IT—

1 - Make him comfortable on a chair, couch or mat. Over it, a special showerhead produces a fine (not course) stream of water. Special precautions must be taken that the water will not appreciably change in temperature throughout the shower (particularly that it cannot burn him).

2 - The temperature is kept at the upper limit of comfort; and the shower will continue for 24 hours.

3 - Conclude by drying him. Sometimes a dash of cold water from the shower is used before drying.

3 - COLD OR COOL SHOWER

HOW IT CAN HELP YOU—This shower is used for its tonic effect of strengthening the body.

HOW TO APPLY IT—

Give him a Hot Shower *(page 197)*. When he is sufficiently warmed, lower the temperature rapidly from hot to as much cold as he can take. This will be about 70°-90° F., for a cool shower, and 55°-70° F. for a cold one.

SPECIAL POINTS—A series of cool or cold showers are often given. When this is done, the first one should only be cool; then, in subsequent showers, gradually lower the final temperature.

4 - NEUTRAL SHOWER

HOW IT CAN HELP YOU—This shower is given at a lukewarm temperature and is chiefly used to calm, relax, and help one go to sleep.

HOW TO APPLY IT—

1 - Begin the shower at 100° F., and very slowly lower it to 97° to 94° F.

2 - The shower should normally last about 3-5 minutes.

3 - Dry him quickly, without any percussion or unnecessary friction. You may then wish to place him in a warm bed, so that he can go to sleep.

5 - GRADUATED SHOWER

WHAT IT IS—This is a shower bath that employs a greater variety of temperature changes.

HOW IT CAN HELP YOU—The objective is to gradually lower the temperature of the body, with as little shock effect as possible.

HOW TO APPLY IT—

1 - Give a prolonged or vigorous sweating bath. Place a Cold Compress *(page 169)* on his head before he leaves.

2 - Begin the Graduated Shower with very warm water (108°-110° F.), and then quickly raise it to a hot shower (115°-118° F.).

3 - Maintain this temperature until he feels warm and is ready for the cold. Then, slowly lower the temperature until it is fairly cool (80°-90° F.)

4 - Conclude the shower in 2-6 minutes; and then quickly dry with sheets and towels.

5 - Do not let him be exposed to cold air or drafts for at least one hour afterward.

6 - REVULSIVE SHOWER

WHAT IT IS—This shower is like the Graduated Shower, described just above, in that the water temperature is first raised and then lowered. It is different, in that the temperature is not slowly, but quickly, lowered to cold.

HOW IT CAN HELP YOU—The purpose is to cool and stimulate the body. Thus, a mild tonic effect is the result. The Revulsive Shower is also used in order to build up the body; so that it can take an alternate hot and cold shower in order to help build resistance.

HOW TO APPLY IT—

1 - Begin the shower at 105°-108° F. Then gradually raise it to 110°-115° F. or slightly higher. Continue at this temperature for two minutes.

2 - When he is fully warm, turn the valve quickly to a cold temperature of about 60°-85° F.

3 - After 5-10 seconds, turn the mixer valve back to the earlier temperature (110°-115° F.) for 1-2 minutes.

4 - Do this cycle three complete times (three complete changes from hot to cold).

5 - Dry quickly with sheets and towels.

SPECIAL POINTS—As a preparation for beginning to take Alternate Hot and Cold Showers, one should become accustomed to Revulsive Showers first. And, gradually, the cold part of the Revulsive Shower should become longer.

7 - ALTERNATE HOT AND COLD SHOWER

WHAT IT IS—Abrupt changes back and forth from hot to cold.

HOW IT CAN HELP YOU—This is a vigorous tonic and physical stimulant. It should not be taken without much preliminary taking of less intense showers.

HOW TO APPLY IT—

1 - Begin with the hot water at a temperature of 106°-110° F.; then quickly raise the temperature to the upper limit of tolerance. Hold it there about one minute.

2 - Turn the valve quickly to full cold. Hold it there for 15-30 seconds.

3 - Reverse again to hot for about one minute; then

back to cold for 15-30 seconds again.

4 - Do three complete cycles of hot and cold, finishing with the cold.

5 - Dry well with sheet and towels, and fan dry with a sheet.

— SECTION THIRTEEN —
MISCELLANEOUS BATHS

1 - STEAM BATHS INCLUDING RUSSIAN BATH AND SAUNA

WHAT IT IS—This is an application of hot water vapor to the skin. It is not an application of steam; for the temperature of steam is so high that it would immediately cause severe burns.

HOW IT CAN HELP YOU—The so-called "steam" bath produces vigorous sweating. This greatly increases the breakdown of excess fats and carbohydrates—and thus aids in taking off extra weight. Thus, the Steam Bath is very helpful in obesity. But it is also used in chronic rheumatism with obesity, gout, Bright's disease, chronic alcoholism, tobacco addictions, and in arteriosclerosis unless that condition is extreme.

CAUTIONS—Unless one drinks enough water before, during, and afterward, there is a "washed out" effect that can cause a feeling of weakness. It should be noted that a 20-minute steam bath will raise the body temperature about two degrees F. and produce a definite rise in blood pressure.

Do not use the Steam Bath in diabetes, valvular heart disease, extreme arteriosclerosis, and all conditions associated with emaciation.

HOW TO MAKE YOUR OWN—Most homes do not have access to steam-bath rooms, but it is possible to make your own:

1 - A room can be made for this purpose. The walls should be of nonporous material, with wooden benches and a floor drain. A source of heat should be provided outside the room. In addition, a shower or bathtub should be in an adjacent room.

2 - A small, but very functional, steam bath can be made out of secondhand sheet metal. An arc welder and some welding skill can turn it out in a day or two. If you are a handyman, you will have no trouble with it.

3 - Set an old chair on the floor. Have the one needing a steam bath sit on it. Place a heavy blanket around him, that should cover him from the neck on down to the floor. Under the chair, place an electric teakettle. It should be three-quarter's full of hot water and already steaming. Place a cold cloth to the head and put the feet in hot water. End this about 20-30 minutes later with a cold friction *(page 187)* or a cold shower. Be sure that the spout of the teakettle is turned toward the back of chair. Always stay by a person receiving a steam bath.

HOW TO APPLY IT—*(See pictures on page 200.)*

1 - Give a preliminary Hot Footbath *(page 193)* as he drinks several glasses of water.

2 - The steam room should be ready for usage. If the bench is not warm, throw several pails of hot water on it. Warm the room to about 100° F. and cover the bench with a folded cotton sheet.

3 - Help him lie down on the bench on his back.

Many homes do not have facilities for steam baths. But some will have homemade steam cabinets, steam rooms, or sheet-metal steam units. Therefore, we will here give directions for steam baths. These directions can be used for a steam cabinet or in a steam room with a small window in it for the head.

1 - Give a preliminary Hot Footbath *(page 193)* as he drinks several glasses of water.

2 - The steam room or cabinet should be warm and ready for usage. If it is a steam room and the bench is not warm, throw several pails of hot water on it. Warm the room to about 100° F. and cover the bench with a folded cotton sheet.

3 - Assist him to the bench and help him lie on his back, with his head on an air pillow and just outside the opening (as in a steam cabinet or Russian steam vapor).

4 - The head opening is lowered; and a towel wrung from ice water is placed about the neck or hung across the end of the neck window and tucked about the neck.

5 - A second cold, wet cloth is placed to the head, covering the temporal arteries (which are slightly in front of and above the ears). A third one should be placed above the heart. (Sometimes an ice bag over the heart is necessary).

6 - Turn on the heated vapor, gradually raising the temperature to 115°-120° F. A small amount of vapor must constantly escape in order to maintain this high temperature.

7 - Closely watch him; frequently change the cold, wet cloths on the head and neck. Keep him drinking water before, and frequently during, the steam bath.

8 - The steam bath should continue for 10-30 minutes. A fresh ice-water cloth should be placed on his head just before he rises.

9 - End with a Graduated Shower: Begin with a warm shower (108°-119° F.), quickly raising it to a hot one (115°-118° F.). When he feels warm and is ready for the cold, gradually lower the temperature till it is quite cool (80°-90° F.). This shower should be located close to the steam bath and should take about 2-6 minutes.

DEFINING TERMS—What is a "Russian Bath" and what is a "Sauna," and are they the same? To take a Sauna, one sits on a bench in a room containing hot water vapor ("steam"). His entire body is in that room. For a Russian Bath, he instead lays on a wooden "slab" or bench, with his head protruding from a small opening in the side of the room. In this way, his body receives the benefit of the hot vapor, but his head can

remain outside. Obviously, since the Russian Bath keeps the head cooler and the lungs filled with fresher air, it has definite advantages over the Sauna. A Chair Steam Bath (Chair Sweat) combines some of both advantages. The head is vertical and outside the area of vapor; in addition, the entire unit is both inexpensive and portable.

2 - STEAM CHAIR (STEAM SWEAT)

WHAT IT IS—This is a steam bath "in a chair." As such, it is probably the simplest way of giving a "steam bath" to a person. And it has the advantage of keeping his head out of the hot vapor, which a sauna-type steam bath cannot do.

HOW IT CAN HELP YOU—This is a simply erected, very portable, steam bath that can provide the help of a regular steam bath. *(See "Steam Bath, How It Can Help You" on pages 200-201 for further information on these benefits.)*

WHAT YOU WILL NEED—Hot plate. Kettle or pot filled with hot water. Sheet or blanket. Three towels. Ice bag. Cup of hot water (for drinking). Basin for hot footbath. If medicated steam bath: Oil of eucalyptus or mint.

HOW TO APPLY IT—*(See picture on page 200.)*

1 - Set the chair in position where you want it (not far from an electric outlet for the hot plate, and arranged so no one will trip over the cord and spill the hot water under the chair). Place the hot plate under the chair and carefully put the kettle or pot on it. The spout should face toward the rear; neither the pot nor hot plate should be able to burn him or set the blanket on fire. The water in the kettle should already be boiling hot. Fold a towel and place it on the seat of the chair. Set a basin or tub of hot water in place for the hot footbath. (If medication is added to the kettle water: Add about 1 teaspoon of Eucalyptus oil or 2 tablespoons of dried mint leaves to each potful of water.)

2 - Wrap the second towel as a turbine around the head of the one to receive the steam bath. Undressed, he should now be seated on the chair and begin the hot footbath.

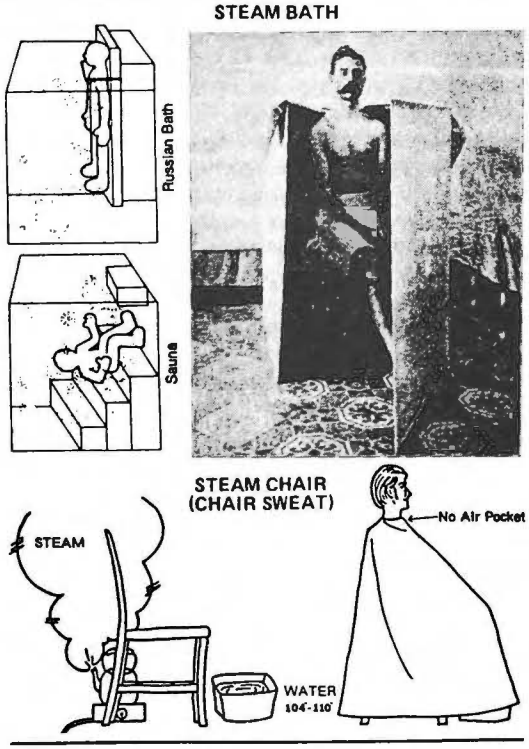
3 - Wrap the blanket or sheet (a blanket would be best) around him. Do this by wrapping it about his back and shoulders, covering his body below the neck to the floor.

Fold a towel lengthwise and place it as a snug collar about his neck, thus holding the blanket or sheet in place. When he begins to sweat or his oral temperature goes past 100° F., apply the cold compress (cold, wet cloth) to his head. You will need to keep renewing the cold cloth and adding hot water to the hot footbath (instructions under "Hot Footbath" *(page 193)* will explain how to add this water without burning him).

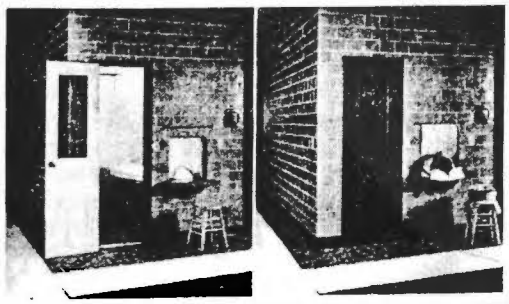
4 - Every 5-10 minutes, he should be encouraged to drink some of the hot water. Offer it to him in a cup or glass with a flexible straw in it.

5 - A very frequent check on temperature and pulse is crucial. Oral (mouth) temperature should be kept under 104° F. Check it every 10 minutes until it is above 103° F.; then check it every 5 minutes until it is again below 103° F. Pulse should be checked at the large artery in his temple or the one at the front side of the neck; this should not go over 140° F. Air temperature inside the "tent" should be kept between 120°-130° F. until his oral temperature goes up to 102°-104° F.; at which point the tent temperature should be brought down to 105°-110° F.

STEAM BATH



RUSSIAN (STEAM) BATH



6 - At the conclusion of the steam bath, carefully remove the basin, kettle, and hot plate. Then dry the feet. If it seems best to prolong the effects, place him in bed with the tent blanket or sheet still wrapped about him. He should be covered well in order to continue the sweating.

7 - Finally, terminate the treatment with a shower or cold mitten friction. Then place him in bed for 30-60 minutes, so that he will have enough time to react well to the concluding cold tonic. If he sweats during this time, give him an ordinary shower when he leaves the bed. He should receive large amounts of water during and after the treatment.

CAUTION—Only give this chair steam bath to one who is basically healthy, but not feeble or debilitated.

3 - VAPOR INHALATION (STEAM INHALATION)

WHAT IT IS—This is a means of supplying warm, moist air to the congested membranes of the nose and sinuses during a head cold.

HOW IT CAN HELP YOU—After being chilled, the temperature of the respiratory tract is lowered. A cold in the head is the result; soon it may go into bronchitis or chest cold with its harsh, dry cough.

Vapor inhalation warms and soothes the respiratory tract, relieves inflammation and congestion in the nasal membranes, relieves "throat tickle" by moistening the air, loosens secretions and stimulates expectoration (spitting); also water drinking will help solve this problem and relieve spasmodic breathing, lessen coughing by relaxing the affected muscles, increase blood flow to this area, and prevent excessive dryness of the mucous membranes.

WHAT YOU WILL NEED—A vaporizer or a kettle with a spout. Boiling water. A chair or bedside stand. Hot plate (if continuous inhalation is desired). An umbrella. A newspaper rolled into a cone-shape. Medication, such as Oil of Eucalyptus (1 teaspoon to a pint of water), Vick's VapoRub, Oil of Wintergreen, etc. Some use 1-2 tablespoons of fresh or dried mint leaves per pint of water.

HOW TO APPLY IT—*(See pictures on page 200.)*

1 - Fill the vaporizer or kettle with the boiling water. Add the eucalyptus oil, etc., either to the kettle water or to the newspaper of the cone (to avoid putting the heavy odor of the oil into the kettle). Place it on the stand by the bed or on the floor (according to the arrangement which works best for you).

2 - Arrange an umbrella on the bed, covered partly with a sheet. Place the paper cone over the kettle spout, with its upper, narrower opening, into the umbrella in such a manner that it will not point into the face. Understand that this procedure may work best for you with the kettle on a nightstand without the cone, or on the floor or low chair with it. Or, in a smaller room, the kettle can be placed on the floor without the cone.

3 - Lying on one side of the bed, he can place his head into the "tent" and breathe the vapors.

CAUTIONS—Check the water level in the kettle frequently. Avoid all possibility of burning him. Avoid drafts in the room while the vaporizer is operating. Be especially careful when children are receiving the treatment. Be on guard lest they knock over the kettle and burn themselves. Do not let the hot plate (electric burner) come in contact with the bedding, cone, etc., and start a fire. Individuals with cardiovascular or heart problems may find difficulty in breathing amid the vapors.

4 - RADIANT HEAT BATH (ELECTRIC LIGHT BATH)

WHAT IT IS—This is a heating of the body, not with an immersion bath in water, but an immersion in radiant heat. The heat source can be electric space heaters; but, the original Kellogg arrangement was a box with incandescent bulbs.

NOTE—A steam bath is generally more practical, available, and effective.

HOW IT CAN HELP YOU—Kellogg found that these radiant heat baths could provide an intensity of dry heat not to be obtained in any other way.

The Electric Light Cabinet is a very efficient way to treat acute or chronic conditions requiring fever therapy. (Fever therapy is an artificial raising of body temperature in order to increase white blood cell action and eliminate toxins and bacteria.) A person with an inflammation, or already with a fever, will have a temperature drop of 1°-2° F. within 15 minutes or so after the bath is completed. Thus, the use of this cabinet is very helpful in mild fevers, inflammations, colds, flu, or any condition in which sweating is helpful. It helps in withdrawal from addicting drugs (including tobacco and alcohol), and will lower blood pressure.

WHAT YOU WILL NEED—In order to achieve the full effects of this, you would need to construct a cabinet with these dimensions: 5 x 5 feet square by about 4½ feet high. This will hold 80 bare-filament incandescent light bulbs of about 60-100 watts each. These are arranged in four vertical strips, one on each corner of the cabinet. The four strips are designed on several different switches. In this way a varying amount of heat can be provided, according to how many are switched on. Six switches are recommended. (Avoid circuit overload by placing half the bulbs on one circuit and the other half on a different one.

One vertical side of the box is missing. This is the "door" to the cabinet. After entering and being seated in a chair, a blanket, canvas or heavy sheet is placed over the doorway. At the top, there are two small hinged "doors" with semicircular openings in them. These are now folded down, thus providing a circular opening in the middle, for the head to project through.

HOW TO APPLY IT—*(See picture on next page.)*

1 - After entering the cabinet and seating himself, the front and top is closed and a towel is placed about his neck. Be certain that the bulbs cannot touch him, lest he be burned.

2 - The light switches are turned on and the air in the cabinet will go from about 70° F. to 125°-130° F. within a few minutes. Why so high? Because the body can tolerate a higher dry heat temperature than it can a vapor or water temperature. The body temperature will rise to 101°-102° F. in approximately 20 minutes. This artificial fever effect will help increase white blood cell number and activity, thus hastening the elimination of bacteria and toxins.

3 - Sweating will begin in 5-8 minutes, at which time facial sponging with a cool, wet cloth should begin. Lay a cold, wet cloth over the forehead, eyes, nose, and cheeks.

4 - Always know how he is feeling. Control the heat with the switches. Conclude the bath either when the desired temperature is achieved or after a total of 10-20 minutes.

5 - Follow up with a Cold Mitten Friction, or cool shower.

5 - OATMEAL BATH

WHAT IT IS—This is a full warm tub bath with oatmeal liquid in it.

HOW IT CAN HELP YOU—The oatmeal bath can help reduce the itching and burning from skin rashes of various kinds.

WHAT YOU WILL NEED—Three bath towels. Washcloth. Cloth for head compress. Bath mat. Basin of cool water for the compress. Shower cap to keep the hair dry. 1-2 pounds of quick-cooking oatmeal.

HOW TO DO IT—*(See picture on next page.)*

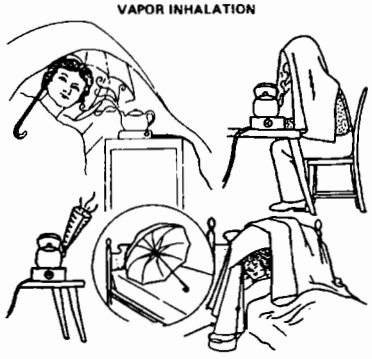
1 - Put the oatmeal in a thin cloth bag; then place it in the tub, so that the inflowing water will run over the bag into the tub. Fill the tub about two-thirds full with water at 96° F. The water should be the correct temperature, not too warm or too cool. The water should be deep enough for the one taking the bath to be immersed to the neck. When full, squeeze the oatmeal bag into the water. The water should by now be milky and very soft.

2 - Help him into the tub (and out again afterward). This is because the oatmeal water is slippery. Make him comfortable with a folded towel under his neck. The washcloth can be used to bath the parts not immersed.

3 - When finished, help him out of the tub and dry him by patting (do not rub).

CAUTION—Some types of skin conditions are made worse by water.

VAPOR INHALATION



6 - SODA ALKALINE BATH

WHAT IT IS—This is a full bath to which baking soda has been added.

HOW IT CAN HELP YOU—The partially anesthetic aspect of baking soda, when applied to the skin, provides help in dealing with poison ivy, itching, hives, heat rash, sunburns, eczema, drug reaction rashes, ant and bee stings, and plant sensitivity (nettles, etc.). The alkaline factor helps to counteract acidity in the rashes, stings, poison ivy, etc.

WHAT YOU WILL NEED—Baking soda or commercial grade sodium bicarbonate.

HOW TO APPLY IT—*(See picture on page 203.)*

1 - Fill a bathtub with water at 95°-98° F. Add about a cup of baking soda (or an equivalent amount of sodium bicarbonate).

2 - Sitting in the tub, he should dip and pour the alkaline water onto his body, continually covering it. After 30-60 minutes, he stands in the tub and partially "drip drys"; then he pats the skin dry.

7 - STARCH ALKALINE BATH

WHAT IT IS—This is shallow tub bath with a solution of corn starch in it.

HOW IT CAN HELP YOU—This is another type of alkaline bath; it is used for the same purposes as the Soda Bath, described just above. Many may prefer the starch bath; since it is even more of a natural substance on the skin than is baking soda.

WHAT YOU WILL NEED—Dry starch, such as corn starch.

HOW TO APPLY IT—*(See picture on page 203.)*

1 - Add about one cup of a dry starch into a shallow tub of water (at 95°-98° F.).

2 - The remainder of the directions are the same as for the Soda Bath, above. Length of time in the bath can be 20-35 minutes or longer.

8 - SUNBATH

WHAT IT IS—This is simply exposing part or all of the body to the sunlight.

HOW IT CAN HELP YOU—Direct sunlight has a wide range of wave energies. The ultraviolet ones are the most important for both healing and maintaining

good health. The longer heat waves (infrared) are also helpful for their heating effect.

Ultraviolet rays stimulate various life processes, destroy bacteria, and aid in the manufacture of Vitamin D by the body. Ergosterol is a fat found in the skin that has the capacity for absorbing certain ultraviolet radiations; in the process, it becomes changed into Vitamin D. Without adequate Vitamin D, the human body cannot utilize calcium in the diet to make strong bones.

It has been found that the treatment of pulmonary tuberculosis has been greatly helped by extensive sunbathing. And it has been discovered that sunbathing at higher altitudes (in mountain country) greatly improves the likelihood of healing from this disease. These "higher altitudes" need be only 1,000 feet above sea level, but can be as high as 6,000 feet.

In addition to pulmonary tuberculosis, sunbaths are also of great help in tuberculosis of the bones and joints, and in Pott's disease (tuberculosis of the spine).

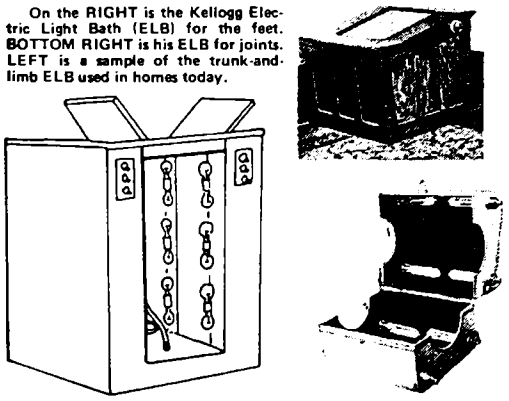
Both the red blood cells and blood hemoglobin increase in sunbathing; the increase is proportional to the altitude. In the higher Alps and on Pikes Peak, this amounts to a 30-40 percent increase in both of these very important blood factors. Mountain sunbathing also increases lymphocytes, blood alkalinity, respiratory volume, energy, and a feeling of well-being. It also lowers blood pressure; significantly increases muscular strength; and definitely improves the feelings of hope, courage, and cheerfulness. All these effects will, to a lesser extent, be achieved by sunbaths at lower altitudes or at sea level. Smog in the air at lower altitudes greatly hinders the values of sunbathing.

HOW TO APPLY IT—

1 - At a mountain altitude, 7-10 days of rest may be needed to adjust to the physical adaptation needed at higher altitudes. At lower altitudes (3,000 feet or below), this is not necessary.

ELECTRIC LIGHT BATH

On the RIGHT is the Kellogg Electric Light Bath (ELB) for the feet. BOTTOM RIGHT is his ELB for joints. LEFT is a sample of the trunk-and-limb ELB used in homes today.



2 - For normal people, begin with 5 minutes of sunlight a day, and increase 5 minutes each day. In hotter climates, only increase 2-3 minutes a day. For invalids, begin with the feet; give them 5 minutes a day, and gradually increase the exposure and the amount of the body exposed.

3 - Ultimately, never go beyond 3-4 hours a day. Blond people especially lack the "sunscreen" factor in the skin; therefore they must be more careful.

4 - The sunbath should produce a feeling of warmth, but should be given in relatively cool surroundings; for a heat bath is depressing.

8 - SEA BATHING

WHAT IT IS—This is bathing in the ocean.

HOW IT CAN HELP YOU—Sea bathing strengthens and builds the body in several ways: The percussion of the moving, cool water invigorates the body; the ocean water contains trace minerals that are needed by the body. The eating of Nova Scotia Dulse or Norwegian Kelp can help to supply these trace minerals, but sea bathing is also helpful.

(It is interesting to note that, if all the water in your body could somehow be squeezed out, there would be about 1 l gallons of seawater. For the mixture would be found to contain the same salts that are dissolved in the ocean, and in almost the same proportions (about 80 percent sodium, 4 percent calcium, 4 percent potassium, etc. The exception is that blood has 2 percent magnesium while seawater has 10 percent.)

WARNING—Sea bathing is becoming more dangerous, due to waste pollution in the waters, from city dumping and runoff from polluted rivers. North Carolina rivers are notorious for its polluted rivers, from swine farm runoff.

10 - SUN, AIR, AND WATER BATH

WHAT IT IS—In northern Mexico, there are natural healing centers which have shallow out-of-door depressions with water in them. Patients sit or lay in them and splash the water over their bodies. The effect of the combined sunlight, fresh air, and water upon the skin provides a pleasant tonic to the body. Try it in

OATMEAL AND OTHER MEDICINAL BATHS

your own backyard on a warm summer day. Use a galvanized or plastic tub, or something similar.

11 - WET GRASS WALK

WHAT IT IS—This early-morning tonic is to be found in some natural healing centers. Try it in the privacy of your own backyard: Walk barefoot on the lawn in the early morning while the dew is still on the grass. This is such a nice tonic, that you will thoroughly enjoy it. One of the effects, of course, is a strengthening of the feet. Fortunately, there are lawns all over the nation.

12 - SUMMER SPRAY

WHAT IT IS—Children enjoy it every summer; why not join them? Go out in your backyard on a hot summer day and turn the water hose on each other. The water percussion, cool water on a warm day, the air upon the skin, and the light exercise will all combine to bring a vigorous tonic effect to your body.

— *SECTION FOURTEEN* —
IRRIGATIONS

WHAT IS AN IRRIGATION?—In hydrotherapy, an "irrigation" is when we put water onto or into the body through a tube. There are irrigations of the ear, nose, eye, throat, etc., but the most common is the rectal irrigation: the enema and the colonic. We will give the most attention to enemas and colonics; but, in the third subsection, we will discuss several other types of irrigations.

WHAT IS AN ENEMA AND A COLONIC—Water is placed in the large bowel (the large intestine) in order to remove impacted wastes and toxic substances. Either an enema bag or a colonic apparatus can be used for this purpose.

WHAT YOU WILL NEED—An enema bag is a hot-water bottle with a rubber tube and plastic tip; this is obtainable at your local drugstore. For more thorough cleansing and removal of toxic substances from the bowel, a colonic is given. Whereas an enema bag can provide cleansing for a minute or two, before renewal, a colonic can do it for twenty minutes or more.

HOW IT CAN HELP YOU—The body primarily eliminates waste through the bowel, bladder, skin, and lungs. When a person is ill, he has far more toxic waste than normal; and the kidneys (cleansed by drinking pure water), the bowel (cleansed by enemas or colonies), the skin (cleansed by bathing), and the lungs (cleansed by fresh air) are very important in the disposing of that waste matter. Of these, the largest amount of wastes will be discharged through the urine (kidneys and bladder) and feces (bowel, or large intestine). An enema or colonic can be of great help in aiding the body in throwing off these excess body wastes.

1 - ENEMAS
INCLUDING: HOT, WARM, TEPID, AND COLD

WHAT YOU WILL NEED—In order to give an enema, you will need the following items: a bedpan and cover (if the one who is ill cannot easily leave the bed), an enema bag with a hard-rubber or plastic enema tip, small rectal tube, lubricant (such as vasoline), toilet paper, and newspapers or plastic sheeting.

HOW TO APPLY IT—*(See picture on next page.)*

1 - Place the enema bag under the faucet and put in water that is lukewarm or slightly cool to the touch. Fill it to the top, press down in order to expel air, and then screw on the cap (which is attached to about 5-6 feet of tubing).

2 - (In the following directions, we will assume that the one receiving the enema is in bed. If he is able to receive the enema in the bathroom, the entire procedure will, understandably, be much simpler.)

3 - Set up the equipment so that it is ready to flow. Fold the bedcovers back and cover him with a cotton blanket. He should be warm throughout the treatment, especially his feet. All clothing that is not removed should be loose. He can lay on his back, on his side, with knees partially or fully raised, or he can sit up during the treatment.

4 - Place a rubber or plastic sheet (or newspapers) on the bed under him. Turn him on his left side, with knees flexed. Allow the solution to flow through the tubing, so that it just begins to come out; then pinch it off. This removes the air from the tubing.

5 - Release the cutoff clamp; and let some of the water flow until the stream is the same temperature as that in the bag. Close the cutoff and place a little lubricant (Vaseline, etc.) on the tip (which you have earlier cleaned). Then let him insert the tip; or, if he is unable to, gently do it for him.

6 - Instruct him to take as much water as possible. To make it easier to do this, stop the flow by pinching the tube two or three times during the taking of the enema. Ask him if it is coming in too fast; if so, lower the enema bag or pinch off the tube more frequently.

7 - Give the solution slowly, and pinch it off for a few seconds when asked. (If he cannot retain the solution, place him on the bedpan while giving it.) When he feels that it is time to terminate the enema, close the tubing clamp, gently remove the tip and wrap it in toilet tissue. Small amounts of water given several times, are better than a large amount all at once.

8 - If possible, he should retain the water a few minutes before expelling it. Place him on the bedpan and stay within call. If he is unable to relax enough to take sufficient fluid, instruct him to breathe deeply or to bring his knees upward. Stay with him if he is very ill, so that you can assist him. Note his condition and the results of the enema.

9 - Remove the bed protector, replace the bed covers, and make him comfortable. Then clean all the

equipment well and put it away.

WATER TEMPERATURE—What should be the temperature of the water? 104° F. is frequently recommended, but other temperatures can also be used; and, actually, a temperature of 96°-100° F. (just below body temperature) is the ideal, as you will see below.

Hot Enema - (103°-110° F.) The temperature will vary according to his condition and the desired results. The Hot Enema helps relieve irritation, the pain of inflammation in the rectum or prostate, and pain of hemorrhoids. It also aids in expelling gas, and helps to check diarrhea by decreasing rectal tenesmus. It may be used as a prelimary measure in the treatment of dysmenorrhea. It is also used to warm and stimulate the body in shock.

Warm Enema and Tepid Enema - (95°-100° F.) The Warm Enema is the ordinary enema for cleansing purposes. It is at, or slightly below, body temperature. If slightly less, it helps facilitate bowel action during the enema. But if the enema is prolonged, or repeated frequently, it is better to use a still cooler enema or the Tepid Enema (80°-92° F.) in order to avoid the relaxing effects that the warm water has. When the bowel becomes too relaxed, it does not want to move; thus begins what is called the "enema habit."

Cold Enema - (55°-80° F.) 55°-70° F. is considered cold; whereas 70°-80° F. is considered cool. The Cold Enema is a powerful stimulant to bowel movements, and should be more generally used for this purpose instead of the warm enema. It is thus the best for overcoming both the enema habit and the cathartic habit. If retained 10-15 minutes or frequently repeated, it is useful in shrinking hemorrhoids. It may also be used in fever; but, for this purpose, a prolonged colonic would be much more convenient and effective.

2 - COLONICS

WHAT IT IS—A colonic apparatus is an arrangement for taking water into colon, expelling it into a toilet, taking in more and expelling it, for about twenty minutes or so. It is much more practical and helpful than an enema bag.

WHAT YOU WILL NEED—A colonic board can be purchased. Fairly complete information on how to make a colonic board, colonic tip, and tubing for a colonic arrangement in your own home will be found on *pages 257-261* of the author's book, *Water Therapy Manual*, available from this publisher.

HOW TO APPLY IT—*(See picture on page 258-259 of the present author's Water Therapy Manual.)*

1 - Set up the colonic board, so that its head rests on a chair and its foot rests over a toilet bowl (with the toilet lid raised). Over the board, place a folded blanket wrapped in plastic (or two black-plastic garbage can bags: one covering each end and thus overlapping each other in the middle). Above this blanket, at the head, place a pillow. And, at the foot, lay a bath towel crosswise; and then tuck it underneath on each side.

2 - Set up the colonic bucket near the toilet. (The ideal height for it would be this: bottom of the bucket about 15-20 inches above the tip.) Connect all the plastic and metal tubing together; so that water from the bucket can flow through the tubing to the colonic tip. Snap the tube clamp closed.

3 - Fill the bucket with warm water and open the clamp. As soon as the water begins to come out, snap the clamp closed. Make sure the room is warm; and have a bath towel and a blanket or two ready.

4 - Help the one about to receive the colonic to the board; assist him in lying down on it, with his head on the pillow and his feet flexed and straddling the opening at the foot of the board that is just above the mouth of the toilet.

5 - He should be suitably clothed with both tops and bottoms. You now drape the bath towel crosswise over his lower pelvic and pubic area; and then cover him with the blanket (unless he is warm enough without it). You may need an electric space heater in the bathroom, to provide additional heat.

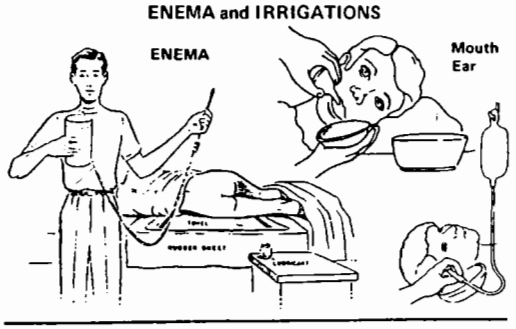
6 - Lubricate the colonic tip and, if necessary, assist him in inserting it. Then, loosen the clamp and let the water begin flowing. Ask him whether it is too warm or too cool. (It is best if he is able to take it very slightly on the cool side.)

7 - Either remain nearby or give him a bell to ring (have it tested to be certain you can hear it where you are elsewhere in the home). If it is a one-gallon bucket, you will want to check it about every 10 minutes. It is best not to refill it more than twice, at the most. If it is a five-gallon bucket, place about 3½ gallons in it; and you will probably not need to refill it.

8 - When he is finished, clamp off the tubing and remove towel and blanket. Help him arise and to get into the shower or bath.

9 - Clean up everything and put all the equipment away.

ENEMA and IRRIGATIONS



3 - OTHER IRRIGATIONS
INCLUDING IRRIGATION OF THE EAR, NASAL IRRIGATION, IRRIGATION OF THE EYE, THROAT IRRIGATION

WHAT IT IS—Both enemas and colonies are methods of bringing water into the body through a tube. In hydrotherapy, these are classified as "irrigations." There are several other types of irrigations used in water therapy. While not taking the space to explain them in detail, we will here briefly consider several of them:

1 - Irrigation of the Ear - A clean rubber tube is used to gently (gently!) introduce a flow of water onto the outer ear. The water is never applied with any pressure! It flows to the ear and thence out to the side. The temperature may be from 100° to 120° F., depending upon the effect desired. The source of water should be on a level with the top of the head. Never use force, because perforation of the ear often exists; serious injury could result from introduction of water into the middle ear with any degree of force. The head should be inclined to the side as the water is applied.

The canal of the ear should afterward be carefully dried and covered with a napkin or a warm hand for a few minutes. In cold weather, the ear should not be exposed out-of-doors for at least an hour after warm ear irrigation is applied; even after that, a small piece of cotton should be placed in the outer passageway.

"This measure affords great relief in the pain of acute otitis media and earache due to other causes. In chronic suppurative disease of the ear, this measure is indispensable as a means of cleansing and disinfection."—*Kellogg.*

2 - Nasal Irrigation - An ordinary hard-rubber syringe is attached to a rubber tube which has been carefully inserted into one nostril. The water is allowed to gentle flow into one and out the other, as the head is held forward. Kellogg says that he has concluded that it is best NOT to use the Nasal irrigation, because it might cause ear problems (through the eustachian tubes). He suggests using vaporizers or atomizers instead.

3 - Irrigation of the Eye - For this, the eyes are closed; and water is allowed to fall on the lids and also the forehead above the brow. Kellogg considers the hot eye irrigation to be "very valuable in cases of chronic inflammation of the mucous lining of the eyelids." But he does not tell us what temperature to use. Obviously, you would want to proceed with caution in irrigating over the closed eye.

"Hot irrigation of the eye has been proved to be more useful as a means of relieving even acute inflammatory troubles of the eye than cold applications."—*Kellogg.*

4 - Throat Irrigation - This is the same as "gargling."

"The application of very hot water by this means may be recommended in cases of chronic pharyngitis with tickling of the mucous membrane and dryness of the throat, irritation, hacking cough, and rawness, giving rise to frequent clearing of the throat or a tickling cough."—*Kellogg.*

In each of the above irrigations, it is important that it be done with great care, especially as hotter water is used.

— *SECTION FIFTEEN* —
DOUCHES (HAND-HELD SPRAYS)

WHAT IT IS—This is a spray or jet of water coming out of a flexible hose. Body parts needing a water therapy treatment are sprayed with water by another person who is standing nearby. The person receiving them must be ambulatory (able to walk about). This is NOT the modern meaning of the word: a washing out of an internal orifice.

EQUIPMENT NEEDED—There are three types of professional spray nozzles:

1 - The Jet Douche - A straight (or jet) nozzle lets the water flow out in a hard, solid jet of water. There is no spray to it.

2 - The Spray Douche - This nozzle is round like the sprinkler on a garden watering pot. It produces a circular spray of water that is similar to the showerhead in your bathroom shower.

3 - The Fan Douche - This nozzle also sprays; but, because it has a flattened head, the spray comes out in a fan or linear pattern.

You may be able to substitute a good garden hose changeable nozzle for the first two of the above three nozzles. Other equipment needed for the douches is a stool with an open seat (similar to a toilet seat).

HOW TO APPLY IT -

The Jet Nozzle - When percussion (a definite hitting on the skin) is wanted, the jet nozzle is used. Both cold water and percussion impact on the skin produce a strong thermic reaction in the body. This increases the vigor and permanency of the entire circulatory reaction.

The Spray Nozzle - This nozzle is used whenever percussion is not wanted. It can apply hot and cold to body parts just as well as the jet nozzle; but it does it without percussion.

The Fan Nozzle - This produces the lightest striking effect on the skin. It is best used when the tonic effects of the hot or cold water are not wanted. For example: when applying very cold water to sensitive surfaces, over painful nerves, and painfully inflamed body parts. A spray nozzle, turned on very low, would come the nearest to approximating the fan nozzle.

SPECIAL NOTE—There are (1) five basic douches (Hot, Neutral, Cold, Revulsive, and Alternate Hot and Cold), (2) thirteen local douches (Ascending, Head,

Spinal [Dorsal], Lumbar, Shoulder, Thoracic, Epigastric, Hypogastric, Abdominal, Foot, Plantar, Perineal, and Anal), and (3) twelve reflexive.

These hand-held sprays are not included in this *chapter in the Natural Remedies Encyclopedia,* because they fill many pages and are generally used only by professionals. Most people would never use these (sprays) at home. Therefore this lengthy section is omitted from this *Encyclopedia*. If you wish this data, you would need to order a copy of the author's 204-page book, *The Water Therapy Manual*. They are explained on pp. 152-175 of that book. But the author wishes to assure you that you probably do not need that advanced data.

— SECTION SIXTEEN —
TEMPERATURE TABLES

Temperature is an important subject in water therapy. Here are several useful temperature formulas and tables:

FAHRENHEIT VS. CENTIGRADE—Only the Fahrenheit scale is used in this chapter because that is the thermal measure generally found in most homes. But centigrade has become the thermal standard of science and medicine. As you may know, centigrade is a graduation based on 0° C. at the freezing point of water, with 100° C. at its boiling point (at sea level). Fahrenheit is keyed to 32° F. as the freezing point of water, with 212° F. as its boiling point. (This is based on sea-level temperatures; higher altitudes will yield lower numbers.)

CONVERSION TABLE—Here is how to change one figure for the other:

To change centigrade to Fahrenheit, multiple the centigrade numeral by 9/5 and add 32 (example: 37° C. x 9/5 + 32 = 98.6° F.).

To change Fahrenheit to centigrade, subtract 32 from Fahrenheit numeral and multiply by 5/9 (example: 98.6° F. - 32 x 5/9 = 37° C.).

AVERAGE BATH TEMPERATURES—John Harvey Kellogg, M.D., in his book, *Rational Hydrotherapy*, also provides us with average bath temperatures:

Douche : cold, 50° to 70°, 60°; hot, 104° to 125°, 115°; neutral, 92° to 97°, 95°.
Affusion : cold, 55° to 65°, 60°; cool, 70° to 80°, 75°; hot, 104° to 122°, 113°.
Plunge : cold, 50° to 70°, 60°.
Immersion : cold, 50° to 70°, 60°; cool, 70° to 80°, 75°; hot, 100° to 106°, 102°; very hot, 104° to 115°, 108°; neutral, 92° to 97°, 95°.
Brand bath : 70° F.
Shallow : cold, 55° to 65°, 60°; cool, 70° to 80°, 75°.
Cold wet-sheet pack : 60° F.
Hot-blanket pack : 130° F.
Sponge bath: 60° to 75°, 70°.
Wet-hand rubbing : 45° to 75°, 60°.
Cold friction : 32° to 70°, 50°.
Cold towel rubbing : 40° to 75°, 60°.
Wet-sheet rubbing : 60°.
Hot-air bath : 110° to 180°, 160°.
Local hot-air bath : 200° to 300°, 250°.
Turkish bath : 140° to 250°, 180°.
Russian bath : 110° to 140°, 125°.
Vapor bath : 110° to 140°, 130°.
Foot bath : cold, 45° to 65°, 55°; hot, 105° to 120°, 115°.
Sitz bath : cold, 55° to 65°, 60°; hot, 106° to 120°, 115°; neutral, 92° to 97°, 95°.
Fomentation : 120° to 160°, 140°.

—Kellogg, "Rational Hydrotherapy," page 422.

COMMON NAMES FOR TEMPERATURE—People feel heat and cold differently. What is cool to one is cold to another. Here are some common names for the basic temperature graduations:

Very cold	32° - 55° F.
Cold	55° - 70° F.
Cool	70° - 80° F.
Tepid	80° - 92° F.
Neutral	*94° - 97° F.*
Warm	92° - 100° F.
Hot	100° - 104° F.
Very hot	104° F. and above

TESTING THE WATER—Here is how Kellogg tells us to quickly estimate water temperature:

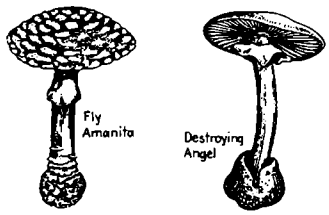
"First, test the water to be sure it is not so hot it will burn you. Then test it further: The hand gives unreliable information respecting the temperature of water, but a more accurate judgment may be formed by plunging the whole arm to the elbow into the water, as the arm is usually protected by the clothing, and hence its temperature is more equable. When the temperature of the water is so high as to produce redness of the skin, it may be said to be hot. When there is simply a comfortable sensation of heat, it is warm. A lightly lower temperature is tepid. When the temperature is low enough to produce a goose-flesh appearance, it is cool; and a lower temperature is cold while a temperature which, within a few seconds, produces pain or numbness of the parts immersed is very cold. Water the temperature of which is so high that the hand can be held in but a fraction of a second, perhaps, is very hot."—*Kellogg, Rational Hydrotherapy, p. 49.*

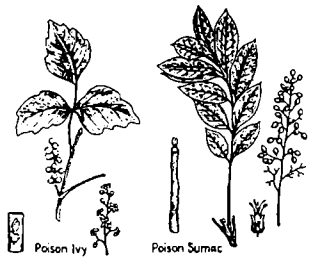
BASIC BODY TEMPERATURES—Body temperature varies with different parts of the body and with the time of day. The temperature under the tongue (oral temperature) is usually 98.6° F. The temperature under the arm (axial temperature), at 2 p.m., may be 99.9° F.; and the temperature may be 96.7° F. at 2 a.m. A thermometer placed in the rectum (rectal temperature) is likely to be 0.5° to 0.75° F. above the oral. Body temperature is usually highest in the early evening and lowest at about 4 a.m. Changes in the range between 97.6° F. and 99° F. are usually not very important. Some people are always a little below or a little above normal. The temperature balance is upset more easily in children than in adults. Mouth temperature should not be taken for 10 minutes or more after a person has had hot or cold food or drink.

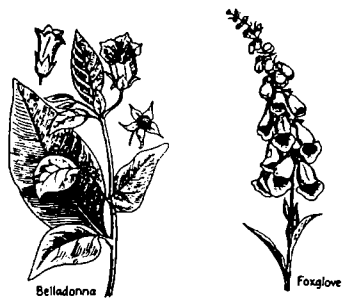
Here are several body temperature indications: 93° F. is fatal (except in cholera). 94° F. is algid collapse.

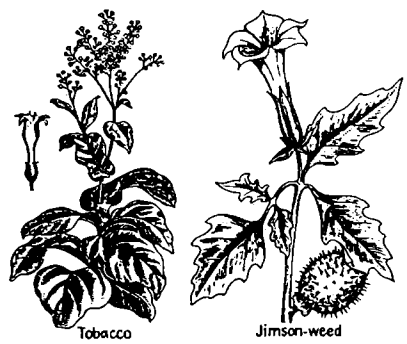
96° F. is collapse. 98° F. is subnormal. 98.6° F. is normal. 101° F. is slight fever. 102° F. is moderate fever. 104° F. is severe fever. 105° F. is high fever and dangerous. 106° F. is intense fever. 107° F. is generally fatal, except in intermitten fever.

The God of heaven gave us water, not only to drink and bathe in, but also to help restore us to health when we become ill. How thankful we can be for such a wonderful blessing! Thank Him every day for this, and all the other blessings that He gives you.









The Most Dangerous Plants

THE AMANITA AND DESTROYING ANGEL—The two mushrooms sketched on the left are the most deadly of mushrooms. They are found in open woods or clearings in summer or fall. Some mushrooms are edible (yet contain little nourishment because they are fungi) and some are mildly or strongly poisonous. But the Amanita is the worst killer of all. Here are the identifying marks of a full-grown Amanita: (1) A bulb-like root (a cup-like vulva) in the ground. (However, you may break the mushroom off just above the bulb and not notice this identifier.) (2) A small ring on the stem just below the cap. (3) There may be small flecks, or spots on top of the cap. Amanitas have white spores and free gills which are not attached to the stem. The Fly Amanita may be yellow to orange (or even greenish) while the Death Angel (also called the Destroying Angel) is usually white. But, for the Amanitas, color is not a guide. The Amanita first sends up a small round globe which splits on the sides as the stem inside it keeps growing. This causes the cap to break off from the ring and the base. There are bad effects felt 3-4 hours after eating the Fly Amanita and 10 to 40 hours after eating the Death Angel (the most deadly of the Amanitas). Call a physician immediately!

POISON IVY AND OAK—The sketch on the left shows what the leaves of both look like. Poison Ivy, in the Eastern States, is a crawling, climbing vine. Poison Oak, in the West, is a woody shrub. The roots of Poison Ivy are shallow but widely spread. Both prefer part shade, part sunlight. The leaves of both (along with Poison Sumac, below) have an oily contact poison which you can get by touching the leaves, (later) your shoes, or the smoke from the burning plant. Treatment of poison: Wash immediately, several times with non-oily soap and water (or wash with 5% ferric chloride in 50% alcohol). To the itching area, apply baking powder, Epsom salts (1-2 tsp. to cup of water). Also good: wet nutritional calcium powder in water or oil and apply, to stop the itching.

POISON SUMAC—Tree or shrub, height to 25 feet, trunk to 6 inches. Limited to swampy lands throughout Eastern States. Many other sumacs are safe. Treat as above.

BELLADONNA—Height to 6 feet. It is extremely poisonous; yet, unfortunately, it is grown for use as a medicinal drug! Contains two deadly poisons (hyoscyamine and hyoscine) which are used in medicines. For the effects caused by these poisons, see Jimson Weed, below.

FOXGLOVE—Height to 5 feet. Although often raised as an ornamental flower, it is extremely poisonous. The leaves contain three poisons used in medical drugs: digitoxin, digitonin, and digitalin.

TOBACCO—Height to 8 feet or more. One of the most deadly of poisonous plants. A tiny amount, injected, will instantly kill an adult. The only reason cigarettes are not immediately fatal is because the nicotine is absorbed more slowly. Tobacco contains over 3,000 poisons. Beginning in 1612 in Virginia, it has been cultivated as a narcotic. But its use gradually ruins various organs and leads to a startling variety of diseases and eventual death.

JIMSON WEED—Height to 5 feet. Grows wild in Eastern States. All parts of the plant are poisonous to cattle, horses, sheep, and humans. Even contact with the leaves may produce a severe dermatitis (skin rash). Unfortunately, it is also cultivated as a medicinal drug. Contains the same two poisons found in Belladonna: the akaloid hyscyamine is in the leaves, fruit, and roots, and seeds; and hyoscine is in the roots. The poison causes headache, vertigo, thirst, nausea, loss of sight and of coordination, mania, convulsions, and death.

DISEASE INDEX

This index only lists the conditions mentioned in the water therapies section *(pp. 154-208)*. In addition to them, you will want to check the Kellogg prescriptions for specific diseases in the main part of the *Encyclopedia*. They contain many, many suggestions of physical problems which water therapy can be used to relieve. You will find dozens of them scattered all through the 25 disease chapters of this *Encyclopedia*.

When turning to a therapy, read the entire section (example: Different Sponges are used for different fevers). Also check the related ones (example: the various Chest Packs). Some are better than others for certain conditions. You might prefer one to another (example: Oatmeal or Alkaline Bath instead of Soda Alkaline Bath). Also, by reading the entire section, you will find cautions (example: Hot Tub Bath). Be sure to carefully read all the principles and cautions at the front of this hydrotherapy section *(pp. 156-161). If you have a serious condition, see your physician!*

Topics are alphabetized; but, within a topic, the order is often arranged in book order, so you can easily turn pages and decide what you want to do (examples: pelvic, rheumatism). Water therapy is a wonderful blessing of God to mankind.

Alcoholic delirium: Neutral Wet-sheet Pack 174-175
Alcoholic intoxication: Alternate Compress 175
Alcoholism, chronic: Steam Bath 200
Alcoholism: Sweating Wet-sheet Pack 174-175
Alveolar Abscess: Hot Packs with Ice Bags 186
Ankle, sprained: Contrast Bath 193
Appendicitis: Hot Packs with Ice Bags 186
Arthritic joints, painful: Paraffin Bath 180
Arthritis, acute infectious: Ice Cravat 170
Arthritis, acute infectious: Ice Pack 169
Arthritis: Contrast Bath 193
Arthritis, rheumatoid: Ice Cravat 170
Anxiety: Neutral Tub Bath 195
Asthma: Heating Chest Pack 173
Black-and-blue swelling, prevent: Ice Cravat 170
Bed sores: Alternate Compress 175
Bile pain: Hot Trunk Pack 186
Bleeding, checks: Ice Bag 186
Blood poisoning in arm or leg: Contrast Bath 193
Boil, bring to a head: Poultices 183
Bowels, stimulate muscles of: Cold Sitz Bath 195
Brachial neuritis: Hot Shower 197
Bright's disease, acute: Full Hot Blanket Pack 185
Bright's disease: Steam Bath 199
Bronchial colds: Heating Chest Pack 173
Bronchitis, capillary: Sweating Wet-sheet Pack 175-175
Bronchitis, congestion in: Fomentation 177-179
Bronchitis: Vapor Inhalation 201
Burns: Ice Pack 170
Burns: Neutral Tub Bath 186
Bursitis: Ice Pack 169
Catarrhal jaundice: Abdominal Bandage 172
Cellulitis: Contrast Bath 192
Cellulitis: Revulsive Sitz Bath 195
Charcot's joint at the ankle: Contrast Bath 193
Chemical toxins, neutralize: Poultices 183
Chest cold: Vapor Inhalation 201
Chest congestion: Hot Footbath 193
Chest congestion due to colds, bronchitis, pleurisy: Fomentation 177-180
Chilblains: Alternate Compress 175
Circulation, improve: Alternative Hot and Cold to Spine 177
Circulation, poor: Contrast Bath 193
Cold in the head: Vapor Inhalation 201
Colds, shorten length of: Hot Footbath 193
Colds: Sweating Wet-sheet Pack 174-175
Congestion: Ice Bag 170
Congestion of internal organ: Ice Bag 170
Congestion, relieve internal: Fomentation 177-180
Congestion, various types: Revulsive Compress 176
Constipation: Abdominal Bandage 172
Contusions: Ice Cravat 170
Coughing: Vapor Inhalation 201
Croup: Heating Chest Pack 173
Diarrhea, chronic: Neutral Tub Bath 195
Dropsy of abdomen: Alternate Compress 175
Dropsy of chest: Alternate Compress 175
Drug reaction rashes: Soda Alkaline Bath 202
Dysmenorrhea: Very Hot Sitz Bath 195
Eclampsia: Full Hot Blanket Pack 185
Eclampsia: Ice Cravat 170
Eczema: Soda Alkaline Bath 202
Edema: Ice Cravat 170
Edema of legs: Contrast Bath 193
Edema, painful in limbs: Continuous Hot Shower 198
Eustachian tube inflammation: Throat Compress 171
Eye, painful affections of: Revulsive Compress 176
Feet, weak, pronated: Contrast Bath 193
Fever: Cold Compress 169
Fever: Ice Cravat 170
Fever, lower temperature of: Graduated Bath 197
Fever: Sponging 190
Fevers, childhood: Sweating Wet-sheet Pack 174-175
Fever, continued: Cooling Wet-sheet Pack 174-175
Fever, reduce high temperature of: Cooling Wet-sheet Pack 174-175
Gallstone pain: Full Hot Blanket Pack 185
Gangrene: Contrast Bath 193
Gout: Paraffin Bath 180
Gout: Steam Bath 200
Gout: Sweating Wet-sheet Pack 174
Headache, anemic: Alternate Hot and Cold to Head 176
Headache, congestive: Cold Com-

press 169
Headache, congestive: Ice Cravat 170
Headache, congestive: Contrast Bath 193
Headache, congestive: Simultaneous Hot and Cold to Head 176
Head, improve circulation within: Alternate Hot and Cold to Head 176
Head, passive congestions in: Alternate Hot and Cold to Head 176
Heat rash: Soda Alkaline Bath 203
Hives: Soda Alkaline Bath 202
Hoarseness: Throat Compress 171
Indigestion, atonic: Abdominal Bandage 172
Infections: Contrast Bath 193
Inflammation: Ice Bag 170
Inflammation: Throat Compress 171
Influenza, respiratory type: Heating Chest Pack 173
Influenza: Sweating Wet-sheet Pack 174
Insanity: Neutral Tub Bath 195 *(see Mania)*
Insect bites and stings: Poultices 183
Insect bites and stings: Soda Alkaline Bath 202
Insomnia: Abdominal Bandage 172
Insomnia: Neutral Wet-sheet Pack 174-175
Insomnia: Neutral Tub Bath 195-196
Intestinal pain: Hot Trunk Pack 186
Itching: Soda Alkaline Bath 202
Joint conditions, painful: Joint Compress 171
Joint inflammation, acute: Ice Pack 169
Joints, stiff: Paraffin Bath 181
Kidney Congestion: Hot Packs with Ice Bags 186
Kidney insufficiency and congestion: Full Hot Blanket 185
Kidney pain: Hot Trunk Pack 186
Kidney stone attack: Kidney Stone Pack 181
Kidney stone pain: Full Hot Blanket Pack 185
Laryngitis: Throat Compress 171
Ligaments, torn: Ice Pack 169
Liver anemia: Abdominal Bandage 172
Lumbago, refractory: Continuous Hot Shower 198
Mania: Neutral Wet-sheet Pack 174-175
Mania: Neutral Tub Bath 195
Mastoiditis: Hot Packs with Ice Bags 186
Meningitis: Ice Cravat 170
Morphine-derivative poisoning, arousing from: Alternate Compress 175
Muscle tone, improve: Alternative Hot and Cold to Spine 177
Nasal passages, stuffy and painful: Heat Lamp 182-183
Nerve action, improve: Alternative Hot and Cold to Spine 177
Nervous exhaustion or irritability: Neutral Tub Bath 195
Neuralgia: Revulsive Compress 176
Neurasthenia: Abdominal Bandage 172
Neuritis, Brachial: Hot Shower 197
Neuritis, multiple: Neutral Tub Bath 195
Neuritis: Revulsive Compress 176
Nicotine elimination: Sweating Wet-sheet Pack 174-175
Nosebleed: Hot Footbath 194
Obesity: Steam Bath 200
Obesity: Sweating Wet-sheet Pack 174-175
Pain from edema, sprains: Cold Compress 169
Pain, reduce swelling in: Ice Bag 170
Paralyzed limbs: Alternate Compress 175
Parametritis: Revulsive Sitz Bath 195
Pharyngitis: Throat Compress 171
Peritonitis: Hot Packs with Ice Bags 186
Pelvic cramps, relieve: Hot Footbath 193
Pelvic congestion: Hot Footbath 193
Pelvic circulation, stimulate: Cold Sitz Bath 195
Pelvic inflammations, hasten absorption of residual thickening after: Cold Sitz Bath 195
Pelvic pain: Very Hot Sitz Bath 195
Pelvic problems—many different kinds: Sitz Bath 194
Plants, sensitivity to (nettles, etc.): Soda Alkaline Bath 202
Pleurisy, chronic: Alternate Compress 175
Pleurisy, congestion in: Fomentation 177-180
Pleurisy: Heating Chest Pack 173
Pneumonia, acute (early) stage only: Dry Chest Pack 174
Pneumonia: Alternate Compress 175
Pneumonia: Full Hot Blanket Pack 185
Pneumonia: Heating Chest Pack 173
Poison, absorb: Poultices 184
Poison ivy: Soda Alkaline Bath 202
Nocturia, prostatic hypertropic: Revulsive Sitz Bath 195
Pott's disease (TB of spine): Sunbath 202
Puerperal infections: Hot Packs with Ice Bags 186
Pus formation, avoid: Alternate Compress 175
Quinsy: Throat Compress 171
Respiratory colds: Heating Chest Pack 171
Restlessness: Neutral Wet-sheet Pack 174-175
Rheumatic fever: Ice Pack 169
Rheumatic fever: Joint Compress 171
Rheumatic fever, joint inflammation: Ice Cravat 170
Rheumatoid arthritis: Ice Cravat 170
Rheumatism, chronic: Steam Bath 200
Rheumatism: Joint Compress 171
Rheumatism, obese: Sweating Wet-sheet Pack 174-175
Rheumatism, muscular, relieve pain: Hot Tub Bath 195
Salpingitis, acute: Hot Packs with Ice Bags 186
Salpingitis: Revulsive Sitz Bath 195
Sciatica, acute: Revulsive Compress 176
Sciatica: Continuous Hot Shower 198
Sciatica: Paraffin Bath 181

nus attack: Sinus Pack 182
nus congestion: Cold Compress 169
din grafts: Paraffin Bath 181
din rashes, reduce itching: Oatmeal Bath 202
eep, helps one go to: Neutral Sitz Bath 195
re throat, beginning of: Hot Footbath 193
re throat: Throat Compress 171
inal irritation: Revulsive Compress 176
rains: Ice Cravat 170
rains: Ice Pack 170
rains: Paraffin Bath 181
b-involution: Prolonged Sitz Bath 195
nburns: Soda Alkaline Bath 202
nstroke: Ice Cravat 170
Sweating treatment, for many purposes: Full Hot Blanket Pack 185
Tachycardia: Cold Compress 169
Tendon repair: Paraffin Bath 181
Tenosynovitis: Paraffin Bath 181
Tetanus dorsalis: Moderate Tub Bath 195
Throat, sore: Throat Compress 171
Tobacco addiction: Steam Bath 200
Tonsillitis: Throat Compress 171
Tuberculosis, pulmonary: Sunbath 202
Tuberculosis of bones and joints: Sunbath 202
Tuberculosis of spine (Pott's disease): Sunbath 202
Tuberculosis of the ankle or foot: Contrast Bath 193
Tuberculosis, relieves opisthotonos (tetanus dorsalis) in: Moderate Tub Bath 195
Tuberculosis, pulmonary: Sunbath 204
Typhoid fever: Cooling Wet-sheet Pack 174-175
Typhoid fever: Cold Tub Bath 196
Typhoid fever: Full Hot Blanket Pack 185
Typhoid fever, lower temperature: Graduated Bath 198
Undulant fever, helps induce mild fever effects: Hot Tub Bath 195
Uremia: Ice Cravat 170
Uremia: Full Hot Blanket Pack 185
Uterus, produces powerful contractions of: Prolonged Sitz Bath 195
Uterus, stimulate muscles of: Cold Sitz Bath 195
Whooping cough: Heating Chest Pack 173

The objective of hydrotherapy is to bring the blood to, and remove it from, an affected area. This is because the healing life is in the blood. The life is not in the heart; for that is only a blood pump. It is not in the glands; they only supply regulating hormones. It is not in the bones, organs, or muscles. And it is not in the brain. That only has thinking areas and switching stations. Life ceases in the foot, brain, or heart when the blood no longer reaches it.

The Bible says that out of the heart flows life. That which flows from the heart is the blood; it contains the life.

"Keep thy heart with all diligence, for out of it are the issues of life [issues forth life]."—*Proverbs 4:23.*

Here is another passage which shows that the word, "issue," in the Bible means "to flow forth":

"A fiery stream issued and came forth from before Him."—*Daniel 7:10.*

So the healing power is in the blood. **When your leg or liver becomes afflicted with a disease, you need to move a fresh supply of blood into and out of that body part**, so it can heal more rapidly.

Water therapy is the best way to do this. Nothing else so efficiently and powerfully moves the blood into and out of a weakened, sickly body part.

The Bible says that the life within you is in your blood:

"For the life of the flesh is in the blood."—*Leviticus 17:11.*

Here are other Bible passages discussing the importance of the blood:

"For the life of the flesh is in the blood; and I have given it to you upon the altar to make an atonement for your souls: for it is the blood that maketh an atonement for the souls."—*Leviticus 17:11.*

"Without shedding of blood is no remission [of sin]."—*Hebrews 9:22.*

"The blood of Jesus Christ His Son cleanseth us from all sin."—*1 John 1:7.*

"Whosoever committeth sin transgresseth also the law: for sin is the transgression of the law. And ye know that He was manifested to take away our sins; and in Him is no sin."—*1 John 3:4-5.*

"Unto Him that loved us, and washed us from our sins in His own blood."—*Revelation 1:5.*

"For this is My blood of the new testament, which is shed for many for the remission of sins."—*Matthew 26:28.*

"Whom God hath set forth to be a propitiation through faith in His blood."—*Romans 3:25.*

"In whom we have redemption through His blood."—*Ephesians 1:7, Colossians 1:14.*

"Now the God of peace, that brought again from the dead our Lord Jesus, that Great Shepherd of the sheep, through the Blood of the Everlasting Covenant, make you perfect in every good work to do His will, working in you that which is well-pleasing in His sight, through Jesus Christ; to whom be glory for ever and ever. Amen."—*Hebrews 13:20-21.*

— SECTION 1 —
GENERAL

GENERAL - 1 - FATIGUE

DEBILITY
(Weak, Debilitated Conditions)

SYMPTOMS—A feeling of exhaustion all, or much, the time.

CAUSES—This can be caused by **a number of di-tic, physical, or hormonal problems**. Some of which mentioned below. See *Chronic Fatigue (214, 215)* much more information.

NATURAL REMEDIES

• Some weak individuals only need **rest, fresh air, nshine, pure water, nutritious meals, and freedom m worry**.

• **Clean the toxins** from the body. You may feel aker for a few days. But, afterward, you will generally l much better and stronger.

• **Over-indulgence** in sex debilitates the body. **Worry** ars out the life forces. The use of **coffee, tea, tobacco, ohol, and processed and junk foods** are also sources trouble.

• A good program of better nutrition, more rest, s tension, and **taking time to go outdoors and work walk** 30-60 minutes at a time will do much to build body.

• A **cold morning shower** invigorates the body.

• You may have **chemical or food sensitivities**. ople today are exposed to enormous numbers of emicals. Try to find what is causing your problem: in ur food, your home, your environment.

• **Do not smoke** or be around smokers.

• **Avoid chocolate, soft drinks, caffeine, and highly ocessed foods**.

• Include **vitamin C** (2,000 mg) **and magnesium** 50 mg) in your diet. Eat lots of **green foods**. Drink **enty of water** each day.

• Trust in God, obey the Ten Commandments, and e as healthfully as you can.

HERBS

• As an aid in rebuilding the body after acute or ronic illnesses, the following **herbal formula** is quite lpful. It combines nutritional benefits with herbal ton-s. Mix together 1 oz. **parsley root**, 1 oz. **alfalfa**, and ½ . of each of the following: **dandelion root, comfrey ot, yellow dock root, burdock root, nettles leaves, and dulse**. Place in an uncovered pot with a quart of water and simmer for 20 minutes. Let it cool, then strain. Place the liquid back in the pot and simmer uncovered for one hour or until it is reduced to one cup. Stir in one cup of unsulphured blackstrap molasses and refrigerate. Take one Tbsp. 3 times a day.

• Or take the above powdered, mixed, dry herbs (not having gone through the cooking stage). **Place them in #00 capsules** and take 2-4 capsules with each meal.

• Mix the following herbs well: 5 parts **white poplar bark**; 1 part each of **barberry bark, balmony bark** and ½ part: **golden seal, cloves**; ¼ part: **cayenne**. Add **honey**. Put 1 heaping Tbsp. into 1 quart boiling, distilled water. Cover and steep 15 minutes. Strain and sweeten to taste.

HYDROTHERAPY

• **Water treatments** are explained in the chapter on hydrotherapy *(153-211)*. These will increase endurance. Tonic frictions include **Wet-hand Rub, Cold Mitten Friction, Cold Towel Rub, Wet-sheet Rub, Dripping Sheet Rub, Ice Rub, and Salt Glow**.

• In cases of severe exhaustion: **Bed rest** for a time, **proper diet**, plus carefully graduated (increasing) **tonic cold applications** will provide needed help.

—Also see Debility (213), Emotional Fatigue Syndrome (213), Chronic Fatigue (214), Epstein-Barr Virus (214), and Neurasthenia (452). Also see Depression (494).

ENCOURAGEMENT—No one understands, as well as Jesus, your problems. He is watching over you. If you are willing to be guided by Him, He will throw around you influences for good that will enable you to accomplish all His will for you. Psalm 27:1.

EMOTIONAL FATIGUE SYNDROME

SYMPTOMS—A variety of symptoms could be involved: continual tension and stress, anxiety, depression, loss of interest, no zest for life, inability to cope with everyday problems, mental and physical fatigue, loss of confidence, fear of failure, panic attacks, a sense of hopelessness, mood swings, muscle spasms, sensitivity to noise, negative attitudes, and constant worrying.

CAUSES—Emotional stress depletes the nervous system, weakens emotional stability, and fatigues the body. Such stress weakens the functions of the body organs (such as the stomach and liver). This in turn results in malnourishment and a release of toxins into

the system. Primary causes would include **constipation, autointoxication, nutritional deficiencies, a negative outlook** on people and circumstances, and **negative input** from other people.

NATURAL REMEDIES

• Learn to **relax**, as well as **exercise outdoors**. Do everything with an attitude of thankfulness toward, and trust in, God, believing that He will work everything out for the best.

• Eat **nutritious, high-fiber foods**: fruits, vegetables, sprouts, grains, nuts, seeds, beans, and drink juices.

• **Vitamin A** (5,000 IU), **vitamin D** (1,000 IU), **vitamin C** (2,000 mg), and **vitamin E** (400 IU) are important. Take a multivitamin tablet twice a day. Make sure you are getting enough **calcium** (2,000 mg), **magnesium** (1,000 mg), **and potassium** (1,000 mg).

• **For more natural remedies**, go to *Chronic Fatigue (214), Epstein-Barr Virus (214), and Neurasthenia (452).*

ENCOURAGEMENT—Learn all you can about the laws of health and obey them. Nothing is apparently more helpless, yet really more invincible, than the soul that feels its nothingness and relies wholly on Jesus for help. God can help you. Psalm 55:22.

CHRONIC FATIGUE

SYMPTOMS—A continual feeling of exhaustion.

CAUSES—Fatigue is a symptom pointing to other problems; it is not a disease of itself. Chronic fatigue is generally caused by a high-fat and refined carbohydrate diet, along with emotional stress. Any of the following only adds to the exhaustion: drugs, caffeine products, smoking, alcohol, poor eating habits.

Chronic fatigue can forewarn of an undetected problem such as anemia, hypoglycemia, diabetes, allergies, malabsorption of nutrients, candidiasis, poor circulation, hypothyroidism, Epstein-Barr virus (EBV), mononucleosis, or cancer.

It can also be caused by weight loss; obesity; and, if characterized only by a lack of energy, boredom.

NATURAL REMEDIES

• Obtain adequate **rest, exercise, and a well-balanced diet.**

• Deficiencies of **vitamin B complex, vitamin C** (2,000 mg), **vitamin D** (1,000 IU), **or iron** (50 mg) may cause fatigue. Also needed: **vitamins A** (1,000 IU), **pantothenic acid** (50 mg), **vitamin B_{12}** (1,000 mcg), **folic acid** (5 mg), **iron** (50 mg), **calcium** (2,000 mg), **and magnesium** (1,000 mg). **Acidophilus** is very helpful in improving digestion and the production of certain B vitamins in the bowel.

• **Exercise** everyday outdoors. Try to induce some perspiration.

• Many experts agree that **a vegetarian diet** can greatly reduce chronic fatigue.

• Helpful herbs include **American ginseng, lavender, rosemary, sweet flag, pasqueflower.**

• Combining several **antiviral herbs** has been successful in many cases. Select several from among **goldenseal, echinacea, licorice, lemon balm, and ginger.** Make a tea using a tsp. or two of 2 or 3 of these, and drink a cup 2 or 3 times a day.

• **Wheatgrass juice** is recommended for fatigue.

• Water therapies are helpful: **ice-cold footbaths, daily morning barefoot grass walks, alternative hot and cold showers, "salt glow" skin rubs, and a dry-friction rub with a skin brush.**

• **For more natural remedies**, go to *Emotional Fatigue (213) and Epstein-Barr Virus (214). Also see Depression (494).*

ENCOURAGEMENT—The whole family of heaven is interested in the family here below, messengers from the throne of God attend our steps every day. They seek to protect us from our mistakes amid the problems we daily encounter. By faith in Christ, obey God's Ten Commandments and know that He will work everything out for the best. 2 Peter 1:3-4.

EPSTEIN-BARR VIRUS
(Chronic Fatigue Syndrome)

SYMPTOMS—Recurrent upper-respiratory tract infections, exhaustion, extreme fatigue, sore throat, swollen lymph nodes, achy joints and muscles, memory loss, low-grade fevers, headaches, poor concentration, night sweats, irritability, and deep depression. Because the symptoms resemble flu and other viral symptoms, EBV is not always diagnosed correctly. In fact, it is frequently misdiagnosed as hypochondria, depression, or psychosomatic illness.

CAUSES—Chronic fatigue syndrome is caused by the Epstein-Barr virus (EBV). This condition has become widespread in America. The CDC in Atlanta estimates that tens of thousands of people are infected with it. Yet they are unaware of it, since symptoms are frequently not prominent.

This virus is also the cause of infectious mononucleosis. When mononucleosis occurs, the person becomes very ill for two to four weeks or longer if the diet is not corrected. *See Mononucleosis (554).*

EBV is a type of herpes virus, and is related to the viruses that cause genital herpes and shingles.

Keep in mind that chronic fatigue syndrome can also be caused by certain other factors: **candida albicans (yeast infection), anemia, chronic mercury poisoning from dental amalgam tooth fillings, hypoglyce-**

mia, insomnia, and hypothyroidism. *(All of the above problems are dealt with in articles in this book.)*

Once EBV is contracted, it always remains in the body. Fortunately, most people develop antibodies to it. The problem occurs when they become rundown and overworked—and then the dormant EBV strikes. It is more likely to reveal its presence when other diseases are also present, such as **arthritis, lupus, multiple sclerosis, cancer, or AIDS**.

EBV causes the body to overreact, resulting in a burnout of the immune system.

Epstein-Barr virus is very contagious, and can be transmitted by **close contact, kissing, sharing food, coughing, and through sex**.

Blood tests for antibodies against candida albicans and EBV are available for specific diagnosis. Yet the fact remains that EBV symptoms are similar to those of many infections, anemia, parasites, endocrine diseases, and AIDS.

NATURAL REMEDIES

• Antibiotics do not help, since EBV is a virus. Recovery takes time, rest, and good nutrition. Drink **lots of water**, at least 8 glasses a day. **Regularity** in bowel movements is essential. Add **fiber** to the diet. **Cleansing enemas** should be used occasionally.

• It is vital that you get **plenty of rest**. Throughout the day, take relaxation breaks. If possible, try to lay down and rest before meals.

• **Exercise each day** is invigorating. Keep taking a little more. Outdoors exercise is best. Avoid overexertion, but also avoid being too sedentary. You will not recover by remaining in bed!

• Use your energy carefully. **Do not overdo** and then collapse for a time. You may have exhausted adrenal glands.

• Your problem may be partly or wholly caused by the **prescription drugs** you are taking.

DIET

• **Remove** from the diet all junk foods, processed foods, fried foods, stimulants (coffee, tea, soft drinks, sugar), and white-flour products (bread, spaghetti, etc.).

• It is said that 60 percent of those with EBV also have **candida** *(see Candidiasis)*; therefore it is best to eat some form of acidophilus. **Eliminate sugar, alcohol, mushrooms, all fungi, molds, yeast, fermented foods such as sauerkraut, soy sauce, dry roasted nuts, potato chips, soda pop, bacon, pork, lunch meats, and all types of cheese**.

• Eat some brand of **"greens" tablets**. **Chlorophyll** is vital to proper diet and healing. Make **green drinks** from whizzed up greens and pineapple juice.

• Take 2,000 mg **vitamin C**, twice a day, and 400 mg **magnesium** daily.

OTHER

• Take **no aspirin**, since it may induce Reye's Syndrome *(713)* in children.

• Helpful herbs include **red clover**, to cleanse the blood; **echinacea**, to help the glands; **garlic**, as an antibiotic; and **saffron**, to help reduce pain.

• Epstein-Barr can be combated with massive doses of **vitamin C**, immediately **followed by exercise**.

• **For more natural remedies**, go to *Emotional Fatigue (213)* and *Chronic Fatigue (214)*.

• **Similar symptoms:** *Lyme Disease (568, 744), Chronic Fatigue Syndrome (214), and Neurasthenia (452).*

ENCOURAGEMENT—The heart that has once tasted the love of Christ cries out continually for a deeper draught. How thankful we can be for His love and care over us. Hebrews 10:19-20.

CANDIDIASIS

(Yeast Infection, Candida, Thrush, Chronic Fatigue Syndrome)

SYMPTOMS—Symptoms include bad breath, constipation, chronic infections, depression, fatigue, food cravings, gas, headaches, adrenal and thyroid problems, hiatal hernias, indigestion, insomnia, mental confusion, discomforting odors, panic attacks, and menstrual problems. Vaginal infection produces intense itching, accompanied by an odorless, white, cheesy discharge.

CAUSES—This is an infection caused by *candida albicans*, a normally harmless yeast *(saprophyte)* found in your intestines. Some of it is also regularly found in your mouth, throat, and genital tract. But this organism goes wild when its competitors, the normal bacteria of the intestines, are killed by **long-term use of antibiotics**. This enables the candida to greatly increase in number. Yeast infection is caused by a group of yeast-like fungi called candida. The most common of these is *Candida albicans*, but it is not the only one. Yeast live on moist areas of the body, such as the lining of the mouth and the vagina.

In the vagina, the ailment is caused by an alteration of the normal **pH balance** from slightly acid to more alkaline.

Stress causes a reduced production of stomach acid, which lets candida enter the stomach—a place where it normally is never found. As a result, less digested food enters the intestines, much to the liking of the candida which feeds upon it.

Several modern **prescription drugs** cause yeast infection. **Sugary and junk food** adds to the problem.

This yeast-like substance proliferates so massively that it enters the bloodstream and is carried to many parts of the body, weakening the immune system and causing various problems.

In the oral cavity, candida is called *thrush*. White sores may develop on the tongue, gums, and inside the cheeks.

In the vagina, it results in *vaginitis (660)*. Large amounts of a white, cheesy discharge and intense itching occur.

Other effects are *food allergies (574-585), athlete's foot (292), ringworm (261), jock itch (261),* and even *diaper rash (690).*

Candida is not transmitted sexually, but mothers may pass thrush on to their newborn children. The baby's tongue will appear red and be covered with white spots (generally noticed 8-9 days after delivery) that will appear like milk spots. On the buttocks, thrush may resemble diaper rash. *See Infant Thrush (695).*

Three out of four adult females have at least one attack of candidia. Because their vaginal environment is more conducive to the growth of yeast, women with **diabetes** can contract candida easier than diabetic men.

You may wish to request a blood test for antibodies against *candida albicans.* A skin test, similar to a TB test, is also available. A positive result confirms that you have candidiasis. But a negative skin test may not be reliable. Candida is difficult to diagnose, since a culture cannot be used. This is because this yeast is a normal constituent of everyone's intestines.

NATURAL REMEDIES

THINGS TO AVOID

• Try to eliminate **food allergies, hypoglycemia, any infections,** and **indigestion.**

• The **woodpile** by the woodburning stove and fireplace can be a problem; for all wood contains fungi.

• Do not use **insecticides, tobacco,** or **perfumes.**

• Avoid **damp, moldy environments.** Do not use **oral contraceptives** while you have candida.

• Avoid **antibiotics** and **steroids,** because they destroy the competing bacteria and allow candida to overgrow. Avoid **birth control pills** and **cortisone types of drugs,** including Prednisone.

• Do not use the following foods: **Sugary foods, Cheese, alcohol, chocolate, fermented food, gluten grains (wheat, oats, rye, and barley). Meat, pickles, raw mushrooms, vinegar, or any yeast products.**

• Yeast thrives on sugars and carbohydrates. A **vegetarian nondairy diet of protein, unrefined grains, and vegetables** is best. **Onions** and **garlic** are very helpful. Fresh, raw garlic is the best. Avoid meat-based proteins, since these are associated with abnormal bowel flora development. **Avoid yeasted grain foods.**

FOODS

Stay on a **low carbohydrate** diet. Lower it to 80 grams per day. A yeast-infected person may crave such foods. Limit the use of all **yeast foods;** this includes mushrooms, baked goods containing baker's yeast, and foods enriched with vitamins (often made from brewer's yeast). Only use B vitamin supplements from rice bran. **Avoid** mushrooms, **fermented foods** and drinks (sauerkraut, ginger ale, alcohol), **foods with molds** (yogurt, sour cream, buttermilk, all cheeses), **malted products,** and **dried fruit.** Avoid **milk products** (because of lactose in them).

• **These foods inhibit candida** growth: **garlic, broccoli, turnips, kale, collards, cabbage. Safe foods include millet, brown rice, whole grains, beans, and vegetables. Almonds and nuts** are okay, but avoid peanuts.

• **Clean all fresh foods** carefully to remove chemicals, sprays, bacteria, and fungi. Add fiber to the diet; it helps clean the colon.

NUTRIENTS

• **Replant *Lactobacillus acidophilus*.** This is the friendly bacteria in your intestines which the "wonder drugs" you earlier took killed off. Lactobacillus is a primary competitor of candida for food in the intestines. It also helps keep the colon slightly acid. Use a retention enema containing 4 oz. warm water and 10 billion organisms (empty twenty 500,000 organism capsules into the water). Use 3 times weekly, 10 minutes each time. Acidophilus is a preventive and remedy.

• Useful **nutrients** include vitamin **B complex** with extra biotin (100 mg, 3 times a day) and B_{12} lozenges. Place 2,000 mcg lozenges under tongue 3 times a day, between meals. Take **vitamin C** to bowel tolerance (up to 5,000 mg) and **essential fatty acids** such as wheat germ oil (2 Tbsp.), primrose oil, **garlic capsules** (2 capsules, 3 times a day), etc.

• Also helpful: **vitamin A** (25,000 IU, 1-2 times a day, for a week), B_6 (100-250 mg, 1-2 times, daily), **vitamin E** (400-800 IU, daily), **biotin,** and aloe vera juice (2 oz., four times per day).

HERBS

• Important: *Also see Antifungal Herbs (230) for important information.*

• **Helpful herbs** include **burdock, echinacea, ginger, goldenseal, bee pollen, kelp, lobelia, passionflower, pau d'arco, psyllium, slippery elm, ginkgo, and suma.**

• The immune-stimulating action of **echinacea** is particularly helpful for treating yeast infection. In a German study, 60% of those who took prescription antifungal drugs had yeast recurrences; but only 10% of those who took echninacea had yeast recurrences.

• Also very good is **garlic,** which is an antibacterial, antifungal antibiotic. Take up to a dozen raw, chopped cloves 2-3 times a day in juice. It is not easy to take, but effective. Blend it with carrots and it is much easier to take. **Cranberry juice** is also opposed to candida; so try taking your garlic with that.

• **Goldenseal** contains the antibiotic berberine, which is very effective against yeast. Other helpful antibiotics include **Oregon grape** and **pau d'arco.**

• **Important: Read** *Vaginitis (660),* which is very similar. You will there find additional natural remedies against albicans. Also see *Chronic Fatigue Syndrome (214),* which has similar symptoms.

ENCOURAGEMENT—God's love for His people is infinite. His care for His people is unending.

JET LAG

SYMPTOMS—Fatigue, lethargy, irritability, inabil-

ty to sleep, trouble concentrating and making decisions, perhaps even diarrhea and a lack of appetite.

CAUSES—Circadian rhythms control your daily cycles of sleep and certain other body functions. **Jetting across several time zones** produces a sudden violation of your body's inner clock. If, from America for example, you fly to Australia or Europe, you will experience jet lag; for you will suddenly be thrust into meals and wakefulness in the middle of "your night" and awake when your body tells you it is time for sleep. North-south trips only produce normal weariness. Traveling westward more than two time zones often results in exhaustion, diminished alertness, disorientation, irritability, loss of appetite, sleepiness during the day, wakefulness at night, and perhaps constipation or diarrhea.

NATURAL REMEDIES

Advance preparation: 1-3 weeks before traveling to a warmer climate, start eating more of **the foods** you will eat at your destination. Start eating **meals closer to the time** you will eat them when you arrive.

TAKING THE TRIP

• Get **extra sleep** beforehand. Drink **plenty of fluids** and be **quiet and relaxed** during the flight. **Fly by day**, arrive at night, and then soak up some **extra rest.** You tend to dehydrate in the plane; so drink enough water: 32 oz. for every 6 hours of flying. But **no coffee or alcohol**; they are both diuretic and flush fluids from the body. Frequently **walk up and down the aisle** in order to avoid the blood clots that can develope in your legs on long trips (especially across the Pacific). Try to break up a long flight by a **one-day layover. Do not smoke**. Doing so puts carbon monoxide in your blood; and, at 5,000 feet (the altitude the cabin is pressurized to), you will have a 10,000 foot oxygen lack. Keep away from others who smoke. **Eat lightly, avoiding heavy proteins, refined starches, and sweet deserts. If you fly at night: Eat before you fly** and avoid the meal served. **Put on eyeshades** and stimulate a normal bedtime. It works!

WHEN YOU ARRIVE

• Get out in the **sunshine** the next day; this will help your body adapt. Obtain some **exercise** after arriving. Try to **walk outside in the sunlight,** to help reset your inner clock. If going from west to east, take that walk the next morning in order to help shift your body. Some people try living by their home clock—but most cannot do that. **Do not take a sleeping pill** when you arrive. It will usually cause a hangover or grogginess. Take a 500 mcg **melatonin** tablet.

• Try to **avoid important decisions** during the adjustment days. The general rule is that it will take one day of adjustment for each time zone crossed. So be prepared. If it is a short stay, remain on **home time.**

• When crossing only two or three time zones, it is known that going west is easier on the body than going east. This is because it is easier to get more sleep on arriving, since you experience more hours that particular day.

ENCOURAGEMENT—We should ever seek to realize that the Lord is very near to us. He can help us as no other one can. Trusting Him and obeying His Word, we can have the help we need. Isaiah 12:2.

TONIC EFFECTS, OBTAINING

HYDRO—In the section on hydrotherapy *(153-211)*, **Hot and Cold to the Spine** is a revulsive compress and acts as a strong stimulant and tonic; it is used in a large number of conditions needing such a treatment.

The **Wet-hand Rub, the Cold Mitten Friction, the Cold-towel Rub, the Wet-sheet Rub, the Dripping Sheet Rub, and the Ice Rub** are all used to increase body circulation and heat. The first four are the mildest and best.

The **Revulsive Shower** and **Alternate Hot and Cold Shower** are also beneficial.

The **Sun Bath** and **Sea Bathing** are helpful.

The **Sun, Air, and Water Bath; Wet Grass Walk; and Summer Spray** are equally useful.

Caution should be exercised in giving the above treatments if the patient is frail, diabetic, or has a heart condition. See the *Hydrotherapy* section of this *Encyclopedia* for much more information on these and other invaluable water treatments. *(153-211)*.

ENCOURAGEMENT—It is God's plan that we live pure, clean lives and living only to honor Him.

TONIC HERBS

Back in old times, every spring our forebears would clean up the house and take a spring tonic in order to clean and rejuvinate their bodies after the rigors of winter.

Spring tonic: 8 oz. **sarsaparilla root**, 2 oz. **licorice root**, 1 oz. **burdock root**, 3 tsp. **senna leaves**, 1 oz. **cascara or sacred bark**, fluid extract, 5 oz. **glycerine.**

Spring tonic: 1 part **sarsaparilla**, 1 part **sassafras**, ½ part **mezereon bark**, ½ part **guaiac**. Make it into a decoction and simmer for 10 minutes. Dosage would be ½ cup or more, 3-4 times a day.

Spring tonic: 1 part each of the following: **senna, juniper berries, celandine, sarsaparilla, dandelion root, uva ursi, spikenard, burdock root, yellow dock.**

Hops tonic: 1 oz. each of **buchu leaves, hops, dandelion root**, and 1 tsp. **ginger**. Boil the hops and dandelion root slowly for 30 minutes in 1 gallon water. Add 1 lb. honey. Bring to a second boil and skim off impurities. Pour the hot mixture over the buchu and ginger. Cover tightly and steep until cool. Strain, bottle, and keep in a cool place.

General tonic: ½ oz. each of **gentian root, calumba root, licorice root, Peruvian bark**, 1/3 tsp. **cayenne.** Simmer in a covered container for 15 minutes in 1 quart

of water. Cool, strain, and give 1 teacup every 3 hours during the day.

Whole body tonic: Here is a tonic which can be used daily as a dietary supplement. It will increase the vitality of the entire body, especially its resistance to disease and ability to rebound from illness or poor health. Mix equal amounts of the following herbal powders: **sarsaparilla root, Siberian ginseng, gotu kola, fo-ti, licorice root, saw palmetto berries, kelp, stillingia, alfalfa**, plus a pinch of **cayenne**. Place in capsules and take 2-12 daily. Use more during periods of convalescence, poor health, or heightened stress.

— Also see *Stomach Tonic (355)*.

ENCOURAGEMENT—In the plan of redemption, God has revealed His love to mankind in a sacrifice so broad and deep and high that it is immeasurable.

LINIMENTS

This is a liniment which can be rubbed onto a person's skin, to help relax and invigorate him. Apply one of the following formulas with a gentle friction of the hand. A liniment is usually thicker than water, but thinner than an ointment, and is usually applied as a liquid at the temperature of the body.

Stimulating liniment: 1 part oil of **cloves**, 1 part **oil of cinnamon**, 1 part **oil of sassafras**. Mix and then massage well into the affected areas.

Relaxing and stimulating liniment: 4 oz. **ladies slipper**, fluid extract; 4 oz. **lobelia**, fluid extract; 1 oz. **oil of sassafras**. Mix together well. Massage well into the affected area.

Camphorated oil: Purchase **camphor** (USP grade) from the drug store, and dissolve 1 oz. in 4 fl. oz. **olive oil**. This is good oil for sprains, bruises, pain relief, rheumatic or gouty joint pains. Check for skin sensitivity to camphor before using.

Vinegar liniment for rheumatism: Pour 1 tsp. **oil of wintergreen** into 1 pint **apple cider vinegar**. Soak a folded cloth in the fluid, wring out, and apply. The wintergreen will bring blood to the area, and the vinegar reduces pain. First check for skin sensitivity to the wintergreen oil. It can also be applied to a sore throat in a wrung-out compress, covered with a larger, dry wool cloth or large sock, and pinned so no air penetrates all night long.

ENCOUGAGEMENT—If you have given yourself to Christ, you are a member of the family of God, and everything in the Father's house is for you. What a promise this is! May we each one prove faithful to the end. Romans 2:7, 10-11.

"As many as received Him, to them gave He power to become the sons of God, even to them that believe on His name." John 1:12.

GENERAL - 2 - NAUSEA

NAUSEA

SYMPTOMS—A sick feeling in the stomach, similar to motion sickness.

CAUSE—A variety of things can induce nausea, including **nutritional deficiencies, food intoxication, food allergies, pregnancy, and cancer.** Repeated bouts of nausea may be due to food allergies. A common cause of nausea is **worms** *(588)* **or constipation** *(367, 723)*. *See both topics.*

NATURAL REMEDIES

• Use the treatments suggested for *Motion Sickness (220)*, especially the **charcoal and ginger root** formula. Powdered ginger root is a definite help in eliminating nausea.

• Do not forget the final solution: Go ahead and **vomit**. That is best if the nausea is caused by something recently eaten. Read *Vomiting (348)*. It will provide very helpful information. It will also tell what to do if you have been nauseated and vomiting for days.

• Eat a small amount of **dry toast or crackers** to clear nausea caused by excess exercise. If you are hypoglycemic, add some **protein**. For post-operative nausea, take two 500-mg capsules of **ginger**.

• Add a **pinch of ginger to other teas**, to help reduce nausea. **Ginger compress** on the head (made from the mild tea) will help relieve headaches due to nausea.

• Drink a mild tea of **goldenseal and honey** on rising to offset the nausea of pregnancy. Put a pinch of goldenseal powder in a cup of just-boiled water, and add a little honey to offset the taste.

• A cup of hot **peppermint tea** will reduce a feeling of nausea. You can add a pinch of basil and/or ginger. Peppermint tea is a powerful antispasmodic. It stops muscle spasms in the digestive tract, including those involved in vomiting. (But large amounts of this tea, during pregnancy, can lead to miscarriage.)

• Here is an excellent herbal formula for nausea: **ginger root, plus a very small amount of licorice root and cayenne**. Dr. Mowrey found it worked for most people. Ginger seems to produce no toxic symptoms, even when taken in large amounts.

• "Carminative" means "stomach soothing"; for these herbs help settle the stomach. Here are the best ones to use: **chamomile, fennel, dill, lemon balm, and any of the mints (peppermint, spearmint, catnip)**. Make a tea of one or more of these.

ENCOURAGEMENT—Angels of God are waiting to show you the path of life. It is outlined in the Bible; and as you seek, through the grace of Christ, to obey His Word, you will find the strength needed to meet your problems. Jeremiah 31:12-13.

Through the study of the sacred Scriptures, your trust will be deepened; and you will have the strength to carry on.

FAINTING
(Syncope)

SYMPTOMS—The person passes out and becomes unconscious.

CAUSES—Fainting points to some other problem, such as **hysteria, epilepsy, insulin shock, heat exhaustion, lack of oxygen, anemia, dehydration, carotid artery obstruction.**

NATURAL REMEDIES

WHAT TO DO IMMEDIATELY

• **Check** the pulse, heart beat, and breathing. Often a dash of **cold water in the face** helps. **Get air to him:** Loosen tight clothing; open windows and doors; and have others stand back, so the person can get more air. **Stimulate the heart:** Use your fist to pound slightly on the back between the shoulders. When able to drink, give him a little cold water.

• If you have it available, place 8 drops of **antispasmodic tincture** on the back of the tongue. If you know in advance that the person has these fainting problems, you may want to prepare the tincture and keep it on hand. Information is at *Antispasmodic Tincture (242, 474).*

• Sometimes **artificial respiration or oxygen** is needed. As soon as the person is conscious, try to find the cause and deal with it.

• If a person has frequent fainting spells, give him an **herb tea** of mint, skullcap, catnip, rue, mistletoe, rosemary, and small amounts of cayenne.

• For those who have collapsed, here are **water therapy techniques** which will prove helpful. They are described in the *Hydrotherapy* chapter *(153-211):* **Alternate Hot and Cold Compress over the Spine; Cold Friction; Hot Enema; Alternate Compress over the Heart; Hot Blanket Pack** for 15 minutes, followed by **Cold Mitten Friction.**

• **Heat to neck and short cold application to chest and face. Alternate Compress to spine; percussion of the chest with the hands dipped in cold water** or with the end of a cold towel; vigorous friction, rhythmically moving the tongue back and forth to help wake him up.

ENCOURAGEMENT—We must ever set the Lord before us and trust implicitly in Him. He will guide and care for us to the end. As we obey His Inspired Writings, we shall have the help we need. Joel 3:1.

In His strength, we can do all that He requires of us. How thankful we can be that we have such a wonderful heavenly Father who is always attentive to our cry! Cling to Him and keep reading the sacred Scriptures, and He will open before you a bright path.

HEAT EXHAUSTION

SYMPTOMS—Thirst is generally the first symptom of heat exhaustion, followed by general malaise, weakness, tiredness, a loss of appetite, headache, pallor, dizziness, and a general flu-like feeling that may include nausea and even vomiting. Sometimes the heart races and concentration becomes more difficult.

Heat exhaustion is less severe than heat stroke, and may occur over several days out in the sun. Dehydration may eventually lead to blood volume loss, poor heat regulation, and shock.

CAUSE—Heat exhaustion is generally caused by **water depletion** (dehydration) and, more rarely, by a **lack of salt** in the diet (salt depletion). When we sweat, we lose both water and salt (sodium, as well as potassium).

NATURAL REMEDIES

IMMEDIATELY

• **Get out of the sun immediately,** so body temperature will not continue to rise and the body will not lose more water and salt. If you remain in the sun, even though resting and drinking fluids, your temperature will continue to rise! Do not return to the sun for many hours!

• In the early stages, drink large amounts of **mineral-rich vegetable and fruit juices,** to replace water and electrolyte loss in perspiration. Water, by itself, does not replace electrolytes. **Potassium-rich vegetable broths** are helpful. Make a broth of thick potato peelings.

PREVENTION

• Plan ahead, so you will not come down with heat stroke later. Drink water. **Drink diluted electrolyte drinks. Avoid salt tablets.** They do the opposite of what they are supposed to do. The increased salt in the stomach keeps fluids there longer. Use water-based supplements which include magnesium, calcium, and manganese. The dosage is ½ tsp. in 4 oz. water, 3 times a day.

• **Do not use caffeine, alcohol, or tobacco.** The first two accelerate dehydration and the smoking constricts blood vessels.

• Over several days' time, **adapt yourself slowly to the sun. Do not overexert** when out in it. Avoid working in the mid day. **Wear a hat,** and keep on a **light-colored shirt.**

• Pour **water over your head and shirt,** especially if the air is not humid. Keep drinking lots of water.

• In hot weather, add ¼ cup dried **lemon balm herb** to 1 quart boiled water. Steep for 30 minutes, strain, and refrigerate until chilled. It is cooling to the body.

J.H. KELLOGG, M.D., PRESCRIPTION *(how to*

give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)

HEAT EXHAUSTION—Hot Full Bath, 3-8 minutes; **Hot Blanket Pack; Hot Enema**, followed immediately by short **Cold Mitten Friction**. *Afterward:* **Cold Wet Sheet Rub**, wrapping in warm blankets.

—*Read Heat Stroke (220)*, which is different.

ENCOURAGEMENT—Our God delights to do abundantly above all that we ask or think. He will care for you through this crisis. Trust Him. When a soul receives Christ, he receives power to live the life of Christ.

HEAT STROKE
(Sunstroke)

SYMPTOMS—The body temperature goes very high (105° F. or more!). Sweating is reduced. There is a strong headache, accompanied by tingling, numbness, confusion of mind, and delirium. The pulse becomes rapid and breathing is faster. Blood pressure rises.

DANGER—Heat stroke is a *serious emergency*. If not properly cared for, the person can go into convulsions, permanent brain damage, and even death.

NATURAL REMEDIES

• You must **begin the cooling treatments immediately**; do not wait!

• *If near a hospital*, **wrap him in an ice-cold sheet and immediately take him to the hospital. Apply more ice water** as you travel. At least every 5-10 minutes, **take his temperature**. Do not give the cold treatment if it begins to drop below 101° F.

• *If you are not near a hospital*, put him into an **ice-cold bath** and use **fans** to aid cooling. If an ice bath is not available, use a **cold stream or lake** until medical help can be obtained. While he is in the cold bath, **rub the arms, legs, hands, and feet** in order to increase the circulation.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR HEAT STROKE AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

SUNSTROKE—Increase the body's heat elimination. From a height, **pour water** (60° F., or less) onto him while two people **rub him** vigorously. Give special attention to the spine. **Ice Compress** to the head and neck. Continue until the temperature falls to 101° F., **Cool Enema, cold water drinking** when possible. **Ice Bag** to the head and neck during the Cold Pail Pour. *As soon as the temperature falls to near the normal point*, give a **sweating Wet Sheet Pack**.

AFTER TREATMENT—Should consist of **daily graduated cold applications** (Tonic Frictions), to slowly build up the body. The **head** should be thoroughly cooled before each application.

—*See Heat Exhaustion (219).*

ENCOURAGEMENT—Treat God as your honored Friend, giving Him the first place in your affections. He is your Lord and your God. As you do this, you will have the support and help you need to meet each day's trials and afflictions. 2 Timothy 1:7.

MOTION SICKNESS
(Car Sickness, Sea Sickness)

SYMPTOMS—Nausea, excessive salivation, vomiting, cold sweat, queasy feeling, stomach churning. Possible dizziness, sometimes fainting.

CAUSE—The semicircular canals in the inner ears detect your vertical position. When there is **too much jostling back and forth**, movement which you do not have control over (as when riding in cars, planes, or boats), your sensory system may become overloaded. Since **your eyes** also sense vertical balance, what you see does not seem to agree with what your labyrinthine receptors in the inner ear sense. Then mental confusion results. Nausea occurs when the brain does not know what to tell the body to do. This weakens the stomach.

The experts say that nausea at such a time also indicates that **your liver is not doing well.**

NATURAL REMEDIES

• *If at sea*, **lie down and close your eyes**. *If in a car seat*, **rest your head back** on the headrest, so it is somewhat faced upward. This relaxes the semicircular canals.

• **Charcoal tablets** may help settle the stomach. **Ginger capsules** are highly recommended.

• **Raspberry leaf tea** is also recommended for the nausea of motion sickness. It can also be mixed with ginger. **Black horehound** can reduce nausea.

PREVENTION

• Prevention is the best. **Do not eat heavily processed meals, drink liquor, or eat junk food**. Some people do well eating **a few whole-grain crackers** before and during the trip. **Avoid smoke and food odors. Stay cool** and **get fresh air**! Cool air is best.

• You may wish to take 5 **charcoal** tablets, one hour before the trip begins. Another method is 2 **ginger** tablets every 3 hours, beginning one hour before the trip. Ginger helps prevent motion sickness, by absorbing acids and thus preventing nausea.

• Some recommend additional **magnesium** (500 mg, one hour before trip) and **vitamin B_6** (100 mg, one hour prior to the trip), to relieve anticipated nausea.

• In order to settle the stomach before a trip, use the nervine herbs: **hops, skullcap, chamomile, and valerian root.**

• **Grab your earlobes and pull down**. This increases circulation to the inner ear and helps prevent motion sickness. Do this often during the trip.

• Lean back and breathe deeply; try to relax and **take a sip of water** from a cup every few minutes. **Avoid**

pid changes in body position or head motion.

• Do not use products that impair circulation: **nicoie, caffeine, and salt.**

Here are more preventive suggestions:

• **Travel at night.** When it is dark, what you see nflicts less with what you sense and the air tends to fresher.

• If possible, **keep a window open and stay near** all the while breathing that fresh air.

• **Sit still and do not look around** very much. Look :aight ahead. If you are in the driver's seat, you will nse (and have) better control of the movements takg place. **Do not read** while riding. **Keep your eyes on mething stationary far ahead.**

• Take a daily **B-complex supplement** and **vitain C** (2,000 mg) for 2 weeks before traveling.

ENCOURAGEMENT—He loves you deeply, and ints you as His own precious child.

ALTITUDE SICKNESS

SYMPTOMS—A sickish feeling as you move upward, gher above sea level. The result is headache, fatigue, alaise, fainting, as well as extreme thirst.

CAUSE—The higher you go, the **less oxygen** there At 8,000 feet, the atmosphere contains half the oxyn of the air at sea level. If you ascend slowly, a few ousand feet a day, your body will probably adjust to e decreased oxygen, with few ill effects. But rapid asnts deprive your body of oxygen, and altitude sickss results. You also tend to become dehydrated.

NATURAL REMEDIES

• **Drink plenty of water** before you start your asnt. Continue drinking as you climb. Drinking enough juids is extremely important!

• **Clove oil** is rich in eugenol, which tends to thin e blood. Other eugenol herbs include **allspice** and **marram.**

• **Garlic** contains 9 compounds that thin the blood. nat makes it outstanding in preventing heart attacks—id altitude sickness. **Tomato, dill, and fennel** also ave this property.

ENCOURAGEMENT—In the strength of God, we can ep pressing forward; and He will comfort and help s, even to the end. Jude 21, 24.

GENERAL - 3 - COLDS

CATARRH

(Excess Mucus)

SYMPTOMS—

• Runny nose, headaches, postnasal drip, sore throat, sinusitis, gastritis, glue ear syndrome, and respiratory problems.

CAUSE—Catarrh is the excess mucous which occurs with many different nasal, throat, tracheal, and bronchial infections—for example, croup, whooping cough, or allergies.

NATURAL REMEDIES

FOOD

• **DIET**—Eat a **fruit diet and drink fruit juices** for a few days.

• **NUTRIENTS—Vitamin A** (5,000 IU), **vitamin D** (1,000 IU), **vitamin C** (2,000 mg), and **vitamin E** (400 IU) are important. Make sure you are getting enough **calcium** (2,000 mg), **magnesium** (1,000 mg), **and potassium** (1,000 mg).

• **AVOID**—Excess mucous is normal with some diseases; yet **avoiding certain foods** will lessen the amount of mucous produced. Some foods are high mucous-forming. Overcooking of food is part of the problem. **Avoid pasteurized milk, white flour, sugar foods, cold drinks, and meat** if you want to cut down on mucous. **Eat more fresh fruit, vegetables, whole grains, nuts, and legumes.** If you have cooked food at a meal, **begin with raw food.** This will help the digestive system handle the increased load that cooked food places upon it.

• **Avoid indigestible food;** it forms higher levels of mucous in the body. Any specific **allergen,** food, or substance which you are allergic to may cause catarrh. Orientals are particularly sensitive to **milk products** (up to 85% of them lack the digestive enzyme, lactase, needed to handle milk sugar, which is lactose).

• Other irritants include **fumes, smoke, foreign objects, chemicals, drugs, spicy foods, salt, pepper, alcohol, and poor food combinations.**

DURING THE ILLNESS

• Put **1 tsp. salt in a pint of soft lukewarm water.** Bend over a wash bowl, pour your hand full of it, and **sniff it up your nose.** Keep doing this until it comes out your mouth. Then gently blow the nose, holding one nostril shut and then the other. Repeat this until the nose is entirely clean. **Then gargle** with the salt water. If the nose refuses to unplug, **jump up and down** for a minute, and sniff and blow again.

• **Use steam** (from a humidifier in the room) to break up the mucous, so you can sleep well. **Eucalyptus oil** also helps.

• Be sure and **drink enough water.** As intake decreases, the mucous thickens and cuts off breathing.

• During the illness, you may **drink primarily of fluids,** with **fruit juices** at times. But at those times **when you eat, emphasize a high-fiber diet, using raw food. When grains are eaten, they should be whole grains,** such as brown rice, millet, and buckwheat.

HERBS

• Each day, take at least **one high herb enema** (such bayberry bark tea).

• You may wish to take a **psyllium seed and herbal mixture,** to clean out the digestive tract of mucous. Herbs for this purpose could include **burdock, aloe vera, ginger, alfalfa, cascara sagrada, kelp, and slippery elm.**

• **Black cohosh, calamus, and valerian** are good, cleansing herbs to drink. **Goldenseal** is excellent. Put a teaspoonful of this in a pint of boiling water; steep, cool, and take 2-3 swallows during the day.

• Other helpful herbs include **chickweed, mullein, plantain, sorrel, white oak bark, bayberry bark, comfrey, eucalyptus leaves, white pine needles, and oregano.**

• An herbal formula which helps reduce catarrh: 1 part white **poplar bark** and 2 parts **uva ursi.** Use 1 tsp. to a cup of boiling water. Take ½-1 cupful 3 times daily.

PREVENTION

Take **exercise, plenty of fresh air, and proper diet** in order to prevent catarrh from going into hay fever, asthma, or tuberculosis. **Wash the nose,** to keep the catarrh from going down into the lungs.

ENCOURAGEMENT—It is vital that we exercise faith moment by moment and hour by hour. Only in the strength of Christ can we be enabled to obey His Ten Commandment law, live clean lives, and prepare our hearts for a home in heaven. Isaiah 3:10.

COMMON COLD

NOTE—Most of the following recommendations would also apply to coughs and flu.

SYMPTOMS—Colds are a general inflammation of the mucous membranes of the respiratory passages. Symptoms include nose and throat irritations, watery eyes, fever, headaches, chills, muscle aches, and temporary loss of smell and taste.

A heavy cold may take the form of acute or chronic infection—such as grippe, tonsillitis, sinusitis, bronchial catarrh, chronic cold, or a similar virus-type infection.

Children who frequently have colds or flus may have thyroid malfunctions.

A COLD OR THE FLU?—How can you tell whether it is a heavy cold—or the flu? Here is the difference:

• *Headache* - prominent in flu, but rare in a cold.
• *Fever* - frequent and sudden in flu, but rare in a cold.
• *Fatigue* - extreme in flu and can last 2-3 weeks; there is only mild fatigue with a cold.
• *General aches* - common and often severe in flu; slight in a cold.
• *Runny nose* - occasionally in flu; common with a cold.
• *Cough* - common with flu and can become severe; only mild to moderate in a cold.
• *Sore throat* - sometimes with the flu; common with a cold.

—*Also see Flu (226).*

CAUSES—In one sense, the cause is a variety of viruses. But in another, the person has allowed himself to **become rundown**; so the virus was able to take hold. Factors which lower the body's resistance to virus infection are **overexposure to cold, fatigue, recent or present infections, lack of rest, allergic reactions, inhalation of irritating dust or gas, overeating, sugar consumption, and wrong eating.**

The common cold is not an infection that leaps out and attacks an innocent passerby. It is not even a disease. A cold is the cure of a pre-diseased condition. And the symptoms are attempts by the body to reestablish normal conditions. The body is carrying out a "spring cleaning." A cold is the result of not living on the best level. Once it arrives, it cleanses toxins from the system and, along with rest, enables the person to get back into better shape. A cold is actually a blessing; for it forces people to rest who, otherwise, would prematurely develop debilitating, chronic, and life-threatening diseases.

The cold virus can change size and shape, making it impossible to produce a suitable vaccine. There are more than 100 different viruses which cause colds. Symptoms last for 7-14 days, regardless of therapy. The incubation period is very short (1-3 days) instead of the 10-21 days for most viruses. The cold seems to suddenly appear.

A cold is always in the upper respiratory tract (nose, mouth, throat, and upper bronchials). If congestion develops in the chest, the cold is worsening into something far more serious!

If you do not know how to take care of yourself, you had better contact a physician, especially if: (1) chills and shortness of breath occur. (2) An accompanying fever goes above 101° F. for more than three days or any fever above 103° F. (3) Yellow or white spots appear in the throat. (4) The lymph nodes under the jaw and in the neck become enlarged. (5) Any hot, extreme pain, such as earache, swollen tonsils, sinus pain, or aching lungs or chest occur. (6) There is excessively large amounts of sputum that is greenish or bloody. (7) There is extreme difficulty when swallowing. (8) Wheezing occurs. (9) There is shortness of breath.

If you have a sore throat, beware of white or yellow patches on the throat. These can be *Group A beta-hemolytic streptococci,* which can damage the heart muscle. Have a throat swab done when there might be a question about this.

Children with high fevers should see a physician within 24 hours.

When you get a tingling nose and throat, nasal mucous, or scratchy throat—do not wait for the coughing, weakness, and fever to begin!

NATURAL REMEDIES

ACUTE STAGE

• Do not ignore a cold and drag on with your work. As soon it develops—**go to bed, drink fresh lemon juice in water, and settle down to getting well!**

• Treatment should include as much **vitamin C** as you can take, without producing diarrhea (up to 5,000 mg at a time). In acute cases, 1,000 mg of C every other hour. Also take **bioflavonoids** (200-600 mg). Along with vitamin C, small amounts of **garlic** are excellent germ fighters. **Vitamin A** (25,000) units for not more than a few days. **Calcium** lactate or gluconate (6 tablets). **Brewer's yeast. B_6** (100 mg). It is a natural antihistamine, as well as providing helpful protein. **Vitamin E** (600 units). **Betaine hydrochloride. Zinc** gluconate lozenges. **Vitamin F** (unsaturated fatty acids) reduces the frequency and duration of colds.

• *In acute stages* **when fever is present, abstain from all solid foods and only drink fresh fruit and vegetable juices, diluted** (50-50) with water, **plus herb teas**. The proper treatment of colds is to **encourage elimination** through all channels so that elimination through one channel does not become excessive (urine, bowel, sweating, showers).

• **Avoid chills; get adequate bed rest**; and take a slight amount of **salt**, to replace that lost in sweat.

•**Gargle** three times a day with saltwater (1 glass of warm water with one-half teaspoon of salt mixed in). Take a hot shower.

• **Avoid aspirin** (especially dangerous for children), since it causes internal bleeding. What you think is of little consequence may be flu or chicken pox—which are caused by a virus. Colds are also. When children who have certain viral infections take aspirin, their risk of developing Reye's Syndrome is greatly increased! This is a rare but fatal brain and liver disease. The same warning applies to cold medications containing aspirin.

• Avoid being depressed; try to **be cheerful**. There is healing in this. Keep looking to Jesus and praying to God. Let a friend read a Bible promise to you every so often; think about it. **Rest, relax,** and do not worry. **Keep warm, but get fresh air** from time to time. Take a lot of **liquids**.

HERBS

• Herb teas can include **rose hip, goldenseal, chamomile, peppermint, slippery elm, ginger, desert tea. Eucalyptus oil** is helpful. Put 5 drops in a hot bath or 6 drops in a cup of boiling water. Put a towel over your head and, without burning yourself, **inhale it**.

• Daily drinking **licorice root tea** soothes an irritated throat and relieves coughing. You might wish to take **hop tea**, to help you get to sleep at night.

Echinacea (coneflower) greatly strengthens the immune system and is a powerful antibiotic. Shortly after drinking the tea, the tongue may become numb and tingly for a time, but this reaction is harmless.

• Pour a cup of boiling water over 2 Tbsp. fresh, shredded **ginger root**; cool and drink it. It contains a dozen antiviral compounds.

• **Goldenseal tea** is excellent. It increases the blood supply to the spleen, a center of your immune system. Goldenseal contains **berberine**, which activates the white blood cells (macrophages) which destroy bacteria, fungi, viruses and tumor cells.

WHEN THE CRISIS SUBSIDES

• When the fever subsides, a low calorie **raw fruit and vegetable diet** can now be eaten. This should include **plenty of raw juices and herb teas**, sweetened with a little honey. Some **raw seeds and nuts** can be eaten, but should be chewed well.

• Drink **potato peeling broth** twice a day. The peelings, rich in potassium, should be one-half inch thick (throw away the centers). Boil it for about 20-30 minutes; strain, cool, and drink. Make it fresh everyday.

WATER THERAPY

***There are a variety of water treatments which can be applied. They are described in the hydrotherapy section** (153-211).*

• Take a **hot mustard footbath**, to increase eliminations and reduce head and sinus congestion.

• Take a **hot Epsom salt bath** while drinking sweating teas. Pour Epsom salt (1-2 pounds) into a hot tub. While soaking, drink 2-3 cups hot pleurisy root tea. Immediately after the bath, get into bed and cover with plenty of blankets, so profuse sweating can begin.

• Take a **hot ginger chest compress**.

• Apply a **trunk pack**. Apply a full cold trunk pack each evening. The objective is to stimulate skin elimination and induce perspiration. Leave it on for at least 3 hours at night.

• Take a **steam inhalation**, using eucalyptus, pine needles, cloves, and/or thyme.

• Apply a **cold compress to the neck** and leave it on for 1-3 hours or all night. It must—must—dry out before morning, or the value has been lost. If it does not change into a heating compress, it can intensify the sore throat.

• Use a **saltwater nasal douche**, to open the sinuses. Read the article on *Nasal Catarrh (317).*

—Also see Flu (226).

PREVENTION—Once contracted, a cold must run its course. So it is better, far better, to prevent it than cure it. The best prevention is to **live right; eat right; get enough outdoor exercise, to strengthen the body; and enough rest**. Do not skimp on sleep at night, especially in the colder months. Do not share food with someone who has a cold. Be sure and **dress warmly** enough when it is cold. **Do not sit in a draft. Do not go outside with a wet head.**

Many people, who are seemingly susceptible to colds, never get them. They have learned to live above the level where they contract such infections. Learn the early warning signs; and, when they come, get extra bed rest!

ENCOURAGEMENT—Christ died so you could be forgiven of your sins and, by His grace, be enabled to

obey His revealed will, as given in the Bible and the Ten Commandments (Exodus 20). Isaiah 50:10.

COUGHS

SYMPTOMS—Frequent coughing, productive (producing phlegm) or not.

CAUSES—Coughs often accompany colds and other infections; they are a reflex action to clear the airways of mucous, foreign bodies, an irritant, or some type of blockage. Productive coughs bring up mucous; nonproductive or dry, hacking coughs do not.

A bronchial cough is tight and painful. A sinus infection generally drips mucous down the throat, producing a cough.

Croupy coughs produce a loud raspy sound, bringing up phlegm with difficulty. Damage to the lung tissues, caused by pneumonia, can result in a chronic cough.

There are two other kinds of cough: Lung cancer or tumors can produce a mild cough which gradually becomes worse and is possibly accompanied by blood. There is also smoker's cough. Lung cancer may follow, unless the tobacco is thrown away.

If there is any suspicion of tuberculosis *(412)*, read that article.

NATURAL REMEDIES

WHAT YOU CAN DO

• A few drops of **lobelia** herb under the tongue every few minutes will relax the cough muscles and may loosen the mucous. Be sure and **drink enough water** and other liquids, so the mucous does not become thick.

• Applying **eucalyptus oil inhalations** for 10 minutes a day will help.

• An excellent **cough syrup** is made by mixing equal parts **lemon juice and honey, with a little cayenne** into a tea. Take 1 teaspoon when needed.

• **Cayenne neck compress:** Boil a quart of water. Lower the fire as much as possible and add a half teaspoon of cayenne. Wait a few minutes. Then wet a towel in the water; wring it out, and wrap it around the neck. Keep the water hot and change this fomentation every 3-4 minutes, doing this for a half hour while feet are soaked in hot water.

• Helpful herbs include **licorice, fig leaves, mullein, vervain, oregano, bay leaves, hyssop, and thyme**. Take 3 cups a day (1 tsp. granulated herbs per cup of boiling water. Never boil the herbs. Never use aluminum ware).

• Mix thick **flaxseed tea** with 1-2 drops **of eucalyptus oil** and drink it slowly.

• Whenever there is a cold, **keep the nose and mouth clean**. This will tend to keep the cold from going down into the lungs. Add 1 tsp. salt to a pint of soft, warm water. **Sniff it up the nose**; then blow it out gently. Repeat till the nose is entirely clean of mucous. Then **gargle** the throat and rinse the mouth out thoroughly with saltwater.

• Cleanse the colon with **high enemas**. Continue until they reach the upper part, where the transverse colon is.

• If there is any nausea or bad feeling in the stomach, take an **emetic** to vomit it out. Lukewarm water or **water with a little salt** in it will generally help do this. Drink all the water possible and then **run the finger down the throat**. Repeat till the stomach is clean. Then drink a few cups of a **hot herb tea** (such as **sage, hyssop, yarrow, black cohosh, peppermint, or chamomile**). Later in the day, drink some more.

• **Keep quiet and stay in bed**. Take only **fruit juices or lemon juice** in hot water. Later drink the broth of thick white **potato peeling soup** (also called potassium broth).

WATER THERAPY

The following suggestions are from the section on *Hydrotherapy (153-211)* in this *Encyclopedia:*

• **Heating Chest pack**, to be changed every 6 hours. If temperature is elevated, change chest pack every 2-4 hours. Copious water drinking.

• **Fomentation to spine**, sipping hot water, **Chest Pack. Cold Compress to the throat, gargling hot water** several times daily, **Steam Inhalation** for 15 minutes every hour, sipping half a glass of hot water when inclined to cough.

• *For irritable cough, without expectoration:* **Sipping very hot water; gargle hot water; Steam Inhalations. Also** avoid mouth breathing; keep air in the room warm (75°-80° F.) and moist with steam; carefully avoid exposure of back of neck, chest, or shoulders to drafts or to chill by evaporation during treatment.

• *For cough with viscid expectoration:* **Copious hot water drinking; fluid diet; Fomentation to chest** every 2 hours, followed by **Heating Chest Pack**.

• *For painful cough:* **Fomentation** to chest every 2 hours and tight bandage about chest, to restrain movement if necessary. **Revulsive Compress** for 15 minutes every 2 hours or often as needed. **Dry cotton Chest Pack** between applications.

• *For ineffective cough:* Increase expulsive power by **rubbing and percussion of the chest** with the hand dipped in ice water or slapping the chest with a cold, wet towel.

ENCOURAGEMENT—Christ knows every temptation that comes to man and the capabilities of each human agent. He can help you overcome and obey His Ten Commandment law. He died to take away your sins and give you strength to live right. Isaiah 43:25.

CHILLS

SYMPTOMS—Sweating, shaking, trembling, and unable to feel warm even when bundled up with blankets.

CAUSES—Chills often occur with flu and other vi-

ral infections.

NATURAL REMEDIES

• With clothing covering your head and neck, **do warm-up movements** and exercise.

• If the chilling seems unusual, it is very likely that something serious is developing. Immediately start on a cleansing program. **Go to bed; fast on fruit and vegetable juices or lemon juice. Soak the feet in hot water, get into a tub of hot water, or take a steam bath.**

• Helpful herbs include **blue vervain, cayenne, chamomile, oregano, hyssop, skullcap, peppermint, white willow, and catnip.**

—Also see Poor Circulation and Chills (224).

ENCOURAGEMENT—Provision has been made for us to come into close connection with Christ and to better receive the constant protection of the angels of God. Our faith must reach within the veil, where Jesus has entered for us. We can trust Him implicitly for the help we need. Daniel 9:4.

INCREASE HEAT PRODUCTION

HYDRO—Here are hydrotherapy treatments discussed in the Hydrotherapy chapter *(153-211)*:

To warm up the body: The **Heating Wet Sheet Pack**, which begins when the warming pack has raised the body temperature slightly above its usual degree and ends when general perspiration begins. Once achieved, for best results this should be continued for about 20 minutes.

To increase heat production: The **Tonic Frictions**, which include the Wet-hand Rub, the Cold Mitten Friction, and other specific ones.

The following list of heat-producing water treatments is arranged from most to the least powerful, and is primarily composed of tonic and fever-reducing applications (see the hydrotherapy chapter for directions): **Graduated bath, Cooling Wet Sheet Pack, Cold Friction Bath.** Prolonged Tepid Full Bath, at 88° F. Cold Full Bath, followed by a short Hot Full Bath. Pail Pour, or Shower. Tepid Pail Pour. Cold Pail Pour. Cold Compress. Graduated Compress. Evaporating Sheet. Cold to head and neck. Cold to spine. Cold to abdomen. Cold over heart. Cold colonic. Cepid or cold enema. Cold water drinking, a measure that should be combined with all the others named above. And Cold Air Bath.

It is the impression of cold on the thermic nerves of the skin that best increases heat production. The more intense (and sometimes prolonged) this impression, the greater the desired effect. The most intense effects are produced by prolonging the application until the temperature of the body has been slightly lowered. But if the cold is greatly prolonged or is repeated at short intervals, the heat-rise effect fails.

ENCOURAGEMENT—Amid the perplexities that press upon the soul, there is only One who can help us out of all our difficulties and bring us peace of heart. Jeremiah 29:11.

GENERAL - 4 - INFECTIONS

Also: Section on Childhood Infections (702-713)

INFLAMMATION

SYMPTOMS—Swelling, heat, pain, tenderness, induration, reduced range of motion, fever, discharges, edema, and/or allergies.

CAUSES—Inflammation can result from injury, strain, arthritis, bacterial infection, and cancer. A part of the body is reacting to trauma or infection. Any organ or tissue can become inflamed. When internal, it is often associated with bacteria.

Inflammation is a reaction of the body to defend and heal itself after something occurs (a bruise or injury, etc.). Heat, redness, and swelling are generally present. A fever may accompany a severe inflammation. If not cared for promptly, infection could develop.

Other things which trigger inflammation include environmental toxins, drug overuse, infections, free radicals, and injuries.

NATURAL REMEDIES

The treatment is similar to that of other conditions discussed in this section on infections.

• Important nutrients include **vitamin C** (3,000-6,000 mg, daily), **vitamin B complex** daily, **vitamin E** (400-600 IU, daily), **beta-carotenes** (carrot juice and green and yellow vegetables), **flaxseed oil** (2 Tbsp), and **grape seed extract.**

• **Bromelain** (the substance in pineapples), taken on an empty stomach and with a small amount of **magnesium** and **L-cysteine**, has anti-inflammatory activity. **Calcium, kelp,** and **alfalfa** are also important. Primarily eat **raw foods**, and **avoid all junk food.**

• **Charcoal poultices** or **clay packs** are helpful.

• Drink a **tea of hyssop, chickweed, vervain, mint, and sage.** Read again the section on the common cold *(222)*.

• Place a **compress of fenugreek or chamomile** on the area.

• In case of obstinate inflammation and threatened mortification (gangrene), apply a poultice of powdered or fresh crushed roots of **marshmallow** on the affected area, as hot as possible and renew it before it dries. Add **slippery elm**, to make it even more effective.

• Here are herbs which research studies have shown to be excellent in reducing inflammation: **bilberry, bromelain, echinacea, devil's claw, feverfew, licorice root,** and **onion.** Also outstanding: **goldenseal, pau d'arco, red clover,** and **ginger.**

—Also see Common Cold (222).

ENCOURAGEMENT—Christ is ever seeking to draw

souls to Himself; but Satan is seeking to draw them away. We must resist the temptation to separate from our Lord and Saviour. He is the only One who can help us amid all our trials and needs. Psalm 9:9.

FLU

(Influenza, La Grippe)

SYMPTOMS—Prostration, fever, chills, sore throat, headache, aching behind the eyes with sensitivity to light, abdominal pain, hoarseness, cough, enlarged lymph nodes, aching of the back and limbs, and frequent vomiting and diarrhea. The person feels cold and shaky, but is sweating. Serious complications, such as pneumonia, sinus infections, and ear infections, can develop.

The earliest signs are similar to those for the common cold: weakness, headache, and aching in the arms, legs, and back. He may feel feverish, and then chilly. The flu also generally brings on a dry throat, cough, and extreme weariness.

CAUSE—Also known as "the flu," influenza is a highly contagious viral infection of the respiratory tract. It is easily spread by sneezing and coughing. Individual strains continually change, so vaccines are not very successful.

There are three main types of influenza: A, B, and C. Type A is the most common; all are airborne and most frequently spread by droplets (coughing, sneezing, kissing, and sharing drinking glasses and towels). Flu epidemics occur every 1-3 years, generally in the autumn or winter. A major epidemic occurs about every 10 years, because the virus type has changed.

Because it is a viral infection, influenza may appear suddenly after an incubation of only 1 to 3 days (most frequently 48 hours after exposure). So begin treating it as soon as you can. The quicker you start treating a physical problem, the easier and more quickly it can be eliminated. After 2-3 days, the fever usually subsides; and, if cared for properly, the other acute symptoms rapidly diminish. But the cough, weakness, and fatigue may persist for several days or weeks.

NATURAL REMEDIES

WHAT YOU CAN DO

• **Take an enema** at the first symptom. *For fever,* take **catnip tea** enemas, plus a ¼ to ½ teaspoon of **lobelia** tincture every 3-4 hours until the fever drops. This is also for children.

• **Give fluids (fruit juices, vegetable soups)** to replace fluid and electrolytes lost through sweating, diarrhea, fever, and vomiting. **Drink at least 10 glasses of water a day**, to keep lung secretions thin. Give **vitamin C**, to bowel tolerance (3,000 mg or more, spaced throughout the day). Also **vitamin A** (25,000 IU for 1 week) **and B complex**. Vitamin A protects the lining of the throat (best to take it in the form of carotenes: carrot juice and green and yellow vegetables). **zinc** (15 mg, three times daily).

• **Do not take antibiotics**, for they have no effect on the flu virus. **Do not smoke, drink liquor, use coffee, or eat junk food.**

• Take **echinacea** and **goldenseal**, because influenza can lead to secondary bacterial pneumonia.

• **Eucalyptus oil vapors** are also good. *See "Common Cold" (222) for directions.*

• A useful herb is **slippery elm bark** powder (1 tablespoon) mixed with boiling water (1 quart) and honey (half a cup). Put in a jar and give one teaspoon every 3-4 hours for cough and sore throat.

• **Gargle with saltwater**, to help relieve the sore throat (1 teaspoon salt in 1 pint of warm water). **Soak the feet in hot water**, to ease a headache or nasal congestion. **Occasionally breathe deeply** in and out, to refresh and strengthen the lungs and remove wastes.

• **Humidify the air** in the room. **Make sure the air is warm, but also has a current of air** to keep it oxygenated. But it should not be drafty. (A draft on the patient is defined as occurring when the skin becomes cooler than the forehead or the patient is not comfortable.) **Keep warm**. Wear warm, close-fitted bed clothes. Back rubs may be given, to increase comfort.

• Helpful herbs include **cinchona bark, ginger, eucalyptus, slippery elm, sea buckthorn, yarrow, white willow, and wormwood.**

• During the 1918 flu epidemic, about 20 people in one area ate raw **garlic** daily with their meals. None of the 20 contracted the flu.

• Another flu remedy is to place 1 *oz.* each of **peppermint leaves and elder flowers** in a pan. Pour ½ pint boiling water over these herbs, cover tightly, and keep warm on stove for 15 minutes; strain and cover immediately to keep warm. Take 1 teacupful every 30-45 minutes until there is perspiration; then 2 Tbsp. every 1-2 hours. (For children, give smaller doses and sweeten.) This tea taken hot will break down congestions and equalize circulation. (Or substitute pennyroyal and elder flowers instead of the above two herbs.)

• Pour boiling water over a handful each of **wormwood, sage, alpine speedwell, and licorice root**. Steep for 30 minutes; then take a spoonful every half hour or sip it morning and evening. Recovery time is usually 2 days.

• Boil a 5-inch piece of **fresh ginger** (from the health-food store) in 2 cups water for 5-10 minutes. Drink a cup every 2-3 hours until the flu is gone. It will relieve nasal congestion, improve blood flow, help eliminate chills and aches, and reduce sore throat pain.

• Here is Dr. Holyk's formula: Chop 1-2 cloves **garlic** very fine. Add 3 droppers each of echinacea tincture, **goldenseal** tincture, **cat's claw** tincture, a pinch of **cay-**

banana, the juice of ½ **lemon**, and 6-8 oz. organic **tomato or vegetable juice**. Put it all into a blender along with 2 ice cubes (to make the drink more palatable). Blend, then sip slowly for a few minutes. Drink it twice a day till the flu is gone.

• When it is time to make the transition from liquids to food, emphasize **bland, starchy foods**. This would include **dry toast** (so it will be chewed better), **bananas, applesauce, boiled rice, cooked cereal, and baked potatoes**. Eat lightly and carefully.

• **Water therapy:** Take a 5-minute hot shower. Quickly dry. Then place a large towel in cold water, wring it out, and wrap it around your body from your armpits to your groin. Put plastic around that. Crawl into bed under a wool blanket and stay there for 20 minutes or until warmed. Do this 1-2 times daily.

PREVENTION—Be careful; for influenza is sometimes fatal, especially for children and the elderly. Those who are not hardy and are poorly nourished are especially susceptible. If you have a respiratory ailment (asthma, emphysema, pneumonia, etc.), solve it as soon as possible. One thing can lead to another till you are prostrated with sickness. The flu can often lead to ear infections, pneumonia, and sinus infection.

Children who frequently come down with the flu should be checked for hypothyroidism. Check his temperature under the arm with a thermometer.

A case of flu is becoming serious if the voice becomes hoarse, he develops pains in his chest, he has difficulty breathing, or he starts bringing up yellow- or green-colored phlegm. It may be best to see a physician, if this has not already been done. Avoid the flu vaccine!

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR FLU AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

INCREASE GENERAL VITAL RESISTANCE AND AID ELIMINATION OF POISONS—Sweating (Full) **Baths**, followed by **vigorous cold applications** (Cold Pail Pours, Showers, Frictions, etc.); **Hot blanket Pack** or Hot Full Bath; **Hot Leg Bath with Fomentations** to chest or spine, **followed by Cold** Mitten Friction, Cold Towel Rub or Wet Sheet Rub; Sweating Wet Sheet Pack; copious **water** drinking; **large Enema** once or twice daily.

PAIN IN HEAD, BACK, AND LEGS—Very **Hot Leg Pack** till general perspiration begins, **followed by Cold** Mitten Friction or Cold Towel Rub, keeping limbs very warm.

FEVER—Sweating Wet Sheet Pack and Neutral Bath, **Cold** Mitten Friction, Cold Towel Rub, copious water drinking, cooling Enema.

HEADACHE—Hot and Cold Head Compress, Fomentation to face and especially over eyes (but be sure eyes are closed and covered with dry cloth).

NAUSEA—Ice Bag over stomach.

VOMITING—Hot and Cold Trunk Pack; withhold liquids.

ENEMA—Neutral Enema after each bowel movement. **Cold Abdominal Compress**, changing every 15 minutes.

COLIC—Hot Enema, hot Fomentation over abdomen.

INFLAMMATION OF EYE OR EAR—Fomentation over affected part, derivative treatment to legs, **Hot Leg Bath**, Hot Footbath, Prolonged Leg Pack.

RHEUMATOID INFLUENZA—Hot Blanket Pack 2-3 hours once or twice daily, followed by **Cold Mitten Friction** carefully given and wrapping in dry flannels. Repeat pack twice a day. **Fomentation** over especially painful parts, several times daily, followed by **Heating Compress** in interval between.

GENERAL METHOD—Combat lung and visceral congestion by maintaining warmth and activity of the whole cutaneous surface; give special attention to the lower extremities, so as to divert blood away from the cranial and pulmonary cavities. Sweating procedures may be employed with vigor and frequently repeated if followed by short Cold Frictions given in such a way as to avoid general chilling of the surface.

If any of the following related problems exist, see under their respective headings: Bronchitis, Broncho-pneumonia, Pleurisy, Neuritis, Typhoid Influenza, Thoracic Influenza, Lobar pneumonia, Catarrhal jaundice, Meningitis, Nephritis.

—See Common Cold (222) for how to differentiate between a heavy cold and the flu. Also see Sore Throat (328).

ENCOURAGEMENT—We must have faith that will not be denied, faith that will take hold of the unseen, faith that is steadfast and immovable. Christ can help you, right where you are. Not only can He solve your physical problems, He can guide you all the way to the Holy City above. Lamentations 3:25.

VIRAL INFECTIONS

SYMPTOMS—fever, muscular aches, joint aches, chills, and headaches.

CAUSES—Viruses can be especially serious. Viral infections include the common cold, measles, chicken pox, mumps, influenza, tonsillitis, croup, infectious hepatitis, mononucleosis, spinal meningitis, asthma, and certain bladder infections.

Antibiotics fight bacterial invasion, but are useless against viral infections. There are a few antiviral medications which are useful. In remarkable contrast, the body uses the same variety of powerful defenses—to resist and overcome *both* bacterial and viral crises! So help your body win the battle. The Lord has placed strong defenses against sickness within each of us. We can claim them more fully if we are living according to the laws of health.

NATURAL REMEDIES

• **Vitamin C** (2,000 mg) and **vitamin B_6** (200 mg) are especially helpful. Also see the rather complete list of suggestions under Common Cold *(222)*.

• **Vitamin A** (10,000 IU) is a powerful antioxidant and free radical eliminator. **Vitamin B complex** and **selenium** (500-1,000 mcg/day) are other effective agents.

• **Vitamin C** (2,000-10,000 mg daily, in divided doses) works in the white blood cells, to produce a powerful antiviral task force.

• **Zinc** (30 mg daily) is also important in adding to the body's own immune functions.

• Helpful herbs include **goldenseal, garlic, echinacea, red raspberry**.

• Drinking enough **water** is also important.

• Also see *Special Water Therapies which Fight Infectious Diseases (166-168), Special Antibiotic Herbs (228), Four Powerful Antidotes (558).*

PREVENTION—Trouble begins when the invaders are strong and many, and the body is in a weakened condition. Keep yourself in good health. Get **enough rest, exercise in the open air, and maintain a balanced, nourishing diet**.

ENCOURAGEMENT—God can help you, if you will daily seek Him for that help. Unless we continually cherish a close walk with God, we will be tempted to separate from Him and walk alone. Psalm 91:3-6.

STAPH INFECTIONS

(Staphylococcal Infection)

SYMPTOMS—Staph infections produces symptoms ranging from minor to severe to life-threatening. They can include pimples, abscesses, boils, furuncles, carbuncles, osteomyelitis, enterocolitis pneumonia, and bacteremia. They cause a wide range of problems, from skin infections to serious internal disorders.

CAUSES—These infections are produced by the staphylococcus family of bacteria, which is probably the most common bacteria in existence. Under a microscope, they appear as grape-like clusters.

Although present on the skin of most people, inside the body they can produce pustules, sties, etc., on the skin. Affecting the nose, throat, and lungs, they can weaken the body, leading to viral infections such as pneumonia. Infected needles can produce septic shock, infectious arthritis, osteomyelitis, or bacterial endocarditis. Contaminated food can also pass them into the body.

NATURAL REMEDIES

• Eat **whole grains and green vegetables. Avoid** sugar in all forms (including honey), oils, dairy products, and meat.

• Take **vitamin C** (1,000-5,000 mg, daily), **vitamin E** (100-400 IU, daily), **beta-carotene** (15-30 mg, daily), and **zinc** (15 mg, daily).

• Herbs which are especially useful in treating staph infections include: **raw garlic, honeysuckle,** and **bear lichen.**

• **Clean all wounds and cuts** with soap and water, flush with **hydrogen peroxide**, rinse with water, apply **tea tree oil** full strength. Repeat every 2 waking hours and before retiring at night. (Do not use iodine or alcohol; for they also kill living cells.) Expose wound to **fresh air and sunlight**. Apply warm **goldenseal** tea compresses to firmly adherent crust. **Change sheets**, pillow slips, towels, and clothing frequently to prevent reinfection.

PREVENTION

• It is important that, through **proper hygiene, diet, rest, exercise, and sunlight**, you maintain a strong immune system. Here are remedies which boost the immune system and help the body fight staph infections:

ENCOURAGEMENT—"Herein is love, not that we loved God, but that He loved us, and sent His Son to be the propitiation for our sins." 1 John 4:10.

SPECIAL ANTIBIOTIC HERBS

(Antimicrobial Herbs)

Read this article carefully and remember how to find it again when you need it.

No antibiotic drugs are useful against virus infections, but all of the following herbs are. Although this article tends to focus on natural antibiotics for viral infections, the following herbs are equally powerful fighters against bacterial infections as well.

NATURAL REMEDIES

• **Echinacea** contains *properdin*, which strengthens the immune system. It is also antibiotic and acts like *interferon*, the body's own antiviral compound. *(Turn to p. 128 for warnings about echinacea.)*

• **Garlic** contains *allicin*, one of the plant kingdom's most potent, broad-spectrum antibiotics (but only if eaten raw). Dice it up raw (or put it in a garlic press) and put it in juice or spread it on surface infections. Or take garlic oil or garlic concentrate tablets. Here is another successful formula: Put a can of tomato (or V-8) juice into a blender, along with 3 cloves of garlic. Drink it at various times throughout the day. Keep the leftover juice in the refrigerator. Cooked garlic lacks the antibiotic factors. Garlic is powerful against bacterial, viral, and fungal infections.

• **Goldenseal** contains *berberine* and *hydrastine*, and is a broad-spectrum herbal antibiotic. *Berberine*, is an immune stimulant. (*Berberine* is also in **barberry root bark** and **Oregon grape root**, two other antibiotics. *Turn to p. 132 for warnings about goldenseal.)*

• **Juniper berries** contain *deoxypodophyllotoxin*, which inhibits a number of different viruses. *(Turn to pp. 134-135 for warnings about juniper berries.)*

• **Licorice** has eight active antiviral compounds, including *glycyrrhizin*, which keeps viruses from replicating. Licorice has the most bactericidal compounds (up to 33% antibacterial compounds on a dry-weight basis). It also has *saponins*, which increase the availability of other antibiotic compounds. *(Turn to pp. 135-136 for warnings about licorice.)*

• **Ginger** contains 10 antiviral compounds, called *sesquiterpenes*.

• **Lemon balm** is also antiviral.

• **Shiitake** is a tasty Asian mushroom which contains *lentinan*, an antiviral, immune-stimulating and anti-tumor compound.

• **Astragalus** is a Chinese herb which increases the natural killing function of the body's immune system. *(Turn to p. 119 for a warning about astragalus.)*

• **Dragon's Blood** is a South American herb which is *dimethylcedrusine* and *taspine*; these have antiviral and wound-healing properties.

• **Eucalyptus** contains *hyperoside, quercitrin* and *ennic acid*, which have virus-killing functions.

• **Olive leaf extract** is a powerful antibiotic, and is excellent for viral infections, the common cold, arthritis, skin diseases, heart trouble, and much more.

• Other herbs rich in bactericidal compounds, in ascending order of potency, include **thyme, hops, oregano, and rosemary**.

• Remember that you can always use **licorice** extract, and/or **ginger** (both of which are antibiotic herbs), to help sweeten and flavor your tea with other antibiotic herbs.

ENCOURAGEMENT—We are to keep our minds stayed upon God. In our weakness, He will be our strength; in our ignorance, He will be our wisdom; in our frailty, He will be our enduring might. Exodus 19:5.

SPECIAL HERBAL ANTISEPTICS

Here are several natural antiseptic herbs which you can use to kill germs and hasten healing:

Clove: The oil is a strong germicide. It can be placed on gums, where there are toothaches. Do not swallow the oil.

False unicorn: This valuable herb contains *chamaelirin*, which is a strong antiseptic. It will help eliminate pinworms from the intestinal tract.

Carrots: Boil and mash carrots; then apply to a sore, to help draw out pus and provide healing.

Lemons: A powerful antiseptic which destroys bacteria. It also helps fade freckles, when applied to the skin.

Thyme: This useful herb contains *thymol*. Put small amounts on wounds. Crush and add to boiling water. Then steep, strain, and apply to sprains and bruises.

Goldenseal: This invaluable herb contains *berberine*, and can be used for gum and mouth infections. It will also help eliminate worms in the bowels.

Black walnut: This is good for internal parasites, infection, tonsillitis, and other internal or external applications.

Cabbage leaves: Containing *rapine*, this is a strong antibiotic. Place warm leaves on an ulcerated sore to draw out the pus.

Myrrh: This herb has excellent antiseptic properties. Is good for dysentery and uterine and vaginal infections. Apply it to the gums for toothaches and paeridontal diseases. It is an outstanding antibacterial and anti-viral herb.

Queen of the meadow: This antiseptic herb is used for diseases of the uterus.

Garlic: This powerful herb contains *allicin*. Garlic oil is useful for ear infections. Crushed garlic is useful for many problems.

SPECIAL WATER THERAPIES WHICH FIGHT INFECTIOUS DISEASES

NATURAL REMEDIES

For specific information on a great variety of water therapy treatments, turn to the chapter on hydrotherapy *(153-211)*.

Water therapies which encourage the elimination of toxins: **Radiant Heat Bath, Sweating wet-sheet pack, Steam bath**. The elimination of sweat production and washing it away is very important.

Water therapies which greatly increase leucocytic activity: The following applications help increase white blood cell formation. WBCs, as you know, are a primary body fighter against toxins and bacterial infection. **General cold bath. Heating compress,** frequently renewed. **Alternate heating compress.**

Water therapies which greatly encourage elimination of bacteria by the skin and kidneys: **Steam bath, Sweating wet-sheet pack, Prolonged neutral bath.** Also good: **Sweating baths.** Copious **water drinking**. Each of these should be followed by a **cold mitten friction, cold towel rub**, or some other cold procedure.

ENCOURAGEMENT—"I will receive you, and will be a Father unto you, and ye shall be My sons and daughters, saith the Lord Almighty." 2 Corinthians 6:17-18. What a promise is made here. What a relationship this is; higher and holier than any earthly tie.

FUNGAL INFECTIONS

SYMPTOMS—Moist, possibly itchy, red patches on the skin, mucous membranes, under the nails, between the toes, or on internal surfaces of the colon, vagina, or throat.

CAUSES—Fungal infections grow most frequently in moist, hot areas on the skin, especially in crevices where the skin touches skin or nails and on the surfaces of the colon, vagina, or throat: Athlete's foot *(292)* occurs between the toes. Candida *(215)* in the throat or colon. Ringworm *(261)*, also known as tinea infection, is a fungal infection of the skin or scalp.

If, while treating the fungal infection, you develop symptoms of a worse infection (such as increased redness and swelling or fever) you may have contracted a bacterial infection—in addition to the fungal infection.

NATURAL REMEDIES

• Avoid applying soap to the area.

NUTRITION

• Eat a nourishing diet of **fruits, vegetables, whole grains, legumes, and nuts**. While treating the infection, a diet primarily of **raw food** is best.

• Avoid **tobacco, alcohol, caffeine**. Do not eat **meat or dairy products**. Avoid **sugary, fried, and processed foods**. Eat nothing **greasy**.

HERBS

• **Goldenseal** contains *berberine*, which destroys fungi. It can be used against every type of fungus infection. It can be used in a drink or topically applied. Only use goldenseal for a week; then switch, for a time, to another fungicide herb.

• **Pau d'arco** is strongly antifungal. Drink 3 cups daily.

• **Bloodroot** also contain *berberine* and has been shown to be quite effective as a fungicide.

• **Yellowroot, barberry, and Oregon grape** also contain *berberine*.

• **Tea tree** oil is excellent when applied externally, but do not drink it. Apply it several times a day to the affected area, either full strength or diluted with a little distilled water or cold-pressed oil. **Black walnut** extract can also be used.

• A powerful antifungicide is **wild oregano oil**. The most resistent forms of fungus infection can generally be eliminated by it.

• The **pepper tree** (horopito) is a New Zealand shrub which contains *polygodial*; this is useful against both fungi and bacteria. Another antifungal herb is the ***Licaria puchuri-major***, a Brazilian plant.

• Research studies have found that raw **garlic** inhibited every type of fungal infection it was applied to.

ENCOURAGEMENT—The Lord, our Redeemer, is heir of God; and those who are co-laborers with Him, in the work of saving souls, are joint heirs with Him. Rom 8:17. To be an overcomer is to be placed in the ranks of those who have the far more exceeding and eternal weight of glory.

SPECIAL ANTIFUNGAL HERBS

Here are some of the best antifungal, antiyeast herbs:

• **Garlic** is excellent, both internally and externally. Clinical trials of people taking 25 milliliters (5-6 tsp.) of garlic extract daily revealed that their blood serum showed significant antifungal activity against several common fungi. Garlic extract is even more powerful when applied externally to fungal infections. Liquefy raw garlic in a blender; put it on a clean cloth and apply it to the area 3 times a day.

• **Licorice** contains 25 fungicidal compounds, more than most other herbs. Add 5-7 tsp. powdered licorice root to a cup of boiling water and simmer about 20 minutes. Strain out the pulp. Apply the liquid on a cloth to the affected area 1-3 times daily. *(Turn to pp. 135-136 for warnings about licorice.)*

• **Tea tree oil** (also called melaleuca) is very good on athlete's foot and candida. Research studies found it better than drugs for eliminating candida. For skin infections, apply 2-3 drops directly to the area 2-3 times a day. If it is irritating to the skin, mix it with some vegetable oil. But do not swallow tea tree oil. It can be fatal. This is one of the strongest of the antifungal herbs. You may first want to try a milder one. *(Turn to p. 147 for a warning about swallowing tea tree oil.)*

• **Chamomile** is another powerful fungicide. It is widely used in Europe, especially against candida. Make a strong tea and apply it directly to the area. *(Turn to pp. 124-125 for a warning about chamomile.)*

• **Goldenseal, Oregon grape root, barberry, goldthread, and yellow root** all contain *berberine*, a powerful fungicide and antibacterial compound.

• **Pau d'arco** contains three antifungal compounds: *lapachol, beta-lapachone,* and *xyloidine*.

• **Turmeric oil**, even at very low concentrations, inhibits fungi. Purchase commercial oil of turmeric, dilute it (1 part oil to 2 parts water), and apply directly to the area. Do not swallow this oil!

• **Lemongrass**. You can drink 1-4 cups of lemongrass tea daily. It tastes good. Apply the spent tea bags directly to the affected area.

• **Black walnut.** The powdered fresh husk destroys candida and other fungi. Mix 1 oz. of the tincture with a few drops of valerian root, pau d'arco, and 10 drops of tea tree oil. Apply it to the area.

ENCOURAGEMENT—God loves you as He loves His own Son.

HERPES VIRUS INFECTIONS

SYMPTOMS—Infections that can cause painful blisters on, or around, the lips and genitals. Small, painful blisters on the skin and mucous membranes.

CAUSES—Herpes simplex viruses (HSV) are highly contagious and cause a number of different disorders. The infection is transmitted by contact with a blister.

Even though one has been infected with HSV, this does not give immunity. The viruses remain dormant in the nerves and may be reactivated at times of stress or illenss. Like many viral infections, outbreaks are more frequent and severe in people with reduced immunity, such as those with AIDS.

There are at least seven types of herpes viruses. The two primary ones are HSV1 and HSV2.

HSV1 (also called herpes, type I) usually causes infections of the lips, mouth, and face (cold sores, *250*). Most people have been infected with HSV1 by the time they are adults. Infections tend to be of minor consequence. But some children, with the skin disorder, eczema *(270)*, may develop eczema herpeticum. After the initial infection, the virus becomes dormant but may periodically reactivate later in life, causing cold sores. Many researchers believe that HSV1 is involved in causing Bell's Palsy *(463)*.

HSV2 (also called herpes, type II) typically causes infections of the genitals (genital herpes, *631*).

Both HSV1 and HSV2 can affect the eyes, causing herpes keratoconjunctivitis (see conjunctivitis, *313*). In rare cases, the viruses can cause severe viral inflammation of the brain.

Herpes zoster *(274)* causes chicken pox *(704)*, in children, and shingles *(274)* in adults. The drug companies urgently want to require children to obtain vaccinations against chicken pox. But the fact is that children who get chicken pox quickly recover and are thereafter immune to shingles. But those who never contract chicken pox as children are in danger of getting shingles—a very dangerous disease—when they grow up.

Epstein-Barr virus *(214)* is the virus which also produces infectious mononucleosis *(554)*.

NATURAL REMEDIES

• For natural remedies, go to the specific herpes infection, listed above.

ENCOURAGEMENT—God watches over us with more tenderness than does a mother over an afflicted child. "Your Father knoweth what things ye have need of, before ye ask Him." Matthew 6:8.

IATROGENIC DISEASES

In this, the only section of the Encyclopedia discussing general infections, mention should be made about two new emerging causes of illness:

"Iatrogenic diseases" are defined by an American Medical Association as **"physician-induced diseases."** The July 26, 2000, issue of the *Journal of the American Medical Association* discussed this problem.

This is an unfortunate situation; however, it is best that you are aware of the difficulty. The *Journal* would not have printed the article if they did not want people to know about it. We value our physicians and the care they provide. Yet they are only human and, from time to time, the modern system of rapidly seeing one patient right after another causes difficulties. Here are a few of the research findings in the article:

"As many as 20% to 30% of patients receive contraindicated care" *(ibid.)*. "Contraindicated" is a big word which means care the patients definitely should not have received.

The Institute of Medicine (IOM) has released a report *("To Err is Human")*, quoted in the JAMA article, which stated that **"millions of Americans [have] learned, for the first time, that an estimated 44,000 to 98,000 among them died each year as a result of medical errors" *(ibid.)*.**

"U.S. estimates of the combined effect of errors and adverse effects that occur because of iatrogenic [physician-caused] damage, not associated with recognizable error, include 12,000 deaths/year from unnecessary surgery. 7,000 deaths/year from medication errors in hospitals. 20,000 deaths/year from other errors in hospitals. 80,000 deaths/year from nosocomial infections in hospitals. 106,000 deaths/year from non-error, adverse effects of medications.

"These total to 225,000 deaths per year from iatrogenic causes. Three caveats [warnings] should be noted. First, most of the data are derived from studies in hospitalized patients. Second, **these estimates are for deaths only and do not include adverse effects that are associated with disability or discomfort.** Third, the estimates of death due to error are lower than those in the IOM report.

"If the higher estimates are used, the deaths due to iatrogenic causes would range from 230,000 to 284,000. In any case, 225,000 deaths per year constitutes the third leading cause of death in the United States, after deaths from heart disease and cancer.

"Even if these figures are overestimated, there is a wide margin between these numbers of deaths and the next [fourth] leading cause of death [cerebrovascular disease]" *(ibid.)*.

A different analysis was mentioned in the JAMA article which estimated negative effects on outpatients (those not in hospitals), without including deaths. It concluded that **a surprising number of patients are so damaged by the drug and other treatments, that they must make an immense number of additional trips to see the doctor or go to the hospital.** Here is this remarkable statement in JAMA:

"One analysis . . [which did not include deaths] concluded that **between 4% and 18% of consecutive patients experience adverse effects in outpatient settings,** with [resulting in] 116 million extra physician visits, 77 million extra prescriptions, 17 million emergency department visits, 8 million hospitalizations, 3 million long-term admissions, 199,000 additional deaths, and $77 billion in extra costs" *(ibid.)*.

ENCOURAGEMENT—God is a friend in perplexity and affliction, a protector in distress, a preserver in the thousand dangers that are unseen to us.

NOSOCOMIAL INFECTIONS

There is a fast-growing hospital crisis in America. And if you live in Canada or overseas, think not that you have escaped the problem. Many of the same factors are affecting foreign hospitals. The following information comes from CDC (Centers for Disease Control) records and a series of articles in the *Chicago Tribune*.

Go to chicagotribune.com and especially request the July 22, 2002 issue.

It is vital that you understand that our hospitals urgently need your help! First, we will overview the problem; then we will present several solutions. We want our hospitals to succeed. Yet it is unlikely to occur as long as the public is ignorant of the nature of the problem.

There are 900 fewer U.S. hospitals today, in the new century, than there were in 1980. That fact, plus greatly reduced federal subsidizing of hospital patient expenses since the mid-1980s, has led to unfortunate results.

Federal, state, and other public records reveal that **75,000 of the dangerous infections that patients acquired in hospitals in the year 2000 could have been prevented** if proper patient care and sanitary maintenance had been done. That figure (75,000) represents three-fourths of the 100,000 infections which occurred that year in hospitals. **These are infections which the patient *did not bring* to the hospital—but which he contracted during his stay there.**

Yet most of those infections were often preventable by simple, inexpensive measures. Unfortunately, as a "cost-cutting expedient," they are not done. **A key problem is the hospital cutbacks in the number of staff and subsequent carelessness by overworked physicians, nurses, and cleaning personnel.**

Such a large number of people are becoming infected because they go to hospitals, even for as little as one day, that the CDC has given those infections a special name: They are called ***"nosocomial infections."*** You may have had an acquaintance who mysteriously died while in a hospital. The CDC says that person acquired a "nosocomial infection." That is Latin for "hospital-acquired." The CDC admits it invented the term to shield hospitals from "embarrassment."

Did you know that **the fourth leading cause of death in America (behind heart disease, cancer, and strokes)—is bacteria or viruses given to patients in hospitals—germs which they did not have before they entered those hospitals!** This is astonishing.

At the present time, **more people die because of infections they acquired at U.S. hospitals than those who die from automobile accidents**, fires, or drowning—combined.

Using analytic methods commonly used by epidemiologists, **the *Tribune* found an estimated 103,000 deaths linked to hospital infections in the year 2000 alone.** The Centers for Disease Control and Prevention (CDC), in Atlanta, based its figures on 315 hospitals and an estimated 90,000 deaths caused by infections acquired at U.S. hospitals that same year.

It was found that repeated cost-cutting measures, including nurse layoffs, led to infection-control violations and injury or death to patients.

Since 1995, **over 75% of all hospitals in the United States have been cited for significant cleanliness and sanitation violations.** That totals about 4,350 hospitals, or about three out of every four in the land.

In order to cut costs, U.S. hospitals have reduced cleaning staffs by 25% since 1995 alone.

The CDC and HHS declare that a **clean-hands policy** in our hospitals would, alone, prevent the deaths of up to 20,000 patients each year.

Medical instruments, designed to be slipped into body openings (throat, urethra, vagina, colon, etc.) are frequently contaminated, producing infection.

Doctors wear **germ-laden clothes** from home into the hospital, and even into the operating room. In many hospitals, staff members regularly wear their scrubs home and back to work the next day.

Another serious problem is **adverse drug reactions** (ADR) in hospitalized patients. The situation has become so serious that the *Journal of the American Medical Association* (JAMA) published a report on the problem in its April 15, 1998, issue. This problem generally occurs because **wrong drug (or wrong dosage)** is given to the patient. The article said this:

"In 1994, overall, 2,216,000 hospitalized patients had serious ADRs and 106,000 had fatal ADRs, making these reactions between the fourth and sixth leading cause of death."

According to CDC and *Tribune* findings, in the year 2000 alone, the deaths of 2,610 infants were caused by preventable hospital-acquired infections.

A national study of 799 hospitals, by the Harvard University School of Public Health, found that hospital-acquired infections were directly linked to inadequate nursing staff levels.

What are your chances of acquiring a hospital-induced infection the next time you, or a loved one, goes to the hospital? According to CDC records, you have one chance in 16 of becoming infected with something very serious which could disable or kill you. About 2.1 million patients each year are becoming infected at hospitals. That is 6% of the 35 million admissions annually.

Our hospitals need your help, but there is a solution: Write your U.S. senator and representative and urge that bills be introduced into Congress, mandating better care of patients. We need our hospitals, but they need to be safe!

ENCOURAGEMENT—The gifts of Him who has all power in heaven and earth are in store for the children of God. Gifts so precious that they come to us through the costly sacrifice of the Redeemer's blood; gifts that will satisfy the deepest craving of the heart; gifts lasting as eternity. They are for all who will come to God as little children, submitting to His will for their lives.

CONVALESCENCE

After one has experienced an illness that is more or less severe, there is a period of convalescence, during which the body corrects the losses suffered and normalizes the weakened functions. This period of recovery generally follows any infectious disease. Here are several helpers:

An infusion or decoction of **angelica root** will increase appetite and aid the digestive process. Cooked **oatmeal** flakes will invigorate and balance the nervous system, while nourishing the body. **Spirulina** will invigorate and help revitalize the system. **Ginseng** root powder will provide general invigoration. Raw or toasted **sesame seed** is extremely helpful and nutritive.

ENCOURAGEMENT—Take God's promises as your own, plead them before Him as His own words, and you will receive fullness of joy.

POST-OPERATIVE RECOVERY

Any surgical procedure requires special nutritional attention. Major surgeries, especially abdominal surgery, should be followed by methods designed to reduce inflammation and swelling while promoting proper wound healing. Such measures will not only improve recovery but also help prevent adhesions and excessive scar formation.

To help prevent scarring, apply warm-to-hot **castor oil** over an incision ***after*** the stitches are removed.

Vitamin E (400 IU), to help reduce scar formation. High-potency **vitamin C** (1,000 mg, 3 times daily), to reduce infection. **Flaxseed oil** (1 Tbsp., daily). **Multivitamin supplement.**

Begin the above regime at least 2 weeks prior to surgery. After surgery, continue it for a month, adding **bromelain** (500 mg, twice daily after meals), to aid in protein digestion.

Barley broth is quite restorative and tasty. Simmer 1 cup barley in 6 cups water. Bring to a boil for 2 minutes, let stand for 15 minutes. Strain out the barley and set aside. Drink the water for strength during convalescence. If hungry, the barley can be eaten and, if desired, blended with a little honey.

ENCOURAGEMENT—The power of God is manifested in the beating of the heart, in the action of the lungs, and in the living currents that circulate through the thousand different channels of the body. We are indebted to Him for every moment of existence and for all the comforts of life. James 1:17.

GENERAL - 5 - FEVER

Related data: Diphtheria (709), Rocky Mountain Spotted Fever (568), Typhus (567), Childhood Diseases (702-713)

FEVER

SYMPTOMS—A fever is an elevation of body temperature above normal. A fever is not a disease, but a sign that an infection or disease is present. Fevers are common in a wide variety of diseases, from mild to severe.

Symptoms include headache, flushed face, body aches, nausea, little or no appetite, and sometimes diarrhea or vomiting. Skin may be warm, with some perspiration, or hot and dry. The elevated temperature is an effort by the body to burn out infection, and the perspiration helps eliminate toxins. Therefore a partial fever may be helpful to the body, in fighting the infection. If the fever does not get too high, let it run its course. Many enzymes, antibodies, and white blood cell responses are better during slightly elevated temperatures.

MORE ABOUT FEVERS—Normal temperature is generally considered to be within a range of 97° to 99° F., but it can vary among individuals. If it is 100° F. or above, it is a fever. A fever is defined as body temperature above 98.6° F., measured orally, or 99.8° F. measured from the rectum. One should not have undue concern unless the body temperature rises above 102° F. in adults or 103° F. in children. Then give a tepid bath, and call a doctor immediately. Most fevers never go above 102° F. and most only for a few days.

When body temperature is not more than 5° above normal, it does not completely interfere with body functions. *But levels above 105° F. are dangerous.* At 106° F., convulsions are common; at 108° F., irreversible brain damage frequently results.

Fevers help destroy the bacteria and viruses. But fevers in an infant or small child needs special care, to avoid seizures.

Keep in mind that the fever is not the infection; the infection must be healed as well as the fever.

Putting too many clothes on a child can actually cause a fever.

NATURAL REMEDIES

DURING THE FEVER

• *If the fever gets too high* (above 102° F. in adults or 103° F. in children), **immediately immerse the body in tepid water**, to lower the temperature. *If it then goes to 103° F.—contact a doctor!*

• Other suggestions would include: **ice packs on the forehead, running cool water over the wrists, cool baths, and drinking certain herb teas**, such as feverfew, cinchona bark, and/or white willow. Others include meadowsweet, sea buckthorn, European holly, and mugwort. A poultice to lower fever can be made from **echinacea** root. **Linden** tea can induce sweating to break a fever. **Black elder** tea is also good.

• **Enemas of catnip tea** are an outstanding way to lower fevers. They bring a high fever down quickly and keep it down. They also relieve constipation and congestion, which tend to keep fevers up. When body temperature goes above 102° F., (103° F. in children over two), give a catnip tea enema. Repeat it ever 4-6 hours, and continue taking them twice a day as long as the fever persists. Do not give catnip tea enemas to children under two.

• **Liquids** are especially beneficial. He should take

liquids for 3-5 days.

• **Drink diluted fruit juices,** if fever dominates over chills, **and vegetable or grain soup** if chills dominate over fever. **Hot teas** induce sweating.

• **Vitamin C** (2,000 mg) **and lemon juice** are especially helpful. Other nutrients include **vitamins A (25,000 IU for only a few days), B complex, vitamin B_1 (200 mg), vitamin D (4,000 IU, daily for not more than a month), calcium (2,000 mg), magnesium (500 mg), and potassium (2,500 mg).**

• There is a loss of protein during a fever. Caloric needs are higher, and metabolism is increased. **Greater fluid intake** is required. As fluid is lost, sodium and potassium are lost. Drink plenty of distilled **water**, also **fruit and vegetable juices**. It is important that solid food be avoided until the fever reduces.

• Nutrient-rich juices are especially helpful: **beet juice, carrot juice**, etc.

• *For a feverish child,* place a grape or strawberry within a cube of frozen fruit juice, and let him suck on it.

• **Never give aspirin** to children. It can trigger Reye's Syndrome, a potentially fatal neurological illness.

• He needs lots of **oxygen**. Make sure there is a current of air in the room; open the window. Get smokers out of the house.

• **Wet compresses** help to reduce temperature. Keep removing them and applying new ones as he heats up the old ones. Apply them to the forehead, wrists, and calves of the legs. Keep the rest of the body covered.

• **Cool tap water** can be sponged on the skin, to dissipate excess heat. Wring out a sponge and wipe one section at a time, keeping the rest of the body covered. Because of rapid evaporation, you will not need to dry him with a towel.

• Some people shiver when they have a fever. *If he shivers,* immerse him in a tub of warm water. This will also lower temperature. *For babies,* give **room-temperature baths**. Sandwich them between **wet towels**, which are changed every 15 minutes.

• *If very hot,* remove more covers and clothes; *if chilly,* add them.

• **Lemon** juice and lemon drinks are used in the Mediterranean to control fevers. Lemon is cooling. Take hot lemon tea and honey as often as desired.

• If you have a fever, add **peppermint** to fever-fighting herb teas, including one or more of the following: **willow, ginger, elder, and meadowsweet**. All are excellent fever-reducing herbs. Other outstanding fever reducers include **echinacea, garlic, myrrh gum, licorice root, and goldenseal**. Use singly or together.

• **Blue vervain** tea is excellent for inducing a sweat, which helps the patient's temperature lower.

• To reduce a fever, drink **feverfew** tea. To break a high fever, drink hot **ginger** tea.

• **Catnip** tea (a nerve tonic) can be used as an enema to relax the person and reduce fever. **Dandelion** tea has a long history in the treatment of fever.

• Drinking **barley water** helps patients with high fevers. Because it has no irritating properties, it is helpful when the chest lining or intestinal lining is inflamed. Or cook **rice** with lots of water, and drink the water.

• American Indians use **cayenne** to reduce fevers. Add a pinch to any herbal drink. It will bring the blood to the stomach, reducing the fever.

• **Carrot-beet-cucumber juice** is a specific to clean the kidneys and help bring a fever down.

• A unexplained fever of 99-99.8° F. may be due to a food allergy.

AFTER THE FEVER

• *When signs of fever are gone,* be sure to **prevent chilling**.

• *After the fever has subsided,* eat easily digested foods: **soybean milk, potassium broth (thick potato peeling soup), zwieback, baked white potato, natural brown rice, and very ripe bananas**.

R.T. Trall, M.D. made this statement: "Fevers, if left to themselves, run a certain course and terminate in a given time by a sudden increase of symptoms, called sinking, or a complete subsidence [elimination] of them, and the commencement of convalescence. This change has been called the *crisis*, and the days on which it occurs, *critical days*. The 3, 5, 7, 9, 11, 14, 17, and 20 have been regarded as critical days."—*Hydropathic Encyclopedia, p. 79.*

RECURRENCE

If feverish flu-like symptoms keep recurring: In children this might indicate diabetes; and, in teenagers and adults, Epstein-Barr virus.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR VARIOUS TYPES OF FEVERS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

FEVER DISEASES (ACUTE): COMPLICATIONS—This section deals with a number of complications that commonly arise during febrile (fever) disorders.

GASTRITIS—Fomentation every 3 hours, followed in intervals between by **Heating Compress** at 60° F., to be changed every 30 minutes.

ENTEROCOLITIS—Large **Hot Enema** (100° F.), followed by **Neutral Enema** (96° F.) after each bowel movement. Fomentation to abdomen every 3 hours. **Heating Compress** at 60° F. during intervals in between, changed every 30 minutes.

PERITONITIS—Hot Enema, 3 times daily; **Fomentation** every 3 hours; **Heating Compress** at 60° F. during the intervals between, changing every 30 minutes.

PERICARDITIS AND ENDOCARDITIS—Fomentation for 30 minutes every hour, followed by Ice Bag or **Cold Compress**, to be removed for 5 minutes every 15 minutes. **Hot Hip and Leg Pack** if extremities are cold. **Cold Mitten Friction**, to maintain surface circulation.

PHLEBITIS, ARTHRITIS—**Hot Blanket Pack** followed by **Cold Mitten Friction**, carefully avoiding the affected part, or **Hot Pack** to affected limb for 15 minutes every 3 hours. The Hot application should be followed by the **Heating Compress** which is changed after the next hot application and retained during the interval between.

LARYNGITIS—**Steam Inhalation. Fomentation** to the throat every 3 hours with **Heating Compress** during the interval in between. Renew this every 15 minutes at first and later once an hour. Derivative applications to legs: **Hot Footbaths, Hot Leg Packs, Heating Leg Pack**. Repeat 3-4 times daily. **Fomentation** for 15 minutes every 3 hours, with well-protected **Heating Compress** between, changing once an hour. Derivative treatment to lower extremities. **Steam Inhalation** for 15 minutes every hour.

BRONCHO-PNEUMONIA—**Fomentation** to chest every 2 hours. **Heating Compress** at 60° F., during the interval in between, changing every 30 minutes; **Hot Blanket Pack** for 15 minutes, followed by **Heating or Sweating Wet Sheet Pack**. Give 1-3 applications each 24 hours.

PLEURISY—**Fomentation** every 15 minutes until pain is relieved. Repeat every 3 hours. Well-protected **Heating Compress** during the interval between. Tight bandage about chest, if needed to control pain.

NEPHRITIS, ALBUMINURIA—**Hot Blanket Pack** for 30-60 minutes, 2-3 times in 24 hours. Follow by **Cold Friction**. Protect the surface and maintain vigorous surface circulation. Large **Enema**, 3 times a day; copious water drinking; **Fomentation** to lower back region every 4 hours for 30 minutes, followed by **Heating Compress** during interim between; **Ice Bag** over lower sternum.

EDEMA—The same treatment as for Nephritis and Albuminuria, just above, with the addition of the **Cold Compress over the heart** for 15 minutes every 2 hours.

DELIRIUM—**Ice Cap, Ice Collar, and Heating Wet Sheet Pack** continued 1-2 hours. **Prolonged Tepid or Neutral Bath**.

PARALYSIS—**Ice Cap, ice to spine**; alternate with **Fomentation** for 3 minutes every 15 minutes, repeating 4 times. Repeat every 4 hours.

CONVULSIONS—**Ice Cap; ice to spine; Hot Hip and Leg Pack. Hot Full Bath** 105° F., 5-8 minutes, with **ice to head and neck**.

ABSCESS—**Fomentation** for 15 minutes every 2 hours; **Heating Compress** at 60° F. during the interval between. Renew every 15-30 minutes.

VISCERAL INFLAMMATION—Large hot **Fomentation** over inflamed part for 15 minutes every 2 hours. During the interval between, **Heating Compress** at 60° F., renewed every 15 minutes during the acute stage. Later, **Fomentation** 3 times a day, with continuous **Heating Compress** during intervals between.

THREATENED GANGRENE—**Alternate Compress** every 3 hours. **Heating Compress** or dry heat during the intervals between.

TYPHOID STATE—**Aseptic diet**, copious **water** drinking, daily **Neutral Enema** at 95° F., prolonged **Neutral or Tepid Bath**; and **Graduated Bath**.

—See Fever Diseases (233-239). Also see diseases listed under "Childhood Problems (Chicken pox, Diphtheria, Measles, Mumps, Scarlet Fever, etc.). They are on pp. 702-713.

ENCOURAGEMENT—Christ came so that whosoever believeth in Him may be saved. As the flower turns to the sun, so our eyes should turn to Him. We dare not leave Him, lest we fall away. God can help you just now. Proverbs 24:16.

SMALLPOX
(Variola)

SYMPTOMS—It takes 12-14 days for the disease to develop after exposure. Several days of discomfort is followed by a severe chill, intense headache, terrible pain in the back and limbs, vomiting, fever, loss of appetite, and sometimes convulsions.

Then the fever lowers and the eruptions appear. The pain disappears, but the highly contagious disease can still be given to others.

The rash of smallpox initially consists of hard red papules, especially on the forehead, neck, and wrists. They gradually fill with clear serum, becoming vesicles, which become depressed at their centers and then fill with pus (called pustules).

CAUSES—Unsanitary living conditions and poor diet. The disease is highly contagious.

NATURAL REMEDIES

Call a physician.

• Keep the sick person **in bed with the windows darkened**, yet maintaining ventilation and an **even, moderate, temperature** of not over 70° F.

• Put him on a **fast of juices**. During the fever stage, give him plenty of **lemonade** without sweetening.

• Give **high herb enemas** and clean out the bowels. But, during the second to the fourth day, while the skin is producing the eruptions, do not meddle with the stomach and bowels. Give no emetics or strong purgatives during that time.

• *When the skin is hot and dry*, give him **fluids every hour** until there is free perspiration.

• *When the skin is hot and dry*, place equal parts of **pleurisy root and ginger** (or equal parts of **yarrow and valerian**) in a cup of boiling water, steep for 20 minutes, give a cupful every hour or until there is free perspiration.

• *If the fever rises above 103° F.*, reduce it by means of **tepid sponges** and **tepid enemas**. Give a **wet sheet pack**, which the patient warms up. Until the temperature lowers sufficiently, change it as soon as he warms it up.

• *If there is pain in the back and legs*, **hot fomentations** can partially relieve the pain.

• *If there is itching of the skin*, bathe him with **goldenseal root tea, yellow dock root, or burdock root**. Another formula: Mix 1 oz. **goldenseal** and 9 oz. **flaxseed oil**, and apply freely as needed.

• *If the extremities become cold*, warm them with hot water bottles.

• Use the same remedies on the second fever as you

did on the first; do this with the same good results, if the first has been properly managed.

• **Open the pustules** by pricking with a sterilized needle, about 4 days after they come to a head. Then bathe them with **hydrogen peroxide**.

• **Bathing the pustules with goldenseal** tea will often keep pitting from occurring. Another formula is to **mix goldenseal with Vasoline** and apply to the pustules, to keep from pitting. Yet another formula is bathing the skin with a tea of **yellow dock root and goldenseal**.

• *During the fever,* **give no food save wheat-meal gruel**; but do not do this unless the appetite calls for it.

• Follow with a light diet of vegetable broth, oatmeal water, and fruit juices.

• *Prevention:* If there is danger of exposure to smallpox, **obtain adequate rest, eat carefully and lightly of good food**, and cleanse your system with **high enemas**.

• *To short the course of the disease:* **Hot baths**, taken before or after contracting smallpox will make the skin active and shorten its duration.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR SMALLPOX AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

GENERAL—**Spare, aseptic diet; water drinking.** See "Scarlet Fever. Build General Resistance."

LUMBAR (LOWER-BACK) PAIN—**Fomentation** or **Hot Trunk Pack** every 3 hours; **Heating Pack** during interval between, changing every 30-40 minutes.

NAUSEA AND VOMITING—**Ice Bag** over stomach, **Hot and Cold Trunk Pack.**

CONSTIPATION—**Cold Enema** daily, colonic at 70° F. daily.

DIARRHEA—**Enema** at 95° F. after each movement; **Fomentation** to abdomen; **Cold Compress** to be changed every hour.

DELAYED ERUPTION—**Hot Blanket Pack** or **Hot Bath** followed by **Sweating Wet Sheet Pack.**

FEVER—**Graduated Bath**; Prolonged Tepid Bath; Cooling Wet Sheet Pack; Cool Enema, with simultaneous **Fomentation** to back if necessary, to prevent chill; large **Cooling Compress.**

STAGE OF SUPPURATION (PUS FLOW)—Prolonged or Continuous **Neutral Bath.**

SWELLING OF FACE—**Hot Compress** to face for 5 minutes every hour; **Cold Compress** during intervals at 60° F., renewed every 20 minutes.

PITTING—**Cooling Compress**, using red cloth, covering face completely; Red curtains on windows.

HEADACHE AND DELIRIUM—**Ice Cap**, Ice Collar. Hot and **Cold Head Compress.**

CONTRAINDICATIONS—After the eruptions appear, **avoid** the Wet Hand Rub, Cold Mitten Friction, and all Friction Baths.

GENERAL METHOD—Keep the temperature down and maintain activity of the skin by Prolonged Neutral and Tepid Baths. Aid elimination by copious water drinking. Prevent visceral complications by continuous cold to the head and the frequently changed Abdominal Compress. In confluent cases, general septicemia is prevented by Prolonged Full Baths.

If any of the following related problems exist, see under their respective headings: Broncho-Pneumonia, Endocarditis, Laryngitis, Nephritis, Inflammation of Eye.

ENCOURAGEMENT—It is beyond our power to conceive the blessings that are brought within our reach through Christ; we must unite our human effort with divine grace. As we do this, God enables us to fulfill His will for our lives. Isaiah 44:22.

CHOLERA

(Cholera Morbus)

SYMPTOMS—A few hours or days after contracting the disease, it suddenly begins, often with sudden cramps in the back, legs, or arms. Often there is severe vomiting. So much fluid is lost that he becomes extremely thirsty, and the skin becomes dry. Stools become thin and contain small, white curd-like masses.

Some cases of cholera are very light and have few symptoms other than the diarrhea.

CAUSES—Cholera occurs especially in hot, tropical climates. Filthy living conditions is generally the primary factor. Flies, cockroaches, ants, and mice all carry the disease.

A person cannot get it if he only eats and drinks that which has been boiled. Water and milk must be boiled. Vegetables and fruits must be washed and immersed in boiling water for a few seconds, then peeled.

NATURAL REMEDIES

Call a physician.

• Keep him **quiet in bed**. Provide **fluids** to compensate for the vomiting and fever. **Diluted peppermint or spearmint tea** is helpful. Have him drink a pint, then put your finger down his throat and help him vomit it out. This cleanses the stomach. (Do not do it if he is too weak.) Then give him a cup of **hot peppermint tea** to settle the stomach.

• If vomiting of mucous resumes, repeat the process.

• **Goldenseal** tea is also helpful.

• Give **enemas with white oak bark, bayberry bark, and wild cherry**.

• Give hot **fomentations** over the bowels and the full length of the spine.

• Simmer 2-3 Tbsp. **of cloves** in ½ pint **soymilk** for 5 minutes, Take 1 Tbsp. hot every 15 minutes.

• An infusion of **nettle tea** aids the healing of cholera and dysentery.

• All stools and discharges should be burned or disinfected. No one should touch what is used by the patient. Caregivers should wash their hands frequently.

• A diet of **oatmeal water or slippery elm water** is both nourishing and soothing. Combine with some soy milk, to provide a balanced protein.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR CHOLERA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 134-135 / Hydrotherapy Disease Index: pp. 209-211)*

IMMEDIATE CONSIDERATION—Secure rest to the stomach and bowels by withholding food. Rest in bed.

VOMITING—Ice Bag over stomach, ice pills, Ice Compress to the throat, Fomentation to spine, Ice Bag to spine, Hot and Cold Trunk Pack.

DIARRHEA—Hot Enema after each bowel movement; Fomentation over abdomen every 2 hours, duration 20 minutes during intervals between Heating Compress at 60° F., renewed every 30 minutes. If the temperature is above 102° F., Prolonged Neutral Bath or Hot Blanket Pack followed by Cold Mitten Friction or Cold Towel Rub.

COLLAPSE—Hot Blanket Pack for 15 minutes, followed by Cold Mitten Friction.

CARDIAC WEAKNESS—Ice Bag over heart.

ENCOURAGEMENT—If we will but seek God with all our hearts, if we will work with determined zeal to be a blessing each day, the light of heaven will shine upon us, even as it shone upon faithful Enoch. Hebrews 11:5-6.

MALARIA

SYMPTOMS—Chills occur for several hours, followed by drenching sweats every 1-3 days.

CAUSES—There are four types of parasites which are introduced into the bloodstream by the anopheles mosquito. If the disease becomes chronic (recurrent), it results in general debility, anemia, and an enlarged spleen.

Severe cases can be very debilitating. An especially deadly form is called blackwater fever. The skin takes on a yellow tint and the urine becomes progressively darker in color (caused by the excretion of blood in the urine). Few people survive attacks of blackwater fever.

This disease affects more people in the world than any other, and generally occurs only in tropical climates. But it can, and does, occur in the United States as well.

NATURAL REMEDIES

Call a physician.

There are two primary ways to treat malaria:

• One way is by taking **quinine**. This is an extract of the bark of the cinchona tree. Quinine will generally eliminate the malaria, but a mild to severe hearing loss may result.

• The other way is to give **hot and cold water treatments** to the person. This takes work. The result is equally good, but no hearing loss occurs.

• *During the fever*, give **cold applications** (cool wet sheet packs, sponge him off with cool water, etc.). *During the chills*, give him **hot applications** (hot packs).

• Give **goldenseal** tea.

A cold extract, decoction, powder, or extract of **gentian root** destroys the protozoa causing malaria. A decoction of **black alder** bark decreases the fever. A decoction of **quassia bark** is recommended for this tropical fever.

• **Cinchona bark** tea decreases the fever and is strongly anti-malarial. It eliminates toxins from the blood through sweat and urine. Use a cold extract or an infusion of the bark. Quinine is derived from cinchona, but cinchona is not as harmful as quinine (which is a patented product).

• An equally good substitute for cinchona is **willow bark** (various species). As bitter as quinine, it is also a good pain reliever and fever fighter. **Meadowsweet** also contains *salicin*, the effective chemical in willow.

• Use 2-3 tsp. **elder flowers** daily in tea for feverish chills. To strengthen the effect and add flavor to any fever-fighting herb tea, add **peppermint**.

• **Artemisinin** has been used by the Chinese for centuries to eliminate malaria.

—*See Fevers for additional help (233-239).*

ENCOURAGEMENT—Christ alone can place our feet in the right path. His perfection alone can avail for our imperfection. As we seek, by His enabling grace, to obey His Written Word, He will do for us what we could never do for ourselves. Proverbs 12:20.

TYPHOID FEVER

SYMPTOMS—Onset comes 1-4 weeks after the germs enter the body. First a tired feeling and general weakness, then possibly a headache and nosebleed. The fever rises higher each day until, by the end of the first week, it is 104° F. The evening temperature is distinctly higher than in the morning. Appetite is poor, the tongue is coated, and the teeth and lips have a brownish coat. There is either diarrhea or constipation, and stools are offensive. The abdomen is distended.

CAUSES—Typhoid fever is an acute infectious disease caused by the typhoid bacillus.

Germs are taken into the body through food or drink that has been directly, or indirectly, contaminated by bowel or kidney discharges from a typhoid fever patient.

If the body was kept clean and only pure food and water was consumed, there would by no typhoid.

NATURAL REMEDIES

Call a physician.

• Put him to **bed**; give him air, moderate **warmth**, and **lots of water** to drink.

• Place him on a diet of **fruit juices and vegetable broths**. All patients with typhoid fever must have **raw garlic** to eat.

• Give at least one **hot bath** every day. Have him remain in the tub as long as possible (30 minutes or longer). Put **cold cloths** on the head and throat if he is weak or faint. Finish with a **cold towel rub or spray**.

• Give a daily **high enema**.

• **Red clover** tea and **goldenseal** tea are both good.

Add 1 teaspoon of red clover blossoms to a cup of boiling water. Steep and drink 5-12 cups a day.

• Drink hot **echinacea tea** until sweating occurs; then give hourly thereafter until the system is relieved of toxic buildup. Echinacea increases defenses against infections and stimulates processes of detoxification of the liver and kidneys.

• For congestion with nerve irritation and delirium of typhoid, combine **lady slipper** with **cayenne** and give frequently.

• Give **pleurisy root** tea when the skin is dry and hot. Give **wild cherry bark** tea when there is diarrhea.

• **Orange juice** and **oatmeal water** taken at separate intervals are good nourishment. Make a **vegetable broth** from several vegetables (carrot, celery, greens, and a little onion) and give it as a liquid broth.

—Follow directions under Fevers (233-239).

ENCOURAGEMENT—Christ is strong to deliver. Help has been laid on One that is mighty. He encircles man with His long human arm while with His divine arm He lays hold of all the power of heaven. Trust and obey; for there is no other way to be happy in Jesus. Psalm 103:9-12.

YELLOW FEVER

SYMPTOMS—Illness begins about 3-6 days after the mosquito bite. Onset is extremely abrupt (within a few hours), with a rapid rise in temperature from normalcy to 103° F. or more. The face is flushed and swollen; and the eyes are bloodshot. There are severe pains in the head, down the spine, and to the legs. Early in the disease, the pulse is rapid.

CAUSES—Caused by a virus and transmitted by the bite of the *Aedes aegypti* mosquito or one of several closely related species. It rarely occurs today in North America; but, if you travel in Central and South America, it is more common there. Mosquito netting should be used.

NATURAL REMEDIES

• Read the article on *Fevers (233-239)* and apply it to control high fever (above 103° F.). *Reduce fever* with gently given **tepid sponges** over the body.

• Give a **high enema** (preferably a saline enema), and put the patient to bed. He should eat **no food for 3 days**; instead, squeeze juice of 2-3 **lemons** into a quart of water and drink 2 quarts unsweetened every day. Drink a quart of an **herb tea** *(listed under Fevers).*

• *If vomiting is severe,* so water cannot be retained in the stomach, give an **enema** every 2 hours of about a half pint of **tepid water** with a half teaspoon of **baking soda** dissolved in it. Give these enemas slowly.

• Give an **emetic** if there is a lot of phlegm.

• *On the fourth day,* begin giving him **light nutritious food.** Give **fomentations** to the spine; with a **footbath and cold compress** to the head, twice a day.

• To avoid liver damage, do not use tobacco, alcohol, drugs, excess salt, cooked foods, fried foods, processed foods, etc.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR YELLOW FEVER AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

MAINTAIN GENERAL VITAL RESISTANCE—**Short hot** applications, followed by **Cold** Mitten Friction or Wet Towel Rub every 3-6 hours. Copious **water** drinking; **Cool Enema** twice a day, more often if vomiting is persistent.

ELIMINATION OF POISONS—Prolonged **Neutral Bath, water** drinking, and **Enemas.**

CHILL—**Dry Pack** and hot **water** drinking.

HEADACHE—Ice Cap and **Hot and Cold Head Compress.**

PAIN IN LOINS AND LEGS—**Hot Hip, Leg Pack,** Trunk Pack, and **Fomentation** over lower back.

DELIRIUM—Ice Cap, **Wet Sheet Pack** to heating stage.

CEREBRAL CONGESTION—Ice Cap or Ice Collar; Hot Leg Pack; **Prolonged Neutral Bath.**

GASTRIC IRRITATION—**Fomentation** over stomach every 2 hours. In between: **Heating Compress** at 60° F., renewed every 20 minutes. **Ice Bag** above stomach. **Hot and Cold Compress** over stomach or Hot and Cold Trunk Pack.

VOMITING—**Ice Pills.** If necessary, withhold liquid foods and give food and water by enema. Ice Bag over sternum. Ice to spine. **Fomentation** over stomach.

CONSTIPATION—**Cold Enema** twice daily.

ALBUMINURIA—**Fomentation** to the back every 2 hours for 15 minutes each time. In between: **Heating Compress,** well-protected; **Hot Blanket Pack** for 30 minutes. Followed by short **Cold Friction** and wrapping in dry blankets, repeat every 4 hours. **Ice Bag** over sternum. Continuous **Moist Abdominal Bandage,** changing every 2-3 minutes. Copious **water** drinking and **Enema** twice daily.

COLLAPSE—**Hot Blanket Pack,** Hot Enema, Cold Mitten Friction, **Cold Compress** over heart, **Fomentation** over heart for 30 seconds, Cold Compress for 10 minutes, repeat.

JAUNDICE—Prolonged **Neutral Bath;** large **Hot Enema** twice daily; copious **water** drinking; **Fomentation** over liver every 3-6 hours for 15 minutes each time, with **Heating Compress** in intervals between.

CONVULSIONS—Short **Hot Bath,** followed or accompanied by **Cold Pail Pour** to head and spine. **Alternate Compress** to spine. Heating Wet Sheet Pack.

COMA—**Alternate Compress** to spine or **Sponging** to spine; **Hot Enema; Cold Friction;** Ice Cap.

GENERAL METHOD—Combat visceral congestion from the start by maintaining a warm and active skin. Copious water drinking and Enemas will encourage elimination of the poison while the frequently repeated cold rubs (Cold Frictions) stimulate vital resistance.

ENCOURAGEMENT—Christ is our present, all-sufficient Saviour. In Him all fullness dwells. It is our privilege to know that Christ will be with us, guiding us even to the end. Trust and obey Him. He will impart to you the grace needed to do it. Psalm 121:1-8. How very thankful we can be that we have such a wonderful God! In Him we trust.

DENGUE
(Breakbone Fever)

SYMPTOMS—Symptoms appear about 4-10 days after the bite of an *Aedes aegypti* mosquito. Onset is abrupt, with the fever rising rapidly and in severe cases sometimes reaching as high as 106° F. The face becomes congested and there is marked soreness in the eyeballs. There are severe pains in the head, lower back, and joints. The pulse is relatively slow and blood pressure is low. After 1-3 days, the temperature rises again; and pains and mental depression reappear. But this second wave of illness is shorter. During this period, an eruption, looking like measles, appears on the body. Convalescence is slow. Death rarely occurs.

CAUSES—This illness primarily occurs in many tropical areas of the world. An estimated 40-80 million people, including many travelers from North America and Europe, become infected each year. Occasionally it occurs in North America.

The virus is carried and transmitted by the *Aedes aegypti* mosquito, which is found in rural and suburban areas and usually bites during daylight hours.

The illness can usually be diagnosed from the symptoms; but there is no specific medicinal treatment, other than rest and drinking plenty of liquids. Recovery usually takes several weeks. An attack of dengue fever gives immunity for about a year. There is no vaccine against the virus.

NATURAL REMEDIES

Call a physician.

• Keep the patient in **bed** and on a **light diet**, drinking plenty of **water**. Keep the bowels open by **enemas**.

• *If the fever goes above 103° F.*, reduce it with **cool enemas** or **tepid sponges**. Very hot **fomentations** over painful areas may bring relief. To relieve headaches, place an **icebag** to the head.

• Giving **cold mitten frictions** or **salt glows** daily after the acute symptoms are past will hasten convalescence.

• Travelers to areas where dengue fever is common, should use **mosquito repellents** and wear **clothing that covers** arms and legs.

• Very helpful information will be found in Fevers *(233-239)* and Antibiotic Herbs *(228)*.

ENCOURAGEMENT—Every manifestation of creative power is an expression of infinite love. The sovereignty of God involves fullness of blessing to all created beings. I John 4:9.

"He giveth power to the faint; and to them that have no might he increaseth strength. Even the youths shall faint and be weary, and the young men shall utterly fall. But they that wait upon the LORD shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary; and they shall walk, and not faint."—Isaiah 40:29-31.

GENERAL -

6 - IMMUNE PROBLEMS

WEAKENED AUTOIMMUNE SYSTEM
(Immune Disorders)

SYMPTOMS—It is the immune system which fights infections; this is done by triggering defenses against invading bacteria. The antibodies and antitoxins of this system recognize the foreign bodies and send white blood cells to attack them. When his immune system is weakened, a person is less able to withstand Epstein-Barr virus, candidiasis, food allergies, arthritis, multiple sclerosis, cancer, etc. Infections occur more easily. The person is more susceptible to colds, infections, and viruses.

CAUSES—*There are two types of immune disorders:* One type stems from immune deficiency in which the body's defenses fail to respond properly to a pathogen, allowing the disease to take over. HIV and candida are examples of this. The other type arises from an overreaction of the immune system, when it is hypersensitive to antigens (allergies), or when the body attacks its own tissues (multiple sclerosis).

Autoimmune disorders can result from conditions ranging from rheumatoid arthritis to kidney disease. Unrelenting stress, chronic allergies, and chronic infections can exhaust the immune system. **Medicinal drugs**—such as cortisone, prednisone and chemotherapy—cause immune depression! Beware of them! Other causes of a weakened immune system are **vaccinations** and immunizations against common childhood and epidemic diseases. The thymus gland seems to be the most affected by this weakening. This is especially important, due to its production of T-helper cells.

Prolonged stress, toxic exposure to chemicals, and radiation can weaken the immune system. **Severe infections** can both cause and be a result of it. An example of this would be **allergies** (resulting from immune malfunction) which follow a severe case of rheumatic fever, hepatitis, mononucleosis, or other acute viral or bacterial diseases. Lack of proper rest is yet another cause.

Yet another cause is **nutritional deficiencies**. Some

natural healing specialists believe that any infectious disease may be considered an immune deficiency problem.

The taking of **aspirin** has been linked as a cause of Reye's Syndrome, asthma, low birth weight, and birth defects. **Meat** contains hormones, antibiotics, and bacteria which bring on disease. **Alcohol, nicotine, caffeine, chocolate, and a high-sugar diet** weaken the immune system. **Air pollution** is yet another problem (move out of the city!) **Hypothyroidism** can also result in immune deficiency. **Narcotics** (marijuana, cocaine, and the morphine family) are other culprits. **Mercury amalgam tooth fillings** are another incipient cause.

NATURAL REMEDIES

• Eat lots of **fresh fruits and vegetables**. Obtain adequate protein from vegetables, not from meat. Eat broccoli, Brussels sprouts, cabbage, onions, garlic, and similar worthwhile food. Eat **whole grains, nuts, and legumes. Skip the junk food**. Maintain a balanced lifestyle, obtaining enough sunlight, exercise, and rest.

• High doses of vitamin A in the form of **carrot juice** (beta-carotene) are especially helpful. That, along with **vitamin C** (2,000 mg), may be the most important vitamins for the immune system. Essential fatty acids (**flaxseed oil**, 2 Tbsp.); **zinc** (15 mg, 3 times a day), **selenium** (300-900 mcg per day), **germanium** (50 mg daily).

• **Vitamin B complex**, especially B_6 (300 mg), B_{12} (1,000 mcg.), **folic acid** (2,000 mcg.), **pantothenic acid** (50 mcg.), and **vitamin E** (400-800 IU).

• Immunostimulate herbs include **echinacea root, dandelion, red clover, kelp, garlic, astragalus, and alfalfa.**

ENCOURAGEMENT—When the soul surrenders itself to God, a new power takes possession of the new heart. A change is wrought which man could never accomplish for himself. By faith in His overcoming strength, obey all the Word of God and you will be blessed. Revelation 22:14.

LUPUS

(Systemic Lupus Erythematosus)

SYMPTOMS—Lupus usually begins suddenly with fever, fatigue, arthritis and/or joint pain. Those with it are frequently misdiagnosed as having rheumatoid arthritis. Ninety percent of lupus occurs in women in their 30s. Other symptoms include a characteristic facial "butterfly" rash, severe hair loss, and papular skin lesions. This rash forms over the nose and cheeks in something of a butterfly shape (which tends to intensify because of sunlight).

The skin lesions are small yellowish lumps. They leave scars when they disappear. ("Lupus" means "wolf" in Latin, indicating the rough appearance it gives to the skin.)

Kidney disease (in 50% of those with lupus) and **low white blood cell count** are generally present.

All this, in turn, produces inflammation of the joints and/or blood vessels, affecting many parts of the body.

Sometimes the first appearance of the problem is an arthritic-like condition, with swelling and pain in the joints and fingers. Severe cases can affect the brain and heart.

Sometimes the central nervous system is affected; and deep depression, amnesia, seizures, or psychosis can result.

CAUSES—Lupus is an inflammatory (and autoimmune) disease of the connective tissue. It has been classified as an autoimmune disease, since the body is attacking itself.

Ultraviolet rays in the sun can trigger the first attack. **Stress, childbirth, fatigue, infection, chemicals, and certain drugs** can also bring it on.

NATURAL REMEDIES

Max Gerson, M.D., used a careful, very nourishing diet, including **vegetable and fruit juices and vitamin-mineral supplementation** to eliminate lupus in his patients; but the dietary change had to be total or no progress was made. **All meat, gravy, fats, junk food, fried food, soft drinks, caffeine, alcohol, etc. had to be eliminated** from the Gerson diet. The diet had to be **low in fat and salt** (which helped the weakened kidneys).

• A **vegetable juice fast** would be very helpful.

• Obtain enough **rest and exercise.**

• **Echinacea, yucca, red clover, pau d'arco, and goldenseal** are helpful herbs.

• Follow the arthritis cleansing diet *(513).*

• The diet should be **70% fresh foods**. Eat **potassium broth** (thick potato peeling soup). Eat no fats other than **flaxseed oil** (because of its high omega-3 content).

Drink 3-4 cups of **pau d' arco tea** daily.

AVOID

• Avoid eating **alfalfa sprouts**, for they contain *canavain* which, in your body, replaces its arginine. *Canavain* can itself produce a lupus-like syndrome. It is only found in the seeds and sprouts of alfalfa, not in the tops. (**Alfalfa tablets** help eliminate the disease.)

• Avoid nightshade plants (**eggplant, tomatoes, tobacco**). Do not eat **sugar** products or **high starch** foods.

• Do not take **birth control pills**; they can intensify the lupus. Do not take **corticosteroid drugs. They weaken the bones and immune system.** Avoid **penicillin, allergenic cosmetics**, and ultraviolet rays (especially **fluorescent lighting** and **strong sunlight**).

• Up to 10% of the lupus cases originate by taking **medicinal drugs** *(New England Journal of Medicine).* **Pollutants, additives, chemicals, and certain foods** can also bring it on. When the cause is drugs, the kidneys or nervous system are generally not affected; the lupus is a milder case, and it tends to stop when the drug is no longer taken.

• **Parasites** are associated with lupus. The parasites excrete droppings which interfere with body func-

tions. Until the bloodstream is cleansed and the parasites removed, healing cannot commence.

• **Allergies** can be another causative factor. Search them out and eliminate them. Here are several causes to consider: **beef, cow's milk, wheat, corn, ammonia, hair spray, formaldehyde, perfume, ethanol, pesticides**. Avoid **caffeine** and all **stress**.

• Those with **Raynaud's disease** should live carefully; for they are also prone to contracting lupus. Those with lupus are often misdiagnosed as having syphilis. Lupus is not AIDS. HIV destroys the body's immune system, but lupus is a person's immune system destroying the connective system in his own body.

ENCOURAGEMENT—God's faithful ones have ever been able to obtain help from Him. Give Him your heart, and He will fulfill all your needs. In His strength, you can obey all that He commands in the Bible. Matthew 5:2-11.

SJÖGREN'S SYNDROME

SYMPTOMS—A variety of symptoms keyed to a lack of mucous-secreting glands that do not function properly: dry or parched mouth, burning throat, trouble chewing or swallowing, gritty or sandy eyes, eyes which feel like they have a film over them.

Other symptoms include tooth decay, joint pain, digestive problems, dry nose, dry skin, lung problems, vaginal irritations, muscular weakness, kidney problems, burning tongue, and extreme fatigue.

CAUSES—Sjögren's Syndrome (pronounced *SHOW-grens*) is a chronic autoimmune disease which was first identified by a Swedish physician, Henrik Sjögren, in 1933.

As an autoimmune disorder, Sjögren's Syndrome causes the body's immune system to work against itself, destroying mucous-secreting glands, including salivary and tear-producing tissues.

Although not life-threatening, Sjögren's is progressive, debilitating, and can permanently damage the eyes and mouth if symptoms are not treated.

When Sjögren's occurs alone it is considered "primary." When patients also have an additional connective disease, Sjögren's is called "secondary." These other diseases include rheumatoid arthritis, lupus, polymyositis (inflammation of the muscles), scleroderma (thickening and stiffening of the skin), or polyarthritis (inflammation of the arteries).

Anyone at any age can be afflicted with this disease. In the U.S., estimates run from 200,000 to 4 million; 90% are women.

Because each symptom affects different parts of the body, physicians and dentists often treat the symptom which applies to their field as minor and of little consequence.

Tests are available to diagnose the disease. The cause is, so far, unknown. And, to date, there are no known cures. The treatments, some of which are noted below, only help a person live with the condition rather than solving it. Yet, if it can save your eyesight or an internal organ, it is worth it.

NATURAL REMEDIES

You can learn much more about this condition by contacting the National Sjögren's Syndrome Association, P.O. Box 42207, Phoenix, AZ 85023 (Ph: 800-395-NSSA); they will send you free literature. Or contact the Sjögren's Syndrome Foundation, 333 North Broadway, Suite 2000, Jericho, NY 11753 (Ph: 516-933-6365).

• They will tell you that artificial tears (**eye drops**), salves, ointments, and anti-inflammatory drugs are among the treatments prescribed. One individual who regularly uses natural remedies and has this problem told the author this:

Women with this problem produce **too much estrogen, in relation to the amount of progesterone** they make. So purchase **progesterone cream** and rub in on the abdomen.

• For the eyes, add ¼ teaspoon of **salt** from the health-food store (or its equivalent in **seawater**) to one cup of water; bring it to a boil, then let it set until it is tepid. Put some of this in the eyes every so often. Do not use store-bought salt, because it contains aluminum, which may damage the eyes. Take **emulsified vitamin A** (5,000 IU) and use **torula yeast**. **Black walnut husk tea** may help.

—*Also see Dry Tear Ducts (307).*

ENCOURAGEMENT—It is faith that connects us with heaven and brings us strength for coping with the powers of darkness. In Christ, God has provided means for subduing every evil trait and resisting every temptation, however strong. 1 Peter 3:10-11.

GENERAL - 7 - AGING

AGING

SYMPTOMS—You are experiencing the normal symptoms of aging.

WHAT TO DO ABOUT IT—Some people age more rapidly than others. Causes can include heredity or a debilitating disease. But there can be other reasons.

• **Exercise** is important. Lack of it causes loss of bone and muscle mass. Inevitable physical degeneration results. **Walk out of doors everyday!** Your life depends on it. **Breathe deeply. Be positive and cheerful** as you walk. Hold your head up and enjoy it.

• **Go to bed on time. If you cannot sleep** in the middle of the night, pray and thank God for your blessings. Go outside and breathe deeply of the good night air; then go back to bed and you will fall sleep.

• A person who is depressed or negative will age faster. Cheer up, go to God, and surrender your life to

Him. Obey His Ten Commandment law and trust your life to Him. Be peaceful in Christ. Find in Him your strength and hope.

• It can be more difficult to deal with **stress** as you get older. God can help you with that also.

• **Find someone to help**, write to, and pray for.

NUTRITION

• Hearing loss can accompany aging. **Too much fat** in the diet and **lack of vitamin A** can cause hearing problems. (Best take vitamin A in the form of beta-carotene: carrot juice, green and yellow vegetables.) Some physicians suggest that hearing loss is a sign of later heart disease.

• Older people do not absorb nutrients as well as younger people. This includes vitamins, minerals, and amino acids. Enzymes and co-enzymes are not produced as abundantly as they formerly were. **Food supplements** are needed even more than in earlier years.

• Eat good, **nourishing food**, but **do not overeat**. You are not working hard physically, as you once did. Experimental rats were given much less in food calories and lived 50% longer.

• **Systematic undereating** is one of the key secrets of longevity. **Lose weight** and keep slim. Extra weight rapidly ages you.

• Eat lots of **fresh fruits and vegetables**. Eat **whole grains, nuts, and legumes**. A **high- fiber diet** is important. If you are not hungry, then do not eat very much. Eat one big salad every day. The greener the leaf, the more antioxidants *(104)* it contains. Broccoli is outstanding.

• Brittleness and fragility of bones result as calcium is more poorly absorbed. Make sure you are obtaining an adequate supply of **calcium** (2,000 mg), **vitamin D** (1,000 IU), **and copper** (4 mg).

• Drink freshly made **carrot juice** everyday.

• If possible, drink only **spring or steam-distilled water**. Keep your body's water table high. It will go a long way toward protecting you against later heart and blood vessel problems.

• There is increased oxidation of cells with the advance of years. Take **vitamin E** (400 IU), to help safeguard against this. **Vitamins A** (taken as **carotene**) **and C** (2,000 mg) are also antioxidants. Drink 2 **antioxidant herb teas** daily (lemon balm, peppermint, thyme, sage).

• The **B complex** vitamins are needed for good brain function, proper digestion, sound nerves, and physical stamina.

• **Vitamin C** (2,000 mg) in your diet will lessen the likelihood of strokes and blood vessel ruptures. It strengthens the body, and promotes healing of wounds. It fights infection.

• Make sure you are obtaining enough minerals. Take a **vitamin/mineral supplement**—so you will get enough potassium, magnesium, selenium, and zinc.

• Eat a little **Nova Scotia dulse** or **Norway kelp** each day, to get those needed trace minerals.

• Helpful herbs include **ginseng, echinacea, cayenne, pau d'arco, hawthorn, and suma**.

• **Garlic** helps the heart and the immune system.

AVOID

• Processes of aging are accelerated by **poor living, wrong eating and drinking habits, and dangerous activities**. Some people make themselves prematurely old.

• **Stop smoking, drinking, and living in excess.** Throw out the **caffeine** and **processed foods**.

• As much as you can, **stay away from medicinal drugs**, and you will be happier for it.

ENCOURAGEMENT—What a privilege is ours—to be connected with the Majesty of heaven, the One who loved us and gave His life for us. Never forsake Him, and you will be deeply blessed. Exodus 23:25. "The Lord also will be a refuge for the oppressed, a refuge in times of trouble." Psalm 9:9. You can put your whole weight upon Him. He will carry you safely.

FORMULA FOR ANTI-SPASMODIC TINCTURE

Taken internally, this special herbal formula is extremely useful in treating violent cases of epilepsy, convulsions, lockjaw, delirium tremens, fainting, hysteria, cramps, and unconsciousness. It is very effective for cramps in the bowels, snake bites, pyorrhea, mouth sores, tonsillitis, diphtheria, other throat problems. Gargle with it for these throat problems. In case of croup, give it in full teaspoon doses of warm water, repeating every 10-15 minutes until free vomiting begins.

Applied externally, it is good for any kind of swelling, cramps, rheumatism, lumbago, etc. It is excellent for lockjaw. Put it between the teeth, so it will get on the tongue and the mouth will unlock within a few minutes. If a baby is in convulsions, wet a finger in the tincture and thrust it into the baby's mouth; almost immediately the convulsions will end. For infants, rub the liquid well into the neck, chest, and between the shoulders at the same time. The lobelia causes immediate relaxation. The cayenne warms and stimulates the blood. The skullcap and valerian soothe the nerves and prevent rupture of small blood vessels.

How to prepare anti-spasmodic tincture:

Mix 1 oz., each, of the following powdered herbs: lobelia seed, skullcap, skunk cabbage, gum myrrh, black cohosh, and ½ oz. cayenne.

Prepare 1 pint boiling water and 1 pint apple cider vinegar. Steep the herbs in the pint of water that is brought to a boil for 30 minutes, strain, add the vinegar, and bottle for later use. *(Go to pp. 109-110 for herbal preparation.)*

An alternate formula, used in England, is as follows: one-half oz. each of powdered lobelia herb, lobelia seed, skullcap, valerian, skunk cabbage, gum myrrh, and cayenne. *Go to p. 474 for more on anti-spasmodic tincture.*

SKIN PROBLEMS

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR SKIN PROBLEMS AND THEIR COMPLICATIONS ***(Water therapies: how to give: pp. 153-208 / Disease index: pp. 209-211).***

GENERAL SKIN CARE—The condition of your skin is a window to your lifestyle. Eat, work, rest, exercise properly, and **take care of your liver. Avoid oils, fats, and fried foods.** Take a **cold shower every morning and a warm shower at night. Use less soap** and never use strong soaps.

SKIN DISEASES—Short, **Cold Full Bath** is helpful. But there are those who are not able to tolerate it.

BURNS—The **Evaporating Compress.** The **Cold Irrigating Compress** (cool, wet cloth over the area, to reduce heat or sprinkle water over it, to intensify the cooling effect). If very extensive, the **Prolonged or Continuous Neutral Bath.**

DRY SKIN—Sweating Wet Sheet Pack, oil rubbed on skin. Cold Mitten Friction, **Cold Towel Rub,** Wet Sheet Rub, Steam Bath, Hot-air Bath, Electric Light Bath, Sun Bath.

ERUPTIONS—If *dry,* not irritable, give **prolonged Neutral Bath.** If *scaly,* **alkaline bath** (soda bath or oatmeal bath). If *moist* and irritable, **cool evaporating compress** moistened with soda solution (1 ounce to 1 gallon). If skin is *thickened,* as in chronic eczema, **Hot or Alternate Hot and Cold Compress** or Spray Douche for 10-15 minutes, 3 times a day. If *extensively damaged* skin (as in pemphigus, confluent smallpox, bad burns), give the **Continuous Neutral Full Bath** until the skin is healed.

ERYTHEMA—Cool Evaporating Compress or Irrigating Compress.

SWEATING FEET—Revulsive Douche to feet, with extremes in temperature as great as possible. Alternate **Hot and Cold Footbath.** Heating Compress to feet during night, with **Cold Mitten Friction** of feet in the morning on arising.

INACTIVE SKIN—Sweating water therapy, followed by a **cold bath.**

INCREASE SKIN CIRCULATION AND TONE—Short **sweating** procedures, followed by **short cold** applications—such as Wet-sheet Rub, Shallow Bath, or Cold Douche. Daily Cold morning Bath, Cold Towel Rub, Cold Shower, or Shallow Rubbing Bath.

PRURITUS—Prolonged Neutral Bath, copious **water** drinking, large **enema,** daily **aseptic dietary.**

SKIN GRAFTS—Paraffin Bath.

SKIN SCALING—Soda **Alkaline Bath** daily for 15 minutes to 1 hour.

ENCOURAGEMENT—To have fellowship with God the Father and God the Son is be ennobled and elevated. They can do for you that which you never could do for yourself.

BRUISES
(Contusions)

SYMPTOMS—Although the skin is not broken, the underlying tissue is injured. The result is some pain and swelling, and perhaps black and blue marks.

CAUSE—Contusions occur when the skin is injured, but the skin is not broken. Blood vessels have been ruptured and have released blood into the surrounding tissue, including the skin.

NATURAL REMEDIES

•As soon as possible after an injury, place an **ice pack** on the bruised area and keep it there for 30 minutes. If done right away, this will keep it from swelling. Often the swelling does more damage than the bruise. Later apply a **poultice of greens** (fresh or dry), **oatmeal, wheat bran, comfrey,** or **charcoal.** Pulverize the charcoal, tie it in a cloth, wet it in warm water, and lay it over the bruise for several hours. Repeat until the affected area is better.

• A research study found that placing **bromelain** over bruises received by boxers accelerated healing. Those receiving the bromelain healed much faster. (Pure bromelain can be purchased from a health-food store. Pineapple contains 14% bromelain.)

• Swallow 150-400 mg **bromelain,** 3 times daily on an empty stomach to treat bruises, swelling, and many sports injuries.

• Take **vitamin C** (2,000 mg) and **bioflavinoids** (100 mg). Also **vitamin E** (400 IU), **selenium** (500 mcg), and **zinc** (30 mg).

• Helpful herbs: **Comfrey** has been used to treat bruises since ancient Greece. **Parsley** leaves usually eliminate black and blue marks within a day or two. Put a raw potato over a bruise or black eye. **Witch hazel** was used by in the early American Colonies to treat bruises. Saturate a ball of it and place it over the bruise.

Both **agrimony** and **yarrow** have been used for centuries to treat bruises.

• Here is a poultice for bruises: 4 parts each of **slippery elm** powder and **wild indigo** powder, 2 parts **myrrh gum**, and 1 part **prickly ash** powder. Wet and mix to paste consistency with good brewer's yeast. Apply over the affected area and cover it.

• Here is another poultice: wet brown paper. Dip it in **blackstrap molasses** and place it on the bruise.

• More poultices: **Bread blended with water or milk**. A paste of **arrowroot and water** or **cornstarch and caster oil**. Boiled **slippery elm bark**. Grated **raw cabbage**. Chopped boiled **onion**. Raw **potato.**

• **Hydro:** Soak one washcloth in water that is hot, but not enough to burn the skin, and the other washcloth in water with ice cubes. Wring out both, put the hot one on for 3 minutes, then the cold for 30 seconds. Repeat this 4 times, resoaking the washcloths each time.

PREVENTION—

• Strengthen the blood and vessels by eating a **nourishing diet**, rich in **green leafy vegetables and fresh fruit. Buckwheat** is helpful. Also **vegetable juices** containing carrot, celery, and beet. Eat **whole grains, nuts, and legumes**.

• Take **vitamin C**, to bowel tolerance (be sure bioflavonoids are included), and **vitamin E** (800-1,200 units). Go out in the sun and absorb some **vitamin D**. People with vitamin C deficiencies bruise more easily than do others; for their blood vessels are weaker. Also important for cell integrity are the bioflavonoids.

—Also see Easy Bruising (below).

ENCOURAGEMENT—Jesus is ministering on your behalf in the heavenly Sanctuary. He provides you with enabling grace to obey His Ten Commandment law. Thank God for salvation in Christ! He is all we need now and for eternity. Exodus 15:26.

EASY BRUISING
(Ecchymosis)

SYMPTOMS—Frequent and easily made bruising, when others around you do not seem to have this problem.

CAUSE—Low-fiber diets containing **little fruit and vegetables**. In other words, **junk food** such as coffee, tea, white-flour products, and soft drinks.

• Some people are more prone than others to produce bruise spots. This can be a sign of **kidney and liver disorders**.

• Both **anemia** and **allergies** can cause bruising.

• Other factors that make one more susceptible to bruising are **overweight, menstruation,** and **menopause**.

• Frequent or large bruises can be caused by **leukemia**. Purplish bumps under the skin which do not heal and look like bruises could be a sign of **AIDS**.

• **Aspirin** causes internal bleeding and can increase surface bruise marks. Also beware of **anti-clotting drugs, anti-inflammatory drugs, anti-depressants,** and **asthma medicines. Alcohol** and **hard drugs** weaken the clotting factors.

NATURAL REMEDIES

• Try to make changes listed under "causes," above.

• Eat **citrus fruit** each day, including the **pulp** and **white** under the peeling. This has bioflavinoids.

• Improve your **diet**. Take **alfalfa tablets** and a good **vitamin-mineral supplement** 2-3 times a day.

• Frequent bruising indicates that the body's clotting factors are not strong. Take more **vitamin K** (140 mcg). **Vitamin D** (obtained from the sun) is another natural clotting factor. Take care of yourself—and don't bang yourself against things!

• Helpful herbs include **burdock, aloe vera, cayenne, kelp,** and **white oak bark**.

• **Garlic, alfalfa,** and **rose hips** are useful.

—Also see Bruising (244).

ENCOURAGEMENT—This is the victory that overcometh the world, even our faith. This faith can penetrate the darkest cloud and bring rays of light and hope to the desponding soul. It is the absence of this faith and trust which brings perplexity and distressing fears. Psalm 121:1-8.

WOUNDS, CUTS, SCRAPES

SYMPTOMS AND CAUSES—Cuts, scrapes, and torn skin from collisions and falls.

NATURAL REMEDIES

• ***If the wound is small:*** **Let the blood flow for a short time as you clean it**. This helps cleanse the wound better. *If the wound is larger,* then you need to **stop the bleeding** first and **then cleanse the wound**. Superficial cuts can be cleaned with **soap and water** or **3% hydrogen peroxide**.

• **Goldenseal** root powder helps stop bleeding and promote healing.

• Wounds may be bathed with several herbal washes or poultices (including **aloe vera, comfrey, plantain,** or **tea tree oil**).

• Squeeze together the edges of the wound and place a **butterfly bandage**, or something similar, over it. Apply one for every inch of the cut. A small cut can be closed up and sealed with a **Band-Aid or gauze** wrapped tightly enough to seal it, but not tight enough to hinder circulation.

• ***To stop bleeding***—Apply **direct pressure**. If an artery has been cut, the blood will spurt with each heart beat. Small artery cuts should receive direct pressure by your finger, pressed down over a clean cloth on the wound. Larger ones may require a **tourniquet** to control it until you get help. But do not use a tourniquet unless you have to; for they can be dangerous if left too tight and too long. Placing the wound in **ice-cold water** will also tend to stop the bleeding.

• If blood soaks through your bandage, add a new one over the old one. If applying pressure does not solve the problem, **elevate the limb** above the level of the heart, all the while applying pressure with your finger.

• ***If inflammation or redness occurs later***—where the cut occurred, make a strong tea of a nonpoisonous, green herb (**Goldenseal** powder is the best) and soak the injured area in this hot tea for about an hour everyday until it is all right. Rebandage after each soaking.

• ***If a finger, etc., is cut all the way off***—and there is no help available, quickly place it right back in its own blood and hold it in place with a wrapping till you can get help. Healing will often occur. Go to the nearest hospital emergency room.

• Give **vitamin C** orally, to bowel tolerance (1,000-5,000 mg).

• Apply **tea tree oil**, to prevent infection, and reapply every 2-3 hours. To accelerate healing, apply locally one or more of the following: **vitamin E** (600 IU; it will also reduce scarring), fresh **aloe vera juice**, or a **comfrey** poultice.

—*Also see Bleeding (444).*

ENCOURAGEMENT—Trusting in God, we can have victory in our lives over the sins which so easily beset us. Through faith, we today can reach the heights of God's purpose for us. Ever trust Him. Isaiah 57:15.

HEMATOMA

SYMPTOMS AND CAUSES—A hematoma is an accumulation of blood in the tissues, outside of the blood vessels. The ones you will deal with are just under the top of the skin. These are caused by injuries and bruises, often by a blow which pinched the skin.

NATURAL REMEDIES

The following herbs, placed on top of the hematoma, will promote reabsorption and reduce local inflammation:

• Apply a tincture of **arnica**. This is a remedy widely used in Europe, by physicians and farmers, for bruises and hematomas. This plant can only be used externally. Do not swallow it.

• **Kidney vetch** is excellent for healing wounds, bruises, and hematomas.

• Compresses of **Solomon's Seal** not only make facial skin more beautiful, but it reabsorbs hematomas.

• A poultice of fresh, mashed leaves of **sanicle** also promotes hematoma reabsorption.

ENCOURAGEMENT—Repentance, faith, and (by the enabling grace of Chris), obedience to God's commands—can open the door to a much happier life on earth and a home with God in heaven.

INTERTRIGO

SYMPTOMS—This is an eruption of the skin, caused by two skin surfaces rubbing together (groin, breasts, underarms, or inner thighs).

CAUSE—Bacteria and yeast can grow in those areas and start an ulceration. Intertrigo primarily affects **overweight** women who perspire heavily or anyone who has urinary **incontinence**. In people with **diabetes**, it is more likely to develop into secondary infections. It most often occurs **in warm climates** and **during the summer**.

TREATMENT—

• Keep the **skin surface clean, dry, and free of friction**. Use only **natural, chemical-free soaps, deodorants**, and other products you place on your skin. These are available from a health-food store.

• To add dryness, **starch** can be applied. But never use **talcum** (baby) **powder**. It is ground talc, a soft rock which can cause cancer. Do not use it on your body, in body openings, or on a baby.

• **Improve the diet** and the general health. Eat **garlic** products and **acidophilus**.

• **Avoid sugar and refined foods**; for they nourish bacteria.

• Avoid **sitting in one position** too long. Wear **loose fitting, all-cotton clothing**. Make sure it is not rubbing on the skin.

• Helpful herbs include **chamomile tea**. This soothes the skin, fights bacteria, and helps healing occur. **Aloe vera gel** is also good. **Tea tree oil** will help the skin heal more quickly.

ENCOURAGEMENT—He who could not see human beings exposed to destruction, without pouring out His soul unto death to save them from eternal ruin, will look with pity and compassion upon every soul who realizes that he cannot save himself.

SWELLING

SYMPTOMS—Swellings occur in various parts of the body.

CAUSE—This can be caused by bruising, sprains, infections, arthritis, or edema.

NATURAL REMEDIES

• Take **bromelain** (which is the proteolytic enzyme in fresh pineapple), either in tablet form or in fresh pineapple juice. Bromelain blocks the production of *kinins*, the compounds produced during inflammation that increase swelling and induce pain. Take 400-500

mg, 3 times a day, on an empty stomach.

• Make a tea out of **chamomile, comfrey, white oak bark, mugwort, dill, or oregano**. Drink it and apply it externally to the swelling.

• A **contrast (hot and cold) bath or shower** may help relieve it. **Cold water** alone may do it. A **raw potato poultice** over the area is helpful.

• Place an ice cravat (**ice bag**) over the area.

• For swelling caused by arthritis, take **ginger** to reduce it. One researcher found that ginger produced better relief of arthritic swelling, pain, and stiffness than nonsteroidal anti-inflammatory drugs.

• **Arnica** (mountain daisy) is widely used by sports physicians to reduce swelling.

• **Corn silk** tea has been used for centuries by the Chinese to reduce swelling.

• Like corn silk, **dandelion** will also remove some of the excess fluids in swellings.

ENCOURAGEMENT—Man is erring and frail. But God is kind and patient, and of tender compassion. He has heaven and earth at His command. He knows just what we need even before we present our necessities and desires before Him. Psalm 84:11.

SCARRING

SYMPTOMS AND CAUSES—A cut or wound has occurred and you want to avoid later scarring or you want to reduce a scar that is already there. Scar tissue can form into keloids which are large, hard growths above the skin surface. They are harmless. Yet they are unsightly, tender, and sometimes itchy. Dark-skinned people are especially at risk for keloids.

NATURAL REMEDIES

TO REDUCE A SCAR

• **Vitamin E** (400 IU) is recommended. Take both internally and externally. Break vitamin E capsules and apply to the scar. In some instances, this will cause even old scars to reduce in size and possibly disappear.

TO AVOID SCARRING

• Put a few drops of undiluted **lavender essential oil** on the skin area immediately. Or mix it with **aloe vera gel**, apply, and cover with a sterile pad.

• To accelerate healing, without the development of scar formation, apply locally one or more of the following: **vitamin E, fresh aloe vera juice**, or a **comfrey poultice**. Of these, vitamin E is especially good in avoiding later scarring. Apply vitamin E locally (topically) and include it in the diet. Prick an E capsule and let the oil ooze over the cut or scar.

• **Clean and care for all wounds**, so that they heal properly. Close gaps with a **butterfly bandage**. This will lessen scarring. **Do not pick at scabs**. Let healing progress naturally. **Eat healthfully**. Be gentle on healing wounds, when rubbing the skin, bathing, etc.

ENCOURAGEMENT—Christ is your Advocate, your Helper, and your Friend. He alone is your Saviour from sin. He can enable you, by His grace, to keep His Ten Commandment law and do all that is pleasing in His sight. In His enabling strength, you can conquer all the forces of evil and come off more than victorious. But you must yield yourself fully to God.

ADHESIONS

SYMPTOMS AND CAUSES—Scar tissue from a surgical operation can form an adhesion, where tissue binds to tissue. This can be painful and limit body movement.

NATURAL REMEDIES

TO REDUCE AN ADHESION

• After an operation, when the stitches have been removed and the incision is completely closed, you can **use massage to help prevent adhesions from forming**.

Place the flat of your fingers (not your fingertips, but the pads where your fingerprints are) on either side of the incision. Then, without lifting the fingers, **gently move them around**.

Normal tissue will glide with ease in all directions. But at a point of adhesion, there will be a rapid increase in resistance. The gliding motion will stop.

Do not push beyond that point. But **return to it many times**, a few minutes at a time every day or every other day, and keep gently massaging it. Until the surgical site is well-healed (about 2-3 weeks), never pull on or across the incision itself.

• A Chinese remedy is to **massage Tiger Balm herb tea** in a 1-inch area around, but never on, the incision. Until the incision is completely healed, do this 5 minutes a day with a repeating, circular motion that moves close to the incision and then away from it.

—Also see Scarring (247).

ENCOURAGEMENT—Holiness of heart and purity of life were special subjects of Christ's teachings. He wants you to live with Him forever in heaven!

SKIN GRAFTS

SYMPTOMS AND CAUSES—A skin graft has been made, and you want it to heal well with a reduction of pain.

NATURAL REMEDIES

• Turn to *pp. 180-182* and read how to prepare and use a **paraffin bath**. This simple home remedy is ideal for the treatment of skin grafts.

ENCOURAGEMENT—Through the enabling grace of Christ, as God is pure in His sphere, so man can be

pure in His. By faith in Christ, you can be more than an overcomer.

SKIN -

2 - SORES, ULCERS, BURNS

BLISTERS

SYMPTOMS—Rounded, fluid-filled spots on the skin. They are small areas of broken cells where leaking fluid has pooled and separated the outer layer of skin from the underlying tissue.

CAUSES—They are most frequently caused by wearing different or loose-fitting shoes and the excessive handling of tools.

NATURAL REMEDIES

• **Should you prick the blister** and let the fluid out? No, it is best to leave it intact, because a broken blister can more easily become infected.

• However, if it does break, leave the roof on afterward. This protects the skin while healing occurs.

• Blisters and rashes in babies, which are caused by the high ammonia content in their urine, are greatly helped by the amino acid, **methionine**, in their diet. **Lysine**, another amino acid, has helped heal fever blisters when given 500 mg daily. Also change the baby's diaper more frequently.

• Put **ice** on the blister. Or put a **cool washcloth** on the area to help relieve the pain and itching.

• Apply **peach-pit tea** to the blister.

• **Lavender essential oil**, placed on the blister, will help heal it. This is one of the few essential oils which can be applied to the skin, without first being diluted. Apply it 2-3 times a day until the blister is healed.

• The sap in **dandelion stems** is full of vitamin A. If you have dandelions in your yard, which have not been sprayed with insecticides, pick a few and squeeze the white, milky juice onto the blister and cover it with a bandage. Reapply once a day until healed. (Some are sensitive to the juice. If you are, wash it off immediately and do not put any more on.)

ENCOURAGEMENT—Take the hand of Christ and hold it firmly. He will hold you with a grip that will not let go—unless you choose to wander away after the devil's trinkets. Romans 8:17, 35-37.

SORES, ABSCESSES, PUS

SYMPTOMS—Included here are sores that will not heal. Also abscesses which are large, have pus and, because they do not heal, become open skin ulcers. The swollen part becomes inflamed and tender. There may be alternate fever and chills. *Also see Boils (251).*

An abscess can form on the surface of the skin or within the body—in the sinuses, teeth, gums, tonsils, lungs, brain, abdominal wall, intestinal tract, breasts, kidneys, etc.

CAUSES—include **poor hygiene, bad diet, enervation, lack of rest, worry, exhaustion**, as well as **toxic poisoning**. It may also be caused by an **infected wound, an illness, lowered resistance, certain drugs, food allergies, stress, or junk foods. Drugs containing sulfur** can produce boils.

Leg ulcers are a special problem. These are open sores which develop on the legs, and are more likely to occur in **those with varicose veins**. Poor circulation causes the skin tissue to break down. The following treatments may, or may not, benefit the patient with such circulatory problems.

NATURAL REMEDIES

• For sores that will not heal: **vitamin E** (200 IU a day). Apply a dressing of fresh **comfrey** leaves and root or a paste made from raw **garlic** on gauze for 8-10 hours.

• *For a boil (furuncle or carbuncle),* follow the directions below for an abscess.

• *For a surface abscess:* Keep the infected area **clean with soap and water**. Bring it to a "head" by placing **hot compresses** on it. This will make it soft in the center. (Hot compresses or ice bags will also help relieve the pain. And hot compresses promote healing.) A poultice with 3% **boric acid** can be used or a hot **Epsom salt compress** (dissolve Epsom salt in hot water and apply as a compress all night). **Echinacea** can be used or a **clay** poultice. Some use a **flaxseed** poultice to soften and mature the head. Either it will open itself or, when "ripe," you can open it with a sterile needle. Then flush it clean by a syringe with pure water or one of the above solutions. If bits of puss or dead flesh still remain, apply 3% **hydrogen peroxide**. Then flush out with pure water. The cavity will gradually fill in and heal.

DIET AND NUTRIENTS

• Take **vitamin C** orally to bowel tolerance (take as much as you can without producing diarrhea, which shows the excess is being excreted). Take **vitamin A** (best taken as carotene: carrot juice and green and yellow vegetables), **vitamin B complex, and vitamin E** (400 IU). Get plenty of bed **rest** and drink lots of **fluids**, to help flush the system. Clean the bowels with an **enema** once a week. Stay on a **vegetarian diet—avoiding heavy starches, chocolate, excess sweets, and too many saturated or hydrogenated fats.**

• Go on a **liquid fast** (fruit juice and water is the best) for 24 to 72 hours and stay in bed as much as possible during that time. This will cleanse the system and prepare it for a nourishing diet. This also helps reduce excess weight. Take **alternate hot and cold showers** every morning and evening (or cool baths ev-

ery evening). Drink distilled water with fresh **lemon juice**, plus 3 cups of **goldenseal** or **echinacea** tea, each day.

• A **nutritious diet** with adequate vitamins and minerals is needed to correct the problems in the body which led to the abscessed condition. Also good: **garlic and kelp**.

POULTICES

• A **slippery elm bark and lobelia poultice** soothes and helps promote healing. Apply **honey** externally to the area. It is believed that honey destroys bacteria by drawing the moisture out of those sores. Applying **chlorophyll** water to the area several times a day will keep it cleansed.

• Wrap a bruised, wet **plantain** leaf around the inflamed area. Keep it wet with plastic covering. Apply large, soaking **witch hazel** compresses to any swelling or inflammation.

• On such open skin ulcers, you can also place herbal poultices—such as **German chamomile, marigold, arnica, cliff rose, snake root, and/or witch hazel**. Also helpful is **red clover tea and carrot and beet juice**. Also good: **Burdock root, cayenne, and yellow dock root. Chamomile** is widely used in Europe to treat leg ulcers. **Tee tree oil** is outstanding, but dilute it. (Never take any herbal oil internally.)

• Simmer several **peach pits**, wash the infected area with an herb tea, apply a compress of the peach-pit juice.

• **Goldenseal, myrrh, and comfrey** can be made into a paste which will heal almost any sore.

—Also see Boils (251).

ENCOURAGEMENT—Christ revealed the love of God to mankind. As Jesus was in human nature, so God means His followers to be. In His strength, we are to live the life of purity and nobility which the Saviour lived. Romans 8:1, 33-34.

CANKER SORES
(Aphthous Ulcers)

SYMPTOMS—Small oval or round white ulcers that can be very painful. They appear on the tongue, gums, inner or outer lips, or on the insides of the cheeks.

At first it appears as a red, warm spot which ulcerates and has a yellowish border. Next, a yellowish mixture of fluid, bacteria, and white blood cells are seen. There is often burning or tingling at the place for 1-3 days before the canker sore appears.

Canker sores are different in appearance from cold sores, in that canker sores do not form blisters.

CAUSES—The Greek word, *aphthae*, means "to set on fire." **Allergies, stress, vitamin deficiencies, endocrine imbalance, and viral infections** are considered to be possible causes.

You are more likely to have them if your parents had them. They generally do not begin appearing till the age of 20, and occur equally among men and women. Older people have them less frequently. Canker sores generally heal by themselves within a week or two. It is said that as much as 40% of the adult population experiences them. Some people seem to have one after the other. People with **Crohn's Disease** (an illness of the bowels) are more likely to have them. **Vaccines and antibiotics** may cause them.

Gastrointestinal symptoms often accompany cankers. So **food allergies** may frequently be the cause. Most frequent problems: **citrus, apple, spices (especially cinnamon), acidic or salted foods, nuts, English walnuts, caraway, chocolate, coffee, shellfish.**

Other causes include poor dentures, rough tooth fillings, or braces

NATURAL REMEDIES

• As soon as the first tingle is felt, take 500 mg of **vitamin C** with **bioflavonoids** (50 mg), 3 times a day, for 3 days.

• **Goldenseal** powder or a moistened goldenseal tea bag applied over the ulcer is one of best treatments. It may also bring relief of the pain.

• Wash your mouth with plain **hot water**, to draw healing blood and help relieve pain. This is a simple hydrotherapy treatment.

• Squeeze **vitamin E** oil (from a capsule) on the sore several times a day. Apply **baking soda** to the sore.

• **Zinc** (30 mg) helps it heal faster. And **myrrh** or **witch hazel** repairs damage. **Bayberry** and **burdock** are good.

• Gargle with **chlorophyll** or **wheatgrass** juice. Rinse the mouth with **aloe vera** juice 3 times a day.

• In the Midwest, they put a little **earwax** on the sore to help heal it.

• At the first indication of a canker sore, put an activated **charcoal tablet** on the spot and hold it there till the sensation goes away (within 15-20 minutes). The charcoal absorbs the virus, stopping the eruption.

• Put a blob of **blackstrap molasses** on it several times a day. Place a drop of 3% **hydrogen peroxide** on each canker sore or dilute the peroxide (3 parts water and one part peroxide) and swish it in the mouth. Then spit it out and rinse with water.

PREVENTION—

• Things which tend to cause canker sores include **mouthwashes, citrus fruit, coffee**, or certain other foods—especially **highly seasoned or tart foods**. Do not **smoke** or chew **snuff!**

• **Folic acid (20 mg) and vitamin B_{12}** (1,000 mcg.) deficiencies may cause it. **Onions** help reduce their number. Include them in your food preparation. **Lysine, vitamin B_{12}, and folic acid** also help.

• **Do not eat meat** for two weeks. Meat increases body acidity. Stop eating it entirely, and you are less likely to have canker sores.

• Avoid **sugar** and **processed foods**. **Citrus fruit** causes them in some people.

• Avoid **physical damage** to the area immediately in, and around, the mouth. Avoid **sharp foods**, such as peanut brittle. Use a **soft toothbrush** with no toothpaste.

• **Do not bite** the tongue or cheek, by not talking or turning your head while chewing.

• A **hair analysis** will help you determine your mineral and pH balance. Maintaining a proper balance can help you avoid canker sores.

• If you have repeated attacks of canker sores, something is wrong. With careful checking, you should be able to find it. For example, with some people, it is simply a matter of not overeating on **sweet foods**, even naturally sweet fruit.

• *Beware!* If you have a mouth sore which does not heal, see a dentist. There are certain other diseases which first appear somewhat like canker or cold sores—yet which are much more dangerous.

—Also see Cold Sore (below). You may also wish to turn to Syphilis (630), which often initially appears around the mouth. However, the appearance of the hard chanker of syphilis is much different than that of canker or cold sores.

ENCOURAGEMENT—God is pleased when we keep our faces turned toward the Sun of Righteousness. When we are in trouble and pressed down with anxieties, the Lord is near. He bids us cast all our care upon Him, because He cares for us. "The Lord preserveth the simple. I was brought low, and He helped me." Psalm 116:6.

COLD SORES

(Fever Blisters, Herpes Simplex Type I)

SYMPTOMS—These are thin-walled inflamed pimples which have a tendency to recur in the same area, most frequently at the borders of the mouth, but sometimes on the gums or conjunctiva (the lining of the inner surface of the eyelid). It tends to occur at, or close to, where the skin and mucous membrane meet. First comes a local tenderness with a small bump. Then this bump changes into a blister; and the tenderness may increase. Nearby lymph nodes may become swollen. After about 48 hours, the blisters crust over. Sometimes pus oozes, making eating difficult. Cold sores appear 3-10 days after exposure and may last up to 3 weeks, but generally only 7-10 days.

CAUSE—This is an infectious disease caused by herpes simplex (herpes simplex virus 1, *Herpes virus hominis*). It is caused by a life-long virus which you get by kissing or drinking out of someone else's glass, etc. But, for practical purposes, there are other immediate causes as well.

Some people never have cold sores and others frequently have them. **Stress** is a significant cause. Eating too much **sugar** is another. Excess **ultraviolet light** or **acid foods** cause them in some people. For some women, the onset of **menstruation** can be a cause. **Alcoholic drinking** and **poor diet** also bring them on. Local irritation can be an incipient factor. For some, cold sores tend to occur with a fever, infection, or a cold, after exposure to the **sun and wind**, or when the **immune system** is depressed.

If cold sores occur frequently, the problem may be **low-thyroid** function.

Cold sores seem somewhat like canker sores *(above)*, but they are different in several ways. They form blisters, but canker sores do not. They can form anywhere on the body, especially on the mouth area or on the genitals. Although we are not certain of the bacterial or viral origins of canker sores, cold sores are caused by herpes simplex virus 1.

NATURAL REMEDIES

• Eat plenty of **raw vegetables**. Strengthen the immune system with a **nutritious diet**.

• Apply **ice** for 15-20 minutes at the first sign of tingling. If possible, repeat it frequently. Apply **vitamin E** between applications. Get enough **vitamin A** (50,000 IU for a few days) and **B complex**. **Zinc** is also important (zinc gluconate lozenges). Dissolve in mouth every 3 hours for 2 days or take 20-30 mg daily. Daily take 2,000-3,000 mg of the amino acid **lysine** till the cold sore is gone. It is an effective virus blocker.

• **Protect your lips** from sunburn and wind. **Exercise**, plus adequate **rest**, bolsters the immune system, so it can better resist cold sores. Drink lots of **water**.

• Also helpful are **goldenseal, echinacea, red clover, astragalus**, and **pau d'arco**. Along with **black walnut** tincture, they boost your immune system and kill viruses. **Lemon balm** (or **ice**) soothes the pain. **Lemon balm** contains *polyphenols* and reduces outbreaks.

Avoid high-arginine foods (**chocolate, peanuts, nuts, seeds, meat, and fish**).

• If it is not bothering you very much, leaving a cold sore alone is a good idea.

• Trust in God and **stop worrying** about so many things. **Eat better**, take time to **walk outside**, and **get enough sleep** at night. Studies have shown a definite link between stress and cold sores.

—Also see Canker Sores (249).

ENCOURAGEMENT—He that keepeth Israel neither slumbers nor sleeps. He is kept in perfect peace whose mind is stayed on God. Isaiah 26:3.

We, too, are to walk with God. When we do this, our faces will be lighted up by the brightness of His presence; and, when we meet one another, we shall speak of His power and say, Praise God. Good is the Lord, and good is the word of the Lord.

BOILS

(Furuncles, Carbuncles)

SYMPTOMS—Itching, mild pain, and local swelling, often on the scalp, buttocks, face, or underarms. Within 24 hours, the boil becomes red and filled with pus. Fever and swelling of the lymph glands nearest the boil may occur. Boils are tender, red, painful, and appear suddenly.

CAUSES—Boils are small pus-filled bumps. The medical name for them is *furuncles*. They are generally caused by a staph infection: hemolytic *Staphylococcus aureus* bacteria.

In contrast, *carbuncles* are many-headed boils which tend to combine and enlarge. They begin as a painful, localized infection, producing pus-filled areas in the deeper layers of the skin. Carbuncles are slower healing than boils. They are both treated alike.

Boils are contagious. Do not let the draining pus (which contains both dead and live bacteria) get on the skin elsewhere! When it spreads to nearby areas, the result is a *carbuncle*. A boil on an eyelid is a *sty (307)*.

Untreated boils tend to exude their poisons and disappear within 10-24 days. But, given careful treatment, they are contained and less severe.

Keep in mind that if the body is trying to expel a poison (especially sulfur!) through the skin, you may continue to have a string of boils for a time. The body is trying to cleanse itself of something bad. Inorganic sulfur in the body is especially prone to come out in skin boils.

NATURAL REMEDIES

• Go on a **brief cleansing fast**, to rid the system of impurities. The problem may be toxins, but it may be chemical poisoning. One example would be **sulfur**. Whenever it is taken into the body, it tries to leave (but not through the bowels or kidneys)—through the skin.

• While on a liquid fast for a couple days, you may drink 3 cups of an herb tea daily of one or more of the following: **comfrey, red clover blossoms, yellow dock root, chickweed, plantain, and wild cherry bark**.

• Every night apply a poultice of **raw potato** mixed with **flaxseed**. If you apply a poultice during the day, use **whole-wheat flour** and stiffen it with enough **honey**, so it will not run.

• Apply **moist heat** (a clean towel, cloth, or gauze that is wet in warm water) 3-4 times daily to the boil. This will reduce pain and help bring it to a head more quickly. Avoid irritating the area or spreading the pus. **Avoid exercise** which might cause sweating until it heals. Keep it protected, but not with an adhesive bandage. Severe cases may require **bed rest**.

• Squeezing a boil can force infectious bacteria into the bloodstream. Instead use hot compresses to bring a boil to a head quicker. Apply **Hot and Cold Compresses** to draw out the pus. Soak washcloth in hot water, wring it out, place it on boil for 10 minutes. Apply cloth from cold water for 10 minutes. Repeat this 3 times, twice a day.

• Keep the skin clean by **washing** it several times a day. The area around the boil may be sterilized by wiping it carefully with 70% rubbing **alcohol**. Or apply a solution of 1 tsp. **bleach** to 1 quart water.

• Mix **honey with flour** and place directly over the boil. Alternates would be **clay, charcoal, and/or chlorophyll**.

• *More poultices:* Split a **fig** and apply hot. This is especially useful for a boil on the gum. Many Europeans place sliced **radish** on large boils. American Indians applied **slippery elm**. Add cool water to the powder and make a paste. Place wet **cabbage** leaves over it and replace when warm. **Onion** poultices. **Tea tree oil** compresses.

• Apply **vitamin E** oil to the area. Take **garlic** tablets 1-3 times a day.

• Some boils are large and persistent. There is a poison in the body trying to get out. **Bed rest, a short fast**, followed by a **light, nutritious diet** will greatly help.

• Other helpful herb teas include **oat straw, goldenseal, dandelion, and burdock root**.

• Take **echinacea and goldenseal** tea 3 times daily until the boil is gone. It kills the bacteria.

Do not squeeze boils! This causes them to spread. Wash laundry and dishes carefully.

• *The most dangerous boil:* One around the nose can lead to internal infection. Beware of red streaks from the boil, or the development of fever or chills. As explained above, apply hot compresses until the boil heads. Then alternate hot and cold to drain it. Contact a physician.

—*Also see Abscesses (248).*

ENCOURAGEMENT—If we were left to ourselves, we would make many tragic mistakes. But we can go to God, our kind Father in heaven, and receive all the help in time of need. Psalm 56:4-5.

BED SORES

(Pressure Sores, Decubitus Ulcers)

SYMPTOMS—These are deep skin ulcers—especially found on buttocks, hips, sacrum, shoulder blades, elbows, and heels.

CAUSES—These ulcers form during periods of prolonged bed rest, as pressure is continually applied to bony parts of the body. The bedridden elderly, the unconscious, and the paraplegic are those most likely to experience this problem.

Such individuals generally have a high pH (too alkaline) and are deficient in vitamins A, B_2 (riboflavin), E, and C, as well as zinc.

NATURAL REMEDIES

TO ELIMINATE THE SORES

• Apply **sugar or honey poultice** to the sore. It will help draw out the poisons. Local applications can also include **zinc oxide ointment, aloe vera, wheat germ oil, or comfrey**. Make a paste out of crushed **comfrey leaves and slippery elm**, and cover the sores. **Wash the sores** 3-4 times a day with a combination tea (**witch hazel and myrrh or goldenseal**). Mix powdered **comfrey leaves and slippery elm** in equal parts, mix with water, make a paste, spread on a cloth, and tie it over the sore. It can be left on overnight. When dry, sprinkle some powdered **goldenseal or echinacea** over the sores to disinfect the area. Cover with **cotton or wool** (not a synthetic fabric).

• **Improve the diet**. This is crucial to solving the problem. Drink enough **liquids**, even when not thirsty, and also at night. **Avoid processed, fried, and junk food. Do not eat meat**. The diet should include enough **fiber**. Oat bran is especially good. The **bowels** should move each day. Lower the pH with acid foods. **Cranberries** are ideal. Never drink vinegar!

• Sprinkle a thick layer of **granulated sugar** over an open bedsore and cover it with an airtight dressing. Place **raw honey** on a gauze pad and over the sore. Either method will probably produce healing within 2 weeks. Sponge with **hydrogen peroxide** or fresh, ripe **cucumber** juice. Dust the sores with **cornstarch**. Apply **aloe vera gel**.

PREVENTION

Prevention is much easier than treatment. **Removing the pressure** at the first signs of redness usually aborts the sores. Use **protective padding** on the bed, **massage the skin** to stimulate the circulation. Avoid moist skin. Keep the **skin dry and clean** (especially avoid urine on the skin). **Turn the patient** regularly. **Watch** for signs of redness. Occasional **sunlight** to the skin is beneficial. **Sponge bathe** daily with a mild herbal soap (never with harsh soaps). The **bed** must be kept clean and the **sheet** without wrinkles. **Sheepskin** bed covers help disperse weight more evenly. The use of air or water mattresses can be helpful. **Loose-fitting clothing** allows air to penetrate to the skin (cotton is best). If the patient can **sit up**, have him do it 3-4 times a day. Sometimes prop him up with a pillow. Gentle **massage with petroleum jelly** over the pressured points.

• Give a well-balanced, adequate **diet**. Give plenty of **greens** and **carrot juice**. Give **vitamins A** (one-half **beta-carotene**), **B complex, vitamin C** (1,000 mg), **Bioflavinoids, and vitamin E** (400 IU). Also **copper** (4 mg) **and zinc** (20 mg).

• Apply **vitamin E oil** to the skin area.

• The **Alternate Hot and Cold Compress** is very helpful.

ENCOURAGEMENT—Whatever may be the burdens that you bear, cast them upon the Lord. He can solve your problems. He can provide for your deepest needs, as you trust wholly in Him. Isaiah 25:9. God can care for you as no one on earth can.

BURNS
(Scalds)

SYMPTOMS—There are *first degree* burns (redness), *second degree* burns (redness and blisters), and *third degree* burns (the entire skin and some of the underlying muscle is destroyed). For third degree burns, immediately go to a doctor or an emergency room. Even more extreme is a *fourth degree* burn. Instead of oozing flesh, the area is dry and charred.

CAUSES—Tissue damage to the skin as a result of heat, chemical, electrical, or radiational injury. ***First degree burn:*** usually from sun or water. ***Second degree burn:*** generally from hot metal objects, flame-contact burns, or severe sunburn. ***Third degree burn:*** hot-fluid burns, steam from a pressure cooker, electrical burns, or high-flame contact. (Third degree burns are often not painful because the nerves have been destroyed.) Each year, 2 million Americans get burned, 50,000 are hospitalized, and 5,000 die. So be careful.

NATURAL REMEDIES

• ***First degree:*** Mix equal parts of **white vinegar with water** and cover the burn surface, twice a day. Also apply **aloe vera, tea tree oil,** or **vitamin E oil** locally. **Tannic acid** has been used in clinics for surface burns that have begun to heal. At home, you can effectively use **white oak bark tea**. Apply locally as a tea and wet compress.

• ***Second degree:*** Apply **vitamin E oil or zinc oxide**. Take **vitamin C** to bowel tolerance. Apply **aloe vera** after healing begins.

• ***Third and fourth degrees:*** **Immediately take the person to a professional**! Do not try to remove clothing stuck to the burned area. Apply **aloe vera** after healing has begun.

MORE HELP

• **Soak the clothes**, so hot cloth will not increase the burn. **Apply cold until the pain subsides**.

• Immediately apply **cold water or cold, wet cloths** on the area to reduce pain and swelling. Immerse in cold water (not ice or ice water!) immediately until there is no pain. This will prevent blister formation, if first degree, and reduce damage in second degree. **Cover the burn**, to reduce likelihood of infection. Mix and apply **olive oil with baking soda** to the area. **Elevate** the area, to reduce swelling, and keep it **out of the sun**. Do not break the blisters, and **never put salves or butter** on burns. **Watch** for indications of infection, odor, pus, or angry redness. **Cold clay poultices** are useful.

• Second degree, on up, requires a **high protein diet** and **5,000 calories** per day. Increase **fluid intake**. Also important: **vitamins A, B, C, E, and F**. **Calcium** and **magnesium** help structure proteins for healing.

• Applying **vitamin E oil** and spraying on a 1% to

3% solution of **vitamin C** every 2-4 hours is very helpful for pain. This reduces pain and accelerates healing. Take 1,000 mg of **vitamin C** orally, every hour.

• Have the patient **breathe deeply** every so often. He needs the vital oxygen for the healing of the burn.

• **Fresh aloe vera juice** is outstanding on burns, to hasten healing. But this can only be done if you have a growing plant to cut the leaves from.

• **Lavender essential oil** is a wonderful remedy for burns. This includes 2 oz. each of **distilled water, witch hazel**, and 25 drops lavender from a glass spray bottle (dark glass best). Store in refrigerator. Give a shake and spray on burn area. Do not use it on broken skin.

• Make a paste of **wheat germ oil and honey** (in blender at low speed). Then add **comfrey** leaves to make a thick paste. Apply to burn. Keep rest in refrigerator.

• Taking **echinacea** stimulates immune responses. Since ancient times, mashed **garlic** has been applied directly to burns. **Plaintain** juice is widely used on burns.

• Burns dehydrate the body quickly. If it is a minor burn, give him drinking **water**. Add a little **cayenne** to the water to help against shock. **Ice water** compresses or applications help relieve pain.

IF SPLATTERED

• ***If splattered with hot grease or hot soup***, remove soiled clothing first. Then wash grease off skin. Soak burn in cold water. If clothing sticks to skin, rinse water over clothing and go to a medical facility. Do not pull clothing off the skin! Do not put butter, honey, or vegetable peelings on a burn. If you do, it will seal the heat in. Greasy substances may cause infection. Do not break blisters. Keep bandages loose. With your fingers, gently move burned area of skin immediately. This will keep skin supple and bring blood to area.

• ***To remove hot tar, wax, or melted plastic from the skin,*** use ice water to harden the heated substance. But no ice water after that, only cold water. For acid or chemical burns, use baking soda or apple cider vinegar added to warm water. Apply 5 minutes once a day. Keep burn injuries elevated to minimize swelling and aid healing. To avoid bacterial infection, keep burn lightly covered.

• The following hydrotherapy treatments for burns are listed in the *Hydrotherapy* chapter of this *Encyclopedia (153-211)*: **Ice Pack, Neutral Full Bath, Evaporating Compress**, and the **Cool Irrigating Compress**. Extensive burns can be treated with the **Prolonged or Continuous Neutral Bath**. Old burns can be treated with the **Paraffin Bath**. These are excellent helps in time of need.

ENCOURAGEMENT—We can only see a little way before us; but God sees everything. He knows all about our needs; and He cares for us. He sits above the confusion and distractions of the earth. All things are opened to His divine survey. From His great and calm eternity, He orders that which His providence sees best. It is His plan that you grow in grace and in the knowledge of Jesus Christ every day of your life. The more fully we live for Him, the happier are our lives. Titus 3:7.

SUNBURN

SYMPTOMS—*First degree* sunburns cause reddening of the skin and possibly slight fever. *Second degree* sunburns make reddening and water blisters. *Third degree* sunburns produce damage to lower cells and the release of fluid. This results in eruptions and skin breaks, through which bacteria and infection can enter.

CAUSES—There has been **excessive exposure to ultraviolet light rays** which first burn the surface skin and, later, the lower cell layers. Ultraviolet rays can penetrate clouds. So be careful even on hazy days. Sunburn is bad for you. It ages your skin and increases your risk of later developing skin cancer. Many drugstore remedies for sunburn numb the pain but do little to support the body's own healing systems. Natural methods are better.

PREVENTION—Do not expose yourself to the sun for extended periods of time between 10 a.m. and 2 p.m., when the highest concentration of ultraviolet rays are present. Reflections from snow water, metal, sand, or white- and aluminum-painted surfaces can intensify the effect.

• Apply a **sunscreen** about 30 minutes before going out (SPF 15, or higher). Protect your lips, hands, ears, and the back of the neck. Reapply as needed after swimming and sweating. (Be aware of the fact that there are substances in sunscreen which your body should not absorb, but inevitably will.)

• **Get a tan gradually**, beginning with only a few minutes (never over 15). **Wear protective clothing** whenever possible. Keep a **hat** with you, and use it. **Long sleeves** help. If you wear **sunglasses**, get a pair which protects your eyes from both UVA and UVB rays.

NATURAL REMEDIES

SECOND OR THIRD DEGREE SUNBURNS

• *A third degree sunburn is serious. See a doctor.* **Water applications** help. **Keep the muscles flexible.** A strong sunburn can cause underlying muscles to contract somewhat.

• For both *second and third degree* burns, be sure to eat **high-protein foods**. A lot of tissue needs to be repaired because your body is hard at work. Drink a lot of **fluids**.

FIRST OR SECOND DEGREE SUNBURNS

• Put **cold water** on the burn. Lie in a **cool bath.**

• Place dry **oatmeal** in a bag, run cool water through it, and save the water. Throw away the contents of the bag and use the water in compresses. Apply every 2-4 hours.

• Massage **aloe vera or tea tree oil** on the area. The inner gel of the aloe vera leaf has also been shown to speed the healing of radiation-induced burns.

• Here are other suggestions: **Clay** poultices can be used. Moisten a cloth with **witch hazel** and apply often for temporary relief. For small areas, apply with cotton balls. Apply plain **yogurt** to the area. Make a paste of **cornstarch** and water, and apply it. An **ice pack** can help reduce pain. Get lots of sleep.

• Mix a cup of **skim milk** with 4 cups water (with ice cubes in it). Every few hours, apply compresses of this solution for 15-20 minutes.

• The cool **cucumber** is often used for scalding burns. Slice it open and apply. Apply **raw eggplant.** In Australia, it is used to treat skin cancer. Apply **plantain.** It contains *allantoin*, which heals injured skin cells.

• More than any other nutrient, experts recommend the placing of vitamin E oil on skin burns.

• Do **not** apply any product which has **alcohol, mineral oil, coloring, or waxes** in it.

• If the legs are burned, **elevate** them above the heart level.

The burned skin area will be delicate for 3-6 months, so be careful.

ENCOURAGEMENT—God helps the feeble and strengthens those who have no strength. The Lord is your shade upon the right hand and upon the left. Trusting in Him, you will be safe. Psalm 46:1.

LEG ULCERS

(and other skin ulcers)

SYMPTOMS—Open sores which develop on areas of the legs. (They may also occur elsewhere on the body.)

CAUSES—Leg ulcers occur when the **blood circulation to the legs is inadequate.** Skin tissue tends to erode and ulcers can form. Individuals with **varicose veins, thrombophlebitis**, or other conditions caused by poor circulation, are most likely to develop this problem.

An atherosclerotic plaque or embolism can block an artery, causing an *arterial ulcer* in bony areas of the feet and ankles. When leg veins cease functioning properly, venous stasis occurs, producing a *venous ulcer*. Diabetes can result in insufficient blood supply and a *diabetic ulcer* on the skin.

NATURAL REMEDIES

• Eat a **light, nourishing diet** with adequate **vitamins and minerals.** Much of it should be raw. Leafy, dark **green vegetables** and **garlic** are important.

• **Do not eat meat**, and avoid **alcohol** and **nicotine!**

• Make a gallon of **goldenseal** tea (stronger than you would drink). And, after straining out the herb, put the leg in it for an hour. When finished, let it dry for 10 minutes. Apply **olive oil** in, and around, the ulcer. Dust a little powdered **goldenseal** on it. If needed to keep out insects, put a light gauze bandage over it while letting the air in. It will heal, but slowly. As much as two months may be required. But do not take goldenseal more than a week at a time—and not if you have glaucoma, diabetes, or cardiovascular problems.

• Keep the ulcer **clean,** so it will not become infected.

—Also see Abscesses (248) and Boils (251).

ENCOURAGEMENT—God is pleased when we keep our faces turned toward His Son, Jesus Christ, our only Saviour. When we are in trouble and pressed down with anxieties, the Lord is near. He bids us cast all our care upon Him, for He careth for us. Psalm 55:22.

SKIN - 3 - SKIN SPOTS

MOLES

(and unknown spots)

CAUSE—Most moles are harmless. But those that are flat, or nearly flat, larger than the top of a pencil eraser, or have a mottled color should be checked. If an existing mole turns blue, white, or red and begins to bleed or develops a crust—have it checked. It may be skin cancer.

NATURAL REMEDIES

To remove a suspected skin cancer (before it has continued long enough to go into the system), fasten a thin slice of **garlic** to it in the evening and leave on overnight. Do this for 2-4 nights. The spot will slough off. And, as it heals, new flesh will take its place.

—For more on this, see Skin Cancer (617).

ENCOURAGEMENT—Jesus has said that He has set before us an open door; and no man can shut it. The open door is before us. And, through the grace of Christ, beams of merciful light stream forth from the gates ajar. Be faithful, trust and obey, and your future is bright. Proverbs 19:20.

ACNE

(Acne Vulgaris)

SYMPTOMS—Blackheads, whiteheads, pustules, inflamed and infected nodules, sacs, and cysts. They occur where the sebaceous (oil) glands are most numerous: face, neck, chest, and back. Permanently expanded pores, as well as scarring, can result.

CAUSES—A sebaceous gland is located in every hair follicle and produces oil which lubricates the skin. **Some of the oil becomes clogged,** bacteria multiply, and inflammation results. This occurs during adolescence (be-

tween 12 and 24), when androgens (male hormones) are released in increased amounts in both boys and girls. A few have acne all their lives.

Other causes include **junk foods, oral contraceptives, cosmetics, allergies, stress, and heredity.**

Skin eruptions are often caused by consuming **too much meat, white sugar, denatured flours, eggs and stimulants (including spices), or by the lack of wholesome foods such as fresh vegetables, whole grains, fruits, nuts, and legumes.** Skin ailments will often follow or accompany **diseases of the lung or colon.**

Eggs, peanuts, nuts, colas, and chocolate tend to induce acne. **Milk** is frequently responsible when it is **combined with sugar and eggs** in snacks and ice cream.

The problem is intensified when **sebum, combined with skin pigments, plugs the pores**—and produces blackheads. If scales below the surface fill with sebum, whiteheads are formed.

Canadian Eskimos, prior to 1950, never had acne. When "modern foods" were brought in, acne became common.

Acne is rarely caused by a serious hormonal disorder caused by **tumors in the adrenal glands or ovaries.** Other symptoms of this possibility include **excess facial hair** and **irregular menstrual periods.**

NATURAL REMEDIES

GENERAL

• **Cleanliness** is important. Keep the skin washed and clean. Keep the infected area **free of all oils.** Wash or pat the face with lemon juice 3 times a day. **Shampoo** the hair frequently.

• **Do not squeeze** the spots. Blackheads must be removed (not with picking by the fingers) with a specially designed instrument. Keep hands clean and **avoid touching the face.** Do not touch the affected area unless your hands are thoroughly cleaned. *See Blackheads (256).*

• **Wash the pillowcase** regularly in chemical-free (no added colors or fragrances) detergents.

• Get early morning **sun** on the face daily. Get **fresh air** and **exercise** daily, and plenty of **rest** to eliminate toxins.

• **Avoid irritating the skin.** Avoid clothing which rubs against the affected areas. Do not hold a telephone against your cheek for long periods. Keep your hair from your face, so hair oil and bacteria will not be deposited on the skin.

• **Avoid stress;** for it can cause hormonal changes.

• **Do not put oil on your face.** Avoid the use of greasy creams or cosmetics. **Avoid makeup.** If you feel you must use some, use a natural, water-based product. Wash and dip makeup brushes and sponges in alcohol after each use.

• **Avoid oral or topical steroids.** They will worsen the problem.

• Men should **shave with a blade** and in the direction of hair growth. Shavers can cause scarring.

SPECIAL APPLICATIONS

• Place alternating **hot and cold cloths** on affected area, to bring up cleansing circulation.

• Rub on **lemon juice** at night and wash in the morning.

• Apply **white clay** (from health food-store) and let dry, 3 times daily to bring to a head. Then use once a week.

• Mix 1 part **apple cider** with 10 parts quality water. Apply to the affected areas. This will help balance the skin's pH.

• For acne scars, place **fresh pineapple** on the scars for enzyme therapy; and take 750 mg **bromelain** daily.

• *Here are additional external food poultices to place on the affected areas:* Cook **oatmeal in milk** until thickened, cool, and apply to area. Another method is to **cook carrots** in as little water as possible. Mash, cool, and apply. Or one can apply a whizzed, chopped, ripe **tomato** in a blender with 1 Tbsp. of dry **oatmeal** and 1 tsp. **lemon** juice.

• If your acne is severe, take a **steam bath** 2-3 times a week. Take it once a week, to prevent further outbreaks.

NUTRITION

Proper nutrition is extremely important.

• Drink **6 glasses of pure water** daily.

• Mix 2 oz. each of **beet juice, celery juice and tomato juice.** Take 2-3 times a day. As a general blood purifier, take several times a week.

• **Eliminate all refined and/or concentrated sugars** from the diet.

• Eat a **good, balanced diet.** Exercise regularly and get adequate sleep at night.

• **Eliminate** all **saturated fats** from the diet, along with **junk food, fried food, refined food, dairy foods, carbonated drinks, caffeine, alcohol, and tobacco.** Do not eat foods containing **trans-fatty acids** (milk, milk products, **margarine, shortening,** and other synthetically **hydrogenated vegetable oils**).

• Increase **raw vegetable** intake. The more you eat, the faster the skin will clear and heal. Eat plenty of **non-citrus fruits, raw vegetable juice, cooked vegetables, salads, whole grains, legumes,** and **a few seeds and nuts.** Include some **seaweed** (for iodine) and **pumpkin seed** (for zinc).

• Two servings of **beets or beet juice** weekly, and/or 2 glasses of **carrot juice** daily reportedly improve acne within a few weeks.

• Eat a **high-fiber diet.** This helps the colon eliminate toxins.

• Go on a **short vegetable juice fast** of 1-3 days, along with enemas. It would be well to do this every 2 to 4 weeks, until the skin is perfectly clear.

• Beware of **all oily foods** which have saturated fats. This would include **peanut butter, cheese, milk, and cream.** A small amount of unsaturated vegetable oil would be acceptable.

SPECIAL NUTRIENTS

Certain dietary deficiencies have been linked to acne.

• **Niacinamide** is important in repairing the skin, because it increases the supply of fresh blood to the surface.

• **Vitamin C,** 500-1,000 mg, 3 times daily. Also taking 200-1,000 mg **bioflavonoids** in divided daily doses speed healing and retard spreading.

• **Vitamin E.,** 200-400 IU daily, to protect vitamin A from destruction in the body.

• **Vitamin A** (best taken in the form of carotenes: carrot juice and green and yellow leafy vegetables). Women of childbearing age should not use high-dosage vitamin A.

• Take one **B complex** tablet daily, plus up to 300 mg each of **B_5**, **niacin**, and **pantothenic acid** in divided doses daily for no longer than a month. **B_6**, taken in small doses throughout the month, is especially helpful for acne that flares up during menstrual periods.

• **Chromium**, 400-600 mcg daily; plus potassium, 99 mg daily.

• **Zinc**, 30 mg daily for a few months, then 15 mg daily thereafter. In addition to being an effective bacterial suppressor, it aids healing and is essential for gland efficiency. In one study, zinc was found to be an oral antibiotic.

• Too much **iodine** can stimulate the sebaceous glands to produce too much oil.

• **Essential fatty acids** are important. Flaxseed oil is the best.

• If milk and dairy products are reduced, take 800 mg of **calcium** daily to maintain the pH balance for a clear complexion.

• Take 1-2 Tbsp. **brewer's yeast** and 2 **lecithin** capsules daily.

• Take 2 activated **charcoal tablets** after each meal, for 2 weeks, and 2 tablets daily afterward. Clinical tests reveal this to give good results. Do not continue for extended periods because it can block nutrient absorption.

HERBAL FORMULAS - Internal

Here are several which are recommended by leading herbalists:

• Make a tea of 1 part **burdock**, 1 part **dandelion**, 1 part **sassafras**, 1 part **sarsaparilla**, ½ part **licorice**. Simmer 1 oz. of herbs in 1 pint water for 30 minutes. Take 1 cup, 3 times daily.

• Mix the following in equal parts: **elecampane** root, **elder** leaves and flowers, **witch grass** root, **juniper berries**, **ground ivy**. Steep 1 tsp. in ½ cup boiling-hot water. Take ½-1 cup daily, unsweetened in mouthful doses, over an extended period of time.

• Use a good blood purifier, such as 1 part **red clover**, 1 part **kelp**, 2 parts **echinacea**, 1 part **dandelion** root, 1 part **burdock**, 1 part **red clover**, ½ part **licorice**. Fill gelatin capsules with the powder and take 2 capsules every 2 hours until the condition is greatly improved.

• Herbal specifics include **chickweed**, **echinacea**, **burdock**, **dandelion**, **white oak bark**, **yellow dock**, **red clover**, and **valerian**. Take 1-2 capsules of one of these herbs daily for a week or so at a time. Or sip 1-2 cups of the tea. (Also sponge some of the juice over the lesions.)

HERBAL FORMULAS - External

• Apply golden seal and myrrh **solution** to the affected areas.

• **Chaparral** and **comfrey** tea are good **facial rinses**.

• Apply **tea tree oil** on sores 3 times daily. This is known to be very healing to acne.

• Herbs which could be applied to the skin include **dandelion** root, **echinacea**, **alfalfa**, **chaparral**, and **red clover**.

• Apply a poultice of ground **chaparral**, **dandelion** or **yellow dock root**, mixed with hot water and cooled, to the affected areas and allow to remain for several hours. Then rinse off with tepid water.

• **Steam:** Put 1 part **eucalyptus** leaves and 2 parts **elder** flowers in 1 pint of boiled water in a bowl. Cover the head with a cloth and lean over the bowl of aromatic steam.

• Here is another "facial sauna." Cover the head with a towel and lean over a bowl of **steaming tea of red clover, strawberry leaf, and lavender**.

• Steep an 8 oz. cup (with 1 tsp. **yarrow**) for 30 minutes. Then add it to a basin of steaming water and lean over it for 5-10 minutes, with a towel over your head. You should be close enough to feel the steam (about 12 inches) without burning.

ENCOURAGEMENT—At times it will seem that you cannot take another step. Well, wait and know that "I am God." He tells you, "Be strong and of a good courage. Be not afraid, neither be thou dismayed, for the Lord thy God is with thee whithersoever thou goest." Trust Him. Psalm 112:7-8.

BLACKHEADS

SYMPTOMS—Blackheads are small, tallow-like plugs formed in the pores by the accumulation of dirt, oil, and bacteria. They are black at the exposed end, because of oxidation rather than the presence of germs. They generally cause no itching or pain, but are unsightly.

CAUSES—The duct of an oil gland becomes plugged with partly dried oil mixed with, more or less, dust or dirt. Most cases occur between 12 and 30 years of age.

Problems with digestion, constipation, or underactive thyroid and anemia seem to be contributing factors.

Although germs do not cause them, blackheads can easily become infected.

NATURAL REMEDIES

• Squeeze out the visible blackhead very gently, with a **blackhead remover** (available in a drugstore). Never use fingers to do it. Then **wash with mild soap and water**.

• **Sunlight** kills the surface bacteria, thus clearing the condition temporarily. But sunlight can also stimulate the oil glands, possibly making the condition worse later.

• **Do not overeat. Avoid fat, greasy, or fried foods. Avoid ice cream, cream, butter, margarine, chocolate, pastry, sweets, or much starchy food**.

• Eat a **nourishing diet of vegetables**, but **avoid corn**. Only eat a **moderate amount of protein foods** (nuts and legumes). Supplement the diet with **vitamins and minerals. Vitamin A** is important.

• **Avoid alcohol, tobacco, coffee, or cocoa**.

• Obtain **adequate rest** at night and keep the bowels open.

• **Exercise** outdoors; but avoid exercise which

causes perspiration.

• Put **no creams, oils, or ointments** on the face. **Keep hands away** from the face.

• **Wash the hair** two or three times a week.

ENCOURAGEMENT—We can have access to God, and be accepted by Him, through Christ our Lord. Jesus can strengthen us to obey commands given in the Bible. In Christ, we can overcome our sins. Revelation 2:7.

"Herein is love, not that we loved God, but that He loved us, and sent his Son [to be] the propitiation for our sins." 1 John 4:10.

AGE SPOTS

(Liver Spots, Lentigo, Senile Lentigines)

SYMPTOMS—Age spots (also called liver spots) are the flat brown spots which appear on the skin. They are especially noticeable on the back of the hands.

CAUSES—Liver spots are different than freckles. Freckles are caused by melanin pigments which react to the sunlight in fair-skinned people. Liver spots are the result of a *ceroid* pigment buildup in the skin of older people.

These latter spots are the outward signs of **free radical destruction** within the body. There is pre-oxidation of fats—in the cells instead of in the liver. Free radical damage produces waste materials in cells throughout the body, including the brain and liver. The causes are **poor diet, eating rancid fats, lack of exercise, excess exposure to the sun, autointoxication, and sluggish liver function.**

Exposure to the sun's ultraviolet rays are also involved in this problem. As a result, special cells, called *melanocytes*, produce too much color.

NATURAL REMEDIES

• Eat **high quality food** (especially **green, leafy vegetables**), purify the blood, nourish the glands, and keep the **bowels** open. **Exercise** the body and the mind. Keep the **immune system** in good shape. Take nutritional **supplements**. Drink lots of **water**.

• A powerful helper is the use of **vitamin E** (800-1,200 units per day), which tends to destroy free radicals. Also take **vitamin A** as beta carotene. Take a daily **B complex** supplement, plus additional **B_2**. Take **grapefruit seed extract** daily.

• Eat quality protein foods and **avoid old seeds and nuts**. The oils in them may be rancid. **Do not use meat or milk**. Obtain all your fats as **unsaturated fatty acids**.

• Drink enough **water**, making sure it is either pure or distilled. Practice deep **breathing**. Learn how to **relax**.

• **Avoid all white flour, white sugar, alcohol, coffee, salt, tobacco, cigarette smoke, hydrogenated oils, fried foods, chemicals, drugs. Do not overeat.**

• Center your diet around **broccoli, cabbage, fruits, whole gains, nuts, oats, seeds, and soybeans**. A high-**fiber** diet is important.

• Go on a **brief fast**, to cleanse the liver.

• Avoid too much exposure to the **sun**.

• Do not use commercial **skin creams** or **cleansing creams**. Use **olive oil** and a warm, wet washcloth; then rinse with **lemon juice** and water.

• Apply **lemon oil**. It has bleaching properties that help fade the spots. Take **gotu kola,** to help fade them. Rub on **aloe vera gel**, the milky sap from crushed **dandelion** stems, a slice of **red onion**, fresh **pineapple juice, lemon juice**, or **comfrey** root tea.

• Take **burdock, milk thistle, and red clover** to help cleanse the bloodstream.

ENCOURAGEMENT—The gifts of Him, who has all power in heaven and earth, are in store for the children of God. These gifts are precious; for they come to us through the costly sacrifice of the Redeemer's blood. In Christ, we can be overcomers. 1 John 1:7.

SKIN - 4 - CHAPPING, CRACKING, ITCHING

CHAPPED HANDS

SYMPTOMS—Red, dry, cracked hands.

CAUSES—The low humidity in the fall and winter dries and irritates the skin. The skin of older people has less natural oils. This prepares a person for problems. But something can be done about the other causes, listed below.

NATURAL REMEDIES

If you find you have this problem, there are several things you can do, to prevent or lessen it.

• Water removes oils from the skin. A special kind of water is especially devastating: **soapy water**. Dish water not only removes oil from the plates, but also from your hands. That is part of the reason why your hands are chapped and your arms are not! When you must wash your hands, **wash only the palms and not the backs**—which, having thinner skin, tend to dry out more easily.

• **Soak your hands** in warm (not soapy) water for a few moments. As you do this, some of the water is absorbed by the dry skin. Then **pat dry and gently rub a little vegetable oil** on your hands.

• What you place on your skin is absorbed into your body. So **beware of all the creams and lotions** on the market. The makers of those products are not required by the FDA to include food grade ingredients. Yet all those lotions are absorbed into your system for the body to have to deal with.

• Massage a few drops of **glycerin or olive oil**, combined with a few drops of **lemon oil** (both are available

at pharmacies), into your hands at bedtime.

• Put oil on your hands at night and then slip **cotton gloves over the oily hands**.

• Hot-air blowers tend to chap the hands. Use a **towel** instead.

• Wear **white cotton gloves** while doing dry work. For harder work, use **leather gloves**. Regarding gloves, **avoid vinyl ones**, if you can. They makes the hands worse! The rubber traps the moisture and keeps the skin from breathing.

• Use a long-handled **brush**, when washing dishes.

• Blend uncooked (or cooked) **oatmeal** into fine particles. Place it on the hands to soften and heal the chapped skin. It can also be added to bathwater.

• Apply the gel from the inside of the leaves of **aloe vera** to heal chapped hands, chapped lips, and minor burns.

• Blend the juice of a fresh **leek** into a vegetable oil and put it on your hands.

—Also see Chapped Lips (below).

ENCOURAGEMENT—Through Jesus, we can have access to God and be accepted by Him. Take God's promises as your own. Plead them before Him as His own words, and you will receive fullness of joy. Proverbs 2:3-5.

CHAPPED LIPS

SYMPTOMS—Chapped and cracked lips.

CAUSES—Low humidity, sunlight, wind, cold temperatures, and lack of oil on the lips. In addition, there are several other factors you can control:

NATURAL REMEDIES

NUTRITION

• **Vitamin B_2**, **B_6** and **brewer's yeast** both help cracked lips. A lack of **B_2** makes lips crinkle, flake, and feel chapped, can cause cracks in the corners of the mouth (cheilosis), and eventually shrink the size of the upper lip. A deficiency of **B_6** produces sore lips.

• **Folic acid** (400 mcg) and **pantothenic acid** (100 mg), taken in addition to other B vitamins, often prevent lip ulcers and other sore-lip problems.

• Apply **vitamin E** from a pierced capsule to help heal the lips. Also take 400 IU daily.

• **Calcium** helps hold cells together. And unsaturated fatty acids (**flaxseed oil** is the best) and **magnesium** help your body absorb it. Take 1,000 mg calcium, 500 mg magnesium, and 1 Tbsp. flaxseed oil daily.

• Take a high-potency **vitamin-mineral supplement**.

OTHER HELPS

• **Avoid licking** your lips. It dries them out. Occasionally place a little **vegetable oil** on your lips.

• Your lips are dry because you are not drinking enough **water**. Drink at least 8 glasses a day.

• Toothpaste dries the lips. Instead, use a toothbrush and **baking soda**.

• Chronically sore lips may be due to **allergic reactions to foods, ingredients in chewing gum, cosmetics, mouthwash, or toothpaste**. Experiment, by withholding this or that for a time, and see what is causing your problem.

• Rub your finger alongside of your nose and then on your lips. That puts **natural oils** back in them.

• Finish your meal with a small amount of **lecithin** (which your brain, nerves, and blood vessels need anyway). When you do this, be sure and leave a small amount of it on your lips.

• Do not use "lip balms"; for they generally contain strong antiseptic chemicals. Instead, use **cocoa butter**. It will help rehydrate your lips.

• Rub **beeswax** or unwaxed **cucumber skin** over dry lips to help lubricate them.

• Mix 30 drops **lavender essential oil** (to reduce lip inflammation), 16 drops **sandalwood essential oil** (to moisten your lips), and 2 oz. **cocoa butter** or **flaxseed oil**. Every so often, put some on your lips.

• Place a heat-proof dish in a pan of boiling water. Stir 3 Tbsp. **olive oil** into 1 Tbsp. melted **beeswax** or **paraffin**. Pour this lip salve into small containers with tight lids. Dip into it occasionally and put some on your lips. If the mixture becomes too hardened, reheat it over hot water and stir in a few drops of olive oil.

• When you sip **hot water**, this draws the blood and more water is absorbed into your lips. Take 1-2 sips every 10 minutes throughout the day.

—Also see Chapped Hands (last page).

ENCOURAGEMENT—We may come into the audience chamber, reach up the hand of faith, and cast our helpless souls upon the One mighty to save. He can help us fulfill His beautiful plan for our lives. Jeremiah 29:1.

DRY SKIN, CHAFING

SYMPTOMS—The skin is overly dry; and there can be a tendency to chafing (more so during winter).

CAUSES—There is both a **water loss** and an **oil loss** in the skin. This may seem to be a matter of little concern. But it can be a sign of a more serious problem: **essential fatty acid deficiency** that can result in cardiovascular disease (stroke, heart attack, etc.). Dry skin can be a sign of an **underactive thyroid.**

If you are supplementing with **vitamin A** in amounts over 100,000 units daily, dry skin may be the first warning of overdose. It is dangerous to take too

much vitamin A!

NATURAL REMEDIES

DIET AND NUTRIENTS

• Eat a nutritious diet of **vegetables, fruit, grains, seeds, legumes, and nuts**. High sulfur foods (**garlic, onions, asparagus**) help keep the skin smooth and youthful.

• **Avoid animal fats, hydrogenated oils, and fried food**. Use no oils that have been heated.

• **Use no sugar, chocolate, junk food, alcohol, or caffeine**.

• The solution to this problem is not superficial creams (which contain vasoline or aluminum), but obtaining enough **unsaturated fatty acids** in the diet. These would be the uncooked vegetable oils, such as **wheat germ oil, flaxseed oil, sesame seed oil, corn oil,** and **soy oil**. The oil should be fairly fresh. Never use rancid oil, for it destroys the vitamin E in that meal. Take additional **vitamin E** supplementation (800-1,200 units a day).

• If you are not taking supplemental **vitamin A**, begin taking a moderate amount (not over 25,000 units a day for a few days). **Carrot juice** (or 15 mg **beta-carotene** daily) will also help.

• Take a **B-complex** supplement, **vitamin C** (1,000 mg 2-3 times daily), and **zinc** (15 mg daily).

• Cut out all **greases** and other **saturated fatty acids**. And, in their place, put a Tbsp. of a good oil (**flaxseed oil** and **wheat germ oil** are the best) on your food after it is cooked.

APPLICATIONS

• "Misting" is helpful. **Spray your face** with a fine mist of water at least 3 times a day. To increase the effect, add some **aloe vera** to the mist water. Or you can add an **essential oil** to the water. But, if you do, you must not spray into your eyes.

• For your shower, rinse off everyday with **lukewarm water**, using as **little soap** as possible. Do not use **hot water**.

• Pour 2 cups of **oatmeal**, ground to a fine powder, into a bathtub of warm water. Tie some oatmeal in a washcloth and use it as a washcloth. Oatmeal is extremely soothing to the body.

• For itchy skin, add **vinegar** to the bathwater and take 2 Tbsp. of **vegetable oil** daily. Helpful herbs include **yarrow, violet,** and **marjoram**. **Dry-brush massage your skin**, to tone it up.

• Add 2-3 drops lavender essential oil to warm water and apply a **warm compress** to your face. This will hydrate the skin and stimulate the water and oil glands. Only use a washcloth that has all soap and detergent residues thoroughly rinsed out. Lean over the basin, dip the cloth in the water, and hold it to your face and neck for a few moments. Do this 10 times.

• Certain herbs are mucilaginous and help soothe dry skin. Mix an equal amount of **marshmallow root, fennel seed, dried plantain, and violet leaves**. Steep, strain, and sip a quart of the tea daily.

• **Ripe, mashed avocado** alone or mixed with **ripe banana** is an excellent moisturizing mask. It will deep-moisturize desert-dry skin after cleansing. Pat it over the throat and face (except the eye area). Wait 10-15 minutes. Then rinse off.

MISCELLANEOUS

• Drink an adequate amount of **water**. If necessary, gently rub a small amount of **oil** over your body after the bath. **Avoid commercial lotions and saturated fats (greases)**. These are all absorbed by your body. Avoid too much **sunlight**.

• Stop using **coffee and alcohol**. Both are diuretic, forcing water from your body. **Smoking** or **breathing smoke** makes the skin dry, leathery, and wrinkled.

• For the chafing, wear **cotton clothes**. **Australian wool** (the wool which does not scratch) is also good. **Wash** new inner clothing before you wear it. This softens the fabric. **Do not wear coarse cloth** next to the skin. Do not wear **synthetics**.

• Use **soap** which has cocoa butter, coconut oil, or another vegetable oil. They do not clean as well, but are more soothing to the skin.

• Keep the **house cooler**, and it will not be as dry. Put a **pan of water** on the stove or use a **humidifier,** to put moisture back into the house.

ENCOURAGEMENT—We shall never know, until we reach heaven, what Christ went through to enable us to overcome sin here on earth and live with Him forever. Thank God for His inexpressible, but constantly accessible, Gift. 1 John 1:3.

ITCHING
(Itchy Skin)

SYMPTOMS—The skin is itchy, and you want to scratch it. But this only makes the condition worse.

CAUSES—The itch may (among other things) be caused by an **allergy, shingles, chicken pox, hives, sunburn, diabetes, anemia, or glandular malfunction**.

NATURAL REMEDIES

• Add 2 cups of apple cider **vinegar** to bathwater to relieve itching. Or apply it, full-strength, to the area that is itching—but not near the eyes or genitals. For vaginal itching, douche with diluted vinegar, *see vaginitis (660)*.

• **Soak a towel in ice water** and place it over the itching area. Repeat as needed. Or apply an **ice pack**. For overall itching, slowly enter a **tub of cold water** and remain immersed till you feel better. Or rub an **ice cube** over the area.

• After taking a tub bath, apply a thin amount of **oil on the body**. This will trap water on the skin beneath the oil.

• Wear **cotton clothing** or **Australian wool** instead of **synthetics**. Do not wear tight or poorly fitted clothing.

• Apply freshly squeezed **lemon juice** (but diluted in

the genital area).

• Pour uncooked, blended **oatmeal** into bathwater, or apply an **oatmeal compress** to the itching area. This is very soothing and relieves the itch of poison ivy, hives, and other allergic reactions. Do not slip in the tub!

• Soak a cloth in **cool milk** and apply it to the area.

• Apply **anise oil** directly to the area, to destroy lice and similar insects.

• Apply **slippery elm ointment**. Take ½ cup olive oil and 3 Tbsp. slippery elm powder. Heat this for 5 minutes and add 2 Tbsp. cocoa butter. When melted, cook for 10 minutes. Strain through a cheesecloth, pour into a tight-fitting jar, and refrigerate till firm. It will keep for 2 months.

• Dip a finger in **wet salt** and rub the itch. There will first be a sensation of burning, then coolness; and then the itch will disappear.

• Mix **juniper wood oil** and **yellow wax**; and apply to heal eczema and psoriatic skin sores.

• **Avoid violent exercise** which produces sweating. **Do not use soap, hot water, and abrasive cleansing** procedures which injure or remove natural oils. Avoid rapid changes in **temperature** or **emotional upsets**.

ENCOURAGEMENT—In the Plan of Redemption, God ha revealed His love in sacrifice, a sacrifice so broad and deep and high that it is immeasurable.

SCABIES
(The Itch)

SYMPTOMS—An itching in a body part which tends to continue, then let up, then continue again. Most frequent areas are finger webs, hands, wrists, elbows, underarms, waist, and feet. Skin above the neck is rarely involved, except in infants. In men, it may also occur in the scrotum and penis. In women, the nipples are most often affected. Peak time is late summer and early autumn. Symptoms begin 2-6 weeks after infestation, with severe itching. Gray or skin-colored ridges appear on the skin. Mites are most active at night in warm beds.

CAUSE—Scabies is an infectious skin disease caused by an almost microscopic **mite**, called *Sarcoptes scabiei*. Although he is a little fellow, you know he is there. This eight-legged mite matures in 10-14 days and lives for about 30 days, all the while laying eggs in tunnels under the skin. They hatch in 4-5 days. Children infested with them usually have about 20. If they fall off the body, they live for 36 hours to 8 days.

Scabies is found on all social levels. Contact, even by a handshake, is all that is needed to acquire it. It can also be transmitted through **clothing** and **bed linen**. It is more common in older adolescents and young people, and in girls rather than boys. People can also get it from **touching dogs, other animals, or their bedding**. It is a special problem in institutions, such as nursing homes, etc. Warmth stimulates mite activity.

Scabies can only be accurately diagnosed by taking skin scrapings and viewing them under a microscope. If one person in a family has them, it is generally well to treat everyone. Children under 15 are often the first to contract them. It is usually best to treat everyone in the family at the same time.

NATURAL REMEDIES

• Mix flowers of **sulfur** with petrolatum (**petroleum jelly**). Sulfur is a poison, so do not swallow it! In addition, it will stain clothing and does not smell good. But it will work to kill the scabies mites. For children, use a 5% sulfur (5% sulfur and 95% petrolatum) mixture; for adults, a 10% mixture. Take a warm, soaking bath before applying the mixture. Apply it for 3-5 nights before retiring. Cover from neck to toes. Have someone else apply it to you, so everything is covered. (Sulfur will stain clothing.)

• During this period, **launder** your clothes frequently in hot water (140° F.). The mite cannot survive temperatures above 120° F. for more than 5 minutes. Dry cleaning or ironing will also kill them.

OTHER HELP

• **Pennyroyal** is also called "fleabane," because it is so effective against fleas. The ancient Romans used it for that purpose. Apply a strong tea of it directly to the affected area.

• Add 2 drops of **tea tree oil** and/or **plaintain leaves** to 2 Tbsp. vegetable oil and apply it to the area. Like pennyroyal, it will kill the mites and reduce itching.

• **Turmeric** has been used for centuries in Asia to kill scabies. Make a paste and spread it on the affected area, at the same time you boil clothes and bedding.

• *To reduce the itching sensation,* soak in a **cool bath, starch bath, or oatmeal bath** *(see directions under Dry Skin, p. 258; Itching Skin, p. 259).* Mix powdered **calcium** with a little oil and apply to the area. The gel of **aloe vera** contains *bradykininase*, which is soothing.

• **Onion skins** contain 3% *quercetin*, which is soothing to itching skin. Boil 6 onions for 15-20 minutes in a quart of water, When the liquid is cool, apply it all over the body. A strong solution of **tansy tea** kills scabies.

• For a bath which both soothes the skin and kills the mites, mix **peppermint, pennyroyal, rosemary, sage, spearmint and thyme** together. Make two quarts of tea, toss it in bathwater, and climb in.

• Eat foods high in **zinc** (such as soybeans, sunflower seeds, whole-grain products, yeast, wheat bran, and blackstrap molasses).

• **Avoid processed, fried, and junk foods**. Use no **sugar, chocolate, soft drinks, alcohol, or tobacco**.

• Keep fingernails short and discourage scratching.

• **Note:** Do not use Lindane or Kwell. These chemicals can be absorbed through the skin and cause convulsions.

ENCOURAGEMENT—God's love is revealed in all His dealings with His earthly children. He loved us or He would not have paid such an expensive price to redeem us from sin. Thank Him everyday for His wonder-

l gift of Jesus Christ.

JOCK ITCH

SYMPTOMS—A moist, itchy patch of reddened inction on the surface of the groin.

CAUSES—Fungal infections occur most frequently moist places on the skin. This is a fungus infection the area where the top of your legs meet your trunk.

If, while treating the fungal infection, you develop mptoms of a worse infection (such as increased redss and swelling or fever) you may have contracted a acterial infection—in addition to the fungal infection.

NATURAL REMEDIES

NUTRITION

• Eat a nourishing diet of **fruits, vegetables, whole ains, legumes, and nuts**. While treating the infecon, a diet primarily of **raw food** is best.

• Avoid **tobacco, alcohol, caffeine**. Do not eat **meat r dairy products**. Avoid **sugary, fried, and processed oods**. Eat nothing **greasy**.

HERBS

• **Goldenseal** contains *berberine*, which destroys ungi. It can be used against every type of fungus infecon. It can be used as a drink or applied topically. Only se goldenseal for a week; then switch for a time to nother fungicide herb.

• **Pau d'arco** is strongly antifungal. Drink 3 cups aily.

• **Bloodroot** also contain *berberine* and has been hown to be quite effective as a fungicide.

• **Yellowroot, barberry, and Oregon grape** also conin *berberine*.

• Treat the area with a mixture of **goldenseal and au d'arco**.

• **Tea tree** oil is excellent when applied externally, ut do not drink it. Apply it several times a day to the ffected area, either full strength or diluted with a little istilled water or cold-pressed oil. **Black walnut** exract can also be used.

• A powerful antifungicide is **wild oregano oil**. The ost resistent forms of fungus infection can generally e eliminated by it.

• The **pepper tree** (horopito) is a New Zealand hrub which contains *polygodial*, which is useful against oth fungi and bacteria. Another antifungal herb is the ***Icaria puchuri-major***, a Brazilian plant.

OTHER HELPS

• Keep the **skin clean and dry**. Expose the affected rea to air as much as possible. Your **clothing** should e kept clean.

—*See Candida (215), Athletes Foot (292).*

ENCOURAGEMENT—God's gift of Jesus Christ to nankind is beyond all computation. Nothing was withheld that was needed to save mankind. If we will but ccept the gift and, by faith in the enabling grace of Christ, obey God"s commandments.

RINGWORM

SYMPTOMS—Small, flat, red, slightly elevated ring or oval-shaped sores which may be crusted, dry, scaly, or moist. The centers of the sores heal as the sores spread outward. The result is an infected ring. Itching, burning, or pain may be present. The lesions appear to be circular. The area is often covered with small blisters.

When the scalp is affected, the hair falls out in circular patches. The fingers can also be affected.

CAUSES—Ringworm is a very contagious disease, caused by a parasitic fungus. It can infect children or adults, and is caused by **unsanitary conditions**. **Keep the hands clean**! Pet the dog and then rub your face, and you may regret it.

Ringworm of the beard (face) is more persistent than ringworm of the scalp. Ringworm of the body is the easiest to eliminate.

Dogs, cats, rabbits, children, and contaminated clothing are generally the carriers of the disease.

There are several different types of ringworm, all of which are of fungal origin:

Ringworm of the scalp—This can be on the scalp and on the face. It is the most noticeable kind. It is highly contagious, and often found on schoolchildren. It frequently induces baldness, which may become permanent if hair shafts are destroyed by the fungus. It can be transmitted in unsanitary conditions, from child to child, in hair brushes, barbers' tools, hats, and theater seats.

Ringworm of the trunk—This includes "jockey itch," and is spread by contact with people or their clothing. Dogs and cats can also spread it.

Ringworm of the nails—This consists of a fungus growing under the nails of the hands or feet. It produces thickened, misshapen, brittle, discolored, chalky, pitted, or grooved nails. This type of ringworm is quite difficult to eliminate.

Ringworm of the feet—This is also known as athlete's foot. *See Athlete's Foot (292).*

NATURAL REMEDIES

• **Vitamins A, E, and zinc** are important.

• Put **plantain** and **castor oil,** or **tea tree oil** on the affected area.

• Place **ultraviolet light** on the area: sunlight for at least 6 minutes a day. If you use a sunlamp, never place it closer than 18 inches from the skin, and only for 10-20 seconds at a time.

• Apply **apple cider vinegar** to the area several times a day.

• Equally useful is **castor oil, goldenseal tea, and borax.** Rub the area with **borax** and **castor oil**.

• A 3-day **citrus fast** is very helpful, **cleansing the bowels** daily. Follow this with a **nutritious diet.**

• Eat plenty of **garlic**. Place freshly cut, raw **garlic** 3 times a day on the area. This is a very good remedy. Blend the garlic with a little water and apply as a soak, compress, or poultice. But this remedy is too powerful to apply to raw flesh between the toes. It can burn lower layers of skin. You can also use **black walnut** extract. Wash the area with **garlic juice** or **wormwood**.

• Take 2 **chaparral** or **wormwood** capsules daily.

• Make a strong tea of equal parts **plantain** and **yellow dock**, and bathe the affected area frequently.

• The scalp can be shampooed with **tar soap** and **borax**. Moisten the area every morning and evening with **goldenseal** (1 tsp.) and **myrrh** (½ tsp.) which has been steeped in a pint of boiling water.

• An herb tea can also be taken internally: **goldenseal** or **plantain**, twice a day. **Garlic** is good.

• Make a salve from equal parts of **burdock** root, **chaparral, wormwood, and chickweed**. Apply to the area. Some of it can also be made into a tea to drink in order to fight the fungus internally.

Apply undiluted **lemon juice** every few hours. Adults should drink a solution of 1 tsp. **goldenseal** to a cup of water 2 times a day.

• Keep the skin clean and dry. Ringworm likes damp skin. Take **frequent baths**, but **dry thoroughly** each time. **Rub briskly** with a towel, to remove the outer dead layers of skin that the ringworm initially attacks.

• **Do not scratch**. Keep **fingernails cut short**, to lessen accidental scratching and spreading of the infection.

• *To remove crusts:* Soak the area in a **saline solution**. An alternate method is to apply **moist cloths** for 10-15 minutes, 3 times a day.

• *To treat nails:* **Pare and scrape** the infected area. Try to remove as much of the loose material beneath the nails as possible. Apply **vinegar** with a Q-tip twice a day. Keep at it, even though it may require months to eliminate. Fungus of the nails is the slowest to conquer.

• *To treat scalp:* **Shampoo** the hair daily, and keep it **short**, but not necessarily shaved. If hair is cut at home, **burn** the hair clippings. **Boil** scissors, combs, etc. after use. **Sterilize** clothing. Kloss suggests washing the hair with **tar soap and borax**. And every morning and evening moisten the area with a solution of 1 tsp. **goldenseal** and ½ tsp. **myrrh**, steeped in a pint of boiled water.

• **Heat and moisture** encourage fungus growth. So it is best for the child to avoid getting **hot and sweaty** during periods of infection. If the **skin is bruised or broken**, the fungi can more easily enter the body.

• Keep in mind that a fungicide parasite (which is what all forms of ringworm are) is best stopped by **sealing off the air**.

—Also see Athlete's Foot (292), which is a type of ringworm fungus. Also see Antifungal herbs (230).

ENCOURAGEMENT—Nothing of the world can make you sad, when you have submitted your heart to be molded by the Spirit of Christ. He alone can provide you with the answers you need. Ezekiel 13:22-23.

"But He [Christ] was wounded for our transgressions, He was bruised for our iniquities: the chastisement of our peace was upon Him; and with His stripes we are healed.

"All we like sheep have gone astray; we have turned every one to his own way; and the Lord hath laid on Him the iniquity of us all."—Isaiah 53:5-6.

SKIN - 5 - GROWTHS

Also: Section on Tumors and Cancer (812-826).

WARTS

(Papillomas, Verrucae)

SYMPTOMS AND CAUSES—With the exception of plantar warts (which are flat), warts are always raised bumps. Where there is constant contact, they can cause discomfort and even pain. Venereal (genital) warts are single or clusters of soft cauliflower-like growths. Warts appear more frequently in adolescents who are experiencing hormonal changes, especially between the ages of 12 and 16, and 70% between 10 and 39. There are three primary types of skin warts:

1 - ***Contagious warts:*** Also called viral warts, these are benign skin warts *(verruca vulgaris), which* are also called *common warts*, and may be found on the hands, arms, face, or body. These hard, irregular, or round warts can be dark or flesh-colored and may range in size from a pinhead to a bean. They most frequently occur on the hands, face, knees, and scalp, where the skin is in friction with clothing, etc. They can also occur on the larynx (voice box) and produce hoarseness. They can be spread by **picking, trimming, or touching them**. On the face, they can be spread by **shaving**.

There are three types of common warts: ***flat warts***. These are flat-topped and flesh-colored. They appear on the wrists, backs of the hands, face, and may itch. ***Digitate warts*** are dark-colored growths with finger-like projections. ***Filiform warts*** are long, slender growths appearing on the eyelids, armpits, or neck. They often appear on people who are overweight and middle-aged.

2 - ***Plantar warts:*** This is another type of *verrucum*, which appears on the sole of the foot. These are actually benign epithelial tumors caused by a virus.

3 - ***Venereal warts:*** These worts *(condylomatum*

acuminata) may be found on the vulva and penis. Venereal warts are caused by the human papilloma virus (HPV), of which there are more than 35 types. These warts are pink, cauliflower-shaped growths on the genitals of men and women. Genital warts on a woman can change into cancer of the cervix or genital area. They should be removed! One study showed they can increase the risk of cervical cancer by 200 percent! The incubation period for genital warts is generally 3 months. It can spread to others even before the person realizes he or she has it. Do not have sexual intercourse until the warts are eliminated.

Physicians use liquid nitrogen, corrosive salicylic acids, and surgery to remove warts.

NATURAL REMEDIES

• As with any infection, warts appear because the body has **lowered vitality and lack of resistance. Eat right, keep proper hours, exercise in the open air, and breathe deep.** Tone up your whole body.

DIET AND NUTRITION

• The usual methods of removing warts (surgery, acids, burning, electrotherapy, or freezing) often results in their reappearance. The underlying causes should be eliminated. Improve the diet. And eat foods high in **vitamins A, B complex, C, and zinc.** Deficiencies in all four are related to an increased incidence of viral infections. Also increase the sufur-containing amino acids in the diet, such as are found in **asparagus, citrus fruits, garlic, and onions.** Eat **raw garlic.**

GETTING RID OF WARTS

Since everyone seems to get better using a different treatment, here are lots of them. It is said that no form of wart treatment is 100% effective.

• Place thin sections of **garlic** on the wart. Try to avoid touching the garlic to normal tissue. Hold it in place with cloth and tape, and leave it there overnight. Do this for 2 or 3 nights. Within a week the wart will fall off.

• Apply **castor oil** to the wart for half an hour, 3 times a day for 3 weeks.

• Cover the wart with **honey** for 15 days.

• Put 1 drop **muriatic acid** (the commercial name for hydrochloric acid) on the wart once a day, for 8 days.

• Dissolve as much **sodium carbonate** (washing soda) in water as will stay in solution. Swab this onto the warts for 2 minutes, 4 times a day, and let it dry in the air. Very large warts have responded to this.

• Mix **castor oil and baking soda** into a paste and apply to the wart, cover, and keep on all night. Do not pick at it, but let it slough off within 3-6 weeks.

• Apply an **iron** formula, such as **Ironite** or **black walnut** tincture.

• Apply powdered **vitamin C**, as paste, and cover.

• Soak the wart in a concentrated **saltwater** solution: 1½ tsp. of salt to ½ cup water equals a 30% solution. Soak the wart for 20 minutes, 2-3 times a day for a few weeks.

• Soaking the wart for 30-90 minutes twice a week in **hot water** (113°-118° F.) eliminated half the warts in one study.

• Here are several other helpful applications: **green fig juice**; that is, juice from barely ripe figs will destroy warts. **Milkweed sap** applied several times a day. Fresh grated **celandine** juice. Cut a **raw potato**, rub it on, and repeat several times a day for several weeks. **Chickweed** juice. **Sassafras oil. Marigold** juice. **Green papaya** juice. **Aloe vera. Onion and salt** compress. The juice of **white cabbage. Wheat germ oil.** Fresh **pineapple juice.** Mashed **cashew nut.** Spread the juice of a ***sour* apple** on it. In England, the juice from a **Dandelion** stalk is applied. Houseleek (**Hen and Chickens**) is a succulent rock-garden plant with thick, fleshy leaves containing a large amount of supermalate of calcium which eliminates warts. **Watercress** juice. **Caster bean oil.** The FDA has approved *salicylic acid*, which is abundant in **willow**, for wart removal.

• *For plantar warts* (warts on the bottom of the foot), apply a **plantain** poultice (the leaf itself) to the wart. Another method is to place the inner side of a fresh piece of the inner white part of **banana peel** over the wart and hold it there with tape or rub it on 2-4 times a day for 5-7 days. Change daily after washing the entire area. Once a week the thickened outer horny layer is removed. Maximum time for complete disappearance of a wart is 6 weeks, with no recurrence within 2 years.

• *To prevent warts from forming*, reduce the amount of **protein foods** you eat. Most people eat too much.

ENCOURAGEMENT—Do your duty and trust in God; for He knows what things you have need. He watches over you with more tenderness than does a mother over an afflicted child. Mark 9:23.

WENS

(Sebaceous cysts, Steatomas)

SYMPTOMS—These are slow-growing benign cystic cutaneous tumor-like formations. They contain sebaceous material (skin oil and protein) and are often found on the scalp (wen), ears, back, or scrotum. Ranging in size from a pea to a golf ball, a wen is painless and feels soft but firm. Included here are whiteheads. They can become infected with bacteria and form an abscess.

NATURAL REMEDIES

• A "stab" incision is made at the lowest edge of the cyst. The contents are then sucked out and the insides are flushed with **hydrogen peroxide.** If the cyst is large, the wall will have to be removed so it does not refill. Then place a daily changed sterile gauze over, and within, it to keep it draining for a week to 10 days.

• Apply **goldenseal** or **tee tree oil** to eliminate infection. Apply herb tea of **witch hazel** or **white oak bark** to absorb the oil in the cyst.

• *To keep them from growing or returning,* eat lightly, avoiding heavy **protein foods. Avoid fats—especially saturated fats and all fried foods, cheese, chocolate, butter, margarine, and dairy products.** Do not use **alcohol, nicotine, or caffeine** products.

—Also see Warts (262) and Skin Cancer (617).

ENCOURAGEMENT—God is a Friend in perplexity and affliction, a protector in distress, and a preserver in a thousand dangers that are unseen to us. Trust Him ever. And, by His grace, obey His Written Word. Hebrews 6:18-19.

SKIN - 6 - OTHER MINOR SKIN PROBLEMS

OILY SKIN

SYMPTOMS—Excessively oily skin, a shiny appearance, and a tendency to have blackheads and blemishes.

CAUSES—The sebaceous glands, which secrete oil onto the skin, produce more oil than they should—and the oil they produce is the wrong oil. The excess oil clogs pores. Heredity is a factor, but diet and hormones affect it. Oil gland secretions can be increased by stress, hormonal activity changes, hot weather, pregnancy, or taking certain types of birth control pills.

The forehead, nose, chin, and upper back tend to have more sebaceous glands. Hence these areas can be the sites of the most problems. Oily skin is most common among teenagers.

The cause is frequently too much of the wrong type of oil in your diet or, merely, a lack of the right kind.

NATURAL REMEDIES

DIET AND NUTRITION

• Take 1-3 tsp. of **flaxseed oil** every day. It is rich in the right kind of oil needed by your body.

• For healthier skin, eat lots of **fresh fruit, vegetables, whole grains, legumes, nuts, and seeds.**

• Eating 1 tsp. of granulated **lecithin** each day will help emulsify (break apart and eliminate) the saturated fat in your body.

• Eating **red meat and dairy products** puts the wrong oils (saturated fats) into your body. The result is oilier skin, clogged pores, and more blemishes.

• **Keep your skin clean.** Beware of certain **cosmetics.** They aggravate a problem which might not otherwise exist.

OTHER THINGS TO DO

• **Wash twice a day with soap.** It was made to remove oil. **Hot soapy water** is even better. Ivory soap is a more drying soap than many others. To remove leftover cleanser and dirt from oily skin, apply a gentle, astringent herb tea, such as **yarrow, sage, or peppermint.**

• Some people apply **mud masks** to remove oil. White or rose-colored clays are best for sensitive skin.

• **Avoid smoking.** It increases the size of your skin pores and weakens the skin generally.

• If you have areas of oily skin and dry skin, treat each part separately. *—See Dry Skin (258).*

Fortunately, oily skin tends to age better than dry skin, producing less wrinkles. So, in one way, you can count yourself fortunate.

—Also see Acne (254).

ENCOURAGEMENT—God cares for our necessities. His love and grace are continually flowing, to satisfy our needs. In His care, we may safely rest. Luke 12:32.

PRICKLY HEAT

SYMPTOMS—The skin feels hot and prickly.

CAUSES—Hot weather, dry skin, sweaty skin.

NATURAL REMEDIES

• Wash with mild soap, twice a day. After a bath, use ½ teaspoon of cider vinegar in a glass of water. Take vitamin C orally (1,000 mg or more).

ENCOURAGEMENT—Too often we grieve our kind heavenly Father by our unbelief. If we will but trust His guiding hand, all our difficulties will work to our best good. Psalm 95:7-10.

HEAT RASH

SYMPTOMS—An itchy skin rash can occur in the heat of midsummer. These are tiny red or pink, blister-like bumps that are extremely itchy on your chest, back, and even your armpits or the creases of the elbows or groin.

CAUSES—As a result of poor diet, overwork, and lack of proper rest, the skin has become too acid. Sweat becomes stuck in the pores and spreads into surrounding tissue, irritating it.

NATURAL REMEDIES

• Stay **cool and dry, wear light-cotton clothing, and expose the affected area to the air.** Then the heat rash will probably go away by itself in 3-4 days.

• Eat a more **nutritious diet,** obtain adequate **rest, avoid meat and junk food. Do not smoke or drink liquor.**

• Take a **soda alkaline bath.** This helps counteract acidity in the rash. Fill a bathtub with water at 95°-98° F. Add a cup of baking soda. Sit in the tub and continually pour the water over yourself. About 30-60 minutes later, stand in the tub and partially drip-dry. Then pat yourself dry and get out.

• Put 1-2 cups of fresh **peppermint leaves** in thin cloth, fill the tub with cool water, immerse the mint for 3-5 minutes, and climb in and soak for 5-10 minutes. Do this as often as necessary to relieve the itching.

ENCOURAGEMENT—God loves His children. He longs to see them overcoming the discouragement which Satan would overpower them. Do not give way to unbelief. Remember the love and power that God has shown in times past. How thankful we can be for the gift of God in Jesus Christ His Son! Acts 16:31.

ROSACEA
(Acne Rosacea)

SYMPTOMS—A reddening of the skin—generally on the forehead, nose, cheekbones, and chin. Pustules may appear on the nose and are tender. The skin may thicken. Groups of small blood vessels, close to the surface, become enlarged, resulting in blotchy red areas with small bumps. Red spider veins (telangiectases) and cherry angiomas (red spots caused by tiny tumors in dilated blood vessels) appear. Pimples may accompany the problem. The rosacea may disappear or become permanent. Blackheads or whiteheads are rarely present.

It often begins with a frequent flushing, or reddening, of the face. This is most often seen on the nose and cheeks. A burning, or grittiness, in the eyes may be felt.

CAUSE—Rosacea, which usually begins in the 40s, is a skin disorder which can become chronic. It is important that you try to eliminate the underlying causes which are closely related to a **wrong diet and way of life**.

People who flush easily are more likely to develop this problem. White women between 30-50 have it the most. When men have it, the appearance of the face is worse, often accompanied by a roughened, enlarged nose (rhinophyma). Middle-aged and older people are most likely to have rosacea.

NATURAL REMEDIES

• **Alcohol, stress, excessive heat or cold, sunlight, hot liquids, sugar, or spicy food** may trigger a reaction. Avoid trans-fatty acids (**margarine, shortening, hydrogenated vegetable oils**). It is believed that a **B complex deficiency** is involved, along with a **poor diet**, resulting from too much **junk food**. **Alcoholics**, who perennially lack in B vitamins and good food, often have reddened faces.

• Each day, take 25 mg of **B_2**, 1,000 mg of **vitamin C**, 400-800 mg of **bioflavonoids**, 400 IU of **vitamin E**, and 15 mg of **zinc**.

• Once or twice a month, go on a **short fast**, to clean out the body. Eat **nourishing food**.

• After washing your face, rinse with cool water in which you earlier boiled **potatoes**. Or use a mixture of ½ cup water and 1 Tbsp. apple cider **vinegar**.

• For 5 minutes each evening, massage **olive oil** outward from nose to ears with circular movements.

• **Avoid strenuous exercise** which produces sweating. Avoid **exposure to heat** from the sun, an open fireplace, oven door, or facial steaming. They can burst dilated capillaries on the face. Avoid **icy chilling, after-shave lotions, skin toners, harsh soaps, or hard skin scrubbing. (Pat the skin dry** after washing.) Do not drink **hot liquids**. Avoid **friction** on the face, including clothing (turtlenecks, etc.) touching it.

• Avoid **commercial skin creams** and **greasy cosmetics**. Wash your **pillow case** regularly in chemical-free detergents.

ENCOURAGEMENT—Heirs of God and joint heirs with Christ—what a wonderful hope is set before us! May we prove faithful everyday. As we cling to Christ and, by His enabling grace, obey His Ten Commandment law, we will rejoice in His light. Galatians 4:7-8.

ENLARGED PORES

SYMPTOMS—Unsightly larger pores in the face and on the skin, which gives an appearance of premature aging.

CAUSE—Using **nicotine** in any form.

NATURAL REMEDIES

• Stop believing those ads which show beautiful people smoking. The beautiful people in the ads do not smoke. If the ads showed pictures of women who have smoked for ten years, no one would buy their products.

• If you want to start looking better, **quit all tobacco products** and **stop breathing sidestream (secondhand) smoke**. Do not drink **soft drinks or eat sugar, chocolate, potato chips,** and other **junk foods**. **Begin a good nutritious program with exercise and rest.** Take **vitamin-mineral supplements**, including **vitamins A, C, and the entire B complex**.

ENCOURAGEMENT—All who enter into a covenant with Jesus Christ become, by adoption, the children of God. They are cleansed from sin, as they submit to His rule and obey His Word. Ever trust Him. 2 Chronicles 20:20.

WRINKLES

SYMPTOMS—Wrinkles on the face. The skin tells what is inside. If you have healthful, youthful skin, it is a good sign of a healthy body inside.

CAUSE—The skin loses its elasticity and suppleness. It becomes thinner and dryer. With age, wrinkles are inevitable. But there are ways to avoid getting them earlier than necessary.

NATURAL REMEDIES

• **Stay out of the sun. Avoid tanning booths.** They produce the same wrinkling as the sun. **Wear a hat** when out in the sunlight. **Avoid sunburns.**

• Eat carefully of **good food. Exercise,** drink enough **fluids,** and get adequate **sleep.**

• Wrinkles result from changes in collagen, the "cell cement" protein that is the fibrous portion of your skin. This is about one-third of your body's total protein and 70% of your connective tissue. Without **vitamin C,** you cannot produce collagen. So you begin falling apart.

• **Vitamin A** is important for good skin health. Drink fresh **carrot juice** daily.

• **Cocoa butter** melts at body temperature and remoisturizes dry skin, especially around the eyes (crows' feet), corners of the mouth, and on the neck (turkey neck). **Coconut oil** helps in a similar way. For centuries, **olive oil** has been used for this purpose.

• Place cool cucumber slices on your face to help eliminate wrinkles. Put mashed purslane on your face and wash it off 15-30 minutes later.

• Purchase an 8-oz. atomizer and, a minimum of 3 times a day, **mist your face** with clean water. Avoid living in a **dry home.** Place a dish of water on your stove.

• **Avoid massaging** your face. It can cause a breakdown of the collagen fibers in your skin.

• **Pressing your face** against a pillow adds more wrinkles. Do not **scrunch up** your face when you talk. That makes new wrinkle patterns.

• **Avoid alcohol and nicotine.** Tobacco dramatically ages the skin! Smoking makes a 25-year-old woman look like a 35-year-old! Smoking also decreases blood supply to the face and skin.

• **Dampen the skin,** and then apply a little **vegetable oil** to lubricate it. That will help put water and oil into your skin cells.

• **Massage your face** as the Orientals do. Doing so exercises the skin and facial muscles, strengthening them.

Now, don't laugh, and I will give you more suggestions:

To soften and nourish your skin, mash half an **avocado** and put it on your face. Leave it there until it dries. And then wipe it off with water. Avocado has essential oils. It is an outstanding facial emollient for those with dry skin.

• To reduce puffiness under your eyes, place cool slices of **cucumber** over them for 10 minutes.

• To get the dead skin cells from your face, mash fresh **grapes** and put them on your face. They contain AHA, the over-the-counter active ingredient in skin lotions.

• To remove dead surface skin cells and improve skin texture, Japanese women gently rub a small handful of dry **short-grain rice** against their faces.

• To cleanse the pores, rub mashed **tomato** over your face.

ENCOURAGEMENT—Only to those who receive Jesus Christ as their Saviour are given the power to become sons and daughters of God. By ourselves, we cannot overcome sin. But, in the strength of Christ, we can be overcomers. 2 Corinthians 13:11.

NIGHT SWEATS

(Excess Sweating, Hyperhidrosis)

SYMPTOMS—Sweating during sleeping hours which seems abnormal. The sweating may begin all at once.

CAUSES—There may be a **lack of air** in the sleeping room. The body may be eliminating **toxins** and needs help. You may have a **thyroid problem.**

NATURAL REMEDIES

• A lack of fresh air in a room can cause you to break out in an abnormal sweat. Make sure **a current of air** flows through your bed chamber when you are sleeping. It does not have to be much, but you need a slight amount of moving fresh air. In some instances, there may be enough air in the room; but, when you breathe out air, it tends to remain in a hollow formed by the bedding. Open a window and **breathe through your mouth,** and you may find that your brain feels more relaxed and ready to go to sleep.

• If you are not living right and eating right, then the sweating can be the result of a toxic overload. **Avoid meat, salt, tobacco, and junk food.**

• Drink 2 oz. **green drink** (whizzed up greens in pineapple or apple juice) everyday. **Do not eat closer than four hours before bedtime.** One day each week, **fast** on distilled water or fruit and vegetable juices.

• Take **Epsom salt baths** (2 cups in the bathtub) at night and **hot / cold showers** in the morning. *After the night sweats are past,* take 10-minute **cool baths** in the morning, to tone the system.

• An alternative is to take a **hot saltwater sponge** before retiring. Use 2 Tbsp. of salt per quart of water. A hot bath followed by a **salt glow** is also good.

• Boil a quart of water, turn off the fire, put 1 tsp. **white oak bark** or **wild alum root** in it, let steep 20 minutes, pour into a cool tub, and get in.

• Steep 1 tsp. **goldenseal** in a pint of boiled water and drink 2 cups upon retiring. This will do much to prevent night sweats.

• Keep the **bowels loose** and the colon clean. Use herbal laxatives and herb enemas if necessary.

• You may be experiencing **hot flashes,** caused by irregular thyroid activity. If so, you will suddenly get

hot.

ENCOURAGEMENT—Christ alone has power to cleanse the heart. He alone can make you a child of God. He can transform your life and bring you peace and happiness in the midst of every trial. 2 Corinthians 8:12.

BODY ODOR
(Bromhidrosis)

SYMPTOMS—The secretion of foul-smelling perspiration.

CAUSES AND TREATMENT—The *apocrine* sweat glands produce fluid which has no odor for several hours until bacterial action give it an odor. These glands began working at puberty and are more active in men than women. Most of them are under your arms.

NATURAL REMEDIES

• A lack of soap and water applications cause the sweat to accumulate. **Wash your body** more often, especially in the axial areas (under arms and groin), and change underwear daily. Make sure your clothes are clean. Choose natural fabrics. **Cotton and wool** enable the absorbed sweat to evaporate from the body.

• Foot odors can be caused either by not **changing the socks** often enough or by wearing **rubber or plastic shoes**. They will make your feet smell like an old rubber tire. The problem may be the shoes, not your feet. Many people today wear such shoes, since they are less expensive than leather ones.

• Body odors can also be caused by an excess of **toxins in the body** which it is trying to eliminate. Are you eating **too much food** or **the wrong food**? Are you **staying up late at night, drinking alcohol, or smoking cigarettes**? Apply a **wet sheet pack overnight**. It will help pull the toxins out of a heavy meat eater. By morning, the sheet will be stained by the eliminated poisons. **Fast** one day a week on juice, vegetable juices or water. **Epsom-salt baths** help the body eliminate toxins. Repeat daily for one week. Then reduce to once a week.

• Not eating enough **unsaturated fatty acids** (quality vegetable oils) or not getting enough **zinc** can also produce body odor.

• Drink lots of **water**. Take **chlorophyll** (1 tsp. 2-3 times daily). It is absorbed from the intestinal tract into the bloodstream and deodorizes the body.

• Take a tip from hunters who wash with **pine soap**, so their odor will not be detected by wildlife. Old-fashioned **glycerin soap** is also good.

• Another cause of body odor is **excessive sexual activity**.

• Pouring tomato juice on a dog to de-skunk him has been done for generations. Some have found that they can pour some **tomato juice** in a tub of water, sit in it for a time, shower off, and get out—and they also smell fine!

• Both **coriander** and **licorice** contain 20 chemicals with antibacterial action. **Ginger** has 17. **Licorice** contains up to 33% bactericidal compounds, on a dry weight basis. Powder one, or all of them, and rub them under your arms.

• Rub **baking soda** under your arms. It instantly neutralizes the acid fluid there which bacteria need.

• The herb **goldenseal** can kill bacteria in the intestines, which will reduce body odors.

• Excessive body odor can be caused by **liver disease, diabetes, chronic constipation,** and **certain parasites. Meat eaters** have more odor than vegetarians.

ENCOURAGEMENT—The promise of sonship is made to all who believe on His name. Everyone who comes to Jesus, in faith, will receive pardon and power to obey. Hebrews 13:15-16. Trusting Him is always safe. He will ever guide those who surrender their lives to Him.

SKIN RASH

SYMPTOMS—Reddening of various kinds on the skin, with possible bumps, scaling, and thickening.

CAUSES—In our modern world, skin rashes can have many causes which include **reactions to chemicals, sun, wind, insect bites, alcohol, detergents, and friction**.

Skin rashes in children are often caused by food rashes from **chocolate, peanuts, dairy products, wheat, eggs, or meat**. It has been estimated that 75% of children's skin rashes are caused by sensitivity to eggs, peanuts, or milk.

NATURAL REMEDIES

• Quick relief from many rashes may be obtained by soaking a clean cloth in **cool water**, wringing it out, and applying it to the area for 10 minutes. Repeat as often as needed.

• Better yet, soak the cloth in **comfrey tea** or in **calcium water**. To make calcium water, take a spoonful of calcium gluconate powder (obtainable at a health-food store) and stir it into a cup of water. **Oatmeal water** works just as well.

• A wash of **chamomile tea** helps reduce rashes. A poultice made from **dandelion, yellow dock root, and chaparral** helps alleviate many of them.

ENCOURAGEMENT—When a soul receives Christ, he receives power to live the life of Christ. Just as Christ resisted sin, so you and I can resist temptation to wrongdoing. Psalm 10:13, James 4:9-10.

ERYTHEMA MULTIFORME

SYMPTOMS—Numerous small red spots distrib-

uted symmetrically over the body. These may enlarge to form red rings with purplish centers, called target lesions. The lesions may blister in the middle. There may be itching in the affected area. Other possible symptoms include painful, inflamed lesions within the mouth and nose; fever; headache; sore throat; and, occasionally, diarrhea. Rare: Most of the mucous membranes throughout the body become severely inflamed and ulcerated.

CAUSES—The cause is usually unknown. But the rash can be triggered by infection with a **virus** such as herpes simplex, the virus that produces **cold sores** *(250)*. Other factors include certain **drugs**—such as sulfonamide antibiotics; phenytoin; **cancer**; **radiation** therapy; or **vaccines**, such as the one for polio.

NATURAL REMEDIES

• Did the rash suddenly appear shortly after you took a prescribed drug? If so, that is probably the cause. And you need to **stop taking the drug**. Either switch to a natural remedy or ask your physician to give you a different drug. Although all drugs ultimately injure the body, they do not all produce rashes.

—*See Drug-induced Rashes (below).*

ENCOURAGEMENT—In Christ, God gave us all the treasures of heaven that the moral image of God might be restored in man. Psalm 51:12.

PITYRIASIS ROSEA

SYMPTOMS—It gradually becomes a mild, pink rash. An oval patch, ¾-2½ in. (2-6 cm) in diameter appears, known as a *herald patch*. This patch resembles those that occur in ringworm *(261)*. About 3 to 10 days later, a number of smaller oval, pink, flat spots, 3/8-3/4 inch (1-2 cm) in diameter, appears. This rash begins on the trunk and spreads across the abdomen, along the thighs and upper arms, and up toward the neck. A scaly margin may appear around the edges of the patches after a week. Occasionally, there is mild itching. Rarely are the feet, hands, and scalp affected.

CAUSES—The cause is not known. But **chemicals in the diet, air, or water** may be the cause. It primarily occurs in young adults.

This rash is not serious and usually clears up after about 6-8 weeks without treatment and is unlikely to reappear.

The reason for noting it here is so that you can identify it. The rash could, instead, be psoriasis *(275)* or eczema *(270)*, both of which are serious.

ENCOURAGEMENT—The promise of sonship to God is made to all who believe on the name of Jesus Christ and, by faith in Him, let Him work His will in their lives. How thankful we can be that God has done so much for us all these years! Trusting in Him daily, our future can be even brighter!

DISCOID LUPUS ERYTHEMATOSUS (DLE)

SYMPTOMS—Itchy, red, scaly patches usually develop on the face, scalp, and behind the ears. Over several years, DLE may subside and recur with different degrees of severity. Occasionally, it can also affect other organs of the body. In some instances, the rash disappears, but leaves behind a scarred area in which the skin is thin and discolored. If it occurs on the scalp, the result may be permanent loss of hair and patchy baldness.

CAUSES—DLE is an autoimmune disorder, most commonly occurring in women between the ages of 25 and 45. The problem tends to run in families. Exposure to **sunlight** tends to trigger the onset of the rash or to make it worse.

In about 1 in 10 afflicted with DLE, systemic lupus erythematosus occurs. This condition affects many parts of the body, including the lungs, kidneys, and joints.

NATURAL REMEDIES

• If this problem has occurred to others in your family, it is best that you **avoid too much direct sunlight**.

• Eat a **nourishing diet** and take **vitamin-mineral supplements**. Physical problems are far less likely to overtake those who are have a healthy lifestyle.

ENCOURAGEMENT—When a soul receives Christ, he receives power to live a life such as Christ lived. God can help him live a good, clean life. Hebrews 4:16.

NEEDLE-STICK INJURY

SYMPTOMS—You accidently punctured your skin with a used hypodermic needle.

CAUSES—Although it may cause little pain or bleeding, **a stick by a used needle** ("used" meaning it previously was used on another person) can be dangerous.

Needle-stick injuries need to be investigated, because of the risk that the needle carries organisms such as HIV, the virus that causes AIDS, or the hepatitis B virus. Such sticks can occur among hospital staff or those who visit public places and find a discarded hypodermic needle. But those who take street drugs are the ones who usually are infected from sticks of used needles. They frequently, and purposely, inject themselves with someone else's needle.

NATURAL REMEDIES

• **Never try to put a needle back in the holder** it originally came out of. Instead, carefully **place all the parts in a designated trash container**.

If a needle stick occurs, you will want to have run to see if you have contracted HIV or hepatitis

NCOURAGEMENT—God is our Father, and a tenarent. He loves each of us deeply. No one can care ıu as well as your Creator, the One who loved you ıch that He sent His Son to die to redeem you.

ERUPTIVE AND RASH SKIN DISEASES

(Symptoms of 23 Diseases)

YMPTOMS—Eruptive diseases are skin diseases ı produce spots, medically known as eruptions. diseases produce rashes on the body. Some dis- develop both rashes and eruptions.

'ere is a comparative list of many of these dis-

EVEN SKIN DISEASES WHICH PRIMARILY :CT CHILDREN:

hicken pox - Small, round, pimples that form blisnd crust over as they heal. Generally appears first e trunk, followed 1-2 days later by fever and head- It then spreads to the face and extremities. Exly itchy. Primarily on children. —*See Chicken pox*

leasles (Rubeola) - After several days of fever, ı, sneezing, runny nose, and possibly conjunctivi- ı raised red rash generally begins on forehead, neck, ears. This spreads to rest of body as well. As it ıds, fever usually subsides. Sometimes there are ed spots with white centers on the insides of the ts. —*See Measles (Rubeola) (706).*

leasles (Rubella) - There is fatigue, coughing, ache, mild fever, muscle aches, and stiffness in eck. A pink rash often develops 1-5 days later, aring first on face and neck, and spreading to the f the body. —*See German Measles (Rubella) (707).*

carlet Fever - Vomiting, sore throat, headache, fever. On the second day reddened raised points through a white tongue, especially at the tip and . Then rash begins on the chest and extends to parts of body. —*See Scarlet Fever (708).*

rysipelas - Redness, discoloration, blisters, and ing usually on face and accompanied by high feSkin is deep red or pink and appears glazed. It s and burns. There is a definite edge or margin to ffected area. Blisters may develop. Swollen area firm and hot. Condition tends to spread in all diɔns from where it started. Face is usually swollen. are closed. And lips and ears are thickened and ish. —*See Erysipelas (277).*

tingworm - Small, itchy round red spots that grow ıout ¼-inch in size, with slightly raised, scaly bor- As they expand, they clear in the center and pro- a reddish ring. —*See Ringworm (261).*

mpetigo - Redness in cuts or bruises, followed by blister-like swellings. Fluid is straw-colored. If not scratched, lesions break down in 4-6 days and form a honey-colored crust which heals slowly. Skin beneath may lose color, not to be regained for months. Scratching generally results in more skin injury. —*See Impetigo (274).*

—Also see Tonsillitis (703), Adenitis (703), Strep Throat (703), Quinsy (703), Adenoids (704), Mumps (705), Diphtheria (709), Whooping Cough (711), Rheumatic Fever (712), and Reye's Syndrome (713).

SIXTEEN SKIN DISEASES WHICH PRIMARILY AFFECT ADULTS:

Eczema (Dermatitis) - Patches of scaling, flaking, thickening skin which often itches. Skin color in the affected area may change. Appears anywhere on body.—*See Eczema (270).*

Mononucleosis - A red rash with bumps, plus achiness, headache, sore throat, low fever, and persistent fatigue.

—*See Mononeucleosis (554).*

Lyme Disease - A red, circular lesion that widens as the center heals. Often followed by a rash of small, raised bumps on the trunk. Flu-like symptoms (chills, fever, nausea) may be present. —*See Lyme Disease (568, 744).*

Candidiasis *(fungal infection)* - Moist, red patches which may be itchy. Usually where skin surfaces rub together. In babies, it will be an inflamed diaper rash. —*See Candidiasis (215).*

Hives - Rash that suddenly appears and looks like tiny goose-bump patches, spots, or red and itchy welts. They cover sizeable areas of the body. —*See Hives (272).*

Athlete's Foot - Scaling, cracking, and inflamed blisters between the toes of the feet. Often severe itching and burning sensation. —*See Athlete's Foot (292).*

Psoriasis - Silvery, scaly patches usually on the scalp under the hair or on the ears, arms, legs, knees, elbows, and back. But it may appear elsewhere on the body. —*See Psoriasis (275).*

Shingles - Groups of tiny, painful blisters which are sensitive to the touch and eventually crust over, scab, then fall off. Usually on abdomen below ribs, but can occur elsewhere. May be accompanied by achiness, chills, and fever. —*See Shingles (274).*

Rosacea - Small, reddening bumps and pimples, usually on the nose and center of face. Although resembling acne, it is a chronic condition. Usually in people over 40 years of age. —*See Rosacea (265).*

Scabies - Persistent, itchy rash with small, red lumps which may become dry and scaly. Fine, wavy dark lines go outward from some bumps. Usually between fingers, forearms, wrists, breasts, or genitals. —*See Scabies (260).*

Seborrhea - Yellowish, greasy, flaky patches of skin that becomes scaly and forms crusts. Usually on scalp, face, and/or chest, but may appear anywhere. —*See Seborrhea (272).*

Leukoderma (Vitiligo) - Loss of skin color, especially in black or dark-skinned people. White patches,

surrounded by a dark border (278).

Keratosis (Sharkskin) - The rough goose bump skin on your elbows, back, arms, thighs, and buttocks. It feels somewhat like sandpaper. —*See Keratosis (278).*

Lupus Vulgaris - Great fatigue and depression; rough, red skin patches; chronic nail fungus; low-grade, chronic fever; rheumatoid arthritis symptoms. —*See Lupus (279).*

Food or Drug Allergy - Generally appears as a reddish or pink, flat rash; sometimes with itching and/or ***swelling.*** —*See Allergies (576).*

Poison Ivy / Oak / Sumac - An intensely itchy red rash, with oozing blisters. Sometimes, only a few, tiny, itching spots. Can be spread by itching. —*See Poison Ivy (582).*

ENCOURAGEMENT—All who enter into a covenant with Jesus Christ become by adoption the children of God. Angels of God are commissioned to minister to them and guide them.

SKIN - 7 - MAJOR DERMAL PROBLEMS

MAJOR SKIN DISORDERS

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR MAJOR SKIN DISEASES AND THEIR COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

CHILBLAINS—Alternate Footbath; Revulsive Douche to feet; Alternate Douche; Hot Footbath, followed by Footbath under flowing (cold) water; foot pack.

BURNS—The **evaporating compress**; the cool irrigating compress (cool, wet cloth over it to reduce heat or sprinkle water over it ["irrigate"] to intensify the cooling effect); if very extensive, the prolonged or continuous **Neutral Bath**.

ERYTHEMA—Cool **evaporating compress** or irrigating compress (explained just above), **neutral compress**.

PRURITUS—Prolonged Neutral Bath, copious **water** drinking, large **enema**, daily aseptic **dietary**.

ERUPTIONS—*If dry*, not irritable, give **prolonged Neutral Bath**. If scaly, **alkaline bath** (soda bath or Oatmeal Bath). *If moist and irritable*, **cool evaporating compress** moistened with soda solution (1 ounce to 1 gallon). *If skin is thickened*, as in chronic eczema, **Hot or Alternate Hot and Cold Compress** or Spray Douche for 10-15 minutes, 3 times a day. *If extensively damaged skin* (as in pemphigus, confluent smallpox, bad burns), the **Continuous Neutral Full Bath** until the skin is healed. [*Author's note:* One of Jethro Kloss' workers personally told me that when Kloss' son was injured in an automobile accident, he gave him a Continuous Bath of water with goldenseal in it for several days.]

JAUNDICE—Copious **water** drinking, large **Enema** twice daily, **sweating hot bath** for 15 minutes—such as Radiant Heat Bath, Steam Bath, Hot Full Bath, Wet Sheet Pack, followed by prolonged Neutral Bath. Give the sweating bath once daily, or even twice, if he is not too weak. For general tonic effects, apply Cold Mitten Friction or **Cold Towel Rub** twice daily. **Alternate Hot and Cold Compress** over the liver twice daily, with **Heating Compress** over the liver or flannel-covered **Hot Abdominal Pack** during intervals between.

DRY SKIN—Short sweating bath, such as Radiant Heat Bath, Steam Bath, hot-air bath, Hot Full Bath, Hot Blanket Pack, Dry Pack, sweating Wet Sheet Pack, followed by a **cold bath** suited to his general condition, and this followed by massage with friction.

HYPERHIDROSIS—Steam Bath, sweating Radiant Heat Bath, followed by Revulsive Douche (Spray) to spine, and general Cold Douche.

SWEATING FEET—Revulsive Douche to feet, with extremes in temperature as great as possible; **Alternate Hot and Cold Footbath**; Heating Compress to feet during the night, with Cold Mitten Friction to the feet in the morning on rising.

ENCOURAGEMENT—What greater honor could we have than to be called the children of God? What greater rank could we hold, what greater inheritance could we find, than that which comes to those who are heirs of God and joint heirs with Christ? Titus 3:7.

ECZEMA
(Dermatitis, Atopic Dermatitis)

SYMPTOMS—Dermatitis, also called eczema, is a skin problem indicated by reddened skin; thickening and itching when touched; the formation of dry, patchy scales; and flaking.

CAUSES AND TREATMENT—This skin problem can be caused by a number of things. They are listed below under "Things to Avoid."

Oddly enough, hair loss (alopecia) is commonly associated with dermatitis, especially if a there exists a concurrent unsaturated fatty acid deficiency in the diet.

• If the dermatitis is not terminated, it can so weaken the system, so that more serious infections occur. This is because, at the same time that you are having skin problems, your intestines are developing lesions which can greatly weaken your ability to digest and absorb nutrients!

• It is a fact that 13% of those with severe dermatitis later develop cataracts.

NATURAL REMEDIES

THINGS TO AVOID

• Dermatitis is an inflammatory skin condition that generally keeps reoccurring. Dermatitis is actually an allergy which may be caused by contact with **perfumes, cosmetics, rubber, medicated creams, ointments, poison ivy, or contact with metal alloys (including nickel, silver, and gold)**. Some type of **food** could be the problem. If the irritant continues to be in constant contact with the skin, the dermatitis will spread and get worse. Obviously, if you have this problem you want to solve it! Avoid **dust, industrial chemicals, fumes, sprays, paints, cutting oils, varnishes, and solvents**.

• Avoid **cleansers, cosmetics, body oils, and lotions that contain lanolin, benzocaine, or antihistamines**. It causes allergies, plugs up oil glands, and causes dermatitis and acne. Do not wear **rubber gloves** for household chores. Your skin will absorb some of the chemicals in them.

• Do not use **petroleum jelly** and other **greasy ointments**. They prevent sweating and intensify the itching. Avoid **scratching**. It only makes the problem worse.

• The condition can be intensified by **emotional stress, tension, and fatigue**. Avoid **colds and respiratory infections**. They lower body resistance and intensify eczema. Avoid people with **cold sores** because the virus in them can cause serious skin eruptions, if you have dermatitis.

• Here are some of the allergies which the experts have found to especially cause dermatitis: **Cow's milk**. Either stop drinking cow's milk or try switching to goat's milk. **Wheat gluten** (wheat protein). There are other grains you can eat instead. **Nickel**. The experts call this "nickel rash." Women who have their ears pierced and the nickel post placed in them can produce various rashes on the body—especially where any other metal jewelry touches the skin. By the way, any gold jewelry less than 24-karats has some nickel in it.

• Beware of **bubble bath** and similar **soapy tub baths**. Never take a **bath in hot water**. **Pat yourself dry** after bathing. Do not rub.

• **Children's rashes**: A skin rash in children may be caused by eating **eggs, peanuts, milk, wheat, fish, chicken, pork, or beef**. Eggs, peanuts, and milk account for 75 percent of the skin rashes in children.

• Regardless of what may be the cause, omit **wheat, rye, oats, and barley** for six weeks. Then slowly add one back at a time—and see how all this effects the dermatitis.

• If you know how to do so, you may wish to do a *pulse test* after each meal, in an attempt to ascertain which foods increase heartbeat. Those which do are the problematic ones. *—See "Pulse Test" (575).*

• Avoid **dairy products, white flour, fried foods, other processed fats,** and **sugar.** Avoid **antiperspirants**, for they have metal in them. Use **cotton undergarments**. **Fake fingernails** cause skin rashes. Always use **white bathroom tissue** only. Those with dyes irritate the skin. Be sure and **rinse the soap out of your clothes** which have just been washed. Reduce **sugar and salt** intake.

• **Cow's milk** allergy is the most common cause of dermatitis in infancy. The milk can be taken by the infant or the mother breast-feeding it. Do not eat foods containing **raw eggs**. They contain *avidin*, a protein which binds with biotin and keeps the body from absorbing and using it to heal skin problems.

THINGS TO DO

• Deficiency of any of the **B complex vitamins** can cause dermatitis. Another important item is **unsaturated fatty acids** (1-2 Tbsp. **flaxseed oil** daily is the best). If you are not getting enough, you can begin itching wherever you rub on your skin. Adequate **vitamin A** and enough **protein** are also essential. A deficiency of **selenium** is another definite cause.

• **Antioxidants** help damaged skin heal. The best ones for skin are **beta-carotene** (carrot juice of 12-18 mg daily), **vitamin C** (3,000 mg daily), **vitamin E** (600-800 mg daily), and **zinc** (20-30 mg daily).

• If you want to feel good, soak in an **oatmeal bath**. Add 2 cups of oatmeal to a tub of lukewarm water. Stay in 20 minutes and you will feel fine when you get out! Do not slip in the tub!

• Instead of soap, put **oatmeal in a cloth** and tie the ends. Dip it in water and wash yourself clean.

• Both winter and summer, keep the **relative humidity** above 40%. Eliminate fuzzy and rough clothing. Wear soft, loose cotton clothes. Get rid of feather pillows, furry and fuzzy toys, and long-haired dogs and cats. Get regular exercise.

• Research studies have found the following herbs to be outstanding for treating eczema: **Chamomile, ginkgo biloba, licorice root, and witch hazel**.

• Mix **goldenseal** root powder with **vitamin E oil** and put some on the affected area. This will reduce the itching.

• **Primrose oil** and **vitamin B_6** (pyridoxine) have helped infants with dermatitis.

• An **oatmeal bath** is another helpful measure, to reduce the itching during the time required to solve the underlying cause. Use 2 cups of colloidal (powdered) oatmeal per tubful. Colloidal oatmeal can be obtained at a pharmacy. Do not slip in the tub!

• Herbs that may help include **comfrey, dandelion, red clover, pau d'arco, plantain, chickweed, burdock root, yarrow, and strawberry leaves**. One can either drink the tea made from any of them or apply it to the affected area.

• Steep a Tbsp. each of **burdock root, yarrow, and yellow dock** root in a pint of boiling water for half an hour. Strain, add a pound of **cocoa fat**, and keep boiling and stirring until it is a salve. Use this for eczema.

—See Seborrhea (272), Drug Rash (604), and Skin Diseases (243-279).

ENCOURAGEMENT—Christ, having redeemed man from the condemnation of the law, could now enable man to fulfill its requirements. Rejoice that, in

Christ, you can stand an overcomer over the temptations which have oppressed you. Psalm 30:5.

SEBORRHEA
(Seborrheic Dermatitis)

SYMPTOMS—Scaly patches of skin most often on the scalp, face, and chest. But these can appear elsewhere. It may or may not be itchy and consist of small bumbs or patches. The affected area may be yellowish and/or greasy, or dry and flaky. Although it can occur at any age, it is most common in infancy (cradle cap) and middle age.

CAUSES—This is a disorder of the oil-secreting (sebaceous) glands of the skin. Causes include **stress and anxiety, nutritional deficiencies (especially vitamin A and biotin), heredity, hot weather, oily skin, acne, rosacea, psoriasis, Parkinson's disease, and AIDS**.

NATURAL REMEDIES

• An **oatmeal bath** is excellent. *See Eczema (above) for how to prepare it.*

• Primarily eat **raw, fresh foods** and **avoid diary products, white flour, chocolate, seafood**, and anything with **sugar** or **raw eggs** in it. **Fast** a day or two each month. Take **vitamins A, C,** and **B-complex**. Eat a **gluten-free** diet.

• Do not use commercial seborrhea **ointments**, irritating **soaps**, or chemical **hair shampoos** (which most are). **Colloidal silver** is useful in reducing seborrhea.

• **Do not squeeze or pick** at your skin.

—See Eczema (above).

ENCOURAGEMENT—By repentance toward God and faith in Jesus Christ, the fallen sons of Adam may become sons of God.

HIVES
(Urticaria)

SYMPTOMS—Strong itching (pruritus) may suddenly occur. Elevated wheals (itchy red skin welts with whitish centers) result, along with swollen eyes. The subsequent scratching makes you appear swollen and scratchy. The intense itchy wheals which may result may disappear in minutes, hours, or several days.

CAUSES—Also known as hives, urticaria is an intensely itchy rash that may affect the whole body or just a small area of skin. Although it usually lasts only a few hours, chronic urticaria can last for sever months. Both acute and chronic forms can recur.

Sometimes it occurs at the same time as **angioedema**, which is swelling of body tissues, usually about the face and generally due to an allergic reaction. This can be life-threatening. *See your physician.*

But urticaria can also be an early symptom of **anaphylaxis** *(574)*, which is a severe and potentially fatal allergic reaction to a substance. *See a physician.*

One cause is contact with the **nettle plant**, which pricks a poison into the skin. *(See Nettle Rash, 558).* But more often, the cause is some other allergic substance which may include: **wheat, milk, eggs, chocolate, nuts**, and other food allergens. It may be due to a **drug allergy**. Or it may develop after an **insect bite or sting**.

The first time it occurs in an adult, it is often difficult to identify the cause. It is less common in elderly people and sometimes runs in families.

The acute form of urticaria usually disappears without treatment within a few hours.

The skin is reacting to **allergies, physical irritation, stress, or emotions**. Special dermal cells begin releasing histamine, which causes internal blood vessels to leak fluid into the deepest layers of the skin.

Meat, dairy, and poultry products (especially in frozen or fast foods) are frequent causes of hives. This is due to the chemicals, antibiotics, and hormones given to farm animals.

Some 15%-20% of Americans experience hives at some point in their lives, generally as young adults.

Touching the leaves of the stinging nettle plant can also produce a temporary rash. *See Nettle Rash (558).*

It is important that you try to **identify the cause** of the attack, so you can henceforth avoid it.

NATURAL REMEDIES

IMMEDIATE HELP

• Any alkaline substance generally helps the itching. Place a **calcium gluconate** paste on the skin or apply **milk, calamine, or milk of magnesia**.

• An **oatmeal** or **bran bath** will help relieve the itching. Place 2 pounds of ether in a muslin bag and sit in a hot bath (104°-106° F.). Do not slip in the tub!

• A paste of **cream of tartar** and **water** can be applied to the area.

• **Cold compresses or cool baths** will immediately help also.

LONGER TERM SOLUTIONS

Try to find the cause or causes of this problem and remove them from your diet and environment.

• *Here are some of the things which result in hives in others:* **Stress**, food allergy (**milk, wheat, eggs, peanuts, shellfish, pork, onions, chocolate, some fruits**), **chlorine** in drinking water, adrenal exhaustion and/or liver congestion resulting from an **allergy, hydrochloric acid deficiency, food dyes, preservatives, spices, flavoring, coloring agents, drug allergy, acid conditions, insect stings, chronic infection, penicillin in the milk you drink, aspirin, coffee, alcohol, and tobacco.**

• *Here are more things known to cause hives in some people:* **Aspirin, antimony,** or **bismuth** (in various metal alloys), antipyrine or phenacetin (**pain relievers**), **barbiturates**, BHA and BHT (**preservatives**), phenobarbital or chloral hydrate (**sedatives**), chlorpro-

mazine and meprobamate (**tranquilizers**), **fluoride** (dental products and fluoridated drinking water), **food colorings**, griseofulvin (antifungal), **insulin**, **liver extract**, **menthol** (in perfumes, candy, cigarettes), **mercury** (dental fillings), **morphine**, **penicillin**, pilocarpine (**glaucoma medication**), **preservatives**, procaine (anesthetic, known as **novocaine**), **quinine**, (**quinine** water and malaria medication), **reserpine** (heart medication), **sulfites** (food preservatives, especially in dried fruit), **tartrazine** (food dye and in Alka-Seltzer), **saccharin** (artificial sweetener), **salicylates** (flavoring and preservative), thiamine hydrochloride (**cough medications**), **animal dander**, **dog saliva**, **barbiturates**, **cancer**, **eucalyptus leaves**, **hyperthyroidism**, **insulin**, **iodines** (in antiseptics and dyes), **cosmetics**, **tranquilizers**, and **phenacetin** (pain medication).

• Secondary factors will be **spinal lesions**, **stoppage of lymph flow**, **imbalance between deep and surface blood circulation**, **and adrenal exhaustion**.

• **Insect bites** may induce hives in sensitive children.

• Another factor is **too hurriedly weaning a child** from breast milk. Yet another cause is **sun-induced** hives. They strike 30 minutes after being out in the sun.

Reading over the above lists, it appears that the primary cause is frequently a physical reaction to a substance which the body cannot tolerate being put into it. *We live in a chemical age.* One cannot even drive down the highway without breathing dangerous fumes.

• Do not use **steroids**, **alcohol**, **or processed foods**.

• Lymph stasis and poor circulation may result from **poor skin function**, **lack of exercise**, **fresh air**, **and poor elimination**. But ingesting poisonous substances top the list.

TO STOP RECURRENT HIVES

• Aside from trying to find the chemical offenders, **prolonged fasting** is generally considered the best method of terminating recurrent hives. This cleans out the body and enables it to better deal with the chemicals it is daily confronted with. Fasting will help the intestines and other organs to heal. It will eliminate toxins and help the bowels begin working properly again. Trunk packs will help induce sweating. Moderate sunbaths will help also.

• As a rule, each fast should not be over 1-3 days in length. If you are overweight, longer fasts might be considered. If you are thin, never go over 3 days; indeed, one meal or one-day fasts are best for frail individuals. A **carrot**, **beet**, **and green vegetable juice fast** is better than a straight water fast.

• Use **enemas** during the fast, and even afterward, until the hives do not return. **Maintain good bowel action** thereafter.

• Also important are **dietary changes**. Be sure to get nutritional supplements, including **vitamins A, B complex, B_6, B_{12}, C, and calcium**. You may need to take **hydrochloric acid** with meals. Massive amounts of **vitamin C** (2,000 mg every 4 hours) stop it in many people. Take 500 mg of **quercetin** twice a day. It has good anti-histamine activity.

• There is one other important, possible cause: a lack of **unsaturated fatty acids**. The best is **flaxseed oil or wheat germ oil**. In addition to including only such oils in your diet, you would do well to rub wheat germ oil on the affected area.

• When the problem exists for weeks or months, it is vital that you **identify the cause**, so you can eliminate the hives.

• Chronic hives can be linked to **candida**.

When severe anaphylactic reactions occur, immediately take the person to the hospital. It is best not to let situations come to such a crisis. Solve the problem before hives produces such an emergency.

OTHER SUGGESTIONS

• Take a **hot shower**, as hot as you can take. It releases anti-histamines which attack the surface hives.

• **Jewelweed** is excellent. It contains *lawsone*, which has anti-hive activity. Make a tea of it and apply it to the affected area.

• The following herbs have good anti-histamine activity: **Chamomile**, **wild oregano**, **rue**, **parsley**, **basil**, **echinacea**, **fennel**, **yarrow**.

• Simmer ½ pound of **ginger** in a gallon of water for 5 minutes. Pour into a hot bath. After the bath, sponge off with **chamomile** tea. It works well for some people.

• Drink **burdock** seed tea as a diaphoretic to open skin pores from the inside. Also wash the affected areas with a strong decoction of the tea 2-3 times a day. Apply **chickweed** ointment. Take a chickweed bath.

• To draw out toxins from the skin, take a hot bath with 1 pound of **baking soda or Epsom salts** added to the water.

• Other helps include applying **aloe vera gel** to the area and wearing **loose-fitting clothing**. The problem may be linked to **candida**.

• While hot baths draw out the poisons, **cool baths** are soothing. Take a cool shower at the first sign of hives.

—*Also see Nettle Rash (558).*

ENCOURAGEMENT—In the work of redemption, God has revealed His love in sacrifice, a sacrifice so broad and deep and high that it is immeasurable. For God so loved the world, that He gave His only begotten Son—that you and I could have eternal life!

DRUG-INDUCED RASHES

SYMPTOMS—Many different types of skin rashes. Some mimic other disorders, such as lichen planus or erythema multiforme *(267)*. But most appear as raised areas of skin spread widely over the body. They may cause intense itching. Sometimes wheezing occurs. Or the person collapses and is taken to the hospital.

CAUSES—Medicinal drugs frequently cause rashes to appear on the body. The body wants to quickly get rid of poisonous substances in the drugs. So, in some

cases, they are pushed out through the skin. In other instances, they are excreted in the kidneys, sometimes causing kidney damage in the process.

The drugs most often producing the rashes are the **antibiotics**, such as **penicillin**. Drug-induced rashes usually begin within a few days after the drug is first given, but sometimes do not occur until after drug treatments have ended. The rash may not leave until weeks after the drug is discontinued.

NATURAL REMEDIES

• If you develop a rash immediately after taking a drug, your physician is likely to advise that you **stop taking that drug** immediately. It is possible that two or more medicinal drugs are being taken at the same time or a "recreational" drug is also being taken.

• Notify future physicians about your problem with certain drugs. In instances, where a drug caused serious physical problems, you may wish to wear a medical alert drug tag.

—*See Erythema Multiforme (267).*

ENCOURAGEMENT—If God, the divine Artist, gives to the simple flowers that perish in a day their delicate and varied colors, how much greater care will He have for those who are created in His own image?

IMPETIGO

(Impetigo Contagiosa, Echthyma)

SYMPTOMS AND CAUSES—Cuts, abrasions, insect bites, and stings allow entry of the bacteria. An area of redness is seen, followed by blister-like swellings. The fluid is straw-colored. If not scratched, the lesions break down in 4-6 days and form a honey-colored crust which heals slowly. The skin beneath may lose its color and remain pale for months. The scratching generally results in more skin injury and a spread of the infection. It is more frequently found on the face, hands, arms next, and feet and legs third.

Impetigo is a skin disease caused by a streptococcal bacteria. It occurs primarily in children (especially ages 2-8, especially in **undernourished** ones), and in the summer months. Lower economic groups living in **crowded conditions** are the most likely to contract it. Impetigo is not something to ignore. Neglected, it can produce boils, ulcers, or other skin complications. Untreated, it can result in deep infections of the tissue beneath the skin.

NATURAL REMEDIES

• Impetigo is actually an early sign of immune depression, which allows organisms normally on everyone's skin to produce disease. The body's **immune system needs to be strengthened.**

• **Proper nutrition** is needed, along with **sanitary living conditions.**

• In some individuals, a **food allergy** (such as **milk, wheat**, or **soy**) or a **contact dermatitis** (such as **detergents** in the clothes) weakens the immune system—permitting the impetigo to gain a foothold.

• Strict **sanitary hygiene** is necessary to prevent the spread of the infection to other parts of the body—or to other people.

• **Vitamin A** is necessary for good skin health. Give the child a good **multivitamin supplement**. Give **vitamin C**, to bowel tolerance.

• Put a wash of **boric acid** and herbs such as **comfrey, golden seal, or echinacea** on the affected area.

• Place **garlic oil**, squeezed from capsules, on the area.

Bathing in soapy water every 4 hours during the day is helpful. Severe cases may require a slightly **salty or hydrogen peroxide application** (3 parts water to 1 part 3% peroxide). Apply soaks or **warm compresses** to the attached crusts.

• *Removal of the crusts* results in a more rapid cure. Stubborn scabs may require a solution of 1 tsp. **bleach** to 1 quart water to loosen them. A small amount of **dishwashing detergent**, added to the bleach solution, will improve penetration of the solution.

• *After removing the crusts*, apply hot and cold compresses: **Hot compresses** (110°-115° F.) for 3 minutes, alternating with **cold compresses** wrung from ice water for 30 seconds, with 5 changes in each treatment. Do not burn the child. At night, **charcoal poultices** can be attached and left overnight.

• Use **disposable tissues** instead of cloth handkerchiefs. Each person should be given **his own towel and washcloth. Wash the hands** frequently. While the infection lasts, keep the **fingernails short and clean. Change pillowcases and bed sheets** daily, and **boil all linens** for 10 minutes. If possible, **isolate the child.**

• Exposure to the **air** and **sunlight** will help, but **do not swim.**

• If impetigo is on the scalp, **cut the hair** so you can treat it.

—*Also see Skin Diseases (243-279).*

ENCOURAGEMENT—God gave His Son to become bone of our bone and flesh of our flesh. The gift of God to man is beyond all computation. Nothing was withheld. God has done, and is doing, everything possible to save us from sin. Psalm 34:19.

SHINGLES

(Herpes Zoster)

SYMPTOMS—Sharp, burning pain along a nerve route somewhere in your body for 3-4 days. There are angry red blisters at that pain site several days later.

These are very painful and itchy. Later the bumps blister, turn cloudy, and form scabs. It usually lasts 7-14 days from the time the blisters appear before the scabs drop off. This is no ordinary rash. It is shingles, which is a viral infection of a nerve. It most often occurs on the skin of the abdomen, under the ribs, and above the navel. But it can appear anywhere on the body. It most frequently occurs after the age of 50.

If shingles starts near an eye, beware! The cornea can become infected and blindness may result. You would then do well to consult an eye specialist.

CAUSES—This infection consists of small, round clusters of the same virus which causes chicken pox *(704)* in childhood. But, in adulthood, it causes the far more dangerous condition known as shingles.

What triggers the attack? It is known that **poisonous substances in food, metals, drugs, and other toxic substances** can do it. For example, risk of shingles increases with the use of **anti-cancer drugs**. **Anything that weakens the immune system** can bring on an attack of shingles. Once it occurs, the pain can continue on for months or years. So it is better to prevent an attack.

Special note: The drug industry is pushing for mandatory chicken pox vaccinations for children. This is dangerous and should not be done! You need to oppose it! Contracting chicken pox in childhood is no problem at all, and tends to protect that child against shingles in adulthood. But if he is vaccinated for chicken pox (therefore not getting it), he is far more likely to get shingles when he grows up. (See the author's book, *The Vaccination Crisis* for abundant data, and ways to avoid childhood vaccines. It is described at the back of this *Encyclopedia.*)

NATURAL REMEDIES

• Massive doses of **vitamins C** (1,000 mg, 3 times a day, and 200 mg, 5-6 times a day), **rutin**, and **B complex**. In addition, take **vitamin F, calcium, and lecithin**. The amino acid, **lysine**, can help inhibit the spread of the herpes virus. The diet must include **raw fruits and vegetables, brewer's yeast, brown rice, and whole grains**. Be sure and eat enough **protein (legumes and nuts)**.

• Place one or more of the following on them: **tea tree oil with plaintain, calamine**, or other calcium preparation on them. **Calcium** is always soothing to skin rash conditions. Apply **vitamin E oil** from a capsule to the area. Take 500 mg of **lysine** 2 times daily.

• Put **cold water** on a cloth and place it over the area. The cooler it is, the better it feels. Avoid anything that will make your blistered skin hotter.

• Put apple cider **vinegar** on it daily. Take **hot baths** 2-3 times a week. Take a **starch bath** (one cup of cornstarch or colloidal **oatmeal** into a hot tub). Colloidal oatmeal is powdered and can be obtained at the pharmacy. Do not slip in the tub!

• Clean out the **bowels** frequently. **Light fruit and vegetable fasts** will also help clean out and strengthen the body. Wear only **cotton clothing** while the condition exists.

• Dab the infection with **hydrogen peroxide**, to purify it. If pain exists after the blisters are gone, put **ice** on the area.

• Applying **cayenne** blocks pain signals from nerves just under the skin. It works so well, the FDA has approved commercial creams containing it.

• Applied **licorice** eliminates pain and inflammation within 3 days in some people. Drink a weak tea and apply a strong tea directly to the rash.

• **Avoid drafts**. Allow **sunlight** on the area for short intervals. **When bathing**, gently wash the blisters and avoid touching or scratching them.

• ***Warning:*** If the shingles appear on the forehead, tip of the nose, or near the eyes, contact an ophthalmologist. Such cases can lead to blindness.

—*Also see Skin Diseases (243-279).*

ENCOURAGEMENT—As John thought of the love of Christ, he was led to exclaim, "Behold, what manner of love the Father hath bestowed upon us, that we should be called the sons of God." Oh, may we praise Him everyday for the overcoming strength He imparts, so we can resist temptation and fulfill His will. Psalm 34:6, 15, 17.

PSORIASIS

SYMPTOMS—It appears like patches of silvery scales or red areas and is found on the scalp, arms, legs, knees, elbows, ears, and back. There are cycles of flare-ups and remission. It especially occurs in winter months, but sometimes it disappears for months or years. In some, aging makes it better; in others, worse. It is most common between 15 and 25. And it is not infectious. It affects the white race more than any other.

CAUSES—The skin cells seem to run out of control. Instead of skin renewing itself in 28-30 days, the new cells reach the top layer in 3 days. This produces raised areas of skin, called plaques, which are red and often itchy. Cells normally rise and die. But, because so many cells are doing this, they have a raised, silvery, patchy appearance.

Psoriasis may be linked to **faulty fat utilization**. Attacks are related to times of **stress, illness, surgery, cuts, certain viral and bacterial infections, sunburn, poison ivy, or poison oak**. The **drugs such as chloroquine, lithium, and beta-blockers** also cause it to flare up. Do not use **steroids, alcohol, or processed foods**. There may be a **hereditary factor** involved. Previous **immunizations** seem to be a causative factor for some people. The various medicinal drugs recommended for psoriasis all have potentially dangerous side effects.

There is no certainty that one can totally eliminate psoriasis. Do not spend time worrying over the matter. For the resultant stress may only aggravate it.

NATURAL REMEDIES

• An increased intake of **animal protein** can make it spread outward. Conversely, a reduction tends to shrink it. Consider becoming a vegetarian. **Citrus juices** may also be a problem.

• Since psoriasis is a metabolic disease, a cleansing **juice fast**, 2-3 times for the first week, is a good way to begin working toward its recession. Four weeks later, the fast can be carried out again. But in the meantime, an extremely **nourishing diet** should have been started. All **junk food** should have been discarded. Search out and eliminate **allergy foods**. Beware of **milk and wheat**. It may be well to exclude them for 6 months. Eat a diet of 50% **raw food**, with plenty of **fruits and vegetables**. Eat **whole grains, nuts, and legumes**.

• **Avoid fats (butter, milk, cream, eggs, meat), processed food, white flour, sugar, and citrus fruit. Milk, cheese, eggs, meat, and poultry** contain arachidonic acid, which causes psoriatic lesions to turn red and swell. **Primrose oil** (1 capsule 3 times daily) helps counteract arachidonic acid. Get your food oils from natural foods, such as **flaxseed, sesame seed, and soybeans**. **Flaxseed oil** contains a chemical which tends to reduce psoriasis. Take 3-4 Tbsp. **lecithin** granules each day for 2 months. Then reduce dosage by one-half.

• **Vitamins A, B complex, C, and D** all help the skin and appear to be of help in reducing psoriasis. **Calcium, magnesium, and zinc** are also important.

• Only the scales and skin debris can be removed. Because psoriatic skin is dry, it is well to **put petroleum jelly or vegetable oil on the area**.

• **Lose weight** if you are overweight. Weight loss helps many who have psoriasis.

• Heavy stress can make it worse. Try to retain a **calm, cheerful outlook** on life. Existing psoriasis tends to get worse when you come down with some other **infection**.

• Exposure to **sunlight or ultraviolet light** reduces the scaling and redness. With regular amounts of intense sunlight, 95% of psoriasis sufferers improve. But keep in mind that too much ultraviolet light also produces skin cancer. Sunlight definitely helps many.

• You may wish to consider moving to a **warmer climate**, since the problem becomes much worse in the winter. If you live in a colder climate, maintain higher humidity in the house during the winter.

• **Swimming in the ocean** is good for reducing psoriasis. Bathing in **heated baths** is also helpful, but it also tends to increase the itching. Put **seawater**, several times a day, on the area. Regular **ocean bathing combined with sunlight** heavily reduces psoriasis. (Substitute: 1-4 pounds of **sea salt** (from health-food store) dissolved in bathwater. If you have a second bathtub, you might wish to leave the water in there and bathe in it repeatedly (if you have a way to warm it).

• A **cream containing capsicum** (the active ingredient in cayenne) reduces both scaling and redness. But that causes some burning, stinging, and itching. The chemical relieves pain by acting on sensory nerves. There may be a burning sensation for the first several times it is applied, but this will lessen.

• Apply **vitamin D_3 cream** for good results.

• A combination of **milk thistle seed, dandelion root, oregon grape root, yellow dock and garlic** (combined in a tea) generally eliminates psoriasis within 1-3 months.

• **Angelica** contains *psoralens*, which fight psoriasis. Make a tea and drink it. Food plants containing *psoralens* include **carrots, celery, figs, fennel, and parsnips**.

• Rub mashed **avocado** on psoriasis patches. It is cool and soothing. In Europe, **Chamomile** is used to treat psoriasis, eczema, skin that is dry and flaky. Apply it externally. (But this herb is in the ragweed family, so it might cause a reaction in you.)

• **Licorice** contains *glycyrrhetenic acid*, which works better than *hydrocortisone* in treating psoriasis and eczema. Apply it directly to the affected area. **Sarsaparilla** contains *saponins* which bind to endotoxins and improve psoriasis. Take as a tea and apply to area.

• To relieve itching, toss a few handfuls of **oatmeal** in a warm bath or tie it into cheesecloth, to prevent the sticky oatmeal from clogging the drain.

• Make a strong decoction of 8 oz. each of **garlic juice** and **glycerine**, and 1 pint **burdock seeds**. Mix together, saturate a cotton cloth and place over area, cover with plastic and secure with adhesive tape. Change 2-3 times daily. Also drink 1 tsp. 3-4 times daily till psoriasis is gone.

John Pagano, D.C., has spent 30 years successfully helping people eliminate psoriasis. He says it is caused by leaky gut syndrome, allowing toxic materials to pass through an acid bowel wall. *Here is his formula:*

Drink 6-8 8-oz. glasses of **water** daily. Twice a day, eat **stewed figs, apples, raisins, apricots, pears, peaches, or prunes**. This will help clean the bowels. **Exercise** fairly vigorously outdoors 30-40 minutes a day. Rub **castor oil** on thick skin lesions, and apply a mixture of **olive oil** and **peanut oil** on thinner ones. Stop using all **antiperspirants**, because they block normal elimination through sweat glands.

By this time, an increased amount of toxins will be thrown off, causing increased burning and itching. Take a **lukewarm bath** containing 1 cup **apple cider vinegar** (if your skin is not cracked from scratching), 2/3 cup **rolled oats**, and 1/3 cup **cornstarch**. You might also add 1 pound **baking soda**. Bathe in this 15-20 minutes a day, to wonderfully soothe the nerve endings.

The diet should be 70%-80% **fruits and vegetables**, including many **leafy greens**. The high fiber content will greatly help the bowel. Eat **no meat, shellfish, butter, margarine, or hydrogenated fats** (in most processed foods). Do not eat anything in the nightshade family (**tomatoes, white potatoes, eggplant, peppers, paprika, tobacco**). This includes no **ketchup, pizza**, etc. Also no **processed, pickled, smoked, fried, or junk**

foods. No **processed foods with coconut oil or palm oil.** No **excess sweets, candies, pastries, or pies.** Take 4-6 tsp. flaxseed oil daily. The *omega-3* in it helps heal the bowel.

Coat the inner lining of the bowel with **slippery elm,** promoting its healing. Take 1 Tbsp. granular **lecithin** 3 times daily, 5 days a week.

Add ½ tsp. **slippery elm** powder to 1 cup warm water, let stand 15 minutes, stir and drink. Do not eat for the next 30 minutes. Drink this for the first 10 days of the program, then every other day until the psoriasis clears. **American yellow saffron** also help heal the bowel wall, as it flushes toxins from the kidneys and liver. Add boiling water to cup containing ¼ tsp. saffron and let stand 15 minutes. Drink it 5 days a week until psoriasis clears. Stop using it if you have excessive urination or bladder irritation.

—Also see Skin Diseases (243-279).

ENCOURAGEMENT—What greater privilege could be ours than to enter the family of God. Trust God and, by the enabling grace of Christ, obey His Ten Commandment law, even though many around you may despise it. Proverbs 29:25.

ERYSIPELAS

SYMPTOMS—Redness, discoloration, blisters, and swelling that most commonly attack the face, and accompanied by high fever and other indications of acute illness. The skin is deep red or pink and appears glazed. It has a combined itching and burning sensation. There is a definite edge or margin to the affected area. Blisters may develop. The swollen area feels firm and hot. The condition tends to spread in all directions from where it first began. Even in cases moderately severe, generally the face is swollen. Eyes are closed. And the lips and ears are thickened and feverish.

CAUSES—Erysipelas is serious. And, in babies, the aged, and women who have recently given birth, it may prove fatal. It is likely to cause abortion in pregnant women. This is obviously a very serious condition.

NATURAL REMEDIES

IMMEDIATELY

You will want to contact a physician. If you have contacted a physician, apply **ice bags or ice-cold compresses** (20 minutes on and 10 minutes off) to the affected area until he arrives. Cold compresses to the head help reduce the headaches.

OTHER HELPS

• Go on a thorough cleansing program, with **fruit and vegetable juice fasting,** followed by a careful **nutritious diet.**

• In addition to the liquid diet, he must drink at least 3 quarts of **water** everyday.

• **Avoid constipation.** When eating, there should be 3 bowel movements a day, or use an **enema.**

• Do not wash with soap and water. Only use a saturated solution of **boric acid.**

• Helpful herbs include **plantain, yellow dock, chickweed, burdock root, chamomile, mullein, and yarrow.** Dissolve herbs in a quart of boiling water. Dip a cloth in cool water and lightly touch the affected areas. Do not wipe the skin. **Chickweed** tea is excellent for this purpose. Add 1 Tbsp. per pint of boiling water.

• Another good wash is equal parts **gum myrrh, echinacea, witch hazel, and goldenseal.** Mix and use 1 Tbsp. to 1 pint boiling water, steep ½ hour, strain, apply with cotton.

• A **raw cranberry poultice,** applied cold, will help remove the burning. Dilute **lemon juice** 50-50 with water and apply gently.

• Cover the area with **grated potatoes,** about a fourth inch thick. When dry, remove, and do it again.

—Also Skin Diseases (243-279).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ERYSIPELAS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

GENERAL—Cold Mitten Friction or Towel Rub every 3 hours.

COMBAT LOCAL INFLAMMATION AND EXTENSION OF THE DISEASE—Cold Compress during the early stage of the disease, renewing before it becomes warm. Later, give it less frequently. **Avoid Ice** Bags or Ice Compresses which involve risk of sloughing. **Fomentations** for 2-5 minutes every 2 hours. Ice Collar when the skin of the head or face is affected.

FEVER—Graduated Bath, Prolonged Neutral Bath, **Cooling Enema,** Cooling **Wet Sheet Pack.**

RECURRING CHILLS—Dry Pack and hot **water** drinking.

VOMITING—Ice Bag over stomach, **Hot and Cold Trunk Pack.**

PERICARDITIS, ENDOCARDITIS—Fomentation over heart for 30 seconds, followed by **Compress** above heart at 60° F.; change every half hour.

GENERAL METHOD—During the early stage of the disease, while the surface is bright red and the inflammation is extending, apply **cooling measures,** changing every few minutes (3-5 minutes), as often as the fomentation is warm. Prevent extreme depression by a **Fomentation** that is not too hot, every hour or two. When the parts become a dull red color or the rapid extension is checked, employ the **Heating Compress,** changing it at intervals of 15-30 minutes, prolonging the interval as the fever and inflammation subside.

If any of the following related problems exist, see under their respective headings: Myocarditis, Arthritis, Acute Nephritis, Delirium.

ENCOURAGEMENT—In the gift of Christ, God gave all heaven, that the moral image of God might be restored in man. His enabling grace, in all its vastness, is offered to us—so that we might live clean, good lives, in obedience to His ten commandment law.. Faithfully trusting in Christ, we will soon be with Him in heaven. Psalm 91:1-2, 4, 10.

KERATOSIS
(Sharkskin)

SYMPTOMS—This is the rough "goose bump" skin you will find on your elbows and also on the backs of your arms, thighs, and buttocks. It feels like a sandpaper surface.

CAUSES—This is a sebaceous and keratinized buildup of hard granular plugs in the openings of hair follicles. Many physicians claim that this is a normal condition, but it is actually a deficiency of **vitamin A and zinc**.

NATURAL REMEDIES

• Take **vitamin A** supplementation. This should be 25,000 units per day. However, keep in mind that vitamin A can be dangerous. Since it is an oil-soluble vitamin, it is stored very well by the body. Never take over 30,000 units a day, and only for a limited period of time.

• Increase **zinc** to 15 mg, three times a day, and essential fatty acids to 5 gm, three times a day.

ENCOURAGEMENT—Give God the most precious offering that it is possible for you to give. Give Him your heart. He offers to make you a member of His family, a child of the heavenly King. What earthly inheritance can equal this! Psalm 42:11.

LEUKODERMA
(Vitiligo)

SYMPTOMS—This is a loss of skin color, especially in black or dark-skinned people. When occurring in Europeans, it is less likely to be noticed. It is most commonly seen as white patches, surrounded by a dark border.

CAUSES—The skin is no longer producing melanin, the dark-coloring pigment. It most frequently occurs to someone who has **thyroid** problems. Premature gray or white hair may also occur. All this points to a deficiency of certain **B complex vitamins**.

When treatment is effective, small spots of pigment will appear in the white patches which gradually fill in. But only a few experience a complete return to the original color. Vitiligo is difficult to eradicate.

NATURAL REMEDIES

• **B complex supplementation**, plus emphasis on two special B vitamins: Para-aminobenzoic acid (**PABA**, 100 mg four times a day. Do not take more than 400 mg per day) and **pantothenic acid**. PABA injections may be needed. Also be sure and take **hydrochloric acid** if it is needed. Other helpful nutrients include **vitamins A, B complex, magnesium, zinc, and copper.**

• One study found that folic acid and vitamin B_{12} were low in those with this condition. High dosages of **folic acid** (1-10 mg daily) and **B_{12}** (1000 mcg every 2 weeks) produced increased pigmentation (normal skin coloring) within 8 months.

• The amino acid **L-phenylalanine** (50 mg per kg body weight), combined with **ultraviolet** radiation therapy also greatly helped, especially in children. But do not use UV lamps or tanning beds!

• Many with this vitiligo lack sufficient stomach **hydrochloric acid**. If there is a burning sensation, stop taking it. (The normal stomach produces as much HCl as found in 20 10-grain tablets. But no one should take more than 10 grains (650 mg). Do not take HCl if you have heartburn.

• Only two herbs have been found useful for leukoderma: The best is **khella** *(Ammi visnaga)*. The active ingredient in this stimulates repigmentation of the skin. Take 120-160 mg khella per day. But use khella with caution, for it may cause side effects (nausea and insomnia). Another herb that may help is **St. John's wort**. For it also increases the skin's response to sunlight, producing coloring. Do not use this herb during pregnancy or lactation.

• **Avoid cheese, yeast, wine, and pickled herring**.

ENCOURAGEMENT—We need a living faith. We must know that Jesus is indeed ours and that His Spirit is purifying and refining our hearts, and enabling us to keep the Ten Commandments. May we press closer to our God, so He can fulfill His will more fully in our lives. Romans 8:24.

CELLULITIS

SYMPTOMS—This is a bacterial infection of the skin and underlying tissues that causes redness, swelling, pain, and tenderness.

CAUSES—An area of skin and the underlying tissues become infected by bacteria that enter through a small, possibly unnoticed **wound**. The infection causes redness, pain, and swelling and most commonly affects the legs. When it occurs on the scalp, it is a nonlocalized inflammation without suppuration. Symptoms appear gradually over several hours.

Elderly people are especially vulnerable to cellulitis because many of them have **poor circulation**, which leads to edema or leg ulcers. These problems increase the risk of infection. Others at increased risk of cellulitis include **intravenous drug abusers** and those with **diabetes**. Untreated cellulitis may cause septicemia, a serious blood infection. Cellulitis may recur if you have a persistent immune or circulatory problem.

NATURAL REMEDIES

• If your leg is infected, you should **keep it elevated** to reduce swelling.

• Herbs are applied locally to the area, to cleanse skin impurities. To eliminate any excess of liquids and purify the blood, it is taken internally. These include **dandelion**, which improves liver function and prevents internal toxicity. Prepare an infusion of the fresh juice from leaves and roots.

• An infusion of leaves and/or buds from the **white birch** also cleans skin impurities. From a decoction of the rhizome and root of kneeholly, prepare a lotion or compress. This will invigorate the tissues, promote venous circulation, and reduce cellulitis.

ENCOURAGEMENT—Our Lord adapts Himself to our special needs. He is a shade on our right hand. He walks close by our side, ready to supply that which we need. He comes very near to those who are engaged in willing service for Him. He knows every one by name. Oh what assurances we have of the tender love of God! Cling to Him and, by faith in Christ's enabling grace, obey Him.

LUPUS VULGARIS
(local TB of the skin, Lupus Erythematosis)

SYMPTOMS—Joints and blood vessels are affected, producing arthritis-like symptoms. The kidneys and lymph nodes become inflamed. And in severe cases there is heart, brain, and central nervous system degeneration. The skin and kidneys can be affected.

CAUSES—Lupus is a classic example of an autoimmune-type disease in which the body's immune system attacks connective tissue. It affects women nine times as often as men and becomes life-threatening, when the kidneys become involved. The word "lupus" means "wolf," because of the rough way it causes the skin over the cheeks and nose of some people to appear.

Orthodox medicine does not know what to do for this condition. But natural remedies can help rebuild a stable immune system. Those taking them tend to feel worse for 1-2 months until the toxins are neuturalized.

NATURAL REMEDIES

• Follow a natural remedies arthritis cleansing program.

• Drink 48 oz. **water** daily. The diet should be 60%-75% **fresh foods**. Take **potassium broth** (from thick potato peelings) daily for 1 month, then every other day for another month, then once a week for the third month. Take 1-2 glasses **aloe vera juice** daily. Take 4 tsp. **flaxseed** oil daily. Take a good walk every day for **exercise**. Take **alfalfa tablets** to increase fiber and add minerals. Eat **garlic**. Eat **fresh pineapple** to reduce inflammation. Use **hypoallergenic soaps**.

• Take 500-1,000 mg **vitamin C**, 3 times daily; 400-800 IU; **vitamin E**; and 1-2 Tbsp. **flaxseed oil**.

• Make sure your diet is very **low in fat**. Do not eat **meat** or **fish**. Avoid refined **sugars** and **starches**. Avoid **nightshade plants** (eggplant, tomatoes, peppers, tobacco).

• Avoid **birth control pills, cortico-steroid drugs, penicillin, allergenic cosmetics, UV rays**. Any of them can cause a flare-up of lupus. Avoid **fluorescent lights**. They make lupus symptoms worse. Eliminate **alcohol, caffeine, and sugar**.

• Helpful herbs include **red clover, pau d-arco, and feverfew**. But do not use feverfew during pregnancy. **Licorice** root tea may reduce lupus symptoms. Licorice works better than immunosuppressive drugs, such as steroids. But, if overused, licorice can elevate blood pressure.

ENCOURAGEMENT—The gifts of Him who has all power in heaven and earth are in store for the children of God. Gifts so precious that they come to us through the costly sacrifice of the Redeemer's blood; gifts as lasting as eternity will be received and enjoyed by all who will come to God as little children. Matthew 11:28-30.

ACTINIC KERATOSES

SYMPTOMS—Spots which are dry, red, and scaly. These are most frequently found on the face, neck, or backs of hands.

CAUSES—These are lesions which result from years of **overexposure to the sun**. They may appear to be age spots *(above)*, but are actinic (solar) keratoses. These spots can be precancerous. In fact, they turn malignant roughly 25% of the time. Later they may become hard to the touch and grayish or brown in color.

NATURAL REMEDIES

PREVENTION

Low-fat diets reduce the risk of actinic keratoses. Patients whose diets contain only 21% fat are five times less likely to develop actinic keratoses than those who eat a high-fat diet.

ENCOURAGEMENT—Take God's promises as your own, plead them before Him as His own words, and you will receive fullness of joy.

SCLERODERMA

SYMPTOMS AND CAUSES—Thickening and hardening of the connective tissues in the skin, joints, and internal organs. A rare autoimmune disorder, more common in people of African descent. The skin on fingers and hands may thicken, become swollen, or contract. Also called multiple sclerosis *(see 478)*.

NATURAL REMEDIES

Follow the recommendations given in the chapters on diet, vitamins, and minerals *(84-106)*.

EXTREMITIES

EXTREMITIES - 1 - EXTREMITIES

Also: Claudication (530)

NUMB EXTREMITIES

SYMPTOMS—There is a lack of feeling in the toes, ngers, arms, or legs.

CAUSES—Aside from serious nerve diseases, this mporary condition usually results from pinching off ıe nerve and blood supply leading to an extremity.

But it could be an initial warning of something seri- ıs. If the problem is ***not*** immediately resolved, check ıe disorders listed under *Paralysis (475-483)* in *Sec- on 9 (Neuro-Mental)* or contact your physician.

NATURAL REMEDIES

• **Avoid** tight clothing and strained positions.

• Be sure to get an adequate supply of the **B com- lex vitamins, including B_6**.

• A water treatment useful for numb, tingling feet ould be a **fomentation to the spine**, along with **hot or lternate sponging of the limbs**.

ENCOURAGEMENT—How lovingly the angels of od guard His earthly children who cry to Him for help. ou cannot now understand all the mysteries of Provi- ence. But you can know that all things work together ır your best good. Nahum 1:7.

COLD EXTREMITIES

SYMPTOMS—Hands and feet frequently, or always, eling cold.

NATURAL REMEDIES

• Be sure to **dress warmly** enough. Fashionable lothing often dictates, leaving the arms and legs im- roperly clad. The blood supply is chilled back from ıe extremities and pooled in the trunk. This break- own in proper body circulation can produce diseased onditions in the chest, and in the intestinal and ab- ominal organs.

• Are your nerves being fed properly? Take a **B com- lex supplement,** including **niacin and B_2**. Also take **ibonucleic acid**.

• You may have a **sluggish thyroid.** *See Hypothy- oidism (549).*

• If a sudden coldness comes to your hands and/or feet, and they blanch white, you may have Raynaud's disease *(284).*

ENCOURAGEMENT—The heart in which Jesus makes His abode will be quickened, purified, guided, and ruled by the Holy Spirit. And the soul will be enabled to overcome those sins which he could never put away by himself. Thank God for His enabling grace. 1 Peter 5:6-7.

FROSTBITE

(Chilblains)

SYMPTOMS—The first warning is a tingling, followed by a redness. Then comes a paleness and numbness in a body part (generally the fingers, toes, cheeks, nose, or ears). If not immediately cared for, tissue can die and gangrene will set in.

CAUSES—This is partial or total freezing of a portion of the body. *Frostnip* is superficial frostbite and leaves the area firm, white, and cold. It can result in peeling and blistering, 24-72 hours later, and perhaps cold sensitivity in the area.

In contrast, deep *frostbite* produces a cold, hard, white condition which is painless while it remains frozen. On rewarming, it becomes blotchy red, swollen, and can be quite painful.

Dry, non-infected gangrene occurs when the skin becomes so cold so long that the blood flow stops. Tissue becomes numb, oxygen-deprived, and dies. If treated right away, this can be successfully treated. (Wet gangrene is different. It is the result of an infected wound which prevents drainage and deprives the area of blood and oxygen. This requires different treatment. See a physician.)

NATURAL REMEDIES

WHILE OUTSIDE

• To warm the hands, the person should **place them under his armpits**. Have him **roll himself into a ball** to conserve heat. **He should stay out of the wind and not get wet. He should not drink or smoke.** Both block circulation to the extremities. And alcohol gives an artificial feeling of warmth while actually removing it.

• If outside, he should **stay in a car or truck** until help comes. He should **not take off his boots** until it is safe to do so. The foot may be swollen and he might not get it back on. If considerable walking must be done to find a place of safety, leave the feet unthawed until arriving at the destination.

• **Do not rub ice** on the area! This only extracts

more heat. In the early stages, you can **rub the area with a cloth dipped in cold water or snow.**

• Get the person to a heated room immediately.

INITIAL TREATMENT

• **Cover warmly** in a warm place, so frostbitten areas can warm up gradually.

• Proceed with caution! Rewarming should be done slowly! Rapid rewarming dilates blood vessels near the skin, further lowering blood pressure and sending more cold blood to the body core. As soon as possible, get the person into a slightly **warm tub** (100°-110° F.). The area is numb, so he will not feel the heat.

• **Do not apply more heat** than mentioned above. For the skin is numb and can be burned without anyone realizing it. Unless it is all you have, do not use dry radiant heat (such as a heat lamp or campfire). Frostbitten skin can easily burn; for it does not feel the heat. Living tissue is dying. So **thaw the area quickly. Do not allow it to refreeze.** Move the person to a warmer place. Wrap him in blankets. Give him warm liquids, but no alcohol. **Avoid sedatives, tranquilizers, or pain relievers.** They slow down body processes.

• For frostbite, paint on (but do not rub in) warm **olive oil.** If infective bacterial development has occurred, paint on **honey** to arrest infection.

• Sponge the area with the **water in which potatoes have been boiled.** Give a **hand- or footbath,** being very careful how warm the water is. Gently rub the frostbitten skin with a **raw onion, potato slices,** or **raw radishes that are liquefied.** To relieve pain, cover the area with cooked, **mashed potatoes or turnips** which are at room temperature.

• **Gently stroke the kidneys** toward the middle of the back. Use alternating **warm and cool hydrotherapy** to stimulate circulation. **No hot-water bottles, hair dryers, or heating pads.** Only slow warming is needed.

• *If case is severe,* **wrap the area** in gauze. So blisters do not break. **Elevate legs.** Do not rub blisters.

• *If case is very severe,* **immerse areas** in warm water and **massage** very gently under water for 5-10 minutes.

• *After being treated* for frostbite, **aloe vera gel** should be spread on the frostbitten area 4 times a day, to hasten healing and prevent permanent damage. Use the gel from a cut leaf or purchase it. Or apply the inner sides of **cucumber peelings.**

• *For two weeks thereafter,* eat a high **protein diet,** with plenty of **whole grains.**

PREVENTION

• Before heading out into the cold, put **cayenne** pepper in your shoes. In third-world countries this is a much-used remedy for frostbite. Swallowing a little, will speed up the circulation to your extremities. Fill each #00 gelatin capsule with about ¼ Tbsp. powdered cayenne. Carry several with you. And take one a day.

• **Dress warmly in loose-fitting, layered, lightweight wool clothing. Outer garments should be tightly woven and water repellent. Protect your head, ears, face, hands, and feet.** Wear a **thick ski cap (wool is best), gloves (mittens are warmer), and very warm, moisture-absorbing socks and undergarments.** (At least 1/3 of the heat lost from the body is from the head.) If it is cold enough, you may need **goggles** to protect your eyeballs.

• If you get wet, immediately **get out of your wet clothing,** or stand or sit by a strong heat source. Remain indoors when it is extremely cold and windy.

• Taking massive amounts of **vitamin C** (1,500 mg for each 65 pounds body weight) with **bioflavonoids** in divided daily doses, will help the body maintain its normal temperature to prevent frostbite and hyperthermia.

• If you cannot escape from the cold, **wiggle your fingers, cover your face,** and **move or jump about. Do not smoke or drink.**

• **At bedtime,** have enough warm blankets. Have flannel sheets above a sheepskin or wool mattress, warm cap, long underwear, and socks. And, if feasible, use an electric blanket. Extremely warm sleeping bags can be purchased.

• Whether awake or asleep, **room temperatures below 70° F.** can be dangerous, unless you are properly covered.

ENCOURAGEMENT—The sovereignty of God involves fullness of blessing to all created beings. Only in obedience to Him can we be happy.

HYPERTHERMIA

SYMPTOMS—A lowering of the overall body temperature. If the temperature is below 96° F. (35.5° C.), it may be hypothermia. Other symptoms include confusion, disorientation, drowsiness, slurred speech, shallow and very slow breathing, weak pulse, poor muscle coordination, and uncontrollable shivering.

In severe cases, body temperature can drop below 84° F., muscles become rigid, extremities are purple, and loss of consciousness may occur.

CAUSES—This is a lowering of the entire body temperature. But because it so often centers in the extremities, we are including it in this section. The same treatment should be applied as for "Frostbite" *(281).* The elderly are especially vulnerable.

The temperature is lowered to subnormal levels for some length of time, resulting in near frostbite. Severe numbness and loss of function may occur if the problem is not dealt with. Colds, flu, and infection can result.

NATURAL REMEDIES

• Follow the recommendations given for *Frostbite* (281).

ENCOURAGEMENT—Hide within your heart the precious promises of God's Word, and you will be strengthened in time of need. Cling to Christ and trust Him to care for you to the end. Micah 7:7.

FELON
(Whitlow)

SYMPTOMS—A swelling on an abscess of a thumb or finger (sometimes a toe), which includes throbbing pain and extreme tenderness. It may, at first, seem to be an infection or inflammation of the skin.

CAUSES—The germs causing the infection are usually carried under the skin by a deep pinprick, thorn, sliver, or some other sharp object. The inflammation and pus are deep among the tendons, tendon sheaths, or even next to the bone.

If the felon is not carefully and thoroughly lanced promptly, the tendons could slough or the bone be damaged. This would result in a permanently crippled body part. Moreover, if the pus is not drained, there is danger that the infection may travel to the hand and more extensive crippling occur. Or the infection may infect the blood; and blood poisoning will result. *See Blood Poisoning" (446).*

NATURAL REMEDIES

• Call a physician and **have the felon lanced**. Deep lancing through very painful flesh must be done. So it may be necessary for the patient to be anesthetized.

• An alternate remedy, used by the old timers on the frontier, is as follows: Warm some **kerosene** and immerse the affected part into it for at least 10-15 minutes at a time, 4-5 times a day. This will eliminate the felon.

• To relieve pain, put a piece of **lemon** on it. If on the end of a finger, cut a small hole in the lemon and place it over the finger. If elsewhere, bandage on a thick slice. This may solve the problem if kerosene is not available.

• Jethro Kloss recommends a poultice of equal parts of **slippery elm, lady's slipper,** and **lobelia**.

• Dr. Christopher prescribes boiling the roots of equal parts **blue flag** and **American hellebore** 20 minutes in equal parts of milk and water. Then soak the felon for 20 minutes as hot as can be tolerated. After this, bind on the roots for 1 hour.

ENCOURAGEMENT—Those who take the name of Christian should come to God in earnestness and humility, pleading for help. Jesus has told us to pray without ceasing. And so many need our prayers. James 5:16.

ERYTHROMELALGIA

SYMPTOMS—A skin neurosis, accompanied by burning and throbbing which comes and goes and affects any of the extremities, but especially the feet.

CAUSES—Although this is a nerve problem, it is listed here because it rather consistently affects the extremities.

NATURAL REMEDIES

• Let the patient **rest. Elevate** the affected part. Place a **cold compress** on it. And change this every 20-30 minutes. Apply graduated tonic frictions (such as the **wet hand rub, the cold mitten friction, or the cold towel rub**). See the chapter on *Hydrotherapy* in this *Encyclopedia*, for further information on how to apply these treatments *(153-211)*.

ENCOURAGEMENT—Let your affections center upon God. Think of His goodness and let His Spirit guide you into deeper appreciation of His Ten Commandment law. "If there be first a willing mind, it is accepted according to that a man hath, and not according to that he hath not." 2 Corinthians 8:12.

GANGRENE

SYMPTOMS—The skin darkens, and either remains soft and moist or becomes dry and shrivels. Eventually it sloughs off. As *wet gangrene* progresses, the tissue changes from pink to deep red to gray-green or purple. Symptoms of *dry gangrene* are a dull aching pain, coldness, and eventual numbness in the area.

CAUSES—Tissues affected by gangrene die if not treated in time.

Dry gangrene is caused by a stoppage of blood flow. Lack of blood and oxygen causes the tissues to die. There is no bacterial infection. This most often occurs in the fingers, toes, nose, or ears. If not treated, the gangrenous area will have to be amputated, but the person will not die. Causes include **frostbite, hardening of the arteries, poor circulation, Raynaud's disease, diabetes, injury,** or **blockage within a blood vessel**.

Wet gangrene (also called *gas gangrene*) is caused by a **wound** which becomes infected from lack of oxygen. Bacteria are present. If not treated, the person will go into shock and die within a few days.

NATURAL REMEDIES

Consult a physician. In addition to primary treatment for the gangrene *(see Frostbite, 281)*, the following suggestions will help:

• Eat a **nourishing, high-protein diet** to rebuild tissue. Include **kelp,** to strengthen the thyroid. Drink **carrot juice**. Take 25,000 units of **vitamin A** daily for a week. Take **vitamin C** (2,000-5,000 mg daily) until the problem is solved. Drink lots of quality **water** and **green drinks**.

• **Stop eating junk food, all meat, tobacco, alcohol, and nearly all salt.**

• Take an **enema** containing powdered psyllium seed in water daily, to assure good bowel movements.

• If the skin is dry, lightly **rub wheat germ or olive oil on it**. When pus is oozing, dab warm **hydrogen peroxide** over the area and wipe off carefully.

• Either keep **walking** or **massage** the area (usually the legs) to improve circulation.

• Apply **cool baths** to the extremity or cool whole

baths. **Chaparral tea** or **apple cider vinegar** can be added to the water, to help disinfect it (1 Tbsp. per quart). Also very helpful are **alternate hot and cold footbaths** or **fomentation** packs to improve blood flow.

• **Chelation therapy** *(596)* is able to help solve gangrene problems.

If you have hardening of the arteries or diabetes, be especially diligent in treating this condition.

If an injured area becomes red, swollen, painful, or has an odor, contact a physician.

ENCOURAGEMENT—It is difficult to exercise living faith when we are discouraged. Yet this, of all others, is the very time when we should exercise faith. When you have the greatest need, that is the time to seek God the most earnestly. He will hear, He will answer, He will help. Psalm 37:25-26.

RAYNAUD'S DISEASE

SYMPTOMS—The small arteries in the extremities constrict or tighten. The hands and feet are extremely sensitive to the cold and suddenly contract. Lack of oxygenated blood causes the fingers or toes to become whitish or bluish in hue. As a result, the affected area may temporarily shrink in size!

Unless these attacks are reduced, ulcers may form, which further damage the tissue and produce chronic infection under, and near, the fingernails and toenails.

The hands are the areas most often affected. But it can occur in the fingers and possibly toes, nose, tongue, cheeks, ears, or chin. A blood spasm may initially blanch the area. Tingling, and then swelling, may occur and become painful. The appearance may change to a bright red, as the blood vessels again distend and fresh blood is sent back into the area.

The attacks usually do not last long. But, in those instances in which they do, gangrene can develop.

CAUSES—A cold attack is generally brought on by **exposure to cold** or **emotional upset**. But it can also be brought on when the **hands go into the refrigerator** for a moment, a difficult written exam must be taken, or a **verbal conflict** occurs. Spasms of small arteries result.

The underlying cause may be less easy to identify. It might be **high blood pressure, drugs, connective tissue disease, inflammation of the arteries,** or **equipment vibrations** which injure the blood vessels. In some, the problem is a localized oversensitivity to **hormones** that cause blood vessels to constrict.

Some individuals have lived in a **cold, improperly heated environment** for too many months or years, and the problem developed. Try to avoid resting or sleeping in ice cold places. It can also be caused by **not clothing the limbs** properly in cold weather over an extended period of time. Women as well as men should clothe their limbs in the winter.

Food allergies, junk food, or a poor diet which is high in starches and low in greens, vitamins, and minerals may cause it.

Antihypertensives, ergot drugs, channel blockers, or **alpha-and beta-adrenergic blockers** can be the cause.

There are two forms of this condition:

(1) *Raynaud's phenomenon:* This may be due to **various bodily disorders**. It occurs evenly in both men and women, and usually begins after the age of 30. Symptoms in the phenomenon may affect only one side of the body.

(2) *Raynaud's disease:* This is the primary disease, and occurs mainly in women. The disease generally begins in the teens or early twenties. But it can occur at any time in the life. Attacks normally affect both sides of the body equally.

Frequency of the attacks are significant. They may be rare or occur as often as several times a day. Mild occurrences only last a few minutes. Severe ones may continue for hours. Between attacks the hands will at first appear normal. Later they may remain slightly bluish. Gradually the attacks will be more frequent and last longer.

In later years, the hands will be slightly bluish all the time. The fingers become swollen. The skin turns pale, discolored, shiny, taut, and smooth. The nails become clubbed and deformed. In advanced stages, poor blood supply can weaken the fingers and damage the sense of touch. The sense of feel may decrease and delicate movements become more difficult to perform. Infections and gangrene may occur more frequently in the affected area.

Instead of Raynaud's, you might have **Buerger's disease** *(285)*, a nerve disorder which gradually cuts off the nerve supply to the extremities. Buerger's disease is primarily caused by using tobacco products. Buerger's is a steady cutting off of nerve flow. Whereas Raynaud's is an intermittent blood flow.

This may be a symptom of *Scleroderma (279)*, a rare and serious disease that involves hardening of the skin and damage to the internal organs. Or it could be *Claudication (530)*, which involves a narrowing of the arteries in the legs.

NATURAL REMEDIES

DIET

• Drink enough **water**, but **not soft drinks**.

• Eat a **high-fiber diet** which includes some **psyllium seed**, to help clean the colon. Eat slow-cooked **grains** and a **low-protein** diet.

• Take **vitamin E** (80-1,200 units per day), **unsaturated fatty acids** (wheat germ oil, etc.), **tryptophan**. Take **calcium** (2,000 mg daily) and **magnesium** (1,000 mg daily). Get enough **iron** in your diet.

• Sprinkle a small amount of **cayenne** on your food,

to increase circulation. Other helpful herbs include **garlic, ginkgo, ginger, biloba extract,** and **pau d'arco**.

• Eat a warm soup which includes **cayenne, garlic, and ginger**. It will really warm you! The warming power of cayenne is legendary. A research study found that garlic improves blood flow in the legs. Chinese herbalists give ginger to treat cold fingers and feet.

• Sprinkle **cayenne** in your shoes, to keep your feet warm.

• **Avoid fatty, fried, and junk foods**. At least 50% of your diet should be **raw food**. Avoid food items which tend to bother you (**allergenic foods**). Avoid caffeine (**caffeine, tea, soft drinks, chocolate**). Caffeine restricts blood flow. Use a **fat-free, sugar-free diet**. Sugar increases blood viscosity as well as triglycerides. Avoid food **seasonings**.

• Do not take any **tobacco** product or use **alcohol**. Nicotine causes constriction of the blood vessels and it produces plaque in them, both of which reduce blood flow. Do not even be in the same room where someone is smoking.

OTHER HELPS

• **Keep hands and feet warm**. This is important. It might be well to select a **warmer climate** in which to live. **Dress warmly** at all times. Always wear **gloves** in cold weather (mittens will keep you even warmer). Wear **shoes**. Do not walk without them when it is cooler, even in the house. Wear extra warm **socks** in the winter. Gloves, mittens, and shoes should be warm before putting them on, since it is difficult for one with this problem to warm them. Wear **shoes** which breathe, so you do not end up with damp, cold feet. If you have a tendency for your socks to become damp, try to change them halfway through the day. It is important that you wear a **warm hat** in cold weather. An uncovered head loses a lot of heat.

• Avoid contact with **cold objects**, even for brief moments. While preparing meals, use **tepid**, not cold, **water**.

• *When an attack occurs,* **immerse the body part** in warm (not hot) water, no warmer than 90° F. Why not warmer water? During an attack, without realizing it, one's skin can more easily burn.

• **Massaging the hands and fingers** every evening helps reduce the severity of the attacks, by stimulating blood circulation in that area.

• **Stressful situations** produce a spasm of the blood vessels. As much as possible, avoid such situations. **Keep calm, cheerful, and relaxed. Plan ahead** and avoid scheduling pressures. Trust in God and believe He will care for you. Vigorous outdoor **exercise** will strengthen the entire body and also relax it. Exercise tends to neutralize the attitude and effects of stress.

• Medicinal drugs for Raynaud's do not seem to help. The side effects outweigh the benefits (ergot, beta-blocking drugs, cytotoxic agents, etc.). Do not take **birth control pills**.

• Avoid **machinery which vibrates** the hands. In one study, 50% of pneumatic drill workers had Raynaud's, compared with 5.6% for the average population. Such equipment includes chain saws, metal grinders, stone cutters, lathes, and manual typewriters.

• **Sunbathing** is helpful; for it strengthens both the body and the blood.

• One physician (Donald McIntyre) suggests occasionally **swinging the arms in circles**, 80 twirls per minute, to throw blood into the hands. He says to do it as a pitcher does it: swinging the arm up from the back and then hard downward in front. It has been found that those with back problems can swing their arms entirely in front of the body with the same beneficial effect on the hands (upward from the trunk and downward to the side).

• *Here are several* ***practical suggestions*** *during cold weather:* Before driving to work in the morning, start your car. Turn on the heater and let it warm up. Arrange for parking close to your employment. Dress warmly, including warm hat and gloves, outdoors. Even indoors, put on extra clothing if you need to. Purchase thermal gloves and socks. Try not to touch cold metal with your bare hands. Cover outside door knobs and keys with rubber caps. Wash produce in lukewarm, not cold, water. Check whether you are taking drugs which interfere with your circulation. Do not drink cold drinks. Drink enough fluids, to maintain a good blood volume and circulation.

—Also see Buerger's Disease (below).

ENCOURAGEMENT—Talk with Jesus as though He were right by your side. If there is a place you cannot go with Jesus, then do not go there. If there is anything you cannot watch or listen to with Him, then turn away from it immediately. John 1:12.

BUERGER'S DISEASE
(Thromboangiitis Obliterans)

SYMPTOMS—Continual coldness of the extremity is frequently the first symptom. But numbness, tingling, and aching may also be noticed. When lowered for long periods of time, the feet may turn blue. The problem generally begins in the feet. But it can, and will, occur in the hands and eventually the whole body—if the cause is not stopped.

Asians and Jews develop this problem more frequently than others. And 75 men have it for every one woman who develops it. It most frequently begins at the ages of 20 to 45. There are alternate periods of worsening and inactivity of the disease.

CAUSES—This is an inflammation of the blood vessel walls, accompanied by blood clots and thickening of the blood vessel walls. Eventually they close entirely.

The primary cause is the use of **tobacco** products. Rarely does a non-nicotine user get Buerger's disease.

NATURAL REMEDIES

• Stop using **nicotine** in every form. It is killing you

in more ways than one.

• *Use the treatment outlined for Raynaud's disease.* **Walking** is one of the best exercises for increasing blood flow in the legs.

• Lie on the bed and **elevate the legs** for 1-2 minutes or until they blanch. Then sit on the side of the bed and hold them down till they become pink. Do this 5 times each, 3 times a day.

• **Do not sit for long periods of time** without getting up and walking. Sleep on a **firm mattress**. **Never cross the legs** at the knees.

Forty years ago, the present author read a true story written by physician. A man had came to him with a serious physical problem. The doctor diagnosed it as Buerger's. And he warned him that, if he did not stop smoking, he would eventually lose an extremity. Several years later, the physician was walking down the street when he heard a voice, "Would you light me a cigarette, Chum?" Startled, he looked around and then down. There was the same man. He was now on a sliding board, without any arms or feet, and wanted someone to stick a cigarette in his mouth and light it for him.

—Read Raynaud's Disease (284).

ENCOURAGEMENT—When we learn to walk by faith and not by feeling, we shall have help from God just when we need it. And His peace will come into our hearts. Proverbs 11:24-25, 27.

DUPUYTREN'S CONTRACTURE

SYMPTOMS—A thickening and shortening of tissues in the palm of the hand, resulting in deformity of the fingers.

CAUSES—In Dupuytren's contracture, the fibrous tissue in the palm of the hand becomes thickened and shortened. As a result, one or more fingers, often the fourth and fifth fingers, are pulled toward the palm in a bent position. Sometimes painful lumps develop in the palm, and the overlying skin becomes puckered.

In about half of the cases, both hands are involved. Very rarely, the disorder affects the feet and toes.

The changes occur very slowly over many months or years. It occurs more frequently in men and those over 50 with Diabetes Mellitus, epilepsy, or who drink alcohol.

NATURAL REMEDIES

• Over 50 years ago, researchers first found that taking **vitamin E** reduced the severity of Dupuytren's Contracture. Several studies reported that 200-2,000 IU of the vitamin per day for several months was definitely helpful. Overall, there are more positive studies than negative ones. However, that earlier research has not been followed up on. The reason is that pharmaceutical firms make no money selling vitamin E. The disease progresses so slowly. Taking large doses of E should be a definite help. There apparently is no known toxic dose of E. You probably can take as much as you want each day.

• Exercise your fingers and practice stretching exercises.

ENCOURAGEMENT—God is pleased when we keep our faces turned toward Christ, the Sun of Righteousness. When we are in trouble and pressed down with anxieties, the Lord is near. And He bids us cast all our care upon Him, because He cares for us.

ELEPHANTIASIS

SYMPTOMS—A thick, livid, reddish, tuberculated, and insensible condition of the skin. This is usually in the lower leg. But the disease can also affect the feet, arms, scrotum, breasts, and vulva. It is accompanied by great debility and several morbid symptoms, including offensive perspiration and fierce, staring eyes.

CAUSES—Elephantiasis is the name given to a firm, somewhat rubbery, slowly developing swelling of various parts of the body. Either one of two species of filarial worms may cause it: Wuchereria bancrofti and Wuchereria malayi. The immature parasites are transmitted by many different species of mosquitoes. The legs are most often affected. Because they become so large, the disease is named after elephants.

The enlargement is due to chronic obstruction of lymph drainage. The deeper layers of skin, together with underlying connective tissues, are enormously thickened and changed into a blubbery mass which oozes lymph freely when punctured or cut.

Travelers to a tropical country, primarily Africa or Southeastern Asia, can contract this disease.

NATURAL REMEDIES

• R.T. Trall, M.D., recommends the following natural remedies for this condition. A diet restricted to **plain vegetables, fruits, and grains**. Absolutely **no meat or fish** of any kind. **Absolute cleanliness, frequent cool or tepid bathing or washing** of the entire surface, along with copious **water** drinking.

ENCOURAGEMENT—God knows just what we need, just what we can bear; and He will give us grace to endure every trial and test.

EXTREMITIES - 2 - NAILS

NAIL PROBLEMS
(Fingernails and Toenails)

SYMPTOMS AND CAUSES—Your fingernails help reveal how well you are absorbing nutrients. A deficient diet can affect your nails. Although fingernails and toe-

ails are primarily composed of protein, other nutri-nts are also needed. Here are some of the symptoms, llowed by the deficient nutrient:

Poor nail growth: zinc.

Dry, brittle nails: protein, vitamin A, calcium, iron.

Fragile and showing horizontal or vertical ridges: vitamins.

Half moons absent: protein deficiency.

Thin, flat, and even moon-shaped (concave or oon-shaped) nails: iron deficiency.

Pale nail beds: anemia.

Poor nail growth: zinc deficiency.

Excessively dry, very rounded, and curved nail nds which are darkened: vitamin B_{12} deficiency.

Splitting nails: lack of hydrochloric acid and amino cid deficiency.

Washboard ridges: Iron, calcium, zinc deficiency.

Hangnails: Protein, folic acid, and vitamin C defi-iencies.

White bands on the nails: protein deficiency.

White nails: liver disease, copper excess.

White spots: zinc deficiency, thyroid deficiency, and ydrochloric acid deficiency.

Fungus under nails: lack of lactobacillus in colon.

Bluish nails: chronic lung conditions (not enough xygen).

NATURAL REMEDIES

• **Supply the indicated deficiencies, listed above,** hich apply to you.

• Eat an adequate **protein** diet, which includes rewer's yeast, **calcium, silica.** And, if necessary, add upplementary **hydrochloric acid.**

• **Water** causes the nails to swell. Upon drying, the esult can be loose, brittle nails. In addition, avoid im-nersing the hands in **detergent water.**

• **Never cut the cuticles.** This damages the nail nd invites infections. **Do not push them back.**

• *Brittle nails* are common among teenagers, preg-ant women, and those with food allergies. The prob-em is malabsorption or nutritional deficiencies (**unsat-urated essential fatty acids, amino acids, calcium, ron,** or **zinc**).

• *Hangnails* are caused by an **essential fatty acid leficiency.** Put **vitamin E oil** or **aloe vera** directly on it, o reduce further breaking and likelihood of infection. They are particularly common among women who have heir hands in water a lot or who bite their nails. Keep ails clipped short. Rub **vegetable oil** into the hands ccasionally.

• If you tend to pick at your nails, wear clothes with ockets. When you find yourself starting to do it, **put your hands in your pockets.**

ENCOURAGEMENT—If we commit the keeping of our souls to God by living faith, His promises will not fail us. We are limited only through our lack of faith, submission, and obedience. How thankful we can be that we have Christ as our Saviour and God as our Father! 1 John 3:1-2.

INGROWN NAILS

SYMPTOMS—The nail (usually on the big toe) has pushed into the soft tissue alongside it. Soon it results in sharp pain. Infection can result.

CAUSES—Knowing the causes reveals the remedies. Here they are:

NATURAL REMEDIES

• **Wear large enough shoes!** This is the underlying problem for many cases of ingrown nails! If you cannot solve the problem any other way, cut out the front of the shoe so the ingrown nail can heal! Podiatrists know that people who wear shoes which are large enough rarely have foot problems.

• **Never cut your nails too short! Cut toenails straight across,** not rounded. The outside edge of the nail should be parallel to the skin. Do not trim the nail deeper than the tip of the toe.

• **Soak your foot in warm water,** to soften the nail. **Dry** carefully and then **insert a tiny** (tiny) **wisp of sterile cotton** under the burrowing edge of the nail. This will slightly lift the nail, so it can grow past the tissue. Apply some **peroxide** as a safeguard against infection. Change the cotton insert daily, until the nail has grown past the problem area.

• **Do not cut a "v"-shaped wedge** out of the center of your toenail! Doing so only worsens the problem. Nails grow from back to front, not from inward to outward or vice versa.

• If you accidentally cut or break a nail too short, **carefully smooth the edges** with an emery board.

• **Never cut nails with scissors.** None are small enough to do the job right. They often leave a sharp edge.

ENCOURAGEMENT—Prayer and faith can do what no power on earth could ever accomplish. In Christ, we can resist temptation and obey the Ten Commandments. 2 Timothy 2:12.

YELLOW NAIL SYNDROME

SYMPTOMS—Thickened nails with yellow or greenish discoloration, often accompanied by stunted growth and swelling of the ankles and sometimes other parts of the body.

CAUSES—This is a nutritional deficiency.

NATURAL REMEDIES

• Take 800 IU of **vitamin E** internally. As often as is practical, apply a little to the nails. After several months of this treatment, you will begin to see results.

Vitamin E is the specific for this problem. There are no herbs or water treatments which can accomplish the task.

ENCOURAGEMENT—God comes to all His children in their affliction. In time of danger He is their refuge. In sorrow, He offers them joy and consolation. Shall we turn from the Redeemer, the fountain of living water, to hew out for ourselves broken cisterns which can hold no water?

EXTREMITIES - 3 - LEGS

Also: Knee Pain (511)

LEG CRAMPS

SYMPTOMS—Sudden cramping in the leg muscles.

CAUSES—The usual causes are nutritional deficiencies, circulatory problems, strain placed on the legs by excessive weight, and electrolyte imbalances.

NATURAL REMEDIES

IMMEDIATELY

A key immediate factor is inadequate or imbalanced blood circulation.

- When you leg goes into a cramp, get up and move about. Flex your feet, with your toes pointing upward.
- Apply a hot-water bottle or heating pad to the cramping area and apply pressure with your hands.
- If in bed (when the cramping begins) and you know your legs are overheated, put the hurting leg out of the covers and the cramp may immediately stop.

OTHER HELPS

- Begin eating a better diet, primarily consisting of **fresh fruits, vegetables, whole grains, legumes, and nuts**. Do not overeat.
- It is important that you take **calcium** (2,000 mg), **magnesium** (1,000 mg), and **potassium** (5,500 mg) and that you take them in balanced amounts. Without enough calcium, muscles tend to go into spasms.
- Do not stand in one place too long. **Move about**. Shift your weight from one foot to the other. Wiggle your toes. Keep the circulation moving.

Take a **long walk** every day. Relax as you do it and breath well.

- When sleeping or sitting, sometimes **elevate your feet** above your heart.

ENCOURAGEMENT—When danger approaches, shall we seek for help from those as weak as ourselves, or shall we flee to Him who is mighty to save? His arms are open wide, and He utters the gracious invitation, "Come unto me, all ye that labour and are heavy laden, and I will give you rest." How very thankful we can be that we have such a wonderful heavenly Father!

LEG ULCERS

SYMPTOMS—Open sores which develop on deteriorated patches of skin.

CAUSES—Leg ulcers are primarily caused by **poor blood circulation** in the legs. The flow of blood is restricted, and poorly nourished skin tissue can become ulcerated.

The poor circulation restricts the open sore to very slow healing.

Other causes include **varicose veins** *(438)*, and/or **thrombophlebitis** *(436)*.

When veins in the legs stop functioning properly, venous ulcers can result. Blood is not returning to the heart as it should; the skin above the veins becomes inflammed and sores develop. *Venous ulcers* are generally located on the lowest one-third of the leg.

Arterial ulcers are different. An **embolism** or **atherosclerotic plaque** blocks the proper flow of blood through an artery, causing ulcers on bony areas around the feet and ankles.

Diabetic ulcers are surface ulcers on the skin (usually the feet), caused by **diabetes** *(547)*.

NATURAL REMEDIES

- Improve your diet and way of life. Eat **fresh fruits, vegetables, whole grains, legumes, and nuts**. Do not overeat.
- Avoid **sugary, fatty, starchy, fried, and processed foods**. Do not use **caffeine, alcohol, or tobacco**. If **overweight**, reduce.
- **Garlic** improves blood circulation. **Vitamin C** (1,000 mg) and **vitamin K** (140 mcg) strengthens tissues. Take a full **multivitamin supplement**.

ENCOURAGEMENT—Those who turn to God with heart and soul and mind will find in Him peaceful security. John 14:27.

EXTREMITIES - 4 - FEET

Also: Bone Spur (508)

FOOT PROBLEMS

SYMPTOMS—Feet that hurt all the time. Toes which are curling and become twisted.

NATURAL REMEDIES

- **Shoes that are too small,** shoes that are **too narrow in the toes,** and **high heel shoes** are the source of

most foot problems. When you select shoes, purchase **walking shoes, not stylish ones.**

WATER THERAPY

• Here are summaries of some of the information in the chapter on *Hydrotherapy (153-211):*

Numbness in feet: Give a hot **Fomentation** to the spine, accompanied by **Hot or Alternate Sponging** of the limbs. Repeat this 3 times a day.

Sweating feet: Give **Alternate** very hot and very cold **Footbaths**. During the night, apply a **Heating Chest Pack** to the feet. Give a **Cold Mitten Friction** to the feet in the morning, on arising.

Weak, pronated feet: Put the feet and part of the legs in tubs for **Contrast Baths**. Begin with a temperature of 110° F., and then after four minutes, change to tap water for 1 minute. Change back and forth 4-6 times, and end with the hot water. During the treatment, the temperature of the hot water should be gradually raised to 115°-120° F. The tap water should be gradually lowered to the temperature of ice water. Give the treatment twice a day.

Infections in the feet: Give the same treatment as for pronated feet, above.

ENCOURAGEMENT—It is Jesus that we need. His presence and help must be ours continually. God wants every one of us perfect in Christ. Through His strengthening grace, we can overcome sin and the devil. How thankful we can be for enabling grace! Were it not for the help of God, we could not resist the temptations of the devil. Matthew 19:29.

CORNS AND CALLUSES

(Bunions, Calluses, Warts)

SYMPTOMS AND CAUSES—Pressure and rubbing causes calluses on the bottoms and sides of the feet. They can also form on the hands, and even on the elbows and knees.

Corns form between toes and remain soft from foot perspiration. They occur from the rubbing of adjacent digit bones.

Corns are more painful than calluses.

NATURAL REMEDIES

• Wear proper shoes! **Never wear tight-fitting footwear!**

• **Do not use "corn plasters."** These contain acids intended to eat away at the corns. But they also eat into nearby normal flesh.

• **Do not cut** corns and calluses! This only makes the situation worse. This especially applies to diabetics.

• A corn or callus is hard, dry skin. Regularly moisturizing that skin is the key to healing. As soon as a corn develops, **apply oil** to soften. Or soak your feet in very diluted **chamomile** tea. It will both soothe and soften the hard skin. (The stain the tea makes on the feet will come off easily with soap and water.) Or just soak the feet in comfortably **hot water** for several minutes. Then apply a **hand cream which contains 20% urea**. This will help dissolve the hard skin. Do this daily. Another daily formula is to soak the area in a mixture of **oil of wintergreen, witch hazel, and black walnut** tincture. Use a pumice stone and emery board to trim down the corn or callus.

• Open a **fresh fig** and tape the pulp to the corn overnight. Or cut a square of **pineapple peel** and tape the inner side to the corn overnight. Next morning, remove it and soak the foot in hot water. An hour or two later you should be able to remove the corn fairly easily. Or rub it gently with a **pumice stone.**

• Herbalists in many lands apply **calendula** oil or salve. Or massage the corns twice a day with **caster oil, vitamin E** oil, or a salve prepared from equal parts **soft soap** and **roasted onions.**

• Another method is to crush 5-6 **aspirin tablets** and mix into a paste, by adding a half tsp. each of **water** and **lemon juice**. Apply this to the hard-skin areas. Put the foot in a **plastic bag**, wrap a warm towel around it, and sit for 10 minutes. Then unwrap the foot and scrub the area with a **pumice stone**. The dead, hardened flesh should come loose and flake off.

• Put a few drops of **citric acid** on the area. The next morning, use an **emery board or pumice stone** and rub off the dead skin.

• A variant method is to soak a piece of cotton in fresh **lemon** or **pineapple juice**. **Bandage** the cotton over the area. This will dissolve it, but you must be persistent.

• Any **sweet oil** rubbed on the area several times a day, plus the use of the **emery board or pumice stone**, will skim off the dead flesh.

• Other ways to soften the skin: Soak your feet in water from cooked **oatmeal**. Bandage the corns overnight with a paste of **bread crumbs, apple cider vinegar, brewer's yeast, and lemon juice.**

• Apply a non-medicated **corn pad** (a small oval or round pad with a hole in the middle) to the corn. If necessary, stretch the pad so it does not touch the corn in the center. Apply **vitamin E** oil, cover, and tape. Repeat frequently.

IMPROVING YOUR SHOES

• After purchasing larger shoes, put some **lamb's wool between the toes**, separating them.

• You can purchase Stella's Stretch All (or another **leather-stretching solution**) from a shoe store. Apply it to the shoes and then walk in them while wet. Repeat this frequently and the leather shoe will widen out.

• Women should **never wear high-heel shoes**. They ruin the feet, damage the spine, and throw the pelvic organs out of place.

• Women should **not wear pumps**. These are shoes which cause the foot to slide forward, jamming everything into the front. Instead, wear an **oxford-style shoe, with laces**. This properly cradles the foot.

• Always buy **shoes which breathe. Leather** is the best.

• An **undersized shoe** will damage the toes and cause corns, etc. An **oversized shoe** will produce friction and break the skin. But, of the two, oversized shoes are the less harmful.

Some calluses are useful, never painful, and should not be disturbed.

ENCOURAGEMENT—We are seldom placed in the same position twice. There are continually new experiences to be encountered. But, if we will trust in Christ, He will enable us to overcome sin in spite of all that comes our way. James 4:7.

FOOT ACHES

SYMPTOMS—Tired, aching feet.

CAUSES—Inadequate diet and rest, ill-fitting or small shoes, hard ground and floor surfaces, plus being on your feet all day long.

The average person walks 45,000 miles by the age of 35. Each step places a force that is one-third greater than full body weight on each foot. The feet contain 56 bones, plus 107 ligaments, 31 tendons, and 18 muscles. Your feet need good nutrition, plus some other helps.

NATURAL REMEDIES

• Improve the **diet**. Get enough **protein, calcium, and B vitamins**. Stop eating **junk food**. It isn't worth taking the time to chew and swallow. Your diet should be rich in **whole foods, vegetables, and fiber**. Eat **whole grains, nuts, and legumes**.

• **Avoid saturated fats, fried foods, sugars, alcohol, meat, caffeine, chocolate, sodas, salt, and oxalic acid-forming foods**.

• Lose that excess **weight**. It is hard on your feet.

DURING THE DAY

• Always wear **low shoes**, shoes which **fasten firmly**.

• During the day, **lift one foot** and **give it a good shake**. Then lift the other and do likewise. Then relax and **flex your toes** up and down.

• When standing in one place, **keep changing your stance**. **Try to keep moving** about. If possible, stand on a **carpet or a rubber mat**. Ask the boss if you can buy a rubber mat and lay it on the floor in your work area.

• Take an **ice chest** with you to work. While eating lunch, put your feet in the cold water. Then dry and put on a fresh pair of **dry socks**.

IN THE EVENING

• **Elevate your feet** when you come home at night. Then **soak them** in a basin of warm water, containing 1-2 Tsp. of **Epsom salt**. Rinse with clear, cool water.

• Make a **footbath** with 2 handfuls of **comfrey** root to 1 gallon warm water. Soak your feet 15 minutes.

• Sit on the edge of the bathtub and alternately run (to your comfort) **hot and cold water** over your feet, ending with the cold. (If you have diabetes, be careful about extremes in temperature.)

• Wrap some **ice cubes** in a wet washcloth and rub it over your feet and ankles for a few minutes.

• **Remove your shoes, sit in a chair, and stretch your feet out**. Then, below the ankle, **move each foot in ten circles**. **Point your toes down and then up**.

• Gently **roll your foot over a golf ball, tennis ball, or rolling pin** for a couple minutes.

• Scatter a few pencils on the floor and **pick them up with your toes**.

• For a terrific **foot massage**, toss a handful of beans in a moccasin-style shoe, and walk gently around the room on them.

• In the evening, sit down and put on a pair of **soft slippers**.

ENCOURAGEMENT—It is a part of God's plan to grant us, in answer to the prayer of faith, that which He would not bestow did we not thus ask. Oh, please, my friend, believe and know that God is your best Friend! Ecclesiastes 8:12.

HEEL PAIN

SYMPTOMS—Your heel hurts.

CAUSES—Underlying causes frequently include **standing, walking, exercising on hard surfaces,** and **excessive walking or athletic activity.** Other causes include these: **Arthritis, gout,** an **infection.** It is rare to be caused by a **benign tumor**.

• **Irritation from the back of a shoe** produces painful bumps on the back of the heel (called pump bumps).

There are several types of heel problems:

• Simple **bruises**. If your heel hurts only when you push down on it or press it with your fingers, it may just be bruised.

• Then there are **heel spurs**. These are bony and sometimes painful growths on the heel. These occur when the plantar fascia is pulled slightly off the heel bone.

• *Plantar fasciitis* is an **inflammation of the band of tissue *(fascia)*** that runs from the heel bone to the metatarsal bones at the base of the toes. This causes pain on the bottom of the foot near the heel. The pain is worse upon awakening and better later in the day.

• **Stress fractures** are microscopic cracks in the bone. They hurt in the morning and get worse as the day progresses.

NATURAL REMEDIES

You may need to see a medical specialist.

• Recommended herbs include **valerian, turmeric, and boswellia**. Soak the foot in **peppermint** and **skullcap**.

• Try to **reduce the intensity of your daily foot work** and foot load.

• Holding onto a railing for support, **stretch the calf muscles** by placing both feet on a bottom stair, with half of the feet extended out from the stair. Then carefully rise up on the toes and down about 5 times, gradually building up to 15 or 20. This stretching will help

flex the calf muscle. Do this exercise after walking outdoors to warm up the muscles.

ENCOURAGEMENT—He knows just what we need, just what we can bear; and He will give us grace to endure every trial and test that He brings upon us. Our constant prayer should be for a greater nearness to God.

BURNING FEET

SYMPTOMS—Feet which seem to burn at night.

CAUSES—There is a specific factor affecting this. It is a lack of **niacin** (vitamin B_3). However, there are also several other possible causes, discussed below.

NATURAL REMEDIES

• **Add niacin or niacinamide to your diet.** Either one will accomplish the task of eliminating the sense of burning feet. But niacin will cause your face to flush red and hot for a couple minutes when you swallow it while niacinamide will not.

• A secondary cause would be **air-excluding shoes** or **perspiration-retaining cotton or wool socks**. Wear leather shoes, not synthetic ones. If possible, change your socks halfway through each day.

• There can also be **allergic reactions** to the dye in new hosiery, the chemicals used in tanning leather, or the rubber compounds in athletic shoes. Did you ever notice that synthetic shoes smell like rubber tires?

• Another possible cause of scorching soles and tingling feet could be **nerve inflammation**, which would be reduced or eliminated by taking a **B complex supplement**—specifically, **B_1**, **B_2**, panthothenic acid for burning feet, **B_6** and **B_{12}** to eliminate the pins-and-needles sensation. Drink **brewer's yeast**, stirred into water or juice.

• **Cool or cold foot baths** will invigorate and strengthen the feet.

If the foot only "burns" in one place (especially between your toes), a blister *(248)* or athlete's foot *(292)* may be developing.

Burning feet that do not respond to the above care might be an early warning of the onset of diabetes *(547)*.

ENCOURAGEMENT—To have a new heart is to have a new mind, new purposes, and new motives. What is the sign of a new heart? It is a changed life. Through the merits of Christ's righteousness, we can overcome temptation to doubt and sin. We can live clean, godly lives.

SWELLING FEET

SYMPTOMS—Feet that seem swollen and achy.

CAUSES—Our feet receive a lot of pounding all day long. Sometimes they need a little special care, plus more rest and an improvement of your overall diet.

NATURAL REMEDIES

• Improve your diet. Stop the **junk food** and eat a **nutritious diet** which includes **vitamin-mineral supplementation.**

• Alternate 5 minutes of comfortably hot **saltwater soaking** with 2 minutes in **cool** water. Repeat the sequence and then rinse with **cold** water. Dry the feet and put on **fresh socks.**

• Occasionally sit with your **feet elevated.**

• While sitting down, **roll your bare feet** over tennis balls or a rolling pin. Using your feet and toes alone, **scrunch up** a terry cloth towel on the floor or try to **pick up** marbles or pencils.

• Here is an herbal tea to reduce swelling feet: Mix equal parts **white oak bark, wormwood, and shave grass.** Steep 1 Tbsp. in ½ cup boiling-hot water. Take in tsp. doses.

ENCOURAGEMENT—Every provision has been made to meet the needs of our spiritual and our moral nature. Light and immortality are brought to light through the Lord Jesus Christ. Jesus has said that He has set before us an open door; and no man can shut it.

FOOT ODOR

SYMPTOMS—Feet that do not smell very nice.

CAUSES—Bacteria on the feet, cheap shoes, or eating meat.

NATURAL REMEDIES

• **Wash your feet** frequently. Keep them clean. Scrub gently with a soft brush, including between the toes. Dry them well when finished.

• Put **talcum powder** in your shoes, to help keep them dry.

• **Change your socks** often, several times a day if necessary. This is one of the best things you can do. You do not want to walk around in wet socks.

• Some find help in wearing **two pairs** of socks at a time. This increases the elimination of sweat.

• **Soak your feet** (15 minutes, twice a week) in ½ cup **vinegar** added to 1 quart of water.

• Soak them in pans or pails of alternate **hot and cold water.** But if you are diabetic or have impaired circulation, it may be best that you not do this.

• Sprinkle some dry, crumbled **sage leaves** into your shoes, to control odor.

• Buy **leather shoes**, for they breathe. This reduces the perspiration. **Avoid rubber or synthetic shoes.** They cause your feet to smell like rubber tires at the end of the day—yet the odor is not from the feet! Even expensive rubber shoes, "endorsed by the athletes," can do this.

• Do not use **antiperspirants.** For they contain aluminum (a cause of Alzheimer's disease). **Spray deodorants** are breathed into the lungs.

• **Avoid spicy, pungent foods.** For their odor will be found in your feet later on.

• **Avoid stress.** It increases sweating, which multiplies bacterial action.

ENCOURAGEMENT—To love as Christ loved means to reveal unselfishness at all times, in all places, by kind

words and pleasant looks. The Lord will help every one of us where we need help the most in overcoming and conquering self. Psalm 110:3. How very thankful we can be that we have such a wonderful heavenly Father! He is always kind to His earthly children. We may safely go to Him and entrust our case with Him. If faithful, soon we will be with Him in heaven. Oh happy thought!

COLD FEET

SYMPTOMS—Feet which seem cold too much of the time.

CAUSES—This might be caused by some deeper problem—such as **diabetes** *(547)*, **hypothyroidism** *(549)*, **Raynaud's disease** *(284)*, **Buerger's disease** *(285)*, etc.

NATURAL REMEDIES

• Put your feet in **cold water** for 1 minute, dry them, then **jump rope, run, or walk** for 1-2 minutes. Do this 3-4 times a day.

• If you have a lawn by your house, **walk barefoot** for a few minutes on the cool, wet lawn when you arise. Then quickly dry the feet, put on fresh socks, put on your shoes, and keep active until the feet thoroughly warm. Forget about the neighbors when you do this. You are having more fun than they are. Perhaps they will start doing it too. Better yet, move to the country and exercise.

ENCOURAGEMENT—The pure in heart will see God. It is only God that can, by grace, enable us to choose to be pure. By faith, we walk and talk with our Redeemer, and live His life. Jeremiah 31:18

FLATFEET
(Pes Planus)

SYMPTOMS—The concave arch supporting the bottom of the feet is flattening out, resulting in more exhaustion during the day when you are on your feet.

CAUSES—Inadequate circulation, impoverished diet, and junk food may be involved. It can also be caused when frail children **carry heavy weights** in their youth. Once this problem develops it is generally not solved later, especially since it often occurs in childhood when parents are not aware of what is happening until it is too late. So awareness and prevention are especially important.

NATURAL REMEDIES

• Try walking upstairs **barefoot on your toes**, and then back down the same way. Support yourself on a railing as you do this. Do this 10 minutes each day, for a month while eating a **nourishing, moderate diet**. The muscles in your feet may strengthen. By helping your flat feet, your eyesight may also improve.

• If you cannot solve your flatfoot problem (perhaps because it occurred when you were a child and you did not discover it till later), **learn to adapt your step to the condition**. When you take a step, land very slightly on the outer rear portion of the foot. Then, as the foot moves back, keep the weight slightly (very slightly) on the outer part of the foot. In this way, you will make an artificial arch and your foot will not tire as quickly throughout the day.

• Use a low **arch support** and gradually increase its height.

• Try to **do part of your everyday work while sitting down** occasionally. This will help rest the feet.

ENCOURAGEMENT—We may speak with Jesus wherever we may be. There is no time or place where prayer cannot be offered. Prayer rises above the noise of machinery and traffic. We are speaking to God, and He hears us. Psalm 4:3-8.

ATHLETE'S FOOT
(Tinea Pedis)

SYMPTOMS—Blisters and/or cracks on the skin of the foot, especially between the toes. This is accompanied by itching, burning, and (in extreme cases) pustules, and ulcers. As it develops, the blisters and/or cracks soften, turn white, and tend to peel off in flakes. In severe cases, there may be pain. It is worse in warmer weather.

CAUSES—Athlete's foot is caused by one or more parasitic fungi. Fungus infections on the skin are more difficult to eliminate than bacterial ones. Any condition which keeps the **feet both warm and moist** can lead to this problem. By **scratching the sores** on the foot, the disease can be spread on the hands, under the nails, and to other parts of the body.

The fungus causing athlete's foot spreads rapidly when beneficial bacteria are destroyed by **antibiotics, drugs, or radiation**.

The organisms causing it are spread by walking barefoot on the **contaminated floors surrounding pools, showers, and other public places**.

NATURAL REMEDIES

• Eat a **nourishing diet**, including lots of **fruits and vegetables**, and **skip the processed and junk foods**. Obtain **vitamins A, B complex, and C**. Eat **whole grains, nuts, and legumes**.

• **Avoid meat, cola drinks, caffeine, sugary foods, and fried foods.**

SHOES AND SOCKS

• Eat a nourishing diet; and skip the processed and junk foods. Obtain vitamins **A, B complex, and C**.

• **Keep your feet dry**. After bathing, **dry carefully between the toes**. Wear **cotton socks** and **change them**

daily (ideally, twice a day).

• **Shoes:** To help keep your feet cool and dry, only wear shoes that will not make your feet sweat. **Leather shoes** are best. **Avoid rubber shoes**, even the expensive ones. Do not use **plastic or waterproof shoes**. They create a warm, moist place for fungi to breed. Never wear heavy **boots** all day.

• Do not wear the same shoes 2 days in a row. This gives a pair of shoes 2 days to thoroughly dry out. Spray Lysol on a cloth and wipe the inside of the shoe.

• **Socks:** To help keep your feet cool and dry, change your socks 3-4 times a day. Boil socks to kill the fungus. After washing them, rinse the socks well, to get out the detergent (which the fungus likes). Put on clean socks before dressing. In this way you avoid infecting the groin area.

• **Sunlight:** Fungi hates sunlight. When in the acute stage, try to **leave your feet uncovered**. Every so often, **put them in the sunlight. Walking barefoot outside in the sunlight** is excellent. Place your shoes in the sunlight, angled toward the sun. Ultraviolet light kills fungus.

• **Do not walk barefoot** around the house, so others will not become infected. Also, **never walk barefoot in public places** (public showers, locker rooms, pool decks, motels, hotels). Wear shoes or slippers.

HERBS

Cut raw **garlic** into tiny pieces and, for several days, put some minced pieces in the closed toe of your shoes. Purchase **garlic powder** and twice a day dust your feet with it. Garlic is better than antifungal drugs! Other outstanding antifungal herbs include **ginger, licorice, chamomile, echinacea, goldenseal, astragalus, and oil of turmeric**.

• Apply natural antifungicides, such as **pau d'arco** or **tea tree oil** to your feet. **Drink** 3 cups of pau d'arco tea daily. Also put a strong mixture of it **on your feet**.

• Add 20 drops of **tea tree oil** to a small tub of water. **Soak your feet in it** for 15 minutes, 3 times a day. Dry well afterward and place some undiluted tea tree oil on the feet.

• Apply **plantain and tea tree oil** to the affected area.

• Apply **lemon juice** 1-2 times a day to the area and let it dry. Another method is to apply a strong tea of crushed **juniper berries**. Mash **garlic** with some oil and apply to the area.

• Apply a **baking soda** paste to the area, especially between the toes. Mix 1 Tbsp. of baking soda with a little warm water. Apply, then dry well, and dust feet with **talcum powder**. It is rock dust and not digestible to fungi.

• Twice daily, coat the area with **aloe vera gel, onion juice,** or **vitamin E oil**.

• Once a day, soak your feet in an herb tea **footbath of goldenseal, thyme**, or a half-and-half mixture of **thyme and chamomile tea**.

• Bathe the feet daily in 50-50 **vinegar** and water. Dry well. Then apply a **vegetable oil** to the affected area.

• Soak your foot in a mixture of 2 tsp. of **salt** per pint of warm water, for 5-10 minutes. Dry well and repeat till the problem is solved.

• Apply **goldenseal** powder to the area. At bedtime, cover the area with raw **honey**. Sleep in cotton socks and wash the feet in the morning.

• Crush a green plant juice—such as **chickweed, plantain, Swiss chard,** etc., and apply the juice to the area. Then walk about barefooted in the sun.

Keep in mind that applying overly strong applications to athlete's foot can result in rashes breaking out on hands and elsewhere. If you have unknowingly done this, treat the feet more gently. And, as the foot infection clears, the sympathetic rashes will also.

• In case there is pain, place **cold compresses** on the area. If the problem worsens and pus or a fever develops, see a professional.

—Also see Antifungal herbs (230) and Ringworm (261), which is a closely related fungal skin disease.

ENCOURAGEMENT—When we receive Christ as an abiding guest in the soul, the peace of God (which passeth all understanding) keeps our hearts and minds through faith in Christ. How thankful we can be that in Him we can have peace of heart amid trials and turmoil.

THE DANGERS OF MARIJUANA

Marijuana *(cannabis)* is the most commonly-used illegal drug in America and England. *Research studies reveal the following facts about this strange substance:*

The THC *(tetrahydrocannabinol)* in it passes from the lungs through the blood into the brain. Enzymes in the brain cannot break down the THC as quickly as nicotine, so some THC will linger in the body for a full week.

An average marijuana stick in the 1960s contained 10 mg THC, but today as much as 150 mg. The THC interferes with normal brain waves, and depresses electrical activity of the frontal cortex (the center of character and moral strength). Recent memory is damaged. THC reduces motivation, cognition, learning, focused ability, and concentration. Marijuana smokers are less likely to finish school.

Chronic use of marijuana reduces aggression if the environment is placid. But if problems, stress or hunger occur, strong agression can occur. There is a greater tendency to suicide, especially in females. It is a valid risk factor for anti-social, criminal, sexual, and other behavioral aberrations.

There is a two-fold increase of psychosis in steady marijuana users. Severe psychiatric reactions, including schizophrenia, can occur.

Even small amounts of THC can weaken mitochondria, the source of cell energy, thus reducing body strength. THC inhibits the immune system, especially in the brain. There are significant amounts of cancer-causing chemicals in marijuana tar. In addition to damaging the brain and immune system, THC damages the heart and blood vessels in the eye. It causes more problems than it solves.

See Headache (456) and Common Cold (222).

SINUS TROUBLE
(Sinusitis)

SYMPTOMS—One or more of the following symptoms: facial pain and tenderness on the cheekbones, face, and forehead. Also earache, headache, dry cough, bad breath, fever, dazed feeling in the head, loss of smell, and burning and tearing eyes. Sometimes it results in a swollen face, stuffy nose, and a thick mucous discharge. Congestion and pressure in the interior passageways of the skull behind the nose, forehead, and cheeks. It may result in a throbbing pain or a sinus headache.

CAUSES—The nasal sinuses are located in the bones surrounding the eyes and nose. They help your voice sound fuller and richer. They also help store overflow phlegm in time of illness. These five sinus cavities (frontal, maxillary, nasal, ethnoidal, and sphenoidal) humidify and warm the air you inhale.

Sinusitis is an inflammation of the nasal sinuses that generally occurs together with upper respiratory infection. Colds or bacterial and viral infections spread into the sinuses.

Sinus problems which have become chronic may be caused by **injury** of the nasal bones, **smoking, small growths in the nose, or irritant fumes and odors.**

Allergenic sinusitis may result from plant **pollens** (hay fever) and allergies to **milk** or **dairy products**; but this is less likely from **wheat.**

An **overacid condition** in the stomach can cause sinus troubles. **Poor digestion** of starch, sugar, and dairy products can produce a runny nose. When force is used in **blowing the nose**, phlegm is pushed up into the sinuses.

Swimming or **diving** can force phlegm up into the sinuses.

Allergic rhinitis is a common cause of sinusitis. Avoid substances which might be giving you allergies.

Decayed teeth, enlarged and infected adenoids, cigarette smoke, perfume, household cleansers, and dusty air can cause irritation to the sinuses.

It can also be caused by **infection.** If drainage is clear after a week, you probably do not have an infection. But, if mucus is greenish or yellowish, you do. If drainage is clear and there are no accompanying symptoms of a common cold, you probably have an **allergy.** Few people with sinus trouble have actual sinus infection (sinusitis).

Beware of swelling around the eyes! If left untreated, this can lead to bronchitis, asthma, throat infection, or pneumonia.

If you are interested in figuring out which sinuses may be bothering you, here is some helpful data:

Frontal sinuses produce frontal headaches which are most severe between 8 a.m. and 5 p.m.

Maxillary sinuses make pain in the upper teeth and cheek, and sometimes eye pain as well. It generally lasts from 11 a.m. to 6 p.m.

Ethmoid sinuses induce a dull pain behind the eyes, pain in eye movements, tearing, light sensitivity, and occasionally sore throat and nighttime cough.

NATURAL REMEDIES

• **Do not ignore** a cold, flu, sore throat, infected tonsils, other acute disease, or try to suppress it with drugs. **Go to bed, take juices and light meals, rest, and get well.** When suppressed, the phlegm does not flow out, but hardens in the sinuses and trouble begins.

• Take a **short fast** on citrus juices, vegetable juices, and herb teas.

• Drink lots of **water and juices.** This keeps the fluids in your nose loose and flowing instead of harden-

EMERGENCIES: (750-757)

ing.

• As soon as you are able, begin eating **nourishing food**—especially vegetables, fruits, nuts, legumes, and beans. Drink fresh **carrot juice** everyday. Eat only **fresh foods** (not canned) for the rest of the week to cleanse the system. Slowly add back **whole grains** and vegetable protein (**beans**, etc.).

• Take 500 mg of **vitamin C** every 2 hours of the day until the sinus problem disappears.

• **NAC** (N-acetylcysteine) is a form of the amino acid cysteine. Taking 500 mg, twice a day, helps liquefy mucus so that it can drain.

• **Do not eat meat, dairy products, white-flour foods, sugar, coffee, alcohol, spices, or tobacco.** Avoid **cigarette smoke. Milk products** clog the sinuses and make the situation worse.

• Drinking **hot liquids** help the sinuses flow out their contents.

HERBS

• Helpful herbs to reduce sinus congestion include **comfrey, slippery elm, fenugreek, mullein, aloe vera, yerba santa, red clover, and white oak bark.**

• **Garlic** contains a chemical which makes mucus less sticky. **Horseradish** has it also. **Cayenne** acts in a somewhat similar manner. **Peppermint** tea also helps open up the sinus passageways.

• Add crushed **garlic** cloves to 4 cups water and remove from the heat after coming to a boil. Cool and gradually drink. This will help clean out the sinuses and relieve stuffiness. Raw garlic is the most powerful remedy for sinusitis.

• Eat a healing vegetable soup, in which you add **garlic, onions, horseradish, cayenne, and ginger** to the vegetables.

• Take **echinacea** tea for a week and switch to **goldenseal** for the next week. Both are powerful antibiotics.

• Mix **eucalyptus oil** or **peppermint oil** with a few drops of vegetable oil and rub it on the forehead and temples to relieve sinusitis, but do not drink this.

• Place **peppermint leaves** over the painful area or apply a compress containing strong peppermint tea.

• Inhale **eucalyptus, peppermint, and sodium bicarbonate** for 20 minutes to remove the sinus secretions.

• **Oregano, ginkgo, and bromelain** also help clear the sinuses.

• Jethro Kloss suggests putting a tsp. of **bayberry bark** into a cup of boiling water, simmer 30 minutes, strain; and, when warm or cool, sniff it up the nose, one nostril at a time. It will cleanse and heal.

• An alternative is add ½ tsp. **sea salt** per cup of distilled water, taste it to see if it is half as salty as the ocean, then sniff it up your nose. Another alternative: Sniff up each nostril a tsp. of **goldenseal** or **mullein.**

OTHER HELPS

• Do not use **nose drops**. They aggravate the situation by stopping the drainage and hardening the mucus. **Decongestants** also increase blood pressure.

• Placing **heat** on the sinuses helps relieve pain. This can be **compresses which are hot and wet, a heat lamp, a 60-watt light bulb, or a heating pad.**

• A variation of this is: Twice a day, lean over a pan of hot water with a towel draped over your head (or stand in a hot shower). **Inhale the vapors** as they waft up toward your nose. If you are at work, order a cup of something hot. And, leaning over, sniff up the moisture. An alternative: After the water has come to a boil, turn it off and add 15 drops of **eucalyptus** or **peppermint.** Then cover your head and inhale.

• Some prefer **cold applications** to the sinuses instead of hot ones. Put **crushed ice** in a plastic sack, wrap in a moist towel, and place over the sinus which hurts. At the same time, have the **feet in hot water.** This will help draw blood from the sinus area. However, the hot method is better for draining the sinuses.

• Mix 1 teaspoon of **salt** with 2 cups warm water. Pour it into a small glass. And, holding back your head, sniff it up into one nostril (as you pinch the other one closed). Repeat for the other side.

• **Rubbing** your sore sinuses brings a fresh supply of blood to the area. Press your thumbs firmly on either side of your nose and hold for 15-30 seconds.

• Pain relief was reported by 75% of a test group, after a mechanical vibrator was placed on the midline of the forehead or over the most tender area (45 minutes a day for as many days as needed).

• Sit with your **head down**, between your knees. Cough gently as though you were clearing your throat. Then hold your breath for a minute or so, as the mucus slowly drains. Then gently inhale. Be sure you are drinking enough fluids when you do this.

• **Twice a day**, apply a heating pad to your chest. Then lie with the top half of the body off the bed, using the forearms as support. This will help drainage of the lungs. Remain in this position 5-15 minutes, and cough and expectorate (spit) into a basin on the floor.

• **Walking** helps clear your sinuses.

• Each day, between meals, take six **charcoal** tablets with water. This will help remove toxins. Only do this during the crisis, or it can cause temporary constipation.

• It is better to **sniffle** than to blow your nose. If you must blow, only blow lightly and through one nostril at a time. **Wiping** the nose is better than blowing it.

• A **humidifier** will help keep sinuses moist indoors during the winter months. A humidity of 40%-50% increases sinus comfort.

• **Avoid cold, damp** living, working, and sleeping quarters.

ENCOURAGEMENT—Ask God to do for you those things which you cannot do for yourself. Tell Jesus everything. Lay open before Him the secrets of your heart; for His eye reads it all. Surrender your life to Him. And let Him enable you to obey His Ten Commandment law. Ephesians 6:24.

How very thankful we are that, in all our problems, we have a kind heavenly Father we can turn to. He understands us better than we understand ourselves. He

alone can provide the needed healing of heart and soul and body.

— *HEAD AND THROAT* —

2 - HAIR

BALDNESS AND HAIR LOSS
(Alopecia)

SYMPTOMS—It is hair on the head that we are concerned with here. There are several types of hair loss: baldness or loss of hair *(alopecia)*. Loss of all scalp hair *(alopecia totalis)*. Hair falling out in patches *(alopecia areata)*. Another type of hair loss is localized and caused by scarring.

Alopecia most frequently occurs in men, but occasionally in women. Most common of all is the standard male pattern of baldness and the female pattern of baldness.

A youthful scalp has 100,000-200,000 hairs. A single hair generally lasts 2-6 years and is then replaced by a new hair. When baldness begins, there is an excess of shorter, thinner hair—the kind babies have on their head.

Remember that it is normal to lose as much as 100 hairs a day. Once the hair follicle dies, it never again produces hair. Yet there are instances in which the follicle has not died, but only has stopped producing hair. Careful treatment restores hair growth.

CAUSES—Heredity (especially in men), hormonal factors, aging, local or systemic disease. Localized hair loss could also be caused by **scarring** following a wound or an operation.

Other factors include **poor circulation, high fever or other acute illness, surgery, radiation (x-ray therapy), medicinal drugs, anesthesia, drastic reducing diets, stress (depletes B vitamins), poor diet, skin disease, sudden weight loss, iron deficiency, thyroid disease, obesity, birth control pills, diabetes, or vitamin deficiency**. A nourishing diet should be eaten daily.

Significant causes of baldness include the use of **hair dyes**, **washing it daily**, or **hot-air dryers**. Hair pulled too tight in **ponytails** or **braids**, or set in **tight rollers**, can sometimes come out in patches.

Hair loss in women most often occurs after **menopause**. Some women lose some hair 2-3 months after childbirth because **hormonal changes**, during late term, tended to block normal hair loss. But this is reversed within 6 months. **Hypothyroidism** can cause hair loss. Too little **vitamin A** can cause hair loss. And too much can do it also.

More than any other nation in the world, America has the greatest percentage of men with baldness. What is there about us, our diets, and our way of life that causes this?

NATURAL REMEDIES

• The circulation in the scalp (which is poorer in men than in women) needs to be improved. **Massaging the scalp** each day helps. **Keep the scalp and hair clean**, but **do not wash the hair too frequently**. **Avoid excess shampooing**.

• There should be **adequate protein** in the diet, especially **sesame seeds, pumpkin, sunflower seeds, almonds, and brewer's yeast**. But, as with everything, do not go overboard. People in the U.S. eat more protein than anyone else, yet they have the greatest hair loss.

NUTRITION

• Go on a **cleansing juice program,** for a couple days, and clean the bowels with an enema. Then only eat **nourishing food**. No more processed junk food. Eat a diet high in **fruits and vegetables and low in starch**.

• A variety of factors affect hair loss. **Minerals and vitamins** are important for hair growth. Take a good **supplement** at least twice a day. Drink **fresh vegetable juice** at least once a day. Take **vitamin A** (50,000 units daily for a short time). Several B vitamins especially affect hair growth (**biotin, inositol, niacin**) and color (**folic acid, pantothenic acid, and PABA**). Eat **Norwegian kelp or Nova Scotia dulse**.

• **Oatstraw** and **horsetail** teas are rich in silicon and trace minerals. **Rosemary** helps prevent premature baldness and stimulate head circulation. **Sage** is an astringent and helps stimulate growth. **Yarrow** helps liver activity.

• **Flaxseed oil** (2 Tbsp. daily), containing fatty acids, helps keep hair from thinning. **Black currant oil** (500-mg capsule twice a day) is even more powerful.

AVOID

• **Avoid salt, sugar, tobacco, and alcohol**. Overconsumption of salt and sugar increases dandruff and hair loss. Avoid large amounts of **vitamin A** (100,000 units daily over long periods). **Avoid crash diets** which are low in proper nutrients.

• Beware of the drug, **minoxidil**. Although given to restore scalp hair, it is high-priced and may cause heart damage. The hair it produces is of a poor quality and tends to fall out when the drug is terminated.

• Because **hair is fragile when wet**, do not comb it when wet because it can be easily broken. Avoid rubbing it too hard when it is wet. Better to squeeze out moisture with a towel and pat it dry. However, massaging your scalp (not your hair) is beneficial. **Do not blow-dry** your hair

• **Exposure to sunlight and seawater** is hard on hair.

HERBS

• Try rubbing the juice of a **quince** on the bald area everyday. Eat **flaxseed** and drink **sage** tea. Sage tea will stimulate hair growth. Rub bald spots with **kerosene** once a day. For falling hair, try wetting the scalp daily with strong **rosemary, sage, or white oak bark tea**.

• Dr. Christopher recommends making a strong tea of **bayberry** and rubbing it in well at night. Wash off in the morning, brush the hair thoroughly, and apply again. Possibly add a few drops of **lavender oil**. "This will quickly stop falling hair and remove dandruff."

• For centuries, men and women have massaged their scalps with **rosemary** herb in **olive oil** to maintain healthy hair.

• Eating **sesame seeds** is a Chinese remedy for preventing hair loss. Tincture of **stinging nettle** can also help prevent thinning hair.

• Make a paste of ½ tsp. **fenugreek** powder and ¾ cup unsweetened **coconut milk**. Then massage the scalp vigorously with it twice a week for 2 months.

• DHT *(dihydrotestosterone)* binds to hair follicles, shrinks them, and causes them to die and fall out. (It also causes prostate enlargement.) To eliminate this effect of DHT, take **saw palmetto** (160 mg) every morning and another dose every evening. (The product should be "concentrated and purified" and have 85%-95% fatty acids and sterols.) This herb works by preventing the conversion of *testosterone* (male sex hormone) into DHT. **Licorice** contains a compound which also blocks DHT.

• The herb, **phygeum** (60-500 mg), also has this blocking action. And **nettle** (50-100 mg) enhances the effects of phygeum. **Zinc** (30 mg daily, for 6 months) helps keep DHT from getting to the hair follicles.

• Some people put a little **cayenne** pepper on their scalp. It surely will bring the blood and might even produce some hair! But it may get in the eyes! Most people are not prepared to deal with this extreme method.

• One woman had total hair loss by the age of 32. She restored it with the following formula. Using a wooden or plastic (not aluminum) utensil, mix the following essential oils in a glass bowl: 1 Tbsp. **jojoba oil**, 3 drops **rosemary oil**, 3 drops **lavender oil**, 1 drop **lemon balm**, and 1 drop **Atlas cedarwood oil**. Massage the mixture into your scalp and leave on for 30 minutes or overnight. Wash your hair, adding 1 drop of **rosemary oil** to each shampoo application. As a final rinse, add 1 drop each of **lavender oil** and **rosemary oil** to a quart of cool water and pour it over your head.

• To help hair grow, Kloss recommends **nettle, pepper grass, sage, marshmallow leaves, and burdock**.

OTHER HELPS

• There are others who **stand on their head** to bring the blood there! It is reported that this also helps. Do not do it at work, or folks will think you are crazy. (And, of course, too much of this might not be good for the brain.) A better alternative is to lie on a **slant board** for a time each day. Or **massage** your scalp in the sun.

• Never use **strong soaps or hair sprays**. Only use mild castile soaps.

• **Hats and wigs** are apt to cause hair to fall out faster, since they limit the air to the scalp.

• **Relaxing** a little more often and **reducing stress** helps women keep from losing their hair.

It is said that you must faithfully do your selected hair treatment for two months before you will begin to see results.

ENCOURAGEMENT—Happiness from earthly sources is constantly changeable. But Christ can give you peace and rest which is beyond compare. Let Him, by faith, dwell in your heart. 1 John 3:3.

DANDRUFF

SYMPTOMS—The greatest number of sebaceous (oil) glands are found on the face and scalp. Sebum, the oily secretion, lubricates the hair and scalp in order to keep both soft and pliable. Excess sebum may collect to form dandruff.

Dandruff is a covering of dead skin that prevents new hair from growing, because it cannot break through the dead skin. A scaling or flaking of scalp cells results. It may or may not be accompanied by itching.

CAUSES—A change in the surface cells of the scalp results in a scaling or flaking. This change is especially keyed to nutritional deficiencies. It often occurs in those with oily skin who are prone to develop superficial, acute, and chronic bacterial skin conditions.

There is generally excess secretion of oil in the sebaceous glands. It is this oil which binds the cells together on the scalp. Nutritional deficiencies can cause these abnormal secretions.

NATURAL REMEDIES

DIET

• **Biotin**, a B vitamin, is a major anti-dandruff compound. Take 6 mg daily. It treats both dandruff and the related seborrhea condition (overactivity of the sebaceous glands, resulting in an excessive amount of sebum). A handful of **soybeans** contains the 6 mg of biotin. **Garlic** is second in biotin content, followed by **oats, barley, avocado, alfalfa, sesame, and corn**.

• Often there are severe **B complex** deficiencies, as well as a lack of essential **unsaturated fatty acids and zinc**.

• Other important nutrients include selenium, sulfur, and lecithin.

• Cut out **excess fats, grease, and all fried foods** from the diet. Stop the use of **alcohol**. Check to see if you have **food allergies** (wheat, dairy products, citrus, or something else). **Avoid stress and poor elimination**. Do not use strong, **irritant shampoos or hair treatments**. **Avoid chocolate, sugar, white flour, and seafood**.

• Be sure the diet includes **flaxseed oil, vitamins E and A, PABA, Folic acid, B_6, and zinc**. If needed, take

digestive enzymes. Also helpful are **kelp, biotin, and lecithin**. Eat 50%-75% **raw food**.

• A **short fast** is a good way to begin the program. Then begin eating only nutritious foods.

HAIR MASSAGE AND WASHING

• Massage **burdock root** oil into the scalp. Other herbs with anti-dandruff qualities are **comfrey, ginger, licorice, celandine, and plantain**. Make a tea of any, or several, and use them as hair rinses.

• Put 4 heaping tsp. dried **eucalyptus leaves** in a quart of boiling water. Stir. Then cover. Remove from heat and steep for an hour. Strain and pour the liquid into a squeeze bottle. Add 1 Tbsp. **apple-cider vinegar**. At the close of your shower, pour the rinse slowly over your head. For maximum effect, let it dry.

• The use of an **aloe vera shampoo**, once or twice a week, will control the dandruff.

• **Avoid** shampoos containing selenium sulfide. They can cause eye damage and hair loss.

• **Do not** put tar-based shampoos on your head if you have blonde hair. It will turn the hair brown.

• At bedtime, rub **aloe vera** gel on the scalp.

OTHER HELPS

• Kloss says that the leaves and bark of the **willow** tree, made into a tea, will cure dandruff.

• A little **sunlight** is good for your scalp and hair.

• Keep **calm and relaxed**. It will help your hair.

• **Walking outdoors** will help your hair and your entire body.

—See Oily Hair (below).

ENCOURAGEMENT—The peace of Christ is constant and enduring. We can find no rest apart from Him. Come, now, and make Him your own by faith.

OILY HAIR

SYMPTOMS—Excess amounts of oil in the hair. Redheads rarely have oily hair. Blondes tend to have it the most.

CAUSES—The sebaceous glands produce too much oil and there are nutritional aspects which need to be corrected. There are as many as 140,000 oil glands on the scalp. Oil wicks into fine, straight hair the easiest. Wiry hair tends to be the least oily.

Oil production tends to be increased by intense **heat and humidity. Hormonal changes and stress** can also affect it.

NATURAL REMEDIES

• **Only use clear shampoos**. They have less oil in them.

• Give yourself a **double shampoo**, with a rinse in between. After shampooing, feel your hair. Does it feel oily? This will help you know how well you are doing.

• Squeeze the juice of two **lemons** into a pint of water and use it as a finishing rinse. This helps remove soap residues which tend to weigh down the hair. Or use an apple cider **vinegar** rinse. After showering and blotting the hair dry, apply the rinse and massage it through the hair. Leave it on for 5 minutes. Then rinse with cool to tepid water.

• Or use a **horsetail** herb rinse. It strengthens the hair shafts and reduces oil on them.

• **Do not overbrush**, for this carries additional oil from the roots into the hair.

• **Avoid** too much fat in your diet. A diet of **fried foods, saturated fats, meat, and dairy products** triggers increased production of sebum. This results in an oily scalp and hair.

• Do not use a shampoo that contains *sodium lauryl sulfate* or NDELA *(nitrosodiethanolamine)*. Both are harsh and dry the scalp, perhaps causing flaking.

—Many of the suggestions in Dandruff (above) should be considered.

ENCOURAGEMENT—When you have asked for the things your soul needs, believe that God will give you the best, just what you need. It may not come in exactly the way you expected, but it will be just what is best. Psalm 31:24.

DRY HAIR

SYMPTOMS—Hair that is dry enough that it bothers you. It lacks luster and may be brittle. There may also be split ends.

CAUSES—A dry garden needs water. Dry hair does not need water, but it does need **natural oils**. You may be using **harsh shampoos** that remove all the oil from your scalp and hair. Lack of proper **nutrition** may be another cause.

NATURAL REMEDIES

• Include enough **unsaturated fatty acids** in your diet (unheated vegetables oils, such as **wheat germ, flaxseed, sesame, corn, or soy oil**). *See suggestions under Dry Skin (258).*

• **Do not use heat** to arrange your hair. Both curling irons and electric curlers produce heat that is too intense. Instead, women should use unheated plastic cylinder rollers.

• Dry hair tends to produce frayed ends. **Snip them off** about every 6 weeks or so.

• **Avoid whipping winds**. They also tend to fray your hair. Women do best not to swim bareheaded. Use a **bathing cap**. It will protect the hair. For additional protection, rub on a little olive oil before putting on the cap.

• Shampoo with care, using only **mild shampoos**.

• **Avoid washing** the hair every night. **When washing hair**, only use warm, not hot water. **When rinsing** the hair, always use cool water. This increases circulation.

• Pour **sesame seed oil** on your hair and massage. Or apply **flaxseed oil**.

• Massage avocado into your hair. It provides both

protein and oil to the hair shaft. In a bowl, mix 1 peeled **avocado**, 1 tsp. each of **jojoba oil** and **wheat germ oil**. After shampooing, rinsing, and drying your hair, apply the mixture, massaging it in. Then cover your hair with a plastic bag. Leave it on for 15-30 minutes. Then rinse thoroughly. Repeat once a week.

ENCOURAGEMENT—Accept His gifts with the whole heart. Jesus died that you might have the precious things of heaven as your own and, at last, find a home with the heavenly angels in the kingdom of God. Ephesians 6:24.

GRAY HAIR

SYMPTOMS—The hair is changing from its youthful color to a gray color.

CAUSES—A lack of three B complex vitamins is specific to this problem.

NATURAL REMEDIES

• To restore natural color to gray hair, the following vitamins have been reported to be successful for some people: **PABA** (para-aminobenzoic acid, 1,000 mg), **pantothenic acid** (1,000 mg), and **folic acid** (800 mcg), along with **brewer's yeast**, and **blackstrap molasses**. Also take a good **multi-vitamin / mineral** formula. Include some **kelp or dulse** in your diet.

HAIR RINSES

• Mix **nettles, sage, and rosemary**; and use it as a hair rinse to darken the hair.

• **Henna** is a natural, non-toxic coloring herb which has been used for centuries to make hair more blonde. It works best on thin, light, porous hair.

• **Chamomile and lemon** combined make a good rinse for blonde hair.

• **Rosemary and sage** rinse will help shine dark hair.

• **Cider vinegar** rinse helps balance hair pH.

• **Kelp or seawater** adds mineral body to hair.

• Apply **joboba** to damaged, brittle, and over-processed hair.

ENCOURAGEMENT—While self is unsubdued, we can find no rest. But if you will find time and voice to pray, God will find time and voice to answer.

INGROWN HAIR

SYMPTOMS—A hair, generally on the neck, grows down into the skin and causes irritation.

CAUSES—These tend to be caused by hairs which curl. Curly haired people are more likely to have this problem than others.

NATURAL REMEDIES

• The only practical solution is to **pull it out with tweezers**. Do not pull at just anything. Wait until you can actually see the hair. If necessary, place a warm compress on the area, for a time, to help it be seen better. Then use tweezers or a sterilized needle, followed by a dab of hydrogen peroxide on the area.

• People who find this too much of a problem might consider growing a **beard**. Once established, that generally solves the problem. If beards are frowned on at your work, have your physician write a note that it is a medical necessity for you to have one.

• Using an **electric shaver** is better than razors, because razors sharpen the hair end more, especially double track razors. If you do use a razor, try not to shave as close.

• If your neck hairs tend to be angled in different directions, train them to grow in only two directions, by only **shaving up and down** instead of crossways.

• Women should **shave their legs down**, not up. Shaving upward is far more likely to cause inward-growing hairs. This is because leg hairs grow downward.

ENCOURAGEMENT—However fierce the tempest, those who turn to Jesus will find deliverance. His providence will provide for their needs; and His grace will give power to resist temptation and sin.

If it were not for the continual help of our heavenly Father, we would be in terrible shape. He alone can provide the help we so much need, day by day. Trust in Him and He will never fail you, even though your immediate requests may not be fulfilled.

 # HAIR TONICS

• In order to cleanse your hair of soap, used apple cider **vinegar** as the rinse water.

• Drinking **nettle** juice cleanses the system and helps add sparkle to lackluster hair. Drinking **burdock** leaf tea also does this.

• Make a strong **chamomile** tea and use it for a light hair rinse.

• Prepare a tea of **rhubarb** root and use it as a rinse to lighten light brown or faded blonde hair.

 # HAIR CONDITIONER

Your hair loses natural oils, due to too much sunlight, harsh chemical shampoos and dyes, hair preparations containing alcohol, or permanents. A hair conditioner replaces these natural oils. After a few weeks of applying one or another of the following conditioners, your hair should be softer to the touch and more attractive.

• Rub **olive oil** into your hair every 2-3 evenings before retiring.

• If you want an oil mixture that is sweet-smelling, mix the following formula and apply it to your hair every so often: 1 oz. **rosemary oil**, 3 oz. **sweet almond oil**, and 30 drops of **lavender oil**.

• Here is a formula which will help keep your hair

in good condition: Add a little **oil of marjoram** to some **olive oil** and rub it into your hair. Every so often, mix a fresh batch and repeat.

• Here is a formula for an orange-scented oil for dry hair: Mix 1 oz. **rosemary oil**, 3 oz. of **sweet almond oil**, and 20 drops of **oil of orange**.

If you have naturally oily hair, only apply one of the above essential oils, and do it once a week at the most.

• If you have faded hair, mix 1 oz. **rosemary oil** and 1 oz. **coconut oil** with 3 oz. **oil of sweet almonds**. Rub a small amount gently into your scalp every other night.

HAIR FIXER

Commercial preparations, sold to keep your hair in place, frequently contain harsh chemicals, including alcohol. Here is a formula which will help keep the hair in place and tend to give it a beautiful sheen:

Squeeze a little **lemon juice** into a small bowl. Then apply it to your hair with a piece of cotton. Within a few minutes it will be dry.

— *HEAD AND THROAT* —

3 - EYES

Also: Sjögren's Syndrome (241)

WARNING - EYES !

• Do not lay compresses directly on the eyeball. The lids should always be closed.

• Some natural therapists recommend placing hot compresses on the eyes, "as hot as possible." But there is great danger in doing that. A physician did that to the child, Fanny Crosby, and a scar-like film was permanently etched onto her eyes. In this book, only "very warm" eye compresses are mentioned, along with, at times, cold ones.

EYE PROBLEMS

SYMPTOMS—Various kinds of eye problems can develop (such as blurred vision, bulging, blood spots, dark circles, dryness, double vision, itching, lumps on the eyelids, redness, twitching, or watering).

Certain eye problems need specialized attention. But there are also general solutions to a wide variety of eye problems.

NATURAL REMEDIES

• The eyes and the brain use a lot of **oxygen**. Be sure to get enough.

NUTRITION

• Drink **carrot, celery, beet, and parsley juice**. You may need to go on a short **vegetable juice fast**.

• The mineral, **zinc** (20 mg daily), is important. Be sure it is included in your diet. **Vitamins A (500 IU), B complex, B_1 (25-50 mg), B_2 (25-50 mg), B_6 (25-56 mg), pantothenic acid (100 mg), niacinamide (50 mg), C (3,000-5,000 mg), E (400 IU), selenium**, are also important. Eat **fresh greens** everyday. The importance of vitamin A and **provitamin A- and B-carotene** on eyesight cannot be overemphasized. Eat fresh green and yellow vegetables for the carotenoids.

• Two days a week, drink **lemon water** instead of breakfast. Chinese healers say that this purifies the liver and helps the eyes.

• For blurred vision, eat dried, unripe **raspberries**.

• **Do not overeat**. Get plenty of **exercise** and **rest**.

AVOID

• **Poor nutrition** clogs tiny arteries, such as are found in the eyes. A gradual clogging of the veins in the eyes can lead to blindness. The tiny vessels within the eye become blocked with atherosclerosis, the result of a diet high in **fat** and **cholesterol**.

• Eliminate all **fried foods**. The free radicals in these greasy foods damage the eyes as well as other organs. Avoid **meat, eggs, refined grain products, sugar, dairy products, coffee, chocolate, and alcohol**.

• Avoid drinking fluids before bed. Avoid **salt**. Do not use **tobacco** and avoid **secondhand smoke**. Nicotine, **sugar**, and **caffeine** all weaken the eyes.

• **Margarine** and **vegetable shortening** are not good for the eyes.

• **Tinted sunglasses** often cause eyestrain. Only use **polarized sunglasses**, if you use them at all.

• A number of medicinal drugs are not good for the eyes. This would include **aspirin, ACTH, anticoagulants, corticosteroids, diuretics, streptomycin, sulfa drugs, tetracycline, allopurinol, antihistamines, digitalis, haloperidol, anti-infection drugs, quinine, marijuana**, and some others.

• Anti-infection drugs, including **diazepam (Valium), haloperidol (Haldol), some antidepressants, quinine, and sulfa drugs** can cause ocular abnormalities.

• Substances which are bad for your eyes: **chemical diuretics, cocaine, sulfa drugs, tetracycline, aspirin, nicotine, phenylalanine, liquor, and hydrocortisone**.

• Be very cautious about wearing **contact lenses**! They keep air from the eyeball surfaces which they cover. Infections can result. Leaving them in place more than 24 hours can produce ulcerative keratitis. The cells of the cornea are rubbed away by the contact lens, resulting in infection, scarring, and possible eventual blindness. Research shows that this danger applies equally to ordinary daily wear contact lenses or extended-wear lenses.

HERBS

• **Eyebright** is the master herb for eye problems, and has been used for this purpose for over 2000 years. Add one tablespoon of the herb to a cup of boiled water, strain, and let cool. Apply cool, fresh eyebright tea as an eye wash daily. It will strengthen the eyes and help reduce or eliminate many eye problems.

• **Goldenseal** and **red raspberry** teas all help the eyes. Eyebright is especially noted for what it can do for the eyes. People have used it for centuries.

• To strengthen the eyes, especially in weakness resulting from diabetes, use **chaparral** tea internally. Vitamin A is also important.

• Research studies have found that **bilberry** (European blueberry) contains flavonoid compounds *(anthocyanosides)* which improve the circulation of the eye and promote the formation of visual purple. In some studies, it was given along with vitamin E.

• **Dandelion** helps the liver detoxify. And seaweed (**Norway kelp or Nova Scotia dulse**) provides essential minerals.

• Blackfoot Indians made a tea of the leaves and flowers of **yarrow** and applied it as an eye wash. **Aloe vera** juice is another helpful eyewash.

• Drink strong **borage** tea, to strengthen the eyes, and eat young leaves in a salad.

• Add ½ tsp. **fennel** powder (made from crushed, blended fennel seeds) to 2½ oz. clear, cold water. Strain and apply to the eyes for eye problems.

• The ancient Greeks used fresh white **cabbage juice** with tiny amounts of **honey** added, to relieve sore, inflamed, moist, or running eyes. They also added **thyme** to food to help overcome dimness of sight.

• For runny eyes in infants, wash the eyes every half hour with **warm, clean water**. Bruise fresh **cabbage leaves** to a soft pulp and apply a cabbage pack to the closed eyes. This will increase the flow for a few days, but will eliminate the problem within a short time.

• For inflamed eyes, apply a lotion of **eyebright** or strained **chickweed** tea.

• Apply **witch hazel** compresses over closed eyes to relieve red, sore, strained, or inflamed eyes.

• Apply a compress of **tansy** tea for a sty or inflammation of the eye.

• For *dark circles* beneath your eyes, stop working so much, **get more sleep, and drink more liquids**. You may have lost weight too fast. This may be caused by iron deficiency, liver or kidney malfunction, or chronic allergies. Place **chamomile** tea bags over the closed eyes.

• Indians and Americans have been drinking **goldenseal** tea for the eyes, for over 200 years.

• Here is a tonic for poor and unhealthy vision. Mix equal parts of **eyebright, goldenseal root, bayberry root bark, red raspberry leaves**, along with a pinch of **cayenne**. Do not put on the eyes, but take 2-4 capsules of the powdered herbs daily. For acute problems, take 2-3 capsules, 3 times daily. The major effect is provided by the eyebright and goldenseal. The other herbs are antibiotics, astringents, and stimulants. This will help prevent cataracts and relieve eyes that are inflamed, stinging, weeping, or oversensitive to light.

OTHER HELPS

• Place a **washcloth, dipped in ice water**, over your eyes for 15 minutes, once or twice a day. Or **cold cucumber slices** can be put on your closed eyes. This will bring healing blood to your eyes and help strengthen them. This is good for pinkeye, sunburn, and eyestrain.

• For protection against ultraviolet rays, only wear **sunglasses** that block 99%-100% of UVA and UVB radiation. Any other sunglasses can damage your eyes. Eyes can get sunburned. UV radiation causes photokeratitis, in which the outer layer of cells is damaged. Treat sunburned eyes with cold compresses.

• **Palm your eyes** to rest them. Place the palm of your left hand over your left eye. Do the same with the right hand over the right eye. Both eyes are now covered, yet nothing is touching the eyes. This gives them a rest for a few moments. Do this several times a day, 10 seconds at a time.

—See Eyestrain (below), Computer Eyestrain (303), and other eye topics in this chapter.

ENCOURAGEMENT—Make God your entire dependence. When you find yourself starting to do otherwise, immediately call a halt—and run back to Him! Do not tarry. Do not wait. James 1:12. Remember the sweet promise: "The peace of God, which passeth all understanding, shall keep your hearts and minds, through Christ Jesus." Philippians 4:7. When we trust in His Inspired Writings—as found in the Holy Bible—we are on safe ground. Never forsake Him, and He will be with you to the end.

EYESTRAIN

SYMPTOMS—The eyes seem to be straining to see what they are trying to look at. After some time of doing this, you acquire a general feeling of eyestrain.

CAUSES AND TREATMENT—Fatigue, poor diet, overwork, drugs, polluted air, city living. Much of what is in our modern way of life is hard on the eyes.

NATURAL REMEDIES

• Is the area in which you do much of your eyework **properly lit**?

• **Flickering tubes** can bother the eyes. Try not to use **computers** too long at a time; do not watch **television** too long. Both are hard on your eyes. Keep the screen somewhat darkened. Shade your screen by placing a hood over the front.

• Every so often, **shut and rest your eyes**. Try "palming." To do this, place the palms of your hands across your open eyes, without touching them. This cuts out all light and enables you to momentarily rest them.

• Make sure you **blink** often enough. Each blink cleanses and refreshes them.

• **Refuse to strain** your eyes. Keep them relaxed at all times. If you cannot see the object clearly, then look at it relaxed unclearly!

• **Sunglasses** cause eyestrain for some people, but

they help others. Only use Polaroid or approved antiglare glasses.

• The **evening hours** are the worst time to read and use your eyes intensively for anything. The natural daylight is gone.

• Make sure you have adequate **illumination**. The best kind is a full-spectrum light or a combination of fluorescent and incandescent. Use a soft light that does not glare. Place the light so it does not reflect back into your eyes from the paper before you.

• Occasionally look off in the **distance**.

• **Blink** your eyes 400 times a day. This will massage, wash, and rest them.

• Go outside for the last 30 minutes before bedtime, **walk around, relax, breathe deep, and do not read anymore before you retire**.

• Get enough **rest** at night.

• You may need **reading glasses**. If your only eye problem is nearsightedness, you can purchase eye glasses at your local pharmacy for $10 or $20. Always select the weakest, least powerful ones.

—Also read Eye Problems (301) and Computer Eyestrain (below).

ENCOURAGEMENT—By beholding Christ, we become changed. And this is what you want, is it not? Come, take the greatest prize of all. Let Christ come into your heart. He can give overcoming strength to resist sin and obey the Ten Commandments. Proverbs 8:17, 21.

COMPUTER EYESTRAIN

SYMPTOMS—Tired, dry, or burning sensation in the eyes after working before a computer monitor (screen) for several hours.

CAUSES—There are ways to continue in such work, without damaging your eyesight. Here are several suggestions to help you protect your eyesight as you work with computers:

NATURAL REMEDIES

• Try to keep the screen **two feet** from your eyes.

• Place the screen so that your **line of sight** is 10°-15° (about one third of a 45° angle) below the point on the screen where you tend to look at.

• Do not work with a screen which is dull, **blurred, or flickers**. Find the cause and eliminate it or call in a technician. Vibration from a nearby fan may cause the flickering. Move it farther away.

• The lower part (near view) of **bifocals** are located for looking down, not straight ahead. So you may need single (not bifocal) lenses for computer work.

• Reduce **glare**. Do not have overhead lights or windows reflecting into the screen.

• **Blink** often to keep your eyes from drying out.

• Try to arrange your **paperwork** so that it is set at an angle, nearly the same height as the screen and close to the same distance from your eyes as the screen.

• **Dust** the screen occasionally. Static electricity tends to coat it with dust.

• Take 5-10 minute **breaks** every hour.

• Use a glare-reduction **filter** approved by the American Optometric Association.

• An active-matrix LCD **flat display** is sharper and brighter than a CRT-based display screen.

ENCOURAGEMENT—We, too, are to walk with God. When we do this, our faces will be lighted up by the brightness of His presence; and, when we meet one another, we shall speak of His power and say Praise God. Good is the Lord, and good is the word of the Lord.

MUCUS IN EYE

SYMPTOMS—The eye seems be filled with mucus.

CAUSES—The cause may be a combination of an **inadequate diet, poor working conditions, and an airborne infection**.

NATURAL REMEDIES

• **Improve the diet** and take a **vitamin / mineral supplement** twice a day. Obtain adequate **rest**. Work in a **clear and clean environment** that is not overly dusty.

• Wash each eye with **goldenseal** root tea. But do not use goldenseal in large amounts if pregnant.

ENCOURAGEMENT—He who receives Christ by living faith has a living connection with God. He carries with him the atmosphere of heaven, which is the grace of God and a treasure that the world cannot buy. Zephaniah 3:17.

YELLOW EYES
(Icterus, Jaundice)

SYMPTOMS—The whites of the eyes (sclera) have a yellow hue.

CAUSES—The **bile duct system** develops a blockage which may be caused by gallstones, tumors, or hepatitis. Red blood cells may also be destroyed in the process.

Those taking large amounts of carrot juice will develop a yellowish cast to their skin (which is in no way dangerous). But their sclera will not turn yellow, which is the sign of jaundice.

NATURAL REMEDIES

• The cause of the obstruction must be determined and treated. Treatment of jaundice includes **ultraviolet light exposure** in order to increase elimination and liver flush. For 3 days, drink **apple juice**, followed by a cup of **olive oil** and a cup of **lemon juice**. Also obtain **vitamins C, A, and E**. This large amount of olive oil dilates the bile ducts, so the stones can be ejected. This need only be done once to solve the problem.

—Important: See Jaundice (303, 359).

ENCOURAGEMENT—Keep your mind on Jesus, and pride and the love of the world will vanish. Beside the loveliness of Christ, all earthly attractions will seem of little worth. Matthew 16:26.

PUFFY EYES
(Bags under Eyes)

SYMPTOMS—A small area beneath each eye appears puffy. It looks like there are bags under the eyes.

CAUSES—The **liver** and/or **kidneys** are being overworked and undernourished.

NATURAL REMEDIES

• Do not drink **liquor** or use **tobacco**.

• Limit **salt** intake. Avoid **monosodium glutamate** (MSG).

• Improve your diet by switching to nutritious food: **fresh fruits, vegetables, whole grains, nuts, and legumes**.

• **Greasy, processed, and junk food** may seem to be nice because you can get it so quick. But the undernourishment it is causing is wearing out your body.

Caffeine products only whip the tired horse. Instead, get the proper rest you need each night.

• Avoid doing **work which requires you to bend over**. This intensifies the bags under your eyes. **Sleep on your back**.

• Wrap **ice cubes** in a cloth and apply to the area for quick relief.

• Avoid drinking **fluids** before bed.

ENCOURAGEMENT—Christ came to teach human beings what God desires them to know. In the heavens above, in the earth, in the broad waters of the ocean, we see the handiwork of God. All created things testify to His power, His wisdom, His love. But not from the stars or the ocean or the cataract can we learn of the personality of God as it is revealed in Christ.

ITCHY EYES

SYMPTOMS—The eyes seem tired and itchy.

CAUSES—Enervation, poor diet, lack of rest, anxiety, eyestrain, or neglected eye problems.

NATURAL REMEDIES

• **Do not overwork or overeat**. Eat a **nutritious diet**. Get enough **rest** at night.

• The diet should include the entire **B complex**, with an emphasis on B_6. Be sure your diet includes adequate **calcium**.

• **Do not strain** the eyes.

• **Eyebright** is a good herb for the eyes.

• **Do not rub** your eyes! Instead, apply **warm or cool compresses** to your closed eye to soothe the itch.

• **Do not share tissues, handkerchiefs, or towels** with anyone else.

• **Do not place a patch** over the itching eyes. Then bacteria can increase and cause even more serious problems.

ENCOURAGEMENT—The very first step in the path to life is to keep the mind stayed on God, to have His fear continually before the eyes. If you cannot take Jesus with you, do not go there. Do not watch it. Do not listen to it. Zechariah 10:12.

RED EYES
(Bloodshot Eyes)

SYMPTOMS—Red lines in the whites of the eyes.

CAUSES—The sclera is the white of the eye, forming the outer coat of the eyeball. There are tiny blood vessels on the surface of the sclera, which can become congested with blood, due to an insufficient supply of oxygen. Causes include **eyestrain, fatigue, dust, pollen allergies, bright sunshine, cigarette smoke, other irritants, overwork, and staying up late at night. Drinking alcohol** is a special cause. Bloodshot eyes can also mean capillary fragility throughout the body. **High blood pressure** or a lack of certain **vitamins and amino acids** may be the cause of that.

People over 40 commonly experience this problem to some extent. But if it is excessive, or if you are younger, you may wish to give it closer attention.

NATURAL REMEDIES

• Improve your diet; take **vitamin A** (5,000 mg daily), B_2 (100 mg), B_6 (100 mg), and the three amino acids: **lysine, histidine, and phenylalanine**. If you are eating a nutritious diet of **fruits, vegetables, beans, and nuts**, you should be getting the needed vitamins and amino acids.

• Get more **rest** at night. Pause and rest a little more during the day.

• **Do not use "drops"** from the pharmacy. They have an agent in them that constricts the blood vessels. This may make your whites look whiter for awhile, but no problems have been solved. Do not tinker with your precious eyes! When the drops wear off in a couple hours, the redness generally appears redder than before.

• Lay a **cool, wet washcloth** over your closed eye. The cold constricts the blood vessels naturally and the moisture helps your eyes.

• Be sure and drink enough **water**, so you will have an adequate amount of fluid in your tear ducts.

• If the eyes are red when you wake up, the problem may be that you have a low-grade **infection of the eyelids**. Treat it by washing your eyes with warm water at night before retiring.

• Any problem in the eyes should be taken seriously. Infection can be treated with a small amount of **boric acid** mixed with sterile water.

• Helpful herbs include **eyebright, fennel, and cornflower**. Eyebright is remarkably helpful for a number of eye conditions.

ENCOURAGEMENT—There must be a constant, earnest struggling of the soul against the evil imaginings of the mind. There must be a steadfast resistance of temptation to sin in thought or act. But, in the strength of Christ, this can be done. In Him we can live clean, pure lives. Job 11:15-18.

BLACK EYE

SYMPTOMS—The area around the eye turns black, following a blow to it.

CAUSES—Blood tends to pool around the delicate eyeball, in order to hasten healing.

NATURAL REMEDIES

• Boxing trainers deal with black eyes all the time. They apply an extremely **cold piece of iron** (something like a small tire iron) to the area. This reduces the swelling. An alternative is to hold a clean, **cold soda can** against the cheek (but not against the eye itself) for several minutes. Do not place any pressure on the eye itself. Or, to constrict the swelling, apply **cold compresses** to the area.

• Do not take **aspirin**. Because it is an anticoagulant, the blood will not clot as well. Instead, the bleeding will continue longer.

• **Do not blow your nose!** If you received a severe strike, blowing your nose could cause blood vessels to burst beneath the skin in a much wider area! Sometimes the injury fractures the eye-socket bone. And blowing your nose could force air out of your sinus adjacent to the socket. The air is injected under the skin, making the eyelids swell even more. This can increase the likelihood of infection.

• There is always the danger that there may be internal bleeding. So you may want to visit an **ophthalmologist**.

ENCOURAGEMENT—Prayer takes hold upon Omnipotence and gains us the victory. And this is what we need! We must have God or perish. We must submit to Him and obey Him. By the grace of Christ, this can be done. Jeremiah 32:41.

CORNEAL ABRASION

SYMPTOMS—A scratch on the surface of the cornea, which is the transparent front part of the eye. Symptoms usually occur suddenly and may include blurry vision, redness, watering of the eye, severe pain in the eye, frequent blinking, and sensitivity to bright light.

CAUSES—The cause could be a scrape by the edge of a newspaper or by a foreign particle such as a speck of dirt. Those who wear soft contact lenses and rub their eyes excessively are particularly at risk of such damage, because tiny particles can become stuck behind the lenses and scratch the surface of the cornea.

The problem is generally not serious, unless the abrasion becomes infected and a corneal ulcer *(308)* may develop. A herpes simplex infection can cause that ulcer.

A corneal abrasion usually takes only a few days to heal, if the eye is closed and remained covered shut for 2 days.

NATURAL REMEDIES

• Improve your **diet**, take **vitamin C** (5,000 mg, 3 times a day). Drink **eyebright** tea. Take **echinacea** tea.

• If home remedies do not solve the problem within a few days, visit an eye doctor.

ENCOURAGEMENT—Go to Jesus, just as you are; and He will open wide His arms and receive you as His child. There is no happiness equal to being with Him.

NEARSIGHTEDNESS
(Myopia)

SYMPTOMS—A person only clearly sees those things which are close up.

CAUSE—Light is focusing in front of the retina instead of on it. Only 2% of second grade children are nearsighted. By the end of high school, the figure is 40%. By the end of college, more than 60% of students are nearsighted. Heredity is another cause. There is both an occupational and nutritional cause for this problem.

NATURAL REMEDIES

• Every so often, rest your eyes by looking at something at a **distance** in the sky.

• **Vitamin D** (1,000 IU daily) **and calcium** are both important. Take **sunbaths** and **calcium citrate** tablets or powder. Take vitamin C (5,000 mg daily)

• **Do not strain** the eyes, thinking that will help you improve your eyesight! Doing so only weakens the delicate muscles and will result in still more vision problems. Ignore these "better sight without glasses" theories which tell you to strain your eyes in order to improve your vision!

—Also read Eye Problems (301), Eyestrain (302), and Computer Eyestrain (303).

ENCOURAGEMENT—Cry to God for help. Find in Him your all in all. He can help. He can satisfy your deepest soul desire. John 15:10.

FARSIGHTEDNESS
(Hyperopia)

SYMPTOMS—A person's distance vision is good, but his near vision is blurry.

CAUSES—The six **muscles** pulling on the eye do not function properly or the **eyeball** is abnormally short. As a result, light rays focus behind the back wall of the eyeball, which is the retina.

NATURAL REMEDIES

• Maintain a **nourishing diet** which includes a vitamin / mineral supplement. Be sure you are daily obtaining the entire **B complex, especially B_6. Calcium** is also important.

• **Do not strain** the eyes. If they seem tired or unable to focus properly, **rest them** from time to time. Straining the eyes, hoping that will help you see better, only aggravates the problem.

—Read Eye Problems (301), Eyestrain (302), and Computer Eyestrain (303).

ENCOURAGEMENT—Heaven is not closed against the fervent prayers of God's little ones. The only reason for our lack of power with God is to be found in ourselves. Too many only offer a little hurried prayer and then rush off. Take time with God! You urgently need it. Hebrews 5:9.

NIGHT BLINDNESS

SYMPTOMS—You do not see as clearly in the dark as do others. When you go out into the dark, your eyes seem to adapt very slowly to it.

CAUSES—There are two types of light-sensitive cells in the retina: rods and cones. Up to 120 million rods are distributed throughout the retina. Although rods are sensitive to all visible light, they contain only one type of pigment and cannot distinguish colors. They are responsible mainly for night vision.

If you have this problem, you are not going blind. The primary problem is a lack of **vitamin A**, which the body uses to make visual purple and to help you see in the dark.

The lack of vitamin A in the system can be caused by an inferior diet. But it may also be traced to one of the following: The body has a **fat malabsorption syndrome** and does not properly absorb oil-soluble vitamins. A **zinc** deficiency will cause the liver to poorly convert carotene to vitamin A. **Cystic fibrosis, celiac disease, and various food allergies** can produce intestinal changes which would affect fat-soluble vitamin absorption.

NATURAL REMEDIES

• Make sure you are getting enough **vitamin A**. The therapeutic dose would be 25,000 IU daily for only a few days. Too much vitamin A can be dangerous.

• The safer form of vitamin A is **carotenoids**, such as beta or marine carotene (up to 100,000 IU daily). Drink 3 cups of **carrot juice** every day! Eat **green and yellow vegetables**.

• Take 15-20 mg of **zinc** daily.

• Some people wear a stronger prescription of **glasses** when they must drive at night. Keep the **headlights and windshield clean.** Do not wear **sunglasses** at dusk. **Drive slower** at night. Better yet, only drive during the day.

• Take **bilberry** extract capsules or liquid, **PCOs** from **grapeseed** or **white pine** (100 mg, 3 times daily), and **coQ$_{10}$** (60 mg, 3 times daily).

ENCOURAGEMENT—By keeping our minds on God and Bible themes, our faith and love will grow stronger. We will have a little heaven on earth. Those around us need our help so much. Psalm 31:24.

COLOR BLINDNESS

SYMPTOMS—The reduced ability to tell certain colors apart.

CAUSES—There are six million cones in each retina which provide detailed and color vision. There are three types of these cone cells, one is sensitive to blue light, another to green, and the third to red light. If one or more of these three types of cones are faulty, color blindness results. In one type of **inherited** color blindness, a color-blind father passes his recessive genes on to his daughters who are not color blind. But their sons may inherit color blindness. In another type, both males and females can inherit it equally.

The problem is more frequent in males than females. The most common type is red-green color blindness.

Other causes include **macular degeneration and several other eye disorders**. The toxic effects of various **drugs**, including **chloroquine** (used for malaria) can also cause it. If the condition is caused by eye diseases or drugs, the color blindness can be alleviated to some extent.

NATURAL REMEDIES

• Take 5,000 units of **vitamin A** daily and 25,000 IU of **carotene**.

ENCOURAGEMENT—There are perils all about us. We must draw nearer to God. Cultivate the habit of talking with the Saviour. Let your heart be continually uplifted to Him in silent petition for help, for strength to obey, and for guidance. Let every breath be a prayer. 2 Corinthians 12:9.

AMBLYOPIA

(Inability to Focus Eyes)

SYMPTOMS—This condition exists when the eyes do not seem to focus clearly on anything, near or far. It can be serious enough to constitute a type of blindness.

CAUSES—This is blurry or absent vision in an eye that is structurally normal. It occurs in young children if the two eyes send different images to the brain. If the

problem is not solved by the age of 5, later attempts to correct vision will fail. This is because the brain will disconnect the vision from one of the eyes.

Misalignment of the gaze of the eyes (strabismus, *309*) is the most common cause. Other causes include vision disorders in one eye, such as astigmatism *(see Eye Problems, 301)*, farsightedness *(305)*, and nearsightedness *(305)*.

Certain nutritional and environmental problems are usually involved.

NATURAL REMEDIES

• Lack of **vitamins B_1 and B_{12}** appears to be a primary cause. **Smoke** from cigarettes and cigars is another important cause.

• Take **B_{12}** intermuscularly (1,000 mcg / day for a total of 20,000 mcg). This will often solve the problem, along with an adequate supply of **vitamin D** and **calcium**.

• Get **tobacco** out of your house and office.

—Also read Eye Problems (301), Eyestrain (302), and Computer Eyestrain (303).

ENCOURAGEMENT—Thank God that He is so near to help in time of need. Prayer and faith can do that which no earthly power can accomplish. Trust Him and obey His Written Word. And you will have the guidance you need. Isaiah 58:11.

KERATOMALACIA
(Xerophthalmia)

SYMPTOMS—The cornea is the domed clear bulge on the front of the eye. It becomes hazy and dry, and then ulcerated. The eyes feel extremely dry. Blinking increases, but does not seem to properly moisten them. Conjunctivitis and night blindness occurs.

Fat-like spots (Bitot's spots) appear on the sclera (white of the eye). These are white, foamy, elevated, and sharply outlined patches on the whites of the eyes.

CAUSES—"Xerophthalmia" means dryness of the eye. It occurs mainly in developing countries. The condition is caused by a dietary deficiency of **vitamin A**. Left untreated, it leads to chronic infection and the cornea (the transparent part of the front of the eye) may soften and perforate. If that happens, infection can spread inside the eye and blindness may result.

Not artificial tears, but large doses of vitamin A is the solution.

NATURAL REMEDIES

• Take **vitamin A** in the form of carotene (25,000 IU for children and at least 50,000 IU for adults) per day. Increase the amount of **zinc** and **protein** consumption, and improve the general **nutrition**. Take a **vitamin / mineral supplement** twice daily.

• Bitot's spots are caused by a vitamin A deficiency. **Vitamin D** and adequate protein are also needed.

• **Avoid eyestrain and smoke**-filled rooms.

—Also see Dry Tear Ducts (below).

ENCOURAGEMENT—We must be much in prayer if we would make progress in the spiritual life. Take time with God, and you will be blessed for it. He can give you strength to live a better life, a clean life, a new life in Christ. Matthew 4:4.

DRY TEAR DUCTS
(Dry eyes, Keratoconjunctivitis Sicca)

SYMPTOMS—The eyes seem dry all the time, due to insufficient production of tears.

CAUSES—There is a small tear duct (lacrimal gland) which keeps each eye moist; yet it does not seem to be working properly. In severe cases, corneal ulcers may develop. Dry eye affects more women than men and is more common over age 35.

NATURAL REMEDIES

• Take **vitamin A** (25,000 IU) for only several days. Eat lots of **green and yellow vegetables** and drink **carrot juice**. A lack of it causes small openings to close down.

• Include enough **essential fatty acids,** including **omega-3** in your diet (**flaxseed oil** is an outstanding source), along with more **calcium**.

• Do not eat **junk, sugar, saturated fat, or processed foods**.

• Increase **water** intake.

• Bathe the eye daily with **aloe vera juice**.

• Take a **B complex** supplement, with extra **B_2** and **zinc**.

—See Sjögren's Disease (241). You may have it. Also see Keratomalacia (above), which is quite similar.

ENCOURAGEMENT—Those who love God are changed from being rebels against the law of God into obedient servants and subjects of His kingdom. They live to help and bless others. Jeremiah 31:3.

STY
(Stye, Hordeolum)

SYMPTOMS—What appears to be a small pimple develops on the eyelid.

CAUSES—A sty is a bacterial infection (usually staphylococcal) of an eyelash follicle. It causes a pus-filled bump to form on either the inside or outside of the eyelid. An oil gland has become infected, inflaming the tissues of the eyelid. The pimple grows for a week or so and then usually subsides, sometimes rupturing spontaneously as it heals.

Some people never get sties. Other frequently get them. Adolescent girls get them from incomplete removal of **eye makeup**. Any eye cosmetics used before getting a sty should be discarded. Mascara that is kept longer

than 3 months develops bacterial growth.

NATURAL REMEDIES

• Do not delay solving this problem. If it does not quickly heal, it may need to be drained by a professional. ***Do not squeeze*** *the lump*. This may spread the infection more widely. Sties can be dangerous. So do not be casual about them.

• Because you were not drinking enough **water**, eyelid secretions did not remain thin. Frequently **wash your hands** and keep them clean. **Do not rub your eyes** with dirty hands or fingers. Each person should have his own **towel and washcloth**. They should be washed daily if a person has a sty.

• Take adequate **vitamin A**. But take more, if you frequently have sties. Because too much vitamin A (from supplements) can cause problems, you would do well to get your vitamin A from **carotene**. **Green and yellow vegetables and carrot juice** are rich in carotene.

Go on a 5-day **fruit fast**, plus **carrot and celery juice**. Keep the bowels clean with an enema every morning.

• Do not eat **refined, fried, and processed foods.** Also do not eat **meats, unsaturated oils, salt, alcohol, tobacco, dairy products, or white flour**.

• Carrots, which are chopped and diced, or mashed potatoes (raw or cooked) can be made into a **poultice** and applied over the area. They can be left on for an hour and repeated 3 times a day.

• Hot compresses on the area are sometimes recommended. —But keep in mind that it was a very hot compress which blinded young Fanny Crosby. Instead, hold a **warm, moist cloth** against the affected eye. This will hasten drainage.

• Very **warm compresses**, alternated with **cold**, will help draw the pus to a head and then break it open.

• Drink 3 cups of **goldenseal** tea or **eyebright** to help clean the liver. **Fennel** or **myrrh** may be substituted.

• Apply concentrated **thyme** tea directly to the sty with a cotton swab. Thyme is rich in *thymol*, an antiseptic.

• Take **echinacea** orally. It is a powerful antibiotic. It has anti-bacterial properties. Daniel Mowrey, Ph.D., says that just 6 mg of the active constituent *(echinacosides)* in echinacea is equivalent to one unit of penicillin.

• Varro Tyler, Ph.D., of Purdue University, recommends placing fresh scrapings from the inside of a **potato** onto a piece of clean cloth and then onto the sty. Replace once or twice with fresh scapings. Within a couple hours, the swelling will be down and the sty improved. By evening it will be gone.

• A German treatment for sties is to place a very warm compress of **chamomile** tea on the sty.

• Swallow as much chopped **garlic** as you are able. It goes to work in the body to kill the staphylococci in the sty.

• If the eye itself becomes infected, add ½ tsp. salt to 8 oz. water and apply as an eyewash to the eye.

• After the sty drains, compresses should be continued until all drainage ceases.

—See Chalazion (below).

ENCOURAGEMENT—The Bible reveals the plan of salvation, and shows how sinful man may be reconciled to God and enabled to live a clean, godly life.

CHALAZION

SYMPTOMS—This appears to be a sty on the eyelid, but it is not. After several days, the swelling and pain disappears. But a slow growing pea-sized nodule remains on the lid.

CAUSES—A chalazion is the result of **plugged meibomian glands** in the eyelid, resulting from a **nutritional deficiency**.

NATURAL REMEDIES

• Take vitamin A in the form of **beta carotene** (at least 50,000 units per day) for many days. Also drink **carrot juice**, and eat **green and yellow vegetables**. Include a **zinc** supplement in the diet (15 mg, 3 times a day).

• Apply warm poultices of 3% **boric acid** on the closed lid. A boric acid ophthalmic ointment may be obtained without prescription from the pharmacy.

—Also see Sty (307).

ENCOURAGEMENT—When God gave His Son to our world, He endowed human beings with imperishable riches—with which nothing else can compare. Christ offers you all the love of God. Come, accept Him just now. James 2:5. "Light is sown for the righteous, and gladness for the upright in heart." Psalm 97:11. How very kind of our heavenly Father to provide us with such encouragement. He is always there when we call upon Him.

ULCERATED EYE AND LID

(Corneal Ulcer)

SYMPTOMS—The eye has become inflamed, resulting in an ulcer on the eyeball. The problem may then extend to the eyelid.

CAUSES—This occurred because the normal covering of the **eye was scratched or damaged** in some way, and then became infected The infection is generally caused by a **virus**. The ulcer can also be caused by blepharitis *(313)*.

NATURAL REMEDIES

• Obtain **adequate rest, improve the diet, and take large doses of vitamin C** (2,000 mg, 3 times a day).

• Apply a warm **yellow dock** tea poultice to the eyelid. You can also drink it.

—Also see Entropion (below).

ENCOURAGEMENT—Everyday learn something

new from the Scriptures. Search them as for hid treasures. They contain the words of eternal life.

XEROPHTHALMIA

SYMPTOMS—An inflammation of the cornea.

CAUSES—This is an infection of the cornea (the transparent part of the eye, through which light passes). The condition is caused by a lack of vitamin A.

If not treated, this disorder leads to chronic infection, night blindness *(306)*, and / or biotot's spots *(309)*. The cornea may soften and perforate. Infection may then spread inside the eye, resulting in blindness.

NATURAL REMEDIES

• Very large doses of **vitamin A** are needed. Take 25,000 IU daily until the condition ends. Then reduce to 10,000 IU daily. If pregnant, do not take over 10,000 IU daily. Too much vitamin A can be a problem.

• Take **carotenoids** daily: 3 glasses of **carrot juice** daily, plus eating fresh **red and yellow vegetables.**

• Take **vitamin B_2** (100 mg), **vitamin B_6** (200 mg), **vitamin C** (1,000 mg), and **bioflavonoids** (50 mg),

• **Zinc** (20 mg daily) is also important.

ENCOURAGEMENT—Tender, compassionate, sympathetic, ever considerate of others, He represented the character of God. And He was constantly engaged in service for God and man. As Jesus was in human nature, so God means His followers to be. In His strength we are to live the life of purity and nobility which the Saviour lived.

BITOT'S SPOTS

SYMPTOMS—Elevated and quite distinct white patches on the conjunctiva.

CAUSES—The conjunctiva is the thin membrane which is on top of, and covers, the visible part of the eye. The usual cause is a severe vitamin A deficiency. But being in a smoke-filled room can aggravate the problem.

NATURAL REMEDIES

• Take 25,000 IU of vitamin A for 2 weeks. Then take 15,000 IU each day for a full month. After that, reduce to 10,000 IU daily. If pregnant, do not take over 10,000 IU daily. Use an emulsion form of the vitamin for improved assimilation. It is also safer at higher doses.

• Drink 2-3 cups of fresh carrot juice daily. Also eat lots of red and yellow vegetables.

• Do not remain in a smoky environment.

• Obtain enough rest, fresh air, and exercise.

ENCOURAGEMENT—Take the hand of Christ and hold it fast. His hand holds you much firmer than you can hold His hand. But you must choose to remain close to Him. He always gives you freedom of choice.

ENTROPION

SYMPTOMS—The eyelashes turn in, causing irritation to the eyeball. There may be pain in the eye area and a watery eye.

CAUSES—The eyelid turns inward; and the eyelashes rub against the cornea (the transparent front part of the eye) and the conjunctiva (the white of the eye). Left untreated, the cornea may be damaged, ultimately leading to loss of vision.

The problem mainly affects older people in developing countries. Entropion most frequently follows trachoma, which formed scar tissue on the inner surface of the eyelids. Eventually, this shrinks, causing the eyelid to turn inward.

NATURAL REMEDIES

• Attach one end of a piece of **adhesive tape** to the skin beneath your lower lashes. Tape the other end to your cheek. Let it remain 3 days. Remove the tape and see if the condition has improved. If not, see an eye doctor immediately.

—Also see Ulcerated Eye and Lid (308).

ENCOURAGEMENT—Christ, who could not see human beings exposed to destruction without pouring out His soul unto death to save them from eternal ruin, will look with pity and compassion upon every soul who realizes that he can not save himself. How thankful we can be for God's blessings to us!

STRABISMUS
(Crossed Eyes, Squint)

SYMPTOMS—If mild, symptoms occur only when a child is tired. If severe, symptoms are present all the time and may include misalignment of the gaze of one of the eyes. Poor vision in one of the eyes is due to lack of use.

CAUSES—Only one eye points directly at the object being viewed. This abnormal alignment of the eyes causes the brain to receive conflicting images, which may result in double vision or, in children under the age of 8, suppression of the image from the misaligned eye.

The cause can be **inherited, nearsightedness** *(305)*, or **farsightedness** *(305)*. But the cause can be **structural differences** between the muscles controlling eye movements or **paralysis** of the eye muscles, due to a brain **tumor.** This is rarely caused by **cancer** of the eye.

A vision test can be performed and, if the problem suddenly developed, a CT scan may be done to look for a tumor.

NATURAL REMEDIES

• **Corrective glasses** can be given to the child to wear. Or he or she may wear an **eye patch** for a period of time each day, to force the weak eye to be used prop-

erly. These treatments are usually successful, although the problem can recur.

ENCOURAGEMENT—When the soul surrenders itself to Christ, a new power takes possession of the new heart. A change is wrought which man can never accomplish for himself. It is a supernatural work, bringing a supernatural element into human nature.

FLOATERS

SYMPTOMS—Small specks, known as floaters, that appear to float in the field of vision. They are especially seen in a well-lit room or outdoors on a bright day.

CAUSES—These are fragments of tissue in the jelly-like vitreous humor that fills the "ball" of the eye. They cast shadows on the retina. Any eye movement causes them to move rapidly. But, when the eyes are still, they drift slowly.

If they appear suddenly, or in large numbers, consult your eye doctor. This may indicate **separation of the retina** from its underlying tissue (retinal detachment) or a **leakage of blood** into the vitreous humor (vitreous hemorrhage). If you also see light flashes in the corners of your eyes, be sure and see an eye doctor.

Occasionally, floaters clump into long, stringy strands. If this occurs, the cause may be fibrillar degeneration of the vitreous, which results from excessive exposure to sunlight.

NATURAL REMEDIES

• Take **bioflavonoids** (500 mg, daily) and **vitamin K** (100 mcg, 2 times daily). **Vitamins A** (500 IU) and **E** (400 IU) will help remove lens particles. Also **pantothenic acid** (500 mg), B_6 (250 mg), and **vitamin C** (2,000 mg).

• Drink **carrot juice;** and eat **green and yellow vegetables.**

• Drink **dandelion** root tea and use as an eyewash.

—Also see Scotoma (below).

ENCOURAGEMENT— Christ knows every temptation that comes to man, and the capabilities of every human agent. He weighs his strength. He sees the present and the future, and presents before the mind the obligations that should be met, and urges that common, earthly things shall not be permitted to be so absorbing that eternal things shall be lost out of reckoning.

SCOTOMA

SYMPTOMS—The person seems to see one or more "spots" in front of the eyes.

CAUSES—An unnatural blind spot (scotoma), existing on the retina, is not transmitting any light through the optic nerve to the brain. When there is more than one blind spot, they are called scotomas.

NATURAL REMEDIES

• Increase the amount of **vitamin A** in the diet. And, of course, decidedly **improve the diet**. Throw out all **junk and processed food**. Obtain adequate **rest** at night.

—Read Eye Problems (301) for more information. Also see Floaters (above).

ENCOURAGEMENT—You cannot control your impulses or your emotions. But, in the strength of Christ, you can control the will. You can make an entire change in your life. Psalm 71:5.

DIMNESS OF VISION

SYMPTOMS—It is becoming more difficult to see. Less light seems to be entering the eyes.

CAUSES—Among the most common causes are cataracts *(311)*, glaucoma *(316)*, and diabetic retinopathy *(311)*. Less frequent causes include macular degeneration *(315)* and retinitis pigmentosa *(315)*.

Still another cause is retinal detachment *(310)*. A blood vessel which feeds the retina may be blocked by a blood clot. If this vessel is an artery, loss of vision is sudden. Usually only one eye is affected. An inflamed optic nerve is another possible cause, resulting from infection. This can cause loss of vision within a few days.

Toxic amblyopia *(306)* is another cause which produces a small hole, in vision, which gradually enlarges.

NATURAL REMEDIES

• Eat a good, nourishing diet of fresh **fruits, vegetables, whole grains, legumes, and nuts**. Take a full **multivitamin supplement**.

• **Avoid smoky air** from **tobacco, smoke stacks**, or living alongside a **highway**.

—See the above-mentioned diseases for further information.

ENCOURAGEMENT—The gifts of His grace through Christ are free to all. There is no election but one's own by which any may perish. God has set forth in His Word the conditions upon which every soul will be elected to eternal life—obedience, by the enabling grace of Christ, to God's commandments.

RETINAL DETACHMENT

SYMPTOMS—Flashing lights in the corner of the eye. Large numbers of dark spots in the field of vision *(see Floaters, 310)*. If a large area of the retina has become detached, you may see cloudy ring or a black area across your field of vision.

CAUSES—Separation of the light-sensitive retina at the back of the eye from the supporting tissues underneath occurs. In this disorder, part of the retina peels away from the underlying tissue. *Without rapid treatment, partial blindness can result.* See an ophthalmologist. This condition is more common over the age of 50. This sometimes runs in **families**. Participating in sports can cause a **blow to the eye**. Severe **nearsightedness** can also cause this condition.

A small tear occurs, permitting fluid to leak through and increase the separation.

NATURAL REMEDIES

• Contact an optometrist. He is able to test for retinal detachment.

• In some instances, there is only slight flashes of light in the corners of your eyes; yet the doctor may not see retinal detachment. In such instances, eat an extremely nourishing diet of fresh fruits, vegetables, whole grains, legumes, and nuts, plus a full multivitamin supplement; and the flashes of light may subside. But when in doubt, consult an optometrist for another checkup.

ENCOURAGEMENT—What an exalted position to be identified with one in whom is all perfection centered, who is indeed the Majesty of heaven, but who loved us (although fallen) so much that language cannot express it!

TOXIC AMBLYOPIA
(Tobacco Amblyopia)

SYMPTOMS—A small "hole" appears in the field of vision, which continues to enlarge over a period of time. Usually both eyes are affected. Blindness may eventually result.

CAUSES—This disorder primarily occurs in **people who smoke**, especially pipe smokers. Cigarette smokers tend to remove the cigarette from their face after taking a puff, whereas pipe smokers often leave the pipe in their mouth and the smoke drifts up into the eyes. But either form of tobacco smoking is dangerous to the eyes. The condition can also occur in individuals who drink **alcohol** or come in contact with **dangerous chemicals** (such as **lead, methanol, chloramphenicol, ethambutol, digitalis**, or certain others).

NATURAL REMEDIES

• Stop **smoking** immediately and do not linger in rooms where smoking is taking place.

• Stop using all **alcohol**.

• Dramatically improve your **diet**, as outlined elsewhere for eye problems. Get enough **rest, fresh air, and exercise**.

ENCOURAGEMENT—Though enduring most terrible temptations, Christ did not fail or become discouraged. He was fighting the battle in our behalf, and had He faltered, had He yielded to temptation, the human family would have been lost.

DIABETIC RETINOPATHY

SYMPTOMS—Symptoms may not be noticeable until damage to the retina is severe, although there may be areas of blurry vision. As the disease progresses, vision may suddenly be lost in one eye, due to rupture of one of the fragile new blood vessels in the retina.

CAUSES—If you have **diabetes mellitus** *(547)*, you have an increased risk of developing retinopathy. The diabetes can produce abnormalities in small blood vessels anywhere in the body—including in those in the retina.

At first, small blood vessels in the retina leak. Later, fragile new blood vessels may grow out into the jelly-like vitreous humor (in the center of the eyeball). If untreated, loss of vision can occur.

The longer a person has diabetes and the less it is controlled, the greater the risk. Only very few people with type 1 diabetes mellitus develop retinopathy within the first 10 years; yet once retinopathy begins, it usually progresses rapidly. By the time type 2 is diagnosed, it may already be present.

NATURAL REMEDIES

• Eat fresh **fruits, vegetables, whole grains, legumes, and nuts**. Take a full **multivitamin supplement**. Follow the recommendations in the section on Diabetes *(547)*.

• Take 25,000 IU of **vitamin A** daily. If pregnant, only take 10,000 IU. Also drink 3 cups **carrot juice** daily, and eat **red and yellow vegetables**.

ENCOURAGEMENT—Christ for our sakes laid aside His royal robe, stepped down from the throne of heaven, and condescended to clothe His divinity with humility and become like one of us except in sin, that His life and character should be a pattern for all to copy, that they might have the precious gift of eternal life.

CATARACTS

SYMPTOMS—The lens of the eye becomes clouded, so that the eye is unable to properly focus on objects. In advanced cases, the lens is becoming opaque, so that blindness is setting in. Only part of the eye is generally cloudy or opaque; but this can gradually extend to the entire eye.

CAUSES—Cataracts occur as a result of structural changes to protein fibers within the lens. These changes cause part or all of the lens to become cloudy. Cataracts usually develop in both eyes; but generally one eye is more severely affected. If it is in the central part of the lens or in the whole lens, total loss of clarity and detail in vision can result. But it will still be able to detect light and shade.

Congenital cataracts occur if the mother had **ru-**

bella during the first three months of pregnancy or if the infant has **galactosemia**. This is an inherited inability to properly digest *galactose* (a type of milk sugar, called lactose). These cataracts generally do not get worse. Not using milk products at all can help prevent this in adults. **Smokers**, those who take **steroids**, and those who have **heavy metal poisoning** can get cataracts.

In one study, a group of women who smoked 30 cigarettes a day showed a 60% greater risk of developing cataracts.

Traumatic cataracts result from **blows** which rupture the anterior lens capsule, **harmful chemicals, intense infrared radiation, or X-rays**. **Radiation** causes free-radical damage in the eyes. This causes the lens to absorb aqueous humor. The lens becomes cloudy and must be removed in order to restore eyesight. People living closer to the South Pole (which has part of its **ozone** layer stripped away) are more likely to develop cataracts.

Other causes include **hypoparathyroidism, Down's Syndrome, and atopic dermatitis**. **High blood sugar** levels and **low calcium** levels can also bring it on. Higher blood sugar levels in **diabetics** and **hypoglycemics** causes the cells in the lense to absorb large amounts of glucose. This is converted into sorbitol, an insoluble form of sugar. This gradually crystallizes in the eye, forming a cataract. The longer one has diabetes, the greater the risk of cataracts.

Hair dye has been shown to cause cataracts. Only 23% of those not dying their hair get cataracts. Whereas 89% of those who dye their hair develop them.

Complications of **tumors, detached retina, iritis, glaucoma, and severe myopia** can also bring it on.

Other studies reveal that people with **stress, allergies**, or who eat **seafood** (thus ingesting methylmercury) are more likely to develop cataracts.

It is now known that a **lack of vitamins C or B_2** in the diet over an extended period of time can help produce cataracts.

Cataracts are the most common form of blindness in older people, and should not be ignored when they are beginning to develop.

John D. Huff, M.D., a Texas ophthalmologist, says that 9 out of 10 patents in the early stages can reverse their cataracts with natural remedies. No single natural remedy can do it; but, when combined, good results can be obtained. Here is information which can help you:

NATURAL REMEDIES

• Obtain **adequate rest** at night. Do not sit up **watching television** till late at night! You are tiring your eyes and irradiating them with **X-rays** at the same time.

• Eat good "see foods": **fruits, vegetables**, and the nutrients listed below. Eat **whole grains, nuts, and legumes**. It is important that you eat a good **nutritious diet**! Get enough **vitamins E, C, B complex** (B_1 and B_2 is very important), **selenium, zinc, bioflavonoids, l-glutamine, l-arginine, l-cysteine, and glutathione**. If diabetes is involved, add **chromium** supplementation. **Avoid excess cholesterol, sorbitol (artificial sweetener), unsaturated fatty acids, and mercury tooth fillings** (amalgam). Take a good high-potency **multivitamin**. It should include at least 50 mg of most of the **B vitamins**, 15 mg of **beta-carotene**, 30 mg of **zinc**, and 200 mcg of **selenium**. **Vitamin C** (1,500 mg daily) is extremely important. **B_2** (200 mg) protects the crystalline lens of the eye. Also helpful: **copper** (3 mg) with **manganese** (5 mg) and flaxseed oil (1-2 Tbsp. daily).

• **MSM** (methylsulfonylmethane) is important for good vision. Take ½ tsp. of the powder, per 100 lbs. body weight once a day.

• The flavonoid, **quercetin**, is known to block sorbitol accumulation in the eye. **Lipoic acid** (15 mg daily) is also recommended by some.

• **Do not drink milk or eat cheese, ice cream, seafood, or grease**.

• Place a drop of **honey** in the corner of the eye at night. This will help absorb the crystals.

• **Antioxidants** prevent cataracts from forming. That which clouds the eye is damage for oxidation, caused by free radicals. Antioxidants neutralize free radicals.

• **Sources of antioxidants**: The best antioxidants are **vitamin A**, which you want to get from food in the form of carotenoids, like **beta-carotene**. **Green and yellow fruits and vegetables** are full of it. Other antioxidants include **vitamins C and E, flavonoids, and selenium**. Taking 1,000 mg of vitamin C daily definitely slows cataract formation. **Magnesium** and **manganese** are also important in helping antioxidants. One Harvard study found that getting 50 mg of carotenoids every other day will significantly reduce your risk of cancer, cardiovascular disease, and cataracts. Carrot juice is an excellent way to obtain carotenoids and antioxidants!

• **The mint herbs** are good antioxidant sources: **Catnip, peppermint, and rosemary.** Other sources include **ginger and turmeric.**

• Substances, such as **nicotine, heavy metal poisoning, insecticides**, etc., makes free radicals and destroy antioxidants in the body. **Saturated fats and fried foods** also have lots of free radicals. Steroid drugs can induce cataracts at any age. Avoid **aspirin, commercial antihistamines**, and **cortisone**.

• Certain foods contain *anthocyanosides*, which improve visual acuity: **blueberries, huckleberries, cranberries, blackberries, raspberries, grapes, plums, wild cherries, and bilberries**.

• Research studies found that taking **bilberry** (European blueberry) extract (80-165 mg daily, based on an *anthocyanidin* percentage of 25%) with **vitamin E** (400 IU daily) prevented cataract progression in some patients.

• **Papain** in **papaya** helps digest protein. If not digested properly, protein can concentrate in the lens.

• **Exercise** early in the morning and avoid long exposure to the sun. **Ultraviolet radiation** from sunlight can cause and worsen cataract problems. **Sunglasses** should be designated Z80.3. Prescription lenses should have a UV-protective film. **Tanning booths** intensify the

risk.

• **Relaxing** at times during the day is good for your eyes. Alternate **hot and cold showers** stimulates circulation and proper hormonal balance.

ENCOURAGEMENT—Do not say that you cannot overcome your moral defects. In the strength of Christ, you can. He will empower you to do all that His Father asks of you. The impossibility is all in your will. If you will not, then you cannot. If you are willing, God will strengthen you to resist temptation. 1 Corinthians 10:13.

PHOTOPHOBIA
(Light Sensitivity)

SYMPTOMS—Light hurts the eyes.

CAUSES—This is the abnormal inability of the eyes to tolerate light. Looking at normally bright objects actually hurts the eyes.

This may occur occasionally or gradually increase. The cause is usually a lack of **vitamin A** in the diet. Other causes include acute **glaucoma** *(316)*, **damage to the cornea**, or **uveitis**. If a child suddenly has this problem, it may be an early symptom of **measles** *(706)*.

NATURAL REMEDIES

• If the problem is caused by a lack of **vitamin A**, take 25,000 IU daily for only a few days. More than that can be dangerous. If pregnant, do not take over 10,000 IU daily.

• Increase the intake of **beta-carotene** in the diet. The best way to do this is to eat more **green and yellow vegetables**. Drink 3 glasses of **carrot juice** daily.

ENCOURAGEMENT—All who have a sense of their deep soul poverty, who feel that they have nothing good in themselves, may find peace and strength by looking to Jesus. Thank God that He not only accepts us, but He changes us. Matthew 7:24-25.

INFLAMED EYELIDS
(Blepharitis)

SYMPTOMS—Redness, swelling, burning, itching of the eyelids. Crusting and scales at the base of the eyelashes. It may feel as if there is something in the eye. Occasionally there is a discharge. In severe cases, there is so much swelling that it closes the eye. Swelling usually goes down within 1 or 2 days, with treatment.

CAUSES—There are two types: *seborrheic*, which produces oily or waxy scales that are easily removed, and *staphylococcal*, which has drier scales and more difficult to remove. Small children frequently have blepharitis. It may be caused by allergy or associated with eczema, dandruff, or seborrheic dermatitis.

Trachoma is the most frequent cause of blindness. Worldwide, 20 million have this.

NATURAL REMEDIES

• Careful, **daily cleaning** of the eyelid and increasing of the blood flow to the area are the best ways to deal with the problem. Clean each eye with a fresh swab (Q-tip) that has been dipped into a 50-50 solution of baby shampoo and water. Roll it against a clean swab to remove the excess liquid. And then carefully remove the crusts with a downward, outward motion to the tip of the eyelash. After this, thoroughly rinse off the shampoo with a fresh washcloth.

• Provide a **nutritious diet** which includes **no sweets, meat, spices, or processed foods**.

• Do not let water run over the eyes when washing the hair. Keep the **eyes and head clean**. Fingernails should be kept short. **Hands should be washed** frequently.

• Occasionally, **lice eggs** (nits) are the cause of the problem. If so, they must be removed.

—Also see Conjunctivitis (below), which is similar.

ENCOURAGEMENT—Christ wept at the grave of Lazarus, that He could not save every one whom Satan's power had laid low in death. When He raised Lazarus from the dead, He knew that for that life He must pay the ransom on the cross of Calvary. Every rescue made was to cause Him the deepest humiliation. He was to taste death for every man. Hebrews 2:9.

CONJUNCTIVITIS
(Pinkeye)

SYMPTOMS—The membrane lining of the inner part of the eyelid becomes inflamed. The eyes may appear swollen and bloodshot, and are often irritated and itchy. If there is pus, eyelids often stick together after being closed for a period of time. There may not be pain, but there may be a sensation of sand in the eye.

CAUSES—The conjunctiva is the delicate membrane which connects the eyeball and the inner eyelid. It is usually transparent; but, when irritated or inflamed, it turns a blood-red color.

There may be a discharge from the eye. The origin may be **viral** if the discharge is thin and watery. If it is white and stringy, the cause may be **allergenic**. If there is pus, it may be **bacterial** in origin.

Conjunctivitis is highly contagious when it is caused by a virus. The cause is generally viral or bacterial infection. But physical or chemical injury may be involved (such as **injury to the eye, bacterial infection, allergens, dust, animal danders, pollen, medications, contact lens solutions, fumes, smoke, chemicals, cosmetics, tobacco smoke, air pollution, or other foreign substances in the eye**). Be careful about **swimming pool water.** It can cause eye and ear infections. **Straining** one's eyes may also produce irritation or congestion of the conjunctiva. It typically occurs during a case of **measles**.

In chronic or persistent cases, conjunctivitis may

be related to a lack of **vitamin A** or to toxicity due to **liver or kidney dysfunctions**.

When caused by allergens, the infection may reoccur at a certain time each year. In young children, "viral conjunctivitis" can occur from spring till fall and clear up in the winter.

Viral conjunctivitis is often found among groups of schoolchildren. Conjunctivitis is the most common form of eye infection in Western civilization.

Infants born at a hospital, and especially those who remain there for lengthy periods after birth, may be exposed to germs in the nursery. Those born at home are less likely to contract **newborn conjunctivitis**.

Chlamydial conjunctivitis typically begins 5-12 days after birth. **Gonorrheal conjunctivitis** usually appears 2-4 days following birth. Both infections are transmitted from the mother during passage through the birth canal.

NATURAL REMEDIES

• Take **beta carotene** (10,000 IU, 3 times a day for 1 week; then 25,000 IU daily). This will provide needed vitamin A.

• Take 1 comprehensive **B complex** tablet daily. Also **vitamin C with bioflavonoids** (1,000-5,000 mg in divided daily doses). **Zinc** (25 mg daily).

• Apply warm poultices of 3% **boric acid** on the closed eye. A boric acid ophthalmic ointment may be obtained without prescription from the pharmacy.

• Apply **charcoal poultices** overnight. Mix enough water in to make a thick paste. And spread it over a piece of cloth larger than the inflamed area. Hold it in place with an ace bandage and leave on overnight. Use only enough pressure to hold it in place—but not so tight that pressure is placed on the lid or eyeball. To avoid spreading the infection, carefully dispose of the cloth in the morning. Do not save and use it again.

• During the day, slurry **charcoal water** can be applied: Add ¼ teaspoon of salt and 1 teaspoon of powdered charcoal to a cup of water, boil, let cool, and strain through several layers of cloth. With a dropper, put 4-5 drops of the clear fluid in the affected eye, by pulling back the lower eyelid and applying, every 2 hours. Wash hands carefully after each treatment.

• Do not place a patch on the eye. It can cause bacterial infection and weaken the eyelid, so it will later droop.

• **Ice-cold compresses** can be laid on the eye during the acute stage. The eye should always be closed when doing this. For half an hour, apply a wrung-out washcloth to the eye; change it every 2-3 minutes; stop for 30-60 minutes; and, then, repeat for another 30 minutes.

• **Very warm and cold applications** can be applied every 4 hours. But the water should never be too hot (hot compresses on the eyes are what blinded young Fanny Crosby). Apply a cloth wrung out of very warm water for 2 minutes, then a cold cloth for 30 seconds. Do this for 15 minutes.

• **Saline irrigations** are also good. Add 2 level-teaspoons of salt to 1 quart water, to rinse discharges out of the eyes.

• Bacteria causing this infection may be carried on towels, clothing, paper, toys, or hands. **Launder** bed and bathroom linens separately from those of other family members. All in the home should frequently **wash hands**. **Keep fingers away** from the face.

• Put a **chamomile** tea bag in warm (not hot) water for 2-3 minutes, squeeze out the excess liquid, place it over the infected eye for 2-3 minutes. Do this 3-4 times a day.

• Other good herbs for compresses and washes include **bilberry, aloe vera juice, chickweed, eyebright, fennel, catnip red raspberry leaf, or slippery elm**.

• Gauze pads saturated with **witch hazel** and placed over the closed eyes for 15 minutes may help relieve irritation.

• Children prone to conjunctivitis should be **protected from chilling;** because, when chilled, the person cannot resist bacteria as well.

• If you wear **contacts**, put them away for the several days that these treatments continue. Disinfect or, if necessary, replace contacts.

• Stop using **eye cosmetics**. They occasionally introduce infection into the eyes. Wash hands before using them.

• **Do not share** towels, washcloths, or cosmetics.

ALLERGENIC CONJUNCTIVITIS

• Take 1,000-3,000 mg **vitamin C** daily in divided doses.

• Take **quercetin** (1,000 mg daily and increase to 5,000 mg daily till symptoms are gone). It is one of the bioflavonoids.

• **Cold compresses** are also good for this infection when caused by an allergy. Soak a washcloth in a dish with ice cubes and water. Squeeze out excess water, fold it, and place over both eyes. Keep it there till it warms. Repeat until the itching subsides.

GONORRHEAL CONJUNCTIVITIS IN NEWBORNS

• Gonococcal germs are quite sensitive to even slight heating or chilling. Therefore, flush the eyes with a slight **saline (salt) solution** (heated to 108° F.) for 1 full minute. Immediately afterward, apply an **ice water compress**, changed every 15 seconds. Continue for 5 minutes. Watch the infant for the next 5 days for signs of reoccurrence. Get a culture of secretions right away if gonorrhea is suspected.

PREVENTION—

• Avoid the problems noted under above *Causes*.

• When something gets in your eye, get it out. Grasping the eyelash and pulling the upper lid over the lower lid induces tears and helps wash out foreign bodies.

—Also see Inflamed Eyes (Blepharitis, 313), which is similar.

ENCOURAGEMENT—The heart of him who re-

ceives the grace of God overflows with love for God and for those whom Christ died. He becomes kind, thoughtful, humble, yet full of hope and encouragement to those around him. Isaiah 51:7-8.

RETINITUS PIGMENTOSA
(Tunnel Vision)

SYMPTOMS—The initial symptom is poor vision in dim light. Later, the outer edges of vision, known as peripheral vision, are lost. Eyesight deteriorates progressively inward until only a small area of central vision remains (narrow vision field). Full blindness rarely occurs. Dark patches of pigment form on the retina and vision deteriorates. Both eyes are equally affected.

CAUSES—A progressive degeneration of the rods and cones of the retina occurs. Tunnel vision can be inherited. This is progressive degeneration in the retina, the light-sensitive membrane at the back of the eye. The cells in the retina are gradually lost. The disorder is more common in men and is inherited. The disease is fairly rare, but begins in adolescence or young adulthood. The later stages occur after the age of 30, sometimes as late as the 80s.

NATURAL REMEDIES

There is no official cure for the problem. But, in the early stages, a careful diet can slow progression of the disorder. Read through other sections in this chapter on eye diseases; and carefully follow the suggested **diet** and **vitamin-mineral supplementation**.

- High doses of **vitamin A** (15,000 IU daily; but only 10,000 IU during pregnancy) may help slow the loss of remaining eyesight by about 20% a year. But another research study found that high doses of **vitamin E** might accelerate the loss of sight.
- **Flaxseed oil** (2 Tablespoons, two times daily).
- **Vitamin E** (400 IU 2 times daily), if retinitis is hemorrhagic.
- Take **bilberry** or **ginkgo biloba** extract. Research has found that both reduce this disease.
- Take **Coenzyme Q_{10}** (60 mg, 4 times daily). This is especially effective if the case is not severe.
- Also helpful: PCOs from **grapeseed** or **white pine** (100 mg, 3 times daily), **taurine** (500 mg daily), **zinc picolinate** (20 mg daily).
- **Special glasses** may help widen the field of vision if your visual loss becomes severe.

—Also see Macular Degeneration (below), which is a related disease. (Retinitis pigmentosa and macular degeneration are both retinopathy diseases.)

ENCOURAGEMENT—Christ is strong to deliver. Help has been laid on One that is mighty. He encircles man with His long human arm while, with His divine arm, He lays hold of Omnipotence.

MACULAR DEGENERATION

SYMPTOMS—Progressive visual loss occurs over several months. Symptoms may include increasing difficulty in reading, watching television, and recognizing faces. Distortion of vision so that objects appear larger or smaller than normal. Straight lines may appear wavy. However, the edges of vision (peripheral vision) remains clear. Usually both eyes are affected.

CAUSES—The macula is the most sensitive region of the light-sensitive retina at the back of the eye. Progressive loss of central and detailed vision occurs. So this disorder, which occurs more often in women, is the opposite of tunnel vision *(above)*.

Occurring most frequently after the age of 70, the risk of macular degeneration is increased by excessive exposure to sunlight and smoking.

There are two types of this disease: wet and dry. In the *wet form*, new blood vessels grow underneath the macula. If they leak or bleed, the macula is damaged, sometimes very suddenly. In the *dry form*, light-sensitive cells in and beneath the macula die gradually.

NATURAL REMEDIES

- Eat a **low-fat, nutritious diet. High cholesterol** levels are linked to macular degeneration. **Avoid processed foods and meat. Caffeine** in any form can intensify the disease. **Alcohol** damages the macula.
- Take **lutein** supplements. Regular intake of this nutrient, which is a pigment found in **leafy green vegetables** (kale, collards, etc.) can prevent macular degeneration. For this purpose, eat five servings of leafy green vegetables each week. Otherwise, take lutein supplements.
- Animals given **antioxidants** have a much lower risk of macular degeneration. Avoid free radicals and eat antioxidants *(104)*. **Vitamins C** (1,000 mg), **vitamin E** (400-800 IU), **selenium, and zinc** are important antioxidants. Take flaxseed oil (1-2 Tbsp.).
- **Bilberry and lutein** can both be purchased. Take them in combination for better effect. **Taurine**, an amino acid which may help regenerate retinal tissues, may also be obtained at a health-food store. Take it in sublingual form or 500 mg tablets daily.
- **Do not smoke** or be in the same room with smokers. **Avoid smoke in the air** (wood, oil, tires, etc.).
- **Sunlight** can damage the eyes; so avoid looking into the sun or into **bright reflections** from it.
- Get regular exercise and practice relaxation. Drink at least 48 oz. water daily.

ENCOURAGEMENT—Christ came to earth that whosoever will believe in Him may be saved. It is beyond our power to conceive the blessings that are brought within our reach through Christ, if we will but

unite our human effort with divine grace.

GLAUCOMA

SYMPTOMS—Early symptoms include eye pain or discomfort mainly in the morning, blurred vision, halos around sources of light, inability to adjust to darker conditions, and peripheral (side) vision loss (resulting in tunnel vision).

CAUSES—Fluid is continually produced in the eyeball. And, just as continuously, it is draining out. The balance is called intraocular pressure. Normal pressure is 15-20 millimeters of mercury; but glaucoma levels may reach 40 or more. The increased pressure, unless it is relieved, will damage the optic nerve and eventually produce blindness. Glaucoma is the second leading cause of blindness. There are several types of glaucoma.

It is more common in blacks than whites, tends to run in families, is more common in women than men, and especially affects people over age 40. Diabetics are more prone to glaucoma. About 3% of those over 65 have it. And about 60,000 Americans are legally blind from this disorder.

There appears to be no evidence that restoration of vision, lost through glaucoma-caused nerve degeneration, can be restored. Yet there are things which can be done to slow or stop the advance of this problem.

Nathan Pritikin says the cause of glaucoma is atherosclerotic plaque buildup within the eye, caused by eating too much **saturated fat**.

NATURAL REMEDIES

DIET

• Dietetic problems are among the most common causes of glaucoma. This includes **overeating, eating the wrong foods, and not eating the right ones**. It is important that one eat a **raw diet.** It should be rich in **vitamin C.** Studies reveal that vitamin C (2,000 mg or more daily) reduces intraocular pressure.

• The diet should include **betaine HCl, vitamin C, a good vitamin / mineral supplement, vitamin A, vitamin B_2, and nourishing, natural food**—but not too much of it.

• The diet should include **antioxidant foods** *(104).* These lower intraocular pressure. **Vitamin B_{12}** helps prevent the pressure from worsening. **Coenzyme Q_{10}** (3 mg daily) helps lower intraocular pressure. Take it with **vitamin E** (400 mg daily).

• **Omega-3 fatty acids** help unclog the eye's drainage system so the fluid can properly leak out, thus reducing pressure. For this purpose, take **flaxseed oil** (1,000 mg) every day. This is 2 Tbsp.

• **Alpha-lipoic acid** (150 mg daily), best taken with **magnesium** (500 mg daily), and **vitamin C** (1,500 mg daily) also helps lower the pressure.

• **Magnesium** dilates blood vessels. One research found that people given 245 mg per day experienced some improvement within 4 weeks.

• A research study found that 17 of 26 people who took the bioflavonoid, **rutin** (20 mg, 3 times per day), showed definite improvement.

• Less than 1 mg of **melatonin**, taken before retiring, helps reduce pressure increases while you sleep.

• Eat a diet rich of whole, unprocessed foods, especially fresh **fruits and vegetables**. Eat **whole grains, nuts, and legumes**.

• Do not eat **saturated fatty foods. This includes meat, dairy products, grease**, or most commercial **vegetable oils**. Use raw **flaxseed oil** or **wheatgerm oil** instead.

• **Food "allergies"** (eating foods which do not agree with the system) can be a frequent cause of the disease. The most common ones in glaucoma patients are **milk, onions, eggs, and chocolate**.

• Do a pulse test and find out which foods may be causing your problems. In addition, a tonometer can be purchased, which you can use to immediately test your eyeball pressure in response to what you just ate.

• **Higher blood-sugar levels** increase pressure.

• **Avoid coffee, tea, tobacco, alcohol, and all junk and processed foods. Smoking** damages eyes which have glaucoma. Tobacco constricts eye blood vessels and increases intraocular pressure. Avoid **spicy foods**.

• **Avoid excessive fluid intake** (juice, water, milk, etc.) at any one time. Drink only small amounts, only an hour apart. But drink at least 48 oz. daily.

HERBS

• **Jaborandi** comes from a tropical tree in South America. It has been used for treating glaucoma for hundreds of years. The active ingredient is *pilocarpine*, which reduces intraocular pressure.

• **Oregano** is one of the richest herbs in antioxidants. 1-2 tsp. dried oregano in a cup of boiling water lower intraocular pressure.

• **Kaffir potato** contains *forskolin*, which lowers eye pressure. Taken in drops, it lowers it in just 1 hour, reaches its peak in 2 hours, and continues for 5 hours.

• **Pansy** flowers contain *rutin*, which lowers pressure.

• Warm **fennel** herb, alternated with **chamomile** and **eyebright**, is helpful. Apply as eyewash in an eyecup or three drops to each eye, 3 times a day.

• A Chinese herbal formula for glaucoma is this: Mix 1 oz. each of tinctures of **bilberry, dandelion, coleus, eyebright, milk thistle, and ginkgo** in a large bottle. Take 1 tsp. 2 times daily for 3-6 months.

• Research studies found that the root of **coleus forskohlii** contains *forskolin*, which reduces intraocular pressure. **Salvia mitiorrhiza** root also does this. Both are Chinese herbs.

• Avoid **bloodroot**. For it and its active ingredient, *sanguinarine* (which is used in toothpastes and mouthwashes), is known to increase intraocular pressure.

OTHER FACTORS

• **Moderate, daily outdoor exercise** helps reduce pressure.

• If anxiety seems to be a cause, increase the **B com-**

plex intake. **Avoid stress, worry, fear, and anger.** Cultivate a tranquil, restful lifestyle. Great temperature changes (as found in northern areas) are a source of stress. It is extremely important that you avoid stress.

• **Avoid heavy lifting, pulling, etc.** Avoid **constipation**. Straining at the stool increases eye pressure (as does **diarrhea**). Maintain a slight, mild laxative effect. **Avoid sitting or standing still** for long periods. **Lying face down** significantly increases pressure. Standing on the hands dramatically increases pressure.

• Increased blood pressure brings increased pressure within the eyeball. Keep your **blood pressure** down!

• Fill a large basin with **ice-cold water.** Immerse both eyes in the water and rapidly blink eyes open and shut 5-10 times. Rest. Then repeat 2-3 times. Do this 2 times a day.

• Apply an **ice-cold moist, folded washcloth** (or towel) 2-3 minutes, rest 1 minute, and reapply 3-4 times. Repeat 2 times daily.

• Place a **very warm (not hot), folded towel** over both eyes for 3 minutes. Then apply an **ice-cold cloth** for 30 seconds. Repeat 3 times, ending with a cold cloth.

• **Do not use the eyes intensively for long periods** of time (TV viewing or excessive reading).

• **Motion sickness medication** patches increase eyeball pressure.

• Those with glaucoma do well to remain under the care of a professional. Every time the pressure increases, a little more eyesight is permanently lost.

ENCOURAGEMENT—No difficulty can hinder you, if you are determined to seek first the kingdom of God and His righteousness. Looking to Jesus, you will be willing to brave contempt and derision for His sake. Psalm 16:11. "Our help is in the name of the Lord, who made heaven and earth." Psalm 124:8. The more we trust to God and the less we trust to ourselves, the more help we receive.

THINNING EYELASHES

SYMPTOMS—The hairs in the eyelashes are getting thin and gradually fall out.

CAUSES—This disorder can have a variety of causes. A primary one is chemicals: **eye makeup, certain medicinal drugs,** and **environmental toxins** in the air. Other causes include **allergies, hypothyroidism, nutritional deficiencies** from a poor diet, **eye surgery,** and **injury**.

NATURAL REMEDIES

• Improve your diet. Eat fresh **fruits, vegetables, whole grains, legumes, and nuts**. Take a full **multivitamin supplement**.

• Take 25,000 IU of **vitamin A** daily for a month; then reduce to 10,000 IU. If pregnant, do not go over 10,000 IU daily.

• **Vitamin B_2** (200 mg) and **niacin** (2,000 mg) are also important.

• Take 2 Tbsp. **brewer's yeast** daily.

• **Vitamin E** applied to your eyelashes and eyelids at bedtime will help thicken the eyelashes. Put it on gently.

ENCOURAGEMENT—Amid the perplexities that will press upon the soul, there is only One who can help us out of all our difficulties and relieve all our disquietude. We are to cast all our care upon Jesus. We need to bear in mind that He is present and is directing us to commune with Him. 1 Peter 5:7.

— *HEAD AND THROAT* —

4 - NOSE

ANOSMIA

(Loss of Sense of Smell)

SYMPTOMS—One does not detect odors. This can occur either temporarily or regularly.

CAUSES—This occurs when one has a cold or rhinitis (nasal inflammation, resulting from colds or allergy).

But when it is chronic, it has one of several causes: a lack of **zinc** in the diet, an **injury, a tumor, or a stroke.** Zinc will not help in those cases.

NATURAL REMEDIES

• Take 30-60 (usually 50) mg of **zinc**, 3 times a day.

ENCOURAGEMENT—What love, what amazing love! That the King of glory would humble Himself to save fallen humanity! Come, fall before Him, just now, and give Him your life anew. Proverbs 15:29.

NASAL CATARRH

(Rhinitis. Runny, Stuffy Nose)

SYMPTOMS—The nose is runny or stuffed up.

CAUSES—Rhinitis is the inflammation of the nasal passages, producing nasal congestion and increased secretion of mucus. When a person drinks enough water, the nose may run. When not enough has been taken, the nose is stuffed and one has to breathe through the mouth. This condition accompanies a variety of problems, including the common cold. *Also see Allergic Rhinitis (578).*

NATURAL REMEDIES

• Go on a **cleansing fast** for a couple days, drinking lots of **liquids and fruit juice**.

• Obtain adequate **rest**, an adequate **fluid** intake, and a well-balanced **diet**. Increase the amount of **vitamin A**, as well as the other **vitamins**.

• **Eucalyptus oil** is an old-fashioned treatment, long

in use. Other helps include **chamomile, scotch pine, and cayenne.**

• As a nose ointment, Dr. Christopher recommends this: Mix 1 part each of **oil of spearmint and oil of peppermint** in sufficient amount of vaseline and apply in the nose with a paintbrush.

• Another helpful formula is to mix powders of 1 oz. **witch hazel**, ½ oz. **wild cherry bark**, and ½ oz. **white oak bark**. Sniff the powder up the nose.

• If these herbs are not available, use powdered **witch hazel** alone. Sniff it up the nose or mix with vaseline. And paint your nose with a tiny paintbrush.

• **Do not blow hard**—and unintentionally force phlegm up the eustachian tubes. This can lead to ear infection.

• **Beware of decongestants**; they can hurt the nasal lining.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR NASAL CATARRH AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

(1) ACUTE Catarrh (Acute Coryza) —

GENERAL TREATMENT—**Sweating bath at bedtime, followed by a short cold application:** Wet Sheet Rub, Cold Douche, Hot Footbath with very hot compress to the face, Water Vapor Inhalation, and water drinking.

TO PREVENT—**Cold Bath** daily or twice a day and **outdoor life. Avoid excessively warm** clothing, warm living, or warm sleeping rooms in the winter. Wear linen next to the skin in summer and winter.

(2) CHRONIC CATARRH —

BASIC CONSIDERATIONS—**Avoid taking cold.** And when an acute catarrh is contracted, eliminate it as soon as possible.

INCREASE ACTIVITY AND TONE OF THE SKIN—**Short sweating procedures**, especially the Radiant Heat Bath and Wet Sheet Pack continued until the sweating stage. Follow by **short cold** applications. Wet Sheet Rub; Shallow Bath or Cold Douche; Neutral Bath at bedtime, 20-30 minutes, 3 times a week; daily Cold morning Bath; Cold Towel Rub; Cold Shower or shallow rubbing bath. All sweating baths ought, if possible, to be taken just before retiring at night.

IMPROVE NUTRITION AND LIFESTYLE—**Avoid indigestible, spicy foods and meats.** Eat simply of wholesome food. Obtain needed **outdoor exercise, sunbaths**, and swimming.

RELIEVE NASAL CONGESTION—**Alternate Compress** to the face, **Alternate Sponging** or Compresses to the upper spine, and **Cold Footbath** under running water if the extremities are cold.

GENERAL METHOD—Build up the general health by tonic measures, employing friction tonics, at least twice daily. Avoid hot baths and too warm clothing. Expose the body, as much as possible, to the open air. But use great care to avoid taking cold by undue exposures. Gradually train the body to the point of enduring exposure without injury. (Drink enough water to keep the mucus in the nose thin, so it can easily flow out without clogging the passageways. Do not blow your nose, lest mastoid infection occurs).

—Also see Common Cold (222) and Catarrh (221).

ENCOURAGEMENT—By yielding your will to Christ, He will hold you fast. You will have strength and determination to live a clean life and resist temptation to sin. Psalm 91:15.

NOSEBLEED
(Epistaxis)

SYMPTOMS—The nose bleeds. A tiny vein in the nose has been broken.

CAUSES—Nasal infection, injury to the nose, **scratching** with a fingernail, **blowing the nose hard**, a sudden **change in atmospheric pressure**, or a **foreign body** in the nose of children. It is more likely to occur during winter. **Excessive dryness** can cause nasal surfaces to crack and bleed.

Nosebleeds are common in children before puberty, but it usually stops by itself. They often follow upper respiratory tract infection. And the lining may have been affected by the blowing and wiping.

In people over 50, nosebleeds can be more serious. The small blood vessels in the nose can rupture more easily. It can also be caused by **drugs that prevent blood clotting; this** lasts longer if you have **high blood pressure.** Nosebleeds are common among **alcoholics**.

Most common is *anterior nosebleed*, which is bleeding in the nose itself. The other type is the *posterior nosebleed.* This occurs in the elderly. And it is caused by high blood pressure. The bleeding starts in the rear of the nose and runs down into the throat. The blood pressure must be lowered! Increase water intake and see a physician. If bleeding continues more than half an hour, see a physician.

NATURAL REMEDIES

ANTERIOR NOSEBLEEDS (from the nose itself)

• **Blow out the clots**, then **sit in a chair and lean forward** without tilting the head back. (If you lie down or lean backward, you will swallow blood.) **Put a small piece of wet cotton (or cloth) in the nose** and **pinch lightly** on it for 5 minutes. Then apply **cold washcloths or an ice pack** to the nose, cheek, and neck. (Another suggestion is to lightly **sniff cold water with a little salt or lemon juice** added.)

• Then apply **vitamin E oil** (or petroleum jelly) *gently* to the inside of the nose for 7-10 days, to keep the membranes moist. Lie back and **rest** for a time. If the nosebleeds are serious enough to warrant it, rest as much as you can for two days. The rupture in the blood vessel that caused the nosebleed requires 7-10 days to completely heal. When the bleeding stops, a clot forms and then becomes a scab. Do not pick it loose.

• **White oak bark and bayberry** are astringents. **Sniff** one of them up the nose before inserting the cotton.

• A little **cayenne** can be swallowed in some water. This will draw blood away from the head to the stomach.

• Here is Jethro Kloss' remedy for nosebleed: Add 1 tsp. **goldenseal** to 1 pint boiling water. Steep and let settle. When cold, pour a little into your palm and sniff it up your nose. Repeat several times a day. Or use tea made from **witch hazel leaves, wild alum root, and white oak bark**. Applying **cold or pressure to back of the neck** helps prevent free flow of blood to the head.

• Make sure you are getting enough **vitamin K** in the diet. It is found in all **dark greens**. Put **lactobacillus acidophilus** in the colon. It will synthesize, thus increasing the amount of, vitamin K in your body. (Frozen foods lack vitamin K.)

• Be sure to take enough **vitamin C. Calcium, magnesium, alfalfa, and vitamin E** are also important.

• Along with vitamin C (1,000 mg), take 2 mg copper. It is essential for the formation of collagen and elastin, which helps eliminate nosebleeds.

• Eliminating **sugary sweets** tends to stop recurrent nosebleeds.

• When the nose dries out excessively, nosebleed can occur. Try increasing the **humidity** in the room. Consider purchasing a humidifier. **Smoking** dries out the nasal membranes.

• **Medicinal blood thinners** can cause nosebleeds. The active ingredient in D-Con rat poison is a blood thinner drug. Foods high in *salicylates* also tend to thin the blood. **Tea and coffee** are in this category.

POSTERIOR NOSEBLEED

• You need to **lower your blood pressure**. Read the section on high blood pressure *(429)*.

• Keep in mind that a posterior nosebleed is far better than having a blood vessel rupture from high blood pressure—inside the cranial cavity. Then you have a stroke! Whichever type of nosebleed may occur, here are additional suggestions:

• Those with frequent nosebleeds should **take extra iron**. It is needed to make hemoglobin. **Rutin** is also needed.

• **Avoid oral contraceptives**. Anything that changes estrogen levels can make you more prone to nosebleeds.

HYDROTHERAPY

Here are several treatments for nosebleeds, discussed in the *Hydrotherapy* section *(153-211)* of this *Encyclopedia:*

Contrast Bath to the hand and arm. Two very deep pails may be used. The hot water should be as hot as can be borne. A **hot footbath** can also be used to stop a nosebleed. A **cold water spray** to the bottom of the feet will also do it. Put an **ice bag** on the back of the neck. And, at the same time, place a **hot fomentation** over the face. Put **ice** to the hands; and, if necessary, **elevate the hands** to a vertical position. Give a **hot footbath** or **Hot Leg Pack**.

ENCOURAGEMENT—If we are in Christ, we are heaven-bound. So we must not seem mournful to those around us. Rejoice. For every day is one day nearer heaven! Do all you can to be a blessing to those you come in contact with. Psalm 145:19.

NASAL CUTS AND INFECTIONS

SYMPTOMS—Efforts to pick at the inside of the nose and clean it out will occasionally result in inside cuts which sometimes become mildly infected for a time.

CAUSES—It is easy to get into a habit of picking at the nose, even when there is no reason to do so. People sometimes feel driven to pick at the nose, imagining they will somehow make it super clean. But unwashed fingers in the nose can result in cuts which infect for a day or two. Infection from contaminated hands is even more likely if you have a dog or cat in the house, or people who have them handle your doorknobs.

NATURAL REMEDIES

• The solution is simple enough: Routinely **rinse your nose** with water in the bathroom every morning. This only takes a few moments, but it will remove accumulated dust. The urge to afterward pick at the nose will be lessened.

• Teach yourself, whenever possible, to **leave your nose alone**. Or only put a **washed finger** in your nose.

• If an infection occurs in the nose, get extra rest and take antibiotic herbs *(228)* for a few days.

There is always danger when infection occurs on the face above the lips and below the eyes. For it can travel into the brain. If in doubt, see a physician.

ENCOURAGEMENT—All around us, souls are hungering for Christ and a knowledge of how to be saved. Do all you can to be a help to them. They need you to help lead them to God. In His strength, you can do it. Psalm 112:1.

NASAL POLYPS

SYMPTOMS—Symptoms often develop gradually over a period of months. Severity of symptoms depends on the number and size of the polyps. Symptoms may include decreased sense of smell, blocked nose due to obstruction by polyps, or a runny nose due to excess mucous secretion. Occasionally, they lead to recurrent sinusitis *(295)* and a loss of smell.

CAUSES—These are fleshy growths that develop in the mucus-secreting lining of the nose. They are more common in those with **asthma** *(580)* or **rhinitis** *(315)*. Although they rarely develop in children, they sometimes occur in those who have inherited **cystic fibrosis** *(546)*.

Nasal polyps are always benign (non-cancerous)

NATURAL REMEDIES

• Eat a diet rich in **fruits and vegetables**. Eat **whole**

grains, nuts, and legumes. Avoid meat, dairy products, coffee, tobacco, and alcohol. Avoid a **heavy protein diet** of any kind.

• Eliminate your **food allergies**. They cause a chronic swelling of the nasal lining and develop polyps.

—See Colon Polyps (376) and Allergic Rhinitis (315).

ENCOURAGEMENT—We are to keep our minds stayed upon God. In our weakness, He will be our strength. In our ignorance, He will be our wisdom. In our frailty, He will be our enduring might.

— *HEAD AND THROAT* —

5 - EARS

EARACHE AND EAR INFECTION, MASTOIDITIS

(Otitis Externa and Media)

SYMPTOMS—One or both ears ache. This is frequently accompanied by infection in the middle ear. The pain will be worse at night because the body is prone (flat) and it is more difficult for the eustachian tubes to drain out the phlegm.

Although not common, sometimes the ears will ache because there is trouble with the teeth (referred pain), not because of infection.

Symptoms of a ruptured eardrum: dizziness, ringing in the ears, bleeding or a bloody discharge, sudden pain, or a sudden lessening of pain, and/or hearing loss in one or both ears.

CAUSES—Infection of the outer or middle ear causes pressure to build up. This pressure on nerve endings causes pain. But, if there were no pain, there might be no warning that a serious ear problem existed.

***Otitis externa* is infection in the outer ear.** The eardrum through the length of the eustachian tube becomes swollen and inflamed. There is a slight fever, discharge from the ear, pain (which increases when the ear is touched or pulled), and temporary loss of hearing.

***Otitis media* is infection in the middle ear.** This is especially common in infants and children. The infection is located behind the eardrum, where the small ear bones are located. There is earache, fullness, pressure in the ear, and a fever as high as 103° F. or higher.

Here is an ear test: If you can *lightly wiggle* your outer ear (the part you can see) without pain, you probably have a middle ear infection. If there is pain, the infection is in the eustachian tube.

Another ear test: If you seem to have pain in the ear, *pull firmly* on the earlobe. If the pain increases, then you probably have an ear infection. If the pain does not increase, you may have a dental problem.

Going into **higher altitudes** can push phlegm, already in the eustachian tube, into the middle ear. Never sleep on your ear if you have a head cold and the vehicle is moving upward to a higher elevation! Chronic middle ear disease has increased since the advent of **antibiotics**. They produce conditions favorable to that infection.

Swimming in public pools is a great way to get ear infections. If you go there, do not get the water in your ears—and do not dive! Bacteria go up the eustachian tubes. *(See Swimmer's Ear, 323.)*

Chronically enlarged **adenoids** may cause blockage of the eustachian tubes, leading to congestion and fluid buildup in the middle ear.

Otitis media is more frequent in **bottle-fed infants** than those that are breast-fed. Two reasons: Cow's milk produces inflammation and blockage of the infant's eustachian tubes; this leads to infection from outside. The immune globulin A in breast milk strengthens the infant's immune system. Allowing the child to feed with a bottle, while laying dow, will cause the problem.

Infection in the inner ear generally results from **meningitis** or from the spread of a middle-ear **infection**. Symptoms include loss of hearing, nausea, dizziness, vomiting, and fever.

Earache is a common childhood infection. Most children experience it (90% by the age of 6). It is easier for a child to have an ear infection, since his eustachian tubes are shorter than that of an adult. Causes include **childhood diseases, allergies, colds, and respiratory infections**.

If they are frequent, ear infections can lead to loss of hearing.

NATURAL REMEDIES

TREATMENT FOR INFECTION

• Keep the **ears warm** and the person **resting in bed**, preferably with his **head slightly elevated** and, perhaps also, his trunk (to assist natural drainage of the eustachian tubes). Surgical draining might be necessary. The fever increases the need for **vitamins A and C**. Keep the **feet warm. Heat applied to the feet** will draw blood from the head and improve circulation.

• **Sit up** when practical to do so, to decrease the swelling and start the tubes draining. **Swallowing** will help ease the pain. **Yawning** really helps open up the eustachian tubes.

• Only feed a child when he is **sitting up**.

• **Blow warm air** toward the ear, from a hair dryer 18-30 inches from it.

• Another way to reduce pain is to make a paste, using **onion powder** or **clay packs**. Then apply this to the outside of the ear.

• Bake a large **onion**, until it becomes soft, and tie it over the ear. This will often give great relief when pain is severe.

• Mix a tsp. of (or a drop of each tincture) **echinacea, goldeseal, and licorice root** (to add flavor) to a cup of boiling water. Drink this flavorful cup 3 times a day.

Children will like it.

• Go on a brief **fruit and vegetable juice fast.**

• Take **vitamin C** (500 mg, 3 times a day), **vitamin A** (2,500 IU), **zinc** (15 mg), **vitamin E** (200-400 IU), and **B complex.**

DROPS IN THE EAR

IMPORTANT: Do not place liquid or oil in the ear if you think the drum has burst!

• Warm some **oil** to body temperature and place a **drop or two in the ear.** This will help lessen pain.

• A helpful method, used by many for a long time is this: Place a few drops of **garlic** juice in the ear. Then add a couple drops of **lobelia** oil. The garlic purifies and kills germs. The lobelia takes away the pain. To only take away pain: Place a little **olive oil** in the ear. Then add a drop or two of **lobelia** tincture.

• Place 2-3 drops of warm **mullein oil** in the ear 2-3 times daily. Mullein has been used to treat earaches for many years. Or add a few drops of **tea tree oil** to vegetable oil and place some in the ear. Never drink herb oils. *How to make your own mullein oil:* Gather fresh yellow mullein flowers and steep them in sunlight for 21 days. Strain out the oil. Or purchase the oil.

• Winnebago Indians steeped the whole **yarrow** plant and poured the liquid into the aching ear.

AVOID

• There is a tendency for people who have ear problems to be **heavy earwax** producers. To reduce the amount of earwax made, eat less saturated fatty acids. Unsaturated fatty acids are not a problem.

• A 1991 pediatric study of over 100 children with chronic otitis media revealed that 78% were **sensitive to foods**, such as corn, milk, peanuts, and wheat. By eliminating the allergenic foods, 86% were cleared of ear problems.

• **Avoid sugar, dairy products, meat, and heavy meals** until the crisis is past. Herb teas are helpful in assisting the healing process. This includes **peppermint, echinacea, goldenseal, pau d'arco, and slippery elm.**

• Because they increase sticky mucus in the body, **dairy products** increase ear infections. **Excessive sweets and starches** lower resistance and intensify ear problems.

• People with a tendency to ear infection should **avoid all cow's milk products.** But, in addition to producing so much mucus, it is reported that milk allergies can produce earaches (and even a burst eardrum), simulating otitis media—without an ear infection actually existing.

• Avoid **cigarette smoke.** For it can irritate the eardrum.

• Place drops of **hydrogen peroxide** in the ear, to help clean it out. Then rinse it out with water. Do not leave the peroxide there! It can sink through the eardrum and produce a fizzing sound which can last for several years.

• Dripping **garlic oil** directly into the ear canal has been shown to treat fungal infections as well as or better than drugs. It has powerful antibiotic properties.

• Take **garlic enemas.** These will help disinfect the body of higher levels of toxins that are building up from the infection. Signs of this are chills, fever, general aches, and pain increase.

TREATMENT FOR RUPTURE

What should you do if the eardrum ruptures? Causes can include a severe ear infection and sudden pressure inward on the ear which results from diving, slapping, a strong kiss to the ear, or a nearby explosion.

During an ear infection, pus builds up and causes pain in the ear. If this pus starts leaking to the outside, then the eardrum has ruptured. Sometimes a rupture brings a sudden reduction in pain, because the pressure has been lowered. A rupture causes hearing loss and a discharge of bloody fluid from the ear.

• In case the eardrum ruptures, **put nothing in the ear** until the eardrum is healed. A **fomentation** on the outside of the ear can be helpful.

• Once the infection increases to acute pain, you may need an antibiotic. **Echinacea** has both antibiotic and immune-boosting effects. Give a tsp. of dried herb in tea, or a drop of the tincture in juice or tea. Drink either 3 times a day.

• An alternate method is this: When the eardrum has abscessed and broken, use **warm peroxide** to wash the ear out. The peroxide will loosen the putrefied matter and bring it out of the ear. This method is probably good for cleaning out the ear. But keep in mind that hydrogen peroxide is best used on outside body surfaces, where oxygen can cause it to fizz into harmlessness. When it gets inside sensitive body parts, it can continue there for quite some time. We know of one individual who had peroxide in his ear for several years thereafter. And, every so often, he could hear it lightly fizzing.

• Do not place a hot-water bottle over the infected ear and leave it there for a time. A suction effect can be caused which worsens the condition.

• Give a quick, **hot bath** of only a few minutes. Finish with **cold** water, dry quickly, rubbing briskly. Put into **bed** immediately and let him sleep.

—Also see Swimmer's Ear (323).

HYDROTHERAPY

Here are treatments mentioned in the *Hydrotherapy* section *(153-211)* of this *Encyclopedia:*

Irrigation of the Ear: A lean rubber tube is used to gently (gently!) introduce a flow of water onto the outer ear. The water is *never* applied with any pressure! It flows to the ear and out to the side. The temperature may be from 100° to 120° F., depending upon the effect desired. The source of water should be on a level with the top of the head (to maintain only a slight pressure). Never use force. Because perforation of the ear often exists, serious injury could result from introduction of water, with any degree of force, into the middle ear. The head should be inclined to the side as the water is applied.

The canal of the ear should afterward be carefully dried and covered with a cloth or a warm hand for a few

minutes. In cold weather, the ear should not be exposed outdoors for at least an hour after warm ear irrigation is applied. Even after that, a small piece of cotton should be placed in the outer passageway.

This measure affords great relief in the pain of acute otitis media and earache due to other causes. In chronic suppurative disease of the ear, this measure is indispensable as a means of cleansing and disinfection.

Draining the middle ear: Applications should be made to the whole side of the head and face, diverting blood from the internal carotid and internal maxillary blood vessels. If the Hot Compress extends below the jaw, the common carotid artery will be dilated (enlarged), which you do not want. An ice bag should be placed below the jaw at the same time. This will increase the effect by contracting the carotid.

Draining the inner ear: The inner ear problem may be relieved, when congested, by warm applications to the arms and cold applications to the head and back of the neck, thus diverting the blood into the arms from the vertebral arteries by a proximal compress or an ice bag to the back of the neck.

Inflammation of ear: Fomentation over the affected part, derivative treatment to legs, Hot Leg Bath, Hot Footbath, Prolonged Leg Pack.

Inflammation of middle ear: Ice to throat of the same side, fomentation over ear.

Earache: Ice Bag to the neck of the same side. Fomentation over ear. Hot Ear Douche, if necessary. Protect the ear with warm cotton, to prevent chilling by evaporation after treatment.

Eustachian tube inflammation: The Heating Throat Compress is an application of a cold cloth, covered with flannel, which then heats up and results in improved circulation and a better flow of healing blood into, and out of, the afflicted area. Wring the cotton cloth from cold water and place it around the neck. This should be about 2-3 thicknesses about the neck. Cover it well with flannel (singly or doubly, depending on the thickness). Fit the flannel snugly, but not too tightly that it will be uncomfortable. Pin it securely. Remove it the next morning. It should be entirely dry. In eustachian tube inflammation, the compress should extend upward about the lower part of the ear. You may need to hold up this part of the compress (the part by the lower part of the ear) with a bandage that is fastened to it and goes over the top part of the head and back down to it on the other side.

PREVENTION—Never dive below 3-4 feet below the surface of the water.

Never sleep in an airplane or vehicle when it is descending—or ascending. If you are in a car—climbing up or down the mountains—do not sleep, especially on your side. You do not swallow as often when you are asleep. And, if you have phlegm in your sinuses, it can go up into your ears.

Be careful when scuba diving. The greatest air pressure changes occur within the first 33 feet below the surface. Avoid earplugs and hoods which are too tight-fitting, so you cannot equalize air pressure in the ears.

Avoid the above three situations when your head is stuffy with phlegm.

Breast-feeding reduces a baby's chances of having ear trouble.

Do not smoke.

DR. WILLIAM L. McKIE'S PRESCRIPTIONS FOR EAR CONGESTION AND ITS COMPLICATIONS—This section deals with methods of reducing blood congestion in the middle ear and inner ear. It was taken, with slight adaptation, from Dr. William L. McKie's book, *Scientific Hydrotherapy, page 55.*

DRAINING THE MIDDLE EAR—Applications should be made to the whole side of the head and face, diverting blood from the internal carotid and internal maxillary blood vessels. **If the hot compress extends below the jaw, the common carotid will be dilated (enlarged), which you do not want. An Ice Bag should be placed below the jaw at the same time.** This will increase the effect, by contracting the carotid.

DRAINING THE INNER EAR—The internal ear, receiving its blood supply from the vertebral artery, a branch of the subclavian, is not affected by heat over the ear. But the inner ear problem may be relieved, when congested, by **warm applications to the arms and cold applications to the head and back of the neck**, thus diverting the blood into the arms from the vertebral arteries by a **proximal compress or an ice bag to the back of the neck.**

ENCOURAGEMENT—Christ will not be satisfied till the victory is complete in your life. He wants to change you into a full overcomer. Do not fail Him. Let Him empower you to obey the Ten Commandments. Romans 3:4.

EARWAX
(Wax Blockage)

SYMPTOMS—Hearing is becoming duller and the person suspects he may be losing his hearing. There may be a feeling of fullness or ringing in the ears *(see Tinnitus, 324).*

CAUSES—Earwax (cerumen) is secreted by glands in the outer ear. This cleanses and moisturizes the lining of the external canal, thus protecting the inner ear as a barrier against germs, moisture, dust, and insects.

The problem may be a hard plug of earwax (cerumen) in the ear canal. Some people have constant ear pain until the excess wax is cleaned out. If you do **not chew your food** thoroughly, earwax can build up. The chewing tends to break it down. **Saturated fats** contribute to excess production of earwax.

If there is not enough wax in the ear, it will be dry

and itching. Dip a Q-tip in quality vegetable oil and place a little in the outer ear canal. *To relieve itchy ears,* insert a few drops of apple cider vinegar, wait 30 seconds, then tilt head and let it run out.

NATURAL REMEDIES

• **Never put anything sharp in the ear!** That includes bobby pins, paper clips, and pencil tips. They can puncture the eardrum.

• **Do not use cotton-tipped swabs** either, because they merely ram the wax down deeper and impact it the more.

• Place something in your ear which will soften it. This can be **hydrogen peroxide, mineral oil, or glycerin**. Add a drop or two of this to each ear. Let the excess run out. The liquid left inside will soften the wax. Do this for a couple days.

• Fill a bowl with body-temperature **water** and suck it into a rubber bulb syringe. Holding your head over the bowl, gently squirt the water into the ear. Use very, very little pressure. Turn your head and let the water run out.

• Do not rub the ears in order to dry them. Either use a **hair dryer** (18-20 inches away) or drop a little **alcohol** in each ear. Do not wash out the ears in this manner more often than every couple months. You need some earwax to protect your ears.

• There is a tendency for people who have ear problems to be heavy earwax producers. To reduce the amount of earwax made, eat **less saturated fatty acids**. Unsaturated fatty acids are not a problem. It is the over-balance of saturated fats which causes the earwax problem. Therefore, stop eating **junk foods**. Much of it is full of saturated fats. Instead, take **flaxseed oil** for its omega-3 and omega-6

• An alternate method of cleaning out the earwax is this: Using an eyedropper, place either a solution of 1 part **vinegar** to 1 part warm **water** or a few drops of **hydrogen peroxide** in your ear. Allow it to settle for a minute, then drain it. Do this 2-3 times a day. If the wax is hard and dry, apply **garlic oil** for a day or two, to soften it. Then wash out the ear with a steady stream of warm **water**, under no pressure. Patiently continue irrigating the ear canal, flushing with warm water. The wax buildup will come out.

• Yet another method is using **"ear candles,"** available at health-food stores. Someone will have to help you use them. Instructions come with the candles. Afterward, you may be bothered by the fact that an excess of wax has been eliminated. You may need to put cotton in each ear for a time. This method really works!

• If you take **vitamin C** (500 mg, 3 times a day) regularly, in 6 months your ears will no longer produce excess earwax.

ENCOURAGEMENT—One day alone is ours. During this day, we are to live for God. For this one day we are to place in the hand of Christ all our purposes and plans, casting all our care upon Him. For He careth for us. 1 Peter 5:7.

SWIMMER'S EAR

SYMPTOMS—An ache and/or infection in one or both ears, after swimming in a pond, creek, or public swimming pool. The outer ear canal becomes inflamed, swollen, and red. Tenderness and pain, discharge from the ear canal, difficulty hearing, itching. Touching the ear often causes pain. There may be a feeling of fullness in the ear. Symptoms usually appear over 1-2 days.

CAUSES—Swimmer's ear occurs when **pool water** remains in the outer ear canal too long. Bacteria or fungi in the water increases the chance of infection. When swimming in **contaminated water**, keep your head out of the water. The pool water, having repeatedly wet and softened the earwax, caused it to become an ideal place for bacteria to grow. **Chlorinated water** is more likely to cause swimmer's ear than saltwater.

But the most common cause is infection, from the nasal passages and throat, that has been pushed into the eustachian tubes when the **nose was blown** too hard.

Diving into water is remarkably unsafe.

Constant swimming throughout the summer can result in infestation of the external ear canal by **candida albicans** *(215)*. Constant dampness of the ear, in water not entirely clean, throughout the summer swimming season is thought to be the cause. A research report, issued in 1991, revealed that water can make earwax swell somewhat, partially plugging the ears. That effect is probably a protective device. **Hair dye**, entering the outer ear, can also cause infection as well as chemicals in some **commercial eardrops**.

People who wear hearing aids should remove them occasionally, so moisture in the ear can evaporate.

NATURAL REMEDIES

TREATMENT

• Experts say that 80% of the swimmer's ear problems can be cured by putting **alcohol-vinegar drops** in the ears 3 times a day, for two or three days after the swimmer's ear problem develops. *(See just below for the formula.)*

• *You may also want to read the extensive section on Earache and Infection (320).*

Contact a physician, if the drops cause burning or sharp pain, if symptoms persist for more than a few days, if fever develops, or there is a discharge from the ear.

PREVENTION

• The key to prevention is to **keep the ear clean and dry. Do not** let the children swim during periods of active disease. When swimming, keep water out of the ears or wear **soft earplugs** (firm ones may damage the ear lining).

• But, if water enters the ears, **shake your head** vigorously to remove as much water as possible from them. **Pull the ear** up and out, to straighten the ear canal so the water can get out easier.

• After leaving the swimming pool, apply **hydrogen peroxide** as eardrops to disinfect the ears. Or prepare this mixture: 1 oz. **rubbing (isopropyl) alcohol** and 1 oz. **apple cider vinegar** (5% ascetic acid). Then place a couple drops of this in each ear. This makes the water evaporate and, at same time, restores the acid balance of the skin, preventing itchy ears.

• Wear earplugs when bathing or shampooing the hair.

ENCOURAGEMENT—If you have given yourself to God, to do His work, you have no need to be anxious for tomorrow. He will take care of that. Instead (just for today) live for Him, obey Him, and be a blessing to all around you. 2 Timothy 2:11-12.

INSECT IN THE EAR

SYMPTOMS—An insect has gotten into your ear and is moving around and/or buzzing.

NATURAL REMEDIES

• Tilt your head toward the sun or, if you are in a darkened room, toward a flashlight. The little creature may head **toward the light** and leave.

• Place a piece of **ripe apple or peach** next to the ear to entice him to exit.

• The insect may be entrapped in the earwax or weakened, if your exploring finger pressed against him. Have someone pour a teaspoon of **warm vegetable oil** into that ear and keep it there briefly. He may come out when you tilt your head and let the oil out. As you tilt the ear, **pull the outer ear** backward and upward to straighten the canal so he can get out easier.

• If still no success, pour **warm water** into the uptilted ear, so he can float out. As a last resort, contact a nurse or physician.

ENCOURAGEMENT—We may be assured that we need not go into the heavens to bring Jesus down to us, neither into the deep to bring Him up; for He is at our right hand, and His eye is ever upon us. We should ever seek to realize that the Lord is very near us, to be our counselor and guide. This is the only way in which we may have confidence toward God.

TINNITUS (Ringing in the Ears)

SYMPTOMS—Sounds in the ear: ringing, whistling, roaring, hissing, chirping, buzzing, and whining cricket sounds—when there is no outside physical source for these sounds. At first, they come and go. The sound is constant. No one else hears them.

There are reported instances in which others have heard the sounds from as much as four feet from the person's ear. "Tinnitus," in Latin, means "to tinkle" or a "bell-like ring."

The frequency of tinnitus increases with age. The left ear seems to produce the sounds more often than the right ear. About 75% of deaf people report tinnitus.

CAUSES—There are several possible causes, including an **irritation of nerve endings** in the ear by loud noises. **Chemicals** and **drugs** can injure the internal ear. **Prescription drugs** can produce tinnitus or hearing loss (beware of **quinine** and **aspirin**). **Nicotine** constricts blood vessels and may be the cause. Other causes are **lead, aluminum, mercury poisoning, impacted wax, hormonal problems, high blood pressure, severe blows to the head, anemia, perforation of the tympanic membrane, fluid in the middle ear, epilepsy, migraine, food allergies, Ménière's disease, hypothyroidism, multiple sclerosis**, as well as repeated and prolonged exposure to **loud noises**. Whatever the cause, **stress** sometimes adds to it. Frequent food allergy causes include **milk, eggs, wheat, sugar, honey, and other sweeteners**.

Tinnitus is not a sign of a more serious problem or a precursor of any serious disease—unless it is associated with Ménière's Disease *(325)*.

NATURAL REMEDIES

• Surgical success rates for this are very low. Beware of "tinnitus maskers." These products can cause hearing loss.

• Do the **pulse test** to check on problem foods. Have a **hair analysis** made. Find the cause and eliminate it. A 1981 medical study pointed to **coffee, tea, tonic water, red wine, grain-based spirits, chocolate, and cheese** as the most common dietary causes of tinnitus.

• Mix 1 teaspoon of **salt** and 1 teaspoon of **glycerin** in 1 pint warm water. Several times a day. Using a nasal sprayer, spray each nostril until it begins draining into the back of the throat. Also spray the throat.

• Eat a **nourishing diet**, which includes **trace minerals** (Norwegian kelp or Nova Scotia dulse), **vitamin A, calcium, magnesium, and betaine HCl**.

• A lack of **manganese** can cause deafness, dizziness, and ear noises. A lack of magnesium can produce nerve twitching and sensitivity to noise.

• Changing and correcting the diet, **reducing stress**, and getting more **exercise** outdoors has been helpful in dealing with tinnitus. Stress causes more adrenaline to be produced; this constricts blood vessels and keeps waste products from being as quickly eliminated. **Fatigue** increases this problem. Maintain a regular schedule of going to bed and arising. Make sure the colon is working well. An **enema** will help with this.

• Take **B complex** and higher levels of three of them: **thiamine** (100-500 mg daily), **B_{12}** (1,000 mcg daily for 6 months, then 100 mcg daily), and **niacin** (50 mg, 2 times a day). If there is no improvement after 2 weeks, increase the niacin by 50 mg every 2 weeks until you reach 500 mg twice a day. Also take **zinc** (15 mg, 2 times daily), and **magnesium** (400 mg daily). Manganese is also important.

• **Avoid loud noises** and noisy situations. **Alcohol** makes tinnitus worse. **Caffeine** is a common cause.

Marijuana and **cocaine** intensify the problem. **Aspirin** is a known cause of tinnitus, as well as **blood pressure and arthritis drugs**. Also beware of **steroids, anticonvulsive medications, vasodilators, and anticholesterol drugs**. **Nicotine** damages the hearing.

• Avoid sugar, salt, and all fatty foods, including meat and dairy foods. Eat plenty of fiber: fresh **fruits and vegetables, whole grains, nuts, and legumes**.

• Over a dozen European studies have confirmed that taking **ginkgo** eliminates tinnitus in many, but not all cases. **Lesser periwinkle** (20 mg, 3 times daily) contains *vincamine*, which gives good results with tinnitus and Ménière's Syndrome *(below)*. **Sesame seeds** helps reduce the effects of tinnitus.

• Other useful herbs include **bugleweed, garlic, gotu kola, cayenne, and prickly ash.**

• Do not take **wintergreen, meadowsweet, willowgreen**, or high doses of **aspirin**. They can cause ringing in the ears.

• Play some **music** softly at night, the time when the tinnitus is most noticeable. Actually, you can **train your mind** to ignore the tinnitus sounds and focus attention on other sounds.

• The cause may simply be **excess earwax**. *Read the section on Earwax (322).*

—See Ménière's Disease (below) and Earwax (322).

ENCOURAGEMENT—Christ desires to give you the riches of eternal life with Him. What can compare with that? Do not wait any longer. Come to Him right now. Kneel down alone and pray to Him right now. Hebrew 2:7, 2 Chronicles 7:14.

MÉNIÈRE'S SYNDROME

SYMPTOMS—This disease of the inner ear is characterized by recurring episodes of ringing in the ears (tinnitus, *324*), loss of balance, severe dizziness (vertigo, *451*), and nausea. There is progressive deafness *(326)* and a sensation of fullness in the ears. Sudden movement during an attack can induce nausea and vomiting. Sometimes there is an uncontrollable horizontal jerking of the eyeballs.

The condition may affect one or both ears. It generally occurs in adults (most often in women, 50-60 years old). The onset is sudden. It may last for hours or weeks and then return soon again, after years. In most instances, it is experienced only in one ear and can result in complete deafness in that ear.

Vertigo is the sensation that the world is turning around you. Ménière's Syndrome accounts for 10%-15% of all vertigo (and 5% of all dizziness).

—See Vertigo (451).

CAUSES—Ménière's Syndrome often results from a disturbed carbohydrate metabolism, such as is found in **hypoglycemia**.

Impaired blood flow to the brain may be a causative factor. Those experiencing Ménière's Syndrome often have a history of **vasomotor rhinitis, ear trouble, and allergies**.

Autopsies reveal an edema in the membranous labyrinth.

Most common causes include **allergies, viruses, infections,** and **hormonal intolerances**.

Symptoms exactly like Ménière's Syndrome can be caused by a **cholesteatoma**. This is a tumor-like growth in the middle ear, which gradually pushes on the central nervous system. Consulting with a specialist might be of help in diagnosing the cause.

In some instances, this disease is misdiagnosed. It is actually **salicylism**, from excessive self-medication of **aspirin**—which can also cause deafness, ringing in the ears, dizziness, headache, vomiting, confusion, and hyperventilation in the later stages. If that may be the cause, stop taking aspirin immediately.

Fluid retention in the semicircular canals might be putting pressure on the delicate nerves of the inner ear.

The majority of people with Ménière's Syndrome are **overweight** and have abnormal **carbohydrate metabolism**. At least half have **high-blood fats**. Ménière's generally first occurs after taking **antibiotics**, which destroy beneficial bacteria in the colon.

NATURAL REMEDIES

• A general cleansing routine is often met with excellent results. This would include **fasting** for 3-7 days on vegetable juices and repeating it every six weeks. In between juice fasts, a solid **nutritious diet** that is composed of lots of **vegetables, seaweed, seeds, nuts, beans**, etc., should be eaten.

• Ménière's patients are chronically deficient in B vitamins. **B complex** (1 comprehensive tablet daily), B_1 and B_2 (10-25 mg of each daily), B_6 (50 mg, 4 times a day for 2 weeks), **niacin** (200 mg daily if pregnant, otherwise 50-250 mg before each meal). This may correct the disease in 2-4 weeks. **Niacinamide** may be substituted for half of the niacin. **Vitamin C,** plus **bioflavonoids** (1,500-5,000 mg, in divided doses) and **vitamin E** (400 IU). **Calcium** is also needed. A lack of **manganese** (5 mg daily) can cause deafness, dizziness, and ear noises. A lack of **magnesium** can produce nerve twitching and sensitivity to noise.

• Go on a **low-salt, low-fat, low-sugar diet**, with a reduction of **refined carbohydrates**. Drink enough **water**. Eliminate **white-flour products, white sugar, saturated fats, caffeine, nicotine, and alcohol**. An oil-free diet may improve circulation in the tiny capillaries. **Smoking** induces constriction and spasm of the blood vessels. In one study, 9 out of 10 patients improved, when placed on a **low-salt** diet. Take an **acidophilus product** to replace beneficial bacteria lost from taking antibiotics.

• Another research showed that **allergies to milk, eggs, corn, wheat, and yeast** caused Ménière's. Eliminating them essentially terminated the problem. Stop using all of these foods. Then gradually reintroduce one at a time and see which might be bothering you.

• Variations in **glucose levels** can prompt Ménière's. A New York study indicated that, when **insulin levels** are normal, the patient seldom has tinnitus, vertigo, fullness in the ear, or variable hearing loss.

• Gradually increase the amount of outdoor **exercise. Breathe deeply** as you do it. This will help the circulation in your head.

• Use one bowl for hot water and one for cold, once or twice a day, and take a **hot and cold head bath**. Immerse the head in the hot water for 30-60 seconds. And then plunge it into ice cold. (If elderly, weakened, or with a heart condition, begin with less extreme temperatures.)

• Herbs which may help include **cayenne, gotu kola, butcher's broom, ginkgo biloba, and ginger**.

• *At the time of an attack,* **lying quietly on the affected side, with eyes turned in the direction of the affected ear** may help reduce the immediate crisis.

• *If you are helping someone with this problem,* let him move about at his own rate. Avoid jarring him. When speaking to him, stand directly in front so he will not have to turn his head (which can add to the vertigo).

—Also see Vertigo (451) and Tinnitus (324).

ENCOURAGEMENT—Do not try to manage your own life. You cannot do it as well as God can do it for you. Work with Him. Surrender your plans to Him, to be laid down or taken up as He sees best.

HEARING LOSS (Increasing Deafness)

SYMPTOMS—One's sense of hearing is lessening.

CAUSES—It may be that the hearing is being lost. The most common cause is **aging**. But it also may be that the ear has too much impacted **earwax**. *See Earwax (322) for how to remove it.* If a pregnant mother has **Rubella** (German measles, *707*) or **syphilis** (*630*), her child may be deaf. **Premature birth, trauma, lack of oxygen at birth, or low birth weight** can damage the infant's hearing (usually only temporarily).

A **manganese** or **tin** deficiency in the diet can result in a hearing loss. Putting these back into the diet can reverse this and restore the hearing.

Other possible causes would include: **milk allergies, poor ear circulation, and vitamin A deficiency**.

The eardrums might be hardened with age. This generally accompanies **hardening of the arteries**.

Catarrhal deafness could be the problem. This starts when an acute infection (such as a cold or the flu) is suppressed and not allowed to run its course and be properly eliminated. A low level infection continues in the middle ear and gradually ruins the hearing. Temporary deafness can result from a **punctured eardrum** *(see Earache, 320).*

When acute diseases are treated with **aspirin or quinine**, partial or complete deafness can result. Other drugs which cause this effect are **aureomycin, streptomycin, barbiturates, cocaine, opium, and their derivatives**.

Smoking and **caffeine** cause spasms and narrowing of blood vessels. Smoking reduces the amount of oxygen reaching the delicate parts of the ear.

Other substances to avoid would include **lead, mercury, and cadmium**.

Excessive amounts of **noise** injures the fine structures in the inner ear and gradually produces deafness. If you cannot hear people talking to you, the surrounding noise is great enough to damage the hearing.

Some people have **occupational hazards** which eventually lead to deafness. This includes piloting **small planes** and running **chain saws** or **heavy equipment**.

Normal conversation is 50 dB (decibels). Vacuum cleaner or washing machine is 75 dB. Food blender, blow dryer, electric razor, or city traffic is 85. Power mowers or symphony orchestras is 90-105. Amplified rock concerts, car stereos or headsets, powerboats, stadium sporting events, air hammers, or rifle shots are 110-140. An increasing number of people are gradually losing their hearing.

If you seem to have pain in the ear, pull on the earlobe. If the pain increases, then you probably have an **ear infection**. If the pain does not increase, you may have a **dental problem**. Total deafness is rare. Deafness may be accompanied by tinnitus (ringing in the ears, 324) or *vertigo* (dizziness, *451*). In older folk who experience the most hearing problems, the hearing of high frequencies is first to be lost (called presbyacusis).

Nations with the highest **cholesterol** rates have the highest rates of deafness. And those with the lowest have almost no deafness, even in the aged.

NATURAL REMEDIES

• Consider the above factors and **make needed changes**. Some research studies show that hearing loss can be reversed, even in the elderly, by eating a proper diet and avoiding certain things. Other research reveals that reducing fat and cholesterol intake improves hearing.

• **Clean the ears**. Make sure **manganese** and **tin** are in the diet (take Nova Scotia dulse or Norwegian kelp). Take pulse tests and gradually eliminate **food allergies**. If milk is the problem, cut out all **milk products** from the diet. Avoid **medicinal drugs, chemicals, and loud noises**.

• Eat a **wholesome, nutritious diet** with **vitamin / mineral supplements**. Drink fresh **vegetable juices**.

• **Eliminate processed, sugared, and junk foods** from the diet.

• Each day take vitamin A in the form of **carotene** (25,000 IU), **B complex** (1 comprehensive tablet), **vitamin C** (1,000-5,000 mg, in divided doses), **vitamin E**

(400 IU), and **magnesium** (750 mg). Loud noise reduces the amount of magnesium in the ears; and, without it, hearing impairment begins. Also needed for good hearing: **manganese, potassium,** and **zinc.**

• *In case there is an inflammation in the ear which causes the hearing loss:* **Mullein oil** can be put in the ear as ear drops. 2-4 drops of warm (not hot) **garlic oil** or liquid extract is also good. Do not use the same dropper in both ears, as it may spread the infection. Eat fresh **pineapple.** *(Read Earache and ear Infection, 320.)*

PREVENTION

If you lose your hearing from excessive noise, there is less likelihood that you will recover it.

• Always wear **ear protection** when using appliances or machinery which produce loud noises. This would include power tools, chain saws, lawn mowers, table or portable saws, and target practice. Use earplugs rated for at least twice as many decibels as you need to ensure protection.

• When listening to **music**, it should never be so loud you cannot hear the ring of the doorbell or the telephone. If you use **earphones**, no one else should be able to hear sounds from your earphones. If they can, you are playing the music too loud for the safety of your ears!

• The average **rock concert** or **stereo headset** at higher levels (100 decibels, plus) can damage your hearing in 30 minutes. Two hours in a **video game arcade** can do the same thing. By comparison, an air hammer is 120 decibels. Audiologists say 75 dB is the safe limit for extended periods. Ear protectors should be worn above 90 dB.

• Wear **earplugs** when swimming in public places.

• Reduce your **cholesterol** level. Those with high cholesterol have greater hearing loss as they age.

• Do not get **German measles** *(707)* while you are pregnant. If you are vaccinated for it, do not become pregnant for 3 months afterward. The ensuing birth defects to the child could include hearing loss.

• Beware of **medications** during pregnancy.

• Make sure your infant has good hearing. If not discovered, he or she will miss much instruction and a variety of speaking skills. Generally, you will be the first one to learn if such a problem exists, not the doctor.

ENCOURAGEMENT—The Bible reveals how we can be saved. From Eden lost to Eden restored, it tells the entire story of salvation in Christ. Read that precious book, and you will be blessed and be a blessing to others. Psalm 119:9-11.

PRESSURE PROBLEMS (Barotrauma)

SYMPTOMS—A feeling of echo-like hearing, fullness, pain, and temporary ringing or buzzing in the ears when rapidly going upward or downward.

CAUSES—If the pressure on the outer side of the eardrum exceeds the pressure on the inner side, the middle ear may become painful or damaged. Changes in air pressure occur in **airplanes, when diving, parachuting, scuba diving, riding in a car at high altitudes, or riding in a fast elevator.**

An extreme pressure imbalance may lead to a ruptured eardrum *(Earache and Ear Infection, 320)*, bleeding into the middle ear, or damage to the inner ear. This results in possible hearing loss *(326)* and vertigo *(451)*.

NATURAL REMEDIES

• **Swallow** or **hold your nose, exhaling with your mouth closed.** The eustachian tubes that connect the ears to the nose and throat will usually open, allowing air into the middle ear and equalizing the pressure. When insufficient air enters the middle ear, barotrauma results.

• Other ways to equalize pressure: **Move the jaw from side to side, sip liquids, stay awake and sit upright during descent, suck on food or condiment, or yawn.**

• Here is the "popping" method (also called the Valsalva maneuver): **Pinch the nostrils** shut, take a **mouthful of air**, and **close the mouth.** Then either **puff out the cheeks**, or **use the cheek and throat muscles to force air** up into the back of the nose.

• Give a small child a **balloon** to blow on. Give babies a **bottle** of water or juice, so they will frequently swallow.

• Barotrauma is more likely to occur if the eustachian tubes are blocked, as a result of a cold or ear infection (earache, 320). If you have a cold or ear infection, avoid flying or diving.

ENCOURAGEMENT—The soul that is yielded to Christ becomes His own fortress, which He holds in a revolted world, and He intends that no authority shall be known in it but His own. A soul thus kept in possession by the heavenly agencies is impregnable to the assaults of Satan.

OUTER EAR INJURY

SYMPTOMS—The visible part of the ear is injured. This causes it to be swollen, painful, and distorted in shape.

CAUSES—Blood may collect (a hematoma) and cut off the supply of blood to the cartilage, which may be so damaged that scar tissue develops and permanent deformity occurs. Severe or repeated injuries can produce a "cauliflower ear." Boxers and athletes are most likely to have this problem.

NATURAL REMEDIES

• Reduce the discomfort and swelling by applying an **ice pack.** If the swelling is too extensive, a physician may need to drain a hematoma or apply a pressure bandage.

• When playing contact sports, wear **headgear** to

protect your ears. Better yet, stop engaging in activities which cause ear injuries.

ENCOURAGEMENT— We need to educate and train the mind so that we shall have an intelligent faith, and have an understanding friendship with Jesus. Unless we continually cherish friendship between God and our souls, we shall separate from Him, and walk apart from Him.

— *HEAD AND THROAT* —

6 - THROAT

Also: Tonsillitis (703), Adenoids (704)

SORE THROAT

SYMPTOMS—The throat becomes sore and scratchy. This is often the first sign of an infection.

CAUSES—A variety of **bacterial or virus infections** can cause sore throat. Those which are of *Streptococcus Group A* origin tend to produce a higher fever than viral sources (**upper respiratory infections, cold viruses, flu**, etc.).

Anything irritating to the throat can initiate the problem (such as **chronic coughing** and **loud talking**). Other irritants include **smoke, dust, fumes, very hot foods or drinks, abrasions, tooth and gum infections. Smoking** is a major cause of sore throats. A continual throat tickle or cough could be an indication of a **food allergy**.

Bacteria on toothbrushes can cause sore throats. Buy a new toothbrush or boil the old one at least once a month. Between uses, store the toothbrush in hydrogen peroxide—but rinse it well before using.

A sore throat is a typical first symptom of colds. If a sore throat continues or recurs, it might be the onset of **mononucleosis** (especially if the sore throat lasts more than 2 weeks). ***Do not dally. Go to bed and get well. A sore throat can be the first sign of something more serious:*** a cold, the flu, mononucleosis, herpes simplex, Epstein-Barr virus. Also it might be one of several childhood diseases, such as chicken pox or the measles. Sometimes a sore throat can lead to chronic fatigue syndrome, gingivitis, epiglottitis, diphtheria, laryngeal cancer, or an abscess around the tonsils. A sore throat may be a symptom of *streptococcus*. If left untreated, it can result in kidney disease or rheumatic fever.

NATURAL REMEDIES

• Sip liquid **vitamin C**. Let it drip down the throat slowly (all the while trying to keep the acid C off the teeth, so it will not melt them). Coat the throat with **raw honey,** mixed with **lemon juice**.

• Drink plenty of fluids—**fruit and vegetable juices** and lots of **water. Go to bed, rest, trust in God, and get well.** Take **enemas**.

• Gargle with **saltwater** (½ tsp. sea salt in a cup of water). Or, every few hours, alternately gargle with **chlorophyll liquid** and **saltwater**.

• **Vitamin A** in the form of beta carotene (75,000 IU daily for 1 week, then 25,000 IU daily). **Vitamin C** (1,000-5,000 mg in divided daily doses).

• **Vitamin C** is powerful. Take a 250 mg tablet each hour, plus gargling each hour with 500 mg of powdered vitamin C, stirred in a glass of water. Doing this, plus going to bed and resting, may eliminate the sore throat by the second day.

HERBS

• The Germans use **eucalyptus** to treat sore throats. The aromatic oil has a cooling effect on inflamed tissue. And the tannins exert soothing astringent action. Add a few tsp. crushed leaf per cup of boiling water. Drink it.

• The Chinese use powdered, dried **honeysuckle flowers** to treat sore throat, colds, flu, bronchitis, tonsillitis, and pneumonia. It has over 20 antiseptic compounds. **Honeysuckle flower extract** is equally powerful.

• Both Europeans and Chinese use licorice to treat sore throat. Add 5-7 tsp. **licorice root** pieces to 3 cups water. Bring it to a boil, simmer until half the water is boiled away. Then cool, and drink. It will also help you spit out the phlegm.

• **Garlic** is a powerful remedy for sore throat. It is both antiviral (for colds) and antibacterial (for strep throat). Make a tea and gargle with it.

• Both **goldenseal and echinacea** fight bacterial and viral infection. (But do not take goldenseal over a week at a time or during pregnancy.) Gargling with **fenugreek** tea will help relieve a sore throat. **Marshmallow root** tea soothes a scratchy, itchy throat. Hot **mullein** poultices soothe sore throats.

• Drink sage tea and inhale its hot vapors. It will help open nasal and head passages. A **vinegar compress** to the throat will relieve the most painful sore throat. Add a pinch of **cayenne** and a tsp. of **wintergreen oil** to ½ cup **apple cider vinegar**. Soak strips of cloth, place around throat, with dry wool cloth over that.

• Mix **ginger with lemon juice and honey**. And gargle with it. Other powerful herbs for sore throats include: **marshmallow, agrimony, myrrh, plantain, slippery elm, German chamomile, and myrtle.**

• An old herb doctor makes these suggestions: Gargle the throat with **cayenne** tea, a half teaspoon to a cup. Put an **onion** poultice on the neck overnight, for 2-3 nights. Rub **kerosene** on the outside of the neck and cover it with warm flannel.

HYDROTHERAPY

The following is from the *Hydrotherapy* section *(153-211)* of this *Encyclopedia:*

The **heating throat compress** is an application of a cold cloth, covered with flannel, which then heats up and results in improved circulation and a better flow of

healing blood into, and out of, the afflicted area. Wring the cotton cloth from cold water and place it around the neck. This should be about 2-3 thicknesses around the neck. Cover it well with flannel (singly or doubly, depending on the thickness). Fit the flannel snugly, but not so tightly that it will be uncomfortable. Pin it securely. Remove it the next morning. It should be entirely dry, or you have failed to accomplish the desired objective. Give a **hot bath** or **steam bath**.

—See Flu (226), Pharyngitis (below), and Adenoids (704).

ENCOURAGEMENT—With the trusting faith of a little child, come to your heavenly Father. Tell Him all your needs. He is always ready to pardon and help. He can give you the guidance you need. He can give you strength to resist sin and obey His law. By His enabling grace, He can fulfill His will for you.

PHARYNGITIS

SYMPTOMS—Symptoms may include: sore throat, difficulty swallowing, pain in the ear (which may be worse when swallowing), and / or enlarged and tender lymph nodes in the neck.

CAUSES—The pharynx connects the back of the mouth and nose to the esophagus and larynx. Pharyngitis is usually the result of a viral infection, such as a common **cold** *(222)* or infectious **mononucleosis** *(554)*. Other causes include **bacterial infections**, such as streptococcal bacteria, and **fungal infections**, such as **candidiasis** *(215)*. Also **Smoking and alcohol. Straining the voice** can often lead to pharyngitis, when shouting.

—Pharyngitis (329) and tonsillitis (703) often occur together. Also see Sore Throat (328).

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR PHARYNGITIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

(1) ACUTE FORM —

DIETARY FACTORS—Rest in bed, keep room at a uniform temperature. Eat a spare diet, consisting chiefly of fruits. Avoid meats of all sorts. Copious water drinking.

GENERAL CARE—Hot Blanket Pack. Sweating Wet Sheet Pack. Steam Bath. Radiant Heat Bath. Hot Full Bath. Follow this with Dry Pack or other sweating procedures, once daily, and by Cold Mitten Friction. Also cold Wet Sheet Rub or Cold Douche. Fomentation to the throat, 3 times daily. Cold Compress between, changed every 15-30 minutes. Enema, if bowels are inactive. Hot gargle every few minutes if throat is very sensitive. Ice Bag to throat if inflammation is intense. Inhalation of soothing vapors. Use of steam inhaler for 10-14 minutes, hourly or almost continuously. If the tonsil suppurates (it oozes pus), it should be lanced. See your doctor.

(2) CHRONIC FORM —

CLERGYMAN'S SORE THROAT DIETARY AND LIFE-STYLE—Aseptic dietary, outdoor life, open-air gymnastics, and swimming.

GENERAL CARE—Fomentations to the throat at bedtime, followed by throat pack (Cold Compress) during the night. Hot gargle, 3 times a day. Radiant Heat Bath. Sweating Wet Sheet Pack. Warm Vapor Inhalation or other sweating bath, 3 times weekly. Follow this with suitable cold application. Daily Cold Bath on rising. Moist Abdominal Bandage to be worn during the night. If necessary, remove tonsils and vegetations in throat or postnasal region.

ENCOURAGEMENT—Thank God every day of your life for all that He has given you and all that He means to you.

LARYNGITIS
(Hoarseness, Aphonia)

SYMPTOMS—A tickling, raw throat is the initial symptom. The voice becomes hoarse, there is pain when speaking, the voice becomes weak, or it is lost entirely for a time (aphonia). The voice loss is frequently all that happens. No fever or infection accompanies it.

CAUSES—The larynx is located between the throat and trachea (windpipe) and contains the vocal cords. Laryngitis is rarely serious. It may be acute, lasting only a few days. But it may be chronic, persisting for months. It is usually caused by a **viral infection**, such as a **cold** *(222)*. But it may occur after **prolonged use of the voice**, especially in **loud speaking**. Chronic laryngitis may be caused by **smoking**. Drinking **liquor** aggravates laryngitis. Sometimes laryngitis is associated with **vocal cord nodules**. *"Hoarseness"* is when it is with difficulty that you can speak. *"Aphonia"* is when you have totally lost your voice.

NATURAL REMEDIES

- ***Do not talk!*** Try to avoid any speaking for a day or two. **Do not even whisper.** Just write notes. Put a **bell** by your bedside and ring it when you need help.
- Go on a short **fruit and vegetable juice fast**. This will help remove excess mucus.
- Drink lots of **liquids**, 8-10 glasses a day; but **do not drink cold** drinks or anything with ice in it.
- **Breathe through your nose**. This increases the humidity in your throat. Air in an airliner is very dry (because it is pressurized). So do not breathe through your mouth if you are on a plane.
- Put your head over a **hot bowl** of water for 5 minutes, twice a day.
- **Hot compresses** may be applied to the throat every 3 hours. A **heating compress** may be applied to the throat and chest at the same time.
- An **ice bag** may be applied to the throat. **Cold compresses** may be wrung out from ice water and placed on the throat. (Yes, both hot compresses and cold compresses help reduce laryngitis.)
- **Do not smoke**. Do not take **aspirin**. It increases clotting time, which can slow the healing process.

HERBS

• Helpful herbs include the following: **slippery elm, plus lemon and honey**. This is very soft and soothing on the throat, an outstanding help.

• **White oak bark** tea is excellent for the throat. Add 1 tsp. to 1 cup boiling water, strain, cool, and drink 4-6 times a day.

• Drink and gargle with herb teas of **wild cherry bark, mullein, and/or vervain**.

• Make a syrup out of **wild cherry bark** and take a little at a time.

• The "singer's plant" is **hedge mustard** *(sisymbrium officinale)*. Take it as a liquid extract.

• **Ginger, horehound, or mullein** (together or separately) are good for laryngitis. Add 1-2 tsp. dried herb per cup of boiling water. Cool and drink.

• **Marshmallow** soothes the throat. The mucilage in it soothes the throat and helps protect it from bacterial infection.

• Drink 1 cup of **eyebright** tea, 3-4 times a day.

• Gargle with **goldenseal** tea and drink some.

• Mix 2 tablespoons of **flaxseed** and 1 tablespoon of **horehound**. Boil in 1 pint of water for 10 minutes and strain. Squeeze 1 **lemon** into the tea and add a pinch of **ginger**. Take 1 tablespoon every half hour.

• Here are four herbs which the German government approves for treating laryngitis: **echinacea, plantain, knotgrass, and primrose**.

FUTURE PREVENTION

• **Learn to breathe and speak correctly**, without straining or being tense. Avoid loud speaking. Train yourself to speak softer. If you have something worth hearing, they will listen. Do not lose your temper and shout.

• When you feel the **slightest indication** of hoarseness coming on, cancel speaking engagements and get extra rest.

• **Watch your diet**. Eating mucus-forming foods (such as dairy products, meat, candy, and wheat) can produce hoarseness. Drinking liquids with a meal tends to do it also. Remember that **tobacco and alcohol** are hard on the voice. To strengthen your voice, gargle a quart of **cold water** everyday.

—*Also see Sore Throat (328).*

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR LARYNGITIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

(1) ACUTE FORM —

GENERAL CARE—Steam Inhalation for 10 minutes, hourly, and **Heating Compress to throat** without plastic covering. Avoid use of voice while very hoarse.

(2) CHRONIC FORM —

INCREASE GENERAL VITAL RESISTANCE AND INVIGORATE THE SKIN—Graduated Cold Baths. Sweating baths or prolonged Neutral Bath at night, 2-3 times a week. Follow sweating procedure by any suitable **cold application.**

TO RELIEVE LOCAL CONGESTION—Warm Vapor Inhalation for 10 minutes, every 4 hours. **Fomentation** at night. Follow by well-protected **Cold Compress** to the neck, to be worn during the night. (It must warm up by morning!)

COUGH—*See under Croup (405).*

ENCOURAGEMENT—The only safeguard against evil is surrender to Christ, studying the Bible, obeying it, and living to help others. Romans 8:35-37.

SNORING

SYMPTOMS—Wheezing, sighing noises made through the mouth while a person is sleeping. It drives everyone else to distraction, except the one making the noise. The tissue in the upper airway in the back of the throat relaxes during sleep; breathing in causes it to vibrate.

CAUSES—Snoring generally occurs while **sleeping on the back**. The mouth falls open and the singing begins. It is the sound made by the vibration of the soft palate which is the rear of the roof of the mouth.

Men snore more frequently (71%) than women (51%). Most snorers are overweight men between the ages of 30 and 50. But children snore at times (usually because of enlarged **adenoids** *(704)* or **tonsils** *(703)*.

• Snoring can develop as a result of **allergies** *(576)*, during or following **hay fever time** *(578)*, or **after colds** *(222)*.

NATURAL REMEDIES

• **Sleep on your side**, not on your back. One method which works fine is to **sew a tennis ball** into the middle of the back of your pajamas. When you roll onto it in your sleep, you will quickly roll off again—and there will be no snoring.

• **Do not sleep on a pillow**. They tend to elevate your head and increase snoring.

• Put blocks under the front legs of your bed and **elevate the upper part** of your body (head and trunk). This will reduce snoring.

• **Losing weight** tends to lessen snoring. The more overweight a person is, the more likely he or she will snore.

• Drinking **alcohol** or taking **sleeping pills** tends to increase snoring, by excessively relaxing the tissues of the soft palate, which narrows the nasopharynx. **Smoking** causes the soft palate (not to relax) to swell, also narrowing the nasopharynx.

• Tell your spouse to **shake you awake** when you snore. That will wake you enough that you will stop.

• Buy your spouse **earplugs** to wear at night.

ENCOURAGEMENT—We must not allow coldness to chill our love for our Redeemer. If we have fellowship with Him, we must ever set the Lord before us and treat Him as an honored Friend, giving Him the first place in our affections. We should speak of His matchless charms and constantly cultivate the desire to have a better knowledge of Jesus Christ. Then His Spirit will have a controlling power upon our life and character.

— SECTION 5 —

GASTRO-INTESTINAL

GASTRO-INTESTINAL -

1 - TEETH AND GUMS

BRUXISM

(Teeth Grinding)

SYMPTOMS—Unconscious grinding of the teeth together, often while asleep.

CAUSES—Bruxism can wear down the teeth, loosen them, and even contribute to receding gums. So it is a condition you want to stop.

The experts tell us it is caused by **stress, anxiety, anger**, sensitivity of the teeth to heat and cold, and fluctuations in blood sugar levels. So **hypoglycemia** can be a factor. When a person has low blood sugar, he is more likely to clench and grind his teeth.

In reality, bruxism and gum chewing produce stress. Neither reduces it.

Another major cause is the habit of **idly chewing on something** during the day, when you are not eating.

Some people find it necessary to wear a splint while sleeping.

NATURAL REMEDIES

• You may find that the solution is simply to stop chewing during the day when you do not need to. **Do not chew gum**. Do not **chew bits of food** after the meal is ended. When you are not chewing something so you can swallow it, do not chew. This simple rule has totally eliminated the bruxism problem for many people. It can do it for you also. Actually, chewing, as a leisure time activity, is *not relaxing*. It actually makes one nervous. Having developed the habit of unnecessarily chewing during the day, it will tend to be repeated at night when asleep.

• **Keep your mouth relaxed** during the day. Do not clamp your teeth together. Do not grind. If you control yourself during the day, you will soon automatically do it throughout the night.

• Several times a day, slowly **shrug** each shoulder, then shrug both together.

• Take a **vitamin-mineral** supplement. To reduce stress reactions, take **vitamin C** (3,000-5,000 mg in divided doses), **zinc** (30 mg), **pantothenic acid** (500 mg), and **calcium** (2,000 mg). Eliminate **caffeine, candy, fast foods, meat, and white-flour products**. Do not drink **alcoholic** beverages. They contribute to tooth grinding. Eat nothing **sweet** within 6 hours of going to bed. Do not eat **supper** an hour or less before bedtime. **Food allergies** *(574-585)* are sometimes the cause. Try to locate yours.

• **Just before bedtime**, do nothing stressful for 30 minutes. Instead, go for a pleasant walk outside and breathe deeply of the fresh air.

• Four times a day, **say each vowel**, A, E, I, O, U, out loud, exaggerating the muscle movements. This will relax your mouth. Reduce **television** viewing time.

• **Valerian, skullcap, hops, and chamomile** teas will relax you and provide deeper sleep.

—See Temporomandibular Joint Syndrome (524). If bruxism is not eliminated, it can lead to TMJ. And you do not want that to happen!

ENCOURAGEMENT—With the trusting faith of a little child, we can come to our heavenly Father and tell Him of all our needs. He will not turn us away, but will hear and help. Matthew 5:11-12.

CALCULUS

(Tartar, Stained Teeth)

SYMPTOMS—The teeth are darker and more yellow than they should be.

CAUSES—The actual color of teeth is not white, but light yellow. However, as one ages, the teeth tend to become somewhat darker and more yellow.

Coffee and **cigarettes** are a primary cause of tooth staining. Stop using them both and you will look better. You will feel better, too.

NATURAL REMEDIES

• **Rinse** the food from your mouth after each meal. **Clean** your teeth after every meal. Brush with fresh **strawberries**. Place a strawberry on the toothbrush and brush as usual.

• Brush with **charcoal** powder. Polish them with **baking soda**. Many of the stains are acid in nature. And the soda neutralizes and removes them. An **electric toothbrush** removes more plaque than regular brushing. Keep in mind that hard brushing can scratch your tooth enamel. The super-whitening **tooth abrasives** in toothpaste take off even more. Be careful. You want white teeth, but you also want teeth.

• Since we are on the subject of ruining your teeth, an excellent way to melt your teeth is to drink cola drinks. They contain phosphoric acid, which has a double whammy effect on your poor teeth! The acid melts your alkaline teeth. And the phosphorus immediately locks into the melted off calcium and carries it away.

Place a tooth in Coca Cola, and it will be gone in a short time.

ENCOURAGEMENT—We need to come into the audience chamber of the Most High and ask forgiveness for our sins. He will hear, He will forgive, and He will give us enabling strength to resist sin. It all depends on our choice. But we must not waver in our loyalty to Him. Hebrews 11:26.

TOOTH SENSITIVITY

SYMPTOMS—The teeth feel extremely sensitive to heat and cold.

CAUSES—Some of the protective enamel has been worn away. The cause is too-vigorous brushing, an imbalance in your bite, the habit of chewing on pencils, tooth grinding *(see Bruxism, 333)*, or inadequate nutrition.

NATURAL REMEDIES

• **Vitamin B_1** (thiamine) will reduce your sensitivity to pain. Take 100 mg daily.

• **Calcium hydroxyapatite** is a form of calcium which will help restore tooth enamel, making your teeth less sensitive.

• Mix ¼ tsp. **clove** powder with a few drops of water. Put a little on the sensitive tooth after each meal.

• Mix equal parts of liquid extracts of **fennel, white oak bark, and horsetail** herbs. Put 7 drops on sensitive teeth (but not on those that are cracked). Also use the mixture as a rinse each morning and evening. The fennel soothes the nerves. The white oak bark tightens and cleans gums. And the horsetail decreases bleeding.

—*Also see Receding Gums (337).*

ENCOURAGEMENT—If ever there was a time when men needed the presence of Christ at their right hand, it is now. We need the Captain of our salvation continually by our side.

TOOTHACHE

SYMPTOMS—One of your teeth hurts badly.

CAUSES—The primary cause is the "civilized" diet that we eat today. About 50 years ago, a dentist traveled around the world, visiting primitive people groups which never tasted our **Western diet.** And he found that they had strong teeth and no cavities.

NATURAL REMEDIES

To stop a toothache, until you can see a dentist, here are several suggestions:

• **Rinse** your mouth vigorously with a mouthful of lukewarm water. If the pain is from food caught between the teeth, this may flush it out. Try **flossing** gently between the teeth.

• Stir 1 teaspoon of salt into a glassful of water, at body temperature. Swish warm **saltwater** in your mouth and spit it out. Do this after every meal and before retiring at night.

• Somewhat warm **saltwater**, held in the mouth, will bring relief.

• Oil of clove contains *eugenol*; this anesthetic, an antiseptic, is a powerful toothache reliever. Apply 1-2 drops of **oil of cloves** to the affected tooth with a cotton swab. If the oil seems too strong, dilute it with **olive oil.** Put the clove oil on the tooth. But do not swallow it.

• Both **ginger** and **cayenne** act as counter-irritants, so the pain is not felt. Make a paste, dip a small cotton ball into it, wring it out, and apply the ball to the tooth without letting it touch your gum.

• Sprinkle a little **cayenne** in **vinegar**, swish it around in the mouth, and then spit it out. Or soak heavy brown paper in **vinegar**, place it outside the mouth on the cheek next to the affected area, and leave overnight.

• Put a **charcoal** tablet in your mouth and, with your tongue and cheek, press it against the swollen gum at the base of the problem tooth.

• Drink 1-2 cups of **mullein** tea or chew **catnip** herb.

• **Chamomile and hops** tea will help relax the body.

• Mash up the root of **plantain** and put it on the cheek near the tooth.

• Crushed **garlic** or grated fresh **horseradish** can be placed on the tooth.

• **Chaparral** has been used as a folk remedy for toothache. It contains nordihydroguarietic acid, a strong antiseptic. Swish chaparral tea in the mouth. Then spit it out.

• **Sesame** contains 7 pain-relieving compounds. Add 1 part sesame to 2 parts water, boil till half the liquid is gone. Apply to the tooth. An old Chinese remedy.

• Hold double-strength **sage** tea in the mouth for 30 seconds; then swallow it.

• **Myrrh** helps control mouth infections.

• For a temporary relief, mix **clove** oil with **zinc** oxide powder to form a paste. This will protect the cavity from food.

• Chew **willow bark.** The *salicin* in it relieves pain.

• Keep **heat** away from the tooth and nearby cheek. If it is an infection, the heat will draw it to the outside of the jaw and make the situation worse.

• With your fingers rub an **ice cube** until one side is shaped into a V-shape. Then press it gently against the tender place, pushing it back and forth over the area for 5-7 minutes. The effect of rubbing tends to cancel out the pain signal, which must travel along the same nerve route as the rubbing signal.

• Put **ice** on the nearby cheek for 15 minutes, 3-4 times a day.

• Avoid **biting** on that area of the teeth.

• To reduce infection in a tooth, put a few drops of **goldenseal** extract on a piece of cotton and apply it to the swollen area at night. Do this for 3 consecutive nights.

• Some individuals have found that, when a toothache begins, they quickly **skip a meal, rest,** take **vitamin C**, get **extra rest**, and live very **temperately** over

the next several days—and the infection in the tooth is overcome by the body.

—Also see Tooth Decay (below).

ENCOURAGEMENT—The Lord has fullness of grace to bestow on every one that will receive the heavenly gift. The Holy Spirit will bring the God-entrusted capabilities into Christ's service. He will mold and fashion the human agent according to the divine Pattern, in proportion as the human agent shall earnestly desire the transformation.

TOOTH DECAY
(Dental Caries)

SYMPTOMS—A cavity or hole develops in a tooth, but may not be noticed until it begins to be painful.

CAUSES—The outer part of the tooth (the very hard enamel) erodes; then the body of the tooth beneath it (the dentin) also begins eroding. This is called tooth decay. An estimated 98% of Americans have dental cavities. Yet foreign groups which have never eaten Western food have none.

It is thought that **plaque** buildup (a sticky mass on the surface of the tooth) provides a place for bacteria to grow and feed on sugars in the mouth. The acid they produce digs holes in the teeth. If not stopped, the erosion enters the lower, center part of the tooth, called the pulp, where the nerve is. Then the pain begins.

However, certain things help produce tooth decay. These include **sugary foods, sticky foods, and acid foods.**

Cola drinks do an excellent job of melting teeth. Coca Cola, and similar cola beverages, contain phosphoric acid and lots of sugar. Frankly, the fluid is so terribly acid that it would be intolerable without lots of sugar to mask the acidity. Acid, sugar, and phosphorus are very dangerous when combined. The powerful acid melts part of the teeth. And the phosphorus chemically locks with the melted calcium and quickly carries it off. All of that sugar does its part to ruin the teeth also. It helps the bacteria to jump in and start still more trouble. Drop a tooth into a glass of Coke, and then time the number of hours it takes for the tooth to totally disappear.

NATURAL PREVENTIVES

• Do not drink **cola drinks**. Do not eat **sticky foods**. Do not eat **white sugar products**. Do not chew up **vitamin C tablets**! The acid in them will melt your teeth.

• **Rinse** out your mouth after eating or finish a fruit meal by eating an apple.

• **Goldenseal** extract, that is alcohol-free, can be used as an antibacterial mouthwash.

• Eat plenty of **raw fruits and vegetables. Leafy green vegetables, raw carrots, parsley, turnip greens, and garbanzo beans** help prevent tooth decay. Eat **whole grains, nuts, and legumes.**

• **Rhubarb, poke, and spinach** are extremely high in oxolic acid, which inhibits calcium formation; so do not eat them (especially rhubarb and poke!).

• Avoid all **toothpastes and powders**. The detergents in them are harmful to teeth and gums.

• It is vital that you take **calcium** supplements in order to maintain good tooth and bone structure. As you get older, you need even more calcium.

• **Massage your gums** with your finger once a day.

• **Bloodroot** helps reduce plaque on teeth. Bay leaf has a chemical (cineole) which kills dental bacteria. Licorice contains glycyrrhizin and indole, which kill bacteria on the teeth. Wild bergamot contains thymol and geraniol, which is a tooth decay preventive.

• Avoid soft, gooey foods, dairy products, especially soft cheeses.

• Strawberries are a good tooth cleanser. Rub strawberry halves on your teeth.

• To remove tartar, mix equal parts cream of tartar and sea salt, or baking soda and sea salt, and clean the teeth.

—Also see Toothache (334).

FLUORIDE TREATMENTS—Even more books have been written about **fluoride**! This deadly poison should be avoided at all costs. If it is added to your public drinking water supply, then you should buy bottled water (or buy a home distiller, to process your faucet water). If your dentist offers to give you fluoride treatments, you would do well to politely decline the opportunity.

AIR ABRASION TECHNOLOGY—Air abrasion dental work is the latest hi-tech method of drilling teeth. It is said to painlessly remove tooth decay without drilling, permit the dentist to make smaller fillings, and save a larger percentage of the tooth.

ENCOURAGEMENT—In the Bible, the will of God is revealed. He who makes these truths a part of his life becomes, in every sense, a new creature. God can do for you what you never could do for yourself. But it requires total submission and obedience to His Written Word. Ezekiel 36:26.

MERCURY FILLING SYNDROME
(Poisonous Dental Fillings)

SYMPTOMS—Possible symptoms include dizziness, arthritis, colitis, multiple sclerosis, loss of mental acuity, psychosis, Alzheimer's, Parkinson's, and other degenerative illnesses of the nervous system.

CAUSES—Mercury is a deadly poison. Yet fully half of the amalgam fillings in your mouth are mercury. The rest is silver, copper, zinc, and tin. Mercury changes into a gas and evaporates. Mercury tends to evaporate slowly over a period of time. It is a scientifically proven fact that mercury fillings "outgas." With each meal or drink, a small amount of the mercury in the amalgam escapes in the form of a vapor and is swallowed with your food. Over 85% of the American public have amalgam fillings. Each year over 200 million cavities are filled, most of

them with amalgam.

About 3,000 out of 150,000 U.S. dentists have stopped using amalgams entirely. Yet none of them dare ask to remove those already in place, or they will lose their dental licenses. But if you ask that it be done, they will do it gladly.

SOLUTIONS—Alternatives are ceramic-based materials, gold, or platinum-type metals. They are more expensive, but less harmful. It is best that you ask that replacements not include aluminum, barium, or other metals. Composite fillings, generally made of plastics, are the best. Plastic molecules are too large to be absorbed by the mouth or intestinal tract. If composites are placed correctly, they last as well as amalgam fillings. But they require careful placement, which many dentists do not know how to do.

Here are organizations which can help you find a qualified dentist for this task:

DAMS Newsletter (Defense Against Mercury Syndrome), 725-9 Tramway Lane NE, Albuquerque, NM 87122.

The International Academy of Oral Medicine and Technology (Michael Ziff, D.D.S., director), Box 808010 Orlando, FL 32860-5831.

Queen and Company Health Communications, Box 49308, Colorado Springs, CO 80949-9308.

ENCOURAGEMENT—While you have one desire to resist the devil and sincerely pray, Deliver me from temptation, you will have strength for your day. It is the work of the heavenly angels to come close to the tried, the tempted, the suffering ones. Psalm 34:7-8.

AVULSED TOOTH

SYMPTOMS—A tooth that has been partly or completely knocked out of its socket, as a result of a powerful impact to the jaw.

CAUSES—Through **accidents**, children frequently lose teeth; but an avulsed tooth is a problem only if a secondary (adult) tooth is lost. This is because primary (baby) teeth are eventually replaced by adult teeth.

Among teenagers and adults, avulsed teeth are more common in men because they play more **contact sports**. It is usually front teeth that are involved.

NATURAL REMEDIES

• *If a tooth is dislodged,* but still partly in the socket, **go to a dentist or emergency room** immediately.

• *If the tooth is knocked out completely,* quickly **put it back into the socket**, if possible. If this cannot be done, put it into a glass of milk or saltwater, or wrap it in a clean, damp cloth. Then rush to a dentist or emergency room. The tooth will reattach itself to the jaw 90% of the time, if it is reset in the socket within 30 minutes after being knocked out.

• The dentist will set the tooth back in place and, to keep it immovable, splint it to other teeth for 10-14 days.

• But if it has been fully knocked out, he may have to do a root canal, because the pulp (containing the nerves and blood vessels) have been killed. Sometimes, an artificial tooth has to be put in its place.

• In some instances, a lost tooth is swallowed. In such cases, an X-ray should be taken to make sure it was not inhaled into the lungs.

ENCOURAGEMENT—The law of love being the foundation of the government of God, the happiness of all intelligent beings depends upon their perfect accord with its great principles of righteousness.

DRY SOCKET

(Post-extraction Alveolitis)

SYMPTOMS—Severe throbbing pain that often radiates to the ear 2-4 days after extraction of a tooth. A bad taste in the mouth and bad breath. After a tooth is extracted, the hollow place (tooth socket) will not heal.

CAUSES—After a tooth is extracted, the tooth socket fills with blood and clots. Gradually, this clot fills in with flesh. But if the clot is washed away by premature rinsing, or if the clot becomes infected, the bony lining of the socket can become inflamed.

This is called "dry socket" and only happens once in every 25 tooth extractions. It occurs most frequently following a difficult extraction of a lower jaw molar, in those who smoke or in a woman taking oral contraceptives.

NATURAL REMEDIES

Return to your dentist.

• Take analgesic **herbs** and apply **water therapy** to lessen the pain *(see Toothache, 334).*

• Take **vitamin C** (2,000-5,000 mg, in divided doses, daily) and apply **herbal antibiotics** *(228).*

—See Gingivitis (337) and Tooth Decay (335) for more information.

The dentist will wash out the tooth socket with warm saltwater or a diluted antiseptic solution. Next, he will pack the socket with antiseptic paste. This will be repeated every 2-3 days until the tooth socket begins to heal. He may also suggest that you use hot saltwater mouthwashes at home to help reduce the inflammation. Healing should begin within a few days and be completed in a month or so.

ENCOURAGEMENT—It is today that the sweet voice of mercy is falling upon your ears. It is today that the heavenly invitation comes to you. Today, in Heaven, Christ invites us, "Come." Matthew 11:28:30.

GUM BOIL

SYMPTOMS—A bubble develops on the side of the gum, close to the teeth.

CAUSES—An infection in the base of a tooth is bursting out the side in a bubble. The tooth may, or may not, hurt.

NATURAL REMEDIES

- Give **antibiotic herbs** *(228)*.
- **Fig or other plant poultices** may be applied in order to hasten the ripening of the abscess or boil. Soak fresh or dried figs in water. Then apply them directly over the boil. This will promote healing of the abscess.
- **Improve the diet, brush your teeth** regularly, **avoid** the use of sticky and sugary foods.

—Also see Toothache (334) and Tooth Decay (335).

ENCOURAGEMENT—The more one sees of the character of God, the more humble he becomes, and the lower his estimation is of himself. This indeed is the evidence that he beholds God, that he is in union with Jesus Christ. Unless we are meek and lowly, we cannot in truth claim that we have any conception of the character of God.

GINGIVITIS
(Swollen Gums, Bleeding Gums, Gingival Hyperplasia)

SYMPTOMS—The gums swell and get red. Cleaning the teeth makes them bleed.

CAUSES—The gums enlarge and swell. This is an early sign of periodontal disease *(see pyorrhea, 338)*. Gingival hyperplasia can also be a side effect of some **drugs**, such as hypertensives, anticonvulsants, and certain immunosuppressants. The condition may occur during **pregnancy** because of hormonal changes (which should clear up after childbirth). Rarer cases include **scurvy** (lack of vitamin C, *388*) and **acute leukemia** *(625)*.

NATURAL REMEDIES

- Begin taking more **calcium**. Get more **sunshine** or take supplemental **vitamin D**. Building the bones from within is the best way. If your teeth are having trouble, the other bones in your body, although hidden, probably are also. You do not want a fractured hip later.
- Eat a nourishing diet. Include raw **fruit and vegetables**. They help exercise your teeth and gums. They also help clean your teeth.
- Stop using **nicotine** and **alcohol**. They remove vitamins and minerals from your body.
- Fill a clean ear syringe (a rubber bulb with a long nose) with water and **hose out your mouth**.

Massage the gums at least once a day. Better yet, massage after every meal when you brush your teeth.

- Massage the **gumline** with a little **baking soda** on your finger, dipped in water.
- **Brush the teeth** carefully after each meal. Use a soft toothbrush and do it gently. Otherwise you will make scratches on the enamel. Move the toothbrush from the root to the top of the tooth. Brush carefully at the gumline.
- Alternate between **two toothbrushes**, so each one can dry out before it is used again. Soak the toothbrushes in **hydrogen peroxide** once a week. This kills bacteria buildup.
- An electric toothbrush is said to eliminate 98% of the plaque. Whereas a regular toothbrush is said to remove only 48%.
- **Floss** your teeth faithfully as needed.

—See Receding Gums (below), Tooth Decay (335), Pyorrhea (338), and Mouth and Gum Infections (339) for more information.

ENCOURAGEMENT—Thousands have drawn from the well of life. Yet there is no diminishing supply. In the Bible will be found the help you need, day by day. 2 Timothy 1:9.

RECEDING GUMS

SYMPTOMS—The gums are withdrawing away from the teeth, exposing part of the roots. The roots of the teeth may become overly sensitive to hot, cold, or sweet substances.

CAUSES—Normal, healthy gums form a tight seal around the base of the teeth. But when the gums recede, the teeth are not as solidly connected with the socket in the jaw. One or more teeth may eventually become loose. In extreme cases, tooth extractions may have to be made. Because the roots are softer than the enamel on the crown of the tooth, they are also more subject to decay.

The cause is poor oral hygiene, a buildup of plaque (deposits of food particles, bacteria feeding on them, and mucus), calculus (hardened plaque) between the base of the gum and the teeth, and poor diet. If the situation is not corrected, the gums eventually become inflamed. Also the results are gingivitis *(337)* and periodontal disease *(see Pyorrhea, next page)*.

NATURAL REMEDIES

- Begin **brushing** and **flossing** your teeth well. **Massage** your gums daily.
- Improve your diet by only eating nourishing food: **fruits and vegetables, whole grains, nuts, and legumes** instead of junk food that is **candy, processed, or greasy**. Avoid **meat**.
- Obtain more **rest**.
- Take **vitamin C** (2,000-5,000 mg in divided doses daily) until the situation clears.

—See Gingivitis (337), Tooth Decay (335), and Pyorrhea (below) for more information.

ENCOURAGEMENT—There is not a moral precept found in any part of the Bible which is not engraved with the finger of God in His holy law, the ten commandments, on the two tables of stone.

PYORRHEA

(Periodontal Disease, Gum Disease)

SYMPTOMS—The gums become inflamed and extend to the ligaments and bones that hold the teeth in place. Eventually the teeth may loosen and fall out.

CAUSES—Periodontal means "located around a tooth" and refers to any problems in the gums or other supporting structures of the teeth. It includes pyorrhea, gum disease. Gingivitis *(337)* is inflammation of the gums, an early stage of periodontal disease. Receding gums *(337)* is when the gums shrink and pull away from the teeth. All of these problems are closely related and have the same underlying causes. It especially affects people over age 55 and is a major cause of tooth loss.

Plaque (sticky deposits of mucus, food particles, and bacteria) adheres to the teeth and gradually accumulates. This plaque causes the gums to become infected and swollen. That infection (called gingivitis), leads to pyorrhea (also called periodontitis) in which the bone underlying the teeth is eroded away by the infection.

Other causal factors are an inadequate intake of **calcium, copper, vitamins D and C** (by the eating of **processed and junk food**), and dental erosion by **acids** placed in the mouth. **Smoking and stress** are other crucial factors. **Diabetes** and certain **blood disorders** put a person at greater risk of developing periodontal disease.

NATURAL REMEDIES

• It is known that **inadequate nutrition, wrong foods, consumption of sugar, high phosphorous foods, smoking, drugs, excessive alcohol, chronic illness, and hormonal disorders** make an individual more susceptible to periodontal disease. **Smokers** have twice the risk of gum disease. Laboratory animals given **high-sugar diets** revealed a decrease in bone volume. These problems should, if possible, be corrected.

• **Calcium** (2,000 mg), **copper** (4 mg), **vitamin D** (1,000 mg), and **vitamin C** (2,000 mg) are needed for good strong teeth. **Folic acid** (5 mg), **niacin** (2,000 mg), **bioflavonoids** (100 mg) are also needed. As a rule, take care of the teeth, and the gums will take care of themselves. Give the teeth the nourishment they need. As you do that, you are also strengthening the bones throughout your entire body.

• Emotional stress is known to decrease the body's ability to resist gum disease. **Exercise** neutralizes stress and encourages the maintenance of healthy gums.

• If gum inflammation is present, **soften the toothbrush** by running very hot water over it before using it.

• Open a capsule of **vitamin E** and rub the oil on inflamed gums, to aid in healing.

• A powerful aid in stopping gum infection is to brush the teeth twice a day with powdered **charcoal**.

• Put **goldenseal** powder in the mouth to help eliminate the infection. But do not take goldenseal internally for more than a week at a time. (Too much can harm lactobacillus in the bowel.) Do not use it during pregnancy.

• Make a poultice of **goldenseal** and **myrrh** powder and place directly on the gums.

• Take **coenzyme Q_{10}** (60 mg, 2 times daily) for almost immediate relief.

• Take **quercetin** with **bromelain** for inflammation, plus **lysine**.

Note: Sores under the tongue can be an early sign of mouth cancer. But if you do not smoke or chew tobacco, you are unlikely to ever have that problem.

—See Receding Gums (337), Tooth Decay (335), Gingivitis (337), and Mouth and Gum Infections (339) for more information.

ENCOURAGEMENT—The Lord is soon coming. Talk it, pray it, sing it. Tell others to get their lives ready to meet their Lord. But it is now, before probation closes, that we must, by faith in Christ, put sin away from our lives. Matthew 24:30-31.

DENTURE PROBLEMS

SYMPTOMS—Loose-fitting dentures, dentures which may hurt the gums when chewing, dentures which cause difficulty in speaking properly.

CAUSES—Dentures are false teeth. The professional explanation for the problem is that the wearers do not take proper care of them and that the gums periodically change shape, etc.

There is another, less-known, reason: When the decision is made to extract teeth and fit an individual for dentures, the teeth are pulled out and the molds prepared for the false teeth. The entire process is frequently done quickly, so teeth will appear to be in the mouth as soon as possible. In addition, it is a convenience to the dentist to take the molds the same day that the extractions were done.

But when the extractions are made, the gums understandably swell! A number of sizeable wounds have been made in the mouth; and the gums are swollen and inflamed. That is not the time to take the molds.

Instead, the person should wait at least 10 days for the gums to heal and readjust into new positionings. Only at that time should the molds be made.

If your dentist tells you that you need all your teeth pulled out, discuss the matter with him and perhaps check with another dentist or two. Very often only certain teeth need be removed and a bridge can be put in, which locks onto the teeth which remain. This is far better than wearing dentures. Do all you can to keep

your teeth.

But the solution for some individuals, with a mouthful of mercury fillings, is to get rid of those teeth entirely rather than to gradually replace mercury fillings with safer ones.

Retaining several lower teeth, so only a partial denture is needed, will help hold the lower denture in place. The upper denture tends to remain in place by itself.

LIVING WITH DENTURES—

• **Practice speaking**. Read aloud from books and learn how to articulate vowels, consonants, and various combinations.

• **Remove the dentures** at certain times, so the gums can rest.

• **Begin chewing** by eating soft foods. And gradually get used to chewing courser foods with dentures.

• After each meal, **scrub the dentures** with soap and lukewarm water. **Wash your gums** gently with a soft toothbrush, to remove the plaque, and carefully **clean any remaining teeth**.

• **Massage your gums** everyday. Place your index finger over the outside of the gums, another finger over the inside portion, and rub back and forth. Or brush them with the toothbrush.

• **Rinse your mouth** each day with warm water mixed with a teaspoon of salt.

ENCOURAGEMENT—When the servants of Christ take the shield of faith for their defense and the sword of the Spirit for war, there is danger in the enemy's camp. Give your life fully to God, so He can use it for His glory and the advancement of His kingdom. Hebrews 4:12.

"That by two immutable things, in which it was impossible for God to lie, we might have a strong consolation, who have fled for refuge to lay hold upon the hope set before us; which hope we have as an anchor of the soul, both sure and steadfast, and which entereth into that within the veil." Hebrews 6:18-19. A sweet promise, just for you.

GASTRO-INTESTINAL - 2 - MOUTH

Also: Cold Sores (Fever Blisters) (250), Canker Sores (Aphthous Ulcers) (249), Cleft Palate - see Birth Defects (688-689), Cleft Lip - see Birth Defects (688-689)

MOUTH AND GUM INFECTIONS

SYMPTOMS—Ulcers and infections in the mouth and gums.

CAUSES—Infections in the mouth sometimes involve infections in the gums.

For much more information, see Gingivitis (337) and Pyorrhea (338).

NATURAL REMEDIES

• Eat a **nutritious diet** and take **vitamin-mineral** supplements. Also stop eating **fried, processed, sugary, and greasy foods**. Avoid **meat** products. Do not use **tobacco**—including chewing **snuff**. Do not drink **liquor**. Obtain adequate **rest** at night.

• For burning sensations in the mouth, take a B complex tablet, plus **vitamin B_6** (100 mg) and **vitamin B_2** (200 mg) daily.

MOUTHWASHES

Select from among the following mouthwashes, to help soothe and heal the mouth and gums during the time that remedial care is being given to them. However, they cannot take the place of brushing, flossing, proper diet, and keeping the mouth clean.

• Rinse your mouth with **saltwater** whenever you feel the first signs of a gum infection.

• For ulcerations in the mouth, mix **comfrey** with **burdock** root, add 1 tsp. to a cup of boiling water, steep, let cool, swish in the mouth several times a day.

• For a sore mouth, mix together 1 oz. **bayberry** root bark, ½ oz. each of **blue cohosh** root, **witch hazel** bark, and **goldenseal**. Steep the herbs 30 minutes in 1 pint boiling water, strain, sweeten as desired. Gargle with it.

• A dilute tea of **St. John's wort** will promote healing.

• For mouth infections, rinse out the mouth 3 times a day (without swallowing it) with hot, **peach pit** tea.

• Rinse the mouth with a decoction of the ground rhizome of **bistort**. It is astringent and will give strength to weak, bleeding gums.

• Warm **chamomile** tea may be used as a soothing mouthwash after each brushing. Do not add sugar or milk to the tea.

• **Gotu kola** extract is good for gum healing.

• **Tea tree oil** is an anti-infective mouthwash. **Witch hazel**, and **calendula** extract are also good.

• Rinse with **white oak bark** tea. It is astringent; and it will reduce inflammation and cleanse the gums.

• Mix **aloe vera** juice with **myrrh** and apply to the gums.

• Drink 3 tsp. **chlorophyll** liquid, daily, and apply directly to the gums.

• Brush the teeth with **black poplar** powder, mixed with **charcoal**. The mixture absorbs residues and plaque. It also makes the teeth whiter.

• Prick capsules of **vitamin E** oil (400 IU) and rub the oil directly on gums. Or combine with **vitamin A** oil (500 IU) and place on gums.

• Use **folic acid** solution as a mouthwash.

• To control pain and soothe inflammation, massage gums with diluted **clove** oil, diluted **eucalyptus** oil, or **lobelia** extract.

• Put 4-5 drops **tea tree** oil or **grapefruit seed extract** in a water pick and use daily for recurring gum infections.

—See Receding Gums (337), Tooth Decay (335), Gingivitis (337), and Pyorrhea (338) for more infor-

mation.

ENCOURAGEMENT—The ten commandments, "Thou shalt" and "Thou shalt not," are ten promises assured to us if we render obedience to the law governing the universe.

SALIVA PROBLEMS

SYMPTOMS—Not enough saliva, causing a dry-mouth condition. Or, perhaps, there is too much saliva.

CAUSES—Without proper saliva, you cannot absorb your food properly; for digestion begins in the mouth. Causes include **inadequate diet**, not drinking enough **fluids**, lack of **vitamin A** and other **nutrients**. Excessive salivation may be indicative of a **food allergy**.

NATURAL REMEDIES

• Drink at least two glasses of warm **water** 15-30 minutes before each meal.

• If you have a dry mouth, take a little **lemon juice** or **honey** before the meal, to stimulate the flow of saliva.

• If you are not obtaining enough **vitamin A** (5,000 IU or in the form of carotene in carrot juice, and green and yellow vegetables), your saliva flow may be inadequate.

• If you seem to have too much saliva, drink a tea of one of the following: **white oak bark, goldenseal root, or bayberry**.

• If you produce too much saliva, check to see if you have food allergies *(576)*.

• **Chew your food** well, especially carbohydrate ("starchy") foods. They need partial digestion in the mouth before being swallowed. This includes such things as bread, all-grain products, potatoes, etc.

• The **chewing gum habit** is not good. It overworks your salivary glands when they should be resting.

—Important: You may have Sjögren's Syndrome (241).

ENCOURAGEMENT—Thank God everyday for temporal blessings and whatever comforts He bestows upon us in this life. He has a bright future for us; and, if we will but cooperate with His plans, our future is very bright. 2 Corinthians 1:22.

HALITOSIS
(Bad Breath)

SYMPTOMS—The breath has an unpleasant odor.

CAUSES—Touch the back of your hand with your tongue; then smell it. This is a simple test which may tell you something you need to know.

Not caring for your teeth properly, **not brushing them** can be a primary cause. But **tooth decay** *(335)*, **indigestion, improper diet, gum disease** *(339)*, **constipation** *(367, 723)*, **inadequate digestion of proteins, infection in the nose or throat** *(328)*, **poorly functioning liver** *(357-361)*, **stress** *(455-470)*, **heavy metal buildup** *(596)*, or **mouth sores** can also be major problems. Bad breath may be a sign of an underlying **health problem**.

NATURAL REMEDIES

• **Brush your teeth** after each meal. Use dental **floss**.

• **Brush the tongue** carefully. It often has food particles and bacteria; it needs cleaning. Many people throughout the world rely on washing the tongue to get rid of bad breath.

• Drink more **water**. Dehydration often causes bad breath, especially first thing in the morning. Saliva does not flow during sleep, so no mouth cleaning occurs at night. Water is the best liquid for your body. The more water you drink, the more your mouth will stay clean.

• Go on a five-day **raw food diet**; during this time 50% of what you eat is raw. This will help clean out your system.

• **Garlic, onions, and curry** contain aromatic compounds that are exhaled as offensive breath for up to 24 hours. But, although **garlic** can be a temporary problem, it is such a powerful antibiotic that you may need to take it anyway.

• Eat **parsley**. Other **chlorophyll-containing foods** are also good for your breath. Include **acidophilus lactobacillus** in your diet to recondition your large bowel.

• Take a **B complex** supplement daily, plus B_6 (50 mg). Also take **zinc** (30 mg).

• Take **charcoal** by mouth. Let it dissolve slowly in the mouth. This will help clean both your mouth and stomach.

• **Apples, carrots, celery**, etc., are excellent for cleaning out your mouth at the close of a meal. They remove odor-causing bacteria from the mouth.

• When you get up in the morning, take 3 **chlorophyll** capsules or tablets on an empty stomach.

• **Outdoor exercise** will bring more oxygen into the lungs and help clean out the system, reducing bad breath.

• **Gum disease** is a frequent cause of bad breath. *See Gingivitis (337) and Periodontal Disease (338).* Place **goldenseal** over the infected gums or mouth sores. Do this for 3 days, to help heal the gums.

• Although very unlikely, **mouth breathing** may cause bad breath. Yet, for many, the advantages of mouth breathing (obtaining more oxygen than otherwise could be done) outweighs the possible disadvantages.

• **Sinus infection** produces a discharge with a bad odor. If you have sinus trouble *(295)*, this may be the cause of your bad breath.

• Use **myrrh, rosemary, or peppermint** to brush your teeth and rinse your mouth.

• In cases of bad breath caused by stomach prob-

lems, **thyme** tea can be helpful.

• Dr. Christopher especially recommends taking a little **myrrh** tea internally to eliminate bad breath.

• Chew **fennel** or **anise** seeds after eating an odorous meal.

• **Ginger, coriander, cumin, and fennel** are four herbs that can deodorize your intestinal tract. Chew **anise, cardamom, dill, or fennel** seeds.

AVOID

• **Alcohol, coffee, nicotine, and meat eating** are four of the worst offenders.

• Avoid bad teeth! **Unclean teeth, decayed teeth, or space beneath caps** (dental crowns) where food can lodge and rot can be significant causes of bad breath.

• Do not eat **spicy foods**. **Meat eating** can produce bad breath, both because of the particles left in the mouth and because of later indigestion. **Cheese** and **fish** both cause bad breath. Drinking **coffee, beer, wine, or whiskey** are excellent ways to have bad breath. Many **street drugs**, so disrupting to the body, also produce bad breath.

• Avoid foods that are likely to cause tooth decay (such as **meat, candies, and sticky sweets**). Avoid **foods that get stuck** between the teeth too easily.

• Other "bad breath foods" include Roquefort, Camembert, blue **cheeses**, canned **tuna** on pizza, and spicy deli **meats**.

• Do not use **commercial mouthwashes**. They irritate the mouth more than they solve any problems. All they have is alcohol, dye, and flavoring.

• Instances have been reported of **food allergies** *(574)* causing bad breath. Search out the foods you are allergic to and avoid them.

• Avoid **constipation** *(367, 723)*.

• Once a week, rinse your toothbrush in **hydrogen peroxide**, soak it overnight, or boil it each month. Occasionally buy a new one. Bacteria grow on the toothbrush.

—See Gingivitis (337) and Periodontal Disease (338).

ENCOURAGEMENT—Give the Word of God, the Bible, the honored place as the guide in your home; you and your family will be blessed for it. The Bible presents a perfect standard of character; and its divine Author can give us the grace to obey it fully.

CHEILOSIS
(Angular Stomatitis, Geographic Tongue)

SYMPTOMS—Cracks appear in the corners of the mouth and in the (nasolabial) corners of the nose.

The top and sides of the tongue are irregular, denuded areas that appear very smooth. Geographic tongue is not painful; and the sense of taste may, or may not, be affected.

CAUSES—This is a nutritional problem, as explained below.

NATURAL REMEDIES

• The cracks are directly caused by a vitamin B_2 (riboflavin) deficiency. Take 500 mg daily.

• The geographic tongue means you are not absorbing **vitamins** B_3 (200 mg), B_6 (200 mg), B_5 (2,000 mg), B_{12} (1,000 mg), **folic acid** (5 mg), **or zinc** (30 mg) properly. The cause is frequently malabsorption from **celiac disease**-like *(382)* changes in the small intestine.

• Do a series of **pulse tests** *(575)*, to determine the foods you may be allergic to. Avoid those allergens. You may need to take **betaine HCl** (hydrochloric acid) before each meal.

ENCOURAGEMENT—By firm principle and unwavering trust in God, we can live clean, honest lives that will be a blessing to all around us. This is the will of God for us. 2 Corinthians 7:6.

LOSS OF SENSE OF TASTE

SYMPTOMS—The ability to taste things seems to be disappearing or totally gone.

CAUSES—There are about 10,000 taste buds on the upper surface of the tongue. Each bud contains about 25 sensory receptor cells; these tiny taste hairs are exposed to drink and food dissolved in saliva. They sense four basic tastes: sweet, sour, salty, and bitter.

This condition may be caused by **allergies, infections, aging, nasal polyps, nerve damage,** or **deficiencies of B vitamins and zinc**. The cause may be certain **drug medications**.

NATURAL REMEDIES

• Switch to a **nutritious diet** of fruits and vegetables. Take a complete **B vitamin supplement**, plus added **zinc** (30 mg daily). After several weeks, reduce the zinc dosage to 15 mg.

ENCOURAGEMENT—Although you will have trials, yet these trials, well borne, only make the way more precious, if you are trusting in Jesus and humbly seeking to do His will.

DRY MOUTH
(Xerostomia)

SYMPTOMS—The mouth seems to be dry all the time.

CAUSES—An estimated 25% of older American have dry mouth syndrome. It is common among public speakers.

NATURAL REMEDIES

• Dry mouth is a side effect of more than 400 medicinal **drugs**, including many prescribed for **high blood pressure and depression.** In addition, avoid **antihistamines, diuretics, and tranquilizers.**

• **Hypoglycemics** and **diabetics** often have a dry

mouth, due to blood sugar imbalance. They should drink enough **water**.

• **Breathe through your nose,** to avoid stress-induced dry mouth. (However, mouth breathing helps you take in much more air; you may do best not to stop the practice.)

• Sip **water** frequently. It is good for you. Or drink a glassful every hour or so between meals. It is an intriguing fact that those who rely on **coffee, soft drinks,** or **liquor** for their fluids tend to not get enough liquids. Instead, only drink **water and fruit juices**, and you will have lots of fluid in your body.

• Add a dropperful of **echinacea** tincture to juice, or chew the root of a fresh plant.

• Rinse the mouth with **goldenseal** mouthwash before bedtime. It will keep your mouth moist and relieve inflamed gums.

• Take **coenzyme** Q_{10} (10-30 mg) daily.

• **Jaborandi** (various species of Pilocarpus) is a Brazilian plant which increases salivation as much as tenfold. The active ingredient is *pilocarpine*.

• **Aloe vera** gel can relieve tender, burning, inflamed gum tissue. Do not eat for an hour afterward.

• In China, they simmer 2-4 tsp. dried **multiflora rose** per cup of boiling water to make a tea for dry mouth.

• **Cayenne** stimulates salivation.

• **Vitamin C** (2,000 mg) will help repair the damage to mouth cells which are too dry. Also take a complete **B complex**.

• You may have **Sjögren's syndrome** *(241)*. This causes dry eyes, dry mouth, and painful joints.

ENCOURAGEMENT— The truest, the most exalted, knowledge is found in the Word of God, the Bible. In its simplicity there is eloquence. It is the path to eternal life.

LEUKOPLAKIA

SYMPTOMS—White, painless patches on the tongue or lining of the mouth.

CAUSES—These patches frequently follow radiation treatment or long-term antibiotic drug therapy. But they may also be caused by pipe smoking, rubbing by a rough tooth, or thickening of tissues in the elderly.

Leukoplakia is closely related to candidiasis (215), which you may have.

NATURAL REMEDIES

• The patches often disappear when a B complex tablet and acidophilus capsules are taken with each meal.

• Rinse the mouth with **aloe vera** juice or a mixture of 2 tablespoons each of apple cider **vinegar** and **water**, plus a pinch of **cayenne**.

• Make a tea of **white oak bark, myrrh, goldenseal, and red raspberry**, and swish it in the mouth.

• Wipe the patches with a cloth dipped in a solution of **borax**, mixed with **water** or **honey**.

ENCOURAGEMENT—Present your petitions to the Lord in humility and real soul hunger for the blessing of God, without boasting of superior attainments. Come to Him as His little child, asking for help.

ORAL THRUSH

SYMPTOMS—Creamy-looking white patches form on the tongue and the mucous membranes of the mouth. If the patches are scraped off, bleeding may result.

CAUSES—This is a fungal infection; and it is most common in those with compromised immune systems.

NATURAL REMEDIES

NUTRITION

• Eat a nourishing diet of **fruits, vegetables, whole grains, legumes, and nuts**. While treating the infection, a diet primarily of **raw food** is best.

• Avoid **tobacco, alcohol, caffeine**. Do not eat **meat or dairy products**. Avoid **sugary, fried, and processed foods**. Eat nothing **greasy**.

HERBS

• **Goldenseal** contains *berberine*, which destroys fungi. It can be used against every type of fungus infection. It can be applied both topically and as a drink. Only use goldenseal for a week; then switch for a time to another fungicide herb.

• **Pau d'arco** is strongly antifungal. Drink 3 cups daily.

• **Bloodroot** also contains *berberine*; and it has been shown to be quite effective as a fungicide.

• **Yellowroot, barberry, and Oregon grape** also contain *berberine*.

• **Tea tree** oil is excellent when applied externally; but do not drink it. Apply it several times a day to the affected area, either full strength or diluted with a little distilled water or cold-pressed oil. **Black walnut** extract can also be used.

• A powerful antifungicide is **wild oregano oil**. The most resistent forms of fungus infection can generally be eliminated by it.

• The **pepper tree** (horopito) is a New Zealand shrub which contains *polygodial*, which is useful against both fungi and bacteria. Another antifungal herb is the ***Licaria puchuri-major***, a Brazilian plant.

ENCOURAGEMENT—Genuine faith is the faith that works by love and purifies the soul. A living faith will be a working faith.

RED, CRACKING LIPS
(Cheilitis, Perléche)

SYMPTOMS—Redness and tenderness on one or both lips, with inflammation, a burning sensation, and scaling. Sometimes cracks on the lips and often in the corners of the mouth.

CAUSES—Nutritional deficiencies and **allergic reactions** to toothpaste or mouthwash may be the cause. The problem might be due to skin conditions such as **seborrheic dermatitis** *(272)* or **psoriasis** *(275)*. In adults, the cause may be poorly fitted **dentures**. In small children, excessive **lip licking** or **drooling** (possibly caused by mouth breathing which keeps the mouth open, or injury from **dental braces**). Excessive **sun or wind exposure** can intensify the problem.

NATURAL REMEDIES

• Read the above paragraph carefully and make needed changes.

• Eat a nutritious diet of **fruits, vegetables, whole grains, nuts, and legumes,** plus a full **vitamin-mineral supplement**. Obtain adequate **rest** and **exercise**.

ENCOURAGEMENT—When the divine law is set aside, the greatest misery will result to families and to society. Our only hope of better things is to be found in a faithful adherence to the precepts of God.

 # LIP BALM

Here are a formula for a lip balm you can prepare in your own home. In this way, you can be sure there are no dangerous additives in the balm.

Warm 1 cup almond oil in a double-boiler. Stir continually. Add 1 Tbsp. beeswax. Add 1 tsp. of each of the following: vanilla extract, honey, vitamin E oil, aloe vera gel. While hot, stir as you pour it into a wide-mouth jar. Close tightly. The lip balm, which will soon harden, is very nourishing for the lips.

ENCOURAGEMENT—God never lets go one who commits the keeping of the soul to His care. Having loved them because of their love of Jesus, He loves them to the end.

GASTRO-INTESTINAL -

3 - GAS AND VOMITING

HICCUPS

(Hiccoughs, Singultis)

SYMPTOMS—Hiccups that you want to have stopped.

CAUSES—Charles Osborne of Anthon, Iowa, started hiccuping in 1922 and hiccuped for the next 65 years. After 430 million hiccups, he passed away.

Almost all hiccups are one-sided; that is, only one side of the diaphragm contracts. **Overeating** or **excessive drinking** is the most common cause. It causes the stomach to extend downward and press against the diaphragm—which then starts its hiccuppy motions. Other causes include **overeating, eating too fast, irregular times for eating, carbonated beverages, stomach inflammation due to fermentation, stress or excitement, cold showers, sudden temperature changes, smoking, drinking alcohol**. Nursing infants which **swallow air**.

A hiccup is a repeated involuntary spasmodic contraction of the diaphragm, immediately followed by a sudden closure of the glottis.

But that information does not help solve the problem. Here is advice that may. All of the following methods really work for some people. Find what is best for you. (You will notice that these techniques are frequently based on diverting attention, changing the ongoing physical hiccup pattern, and getting the body to do something different for a few moments.)

NATURAL REMEDIES

• A high blood carbon-dioxide level is known to stifle hiccups. A well-known procedure is to **breathe into a paper bag**. Blow in and out exactly 10 times; and do it very hard until you are red in the face. You must do it fast; and you must form a good seal around the bag so no air gets in.

• **Hold your breath** as long as you can; then **swallow** when you think a hiccup is coming. Do that 2-3 times. Then take a deep breath and begin again.

• **Hold your breath** in for as long as possible; then **exhale and hold** that as long as possible.

• **Blow air out** in a slow, steady stream.

• Hold your breath while **extending your head as far backward** as you can.

• Swallow a teaspoonful of **dry sugar**. It often stops the hiccups in minutes. The sugar in the mouth probably sends different signals along the nerve routes, interfering with the hiccups.

• Close your mouth, hold your **nose and ears closed** with your fingers and thumbs, and **swallow** 3 times before you let go. This creates a slight vacuum and changes the rhythm of the diaphragm enough to bring relief.

• Chew and swallow **ice** for 10-15 minutes.

• Stand behind the person as he sits on a chair. Grasp the neck gently with your fingers and, with the thumbs, slowly **massage** down each side of the spine.

• Fill a glass of water, bend over forward, and **drink the water upside down**.

• Apply pressure with the flat of the hand, just **below the breastbone**.

• Take a deep breath and drink 10 **swallows** of water while not breathing.

• Put **ice** on the neck.

• Drink **catnip** tea.

• Place light fingertip pressure on each **side of the neck**, for about a minute.

• Take exactly 10 **sips** of water in rapid succession.

• A **sneeze** sometimes stops the hiccups.

Chew activated **charcoal** tablets, fresh **mint** leaves, or **dill** seeds.

• Drink **lemon and lime** juice.

• Have someone pull outward on your **tongue** for a

few minutes.

• Drink a glass of water while **clenching a pencil** with the back teeth.

• Lie on the **left side** for 10-15 minutes.

• Stand **on your head**.

• **Shout or sing** as loudly as possible.

• **Bend over**, placing the head lower than the diaphragm, then drink a glass of cold water through a straw. Then remain in that position for several minutes.

• Swallow **crushed ice**.

• **Do Deep breathing**.

• A sudden, **loud noise** will startle an end to the hiccups; but make sure the person has no heart trouble.

• **Tickle** the soft section in the back of the roof of the mouth with a cotton-tipped swab.

• Have someone **massage your feet**.

• Drink a half glassful of fresh **orange juice**.

• Take a **hot bath** for 15 minutes.

• Place an **ice bag** to the pit of the stomach.

• **Soak both feet** in water for 15 minutes.

• Bend at the waist, **touch the toes**, and hold this position for about 60 seconds. This method is useful for both adults and children.

• When children run around and play, sometimes one ends up with the hiccups. When that happens, try **tickling** him while he holds his breath; and tell him to try real hard not to laugh. He will forget about the hiccups.

• When you are eating, just **be quiet and eat**; and you are not likely to get hiccups.

• Do not use **alcohol, caffeine, tobacco, cold or carbonated water**.

• In case you have hiccups which will not stop, go on a **3-day complete fast**, drinking only juices.

ENCOURAGEMENT—The work of conquering evil is to be done through faith. Those who go into the battlefield will find that they must put on the whole armor of God. The shield of faith must be their defense. God will give them the victory over temptation and sin. Psalm 119:105, 130.

BELCHING
(Eructation, Aerophagia)

SYMPTOMS—Burping up air from the stomach.

CAUSES—Belching is most frequently caused by bringing up air that was **swallowed with the food and drink** taken in. This is called eructation. When belching occurs repeatedly, all day long, it is called aerophagia, which is caused by unconscious, **repeated swallowing of air**.

We normally have about a cupful of air in our stomach all the time. Each day, we swallow air and make some in our stomach (about 10 cupfuls in 24 hours). Because this is 9 cupfuls too many, we belch occasionally.

NATURAL REMEDIES

• Make a habit of **not gulping down air** as you eat. Just thinking about being more careful will help a lot.

• **Chew with your mouth closed**, and **do not talk** while you are eating.

• Do not eat **foods which produce gas**, such as beans, carbonated drinks, and beer.

• **Do not drink in odd ways**: out of cans, bottles, or through a straw.

• Avoid **foods with high air** content. This includes ice cream, beer, omelets, and whipped cream.

• **Ginger** stimulates digestion and is good both for relieving and preventing belching. Take 1-2 550 mg capsules of powdered ginger before each meal. Or drink a cup of ginger tea with the meal.

• Eat **nutritious food** and take **vitamin-mineral supplements**, so you will make enough digestive enzymes.

• Add 1 tsp. **cardamom** to 8 oz. water, boil for 10 minutes, drink it hot. The herb helps reduce muscle spasms in the stomach, which cause the belching.

—Also see Bloating (below).

ENCOURAGEMENT—If we would give more expression to our faith and rejoice more in the blessings we know we have, we could have more faith and greater joy. If you will cooperate with His plan, as given in the Bible, He will give you eternal life.

FLATULENCE
(Gas, Bloating)

SYMPTOMS—There is an excess of gas in the stomach. The stomach (or intestines) seems to be too full.

CAUSES—Bloating is the accumulation of gas in the stomach, intestines, or bowels. Normally the stomach is sterile because of the acid environment. But when it does not contain enough **hydrochloric acid** *(achlorhydria, 351)*, bacteria from the small intestine migrates up into the stomach. Arriving there, it ferments the carbohydrates and sugars. This produces gas or, what is called, bloat.

NATURAL REMEDIES

• You may wish to take 1 ounce of oral **hydrogen peroxide** (20 drops / ounce) twice a day, along with colloidal minerals, betaine HCl (hydrochloride), and pancreatic enzymes (75-200 mg, three times a day). Take this 15 minutes before mealtime. Be sure you take it through a straw and it does not get on your teeth! (The acid can melt them.)

• Instead take **lemon juice and water** before each meal. In your stomach, the lemon juice will act simi-

larly to that of HCl.

• A **low-fat diet** helps reduce carbon-dioxide production in the top (duodenal) area of the small intestines.

• Drink enough **water**. A dry mouth encourages swallowing.

• Eat more **slowly**. **Chew** your food well. **Relax** when you eat.

• Eat **lactobacillus** to restore the bacteria needed to stop bloating in the bowel.

• Eat **digestive enzymes** at the close of the meal.

• Take **chlorophyll** to reduce gas and odor.

• Do not postpone **bowel movements**.

• **To reduce gas-causing sulfur compounds** in beans (pinto, navy, garbanzo, etc.), use the following cooking method: Place 1 cup beans in 5 cups water, bring to a boil, then boil 1 minute. Drain off the water and add 5 cups of freshwater. Bring the water to a boil and continue cooking the beans according to directions. Cabbage and cauliflower can also cause flatulence.

TO ELIMINATE AIR

• Take **charcoal** to help reduce the gas. The charcoal will adsorb it and carry it off. Activated charcoal is best.

• If you are going to a social gathering and must not produce gas, take 1-2 200-500 mg **charcoal tablets** before going there. Do not do this over 2 weeks at a time.

• **Walking** helps break down bubbles, so they can be more quickly expelled.

• Rock in a **rocking chair** vigorously with feet on the floor.

• When bloating occurs, this can be done: If it is in the stomach, seat the person upright, **apply heat over the stomach**. Have him **sip hot water**.

• If the bloating is in the intestines, have him **lie down** for a half hour, before and after meals. Give **no fluids with meals**, but hot water may be sipped afterward. If needed, give an **enema**.

• To expel excess air, rock back and forth in the knee-chest position.

• Carminative herbs expel gas and bloat. Mix equal parts **balm, chamomile, and peppermint**. Steep 1 tsp. in ½ cup boiling-hot water. Take unsweetened in mouthful doses.

• Mix 3 parts **spearmint** and 1 part **ginger**. Add 1 tsp. to each cup of hot water. Drink the clear tea and leave the sediment.

• Mix equal parts of **German Chamomile, anise, caraway, fennel seed, and balm leaves**. Steep 1 tsp. in ½ cup boiling-hot water. Take ½-1 cup a day.

• Other carminative herbs include **allspice, cloves, cornmint, dill, horsebalm, sage, and thyme**.

• A little **ginger tea** is good for infant colic or flatulence.

AVOID

• Avoid **drinking with meals**.

• Avoid **gas-producing foods**, such as beans, cabbage, other members of the cabbage family, and whole wheat-flour products.

• **To reduce gas-causing sulfur** compounds in beans (garbanzo, pinto, navy, etc.), use the following cooking method: Place 1 cup of beans in 5 cups of water and bring to a boil. Boil for one minute. Then drain the beans and add 5 cups of freshwater. Bring the water to a boil and continue cooking the beans according to directions.

• An old Appalachian method: Cook **beans** with a small, whole **carrot**.

• You may have trouble digesting **milk sugar** (lactose). Try stopping all milk products for a week or two and see if that helps. Dairy foods can produce gas in the large bowels.

• It is possible to eat too much **fiber** at a time. This can induce some bloating.

• **Artificial sweeteners** produce gas.

• **Carbonated drinks** (beer, champagne, soft drinks) and foods with whipped air cause more air to be ingested.

• Avoid **fried food, hydrogenated fat, sugar, refined carbohydrates, junk food, ice-cold drinks, and poor food combinations**.

• Avoid drinking at **water fountains**. You can hardly drink at one without gulping down air.

• Both **chewing gum** and **smoking** increase the swallowing of air.

• Do not **sigh**. People who sigh often swallow air.

• Avoid **tight belts** and **tight-fitting clothes**. Those who do not wear belts and girdles have less indigestion.

• Avoid **repetitive belching**; for you tend to swallow more air than you release.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR GASEOUS STOMACH DISTENSION AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

COMBAT IT—Cold Compress over stomach without plastic covering, changed every 4 hours. Cold Fan Douche over stomach, twice daily.

INCREASE GENERAL VITAL RESISTANCE, COMBAT AUTOINTOXICATION—short sweating baths, such as the Radiant Heat Bath, Sweating Wet Sheet Pack, Hot Full Bath (4-6 minutes, at 105° F.), Hot Blanket Pack, Hot Enema. Follow each hot bath with a **Tonic Friction** application.

PYROSIS—Hot water drinking before retiring at night. **Fomentation** over stomach at bedtime, with **Hot Abdominal Pack** overnight, and sipping half a glass of very hot water, when rising in the morning. A few ounces of orange juice or other natural, unsweetened fruit juice half an hour before eating is important.

CONSTIPATION—Graduated Cold Enema. Cold Douche to abdomen. **Hot Abdominal Pack. Regularity** of bowel habits.

PAIN—Fomentation over the abdomen, followed by a **Heating Compress** that is protected only by flannel.

—Also see Belching (344), Achlorhydria (351), Dyspepsia (348), and Colic in Children (698) and Infants (691).

ENCOURAGEMENT—Living faith and obedience, by faith in Christ, can give us the victory over every beset-

ment and sin. He can enable us to stand firm to the end. 1 John 5:4.

HEARTBURN
(Acidosis, Overacid Stomach, Gastroesophageal Reflux Disease)

SYMPTOMS—A burning sensation in the stomach or chest.

CAUSES—Heartburn is a sense of burning in the stomach. In most instances, some of the stomach digestive juices have backed up out of the stomach into the esophagus (the food tube between the mouth and the stomach). This backing-up action is called *reflux*. These juices include hydrochloric acid, which is a rather powerful acid. It is used in industry to clean metal. When it comes in contact with the esophagus, it burns the wall. Normally, the esophageal sphincter muscle shuts and prevents stomach acids from pushing upward.

Chronic heartburn can scar the esophagus. The acids make their way into the lungs, and asthma-like conditions can result. Chronic heartburn is now officially known as GERD (gastroesophageal reflux disease).

Heartburn can be caused by **excessive consumption of fatty or fried foods, alcohol, coffee, spicy foods, chocolate**, or just having **too much food** in the stomach. **Citrus fruits** or **tomato-based foods** cause it in a few people.

Other contributing factors are hiatal hernia *(347)*, allergies *(576)*, stress *(455)*, gallbladder problems *(362)*, and enzyme deficiencies *(104)*.

Having **too little stomach acid** *(351)* can cause a similar condition. People over 50 often have a deficiency; and the discomfort is nearly identical to having too much. Proper digestion does not occur; this causes bloating, belching, and other symptoms of heartburn. If this is your problem, you need to take lemon juice and water with your meal. If symptoms continue after taking the lemon juice, then your stomach is making **too much** acid.

NATURAL REMEDIES

IMMEDIATELY

• Drink a large glass of **water**. This will help wash the HCl back down and dilute it as well. Or drink some raw **potato juice**. Whiz up an unpeeled potato and drink it down.

• Do not lie down. Remain **upright**, so gravity can help push the HCl down and keep it down.

• Lose weight. The pressure of extra weight causes heartburn more frequently.

• Do not wear tight clothing around the waist. Loosen your belt; better yet, **wear suspenders**.

• Eat more **raw vegetables, chew your food** well, take small mouthfuls, and **eat slowly**.

HERBS

• **Peppermint** is excellent for heartburn. Make a tea and drink it. Lemon balm, basil, and oregano are also good.

• Chewing **licorice** protects the lining of the esophagus, which can be damaged by chronic heartburn. For best results, use deglycerinated licorice, which is a chewable form. Take 1-2 chewable tablets 3 times daily on an empty stomach. It can help protect against stomach ulcers from an excess of stomach acid.

• Two natural antacids are "**bitters**" (bitter herbs) and **ginger** root. Bitters includes **goldenseal, gentian root**, and **wormwood**. Take a small amount before the meal to prevent heartburn. Take 2 capsules ginger root at the end of the meal to prevent heartburn.

• **Papaya** and **pineapple** contain *bromelain*, which is a digestive enzyme.

• Drink a cup of **aloe vera** to stop heartburn symptoms rather quickly. It helps protect the lining of the esophagus.

• **Dill** has been used to soothe the digestive tract and treat heartburn for centuries. Crush a few seeds and make a tea of it. (If pregnant, do not use dill.) **Fennel** is another favorite for treating heartburn.

• **Slippery Elm** helps relieve the symptoms of acid indigestion by healing the mucous membranes.

• **Cardamom** help eliminate gas.

• **Angelica** is good for heartburn in adults and colic and gas in children.

• A cup of **gentian**, taken 30 minutes before a meal, prevents heartburn. Simmer 1 tsp. in a cup of water for 30 minutes, then add a sprinkle of **cayenne** and **ginger**, and drink it.

AVOID

• **Avoid bending over**; if you must lift something, bend at the knees. You do not want to compress your stomach when you have heartburn. Do not lift heavy objects.

• **Do not eat** 2-3 hours before bedtime or lie down after a meal. Acid can more easily flow into the esophagus; and, by doing so, it can also bring on a heart attack. Do not use **extra pillows** under your head; you do not want your body to bend at the waist. Do not sleep on your **left side**; doing so helps the stomach acid flow up into the esophagus. **Elevate** the bed at the head by 4-6 inches.

• Do not eat **big meals**. Do not eat **high-fat foods**. Do not eat **spices, chocolate**, or **mints**.

• **Avoid foods** which upset you.

• Do not drink anything **caffeinated**; for it will irritate the esophagus even more. Caffeine relaxes the sphincter, so stomach contents can move on up. **Estrogens** relax it also. **Smoking** weakens your esophageal muscle.

• Drinking **milk** may feel good going down; but it encourages the stomach to secrete more acid.

• **Drinks with (carbonated) fizz** in them expand the stomach and make it more likely that HCl will come up the food pipe. So no colas or beer.

• **Greasy, fried, and fatty foods** sit in the stomach for a long time and increase HCl production. Avoid **meat**

and **dairy** products.

• **Antidepressants and sedatives** aggravate heartburn. **Aspirin** and **ibuprofen** cause heartburn.

Antacids only mask the symptoms. They also contain aluminum, which is a cause of Alzheimer's disease *(485)*. Antacids interfere with the body's ability to digest and absorb food.

WARNING

Angina *(425)* and **heart attack** *(419-426;* signals: *753)* are both very dangerous conditions. Among the earliest symptoms of both is, what appears to be, an "acid stomach." Beware. You are wise to eat so that you do not have heartburn. Then if major heart trouble sends a warning message that seems like heartburn, you will not ignore a crucial first signal of terrible trouble.

Heartburn usually occurs during, or shortly after, a meal and produces pain or burning in the chest. *Heart attack* and *angina* can strike at any time. The pain often radiates from the chest up under the jaw or along an arm, producing faintness and sweating. If in doubt, call 911 and describe your symptoms.

—Read everything under Hiatal Hernia (below), Excess Hydrochloric Acid (351).

ENCOURAGEMENT—Even on earth we may have joy as a wellspring, never failing, because it is fed by the streams that flow from the throne of God. All this is ours as we study the Bible and, in Christ's strength, obey it. 1 Peter 4:12.

HIATAL HERNIA

(Hiatus Hernia)

SYMPTOMS—Heartburn and belching. There may be difficulty in swallowing. Material from the stomach may suddenly return into the throat or mouth, causing a burning sensation. It may feel as if there is a lump in the throat or that food is sticking somewhere in the throat. Sometimes bloody mucus is coughed up.

CAUSES—A small portion of the stomach slips (pushes or herniates) through an opening (hiatus) in the diaphragm, causing the stomach to come up into the chest cavity (the thorax). A weakness in the diaphragm as it leaves the esophagus may enlarge the opening, where the esophagus (food pipe) enters the stomach. This enables the stomach to slide up somewhat.

The weakness is often caused by increased pressure upward, from what is in or near the abdominal cavity: **obesity, pregnancy, tumors, heavy lifting, overeating, straining at the stool, or tight clothing**.

It is said that nearly half the people over 40, in the U.S., have hiatal hernias. But most are unaware of it, since these hernias are often quite small and are hardly noticed. They occur in women four times as often as in men, perhaps due to tight clothing. They generally first occur after the age of 40.

The acid material that comes up into the windpipe, from the larger hernias, frequently causes ulceration in the esophageal wall.

But ulcers can also occur in the duodenum, which is the top part of the small intestine, just below the stomach. People with this condition have a tendency to have **overacid stomachs**.

Between the esophagus and stomach is the esophageal sphincter. This is a circular valve which can open and close. But its strength is damaged by **drugs, tobacco (smoked or chewed), or certain foods**. This weakening allows food and acid to go back up into the windpipe.

Those problem foods include **coffee and chocolate** (because of the methylxanthines in them), **spicy foods, tomato, alcohol, peppermint, spearmint, and citrus juices. Tobacco and coffee** are especially bad. **Whole milk** can also be a problem. Weakening of the sphincter occurs within 30 minutes after drinking coffee. One puff of a cigarette can lower sphincter pressure to zero; the result is called "smoker's heartburn."

NATURAL REMEDIES

After you eat, sit in a chair for awhile. Do not stoop or bend over.

• Eat **nourishing food**, plus **vitamin / mineral supplements**. Several **small meals** are best. **Avoid overeating**; it only intensifies the problem. If eaten at all, **supper should be light** and 2-3 hours before bedtime. Food in the stomach, after you are in bed, is more likely to flow back up into the windpipe. Stop eating supper entirely, and you are more likely to have success in overcoming hiatal hernias.

• Include extra **fiber** in your diet; this helps soak up some of the acid.

• **Do not drink liquids** immediately before, during, or up to 30 minutes after meals, so digestive enzymes work better. But, as soon as you sense heartburn coming on, drink 1-2 large glasses of **water**. This tends to wash the acid back down into the stomach.

• **Avoid fried food and fats**; they slow down the digestion process in the stomach. Do not take **tea, coffee, colas, alcohol, or tobacco**. Avoid **refined foods**, including **white-flour products and sugar**. Avoid **coffee, chocolate, spicy foods, alcohol, tomatoes, mint foods, whole milk**, and possibly **citrus juices**.

• Eat your meals on a **regular schedule** and do not eat between meals. Eating between meals causes the stomach to stop partway through and start all over again—still with everything from the previous meal in it.

• Even when not thirsty, drink a large glass of water every so often throughout the day.

• **Avoid heavy lifting** and **do not bend over** more than you have to. Wait till 2 hours after a meal before starting heavy exertion. Bend from the knees, not from the waist, to avoid upward pressure on the stomach.

• Daily outdoor **exercise** will strengthen the muscles.

• Avoid **stress** and stressful situations.

• Avoid **tight clothing** (corsets, girdles, belts, etc.).

• You may need to raise the head of the bed 4-8 inches to avoid reflux of food upward at night.

—Read everything in Heartburn (346) and Excess

Hydrochloric Acid (351). Also see Hernia (533) and Umbilical Hernia (534).

ENCOURAGEMENT—We all need a guide through the many difficult places of life. But if we will cling to God and His Written Word, the Bible, we can have the victory at each step. Zechariah 13:9. "Faithful is He that calleth you, who also will do it." 1 Thessalonians 5:24. Trust in your kind heavenly Father, and He will care for you.

VOMITING
(Emesis)

SYMPTOMS—The person vomits.

CAUSES—Vomiting is the return of the stomach contents through the mouth. Most cases of vomiting are not due to severe illness.

The cause is often **overeating**, eating the **wrong food, poor combinations**, or excessive **alcohol** consumption. But it can also be caused by **food allergies, poisoning, food poisoning, or infection** (flu, Epstein-Barr syndrome, candida, etc.). If the vomitus (that which comes up) looks like "coffee grounds," it includes large amounts of blood from a bleeding ulcer or stomach cancer—*and that is an emergency*; for extensive internal bleeding can result in death. Take him to the emergency room.

If it occurs in infants, accompanied by fever and the child is unresponsive, it could indicate **meningitis**. Call a physician immediately. *See Meningitis (476).*

But it might be that you need to induce more vomiting, because someone has just eaten a poisonous plant, rat poison, etc.

NATURAL REMEDIES

TO HELP VOMITING OCCUR

• If you have eaten something poisonous or are having a gallbladder attack, an emetic will help. Drink an **emetic** herb tea. **Lobelia** is probably the best. When giving lobelia tea, give the full dose all at once or you will not induce vomiting. Add 1 ounce of lobelia to a quart of boiling water; let it steep for 5-10 minutes if you are in a hurry (15-20 minutes is better). Then give a cup or two of the liquid (not hot), and let him vomit.

• Other emetic herbs include **bayberry bark, myrica, white willow, peach leaves, and ragwort.**

TO STOP VOMITING

• Give *very small doses* of **lobelia**; they will relax the person and the vomiting will cease. Use a teaspoon of boiling water, steep, and take only a teaspoonful of this every 15 minutes until relief is obtained. A cup of hot **peppermint** or **spearmint** tea, taken after the stomach has been cleaned out, will also help settle it. **Catnip** or **sweet balm** is also useful. A hot **fomentation** over the stomach, or a **hot-water bottle** with a moist towel under it, will help settle the stomach.

• Old-fashioned remedies to control incessant vomiting: Hold half a peeled, **raw onion** under each armpit. Or place an **ice pack** against the back of the neck.

AFTER VOMITING

• Do not eat for several hours, but carefully take **fluids**, as you are able. You lose a lot of fluid when you vomit. Be sure to replace it. Drink water, do not become dehydrated. The fluids should be clear: **water, weak tea, or fruit juices**. Milk and heavy soups may be too much for the stomach just then.

• Drink small amounts of **peppermint tea.**

• Vomiting also flushes out minerals. These need to be replaced with electrolyte drinks, **clear soups, apple or cranberry juice.** If only water, add a couple pinches of sugar and salt to it. After vomiting, it is **best to sip** the fluids; pause, then sip a little more. Do not gulp them down.

• Sip plain **hot water** or **hot broth** with some **cayenne** in it. Give herbal teas of **chamomile, comfrey, cloves, basil, licorice root, or yarrow.**

• **Ginger** is unusually powerful. It can stop vomiting, motion sickness, altitude sickness, and nausea.

• Do not drink **cold** fluids; it is a shock to the weakened stomach. Do not drink **carbonated** products at this time.

• When you are ready to eat, start back with a **small carbohydrate meal**, such as rice soup. Avoid **fatty** substances; for they remain in the tired stomach too long.

—Also see Vomiting in Children (698).

ENCOURAGEMENT—God bids us to fill the mind with great thoughts, pure thoughts. He desires us to think upon His love and mercy to us; study, in the Bible, the plan He has to save us through faith in Jesus Christ. Matthew 7:7-8, 11.

INDIGESTION
(Poor Digestion, Dyspepsia)

SYMPTOMS—Gas, abdominal pain, a bloated feeling, rumbling noises, belching, nausea, and possibly a burning feeling. Sometimes vomiting.

CAUSES—Dyspepsia is probably the most common "disease" in the Western world. Ongoing indigestion can lead to food allergies, osteoporosis, anemia, degenerative disease, and a debilitated immune system.

Poor dietary habits and **stress** are primary causes of this problem. Other causes include (1) **overeating, eating too fast, not chewing food well, eating when fatigued.** (2) **Too much cooked food and not enough fresh food, not enough fiber** in the diet. (3) Partaking of **coffee, tea, soft drinks, alcohol,** and using nico-

tine. (4) Eating **foods you are allergic to** *(see Pulse Test, 575)*. (5) **Eating when nervous, distressed, angry, fearful**, etc. (6) **A lack of hydrochloric acid** (achlorhydria), which means protein food will not be digested correctly. (7) A **Lack of digestive enzymes**, which keeps vitamins and minerals from being used properly. (8) Other causes include **peptic ulcers**. **Intestinal obstruction** can lead to indigestion. If the **liver, pancreas, or gallbladder** are not functioning properly, it is more difficult for the body to digest food.

If food does not digest properly, it tends to ferment in the intestines. This produces hydrogen and carbon-dioxide gas, which causes bloating and pain.

NATURAL REMEDIES

• Correct everything, pertaining to the above paragraph, that you can.

DIET

• Drink **carrot and beet juice**.

• A primary cause in older people is achlorhydria (low hydrochloric acid production). Take natural **digestive aids**, such as **papain** from papaya or **bromolain** from pineapple.

• **Papaya** contains the digestive enzyme, called *papain*; and fresh **pineapple** contains *bromelain*. Or take **papain** and **bromelain** tablets. These are proteolytics which break down protein.

• **Calcium, magnesium, and vitamin D** are needed.

• If foods, such as cabbage, cucumbers, onions, radishes, or turnips are **foods which cause indigestion**, an aftertaste usually identifies the problem food.

• Eat more live (**raw**) **foods** rather than primarily heavily cooked items. Fresh, raw foods are rich in enzymes that help digest and assimilate the nutrients. But those enzymes are destroyed when heated over 120° F. All processed foods have been heated above 120° F.

• Be sure to include enough **fiber** in your meal. Otherwise you are more likely to have constipation, with consequent absorption of toxin backup into the system.

• Include **trace minerals** in the diet (in Norway **kelp** and Nova Scotia **dulse**).

• Obtain adequate **vitamin and mineral supplementation**. If you are having a difficult time absorbing your food, you need to maintain those nutrients all the more.

• Keep in mind Kouchadoff's discovery. This Russian scientist experimented and found that, when **cooked food** was eaten, the white blood cells increased rapidly in the small intestine. As part of our immune system, they increase to fight hostile invaders. In other words, when your white blood cell count goes up, a threatened infection or disease is being prepared for. In contrast, eating **raw foods** protects the immune system and does not cause an increase in white blood cell count.

• Dr. Bircher-Benner, of Switzerland, discovered that **eating raw food at a meal *before* cooked food** is eaten, prevented the formation of white cells in the intestines. Therefore, he always served raw salads before cooked foods.

• Some people have an excess of hydrochloric acid in their stomachs, and they do best eating a little protein, such as a few **raw nuts, to start the meal**. This gives the stomach acid something to work on right away.

AVOID

• Avoid **greasy foods** or foods containing **meat**. Eliminate meat entirely. It is very hard to digest; and it frequently has bacteria and parasites.

• Do not use **alcohol, vinegar, or caffeine.** Avoid **spicy, refined, or greasy foods;** these promote indigestion.

• **Food allergies** *(576)*, such as **lactose (milk) intolerance**, can also cause it; so locate and eliminate those foods from your diet. Avoid foods which tend to bother you. Take the pulse test *(575)* in order to determine yours.

• Do not eat heavily of **legumes**, especially **lentils**, **peanuts**, and **soybeans**. They contain a substance which slows down certain digestive enzymes.

• Eat fewer **gas-producing foods**, such as cabbage and cauliflower, Avoid eating these food combinations together at the same meal: **milk and sugar**, **fruits and vegetables**, **sugar and protein.**

• Do not drink out of bottles, cans, or through straws. Do not chew **gum** or suck on **hard candies**. Do not drink carbonated beverages.

• Avoid **foods which have lots of air** in them, such as carbonated drinks, beer, soufflés, omelets, whipped cream, and ice cream.

• Do not drink **liquids** with your meal; for this dilutes your stomach juices.

OTHER HELPS

• First thing each morning, juice a **lemon** and drink it in a cup of water. This will help prepare your stomach for its daily duties.

• Get more **rest** at night; rest a little before the meal.

• You should be able to **relax when you eat**. Do not eat when you are in a hurry, under stress, upset, or excessively tired. Take time to **chew** your food thoroughly. Try to relax for 30 minutes after each meal.

• **Swallowing air** (by chewing with the mouth open, talking while chewing, or gulping food) can cause indigestion.

• It is important that you eat at **regular hours**. Getting too hungry allows gastric juices to accumulate and may trigger indigestion, especially for diabetics and hypoglycemics.

• If your symptoms are severe, **eat lightly** at meals and gradually figure out which foods disagree with you.

• **Walk** outside immediately after eating. Try to do it where the air is fresh rather than by a highway.

• If you have **dentures**, make sure they fit right.

• Do exercises, such as sit-ups, to improve muscle tone if abdominal distension is a problem.

• If the immediate problem is extreme, put a teaspoon of activated **charcoal** in a glass of water and drink it; or crush up 6 charcoal tablets in your mouth and drink a cup of water.

• To relieve abdominal pressure, lie on your back

and **draw your knees up** to your chest.

HERBS

• **English bitters** are very helpful. Take them before each meal. Britishers solve their digestive problems with them. (These are bitter herbs.)

• To soothe the stomach, end a meal with a cup of **chamomile** tea.

• **Peppermint** tea can relieve indigestion. The German government recommends it for this purpose. **Angelica** root tea is also good for this purpose. Take 2-3 tsp. dried herb, per cup of boiling water, or up to 1 tsp. of tincture. Other helpful herbs include **coriander, marjoram, catnip, fennel,** and **ginger. Mint** tea calms the stomach.

• Other helpful herbs include **balm, bitter orange, celandine, hops, and yarrow.**

—For additional information, look up the following articles which may apply to your case: *Nervous Dyspepsia (below), Belching (344), Bloating (344), Heartburn (346), Vomiting (348), Achlorhydria (351), Stomach Problems (350-356), Allergies (576), and Pulse Test (575).*

ENCOURAGEMENT—God's purposes are right, but will prove of no avail unless resolutely carried out. Many will be lost while hoping and desiring to be Christians; but they made no earnest effort to accept Christ and, in His strength, obey His will as given in the Bible. Isaiah 58:2-9.

NERVOUS DYSPEPSIA

SYMPTOMS—Indigestion which especially occurs when a person is nervous, excited, under stress, fearful, or angry.

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR NERVOUS DYSPEPSIA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

IRRITATION OF SOLAR PLEXUS AND ABDOMINAL SYMPATHETIC NERVE—Fomentation twice a day; during interval between, apply **Heating Compress** and change every 4 hours, except during sleep. **Abdominal Compress** during the night, dry bandage during the day, and abdominal supporter when enteroptosis exists.

GENERAL WEAKNESS—Graduated Cold Baths, twice daily; Cool or Cold Percussion Douche (spray) to spine.

HEARTBURN—Dry aseptic **dietary**; gastric **Fomentation**, followed by **Heating Compress.**

ERUCTATIONS AND REGURGITATIONS OF FOOD—Fomentation over the stomach, twice daily. Continuous **Heating Compress** during the interval between, but without impervious covering, renewing every 4 hours.

SPINAL IRRITATION—Fomentation in the evening. Follow by a **Heating Compress** over the spine, to be worn during the night. **Hot Abdominal Pack.**

COLD EXTREMITIES—Revulsive Douche, running **Cold Footbath, Leg Pack**, massage

HEADACHE—Hot and Cold Compress to the head; **Alternate Sponging** to the spine; **Cool Compress**, if congestion is present. And massage the head and neck.

ANOREXIA—Ice Bag over stomach, half an hour before eating. Cold Douche (spray) over spine, **cold-air bath, outdoor life**, and small **Cold Enema** before breakfast.

ABDOMINAL WEIGHT AND TENDERNESS—Abdominal supporter; Hot fan Douche to the abdomen; **Hot Footbath; Revulsive Sitz Bath; Fomentation** twice daily, followed by **Heating Compress.**

EXCESSIVE PERISTALSIS—Hot and Cold Compress to Abdomen; **Fomentation** over abdomen, twice daily. Follow by **Hot Abdominal Pack**, protected by plastic covering.

ASTHMA—Nervous or reflex asthma is commonly associated with dilated or prolapsed stomach and irritable lumbar sympathetic ganglia. The most important palliative measures are the **Hot and Cold Trunk Pack; Fomentation** over the abdomen, twice daily. Follow by **Heating Compress**, to be worn during the interval between. **Hot Enema, Hot Full Bath**, general set of **Tonic Friction** treatments, Revulsive Douche to legs.

GENERAL METHOD—The general method consists in improving the nerve tone, allaying general nervous irritability, lessening gastric irritation, and improving the general nutrition by the appropriate measures (as indicated above).

—Also see Dyspepsia (above).

ENCOURAGEMENT—The Father appreciates every soul whom His Son has purchased by the gift of His life. Every provision has been made for us to receive divine power, which will enable us to overcome temptations. Through obedience and Christ's enabling grace to all God's requirements, the soul is preserved unto eternal life. Psalm 5:12.

GASTRO-INTESTINAL - 4 - STOMACH

ENLARGED STOMACH

SYMPTOMS—Although the person is eating far more than he needs, yet he is hungry and ready to eat still more.

CAUSES—The stomach changes in size, according to whether a person consistently eats small meals or large ones. Many people eat far more than they need.

NATURAL REMEDIES

• Step One: Go on a 3-day fruit and vegetable juice fast.

• Step Two: Carefully plan that you will no longer eat or drink (other than water) anything except that which is solidly nourishing: **fruits, vegetables, beans, nuts, vitamin-mineral supplements, uncooked flaxseed or wheat germ oil.**

You will take **small bites** and **chew everything** very

well. Do not talk much while doing this, or you will forget and eat too much. You will not be rushed when you eat.

Henceforth, **no junk food, processed foods, greasy foods, or sugary foods** will pass your lips. No **carbonated beverages, coffee, tobacco, or alcohol**. Doing this clears your mind and body so you can regain simple tastes for worthwhile food.

• Step Three: Persistently, determinedly choose to eat smaller meals; and **leave the table** as soon as you are done. This is an exercise in will power, but you can do it. Others have done it.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR ENLARGED STOMACH *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

DIETARY FACTORS—Aseptic diet; avoid overeating, frequent eating, and gas-forming foods. Give very **simple dry dietary of well-cooked cereals or a liquid diet**, such as purees or gruels prepared from nut creams.

ENCOURAGEMENT—We cannot overestimate the value of simple faith and unquestioning obedience. It is by following in the path of obedience in simple faith that the character obtains perfection. Matthew 5:48.

ACHLORHYDRIA
(Insufficient stomach acid)

SYMPTOMS—Burping, belching, and bloating.

CAUSES—Gastric (stomach) acid is necessary for digestion, although most of its components are later reabsorbed in the intestine. The stomach begins losing its ability to produce hydrochloric acid (HCl) at the age of 35. Of those over the age of 50, 75% do not produce enough HCl. Yet, without it, protein foods cannot be properly digested.

When the stomach does not have enough HCl, intestinal bacteria and yeast (candida albicans) are able to enter it and ferment high carbohydrate foods (juice, fruit, breads, etc.).

Continued low HCl production results in B_{12}, calcium, and protein deficiencies. New food allergies can begin, because large fragments of food pass through the gastro-intestinal tract undigested. Bloated stomach and even anemia can result.

NATURAL REMEDIES

• Take **lemon juice**, diluted with water (or totally undiluted) at the beginning of each meal.

• Take English **bitters** *(Gentiana lutea)* before each meal. These are bitter herbs which have helped people's digestion for hundreds of years.

• Take **betaine HCl** (75-250 mg) 15 minutes before each meal.

• Do not take **antacids**; they neutralize stomach acids and make the problem worse. In addition, many of them contain aluminum and other harmful ingredients, including calcium carbonate which will cause the stomach to produce even more HCl than before. Magnesium compounds lead to diarrhea; and sodium bicarbonate can result in gas and bloating.

• **Gum chewing** keeps stomach acids flowing and weakens the stomach.

• Drinking lots of **fluids with a meal** dilutes the stomach juices.

• Due to their bitter qualities, **gentian** and **milfoil** increase stomach juice secretion.

• **Angelica, St. Benedict thistle,** or **sweet flag** increases secretion of gastric juice. **Pineapple** substitutes for it.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR INADEQUATE HYDROCHLORIC ACID AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

INCREASE GENERAL VITAL RESISTANCE—Graduated tonic hydrotherapy treatment (**Tonic Frictions**), twice daily; **outdoor life**; swimming.

INCREASE ACTIVITY OF GASTRIC GLANDS—Cold Fan **Douche (spray) over Stomach**, Cold Percussion Douche to Dorsal spine, general Cold Douche or other cold procedure, **Hot Abdominal Pack**. Drink a third of a glass of **cold water, half an hour before eating**.

INCREASE MOTILITY—Cold **Gastric Douche**, 3 hours after meals. Small **Cold Enema**, retained, 3-4 hours after eating. And abdominal massage.

INDIGESTION, BILIOUSNESS—Hydrochloric acid being absent, flesh foods must be withheld. **Aseptic diet; avoid fried foods, rich gravies, and animal fats**. These lessen the secretion of HCl (hydrochloric acid). **Eat no meat!** Also **avoid cane sugar and concentrated sweets**. Apply **hot applications** over the stomach, an hour after eating.

LOSS OF APPETITE—Ice Bag over the stomach, half an hour before each meal. **Cold Mitten Friction** before breakfast; repeat before dinner if necessary. Small **Cold Enema** or Cold Colonic before breakfast.

ENCOURAGEMENT—You need not go to the end of the earth for wisdom and help. God can help you just where you are. Give Him your life and all you are or hope to be. As you trust and obey, He alone can keep you kind and pure. Matthew 21:22.

EXCESS HYDROCHLORIC ACID

SYMPTOMS—Burning sensations in the stomach, acidosis. Possibly heartburn and reflux disease.

CAUSES—Most people, especially older ones, do not produce enough hydrochloric acid (HCl); but some produce an excess of it.

NATURAL REMEDIES

• Begin the meal with a few **nuts**, which you chew well before swallowing. They will soak up some of the stomach juice, giving it something to work on while you continue your meal.

• Eat a **nourishing diet**; but avoid very **acid foods** (such as citrus, vinegar, cranberries, or plums).

• Take a full **vitamin-mineral** supplement.

• Consistently eat **smaller**, highly nourishing meals; and the stomach will gradually adapt itself to producing less HCl. Make sure you are eating enough **protein**.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR EXCESSIVE HYDROCHLORIC ACID AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208/ list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

DIETARY CONSIDERATIONS—Avoid irritating food: mustard, pepper, spices, condiments of all sorts, all kinds of flesh foods, excess of proteins, hot foods, farinaceous and sweet desserts, and frequent meals.

INCREASE GENERAL VITAL RESISTANCE—Graduated **Tonic Frictions**, twice daily.

COMBAT IRRITATION OF GASTRIC GLANDS, OR HYPERSECRETION—Revulsive Compress twice daily, an hour before meals; continuous **Heating Compress** without plastic covering during the interval between. Avoid Cold Douche over stomach and spine opposite the stomach, and also Prolonged Cold Baths. Hot Douche or **Fomentation** over stomach and spine opposite the stomach, 3-4 times daily. **Hot immersion Bath**, at 105° F., for 15 minutes or Radiant Heat Bath for 10 minutes, half an hour before dinner. Follow by **Cold Mitten Friction**. Sip half a glass of **hot water**, a half hour before eating.

COMBAT TOXEMIA—Sweating procedures: Radiant Heat Bath, Sweating Wet Sheet Pack, Warm Vapor inhalation, Prolonged Neutral Bath. Follow hot baths by **short cold** applications (such as a Wet Sheet Rub, Cold Towel Rub, Cold Shower, Spray Douche. **Water** drinking. Also **an Enema** daily for a week or two, at 70° F., and injecting a second portion to be retained).

FLATULENCE OF STOMACH AND BOWELS—Cold Compress over abdomen, changed every 4 hours. Following **fomentation** with **Cold Enema** for 15 minutes, twice a day.

PAINFUL DIGESTION—Hot **Fomentation** an hour after eating, for 15 minutes. Follow by **Heating Compress** to be worn until next meal.

GASTRIC IRRITATION WITH VOMITING AFTER EATING—Hot and Cold Compress over stomach or hot and cold **Trunk Pack**, applied half an hour before eating and continued for 2 hours.

CONTRAINDICATIONS—Avoid Cold Douche over stomach, Cold Shower, and prolonged cold baths of all kinds.

ENCOURAGEMENT—The tender mercies of God are unmeasured; and those who appreciate the love of Christ will be renewed in true holiness and brought into Christ, their living Head. They will be followers of God as dear children.

Kind words are as dew and gentle showers to the soul. The Scripture says of Christ that grace was poured into His lips, that He might "know how to speak a word in season to him that is weary." And the Lord bids us, "Let your speech be alway with grace," "that it may minister grace unto the hearers." When the heart is pure, rich treasure of wisdom will flow forth.

GASTROENTERITIS
(Acute Gastritis, Stomach Flu, Inflammation of the Stomach)

SYMPTOMS—Nausea, vomiting, fever, diarrhea, abdominal pain, loss of appetite, and muscle aches. Acute symptoms generally last only 24-72 hours.

CAUSES—Gastroenteritis is an inflammation of the gastrointestinal tract. This includes both the stomach and intestines.

It is usually caused by **viral (sometimes bacterial) infection, allergies, stress, chemical irritation, or medicinal drugs. Antibiotics** are a frequent cause; they weaken the body so a virus can attack.

It may be caused by excessive **alcohol, food poisoning, or a bacterial infection.** An attack can be triggered by **drugs**, such as **aspirin** or **antiarthritic medications**.

This disease is contagious; so be careful. Wash hands frequently, sterilize cloths, etc.

NATURAL REMEDIES

• Begin by giving the person activated **charcoal**: Each dose should be 4 capsules, 8 tablets, or 1-2 tablespoons of powder stirred into a glass of water. Give a dose each time there is vomiting or diarrheal stools.

• Keep him in **bed** and give a clear **liquid diet** during the acute stage while there is nausea and vomiting. Throughout the day give small amounts of water, fruit juices, or ice chips to help restore lost fluid.

• When the vomiting and diarrhea cease, give small amounts of non-irritating food, such as **cooked rice, plain cooked potatoes, cooked carrots, bananas, or apple sauce**.

• Do not be quick to let him get out of **bed**; for the vomiting and loss of fluids may have weakened him.

• In small children and infants especially, watch for **signs of dehydration**. These signs include drowsiness, rapid respiration, and dry skin and mucous membranes. This is important.

• Mix 1 teaspoon of **catnip tea** leaves in a cup of water, steep for 15 minutes, and drink while warm. This is very soothing to the digestive system. If it is vomited up, give again immediately; it is more likely to be accepted and kept down the second time.

• If fluids cannot be kept down, then give small **saline enemas**, to replace lost body fluids. Using 1 level teaspoon of salt per pint of water, inject 1-2 ounces of the solution into the rectum (using a small rubber bulb syringe). Then hold the buttocks together for several minutes. Do this every 1-2 hours until improvement is seen and he is able to take fluids by mouth.

AVOID

• Do not give junk beverages (**colas, black tea, coffee, or alcohol**); for they will only irritate and intensify the symptoms. Caffeine inflames the stomach.

• Avoid **processed and greasy foods**; avoid **milk** and **high-roughage** foods. Avoid all irritants: **salt, pepper, strong spices, and very acidic foods**.

• Do not **smoke** or be near those who smoke.

• Search out **offending foods** and stop using them. *—Also read Chronic Gastritis (below).*

HERBS

• Here is an herbal formula by Dr. Christopher for this condition: Mix 1 oz. each of **flaxseed, slippery elm, boneset,** and 1 stick **licorice**. Simmer herbs 20 minutes in 1 quart water. Strain, add 1 pint apple cider vinegar, and sweeten. When cool, bottle and keep in a cool place. Give 1 Tbsp. 2-3 times daily.

NATURAL REMEDIES

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR GASTRIC CATARRH AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

REST—**Withhold food if necessary**, giving food and water by enema for several days.

COMBAT LOCAL INFLAMMATION—**Fomentation** for 15 minutes over stomach and bowels, every 2 hours. During the intervals between, apply **Heating Compress** at 60° F., changing every 30 minutes. **Hot Footbath**; Hot Leg Pack.

VOMITING—**Ice Bag** to epigastrium; **Hot and Cold Compress** over stomach; **Hot and Cold Trunk Pack**; ice to spine opposite the stomach.

PAIN—**Revulsive Compress** to area of pain, 10 minutes every hour. **Heating Compress** during interval between.

FEVER—**Hot Blanket Pack**, 20 minutes, followed by **Cold Half Pack**. Prolonged Neutral Bath, Cooling Wet Sheet Pack, following a **Fomentation** over stomach.

CONTRAINDICATIONS—Avoid Cold Full Baths and general Cold Douche.

ENCOURAGEMENT—God has a heaven full of blessings that He wants to bestow on those who are earnestly seeking for that help. Proverbs 10:22.

CHRONIC GASTRITIS

SYMPTOMS—Unlike acute gastritis *(above)*, which generally lasts only 24-72 hours, the symptoms of chronic gastritis can continue for an extended period.

SOLUTIONS—This disease is usually the sign of some underlying disorder, such as gastric or duodenal **ulcers** *(354)*, iron deficiency **anemia** *(440, 723)*, or other diseases involving the stomach. It can also be related to a decrease in **stomach acid** *(351)* or **vitamin B_{12} deficiency** *(443)*. There may be an invasion of **bacteria** which has infected the stomach lining.

NATURAL REMEDIES

• Stop smoking or using alcohol. Figure out which medicinal drugs may be causing the problem.

• The following herbs are helpful: calendula tea and aloe vera juice will help heal the stomach walls.

• **Chamomile, ginger, or turmeric** will help reduce the inflammation.

• **Marshmallow or slippery elm** will soothe the stomach.

• *Read Gastroenteritis (352).*

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR CHRONIC GASTRITIS AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

AVOID CAUSES—such as **mustard, pepper, vinegar, strong acids, even acid fruits, sugar, preserves, cheese, alcoholic beverages, tea and coffee, all indigestible and irritating substances, coarse vegetables, pickles, confectionery, and hasty eating**.

PHYSIOLOGICAL REST—Avoid the use of fish, fowl, game, and **all flesh foods**; these excite the secretion of HCl (hydrochloric acid) and remain long in the stomach. **Coarse vegetables, fried foods, fats** (except in a natural emulsified condition), **large meals, tea, coffee, wines, and all liquors** are to be avoided.

INCREASE GENERAL VITAL RESISTANCE—**Graduated Cold Baths**, twice daily.

COMBAT LOCAL CONGESTION—**Fomentation** over stomach area, 3 times daily, 15 minutes at a time. During intervals between, apply **Heating Compress** over it. **Hot Leg Pack**, followed by **Heating Compress** to the legs, Revulsive Douche to the legs, **Hot Leg Bath**, followed by **Cold Friction** to legs. In acute stages, withhold all food and rest in bed.

MUCOUS VOMITING IN THE MORNING—Omit the evening meal. **Fomentation** over stomach in evening. Followed by **Heating Compress**, to be worn during the night.

VOMITING SOON AFTER EATING—**Hot and Cold Compress** over stomach or apply a **Hot Trunk Pack** half an hour before eating, to be retained for 2 hours. Eat dry food in small quantities and rest in bed after eating; **Use Ice Bag** to spine after eating.

GASEOUS ERUCTATIONS—**Dry diet of well-cooked grains, Cold Compress. Use Heating Compress** over stomach at 60° F., changing every 4 hours. Massage for half an hour, 2 hours after eating, if local irritation or tenderness does not contraindicate. Drink a pint of **hot water** half an hour before eating. Avoid use of vegetables or of vegetables and fruits at same meal.

ABDOMINAL TYMPANITES—**Heating Compress** to Abdomen at 60° F., changed every 4 hours. **Colonic** 2-3 times a week, at 70° F.

CONSTIPATION—Graduated **Cold Enema** at 70° F., daily. Abdominal massage. **Hot Abdominal Pack**. Cold Fan Douche to abdomen for 20 seconds. **Cold Rubbing Sitz Bath**.

LIVER CONGESTION—**Fomentation** over liver, twice daily. During the interval between, apply a continuous **Heating Compress**.

EMACIATION—**Rest** in bed, mild and carefully graduated **Tonic Frictions. Ice Bag** over stomach, half an hour before eating.

PAIN IN STOMACH—**Revulsive Compress** over stomach and intestines; repeat several times daily if necessary.

Avoid acid fruits, very hot foods, very cold foods, and concentrated sweets, if they cause pain.

—Also see Acute Gastritis (352) and Gastroenteritis (352).

ENCOURAGEMENT—The divine law requires us to love God supremely and our neighbor as ourselves. Without the exercise of this love, the highest profession of faith is mere hypocrisy.

PEPTIC ULCER
(Gastric Ulcer, Stomach Ulcer, Duodenal Ulcer)

SYMPTOMS—Chronic burning or gnawing stomach pain which often begins 45-60 minutes after finishing a meal or at night. Drinking a large glass of water or eating food relieves it. Vomiting or swallowing something quite alkaline also does. The pain sometimes awakens the person at 1 or 2 a.m.

Pain just beneath the breastbone is a frequent symptom of an ulcer. Sometimes it radiates to the back. The pain is often considered to be heartburn or an empty stomach.

Other symptoms may include headaches, a choking sensation, lower-back pain, itching, and possible vomiting.

CAUSES—*Gastric ulcers* are peptic ulcers occurring in the stomach. *Duodenal ulcers* are peptic ulcers occurring in the top part of the small intestine. However causes and treatment are essentially the same.

These ulcers can be caused by wrong food or too much food. They can also be induced by severe nervous and mental stress.

The walls of the stomach pour a powerful acid into the stomach (hydrochloric acid, or HCl). This powerful fluid is needed to digest protein. Although the walls of the stomach are protein, they are not normally disturbed by the fluid. But when there are problems with people or with the food—then trouble can begin.

Two problems bring trouble when stomach acids begin digesting the walls of the stomach, because too much HCl is being produced, or protective mucus, in order to protect the walls, is not being produced.

These ulcers can occur in the esophagus, but generally occur in the stomach or small intestine.

Gastric ulcers (peptic ulcers in the stomach) occur 2½ times more often in men than in women, most frequently in the 40-55 age group.

Duodenal ulcers (peptic ulcers in the small intestine) occur in the first 11 inches of the small intestine and are caused by excess HCl from the stomach. These ulcers are found in men 4 times as often as in women, and most frequently between 25 and 40 years of age. Duodenal ulcers occur 10 times more often than gastric ulcers.

As much as 15% of the U.S. population have ulcers, but only about half are diagnosed. Some are not discovered until the person begins vomiting blood. Ulcers especially occur during the spring and fall, and tend to run in families.

Many factors affect stomach-acid secretion. **Stress and anxiety** increase it. **Aspirin, steroids, anti-inflammatory drugs, and smoking**—all increase HCl production.

When you have stomach pain, drink some lemon juice. If the pain gets worse, you have too much acid in your stomach.

Hypoglycemics tend to produce too much HCl and are in danger of eventually having a peptic ulcer.

If you vomit blood or have "coffee-ground" stools, then the ulcer is bleeding. You are in danger of bleeding to death—go to a hospital immediately.

Is your stomach pain caused by an ulcer? Here is how to find out: When you have the pain, swallow I Tbsp. apple cider vinegar or lemon juice. If the pain disappears, you do not have enough HCl; if it makes it worse, you have an excessively acid stomach.

NATURAL REMEDIES

TREATMENT—

• For rapid pain relief, drink a large glass of **water.** It dilutes the stomach acids and flushes them out.

DIET

• Eat several **small** meals.

• **Potatoes** are very helpful. They are soothing and have an alkaline reaction.

• **Vitamin U** is the anti-ulcer vitamin. It is a specific for peptic ulcers. Raw cabbage juice and alfalfa have the most. Boiling destroys this anti-ulcer factor, and wilted cabbage contains less vitamin U. Drink fresh, raw cabbage juice immediately after juicing. Drink a quart daily. Carrot juice can be added to improve the flavor.

• Eat plenty of dark green **leafy vegetables.** If symptoms are severe, eat **soft foods (potatoes, squash, bananas, yams,** etc.). Put other vegetables through a **blender.** If you have a bleeding ulcer, add some **psyllium seed** to the food.

• Well-cooked **white rice** and **millet** are good.

• **Fiber** in the diet keeps food in the stomach longer, and reduces the likelihood of duodenal ulcers.

• In earlier years the recommended treatment included frequent feedings, milk intake, and a bland diet. But this approach is being discarded:

• It is now known that the **calcium in milk** stimulates acid production rather than decreasing it, as was taught for years. (Milk does initially neutralize HCl; but the calcium triggers gastrin, which causes the walls to excrete more HCl.) In addition, it is now known that sipping milk and cream can lead to myocardial infarcts (heart attacks). The problem seems to be the butter fat in the sippy diet.

• The **bland diet** approach is also being discarded because those foods neither relieve pain nor speed healing. So, instead, eat whatever good food works best for you.

• Doctors in India use dried **banana** powder to treat ulcers. Fresh bananas are also good.

• Take **vitamin A** (2,000 IU), **zinc** (15 mg), and **copper** (1 mg). **Glutamine** (500 mg), an amino acid, is the principal source of energy for stomach and intestinal wall cells.

AVOID

• Avoid all situations resulting in **tension, stress, irritability, nervous strain, anger, or fear**. Complete rest and relaxation from pressing problems and worries is needed.

• Do not eat **fried foods, tea, caffeine products, salt, chocolate, animal fats, strong spices, or drink soft drinks**. Do not drink **cow's milk**. Do not **smoke** (if you do, do not expect the ulcer to heal properly) or be around those that do.

• **Salt** is a stomach and intestinal irritant. High-salt intake increases stomach (but not duodenal) ulcers.

• A diet high in **sugar** increases HCl production. **White bread** also causes more HCl to be made. Those with ulcers tend to eat more sugar; and sugar increases HCl production.

• **Do not eat between meals**. Doing so slows emptying of the stomach, and thereby increases HCl amounts in the stomach.

• Do not take **antacids or pain killers**, such as **aspirin**. That increases the problem. The calcium carbonate in the antacids doubles the amount of HCl production. Most antacids contain aluminum, which can cause Alzheimer's. The aspirin causes the stomach to bleed!

• Do not use **medicinal drugs**.

• Exposure to **allergies** can cause stomach bleeding.

OTHER HELPS

• **Chew food** slowly and properly.

• **Exercise** neutralizes stress. Maintain a daily program of outdoor exercise.

• Make sure the **bowels** move daily or take cleansing enemas.

• For peptic ulcer pain, apply an **ice bag** to the abdomen just above the navel. Or place it on the spine between the shoulder blades.

• Do not chew **gum**. The digestive process starts when chewing. This prompts the body to secrete enzymes in the gastrointestinal tract. If there is no food in the stomach for the enzymes to digest, trouble begins.

HERBS

• Some bioflavonoids (including quercetin, catechin, and apigenin) inhibit the growth of the bacteria *(Helicobacter pylori)* which causes the ulcers. **Chamomile** contains those bioflavonoids.

• **Licorice** has been used for centuries to soothe inflamed and injured portions of the intestinal tract. It increases *mucin* and fights *H. pylori*. Best to take it in the form of **DGL** (deglycerinated licorice), which will not increase blood pressure or cause water retention. Take 1-2 chewable tablets of DGL 1-2 hours before bedtime. Also extremely good: **marshmallow root**.

• **St. John's wort** and **malva** both calm the stomach and reduce intestinal irritation.

• Also helpful are **bilberry, flax, catnip, goldenseal, bayberry, and myrrh**. **Aloe vera** accelerates healing.

• **Hops, skullcap, and valerian** will help you sleep.

—Also see Gastroesophageal Reflux Disease (GERD) (346), which has very similar symptoms.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR PEPTIC ULCERS AND THEIR COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

DIETETIC CONSIDERATIONS—Rest in bed; **rectal feeding** for 2 weeks if necessary, repeating after a few days if needed. **Bland aseptic liquid diet**. Avoid solid food, condiments, flesh foods.

GENERAL CARE—Revulsive Compress, 3 times a day; **Heating Compress** during intervals between; hot **Fomentation** or Hot Douche to spine.

PAIN—Revulsive Compress, Fomentation over stomach, heat to spine, **Hot Blanket Pack** to hips and legs.

VOMITING—Ice pills, distilled water.

HEMORRHAGE—Rest in bed, **Ice Bag** over stomach, **Hot Hip and Leg Pack**. Withhold foods and drink from stomach by administering water and food by Enema.

ENCOURAGEMENT—God fixes no limit to the advancement His children can make, if they will but surrender their lives to His guidance and study and obey His Inspired Writings. Matthew 21:22.

STOMACH ACID SELF-TEST

STOMACH ACID TEST—Is your hydrochloric acid (HCl) production low or high? You have a stomachache; but is it caused by too little HCl or too much?

1 - When you have the stomach pain, take a tablespoon of **lemon juice**. If this makes the pain leave, you probably have too little stomach acid, not too much. If it makes your symptoms worse, then you have an overacid stomach.

2 - Do you crave **sour foods**, such as **citrus**? Do you like **grapefruit juice**? If you do, and they set well on your stomach, then you are underacid. If you do not like acid foods, then you may be overacid. If it does not matter, you are probably normal.

ENCOURAGEMENT—Those who make God their strength, realize their own weakness—and God supplies them daily with the help they need. This help is for you, as you come to Him. John 15:7.

STOMACH TONIC

HERBS FOR THE STOMACH—Here are several herbal formulas prepared especially as stomach tonics:

• Mix 3 g (grams) **wormwood**, 2 g **peppermint**, 1 g **garden sage**. Steep in 1 cup boiled water, strain, cool, take 1 tsp. in water ½ hour before meals.

• Mix ¾ tsp. **European centaury**, ½ tsp. **buckbean**, and ¼ tsp. **juniper berries**. Infuse them in 1 pint water. Take 1 tsp. in water ½ hour before meals.

• Here is a stomach tonic by Potter, a well-known herbalist of many years ago: Mix 1 part each **buckbean,**

centaury, germander, and blessed thistle. Infuse at a rate of 1 tsp. of combined herbs to a cup of boiling water. Take 1-2 Tbsp. between meals.

— Also see # Tonic Herbs (217).

ENCOURAGEMENT—The law of God, which is perfect holiness, is the only true standard of character. Love is expressed in obedience; and perfect love casteth out all fear.

GASTRO-INTESTINAL - 5 - PANCREAS

Also: Pancreas (546-547)

PANCREATITIS

SYMPTOMS—***Acute cases:*** A sudden attack of severe burning or stabbing pain in the upper abdomen, possibly accompanied by nausea and vomiting. The pain may spread to the back. It is made worse by moving. Food, alcohol, and vomiting may worsen the pain.

Chronic cases: The pain is milder; and pain attacks do not come on suddenly. There is excessive gas, muscle aches, and fever. Because the constant inflammation can produce fibrosis in that organ, permanent damage to the pancreas can occur. The chronic state results in irreversible changes in the gallbladder.

Other symptoms of pancreatitis include abdominal swelling and distension, hypertension, sweating, and abnormal fatty stools.

Diabetes, digestive problems, and cancer can result. Also hearing, respiratory, and kidney failure.

CAUSES—Pancreatitis is inflammation of the pancreas. Normal cells are replaced with scar tissue and calcium deposits. It frequently produces mild diabetes.

The most frequent causes of pancreatitis are drinking **alcohol, viral infection, and diseases of the bile ducts or gallbladder**. A **diet rich in fats and meat** lays a solid foundation for pancreatitis to occur. Other causes include **surgical procedures, diagnostic procedures**, and a considerable variety of **prescribed medications**. **Oral contraceptives, steroids, estrogen, and ACTH** can also do it.

To this list should be added **abdominal injury, obesity, poor nutrition, and electric shock**.

Certain diseases can induce it: **hepatitis, mumps**, and possibly **anorexia nervosa**.

The pancreas produces two important hormones: insulin and glucagon; both of these regulate blood sugar levels and aid digestion. As a result, pancreatitis can produce glucose intolerance and diabetes.

With only supportive care, the acute symptoms will fade. But some will continue to have chronic symptoms arising every so often, for months or years. This is called *chronic relapsing pancreatitis*.

It is wise to do everything possible to avoid the chronic condition or, if it is has begun, try to clear it up as much as possible.

Pancreatitis can lead to pancreatic cancer, the fourth leading cancer killer in America.

NATURAL REMEDIES

• **Fast** and take only water until the acute symptoms subside. Food in the stomach triggers the pancreas to start working, and this you do not want just now.

• Give **slippery elm enemas**. Cut the slippery elm bark into very small pieces, and put a large handful in 4 quarts of water. Simmer for 1-15 minutes, stirring frequently. Then cover and let it set 30 minutes. Strain and use it warm. Drink it and use in enemas.

• Place a heaping teaspoonful of **lobelia** in a cup of boiling water and let it steep for a half hour. Add a tablespoon of this lobelia tea to each cup of **slippery elm** tea, and drink. Also drink a cup an hour before each meal and before retiring. This will both relax and cleanse the digestive tract.

• In case of a very serious acute crisis, give frequent **hot steam pack fomentations** to the abdomen. Give **charcoal** internally; and apply it as a poultice over the affected area. Place the person on a strict program of what he eats and drinks.

HERBS

• The following herbs increase the flow of pancreatic juice, which is needed for digestion: **Nettle** (an infusion of fresh juice), **Papaya tree** (an infusion of the leaves), and **St. Benedict thistle** (an infusion or decoction of the leaves).

• **Echinacea, gentian root, goldenseal, and cedar berries** strengthen the pancreas. But do not take goldenseal or echinacea for more than a week at a time.

• **Licorice root** helps all glandular functions.

• **Red clover, burdock root, and milk thistle** help the liver, which is a help to the pancreas.

AVOID

• Avoid **overeating**. This overworks the pancreas.

• After coming off the fast because the acute phase is over, eat a **low calorie, low-fat diet**. In chronic pancreatitis, that organ often no longer produces lipase normally. Without it, fats cannot be properly handled by the body. So eat a low-fat diet *for the rest of your life*.

• Go on a **low sugar diet**. A heavy diet of refined carbohydrates can cause pancreatitis.

• Say good-bye to all **alcoholic** beverages, and also to **caffeine**.

• **Smoking** weakens the pancreas and can directly cause chronic pancreatitis. Avoid secondhand smoke.

• Do not eat **meat** products. Eat beans and nuts.

OTHER

• There are no medications which can solve this problem. Indeed, it was medications which may have led to it; continuing to take them may only intensify the disease.

• Even though total pancreatomy may be recommended, avoid surgery if possible. It will probably only worsen the condition.

—Also see Pancreas (346-347), Nutrition of the Liver (below).

ENCOURAGEMENT—The sinner may become a child of God, an heir of heaven. If he will cling to Christ and obey His Word, he will be enabled to fulfill God's plan for His life. John 16:23-24.

GASTRO-INTESTINAL - 6 - LIVER

NUTRITION OF THE LIVER

CARING FOR YOUR LIVER—There are few organs in your body as vital as the liver. It not only is the largest organ, it also performs more different functions than any other organ in your body.

Only God could make the liver. That relatively small structure (it only weighs four pounds) does literally thousands of different things; all of them are quite complicated and involve complex chemical changes. The liver is truly a special gift from God.

NATURAL REMEDIES

There are six fundamental things which tend to damage the liver:

1 - **Overeating**. This is an excellent way to ruin your liver. Just eat all you want, and you will wear it out.

2 - Eating and drinking the **wrong things**. Here are some of those items which your liver does not wish to face: **refined white-flour products, processed foods, junk foods, white sugar products, imitation foods**. Beware of **potato chips and corn chips**.

What is an **imitation food**? It is a food made to appear like the original, yet which has been stripped of vitamins, minerals, enzymes, and most everything else that might be worthwhile. **White carbohydrates, sugar, fats, protein, synthetic colors, flavors, and odors** are there to give the appearance and taste of real food.

3 - A **low-protein, high-carbohydrate and fat diet**. To make it even worse, make sure it is full of **saturated or hydrogenated fats**. All kinds of **snacks** in the stores consist of this. **Fried foods** may be a devilish delight, but they only add to the eventual misery.

4 - Eat the **specialty food poisons: alcohol, tobacco, caffeine, theobromine, and hard drugs**.

5 - Take **medicinal drugs**. Select from over-the-counter items or those which are prescribed. They will provide you with a real witch's brew of physical horror, much of it not known and realized until later. With hardly an exception, medicinal drugs are poisons. The liver has to work overtime in order to try to excrete these dangerous chemicals.

Some substances which are called "drugs," such as charcoal, are not drugs. They are natural substances which help your body. It is true there are some poisonous herbs, but these (such as digitalis from foxglove) are readily found in the drugstore. The rest, found in the meadow and forest, are for the healing of the nations.

6 - Have **insecticides, preservatives**, and **other cumulative poisons** where you can breathe or eat it. Some poisons directly damage the liver (**alcohol, oral contraceptives, caffeine**, etc.); others damage organs which the liver relies on for help (the pancreas, kidneys, etc.).

Here are several dietary suggestions:

• Make sure you obtain **foods high in potassium**. This includes **rice, bananas, blackstrap molasses, wheat bran, almonds, seeds, kelp and dulse, brewer's yeast, prunes, and raisins**.

• Drink lots of **water**; and, if at all possible, drink only pure water. Drink a little every hour.

• Emphasize **raw foods** in your diet.

• Drink **fresh vegetable juices**, especially **carrot and beet**. Only eat **raw nuts and seeds**. They must be fresh, not stale!

• Use only cold-pressed **vegetable oils** (**flaxseed oil** and **wheat germ oil**, taken raw and not added to your cooking). Use no other type of oils—and **no grease** (**margarine, butter, shortening, or meat fat**).

• **Vitamin K** (140 mcg) is important, to help prevent cirrhosis of the liver. **Vitamin A** helps protect the liver (taken in the form of carotene in fresh carrot juice and leafy vegetables). **Zinc** (30 mg) builds resistance to many liver disorders.

• The **lemon** and the liver are sweethearts. The lemon is one of the best friends that the liver has.

• **Coenzyme Q_{10}** helps supply oxygen to the liver.

• **Lecithin** helps prevent fatty buildup in the liver.

• When taking **supplements**, either chew them up well or take them with a glassful of water.

• **Dandelion** is an excellent food for the liver. **Beet juice** slowly cleanses the liver. Eating fresh **apples** stimulates the liver into action. **Celery** is good for the liver. The root and leaves of **chicory** stimulate the liver. **Asparagus** roots and shoots stimulate kidneys and liver. **Prune whip** before breakfast cleanses the liver. Japanese use the active ingredient in **licorice** *(glycyrrhizin)* to inhibit liver cell injury caused by many chemicals. **Ginger** contains eight liver-protecting compounds. **Turmeric** also protects the liver. **Rosemary** tea stimulates a sluggish liver.

• Use **celandine and silymarin** (which is milk thistle extract) each day to help maintain good liver function. But do not use celandine during pregnancy.

AVOID

• Do not use **nicotine, alcohol, caffeine, fish, fowl,**

meat, salt, soft drinks, sugar foods, tea, or fried foods.

• Avoid **constipating foods**. When there is a backup in the large colon, toxins are reabsorbed into the system and the liver labors to eliminate them. **Regular bowel movements** are vital to the health of the liver!

• Do not take too much **vitamin A**. For the same reason, do not eat **fish** more than twice a week. Avoid **cod liver oil**. Better yet, stop eating fish. **Meat** eating is also harmful to the liver. Anyone taking over 50,000 IU of **vitamin A** for over a year should either reduce intake or switch to natural beta-carotene, which is safe.

• Do not drink **milk** or eat **pastries, stimulants, white rice, black or white pepper, fried or fatty foods, cheese, and refined or processed foods.**

• Never eat raw or undercooked fish, meat, or poultry. There is a serious risk of infection from doing this. **Meat eating** is a major source of bacteria, parasites, viruses, and various malignancies.

• Take no **drugs** if you want your future years to be happy ones. Avoid taking **iron** supplements.

OTHER

• In addition to taking care of your liver, treat your **kidneys** well also. Poor kidney function results in damage to the liver. Drink water! *See Kidney Problems (397-402).*

• Do not use **harsh laxatives**. But do keep the colon clean.

Be good to your liver; and it will help you in years to come. It is a well-known fact, among natural healers, that, if the liver is all right, cancer can be eliminated. But if the liver is too degenerated, the hoped-for solution may not be achieved.

—Also see Liver Flush (361).

ENCOURAGEMENT—The knowledge of God is as high as heaven; yet He can reveal to you all you need, just for today, if you will but give your life daily into His hands. Matthew 6:33.

HEPATITIS

SYMPTOMS—Weakness, nausea, headache, vomiting, fever, muscle aches, loss of appetite, drowsiness, dark urine, joint stiffness and pains, abdominal discomfort, diarrhea, constipation, light-colored stools, and often jaundice (a yellowing of the skin, which will first be noticed in the eyes and mucous membranes). Skin rashes and itching may occur; the latter is caused by excess bile salts under the skin.

CAUSES—Hepatitis is an inflammation of the liver; it may be caused by a **virus, bacterium, or toxic substance**. But, in most instances, the cause is viral. There are actually several main types of hepatitis:

Hepatitis A (infectious hepatitis, HVA): Transmitted by **contaminated water, milk, or food**, it has an incubation period of 15-45 days. The contagion is highest just before illness begins; so **food workers** can transmit the disease. Hepatitis A is contagious between one to two weeks before the illness starts. It is easily spread by **person-to-person contact** and through **contact with food, clothing, linens**, etc. It can be transmitted from **animals**. Eating **shellfish** is a good way to get it, even if the waters they live in pass national standards. Recovery generally occurs within 4 weeks. Chronic cases are less likely to occur.

Hepatitis B (serum hepatitis, HVB): It is found throughout the world and spread as in the same manner HIV is—through contact with **infected blood (contaminated needles, syringes, blood transfusions) and sexual contact.** Six cases have been traced to **contaminated acupuncture needles**. About 5% of all Americans and 85% of gay men have it. Hepatitis B is very serious. It has an incubation period of 28-160 days (2-6 months); and recovery may require 6 months. Throughout that time, it can be passed from one person to another. In increasing numbers, cases are reverting to *chronic active hepatitis*, which can result in liver cirrhosis and death. Hepatitis B is the ninth major killer in the United States.

Hepatitis C (HVC): In the same manner as HIV and hepatitis B, hepatitis C may take 6 months to produce symptoms; yet all that time it can be **spread from one person to another**. Between 20%-40% of all hepatitis cases are of this type. It accounts for 90%-95% of all the hepatitis that is transmitted by **blood donations**. About 85% of infections lead to chronic liver disease.

Hepatitis E, hepatitis non-A, and hepatitis non-B also exist, but are of lesser significance in North America. Hepatitis E is found worldwide; it is in epidemic proportions in India, Mexico, Africa and Asia. It is generally contracted from **drinking sewage-contaminated water**. Such water should be boiled before using.

Toxic hepatitis: All of the above are primarily viral forms of hepatitis. But this one is caused by toxic chemicals. The degree to which the liver was exposed to the **poisonous chemicals, fumes, drugs**, etc., determines the amount of damage to that organ. Absorption of the poison can occur through the skin.

Overall, there are 40,000-70,000 reported new cases of various forms of hepatitis each year in America. But the experts suspect that there are probably ten times that many which go unreported. Hepatitis most often occurs in young adults; it is highest in teenage girls.

Hepatitis A is decreasing, and hepatitis B is rapidly increasing. It is fourth among the 30 leading communicable diseases.

In China, 10% of the population have hepatitis at any one time. That is 100 million new cases each year. As one might expect, the rate of liver cancer is quite high there.

A word to the wise: Gay men often take jobs working in restaurants; yet they have a high rate of hepatitis B and C infections which do not reveal symptoms for weeks or months. During this time they can, and do, transmit the infection to customers through the food they handle. Something to think about the next time you feel like eating in a restaurant or café.

NATURAL REMEDIES

• Give the patient the type of care you would give for any infectious disease; but remember that some of these hepatitis cases can be highly contagious.

• Give hot fomentations over the liver area for 15 minutes, followed by a **cold sponging** and concluded by a **shower**. Do this 4 times each day. Most cases of hepatitis are self-limiting and will heal with rest and supportive care.

• He should have **bedrest** until the acute stage is past; also he should have **initial liquid fasting**, followed by a **light diet**. He often has a poor appetite and does not feel like eating, even though he should. Glass of **lemon juice** and water every morning. **Fruit juice**. Every other day a glass of **carrot, beet, cucumber juice**.

• **Avoid sugar, fat, and alcohol**. Do not use **tobacco** or other poisons.

• Vitamin B_{12} (1,000 mcg) and vitamin C (2,000 mg or more, to bowel tolerance) are important. Also needed are vitamin A (5,000 IU) and B complex.

• Clinical studies reveal that two amino acids, **L-cysteine and L-methionine** (500 mg twice daily of each), **unsaturated fatty acids** (2 tsp. **flaxseed oil**), and **choline** (1-3 grams) help speed recovery from hepatitis.

• Take **grapefruit seed extract** (10 drops 3 times daily for 1 month in juice).

• Robert Cathcart, M.D., says hepatitis is one of the easiest diseases for **ascorbic acid** (vitamin C) to cure. He gives very high levels (40-100 grams) intravenously; and great improvement occurs within 2-4 days.

• Drink plenty of **water** (preferably distilled water) and **bathe** frequently.

• Fresh or cooked **garlic**, or in capsule form.

• Avoid **constipation;** and **wash** hands with soap after every bowel movement. The toilet seat should also be washed after each usage.

• He should **not prepare food** for others; and his own **utensils** should be sterilized after each of his meals. His **linen and clothes** should be washed separately.

• Avoid **drugs** which greatly irritate the liver, including **tranquilizers, aspirin, certain tetracyclines, antidepressants, and antibiotics**. **Tylenol** (acetaminophen) and **iron** supplements are very toxic to the liver.

• Eating **meat and fish**, especially when undercooked, can cause infection from bacteria and viruses.

• **Activities** should be restricted for several months after recovery has occurred. Avoid strenuous sports.

HERBS

• Here are several herbs which would help the liver at this time: **St. John's wort** (300 mg capsule 2 times daily) and **Shiitake** (1,500-2,000 mg 2 times daily with meals).

• For an excellent liver tonic, combine equal parts **Oregon grape, dandelion, pipsissewa, fennel seed, and blessed thistle**. Take 3 cups daily.

• **Barberry** is one of the mildest and best liver tonics. Take 10-30 drops of the tincture daily.

• **Milk thistle** contains *silymarin*, which stimulates protein production from amino acids in the liver. This helps the liver regenerate itself. Take two 150 mg tablets or capsules of milk thistle extract, 3-4 times daily; or 15-30 drops of the tincture in water, twice daily for 2 weeks. It is important that you take this!

• Add 1 tsp. dried or fresh **lemon balm** to 1 cup boiling water. Steep 15 minutes, strain, drink 2-3 cups a day.

• **Goldenseal** tea may be taken 1-3 times a day.

HYDROTHERAPY

• To relieve discomfort, place **castor oil packs** over the liver area and keep warm. **Burdock leaf packs** are good on an inflamed liver.

• Make a strong tea of **peppermint** leaves, add a pinch of **cayenne**, and place as a poultice over the area.

• To strengthen the liver in its battle against infection, apply **alternate hot and cold compresses** over the liver area.

• A **hot half bath** (sitting in a partly full tub) may be given to raise the body temperature, assisting the body to fight the virus by strengthening the immune system. Give him plenty of fluids while in the bath.

—Also see Cirrhosis (361), Jaundice (360), Neonatal Jaundice (694), Infectious Juandice (360), Nutrition of the Liver (357), and Liver Flush (361).

ENCOURAGEMENT—Only those who read the Scriptures, as the voice of God speaking to them, are the true learners. They tremble at the Word of God; for to them, it is a living reality. 2 Peter 1:8. In order to receive God's help, we must cry to Him and surrender all that separates us from Him.

JAUNDICE

SYMPTOMS—The whites of the eyes yellow, then the mucous membranes, and then the skin generally.

CAUSES—When, for various reasons, the liver cannot handle the load placed upon it, bilirubin builds up. This is a yellow-brown substance which results from the breakdown of old red blood cells. The liver must constantly remove bilirubin from the blood; and, if this is not done, bilirubin begins collecting in tissues all over the body. The urine is darker and the stools are lighter because the bilirubin, usually contained, is not present.

But red blood cell destruction can also cause it. Blood tests identify whether the problem is obstruction or RBC destruction.

Jaundice is not itself a disease, but rather a symptom of one. It can point to **pernicious anemia, hepatitis, cirrhosis of the liver, and hemolysis** (which is an abnormal destruction of red blood cells). Jaundice can also be caused by a **blockage of the bile ducts** in the liver, because of **gallstones** or a **tumor**. More rarely, it is caused by a parasitic infestation, such as **tapeworm, hookworm, a flea, or mosquito** carrying a viral infection.

NATURAL REMEDIES

• Take a hot, high **herb enema** twice a day. Use

white oak bark or **bayberry bark** tea.

• As long as fever continues, drink a glass of water with **lemon juice** every hour.

• Give **fruit juices** to begin with. Take 1 cup **goldenseal** or **echinacea** 1 hour before meals, 3 times daily.

• Eat only **raw fruits and vegetables** for a week. Then eat 75% raw foods for a month. Take fresh **lemons** daily during that time.

• Drink fresh **vegetable juices**.

• Treatment includes exposure to **ultra violet light** in order to speed up elimination; **vitamin C**, to bowel tolerance; and **vitamins A, E, and selenium**.

• **Silymarin**, extracted from the milk thistle, helps repair damage to the liver. It is well-worth taking.

• Go on a **liver flush** *(361)*. This is done by drinking **apple juice** alone for 3 days, followed by drinking a cup of **olive oil** and a cup of **lemon** juice. This is a good remedy which cleans out the bile ducts.

• Helpful herbs include **burdock root, agrimony, celandine, red clover, licorice, dandelion, and chionanthus**.

• Jaundice often produces itching of the skin. Wash with hot **boric acid** water to reduce this.

• For jaundice, Dr. Christopher recommends 4 oz. **ginger** syrup, and 1 oz. each of fluid extracts of **butternut** and **boneset**. Give 1 teaspoon 3-4 times daily.

• Both **alcohol and tobacco** are very hard on the liver.

—Also see Infectious Jaundice (360), Hepatitis (358), Neonatal Jaundice (694), Nutrition of Liver (357).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR JAUNDICE AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

GENERAL—Cold Mitten Friction, **Cold Towel Rub**, **rest** in bed, **aseptic diet**.

PAIN—**Fomentation** over stomach and liver for 15 minutes every 2-3 hours; during interval between, **Heating Compress** at 60° F., renewed every 30 minutes. Copious **Hot Enema** at 110° F., twice a day. After discharge of hot water, an enema of one pint water, at 70° F. **Hot Trunk Pack**. Hot Full Bath, at 104° F., for 10 minutes. **Cold Towel Rub** or Wet Sheet Rub.

FEVER—**Sweating Wet Sheet Pack**, warm vapor Bath, Radiant Heat Bath, copious **water** drinking.

HEADACHE—**Hot and Cold Compress** to head, evaporating Compress to head, Cold Compress to head, **Hot Sponging** on back of neck.

ITCHING—**Neutral salt bath**, Hot Sponging.

CHILL—Hot **Water** drinking, **Dry Pack**.

ENCOURAGEMENT—All knowledge gained in this life, which will fit us to live with the angels in heaven, is knowledge worth gaining. Live to be a blessing to others. "I have blotted out, as a thick cloud, thy transgressions, and, as a cloud, thy sins: return unto Me; for I have redeemed thee." Isaiah 44:22.

INFECTIOUS JAUNDICE
(Weil's Disease, Leptospirosis, Spirochetal Jaundice)

SYMPTOMS—Sudden fever, chills, anemia, jaundice, sometimes abdominal pains, and occasionally aseptic meningitis.

Within a few hours, fever, extreme thirst, and severe aching of the limbs develop. Blood vessels in the eyeballs are markedly enlarged. Jaundice appears in about half the cases. In locations where the disease is common, mortality is about 10%-20%.

This disease can easily be diagnosed as something else. It is important to determine the true nature of the infection early.

CAUSES—This is an infectious disease caused by the *leptospira icterohaemorrhagiae*, a spirochete bacteria. **Rats, dogs, and various wild animals** carry it. People are infected when **urine-contaminated water (generally from rats)** penetrates cuts on their fingers or during butchering and skinning of infected animals. The rats are not harmed by the disease.

Leptospire is a parasite which travels to the liver and greatly multiplies there, but can also be found in the blood (in the early stages) and in the urine (later). Blood tests or urine cultures are necessary for diagnosis.

NATURAL REMEDIES

• Give him **bedrest** and keep his bowels open, using daily **enemas** if necessary.

• If he can take food, give him a **liquid diet**. Plenty of **water** is also needed.

• Go on a **liver flush** *(361)*.

• Carefully **dispose** of all his discharges, so as not to contaminate anything.

• Do everything possible to **exterminate rats**.

• Avoid swimming in, or contact with, water that may be contaminated with **animal waste**.

—Also see Jaundice (359), Hepatitis (358), Neonatal Jaundice (694), Nutrition of the Liver (357).

ENCOURAGEMENT—Christ has a treasure-house full of precious gifts for every soul willing to receive it. But only by dedication, submission, and obedience in Christ's strength—can we have it.

CIRRHOSIS OF THE LIVER

SYMPTOMS—Upset stomach, fever, constipation or diarrhea, weakness, weight loss, poor appetite, vomiting, enlarged liver, and red palms. Fluid collects in the abdomen. Possible mild jaundice. Large veins often

seen over the abdomen, especially about the navel and near the diaphragm. Enlarged veins in the rectum, intestines, stomach, and esophagus.

In the later stages, there is anemia, edema, and easy bruising, due to bleeding beneath the skin.

CAUSES—Cirrhosis is a hardening of the liver, because of too much connective tissue and a degeneration of the active liver cells.

It can be caused by certain poisons, chiefly **alcohol**. Certain infectious diseases can cause special types of liver cirrhosis; **viral hepatitis** is outstanding *(358)*. This is especially true of **syphilis** *(630)*, which produces nodes in the liver. **Malnutrition**, caused by **lack of food** or **eating junk food**, can also lead to cirrhosis.

The liver cells harden and scar, causing them to no longer function normally, due to the scarred tissue. This prevents the blood from passing properly through the liver.

NATURAL REMEDIES

- Eat a good, **nourishing diet.** And go off all **meat, tea, coffee, and spices**.
- Internal bleeding frequently occurs, so take **vitamin K** (140 mcg).
- **Silymarin** (200 mg 3 times daily) helps the liver.
- Drink ¼ cup **aloe vera** each morning.
- Do not eat **meat or fish**.
- Helpful herbs include **burdock, celandine, barberry, echinacea, goldenseal, fennel, red clover, milk thistle, and thyme**.
- Follow the program for **hepatitis** *(358)* and **jaundice** *(359)*.

—Also see Neonatal Jaundice (694), Infectious Juandice (360), Nutrition of Liver (357), Liver Flush (361).

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR CIRRHOSIS OF THE LIVER AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

DIETARY CONSIDERATIONS—Avoid tea, coffee, tobacco, alcohol, condiments. Use an **aseptic diet**.

ORGANIC CHANGES IN LIVER—Local applications to liver: Alternate Douche, Alternate Compress, Revulsive Douche, flannel-covered Heating Compress. Follow these local applications by a general Douche or a Wet Sheet Rub.

PAIN—Fomentation, Revulsive Compress or Revulsive Douche, with **Hot Leg Bath** or Hot Leg Pack. Follow by **Compress over liver**, twice daily.

JAUNDICE—Wet Sheet Pack, followed by **Wet Sheet Rub**. Radiant Heat Bath, followed by **Graduated Shower** or Wet Sheet Rub.

DROPSY—Revulsive Douche to legs and abdomen. **Trunk Pack**.

GENERAL WEAKNESS—Carefully **graduated tonic baths** (Tonic Frictions), Neutral Bath, Sunbaths, and outdoor life.

CONTRAINDICATIONS—Avoid Cold Full Baths and very cold general or prolonged Cold Douche.

ENCOURAGEMENT—God has provided abundant means for successful warfare against the evil that is in the world. The Bible is the armory where we may equip for the struggle. The shield of faith must be in our hand and the helmet of salvation on our brow. Proverbs 12:21.

LIVER FLUSH

WHAT IT IS—The liver filters the blood and excretes much of that waste through the bile, which it sends into the gallbladder. When some oil or fat is in a meal, its presence signals the gallbladder to contract and squeeze out some bile, which helps prepare those oils and fats to be properly absorbed by the body.

A liver flush occurs when much of the bile is flushed out of the gallbladder. However, there is the possibility that gallstones may be in the bladder. So phase one of the liver flush is to melt down those stones; and then, in the concluding phase, the bile and the stones are jolted out of the gallbladder into the small intestine.

NATURAL REMEDIES

HOW TO DO IT—There are several ways this can be done:

1 - This method is used for the purpose of flushing out gallstones, after first softening them. It is a three-day pattern for effectively flushing gallstones:

- Go on a liver flush by drinking **apple juice** alone for 3 days. On the third day, the juice is followed by drinking a cup of **olive oil** and a cup of **lemon juice**.

2 - This method is used for cleaning out the liver and gallbladder rather than eliminating stones:

- To cleanse the liver and gallbladder, drink as much pure **apple juice** as possible for 5 days. Add **pear juice** occasionally. **Beet juice** also cleanses the liver.

3 - This is a still more involved regime for restoring the functioning capacity of the liver and gallbladder. *Slightly different than #2, above, it should not be used on anyone below the age of 25 or who has large gallstones:*

- On Tuesday through Sunday noon, drink as much **apple juice** or **apple cider** as you are able, in addition to your regular **meals**.
- At noon on Sunday, eat a normal **lunch**.
- Three hours later, dissolve 2 teaspoons of **disodium phosphate** in an ounce of hot water and drink it. It may not taste good, so follow it with a little freshly squeezed **grapefruit juice**.
- Two hours later, repeat the drinking of the **disodium phosphate** and the **grapefruit juice**.
- That evening, only take **citrus juice** for supper.
- At bedtime: Either (1) drink a half cup of unrefined **olive oil**, followed by a small glass of **grapefruit juice**, or (2) drink a half cup of warm, unrefined **olive oil** blended with a half cup of lemon juice.
- Go immediately to bed and lie on your right side,

with your right knee pulled up close to your chest for 30 minutes.

• The next morning, one hour before breakfast, drink 2 teaspoons of **disodium phosphate**, dissolved in 2 ounces of hot water.

• Eat your meals as usual. The cleansing regime of the liver and gallbladder is completed.

• In case there is slight to moderate nausea when taking the olive oil and citrus juice, this should be gone by the time you go to sleep.

• But if the oil induces vomiting (which only happens rarely), you need not repeat the procedure at this time. Drink a cup of strong **peppermint** tea, to help relieve the nausea.

• You may find small gallstones in the stool the following day. They are light green to dark green, very irregular in shape, the size of grape seeds to cherry seeds, and feel like gelatin. If there are a large number of them, repeat the liver flush in two weeks.

—See Gallstones (362).

ENCOURAGEMENT—We see in the Word of God warnings and promises, with God behind them all. We are invited to search this Word for aid when brought into difficult places. If we place God and the Bible first, we will have divine help in meeting all our problems. Deuteronomy 28:7.

GASTRO-INTESTINAL -
7 - GALLBLADDER

GALLBLADDER INFLAMMATION
(Cholecystitis)

SYMPTOMS—Severe pain in the upper right abdomen, accompanied by fever, nausea, and vomiting. The abdomen may be rigid and is usually tender to pressure at, or below, the lower edge of the ribs on the right side.

CAUSES—The gallbladder becomes inflamed. When this happens, it must be cared for immediately. If not, you could die.

An acute infection of the gallbladder may be only catarrhal in nature; and recovery will come in a few days. But, in more severe cases, the gallbladder fills with pus. Be very careful; immediately treat this condition. In case of pus in the gallbladder, there may be (and may not be) chills and fever. Therefore be alert, if chills and fever occur.

The presence of gallstones tends to irritate the lining of the gallbladder. Bacteria in the bile are then able to invade the wall and cause inflammation.

Inflammation of the bile ducts (cholangitis) produces similar symptoms to inflammation of the gallbladder (plus jaundice); but the treatment is the same.

NATURAL REMEDIES

• **Stop all eating**. Take nothing but **water** for 2-3 days until the acute condition is past. Drink only distilled water.

• Then go on **juices** for several more days. **Pear, beet, and apple juice** are very helpful.

• Then add solid food, such as shredded **raw beets** with 2 tablespoons of **olive oil, fresh lemon juice**, and freshly blended (uncooked) **applesauce. Pears** should be eaten generously; they are very healing to the gallbladder.

• **Oil** is necessary in the diet, to stimulate the production and elimination of gall and the fat-digesting enzyme, lipase. Using only high quality vegetable oil helps keep gallstones from forming.

• Avoid all **meat, grease, processed fats and oils** (including **margarine and butter**).

HERBS

• It is crucial that you **not overeat**! Only eat **small meals.**

• To treat the gallbladder and increase bile flow, mix equal parts **pansy, St. Benedict thistle, milfoil, and buckthorn bark**. Soak 1 Tbsp. in ½ cup cold water for 8 hours; then bring to a boil. Take 1-1½ cups a day in mouthful doses.

—For more information, see Gallstones (below) and Liver Flush (361).

ENCOURAGEMENT—No man or woman can be good or great who has not learned to yield his will to God and to obey with alacrity. Those who learn to obey are the only ones who will be fitted to command. Luke 7:50.

GALLSTONES
(Cholelithiasis)

SYMPTOMS—Bloating, gas, discomfort, or indigestion after a heavy meal of rich, fatty food. There may be constant pain, below the beastbone, that shoots into the right or left shoulder area and radiates into the back. The pain can last 30 minutes to several hours.

A gallstone attack (caused by bile duct blockage): nausea, vomiting, and pain in the upper right abdominal region.

When a gallstone passes (a "gallbladder attack"), the pain can be very severe and last a few seconds or minutes, and recur frequently for hours or days. Chills and fever may accompany the attack. The symptoms often occur after the person has eaten fried or fatty foods.

Inflammation of the gallbladder. Severe pain in the upper right abdomen and possibly across the chest. Fever, nausea, and vomiting may occur.

CAUSES—The formation of gallstones *(cholelithiasis)* may lead to gallbladder infection *(cholecystitis).* Gallstones may form in the gallbladder or (more rarely) in the bile ducts of the liver. They may form in the gall-

bladder as a result of infection or inflammation of the gallbladder wall.

They occur more often in women than men; they occur more often in women who have given birth to children, especially several of them. They are more frequent in obese women, and occur more often after the age of 40. In the United States, about 10%-20% of the population have gallstones.

Persons with diabetes, migraines, cancer of the gallbladder, cirrhosis, and pancreatitis are more likely to have gallstones.

Gallstones are formed from bile, a brown digestive fluid produced by the liver; these are 80% cholesterol (a blood protein) and 20% bile. But they do not look like regular "stones." Kidney stones are sharp and crystalline. But gallstones are smooth, soft, and gelatinous. They feel like dense fat. Often persons with them have no symptoms. An attack usually occurs in the evening.

When they block the exits of the liver or gallbladder, they produce nausea, vomiting, and pain (as described above).

Try to avoid having an operation on your gallbladder. The operation consists of removing it entirely; but you really need it. However, in a crisis, you may need to go through with the operation. Recent studies at the University of Pittsburg found that removing the gallbladder (cholecystectomy) doubled the risk of colon cancer.

NATURAL REMEDIES

To relieve pain, give a 15 minutes **hot fomentation** over the gallbladder area, followed by an **ice rub**. Repeat the process 3 times. This will reduce the swelling, inflammation, and pain.

• For information on how to flush stones out of the gallbladder, *read Liver Flush (361).*

NUTRIENTS

• Each day, take **beta carotene** (15-30 mg), 1 **B complex** tablet, **vitamin B_6** (2 mg), **vitamin C** (100 mg), and **vitamin E** (200 IU).

HERBS

• **Turmeric**, in tea and food, prevents and treats gallstones. It contains *curcumin*; this is shown, in research studies, to eliminate them. It increases the solubility of bile.

• **Milk thistle** contains *silymarin*, which protects the liver, but also increases bile solubility.

• To treat a gallstone attack, mix together as many **mints** as you can (**peppermint, spearmint, catnip**, etc.) with **cardamom**. Make a tea and drink it.

• **Chamomile** or **dandelion** tea helps dissolve gallstones.

PREVENTING GALLSTONES—Here are several points to keep in mind:

• Eating **omega-3 fatty acids** (**flaxseed oil** is rich in them) makes gallstones soluble. **Olive oil** is good.

• Taking 2 tablespoons of **lecithin** each day immediately results in increased phospholipid concentration in the bile. This directly lowers and disperses gallstones.

• Drinking **water** helps prevent gallstone formation. It has been discovered that those with gallstones do not drink enough water. Drinking a pint of water causes the gallbladder to empty about 10-20 minutes later. This is the way to keep the gallbladder cleaned out and in fairly good condition; that is, if you do not eat any fats of animal origin.

• **Lack of exercise** increases the likelihood of gallstone formation. Cholesterol is excreted more rapidly by the liver and bladder with more exercise. The truth is that everything works better when you exercise regularly.

• It is an interesting fact that people who never eat meat, dairy products, or eggs rarely have gallstone attacks. **Animal fat** tends to form gallstones.

• Do not **overeat**. This is very important. Do not eat **processed, fried, sugared, spicy, or junk foods**. Eating too much **sugar** inflames the gallbladder ducts.

• Do not use **alcohol, caffeine, or tobacco**.

• **Animal protein** in the diet increases stone formation; vegetable protein tends to reduce the size of the stones.

• Eating **eggs** greatly increases the likelihood of stone formation. A diet low in **vitamin C** also does.

• Eating lots of **refined carbohydrates** increases stone formation. Not including enough **fiber** in the diet does also.

• Keep your **weight** down. Overweight women over 40 and who have had several children have the most gallstones.

• **Oral contraceptives** (and other drugs containing **estrogen**) increase cholesterol saturation of bile.

• **After the stones have passed, eat lots of** figs, pears, prunes, oranges, pineapple, grated apples, and melons. Eat lots of vegetables that stimulate the liver (including broccoli, brussels sprouts, cabbage, kohlrabi, and cauliflower). Eat dandelion greens, beets and tops, carrot juice, celery, garlic, onions, and tomatoes.

—Also see Liver Flush (361) and Gallbladder Inflammation (362).

ENCOURAGEMENT—The strength of Christ was in prayer. He went alone and pled with His Father for guidance and help. Through Christ's enabling grace, we are to do the same. And we can receive help as Christ did. James 5:15-16.

BILIARY COLIC

SYMPTOMS—Intense pain felt in the right upper quadrant of the abdomen from infection of a gallstone in the cystic or hepatic ducts or the ampulla of Vater. In common language, that means a gallstone from the gallbladder gets stuck in one of the tubes leading out of the gallbladder. This produces intense pain.

CAUSES—Biliary colic occurs when the gallbladder tries to expel a stone or calculus, but the stone has gotten stuck and cannot get out. This is an acute disor-

der which may last several days, with spasmodic contractions of the gallbladder and of the ducts through which the bile flows into the small intestine. The result is sporadic pain, nausea, vomiting, and general discomfort.

NATURAL REMEDIES

• For extensive coverage, *see Gallstones (362), Gallbladder Inflammation (362), and Liver Flush (361).*

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR BILIARY COLIC AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

GENERAL—Fruit diet, water drinking, liquid aseptic dietary.

PAIN—Revulsive Compress, every 2 hours. Continuous hot applications to area of liver. Hot Colonic or Hot Enema, every 2 hours. Hot Full bath.

FEVER—Prolonged Neutral Bath. Hot Blanket Pack. Follow by Wet Sheet Pack. Cold Mitten Friction or Cold Towel Rub.

AFTERWARD—After acute attack subsides, give treatment for Gastro-intestinal Catarrh.

ENCOURAGEMENT—While the Lord has not promised His people exemption from trials, He has promised that which is far better. He has said, "As thy days, so shall thy strength be." If you are called to go through the fiery furnace for His sake, Jesus will be by your side, even as He was with the faithful three in Babylon.

GASTRO-INTESTINAL -

8 - INTESTINES, APPENDIX

INTESTINAL CRAMPS

(Food Cramps)

SYMPTOMS—Intense pain in the intestines.

CAUSES—This is a spasm of the muscles covering the intestines. It tends to accompany gastroenteritis *(352)*, colitis *(374)*, irritable bowel syndrome *(372)*, spastic constipation *(367)*, and other intestinal problems.

NATURAL REMEDIES

HERBS

Here are herbs which relax the intestinal walls and stop excessive movement of the digestive tract:

• An infusion of **catnip flowers** and leaves calms diarrhea and the colic spasm usually associated with it.

• **Flaxseed, tormentil, passion flower, and rue** calm colic pain and spasm in the intestines.

• An infusion of the flower heads of **German chamomile** has an antispasmodic effect on the bowels.

These herbs reduce intestinal fermentation:

• **Bilberry, alfalfa, angelica, anise, thyme, and eucalyptus.**

These herbs reduce intestinal gas:

• **Peppermint, cumin, tarragon, black poplar, fennel, caraway, and garlic.**

• Dr. Coffin's formula for treating colic and stoppage of the bowels: Mix 1 tsp. each **lobelia and cayenne**, ½ tsp. each **myrrh gum and valerian root**. Make a strong infusion of raspberry leaves; then add the other herbs, mix, let stand tightly covered ½ hour, and strain. Inject 1/3 into the bowels at body temperature; repeat in 4 hours and the remainder in 4 more hours. This will produce copious and frequent bowel discharges for the next 8 hours. Give astringent and tonic herbs orally for the next several days, as the patient is able to retain them.

— *Also see Cramps, Muscular (527).*

ENCOURAGEMENT—Here is the only safeguard for individual integrity, for the purity of the home, the well-being of society, or the stability of the nation. Amidst all life's perplexities and dangers and conflicting claims, the one safe and sure rule is to do what God says.

MALABSORPTION

SYMPTOMS—The most common symptoms include: bulky, pale, foul-smelling feces. Flatulence and abdominal bloating. Weight loss. Diarrhea. Abdominal pain with cramps. Fatigue and weakness.

CAUSES—Malabsorption occurs when the small intestine cannot absorb nutrients from food passing through it. If the problem is not solved, certain nutritional deficiencies may develop, which can result in anemia *(440, 723)*, lack of **B_{12}** and **iron**, or nerve damage *(nutritional neuropathies, 455)*.

Digestive enzymes or juices may be inadequate or missing. This may be due to **chronic pancreatitis** *(356)* and **cystic fibrosis** *(526)*. Those with **lactose intolerance** *(383)* lack an enzyme needed to break down the sugar from milk.

Other causes include **celiac disease** *(382)*, **Crohn's disease** *(374)*, and particular **infections** (such as **giardiasis**, *590)*.

NATURAL REMEDIES

• Stop eating **processed, fried, white-floured, sugared, and junk foods.**

• Eat a **nourishing diet of fruits, vegetables, whole grains, nuts, and legumes.** Take a broad-spectrum **vitamin-mineral supplement.**

• Obtain adequate **rest** and outdoor **exercise.**

ENCOURAGEMENT—God desires from all His creatures the service of love—service that springs from an appreciation of His character. He takes no pleasure in a forced obedience; and to all He grants freedom of will, that they may render Him voluntary service.

DUMPING SYNDROME

SYMPTOMS—The food entering the stomach is suddenly dumped into the small intestine instead of remaining in the stomach, to be initially digested.

CAUSES—The dumping syndrome is a common side effect of **stomach surgery**. It can continue for quite some time.

Because proteins are not properly digested, the small intestine becomes very acid; yet it requires an alkaline environment in which to function properly. Anemia and osteoporosis are frequent secondary results of the dumping syndrome.

The best plan is to refuse a stomach operation.

NATURAL REMEDIES

• Take **English bitters**, along with **folic acid** and **pectin**. Eat as carefully as you can. Take full **vitamin / mineral supplementation**.

• **Lie down** for half an hour after each meal.

• Eat **small meals**, which consist of very **nourishing food**.

ENCOURAGEMENT—That heart is the happiest that has Christ as an abiding guest. In this world there is neither comfort nor happiness without Jesus. Oh, may we so live, during this brief period of probationary life, that we shall be with Him throughout the ages to come. Luke 18:7-8.

ILEOCECAL VALVE SYNDROME

SYMPTOMS—Diarrhea, fatigue, constipation, irregular bowel movements, lower right bowel tenderness, acne, migraines, duodenal ulcers.

CAUSES—The stomach empties into the small intestine, which in turn empties into the large colon. The ileocecal valve is a sphincter (circular) muscle that closes the illeum, so that matter in the large colon cannot flow back into the small intestine. This valve also keeps the digested material in the small intestine until all the nutrients have been absorbed. Then bile is released, mixed with the residue, and the valve opens; so it all can pass into the large bowel.

The problem occurs when the valve opens—letting material flow back into the small intestine.

NATURAL REMEDIES

• **Fasting** on juices for 2-3 days will help speed healing of the intestinal tract. Take **aloe vera gel** and **slippery elm**.

• Eat a diet high in **fiber**, including whole grains.

• Emphasize **fresh fruits** and **vegetables**. Eat **stewed prunes, figs, and raisins** for breakfast.

• Include **antioxidants** *(104)* in the diet, along with **beta carotene** (carrot juice and green and yellow vegetables), **B complex**, **vitamin C** (1,000 mg), **bioflavonoids** (100 mg), **calcium** (2,000 mg), **magnesium** (1,000 mg), essential fatty acids (1 Tbsp. **flaxseed oil**), and possibly plant digestive enzymes (**bromelain**, **papain**).

• **Avoid** constipating foods, such as **dairy products, meat, cheese, soft bread, processed starchy foods**.

• Stop eating **meat**. It ferments before it reaches the large bowel. (Predators, such as dogs, tigers, etc., eat meat and have a short bowel. But we have a long one.)

ENCOURAGEMENT— In keeping God's commandments there is great reward, even in this life. Our conscience does not condemn us. Our hearts are not at enmity with God, but at peace with Him.

APPENDICITIS, ACUTE

SYMPTOMS—Pain and tenderness in the lower right area of the abdomen, vomiting, and low-grade fever. In children, the fever can be quite high.

The first symptom usually is pain. There may be tenderness with pressure. Quickly the pain becomes severe. But sometimes the pain is first felt all over the abdomen; it may be especially strong over the navel.

But pain and tenderness with pressure are not enough symptoms to determine appendicitis. There will also be rigidity and tenderness of the muscles of the abdominal wall, especially on the right side, a little below the level of the navel. Coughing and deep breathing make the pain worse.

The attack may, or may not, begin with a chill; but generally some, or much, fever is present from the beginning—along with constipation, vomiting, loss of appetite, nausea, and a tendency while lying in bed to draw up the right leg to relieve tension on the sore side.

CAUSES—The appendix is located on the right side of the abdomen, about halfway between the point of the hipbone and the navel.

Causes of appendicitis include **constipation and overeating. And eating rich, complicated foods and foods low in fiber**. The resulting fermentation and digestive upset can produce appendicitis.

Older people are less likely to experience appendicitis; but if they do, the danger of rupture is more likely.

***IF THE APPENDIX RUPTURES**, the infection will spill into the abdominal cavity, causing peritonitis. Take him to a hospital immediately, so he does not die!*

NATURAL REMEDIES

• Do not wait. Call a physician.

• The inflammation may subside if the person is

put to bed and the infected tissues are kept quiet and not irritated.

• Do not give a cathartic; that is, do not swallow **laxatives or laxative herbs**, to flush out the gastro-intestinal tract !! This can cause the appendix to rupture!

• Undertake a **water fast** immediately. Drink small amounts every so often. Take 2 **myrrh / goldenseal** capsules every 2 hours. Take **echinacea** 4 times a day.

• Immediately give a colonic or **high enema**, but only in this way:

1 - Give an enema of the lower bowel (the **descending colon** on the left side of his body). As you do this, massage that part of the colon *downward* toward the rectum.

2 - Then, always gently, slowly, and carefully, go up *higher* into the ascending colon and massage it toward the rectum.

3 - Then gently massage the **transverse colon** (horizontal part of the large bowel) toward his left and down the descending colon toward the rectum.

• Then slowly massage upward on the *upper part (only)* of the **ascending colon**. Then very lightly, *partway down* the ascending colon, gently massage *upward*. **Each time, continue the massage all the way across the transverse colon and down the descending colon**.

• Constantly be on the alert for indications that the appendix may have burst!!! **If there is a most terrible pain, rush the person to the hospital at once.** If you wait beyond that point, he may die.

• When the attack phase of appendicitis is past, and all is better, break the water fast by going on a **fruit diet** for 2 days.

• Take liquid supplements, including beta carotene (25,000 IU, 4 times daily, with liquid chlorophyll in water 3 times daily). Carrot juice is excellent. Vitamin E (400 IU 2 times daily), zinc picolinate (30 mg daily).

• Then go on a cleansing, building diet of **nourishing food**. Do not eat too much at a time. Include one teaspoon of psyllium in juice or water, 3 times a day, for 2 weeks after the appendicitis has ceased. That will help soften everything and help it slide past the appendix.

HYDRO—The following hydrotherapy information will be found in the *Hydrotherapy* section *(153-211)* of this *Encyclopedia*:

The objective is to draw the inflammation away from the appendix. There are two ways to do this. Start both immediately when the appendix attack occurs:

The first application is based on the reflex principle. Water applications, placed on certain areas of the body, will affect other areas. The navel affects the appendix. So place an **ice cap or ice bag**, about one-half full of finely chopped ice, on the naval. This will draw inflammation away from the appendix.

The second application is based on the derivation principle. You can draw blood away from one area, by placing hot packs on a distant area. A hot **Hip-and-Leg Pack** is applied, plus placing an **ice bag** on the area of the appendix *(see Hydrotherapy chapter, 153-211)*.

Many cases of appendicitis heal without need for an operation to remove the appendix. *But you must be very careful! Contact a physician.*

—Also see Appendicitis, Chronic (below).

One of the false theories, dreamed up by evolutionists nearly a century ago, was the idea that many organs in the human body are useless and only relics given us by our ancestors. But, in recent decades, all of these supposedly "useless" organs (including the thyroid) have been found to have important functions. The tonsils protect the gastro-intestinal tract where it begins and the appendix guards it where the small intestines end. The appendix is a lymphatic structure.

ENCOURAGEMENT—Let your confidence in the enabling power of Christ increase daily. He alone can enable you to resist temptation. He alone can give you the guidance you need throughout the day. In His strength, you can be an overcomer.

APPENDICITIS, CHRONIC

SYMPTOMS—Pain and tenderness in the lower right area of the abdomen, vomiting. This occurs every so often.

CAUSES—This is NOT acute appendicitis, but chronic appendicitis. Relatively few individuals have ongoing problems with their appendix, which do not come into the acute phase. But some do.

Chronic appendicitis is an on again, off again, type of problem. For such individuals, it might be best to have the appendix removed rather than to suffer with it as the months pass.

NATURAL REMEDIES

*If used at all, the following applications may be used only for ongoing chronic appendicitis, **NOT** for the acute phase (365), when a person experiences a sudden attack!!*

The following method requires the placing of heat over the appendix area. This would NOT be done for acute appendicitis:

• Prepare a **castor oil pack** in this manner: Place a folded wool flannel in a Pyrex glass or enamel baking pan. Pour castor oil over the cloth until it is saturated. Heat it in the oven, but get it no hotter than you can touch. It will be heated in 5-10 minutes.

• Or, instead of heating it in the oven, put the neutral (room temperature) pack on the appendix area and place a heating pad over it. Next put a waterproof covering over the pack. Over this, place a hot-water bottle half filled with hot water. Wrap a bath towel around the body, to secure the water bottle and pack. Cover everything with a heavy blanket or sleeping bag, to hold in the warmth.

• Remove it 1-2 hours later. In order to avoid a rash, clean the oil off the skin with a solution of 2 teaspoons of baking soda to 1 quart water. Do it gently. Do not try to wash the castor oil out of the pack or any cloth in-

volved; castor oil cannot be washed out. You can use the same pack again later, by adding some more castor oil and reheating. It can be reused for 6 weeks. Do not spill the castor oil on anything valuable.

• Use the pack for 3-4 nights and then not use it for 3 nights. Then begin again.

• Aloe vera juice can help relieve symptoms. Slippery elm tea is very soothing.

• Stop eating **processed, fried, and junk foods**. Stop eating all **meat products**.

—For more information on appendicitis, see Appendicitis, Acute (365).

ENCOURAGEMENT—We can have a daily living experience in the power of Christ and His willingness to save to the uttermost all that come unto God by Him. Let Him be the center of your affections. He is the best friend you could ever have. Ephesians 2:8.

GASTRO-INTESTINAL - 9 - BOWEL

CONSTIPATION

SYMPTOMS—Stools are hard, dry, and infrequent. It is difficult to have a bowel movement.

Other symptoms may include abdominal discomfort, lack of energy, dull headache, poor appetite, and low back pain.

CAUSES—"Constipation" comes from the Latin; and it means "crowded together."

The bowels should move daily, ideally, after each meal. When this does not happen, waste material moves too slowly through the large bowel. Elimination becomes painful, and toxins are reabsorbed by the system, placing an overload on the liver and kidneys. All waste in the body should be expelled within 18-24 hours.

A number of different physical problems are partially caused by constipation: bad breath, body odor, depression, appendicitis, fatigue, gas, headaches, hernia, indigestion, the malabsorption syndrome, varicose veins, obesity, insomnia, and the coated tongue.

Toxins, reabsorbed from a constipated bowel, can also result in migraines, chronic gas and bloating, thyroid problems, meningitis, and myasthenia gravis.

Constipation tends to be common during pregnancy.

Older people often have constipation because they are not drinking enough water.

Persons with spinal injuries may have problems with constipation, due to damage to certain nerves.

There is always the possibility that, if constipation occurs too frequently, that cancer or some other obstruction of the bowel may be involved. Other symptoms of colon cancer include severe cramping, blood in the stool, a tender and distended abdomen, and very narrowed feces. But cancer can be present without these symptoms occurring.

Alternate diarrhea and constipation may point to irritable bowel syndrome *(372)*.

NATURAL REMEDIES

• First and foremost, include enough **fiber** in your diet each day; drink enough **water**. Get enough **exercise**, especially outdoors, so you get enough **fresh air**. Avoid **poisonous substances** and **emotional tension**. **Relax**. **Be thankful** to God for your blessings; and take time to be a blessing to others. Follow the advice in this paragraph, and many of your problems will vanish.

• As soon as you awake, start drinking **warm water**, a little at a time. By the time you are ready for breakfast, you should have taken at least a quart. Faithfully follow this regime, and you will develop regularity in your morning bowel movement. This plan nicely starts the day off right.

• Then, after breakfast and every other meal, go outside and **walk** a little or a lot. **Breathe** deeply.

• The larger the amount of **fiber** in the diet, the larger and softer will be the stools.

• Squeeze a **lemon** into an 8-oz. glass of warm (or very warm) water and drink it first thing in the morning.

• Eat **smaller amounts** of food at each meal.

• Eat **prunes or figs**. Drink **prune juice. Flaxseed meal** (best freshly ground) is helpful. Both will soften stools. **Psyllium seed** is also good; but take it quickly with a full glassful of water (before it solidifies).

• **Beta carotene** (25,000 IU) or carrot juice will maintain the health of the intestinal lining. **Acidophilus** (2 capsules with each meal) will keep the large bowel healthy.

• Nursing babies are seldom constipated, if their mothers are taking enough bulk (**fiber**) in their diet. **Licorice** tea is good for constipation in babies.

• High doses of **vitamin C** powder are a quick-acting laxative.

• Weak **chamomile** tea can be used for constipation. **Fennel** seed powder will relieve the griping action of stronger cathartics, such as senna.

• Stimulant laxatives are high in *anthraquinones*, which stimulate bowel muscle contraction. The most frequently used are **senna leaves** and **cascara segrada** bark. Cascara is the milder of the two. Senna can induce the laxative habit; so do not use it over 10 days.

• **Senna** is powerful and is likely to cause intestinal pains. Add a pinch of **ginger** or **fennel** to reduce them.

• When necessary, take cleansing **enemas** to relieve the load on the bowel. But the solution is better living, not reliance on enemas.

• If you have taken laxatives, take **acidophilus** to replace the friendly bacteria in your colon.

• A **small, *cold* enema** helps eliminate the enema habit. *See Enema Habit, how to overcome (377).*

• When nature calls, obey and have a **bowel movement**.

• For quick relief, drink a large glass of good **water** every 30 minutes until you have a bowel movement.

AVOID

• Avoid **concentrated foods**, such as **meats, sugar,**

and cheese. They produce constipation.

• **Dairy foods, soft drinks, white flour, salt, coffee, alcohol, highly processed foods, and sugary foods** should not be used, if you want to solve this problem.

• **Iron supplements** cause constipation. So do **painkillers** and **antidepressants**.

• All **decongestants** and **antihistamines** are drying agents; they may cause the stool to become dryer than it should.

• Do not use **cloves** in herb teas if you are prone to constipation.

• Constipation is sometimes caused by food sensitivity. The problem may be **milk, eggs, chocolate, meat, nuts, wheat, corn, or citrus**. Some people become constipated by drinking large quantities of **milk**.

• If you have a tendency to constipation, do not use **aluminum cookware** or too much **salt**.

• Eating a **mono diet** (just milk or greens, etc.) can be constipating.

• Do not take **mineral oil** products to relieve constipation. They absorb fat-soluble vitamins. Do not take **Epsom salts, milk of magnesia, and citrate of magnesia**. They wash minerals out of the body.

• Do not take **laxative herbs** (or even prune juice) all the time for a laxative effect. Only use them when you really need to. After taking them for a week or two, reduce dosage by one-half each week thereafter.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR CONSTIPATION AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

INCREASE PERISTALTIC ACTIVITY—Drink half a pint to a pint of **cold water** before breakfast, preferably distilled water. **Increase the bulk** of food, with free use of fruit (especially apples, oranges, and figs, and bran cakes instead of so much smooth nonfibrous food). Small **Cold Enema**. Graduated Enema. Fomentation over liver twice daily, followed by Heating Compress during interval between. **Hot Abdominal pack** at night. **Abdominal massage**. Cold Fan Douche to abdomen, Cold Percussion Douche to spine, Cold Plantar Douche (bottom of feet) for 1-3 minutes. **Cold Rubbing Sitz Bath** at 70°-75° F. for 5-20 minutes. Avoid complete emptying of colon, using small **Cold Enema** instead of a large quantity of warm water, except when necessary, to relieve autointoxication or remove hardened, impacted feces. If necessary, introduce into rectum (as high as possible) a small pledget of cotton saturated with raw linseed oil or with glycerin. Do this at night or before breakfast, to be retained till the next bowel movement.

INCREASE ACTIVITY OF INTESTINAL GLANDS—Half a pint to a pint of **water** in an enema at bedtime, to be retained overnight. **Abdominal message** and **Hot Abdominal Pack**, without plastic covering.

REMOVE ACCUMULATED FECAL MATTER—Large **Hot Enema** or Hot Colonic, **Neutral Enema, oil retention** (oil enema to be retained throughout the night). Repeat the application till bowel is thoroughly emptied; then inject a pint of water at 75°-70° F., to tone the bowel.

DILATION OF THE COLON—Graduated enema, Cold Fan Douche to abdomen and spine opposite the stomach, running **Cold Footbath**, Cold Rubbing Sitz Bath. Hot Abdominal Pack, without plastic covering, changing every 4 hours.

INCREASE STRENGTH OF ABDOMINAL MUSCLES—Cold Fan Douche (spray), Cold Plantar Douche, Percussion Abdominal Douche. **Cold Compress to abdomen**, renewed every 4 hours without impervious covering. Massage and **special exercises**, particularly head raising and leg raising while lying on one's back.

ENTEROPTOSIS—Restore prolapsed bowels to position, **strengthen abdominal muscles** as indicated above, **correct normal sitting position**, abdominal supporter.

HEMORRHOIDS—Long **Cold Sitz Bath**, Cool Anal Douche, **Cold Compress** to anal area, small **Cold Enema**. If inflamed, rest in bed. **Fomentations** over the nates, followed by cold compress. Repeat Fomentations every 3 hours.

PAIN—(1) If due to a fissure: **hot applications**, sitting over steam [hot vapor, not actual "steam"]. (2) If due to irritable rectum: **hot colonic**. (3) If due to pain in abdomen: **Revulsive Compress**, Revulsive Douche. **Hot Enema** at 110° F., followed by small **cool Enema** and Revulsive Sitz Bath.

RELIEVE SPASM OF SPHINCTER ANI MUSCLE—Prolonged **Neutral or Hot Sitz Bath, Warm Colonic**, Hot Colonic, **and Fomentations** over the nates (the "nates" are the fleshy prominences formed by the gluteal muscles—the area where a child is spanked).

RESTORE SENSIBILITY OF RECTUM—Alternate Hot and Cold Colonic, Cold Douche to lower spine and nates. **Shallow Cold Sitz**, Cold Anal Douche, Alternate Anal Douche.

CONTRAINDICATIONS—Strictly avoid Sweating Baths that sometimes induce constipation. Also strictly avoid abuse of the Fomentation and the habitual use of the Warm Enema. If the Enema is used daily, the temperature, at least at the conclusion of the enema, should be 65°-75° F.; so that a tonic effect may be secured.

GENERAL METHOD—Each case must be carefully studied, with reference to the leading cause or causes which are operative in the individual case. Most important of these are the following: aparalytic or atonic condition of the intestine through disturbed or defective enervation, diminished intestinal secretion, or an abnormal absorption of intestinal secretion which results in unusually dry and solid fecal mass, dilatation of the colon that gives rise to accumulation, relaxation and weakness of the abdominal muscles with lowered intra-abdominal tension, hemorrhoids and other diseases of the rectum, prolapse of the colon and abdominal viscera, loss of normal sensibility of the rectum, and spasm of the anal sphincter muscle.

ENCOURAGEMENT—The fallen world is the battlefield for the greatest conflict the heavenly universe and earthly powers have ever witnessed. It is fought anew in the life of every person born into this world. Both Christ

and Satan want to have the control of your life. The choice is yours: which shall it be? Deuteronomy 31:8.

DIARRHEA

SYMPTOMS—Frequent and loose watery bowel movements. This is often accompanied by cramping, abdominal pain, thirst, sudden need to eliminate, vomiting, and possible fever.

CAUSES—Severe diarrhea can produce a loss of essential electrolytes, such as potassium, and result in pale pallor, listlessness, and dark circles under the eyes.

Diarrhea in infants is serious. Something must be done right away. If the child has five or more watery stools a day, consider it diarrhea.

Possible causes include **overeating, food poisoning, stress, incomplete digestion of food, taking certain drugs, flu, intestinal parasites, caffeine, contaminated water, infection (viral or bacterial), eating certain foods (such as unripe fruit, spoiled protein, or rancid fats)**, eating **soap** (from improperly rinsed dishes), ingesting **certain chemicals, inflammatory bowel disease** (**Crohn's disease** *[374]*, **ulcerative colitis** *[373]*, etc.), **cancer, traveling to foreign countries** *(Turista [371])*, **poor digestion,** or **lactose intolerance** from milk products. **Sorbitol**, the synthetic sweetener found in diet products, can cause diarrhea.

Giardia lamblia *(590)*, a microscopic parasite, is the most common form of water-borne infestation in the United States.

A **rich meal** of wine, lobster, creamy desserts, and all the trimmings is a good start toward diarrhea. It is all too much for the body to handle. The body rejects the whole thing and sends it all out.

Dysentery *(370)* is diarrhea which is caused either by a disease organism of some kind or overeating of rich food. The symptoms are the same as diarrhea, but may be longer lasting.

Breast-fed babies are less likely to develop diarrhea than those which are bottle-fed.

NATURAL REMEDIES

• Treatment and prevention require **clean food sources, careful food storage and preparation, self-discipline, and cleanliness**.

• Because of the ongoing diarrhea, as much as 30% more **protein** than normal is needed, as well as an increased intake of **minerals** and **trace elements**.

• Avoid xanthine-containing foods such as **chocolate, tea, coffee, and spicy foods**. Also avoid **drugs, cold liquids, and carbonated beverages**. All these may produce diarrhea.

• **Milk** may also induce diarrhea. Lactose intolerance and virus are leading causes of diarrhea.

• In case of chronic diarrhea, electrolyte and trace mineral deficiencies are likely. **Rice water, lime water, potato broth, and fruit** will help restore lost electrolytes.

• Use **fiber (bran and pectin) foods** in order to tighten the bowels and stop the diarrhea. **Garlic** is helpful in purifying the gastro-intestinal tract.

• **Carob** powder is high in protein and helps stop diarrhea. It is rich in tannins, which helps the bowel wall resist diarrhea. It is good for young children and infants with diarrhea. Give 15 grams of carob powder with applesauce for children.

• Keep **liquid consumption** high in order to replace lost fluids. But it is recommended that no raw fruit juices be given until the acute stage is past.

• **Antacids** are the most common cause of drug-related diarrhea. **Antibiotics** and a number of other medicinal drugs cause it also.

• While you have diarrhea, **do not prepare food** for others; and **wash your hands** carefully.

• Apple pulp is rich in pectin. **Apples** and **applesauce** are centuries-old remedies for diarrhea. (Apple pectin also treats constipation by softening the stool.) **Psyllium** also helps diarrhea.

• Helpful herbs include **white oak bark**, an astringent which stops diarrhea. Also useful are **American blackberry, barley, clove root, whortleberry, black currant, burdock, and echinacea**.

• Here are more substances which work to eliminate diarrhea: **Agrimony** (stems, leaves, or flowers) is very good. Dried fruits of **bilberry and blueberry, blackberry** (bark or roots), **carob powder, cooked carrots, fenugreek seeds**. **Peppermint** tea will allay spasms, diarrhea, or digestive disturbances. **Cooked rice** controls irritable diarrhea.

• **Slippery elm** tea provides soothing relief. Open 2-3 370-mg capsules and mix with water into a paste. Take a Tbsp. of the paste. Or mix it with mashed **banana** or **applesauce** (both of which help reduce diarrhea). Bananas restore lost potassium and add fiber.

• One comprehensive **B complex** tablet daily, plus **folic acid** (400 mcg), **pantothenic acid** (100 mg), and **niacinamide** (100 mg). This combination produces rapid improvement in acute attacks and has cleared some long-standing cases of diarrhea.

• Diarrhea depletes the body of vitamins and minerals in the food; so **supplements** are helpful.

• **Brewer's yeast** has been shown to alter the immune system or the flora living in the intestine and may relieve infectious diarrhea.

• **Betaine hydrochloride** (supplemental hydrochloric acid) helps some people with diarrhea.

Should you immediately stop the diarrhea?

• Some say to use bran and pectin foods in order to tighten the bowels and stop the diarrhea; others say to let it run its course in order to rid the problem foods, etc., out of the system. But, generally, it is considered best to use fiber foods to get the diarrhea stopped. When increasing fiber intake, also increase fluid intake.

• The deciding factor is whether the diarrhea was caused by a bacteria or virus. If caused by either, you want the body to throw it off through the bowels, if this will happen fairly rapidly.

• If the diarrhea is caused by food poisoning, give **activated charcoal** (4-6 250-mg capsules every 2 hours until symptoms are relieved).

—Also see Dysentery (370), Chronic Diarrhea (below), and Diarrhea in Infants (692). Also see Turista (371) for more on preventing and terminating diarrhea.

ENCOURAGEMENT—If Christ abides in your heart, you will be happy and full of praise and joy. The crises of life are as nothing compared to the bright future God has in store for you. Stand true to Him; and soon heaven will be yours. John 14:18.

CHRONIC DIARRHEA
(Chronic Intestinal Catarrh)

NATURAL REMEDIES

• Read the section on Diarrhea *(369)*. Obtain enough **fiber** in your diet, drink enough **water**, and avoid **problem foods**. Recurrent diarrhea may be due to a virus or bacteria.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR CHRONIC DIARRHEA AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

TO LESSEN CONGESTION—**Rest** in bed. **Enema**, 95° F., after each bowel movement. Follow by half a pint of cold water. **Fomentation** to abdomen twice daily, 15 minutes. During interval between, apply **Heating Compress** over abdomen, renewed every 2 hours. This heating compress should be covered with flannel only (not protected).

TO DISCOURAGE BACTERIAL GROWTH—Aseptic dietary (especially **fruit juices, purees, and well-cooked cereals**). Daily cleanse colon by large **Hot Enema**.

TO COMBAT WEAKNESS AND AUTOINTOXICATION—Short **Sweating Baths**, 3-8 minutes, and **Graduated Cold Baths**.

PAIN IN ABDOMEN WITH TENDERNESS—**Fomentation** to abdomen every 2-3 hours. **Hot Enema** at 100° F., after each bowel movement. **Heating Compress** over abdomen after each hot application, to be changed once an hour until the next hot application is made.

MUCOUS STOOLS—Large **Hot Enema** at 95° F. Follow by small **Cold Enema**. **Cold Compress** to abdomen, changed every hour. **Revulsive Sitz Bath** or Revulsive Compress to abdomen. Revulsive Fan Douche to abdomen.

FREQUENT STOOLS—**Abdominal compress**, as above. Prolong **Cool Sitz Bath** at 75° F., 15 minutes. Follow by short **Hot Pail Pour to spine** and **Wet Sheet Rub**.

ALTERNATING CONSTIPATION AND DIARRHEA—Large Warm (98° F.) **Enema** or Colonic, once or twice a week. Follow with a small **Cold Enema** and Hot Abdominal Pack.

CONTRAINDICATIONS—Avoid Cold Douche, protected Heating Compress, prolonged Fomentations.

GENERAL METHOD—Increase the general vital resistance and improve stomach conditions, regulating the diet so as to render the intestine an unfavorable place for bacteria which constitute the chief cause of this disease. Remove bacteria and masses of mucus by Neutral Enemas.

ENCOURAGEMENT—The happiness of man is found in obedience to the laws of God. In obedience to God's law he is surrounded as with a hedge and kept from the evil.

DYSENTERY

SYMPTOMS—Sudden loose watery bowel movements, often with blood and mucus. It is characterized by pain, tenesmus, fever, and dehydration. Tenesmus is not being able to defecate; yet there is an urgent desire to do so.

CAUSES—The cause of this diarrhea-like disease may be *Entamoeba histolytica* (amebic dysentery), *Shigella dysenela* (bacillary dysentery), or about six other germs or parasites.

NATURAL REMEDIES

• Carefully read everything in *Diarrhea (369)* and *Chronic Diarrhea (370)*.

J.H. KELLOGG, M.D., PRESCRIPTIONS FOR DYSENTERY AND ITS COMPLICATIONS *(how to give these water therapies: pp. 153-208 / list of treatments: pp. 153-154 / Hydrotherapy Disease Index: pp. 209-211)*

DYSENTERY (ACUTE), COLITIS —

DIETARY NEEDS—Free **water** drinking, a simple dietary with **no animal broths or meat preparations. Brown rice, fresh buttermilk, fresh ripe fruit, and fruit juices with well-cooked cereals**.

TO COMBAT VISCERAL INFLAMMATION—**Hot Blanket Pack**, with **Hot Hip and Leg Pack**. Follow by **Heating Compress** to abdomen at 60° F., changed every 20-40 minutes. **Ice** suppositories if the inflammation extends into the rectum. **Cold Sitz Bath** at 75° F., 15-30 minutes, with **Hot Footbath**. Cold Colonic and **Rest** in bed.

TO RELIEVE PAIN—Very **Hot Pack** over pelvis, with **Hot Footbath**. Very **Hot Enema** at 100° F. Follow by **Cold Colonic**. Repeat hourly if needed.

DYSENTERY (CHRONIC), COLITIS (CHRONIC) —

GENERAL CARE—**Rest** in bed, careful diet, **Graduated Cold Baths** (twice daily), **Cold Rubbing Sitz Bath**. Hot Revulsive Sitz Bath 6-10 minutes daily, immediately preceded by a Hot Enema.

PAIN—If much pain is present, give a **Revulsive Sitz Bath** once or twice a day. **Moist Abdominal Bandage**.

ENCOURAGEMENT—Christ calls our attention to their natural loveliness; He assures us that the most gorgeous array of the greatest king that ever wielded an earthly scepter was not equal to that worn by the humblest flower.

TURISTA
(Traveler's Diarrhea)

SYMPTOMS—Diarrhea caused by traveling in foreign countries.

CAUSES—Hygienic conditions and **bacterial flora** are different in other countries. The nationals are used to it; but, arriving in that strange land, it can be too much for your intestinal tract.

One problem is **foreign versions of the *escherichia coli*** bacteria. Foreign versions produce a toxin that prevents your intestines from absorbing the water you ingest in food and drink. The result is diarrhea.

Salmonella and shigella bacteria can also produce turista, which is actually dysentery *(370)*; and a smaller number of cases are caused by rotavirus or the **giardia** *(590)* parasite.

Up to 50% of turista cases are unexplained; but suspicion is pointed to **fatigue, changes in diet, jet lag, and altitude sickness**.

Seasoned travelers say that there is a 50% chance you will get diarrhea if you visit overseas, even if you take the recommended precautions. Here is what you should do:

NATURAL REMEDIES

• American travelers are often given Entero-Vioform tablets, which they are instructed to take several times a day. But those medications are forbidden in Japan and Sweden, because they can cause severe nerve and eye damage.

• Instead, take **betaine hydrochloride** (betaine HCl) tablets with you when you travel; and swallow two tablets after each meal. The hydrochloric acid will kill bacteria in the stomach and help prevent infection.

• Straight **lemon juice or lime juice**, taken on an empty stomach, also has an sterilizing effect.

• To make the situation even better, eat some **raw garlic** with your meals.

• In cases of non-bacterial diarrhea, 3 tablespoons of raw, unprocessed **wheat bran** daily, taken in fruit juice, has been found to give relief.

Here are more ideas for preventing turista from happening to you:

• Drink **acidic drinks**, such as **fruit juice** or whatever else you can get overseas. If you cannot do better, drink carbonated beverages sealed in bottles or cans.

• Try to make sure the dishes and **eating utensils** have been cleaned in purified water and, hopefully, rinsed in very hot water.

• Avoid **uncooked vegetables**. This includes salads, **fruits** you cannot peel, **ice cubes**, and anything in which there is unpurified water.

• **Boil water** for 3-5 minutes to purify it. **Iodine** liquid or tablets purifies it also.

ADDITIONAL HELPS

• Take **dried blueberries** with you. They tend to constipate and thus eliminate the diarrhea. **Blackberry root** is equally good. Make it into a tea and drink it.

• **Plantain** is strongly astringent, so is **white oak bark**.

• Cook down **apple peels** and drink it. The pectin in it helps eliminate diarrhea.

• Tannic acid is in **acorns** and **oak bark**. Both are powerful astringents and will stop the muscular contractions of the intestines.

• Not only **charcoal**, but **clay** is also useful in stopping diarrhea. Many commercial antidiarrheal preparations contain clay.

WARNING SIGNS

When traveling overseas (or even if you remain at home), there is danger that diarrhea may indicate something more serious:

• **Abdominal bloating, vomiting, and pain** can point to colitis, appendicitis, or an intestinal obstruction. **Black or red stools** can indicate bleeding or a parasitic infection. **White or pale stools** can signify disease of the liver. If **fever** occurs with the diarrhea, then a serious infection may be involved.

• Amoebic dysentery is a serious problem in Mexico, Central America, and a number of other places. If you contract it, **garlic, goldenseal, colchicum, peppermint, and ginger** have been used successfully against it. A friend, traveling in Mexico, burned a wooden box and swallowed the **charcoal** with water.

—Also see Diarrhea and Dysentery (369-370).

ENCOURAGEMENT—Happy is the man who has discovered for himself that the Word of God is a light to his feet and a lamp to his path. It is a light shining in a dark place. It is heaven's guidebook for mankind. Isaiah 65:13-14.

SPRUE
(Psilosis)

SYMPTOMS—Mild morning loose bowels for many days. Later: sore mouth, indigestion with bloating, and diarrhea. Dark or muddy complexion, emaciation, anemic, weak, irritable, loss of memory, inability to concentrate. Tongue completely smooth, eroded at edges and beneath, and fissured in center. Mouth extremely tender and painful.

CAUSES—Early cases, properly treated, recover. Those over 50 and those who refuse to adhere to a careful diet may die.

Sprue most frequently occurs in tropical countries. Visitors there are in danger of contracting it.

NATURAL REMEDIES

• **Bedrest** is very important. Protect from chilling.

• Keep him **warm**. Give him a warm room, warm clothing, and avoid cold baths.

• Daily take **sunbaths** or UV treatments.

• Moderately heavy **massage** of the muscles, daily; and avoid the abdomen (unless he is constipated).

• **High protein, high vitamin, and low-fat** diet.

• Only **small meals** should be eaten.

• Take **brewer's yeast** (2 oz.), **rice polishings** (1 oz.), **vitamin D** (2,000 IU), or **folic acid** (10 mg) daily.

• Give **mouthwash** daily *(see Gum and Mouth Disease, 339)*. Control diarrhea *(369)* and constipation

(367) in some later cases. And treat anemia *(440, 723)*. He may develop pernicious anemia *(443)*.

• As soon as he is able to travel, he should leave the tropics and never return.

ENCOURAGEMENT—Parents should teach their children to love God and to obey His law. This is the greatest and most important work that fathers and mothers can do.

IRRITABLE BOWEL SYNDROME
(Mucous Colitis, Spastic Colitis, Intestinal Neurosis)

SYMPTOMS—There are three basic patterns: (1) constipation and pain; (2) alternating constipation and diarrhea; (3) painless diarrhea with mucus.

Diarrhea frequently occurs upon arising and, again, following breakfast. For the remainder of the day, he may be constipated. Diarrhea at night is rare. Instead of diarrhea, stools sometimes are pasty and very narrow.

Also present may be gas, nausea, bad breath, heartburn, severe headaches, bloating, lack of appetite, weakness, faintness, backache, and heart palpitations.

Pain is often triggered by eating; it may be relieved by a bowel movement.

A fifth of those with this problem also experience rectal bleeding.

CAUSES—Irritable bowel syndrome (IBS) is the most common digestive problem which patients see their doctor about. About one-fifth of Americans have the problem. Primarily occurring between the ages of 20 and 50, women have it twice as often as men. It is said that three-fourths of the population experience it at some time in their lives. Yet IBS is comparatively unknown in cultures where people eat simply, and not too much of it.

The fundamental problem is that the muscles of the small and large intestines contract in spasms rather than regularly. Something in the food bothers the gastro-intestinal (GI) tract—probably the totality of the strange things Westerners eat: **processed, greasy, fried, sugared, chemicaled, synthetic, drugged, alcoholed food; plus eating hurriedly and at irregular times**.

These spasms cause the food to pass through the GI tract either too fast or too slow. When too slowly, too much water is absorbed, causing hard, dry stools; when too fast, too little water is absorbed and the stools are watery.

Although irritable bowel syndrome is a nuisance, it is not life-threatening. But be aware that symptoms of IBS may indicate more serious problems, which sometimes are related by IBS: **arthritis, diabetes melitis, gallbladder disease, malabsorption disorders, candidiasis, pancreatic insufficiency, skin disorders, ulcers, colon cancer, and parasitic infections (such as amoebiasis and giardiasis)**.

Several diseases have similar symptoms, including diverticulitis *(375)*, Crohn's disease *(374)*, ulcerative colitis *(373)*, and lactose intolerance *(383)*.

NATURAL REMEDIES

• To relieve gastro-intestinal pain and expel the gas, take an **enema**. Use a **heating pad, hot-water bottle, hot fomentations** to the abdomen, lukewarm **enemas**—given slowly. **Moist heat** will be more effective than dry heat, since it penetrates better. If the pain is severe: Apply the heat for an hour, remove for an hour, and then apply again for an hour until relief comes.

• Take **charcoal** tablets to relieve gas and bloating. But do not use it daily, or it will cause constipation.

• The person may think he has too much **gas**; but studies reveal only that the normal amount of gas in his intestines bothers him more than it bothers other people. It would still be wise to **avoid gas-forming foods**. *See Bloating (344)* and *"Belching (344)*.

• Avoid **swallowing air**. Do not chew **gum, smoke,** or drink **carbonated beverages.**

• Eat additional **bran** (oat bran, etc.), and it will produce more normal bowel movements. Coarse bran works better than fine bran. A **high fiber diet** is particularly important in solving IBS. But drink additional **water.**

• Add crushed **psyllium** seed to your diet. Drink 1 Tbsp. **blackstrap molasses** in a cup of hot water.

• Drink enough **water**. Eat **acidophilus** twice weekly.

• Eat on a **regular schedule**. Do not skip meals or eat between meals. Let your digestive system rest before the next meal. **Five hours between meals** is a good rule.

• Do not eat before going to bed.

• Search for your **food allergies**. Keep written records and take the **pulse test**. *See Allergies (576)* and *Pulse Test (575)*.

• Because of the ongoing diarrhea, people with IBS require as much as 30% more **protein** than normal, as well as an increased intake of **minerals** and **trace elements**. *See Diarrhea (369)*.

• Regular outdoor **exercise** is needed in order to maintain good bowel health. Do **deep breathing**.

• When your intestines upset you, temporarily go on a **bland diet**. Put vegetables and nonacidic fruits through a blender. But be sure to include some protein and fiber, if you are on a soft diet. A **low-fat diet** is important.

• Wear **loose-fitting clothing**.

• **Peppermint** (3 or more cups per day) soothes the entire intestinal tract. **Chamomile** tea does also. **Pep-**

permint oil relaxes intestinal muscles.

• Each day, take a high-potency **multiple supplement, vitamin C** (1,000 mg 3 times), **vitamin E** (400 IU), **flaxseed oil** (2 Tbsp.), and **dietary fiber** (3-6 grams).

AVOID

• An attack of pain may be sharply increased by drinking **cold liquids** and eating **food**. It is now known that the pain is generally associated with constipation. *See Constipation (367).*

• Avoid **stress, worry, and rush**. Avoid **tobacco, tea, coffee, soft drinks, alcohol, and drugs**. Caffeine can trigger or heighten IBS. Liquor makes symptoms worse.

• Research shows that refined **sugar** needs to be avoided if you want to return to normal living.

• Do not use **sugar substitutes** (sorbitol, etc.).

• Do not take **antacids** or **laxatives**.

• Avoid **animal fats, butter, fried foods, and dairy products**.

• Studies of patients revealed that 70% of those with IBS had a **lactose-intolerance** problem. They had to stop drinking **milk** in order to partially, or wholly, solve the problem.

• If you want success, stay totally away from **cigarette smoke**.

• Do not use medicinal or street **drugs** if you want improvement.

—Also see Colitis (below).

ENCOURAGEMENT—There is a great work to be done in our world; and God has a plan just for you. He has a place for you to work; and, though it seems to be ever so insignificant, if you will do it to the best of your ability (ever trusting in Him for help), He will approve. Psalm 146:9.

COLITIS

(Ulcerative Colitis)

SYMPTOMS—Bloody diarrhea, bloody mucus, gas, pain, bloating, incomplete elimination of the bowels, weakness, weight loss, indigestion, headaches, and sometimes hard stools. Diverticula are often produced.

CAUSES—Colitis is a disease of the large intestine. Ulcerative colitis is a more severe variation of it. The symptoms and treatment of both are about the same.

Colitis is a chronic infection of the lower bowel. The mucous membrane wall becomes irritated as a result of fecal matter which has accumulated, due to constipation. In other words, the person **did not have regular bowel movements**; and so the bowel wall became infected as a result.

Over-the-counter laxatives, cooking in aluminum utensils, overeating of refined carbohydrates, too much sugar in the diet, and food allergies are other causes.

Constipation causes the person to strain. This produces diverticula *(375)*, small pockets which fill with waste matter and toxins.

Low-fiber diets, wrong food combinations, and poor bowel habits—all work together to cause trouble. Toxic bacteria multiply quickly when retained in the lower bowel too long.

Nervous tension and emotional stress intensify the problem. **Antibiotics** change the intestinal flora; and that can also produce colitis.

It is important that you try to find the underlying cause of the colitis; otherwise it will be difficult to eliminate it.

More rarely, the intestinal wall weakens, balloons out, and could possibly rupture. This is called toxic magacolon.

NATURAL REMEDIES

• **High-fiber foods** are very important; also drinking lots of **water**. But, for the first few days, you may need to not have too many high-fiber foods. To begin with, boil grains with plenty of water so the cereal is wet, like soupy porridge. After the diarrhea has eased off, bring back the fiber foods.

• To begin with, do not eat raw greens, carrots, or peanuts. Eat **cooked or steamed green leafy vegetables, cooked white potatoes, multigrain bread, and well-cooked oat bran, brown rice, millet, sweet potatoes, bananas, cooked carrots, squash, and avocados**.

• Drink fresh, raw **cabbage, carrot, celery, and parsley juices** to help heal the colitis.

• Do not eat **fruit** on an empty stomach; but, eat at the end of the meal until the colitis is gone.

• Avoid **milk** products; for they irritate the colon. Wheat products may do it also. Avoid **carbonated beverages** and **iced drinks**. Avoid very **hot foods**.

• Eat a **bland diet**. Practice **relaxing**. Add **pectin** to your diet; it reduces the colitis.

• Poorly digested roughage can be the problem. **Eat slowly** and **chew your food** well. Your intestines need fiber, but not chunks of food.

• Undigested cereals and carbohydrates are another cause. Take **digestive enzymes** and **smaller, more frequent meals**.

• Drink lots of **water**. Colitis is frequently reduced by **distilled water**.

• Use the **pulse test**, to ascertain whether allergic foods are being eaten. *See Pulse Test (575).*

• When no open peptic or intestinal ulcers are present, take 2-3 tablets of **betaine hydrochloride** (betaine HCl) after each meal with a glass of water. This will help the stomach digest proteins and carbohydrates.

• **Slippery elm** is very soothing and healing to the bowel. Mix one teaspoon of powdered slippery elm with one pint of boiling water, blend well, add something for flavoring, and drink slowly. **Peppermint, catnip, goldenseal, and alfalfa** are also good.

• **Alfalfa, garlic, and papaya** are also useful. Helpful herbs include **aloe vera, myrrh, and pau d'arco**.

• **Beta carotene** (25,000 IU) to help prevent infection and aid tissue repair. **Vitamin C** (2,000 mg) with bioflavonoids to help eliminate irritating bowel toxins.

Vitamin E (400 IU), **flaxseed oil** (2 tsp.), and **Calcium** (800 mg).

• Use **hot fomentations** to the abdomen for 20 minutes once a day. Take 8 oz. freshly prepared **cabbage juice** immediately before each meal.

• If **charcoal** is used, take a heaping tsp. with each loose stool. It is a very effective remedy.

• Build health with daily outdoor **exercise**. Avoid **competitive sports**; for they cause tension and stress.

—Also see Crohn's Disease (below) for additional information on ulcerative colitis. See Irritable Bowel Syndrome (372) for more on colitis.

ENCOURAGEMENT—We are to love God with all our mind, soul, and body. Give Him your life; and let Him use you to be a blessing to all those around you. There is no other way to be genuinely happy. John 10:28-29.

CROHN'S DISEASE
(Regional Enteritis, Ulcerative Colitis, Inflammatory Bowel Disease)

SYMPTOMS—Loss of energy, appetite, and weight. Chronic diarrhea, fever, chronic rectal bleeding, malabsorption, pain in the entire abdomen, excess fat in the stool (resulting in pale, bulky stools that float). Malnutrition results.

CAUSES—Crohn's disease is also known as regional enteritis. Ulcerative colitis is a different disorder, but similar enough in symptoms and treatment that we will list them together.

The difference is that ulcerative colitis only involves the first two layers of the intestinal wall (the mucosa and submucosa); whereas Crohn's disease also affects the next two layers below that (the connective tissue and the wall muscles).

Crohn's disease is a chronic ulceration of one or more sections of the digestive tract. Three special facts about Crohn's disease are these: (1) The ulceration reaches into all layers of the gastro-intestinal (GI) wall. (2) The entire GI tract can be involved, from mouth to the anus, and (3) it is usually a long-lasting condition.

As the inflamed portions heal, scar tissue remains, which keeps narrowing the channel.

Many puzzles still surround this condition. The origin is not clearly understood; and certain racial groups contract it more than others

Yet certain facts stand out:

Food allergies may help it start; and identifying and avoiding them helps reduce it.

A **lack of vitamins C and E** in the diet aggravates the problem.

People in Europe and North America have it far more than those living elsewhere in the world.

Jews in America have it much more than Jews in Israel. Caucasians have it less often than Jews, but more often than other races.

Therefore it is likely that the modern **Western diet** is a significant factor. Eating simple, nourishing food is an important aspect of dealing with this problem.

Rarely does the disease strike once and go away. Most of the time it keeps recurring for years. When this happens, the ongoing scarring keeps reducing bowel functions.

If ignored, eventually Crohn's disease can lead to cancer.

No definite cure is known; but certain things tend to alleviate the problem.

It is believed that Crohn's disease is an **autoimmune** problem; that is, the GI tract has become so toxic from years of mistreatment, that the immune system becomes confused and begins attacking the part of the body that houses the toxic food.

NATURAL REMEDIES

• A **fat-free diet** helps. It is known that those with Crohn's disease cannot absorb fats well and do not tolerate high-fat diets.

• Drink plenty of liquids, such as **distilled water and fresh juices**.

• **Cabbage juice** contains vitamin U, the anti-ulcer vitamin, which is good for the walls of the GI tract.

• Eat **high-fiber, unrefined carbohydrates (whole grains)**. However, gradually increase the fiber content, all the while **chewing well**, so as not to irritate the GI tract. If you cannot chew well, then blend the food.

• Individuals who contracted Crohn's disease were found to have eaten few **raw fruits and vegetables** prior to developing the condition.

• Mainly eat nonacidic fresh or cooked vegetables, (such as **broccoli, cabbage, carrots, celery, kale, garlic, and Brussels sprouts**). **Never fry** anything.

• The amino acid, **glutamine**, helps heal the bowel.

• Regularly obtain **sunshine** and **fresh air**.

• **Charcoal** will help control the diarrhea. Take 4-6 tablets, 2-3 times a day between meals. If the charcoal irritates the colon, stir the charcoal into water; let the charcoal settle to the bottom and only drink the apparently clear top part.

• Make sure the **bowels move daily**.

• Helpful herbs are **black walnut, burdock, goldenseal, pau d'arco, psyllium, saffron, aloe vera, fenugreek, valerian, slippery elm, and white oak bark**.

• **Boswellia** and **turmeric** help the bowel wall.

AVOID

• Do not use **spices** (such as **mustard, vinegar, pepper, and horseradish**).

• Eat no **junk food** or use **tobacco, caffeine, alcohol**, or useless food and drink.

• Eliminate all **food additives**. Do not use sugar or sugar foods. One study revealed that patients contracting Crohn's disease had previously been eating more **sugar** than the average population.

• **Avoid overeating**, in order to reduce the inflammation of the GI wall.

• **Gluten** tends to make the problem worse. So **avoid gluten-containing grains (which are wheat, oats, rye, barley, and buckwheat)**. Remarkable results can be

obtained; but the gluten-free diet must be strictly adhered to. Not even tiny amounts in the diet may be permitted.

• Lactose intolerance is frequent. Avoid all **milk products**.

• Eliminate all possible **food allergies** and other allergies. Crohn's patients tend to have allergic conditions, such as hay fever and eczema.

• **Avoid stress**, anxiety, and worry. Keep calm and relaxed. Avoid exciting, competitive games.

• Avoid **surgery, antidiarrheal drugs, and corticosteroids**. They worsen the condition rather than improving it. A full 50% of those who undergo surgery report a rapid increase in symptoms afterward.

—*Also see Ulcerative Colitis (373).*

ENCOURAGEMENT—There is a mighty power in prayer. Our great adversary is constantly seeking to keep us away from God. But the humblest soul can, through earnest prayer, penetrate the clouds and lay hold on the arm of God in heaven. John 14:23.

DIVERTICULITIS
(Diverticulosis)

SYMPTOMS—No symptoms appear until this becomes infected or inflamed, resulting in chills, fever, and pain. The pain may be localized in the left lower quadrant of the abdomen and may be constant. Sometimes there is a brief period of diarrhea.

If you are over 40 and have periodic abdominal cramps, gas, and diarrhea alternating with constipation, you may have diverticulitis.

CAUSES—*Diverticula* are small pouch-like sacs on the inside of the large bowel, generally in the descending colon. *Diverticulosis* is a disorder in which these pouches are present. *Diverticulitis* is when they become infected and inflamed.

When a person is **constipated**, he tends to push too hard. The air pressure exerted by this muscular squeeze on the bowel muscles can force small pockets to form in the walls of the lower colon.

Once they form, diverticula never go away. Of themselves, they provide no symptoms. The problem is that fecal matter can collect in them and eventually attract bacteria. This results in infection or inflammation and produces the fever, chills, and pain.

Diverticulosis occurs when the diverticula are inflamed or infected; then the unfortunate symptoms reveal themselves.

This is another disease caused by "civilized" **refined and junk foods**. It is practically unknown in Third World nations, where people eat **high-fiber diets**.

More than half of those over 60 in America have this problem.

NATURAL REMEDIES

• In order to avoid the formation of those little pouches, always **avoid constipation.**

This is done by including enough **roughage** in your diet (**fresh fruit and vegetables, bran**, and other sources of fiber), drinking enough **water**, etc. *See Constipation (367) for more information.*

• **Do not delay** bowel movements. Have them when you sense you ought to. Do not wait.

• Obtain adequate **exercise**, especially outdoors. A research study showed that men who exercised little were 2½ times more likely to have diverticulitis.

• **Prunes, pureed fruit juices, and herb teas** are very helpful. **Carrot, beet, celery, and green juices** are excellent. Of the fruit juices, **papaya, apple, pineapple, and lemon** are outstanding for your purposes.

• **Chew nuts, seeds, and popcorn well,** so they will be less likely to enter the diverticula.

• Eat **smaller meals**. **Garlic** heals and detoxifies.

• Rats placed on **high-fat diets**, for 90 weeks, all developed colon diverticula. Adding more fiber lowers the internal pressure, reducing or eliminating symptoms.

• Avoid **caffeine** products. They all tend to irritate the colon.

• Do not eat a lot of **sugar**.

• **Smoking** and **stress** make the symptoms worse.

• **Girdles, belts, and tight bands** around the waist tend to increase abdominal pressure on the colon.

• The German government recommends taking 1-3 Tbsp. crushed **flaxseed** 2-3 times a day *with lots of water* to treat diverticulitis. **Psyllium seed** can also be used, but it does not agree with some people (1 tsp. mixed with 8-oz. glass of water or juice, taken at mealtime). Either one softens stools. **Slippery elm** does also.

• The fibrous bark of **slippery elm** soothes the bowel and keeps things moving. **Prunes** and **prune juice** contain lots of fiber and have been used for constipation for centuries. **Chamomile** tea (2 tsp. dried chamomile per cup boiling water, steep 5-10 minutes) has an anti-inflammatory action which soothes the digestive system. **Pau d'arco** (2 cups daily) kills bacteria and heals.
